Witness Martin testified that his proposed language provides more options to Blue Ridge than are contained in many other pole agreements. [Martin, Tr. Vol. 4, p. 108.]

[1] Issue No. 3(g) per the November 2, 2017 Joint Statement of Issues.

Discussion and Conclusions for Issue (g)
Default remedies

Default provisions must clearly articulate proportionate consequences for failure to uphold the terms of the agreement, after a reasonable period of time to cure the issue. The Commission finds Blue Ridge's proposed remedy unreasonable under this standard. Suspending Charter's access to all of the poles on which it has existing attachments would introduce further risks for both parties, including preventing Charter from maintaining its network and addressing issues affecting both parties' systems. The Commission finds that Charter's proposed default language incentivizes good faith efforts to remediate defaults and is reasonable.

Issue (h): Confidentiality[1]

Witness Layton requested that the Commission agree with Blue Ridge that the rates, terms and conditions of any pole attachment agreement that result from this proceeding be kept confidential and therefore proposed that the Commission adopt specific language to be included in the pole attachment agreement on confidentiality. [Layton, Tr. Vol. 1, p. 63.] Witness Booth claimed that pole attachment agreements contain "market sensitive information," although he did not demonstrate any basis for his statement. [Booth, Tr. Vol. 3, p. 64.]

Witness Martin, responding on behalf of Charter, argued that keeping pole attachment agreements confidential is not "industry standard," and there is no basis for keeping Charter's agreement with Blue Ridge, or its terms, confidential. [Martin, Tr. Vol. 4, p. 109.]

Discussion and Conclusions for Issue (h)
Confidentiality

Blue Ridge has provided no basis for keeping the rates, terms and conditions of the pole agreement that results from this proceeding confidential. The Commission declines to make such a ruling. As a public agency, the Commission is bound by the North Carolina Public Records Act, N.C. Gen. Stat. § 132-1, et seq., which establishes a presumption that all agency records shall be open to the public. Blue Ridge has cited no provision of the Public Records Act supporting a conclusion that the rates, terms and conditions of the pole agreement that results from this proceeding are confidential[2] nor does the Commission find that any provision of N.C. Gen. Stat. § 62-350 establishes the ability of one party to a pole attachment agreement to unilaterally declare the terms and conditions of the agreement to be confidential. Should Blue Ridge have a legitimate concern that any element of its pole attachment agreement with Charter contains any "market sensitive information," it may request Charter to agree to keep it confidential, and if Blue Ridge is

---

[1] Issue No. 3(h) per the November 2, 2017 Joint Statement of Issues.

[2] The Commission acknowledges that the General Assembly has created a statutory exemption from disclosure for certain "trade secret" information. N.C. Gen. Stat. § 132-1.2. Blue Ridge has not made a showing that the information in question qualifies under this exemption. On its face, the Commission declines to find, under this record, that the information in question is the property of a "private person" or that disclosure of the information creates any competitive concerns in light of the nature of the information at issue and the nature of the market for pole attachments.

unsatisfied with the result, it may bring the issue to the Commission. Blue Ridge's proposed language on confidentiality is therefore denied.

Issue (i): Indemnity[1]

Witnesses Layton and Booth, on behalf of Blue Ridge, testified that Charter should be required to defend and indemnify Blue Ridge for all attachments that Charter has made to Blue Ridge's poles. [Layton, Tr. Vol. 1, pp. 63-64; Booth, Tr. Vol. 3, p. 60.]

In response, witness Martin testified that each party should be responsible for its own negligence, and suggested the following language to protect the interests of both the pole owner and attachers:

> *Indemnity and Limitation of Liability: Except as otherwise specified herein, each party shall defend, indemnify and hold harmless the other party from any and all claims, liabilities, suits and damages arising from or based upon any breach of the party's obligations under the Agreement. Notwithstanding, neither party shall be liable to the other in any way for indirect or consequential losses or damages, however caused or contributed to, in connection with this Agreement or with any equipment or service governed hereby.* [Martin, Tr. Vol. 4, p. 106.]

Witness Martin testified that mutual indemnification is standard in the industry and that Blue Ridge has mutual indemnification provisions in virtually all of its agreements with joint users. [Martin, Tr. Vol. 4, p. 106.]

Discussion and Conclusions for Issue (i)
Indemnity

The Commission finds that, based on the evidence of industry standard and of similar provisions in virtually all of Blue Ridge's joint use agreements, it is appropriate to adopt Charter's proposed language on this issue.

Issue (j): Reservation of Space[2]

Witnesses Layton and Booth asserted that Blue Ridge should be allowed in its pole attachment agreement to prohibit Charter from making any new attachments closer than 72 vertical inches from Blue Ridge's neutral conductor. [Layton, Tr. Vol. 1, p. 64; Booth, Tr. Vol. 3, p. 65.] The NESC prohibits attachments of communications facilities closer than 40 vertical inches from a neutral and 30 inches from a grounded transformer. [*See* EEE, 2017 National Electrical Code, Table 235-5; Booth, Tr. Vol. 3, pp. 78-79.] Witness Booth explained that transformers are usually placed so that their tops are at the same height as the neutral conductors. [Booth, Tr. Vol. 3, p. 66.] Witness Booth maintained that Blue Ridge should be able to require Charter to attach 72 inches below the neutral for any hypothetical attachments it may plan to make in the future. [Booth, Tr. Vol. 3, pp. 181-82, 215-17.] Preventing Charter from attaching closer than 72 inches below the

---

[1] Issue No. 3(i) per the November 2, 2017 Joint Statement of Issues.

[2] Issue No. 3(j) per the November 2, 2017 Joint Statement of Issues.

neutral on each Blue Ridge pole, therefore, would keep space available for a transformer on every pole that does not already contain one.[1] [Booth, Tr. Vol. 3, pp. 78-79, 181-82.] Blue Ridge witness Booth claimed on cross examination that RUS requires the top 8.5 feet or 9.5 feet of a pole to be reserved for electric equipment (including the 72 inches), but on cross examination he was not able to identify specifically any such RUS requirement. [Booth, Tr. Vol. 3, pp. 67, 189-95.][2]

Witness Martin testified that Charter is willing to accept language that would allow Blue Ridge to reclaim any space needed by Blue Ridge for its core utility service, but stated that Charter should be allowed to occupy, at least temporarily, pole space for so long as it is available. [Martin, Tr. Vol. 4, pp. 102-04.] He proposed the following language:

> *<u>New or Relocated Charter Attachments</u>: Whenever Charter installs new Attachments, transfers existing Charter Attachments to replaced poles, or relocates existing Charter Attachments to a relocated line of poles, Charter shall attach at least forty (40) inches and, preferably seventy-two (72) inches vertical clearance under the effectively grounded neutral of Cooperative.* [Martin, Tr. Vol. 4, p. 103.]

Witness Martin testified that "virtually every other communications attacher (other than Charter) is allowed to place its facilities within 40 inches of Blue Ridge's neutral."[3] [Martin, Tr. Vol. 4, p. 103.] And Blue Ridge witness Layton admitted that Charter and its predecessors have been attaching their facilities approximately 40 inches from Blue Ridge's neutral for decades and that they did not violate any RUS requirement by doing so. [Layton, Tr. Vol. 2, pp. 33-34.]

A different related issue was also explored at hearing. Recent inspections conducted on behalf of Blue Ridge have found a number of instances where Blue Ridge's electrified facilities (mostly transformers) are closer to Charter's cables than the clearances allowed by the NESC. The parties differ on whether such violations have been caused by Blue Ridge placing the facilities after Charter was already attached, or whether Charter placed its facilities too close to existing Blue Ridge facilities. [Mullins, Tr. Vol. 3, pp. 269-75; Booth, Tr. Vol. 3, pp. 120-25].[4] While Charter agrees that it is responsible for making space available for new transformers or other Blue Ridge facilities to be placed, it contends that Blue Ridge must be responsible for curing violations that it has created by failing to give Charter notice and an opportunity to decide how it wished to deal with the reclamation of space: moving its attachment, paying for a new pole, or removing its attachment from the pole. [Mullins, Tr. Vol. 3, p. 255.] Charter contends that it does not bear responsibility for curing violations created by Blue Ridge without notice *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****[5]

---

[1] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

[2] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

[3] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

[4] The Commission expects that the parties will make a good faith effort to determine fault in each of these cases as required by N.C. Gen. Stat. § 62-350(d)(4) ("All attaching parties shall work cooperatively to determine causation of, and to effectuate any remedy for, noncompliant lines, equipment, and attachments.").

[5] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

Discussion and Conclusions for Issue (j)
Reservation of space

The parties agree that Charter occupies space on Blue Ridge's poles only so long as that space is not required by the Cooperative for its electric service. The Commission does not find Blue Ridge's apparent position that it should be allowed to prohibit even temporary occupancy of the top 8.5 feet or 9.5 feet on a pole, to the extent that Blue Ridge has no present or impending need for it, reasonable. The Commission finds Blue Ridge's position on this issue inconsistent with the access rights afforded to Charter in N.C. Gen. Stat. § 62-350. In addition, the FCC has addressed this issue stating that, "[w]e will permit the electric utility to reserve space if such reservation is consistent with a bona fide development plan . . . . The electric utility must permit use of its reserved space by cable operators . . . until such time as the utility has an actual need for that space." Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, 11 FCC Rcd. 15499, 16053, ¶ 1169 (1996). Further, the Commission agrees with Charter's position that reclamation of space by Blue Ridge must be for a use related to the provision of its core electric service. Especially in light of the testimony Blue Ridge has allowed its affiliate, which provides dark fiber communications service that could compete with Charter, to attach, it would be unreasonable for the Cooperative to deny Charter access to its poles with the intention of competing directly with it. Accordingly, the Commission finds it appropriate to adopt Charter's proposed language on this issue.

Based on the record in this proceeding, the Commission finds that the next pole attachment agreement between the parties should make Charter responsible for making space for new Blue Ridge attachments according to the language proposed by Charter. To provide clarification on this issue, the Commission specifies that Charter should not be held responsible for curing violations of NESC separation requirements that have been caused by Blue Ridge placing its facilities too close to Charter's facilities without any appropriate notice or opportunity for Charter to remedy. Where Blue Ridge has taken such action in the past, or does so in the future, it should bear the responsibility for cure.

Issue (k): Recovery of Space[1]

Witnesses for both parties agree that Blue Ridge has, and should have, the right to reclaim any space used by Charter when needed for its utility service. [Martin, Tr. Vol. 4, pp. 101-02; Booth, Tr. Vol. 3, p. 64.] Charter proposed the following language that would require Charter to rearrange its facilities (including paying for a new pole, if necessary), or vacate the pole, on 30 days' notice to accommodate Blue Ridge's need for more pole space.

> *Reservation of Space: Should the Cooperative, at any time, reasonably require the space Charter's Attachments occupy on its poles for the provision of its core electric service, Charter shall, upon receipt of thirty (30) days' notice (a) rearrange its Attachments to other space if available on the pole, at its own expense, (b) vacate the space by removing its Attachments at its own expense or (c) if no space is available and Charter does not wish to remove its Attachments, Charter may request the Cooperative replace the pole with a larger pole that can accommodate*

[1] Issue No. 3(k) per the November 2, 2017 Joint Statement of Issues.

Charter's Attachments. Charter shall bear the expense of such replacement and transfer its Attachments to the new pole. [Martin, Tr. Vol. 4, p. 102.][1]

Witness Martin noted that this language is similar to the parties' 2008 pole attachment agreement, which also provides for 30 days' notice. [Martin, Tr. Vol. 4, p. 101; MM Ex. 1.] Witness Martin also maintained that Charter should not be required to pay for the recovery of space to be used for Blue Ridge's competitive communications service, Ridgelink, as that would allow Blue Ridge to favor itself in the provision of competitive communications services. [Martin, Tr. Vol. 4, p. 101; *see* N.C. Gen. Stat. § 62-350(a).] Witness Booth stated on direct examination that if Blue Ridge requires additional space on the pole, Charter should remove or rearrange its attachments "within a time certain to allow Blue Ridge to use the space," or "immediately." [Booth, Tr. Vol. 3, pp. 64, 105.] Witness Booth testified this was necessary because of the safety violations it attributes to Charter. [Booth, Tr. Vol. 3, pp. 105-06.]

Discussion and Conclusions for Issue (k)
Recovery of space

The parties agree that Blue Ridge can reclaim any space used by Charter if Blue Ridge needs it for the provision of its core utility service. The difference between the parties' positions here is the amount of notice which Blue Ridge must give to Charter. Charter proposes that Blue Ridge give it 30 days' notice to rearrange or remove its attachments, or request that Blue Ridge replace the pole at Charter's expense. Blue Ridge argues that Charter should be required to vacate the space immediately. The Commission finds the parties' prior agreement indicative of industry norms and inherently reasonable.[2] Further, the Commission agrees with Charter's position that the recovery of space by Blue Ridge must be for a use related to the provision of its core electric service. Should Blue Ridge construct communications facilities that could compete with Charter, it would be unreasonable for the Cooperative to deny Charter access to its poles with the intention of competing directly with it. Accordingly, the Commission finds it appropriate to adopt Charter's proposed language on this issue.

<u>Issue (l): Unauthorized Attachments</u>[3]

Through witness Layton, Blue Ridge seeks permission to impose penalties for attachments made by Charter without permission of both an unspecified "unauthorized attachment fee" and "back rent." [Layton, Tr. Vol. 1, p. 65.] Witness Layton asserts that if Charter is required only to pay back rent, it will have "perverse . . . incentives" to fail to seek authorization. [Layton, Tr. Vol. 1, p. 65.]

Witness Martin testified that Charter is willing to pay unauthorized attachment penalties in certain circumstances, but that the amount must be reasonable. [Martin, Tr. Vol. 4, pp. 95-96.] He proposed the following language:

---

[1] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

[2] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

[3] Issue No. 3(l) per the November 2, 2017 Joint Statement of Issues.

Unauthorized Attachments: The Cooperative may assess a fee for any Charter Attachment that has not been authorized in accordance with this Agreement ("Unauthorized Attachment"). The fee for Unauthorized Attachments shall be equal to five (5) times the current Annual Attachment Fee and shall be imposed in a non-discriminatory manner as to all attachers. [Martin, Tr. Vol. 4, p. 96.]

Discussion and Conclusions for Issue (l)
Unauthorized attachments

The primary difference in the positions of the parties on unauthorized attachments is the magnitude of the penalty. Blue Ridge seeks back rent, plus an unspecified penalty amount per unauthorized attachment. Charter seeks the traditional FCC standard of five years of back rent. For the following reasons, the Commission finds the language proposed by Charter to be just and reasonable.

Any claims for liquated damages that are penalties unrelated to actual damage are impermissible. No costs (above and beyond lost rental payments) have been established. Furthermore, assuming that pole attachment audits are conducted on a regular basis, and also that some attachments made without authorization were made more recently than five years ago, a five year attachment back rental, such as Charter proposes, is itself a penalty and a disincentive for Charter not to obtain authorization.

Blue Ridge has failed to justify any amount of "liquidated damages" for unauthorized attachments or noncompliant attachments. *See* Chris v. Epstein, 113 N.C. App. 751, 757, 440 S.E. 2d 581, 584-85 (N.C. Ct. App. 1994). Liquidated damages may be appropriate where the damages are reasonably difficult to ascertain because of their indefiniteness or uncertainty and where the amount is either a reasonable estimate of the damages that would probably be caused as a result of a breach or is reasonably proportionate to the damages actually caused by the breach. Knutton v. Cofield, 273 N.C. 355, 360-61, 160 S. E.2d 29, 34 (N.C. Ct. App. 1968). While Blue Ridge introduced scores of photographs in this hearing of alleged safety violations by Charter, it made no attempt to quantify the costs to correct these violations, nor did it produce any evidence of amounts it spent in the past to remedy such violations. As a result, Blue Ridge has not made a reasonable effort to show that any amount of liquidated damages is a reasonable estimate of the damages that Charter has caused or will cause or that proposed liquidated damages are reasonably proportionate to the damages actually caused by Charter's breach. Damages which bear no relationship to the actual harm that is suffered and are imposed to facilitate Charter's compliance with the agreement are a penalty. Penalty clauses included in contracts that are denominated as liquidated damages are unenforceable. Knutton v. Cofield, 273 N.C. 355, 360-61, 160 S. E.2d 29, 34 (N.C. Ct. App. 1968). The Commission also notes that double recovery of actual and liquidated damages is not permitted under North Carolina law. Handex of Carolinas, Inc. v. Cnty. of Haywood, 168 N.C. App. 1, 4, 607 S.E. 2d 25, 28 (N.C. Ct. App. 2005).

Assuming that Blue Ridge conducts attachment inventories on a regular five-year cycle, and assuming that new attachments are made on a regular basis throughout that time period, the penalty proposed by Charter (of five times the annual rate for each unauthorized attachment) will average a recovery of double the annual payment that would otherwise have been paid. Based on the evidence, including Charter's explicit agreement, the Commission finds that that penalty should create a sufficient incentive to Charter. Further, the evidence reflects that such an unauthorized attachment fee is industry-standard. Accordingly, for the aforementioned reasons, the Commission finds it appropriate to adopt Charter's proposed unauthorized attachment fee language.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 35

The evidence supporting this Finding of Fact is found in the testimony of witnesses Booth, Layton and Mullins.

Witness Booth testified that the photographs included in his exhibits illustrate various safety violations by Charter. [Booth, Tr. Vol. 3, pp. 77-82; *see* GLB Ex. 3.] Witness Mullins testified that Charter had not had an opportunity to fully review the situations presented by the photographs in witness Booth's hearing exhibits, but that he believed that much of the noncompliance depicted was created by Blue Ridge and other attachers. [Mullins, Tr. Vol. 3, pp. 267-77.] Witness Layton testified that the purpose of at least one of the safety inspections "was for this litigation." [Layton, Tr. Vol. 1, p. 199.]

Discussion and Conclusions

The issues raised by Blue Ridge regarding the condition and compliance of Charter's outside plant are not ripe for Commission consideration. N.C. Gen. Stat. § 62-350 sets forth required processes and procedures for dealing with noncompliant attachments and disputes as to the cause of the noncompliance. As stated above, the Commission has insufficient basis to determine causation and responsibility for any compliance issues, but understands that the parties are working to remedy any violations that do exist. [Layton, Tr. Vol. 1, p. 91; Mullins, Tr. Vol. 3, pp. 254-56.]

The Commission is confident that the parties will work cooperatively to determine the causation and appropriate remedy for any noncompliant attachments, as directed by N.C. Gen. Stat. § 62-350(d)(4).

IT IS, THEREFORE, ORDERED as follows:

1. That Blue Ridge's maximum just and reasonable pole attachment rates for the years 2015-2017 should be determined based on the FCC Rate Methodology, as modified to reflect the actual data provided by Blue Ridge. Therefore, the Commission finds that the following rates are the appropriate maximum just and reasonable rates: $8.49 per year per pole for rate year 2015, $8.37 per year per pole for rate year 2016, and $8.31 per year per pole for rate year 2017.

2. That Blue Ridge owes a refund to Charter for excessive pole attachment fees paid from August 25, 2015, to August 31, 2017, in an amount to be calculated by the parties, and for excessive pole attachment fees paid after August 31, 2017. If Blue Ridge desires, and Charter is agreeable, the refund may be used as a credit against future pole attachment bills until the amount of the credit is fully exhausted.

3. That in addition to a just and reasonable pole attachment rate, it is appropriate for Charter to pay Blue Ridge's measurable and verifiable costs directly attributable to Blue Ridge providing pole attachment space to Charter.

4. That for Issues (b), (d), (e), (g), (i), (j), (k), and (l), the language proposed by Charter for the disputed terms and conditions is hereby approved and adopted. With respect to Issue (c), the language set forth by Blue Ridge is hereby approved and adopted.

5. That the parties shall negotiate appropriate language to include in their pole attachment agreement based on the Commission's conclusions outlined herein for Issues (a) and (f).

6. That Blue Ridge's proposal to have the rate, terms, and conditions of the parties' pole attachment agreement deemed confidential (Issue (h)) is hereby denied.

ISSUED BY ORDER OF THE COMMISSION.
This the 17th day of October, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Bryan E. Beatty resigned from the Commission on January 31, 2018 and did not participate in the decision.

DOCKET NO. EMP-93, SUB 0

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Wilkinson Solar, LLC, for Registration of a New Renewable Energy Facility	)))	ORDER ACCEPTING REGISTRATION OF NEW RENEWABLE ENERGY FACILITY

BY THE CHAIRMAN: On March 13, 2017, Wilkinson Solar, LLC, (Applicant), filed a registration statement pursuant to Commission Rule R8-66, seeking to register its 74-MW_{AC} solar photovoltaic (PV) electric generating facility located in Beaufort County, North Carolina, as a new renewable energy facility. The Applicant stated that its facility is expected to become operational on December 31, 2018.

The Applicant's filing included certified attestations that: 1) the facility is in substantial compliance with all federal and state laws, regulations, and rules for the protection of the environment and conservation of natural resources; 2) the facility will be operated as a new renewable energy facility; 3) the Applicant will not remarket or otherwise resell any RECs sold to an electric power supplier to comply with G.S. 62-133.8; and 4) the Applicant will consent to the auditing of its books and records by the Public Staff insofar as those records relate to transactions with North Carolina electric power suppliers.

On May 4, 2017, the Public Staff filed the prefilled direct testimony of Evan D. Lawrence, an engineer with the Public Staff-Electric Division. Witness Lawrence's testimony included the recommendation required by Commission Rule R8-66(e), stating that the Public Staff-Electric Division has completed its review of the Applicant's registration statement. Based upon this review, witness Lawrence recommended that the Applicant's registration statement be considered complete and that the facility be considered a new renewable energy facility. No other party made a filing with respect to these issues.

Based upon the foregoing and the entire record in this proceeding, the Chairman finds good cause to accept the registration statement filed by the Applicant for its 74-MW_{AC} solar PV facility to be registered as a new renewable energy facility. The Applicant shall annually file the information required by Commission Rule R8-66 on or before April 1 of each year. To the extent that the Applicant is not otherwise participating in a REC tracking system, it will be required to participate in the NC-RETS REC tracking system (www.ncrets.org) in order to facilitate the issuance of RECs.

IT IS, THEREFORE, ORDERED as follows:

1. That the registration statement filed by Wilkinson Solar, LLC for its 74-MW_{AC} solar photovoltaic (PV) electric generating facility located in Beaufort County, North Carolina, to be registered as a new renewable energy facility shall be, and is hereby, accepted;

2. That Wilkinson Solar, LLC, shall annually file the information required by Commission Rule R8-66 on or before April 1 of each year; and

3. That the Chief Clerk shall transmit a copy of this Order to the NC-RETS Administrator.

ISSUED BY ORDER OF THE COMMISSION.
This the 27th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

ELECTRIC RESELLER – CERTIFICATE

DOCKET NO. ER-68, SUB 0

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
The Standard at Boone, LLC, for Authority	)	
to Resell Electric Service Pursuant to	)	ORDER GRANTING
G.S. 62-110(h) at The Standard at Boone,	)	CERTIFICATE OF AUTHORITY
828 Blowing Rock Road, Boone, NC 28607	)	

BY THE COMMISSION: On August 10, 2016, The Standard at Boone, LLC (The Standard or Applicant), filed an application for a certificate of authority to resell electric service at The Standard at Boone, located at 828 Blowing Rock Road, Boone, NC 28607, in accordance with G.S. 62-110(h) and Chapter 22 of the Commission's rules. On September 28, 2016, the Public Staff of the North Carolina Utilities Commission (Public Staff) filed its correspondence to the Applicant outlining the deficiencies in The Standard's application. On October 6, 2016, the Commission issued an Order finding The Standard's application incomplete and requesting additional information.

The Applicant submitted supplemental filings on October 17 and November 15, 2016; June 23 and October 24, 2017; and April 19 and July 12, 2018.

On July 16, 2018, the Public Staff filed a letter opining that The Standard's application is complete and complies with the requirements of G.S. 62-110(h) and Chapter 22 of the Commission's rules. For these reasons, the Public Staff in its letter of July 16, 2018, recommended that the Commission approve The Standard's application, as amended and supplemented by its filings of October 17 and November 15, 2016; June 23 and October 24, 2017; and April 19 and July 12, 2018.

Based upon a review of The Standard's application and supplemental filings and the Public Staff's recommendation, the Commission finds that, with two exceptions, the application is complete and complies with the requirements of G.S. 62-110(h) and Chapter 22 of the Commission's rules. Specifically, in the SimpleBills sample bill statement submitted by the Applicant on July 12, 2018, the Commission notes that the bill statement appears to be due less than 25 days following the date of its issuance, in violation of G.S. 62-110(h)(4)d.; in addition, the amount of days remaining to pay the bill before the bill becomes past-due appears to be an incorrect calculation. Therefore, the Commission concludes that The Standard's application should be approved, on the condition that the Applicant, prior to reselling electric service at The Standard at Boone, first correct the SimpleBills bill statement to rectify these two additional deficiencies.

Based upon the foregoing and the entire record in this docket, the Commission finds good cause to issue to the Applicant a certificate of authority to resell electric service at The Standard at Boone, subject to the modifications required in a manner consistent with this Order.

ELECTRIC RESELLER – CERTIFICATE

IT IS, THEREFORE, ORDERED as follows:

1. That the Applicant shall, within 10 days following the date of this Order, make a compliance filing containing a revised SimpleBills bill statement to correct the due date and days remaining in a manner consistent with this Order;

2. That, subject to the modifications to the SimpleBills bill statement as required by this Order and evidenced through the Applicant's forthcoming compliance filing, the application filed by the Applicant to resell electric service at The Standard at Boone, located at 828 Blowing Rock Road, Boone, NC 28607, is hereby granted; and

3. That this order shall constitute the Certificate of Authority to Resell Electric Service issued to The Standard.

ISSUED BY ORDER OF THE COMMISSION.
This the 23rd day of July, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. G-9, SUB 727

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Piedmont Natural Gas Company, Inc. for Annual Review of Gas Costs Pursuant to N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6)	))))	ORDER ON ANNUAL REVIEW OF GAS COSTS

HEARD: Tuesday, October 2, 2018, at 10:00 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding, Commissioner Lyons Gray and Commissioner Charlotte A. Mitchell

APPEARANCES:

For Piedmont Natural Gas Company, Inc.:

James H. Jeffries IV, McGuireWoods LLP, 201 N. Tryon Street, Suite 3000, Charlotte, North Carolina 28202

Brian S. Heslin, Duke Energy Corporation, 550 S. Tryon Street, Charlotte, North Carolina 28202

For the Using and Consuming Public:

Elizabeth D. Culpepper, Staff Attorney, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

For Carolina Utility Customers Association, Inc.

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

BY THE COMMISSION: On August 1, 2018, pursuant to N.C. Gen. Stat.§ 62-133.4(c) and Commission Rule R1-17(k)(6), Piedmont Natural Gas Company, Inc. (Piedmont or Company), filed the direct testimonies and exhibits of MaryBeth Tomlinson, Manager of Gas Accounting; Gennifer Raney, Director of Pipeline Services; and Sarah E. Stabley, Managing Director of Gas Supply Optimization and Pipeline Services. Piedmont's witnesses attested to the prudence of the Company's gas purchasing practices and the accuracy of the Company's gas cost accounting for the twelve-month period ended May 31, 2018 (review period).

On August 7, 2018, the Commission issued its Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines and Requiring Public Notice. This Order established a hearing date of October 2, 2018, set prefiled testimony dates, and required the Company to give notice to its customers of the hearing on this matter.

On August 23, 2018, Carolina Utility Customers Association, Inc. (CUCA) filed a petition seeking to intervene in this docket. On August 24, 2018, the Commission issued an Order Granting Petition to Intervene.

On September 17, 2018, the Public Staff filed the prefiled joint testimony of Poornima Jayasheela, Staff Accountant, Natural Gas Section, Accounting Division; Zarka H. Naba, Public Utilities Engineer, Natural Gas Division; and Michael C. Maness, Director, Accounting Division (Public Staff Panel or Panel). The Public Staff revised its filed testimony on October 1, 2018.

On September 24, 2018, the Commission issued its Order Providing Notice of Commission Questions.

On September 27, 2018, September 28, 2018, October 1, 2018, and October 2, 2018, numerous consumer statements of position were filed with the Commission.

On September 28, 2018 and October 1, 2018, Piedmont filed written responses to the Commission's September 24, 2018 questions.

On October 1, 2018, the Company filed its affidavits of publication.

On October 2, 2018, this matter came on for hearing as scheduled, and all prefiled testimony and exhibits were admitted into evidence. Public witness Cathy Buckley testified on behalf of members of the Sierra Club.

On November 28, 2018, the Joint Proposed Order of Piedmont and the Public Staff was filed.

On December 7, 2018, the Public Staff filed a motion requesting that the Commission accept corrections to its pre-filed testimony. The Commission issued an order on December 11, 2018, accepting the Public Staff's corrected testimony.

Based on the testimony and exhibits received into evidence and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

1. Piedmont is a public utility as defined in Chapter 62 of the North Carolina General Statutes and is subject to the jurisdiction and regulation of the Commission.

2. Piedmont is engaged primarily in the business of transporting, distributing, and selling natural gas to customers in North Carolina, South Carolina, and Tennessee.

3. Piedmont has filed with the Commission and submitted to the Public Staff all of the information required by N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k).

4. The review period in this proceeding is the twelve months ended May 31, 2018.

5. The Company properly accounted for its gas costs incurred during the review period.

6. During the review period, the Company incurred total North Carolina gas costs of $343,478,124, which was comprised of demand and storage charges of $129,398,029, commodity gas costs of $220,382,071, and other gas costs of ($6,301,977).

7. At May 31, 2018, the Company had a credit balance of $15,300 owed from the Company to the customers in its Sales Customers Only Deferred Account, and a credit balance of $17,078,428, owed from the Company to the customers, in its All Customers Deferred Account.

8. During the review period, Piedmont actively participated in secondary market transactions earning actual margins of $32,831,848 for the benefit of North Carolina ratepayers.

9. Piedmont operated a gas cost hedging program on behalf of customers during the review period. Piedmont's hedging activities during the review period were reasonable and prudent.

10. At May 31, 2018, the balance in the Company's Hedging Deferred Account was a debit balance of $5,207,171.

11. It is appropriate for the Company to include the $5,207,171 debit balance in its Hedging Deferred Account in its Sales Customers Only Deferred Account. The combined balance for the Hedging and Sales Customers Only Deferred Accounts is a net debit balance of $5,191,871.

12. The Company has transportation and storage contracts with interstate pipelines, which provide for the transportation of gas to the Company's system, and long-term supply contracts with producers, marketers, and other suppliers.

13. The Company utilized a "best cost" gas purchasing policy during the applicable review period consisting of five main components: price of gas, security of the gas supply, flexibility of the gas supply, gas deliverability, and supplier relations.

14. The Company's gas purchasing policy and practices during the review period were prudent.

15. The Company's capacity acquisition planning and arrangements are reasonable and prudent.

16. The Company's gas costs during the review period were prudently incurred, and the Company should be permitted to recover 100% of such prudently incurred gas costs.

17. The Company should implement the temporary rate decrement and increments as proposed by Company witness Tomlinson and agreed to by the Public Staff Panel.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-2

The evidence supporting these findings of fact is contained in the official files and records of the Commission and the testimony of Company witnesses Tomlinson, Raney, and Stabley. These findings are essentially informational, procedural, or jurisdictional in nature and are not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 3-4

The evidence supporting these findings of fact is contained in the testimony of Company witnesses Tomlinson, Raney, and Stabley, and the revised testimony of the Public Staff Panel. These findings are made pursuant to N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6).

Pursuant to N.C.G.S. § 62-133.4, Piedmont is required to submit to the Commission information and data for an historical 12-month review period including Piedmont's actual cost of gas, volumes of purchased gas, sales volumes, negotiated sales volumes, and transportation volumes. Commission Rule R1-17(k)(6)(a) establishes May 31, 2018, as the end date of the annual review period for the Company in this proceeding. Commission Rule R1-17(k)(6)(c) requires that Piedmont file weather-normalized data, sales volumes, work papers, and direct testimony and exhibits supporting the information.

Company witness Tomlinson testified that the Company filed with the Commission and submitted to the Public Staff throughout the review period complete monthly accountings of the computations required by Commission Rule R1-17(k)(6)(c). Witness Tomlinson included the annual data required by Commission Rule R1-17(k)(6)(c) as Exhibit_(MBT-1) to her direct testimony. The Public Staff Panel stated that they had presented the results of their review of the gas cost information filed by Piedmont in accordance with N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6).

Based upon the foregoing, the Commission concludes that Piedmont has complied with the procedural requirements of N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k) for the 12-month review period ended May 31, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-7

The evidence supporting these findings of fact is contained in the testimony of Company witness Tomlinson and the revised Public Staff Panel testimony.

Company witness Tomlinson testified that Piedmont incurred total North Carolina gas costs of $343,478,124 during the review period, which was comprised of demand and storage charges of $129,398,029, commodity gas costs of $220,382,071, and other gas costs of ($6,301,977).[1]

[1] Immaterial difference of $1 between this total and the individual components listed is due to rounding of amounts shown on Exhibit_ (MBT – 1), Schedule 1.

The Public Staff's testimony included a thorough analysis of Piedmont's gas costs. The testimony showed that the level of demand and storage charges were down 2.6% from the level in last year's annual review in Docket No. G-9, Sub 710. The bulk of the reduction was attributed to changes in the costs of four sources of capacity. The most significant cost reduction was a $1,789,913 reduction in the rates paid to Cardinal Pipeline Company LLC as a result of a general rate case in Docket No. G-39, Sub 38. The costs of Piedmont's capacity from Pine Needle LNG, which is regulated by the Federal Energy Regulatory Commission (FERC), decreased $1,451,281 as a result of a change in Pine Needle LNG's Electric power and Fuel Tracker in FERC Docket No. RP17-576. The reduction of $491,283 in Transcontinental Gas Pipe Line Company, LLC (Transco) Firm Transportation charges was the result of a reduction in the electric component of the reservation charge in FERC Docket No. RP18-541. The reduction of $470,996 in Columbia Gulf was the result of the termination of the Columbia Gulf contract, effective October 31, 2017.

The Commission notes that the overall demand and storage costs paid by Piedmont have increased in recent years as additional capacity was added to accommodate growth. In Piedmont's Docket No. G-9, Sub 690, which covered a 12-month review period ending May 31, 2016, demand and storage costs rose to approximately $133.2 million from $124.5 million during the previous review period. This increase was mostly attributable to the cost of adding 100,000 dts/day on Transco's Leidy Southeast project.

Witness Tomlinson's prefiled testimony and exhibits reflected a debit balance of $5,191,871 in Piedmont's Sales Customers Only Deferred Account and a credit balance of $17,078,428 in its All Customers Deferred Account as of May 31, 2018. The Public Staff Panel agreed with these balances and testified that the Company properly accounted for its gas costs incurred during the review period.

Based upon the foregoing, the Commission concludes that the Company properly accounted for its gas costs incurred during the review period. The Commission also concludes that the appropriate level of total North Carolina gas costs incurred for this proceeding is $343,478,124. The Commission further concludes that the appropriate deferred account balances as of as of May 31, 2018, are a debit balance of $5,191,871, owed from the customers to the Company, in its Sales Customers Only Deferred Account, and a credit balance of $17,078,428, owed from the Company to the customers, in its All Customers Deferred Account.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 8

The evidence supporting this finding of fact is contained in the testimony of Company witness Stabley and the revised Public Staff Panel testimony.

Company witness Stabley provided testimony on the process that Piedmont utilized and the market intelligence that was evaluated during the review period to determine the prices charged for off-system sales. Witness Stabley explained that the process and information used by Piedmont in pricing off-system sales depends upon the location of the sale, term and type of the sale, and prevailing market conditions at the time of the sale. Witness Stabley stated that for long-term delivered sales (longer than one month), Piedmont generally solicits bids from potential buyers and, if acceptable, awards volumes based on bids received and its evaluation. Witness Stabley further stated that, for short-term transactions (daily or monthly), Piedmont monitors prices and volumes on the Intercontinental Exchange, as well as by talking to various market participants and, for less liquid trading points, estimating prices based on price relationships with more liquid points. The Company also evaluates the amount of supply available for sale and weighs that against current market conditions in formulating its sales strategy.

The Public Staff Panel testified that the Company earned actual total company margins of $51,420,263 on secondary market transactions and credited the All Customers Deferred Account in the amount of $32,831,848 for the benefit of North Carolina ratepayers (($51,420,263 – 100% of Duke Off System Sales) x NC demand allocator x 75% ratepayer sharing percent) + (100% Duke Off System Sales X NC demand allocator)). The margins earned were a result of Piedmont's participation in asset management arrangements, capacity releases, and off system sales. As explained in Company witness Tomlinson's testimony, Piedmont has reported in Piedmont's Deferred Gas Cost accounts all of the margins received by Piedmont on secondary market sales and capacity release to DEC and DEP for the benefit of customers without any benefit to or sharing by Piedmont as of October 2016, the month in which the Duke Energy/Piedmont merger was consummated.

The Public Staff's analysis showed significant changes in amount of margins received from the three types of secondary market activities that Piedmont engaged in during the review period compared to the previous review period. While capacity releases still accounted for the single largest amount at $20,465,242, margins from those transactions were down by 15%. Margins from Asset Management Agreements, at $10,885,208, were down 41%. Margins from off-system sales, at $20,069,813, were up over 186%. In total, Piedmont's margins from secondary market transactions were up 3.8%.

Based on the foregoing, the Commission concludes that Piedmont actively participated in secondary market transactions, resulting in $32,831,848 of margin for the benefit of North Carolina ratepayers during the review period.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 9-11

The evidence supporting these findings of fact is contained in the testimony of Company witnesses Tomlinson and Stabley and the revised Public Staff Panel testimony.

Company witness Tomlinson stated in her testimony that the Company had a debit balance of $5,207,171 in its Hedging Deferred Account at May 31, 2018. The Public Staff Panel testified that the net hedging costs were composed of Economic Gains on Closed Positions of ($114,950), Premiums Paid of $5,016,010, Brokerage Fees and Commissions of $69,440, and Interest on the Hedging Deferred Account of $236,671.

Company witness Stabley testified that Piedmont's Hedging Plan accomplished its goal of providing an insurance policy to reduce gas cost volatility for customers in the event of a gas price fly up. Witness Stabley testified that the Company did not make any changes to its Hedging Plan during the review period. Witness Stabley further testified that the Company continues to utilize storage as a physical hedge to stabilize cost, and that the Company's Equal Payment Plan, the use of the Purchased Gas Adjustment benchmark price, and deferred gas cost accounting also provide a smoothing effect on gas prices.

The Public Staff Panel testified that its review of the Company's hedging activities is performed on an ongoing basis and includes analysis and evaluation of information contained in several documents and other data. These include the Company's monthly hedging deferred account reports, detailed source documentation, work papers supporting the derivation of the maximum targeted hedge volumes for each month, and periodic reports on the status of hedge coverage for each month. In addition, the Public Staff reviews periodic reports on the market values of the various financial instruments used by the Company to hedge, monthly Hedging Program Status Reports, monthly reports reconciling the Hedging Program Status Report and the hedging deferred account report. Further, the Public Staff reviews minutes from the meetings of Piedmont's Gas Market Risk Committee (GMRC), which was formerly the Energy Price Risk Management Committee, minutes from the meetings of the Board of Directors and its committees that pertain to hedging activities, reports and correspondence from the Company's internal and external auditors, hedging plan documents, communications with Company personnel regarding key hedging events and plan modifications under consideration by the GMRC, and the testimony and exhibits of the Company's witnesses in the annual proceeding.

The Public Staff Panel concluded that Piedmont's hedging activities were reasonable and prudent and recommended that the $5,207,171 debit balance in the Hedging Deferred Account as of the end of the review period be transferred to the Sales Customers Only Deferred Account. Based on this recommendation, the Panel stated that the combined balance in the Sales Customers Only Deferred Account as of May 31, 2018 is a net debit balance, owed to the Company, of $5,191,871.

As demonstrated by the testimony and exhibits provided by Piedmont and the Public Staff's revised testimony, the Commission finds that Piedmont's hedging program has met the objective of contributing to the mitigation of gas price volatility and avoiding rate shock to customers. The Commission concludes that Piedmont's hedging activities were reasonable and prudent and that the $5,207,171 debit balance in the Hedging Deferred Account as of the end of the review period should be transferred to the Sales Customers Only Deferred Account. The combined balance for the Hedging and Sales Customers Only Deferred Accounts is a net debit balance of $5,191,871, owed to the Company.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12-16

The evidence supporting these findings of fact is contained in the testimony of Company witnesses Stabley and Raney, the Company's responses to the Commission's September 24, 2018 questions, and the revised Public Staff Panel testimony.

Company witness Stabley testified that the Company maintains a "best cost" gas purchasing policy. This policy consists of five main components: price of the gas; security of the gas supply; flexibility of the gas supply; gas deliverability; and supplier relations. Witness Stabley testified that all of these components are interrelated and that the Company weighs the relative importance of each of these factors in developing its overall gas supply portfolio to meet the needs of its customers.

Witness Stabley also described how the interrelationship of the five factors of Piedmont's "best cost" policy affects the Company's construction of its gas supply and capacity portfolio under its best cost policy. The long-term contracts, supplemented by long-term peaking services and storage, generally are aligned with the firm market; the short-term spot gas generally serves the interruptible market. In order to weigh and consider the five factors, the Company stays abreast of current issues facing the natural gas industry by intervening in all major FERC proceedings involving its pipeline transporters, maintaining constant contact with existing and potential suppliers, monitoring gas prices on a real-time basis, subscribing to industry literature, following supply and demand developments, and attending industry seminars. Witness Stabley further testified that the Company did not make any changes in its best cost gas purchasing policies or practices during the review period.

Gas Supply

Witness Stabley further testified that the Company purchases gas supplies under a diverse portfolio of contractual arrangements with a number of reputable gas producers and marketers. In general, under the Company's firm gas supply contracts, Piedmont may pay negotiated reservation fees for the right to reserve and call on firm supply service up to a maximum daily contract quantity (nominated either on a monthly or daily basis), with market-based commodity prices tied to indices published in industry trade publications. Some of these firm contracts are for winter only (peaking or seasonal) service and some provide for 365 day (annual) service. Firm gas supplies are purchased for reliability and security of service and are generally priced on a reservation fee basis according to the amount of nomination flexibility built into the contract with daily swing service generally being more expensive than monthly baseload service.

Witness Stabley testified that the Company identifies the volume and type of supply that it needs to fulfill its market requirements and generally solicits requests for proposals from a list of suppliers that the Company continuously updates as potential suppliers enter and leave the market place. The type of supply is classified as either baseload or swing. Witness Stabley stated that swing supplies priced at first of month indices command the highest reservation fees because suppliers incur all the price risk associated with market volatility during the delivery period.

Witness Stabley testified that lower reservation fees are also associated with swing contracts based upon daily market conditions since both buyer and seller assume the risk of daily market volatility. Witness Stabley stated that after forecasting the ultimate cost delivered to the city gate for each point of supply and evaluating the cost of the reservation fees associated with each type of supply and its corresponding bid, the Company makes a "best cost" decision on which type of supply and supplier best fulfills its needs. Company witness Stabley also testified regarding the current U.S. supply situation and the various pricing alternatives available, such as fixed prices, monthly market indexing, and daily spot market pricing.

Pipeline and Storage Capacity

Company witness Raney testified about the market requirements of Piedmont's North Carolina customers and the acquisition of capacity to serve those markets. Witness Raney also testified that the Company expects the economy to continue recovering and to result in potentially increasing residential, commercial, and industrial demand, and in turn, result in greater firm temperature sensitive requirements that will require firm sales service from the Company.

Witness Raney further testified that Piedmont and the natural gas industry have not seen evidence that conservation/reduced usage occurs during design day conditions. Witness Raney testified that for that reason Piedmont is confident the conservative approach to design day forecasting is the most prudent approach.

Witness Raney testified that the Company currently believes that it has sufficient supply and capacity rights to meet its near-term customer needs into the 2018-2019 winter period. Witness Raney testified that in light of prospective growth requirements, Piedmont reviewed new capacity options in addition to continuous monitoring of interstate pipeline and storage capacity offerings. Witness Raney further stated that the Company subscribed to the Leidy Southeast Expansion Project (Leidy Southeast) of Transco, for 100,000 dekatherms (dts) per day of year-around capacity and 20,000 dts per day on Transco's Virginia Southside Expansion Project (Virginia Southside). Witness Raney testified that previously contracted capacity for Leidy Southeast and Transco's Virginia Southside went into service in late 2015 and 2016. The Company signed a Precedent Agreement with the Atlantic Coast Pipeline (ACP) in October 2014 for 160,000 dts of firm capacity, which is scheduled to go in service in November 2019. Witness Raney testified that growth projections begin to show a capacity deficit beginning in the 2019-2020 timeframe if the ACP capacity does not go into service as projected.

Witness Raney testified that capacity additions are acquired in "blocks" of additional transportation, storage, or LNG capacity, as they become needed, to ensure Piedmont's ability to serve its customers based on the options available at that time. Witness Raney explained that as a practical matter, this means that at any given moment in time, Piedmont's actual capacity assets will vary somewhat from its forecasted demand capacity requirements. Witness Raney also stated that this aspect of capacity planning is unavoidable, but Piedmont attempts to mitigate the impact of any mismatch through its use of bridging services, capacity release, and off-system sales activities.

Witnesses Raney and Stabley also indicated that during the past year the Company has taken several additional steps to manage its costs, including, actively participating in proceedings at the FERC and other regulatory agencies that could reasonably be expected to affect the Company's rates and services, promoting more efficient peak day use of its system, and utilizing the flexibility within its existing supply and capacity contracts to purchase and dispatch gas, and release capacity in the most cost-effective manner.

Ms. Cathy Buckley testified as a public witness. Witness Buckley testified that she is not a customer of Piedmont, but, rather was testifying as a representative of the Sierra Club. In summary, witness Buckley made a general statement asserting that Piedmont has failed to show that its gas costs were prudently incurred. In addition, witness Buckley expressed her opinion that construction of the ACP should not be approved because the ACP is not needed, and that the Commission should disallow Piedmont's costs associated with the ACP. Further, witness Buckley requested that the Commission conduct a review of the contracts between ACP and Duke relating to the Duke utilities' subscriptions to capacity from ACP. In response to questions from the Commission, witness Buckley stated that her concerns about the ACP project are in relation to global warming and opposition to fossil fuels, and in favor of renewable fuel sources. Witness Buckley also questioned the necessity of the proposed Piedmont Robeson LNG project.

- The Public Staff Panel testified that, although the scope of Commission Rule R1-17(k) is limited to a historical review period, they also considered other information in order to anticipate the Company's requirements for future needs, including design day estimates, forecasted gas supply needs, projection of capacity additions and supply changes, and customer load profile changes.

The Public Staff Panel testified that they reviewed the testimony and exhibits of the Company's witnesses, the monthly operating reports, and the gas supply and pipeline transportation and storage contracts, as well as the Company's responses to the Public Staff's data requests. Based on this review, the Panel testified that the Company's gas costs were prudently incurred.

DISCUSSION AND CONCLUSIONS

Pursuant to N.C. Gen. Stat. § 62-133.4(e), the Commission is authorized to include all costs related to the purchase and transportation of natural gas to the natural gas local distribution company's system. Pursuant to that statute, in Docket No. G-100, Sub 58, the Commission adopted Rule R1-17(k), which includes "charges in connection with the purchase, storage or transportation of gas for the LDC's system supply" in the definition of gas costs.

Further, N.C. Gen. Stat. § 62-36.01 addresses the need to have natural gas local distribution companies enter into service agreements with interstate or intrastate pipelines to provide increased competition in North Carolina's natural gas industry. It authorizes the Commission, under certain circumstances, to order natural gas local distribution companies (LDCs) to enter into such agreements. In Docket No. G-100, Sub 91, the Commission issued an Order Requiring Reporting, which required LDCs to include information in their annual reviews concerning their future capacity needs in order to assist the Commission in carrying out its responsibilities under the statute. Although the Commission is not exercising its authority under N.C.G.S. § 62-36.01 in this docket, it recognizes that Piedmont's efforts to enter into a service agreement with ACP has the desired effect of increasing competition while reducing the risk of service interruptions.

In the prefiled questions in the Commission's Order Providing Notice of Commission Questions, and at the hearing of this matter, the Commission made inquiry into variations in projected customer demand for future periods reflected in successive Piedmont annual prudence filings. In particular, the Commission focused on changes in projected demand for the winter of 2018-2019 in the four previous annual prudence review filings by Piedmont, which reflected a decrease in projected demand of approximately 47,000 dekatherms between the Docket No. G-9, Sub 690 filing and the G-9, Sub 710 filing. Piedmont's witnesses clarified that the projected demand for this future winter period was calculated in each annual review filing using a consistently applied linear regression analysis based upon an assumed usage per heating degree day. The assumed usage per heating degree day was based on actual experience over the preceding seven year period. According to Piedmont witness Raney, the drop in projected demand for the winter 2018-2019 period was attributable to the inclusion in the look back period utilized to calculate usage per heating degree day of two relatively warm winter periods and the impacts of

Hurricane Matthew. Both Piedmont witness Raney and Public Staff witness Naba indicated that they were comfortable with Piedmont's design day calculation methodology.

In the prefiled questions attached to the Commission's Order Providing Notice of Commission Questions in this docket, and on questions from the Commission at the hearing of this matter, the issue was raised as to whether Piedmont's capacity acquisition planning and arrangements were adequate to meet customer needs in light of customer growth and changing dynamics on the interstate pipelines through which Piedmont receives upstream supplies of gas. Piedmont's written responses to the prefiled questions, as well as the testimony of Company witness Raney and the revised testimony of the Public Staff Panel, support the conclusion that Piedmont's capacity acquisition planning and arrangements are reasonable and prudent to meet projected customer demand.

In addition to its design-day demand calculation, Piedmont also utilizes a five percent (5%) reserve margin in its capacity planning and acquisition activities. In its prefiled questions, the Commission noted that, when Piedmont first proposed to use a 5% reserve margin, it used a warmer design day than other LDCs in North Carolina. The Public Staff pointed to that fact to support the addition of a 5% reserve margin, stating that, with the reserve margin, Piedmont's level of demand was equivalent to that calculated using a colder design day. In a subsequent docket, a Piedmont witness also testified in effect that the reserve margin protected against demand at a colder temperature. However, Piedmont has since significantly lowered its design-day temperature criteria. In this docket, Public Staff witness Naba testified that the Public Staff had reviewed Piedmont's use of the 5% reserve margin. She stated that the 5% reserve margin provides a cushion against higher than projected customer demand or the potential for a constraint on its upstream capacity assets on a peak day. Witness Naba noted that, historically, the Public Staff has seen a growth in Piedmont's firm customer demand and that Piedmont has a legal obligation to provide natural gas to its firm customers on the coldest day of the year. The Commission recognizes Piedmont's responsibility to stand ready to serve its customers. It also recognizes that the Public Staff represents the using and consuming public and its testimony should be given significant weight. It therefore concludes that Piedmont's capacity planning and acquisition activities are reasonable and prudent in this regard.

Piedmont's testimony (and/or written responses to Commission questions) and the Public Staff Panel's revised testimony support the fact that Piedmont has an affirmative legal obligation to maintain sufficient upstream capacity assets to serve its firm customers natural gas needs. These needs are not constant throughout the year and, accordingly, Piedmont acquires upstream capacity for baseload supply, seasonal demand during the November through March timeframe each year, and for peak day projected demand on the coldest days of the year. In order to meet its legal obligations to customers, Piedmont must ensure that these baseload, seasonal, and peak day assets exceed projected customer consumption patterns. The uncontroverted testimony in this proceeding supports the conclusion that Piedmont's capacity planning and acquisition activities taken as a whole are reasonable and prudent.

The testimony in this proceeding also demonstrates, however, that Piedmont's capacity planning has been impacted by changes in flow patterns that have occurred in recent years on the Transco pipeline. These changing flow dynamics, which include the reversal of flows in Transco's Zone 5 on occasion, have created uncertainty about the relative firmness of deliverability of supply utilizing north-to-south secondary segmented transportation rights from downstream supply sources (backhaul) on Transco. Piedmont has recently undertaken certain steps to "firm up" its capacity portfolio with respect to these supplies that were dependent on backhaul by purchasing additional primary firm North to South capacity rights on Transco in lieu of relying on secondary segmentation rights. Witness Stabley testified that firm asset management agreement contracts were used to provide for delivery to Piedmont's city gate. She also testified that agreements to firm up delivery of formally backhaul supplies is on a temporary basis, with contracts expiring in October 2019.

According to Piedmont witness Raney, the additional capacity promised by the ACP project and the proposed Robeson LNG project will also mitigate the negative impacts of changing flow dynamics on Transco. Witness Raney also testified that the vast majority of natural gas supplied to Piedmont in North Carolina currently comes off Transco, and if Transco had some serious issue, that would cause a serious issue for Piedmont.

As required in the Docket No. G-100, Sub 91 Order Requiring Reporting, Piedmont listed the FERC proceedings in which the Company participated. The Commission notes that during the review period, the Commission itself took active positions in a number of FERC dockets.

Piedmont has contracted for capacity from Transco's Eminence Storage Field (Eminence). Piedmont has not taken any position at the FERC regarding demand credits to customers where significant portions of the Eminence Storage Field are out of service. The Commission, on the other hand, has been active before the FERC on matters pertaining to Eminence.

Tomlinson Exhibit 1, Schedule 2 shows that, during the review period, Piedmont paid $2,318,429 for ESS (Eminence) Demand and Capacity, of which 85.08% or $1,972,519 was charged to North Carolina ratepayers.

In Docket No. CP11-551, Transco requested that it be allowed to abandon four of seven salt dome caverns at Eminence. After granting Transco's request to abandon the caverns at Eminence, the FERC established new operating parameters for each of the remaining three caverns. However, filings at the FERC show that Transco has been taking the remaining storage caverns out of service for extended periods for testing and maintenance, thereby raising questions as to whether it can meet the certificate parameters. Despite taking significant portions of the Eminence Storage Field out of service, Transco has not been providing demand credits to customers like Piedmont. Piedmont has not pursued demand credits, which ultimately would benefit its own North Carolina customers.

In contrast, the Commission actively pursued the question of demand credits with the FERC and, as a result, Docket No. CP18-42 was opened. Transco asserted that it operates its system on an integrated basis and, as long as it meets its contractual obligations for capacity and deliverability, it does not matter what assets it actually uses to provide those services. Piedmont filed an intervention in CP18-42, but took no position.

Following the Commission's pursuit of demand credits and the opening of the related FERC docket, Transco filed a request to reduce the certificated capacity of Eminence in Docket No. CP18-145, essentially, in the Commission's opinion, conceding that Eminence could not meet the operating parameters required by FERC in CP11-551. In effect, while Transco may have met its contractual obligations to Piedmont using undefined system assets, the Commission does not believe it was, in fact, capable of meeting full contract demand for all customers at any single point in time from Eminence. Piedmont paid for and should be assured of firm service from Transco at Eminence. The Commission has no way of knowing if Transco's undefined system assets would actually have been available on a firm basis if the system had experienced a design-day event. Accordingly, the Commission filed a protest intervention in CP18-145 based on the lack of support Transco provided for its requested certificate revisions. The Commission notes that Piedmont filed an intervention in CP18-145 on April 10, 2018, but again, took no position.

The Public Staff has recommended that the Commission find that Piedmont's gas costs were prudently incurred. The Commission agrees with and will accept that recommendation. However, the Commission remains interested in Piedmont's decisions with regard to participation in matters before the FERC. In future annual reviews, the Commission will continue to monitor and closely scrutinize the positions and actions taken by Piedmont on FERC matters, including Eminence.

The Commission appreciates witness Buckley's interest in this proceeding and her time in appearing before the Commission to testify. However, the Commission gives little weight to witness Buckley's testimony, for several reasons. First, witness Buckley provided no facts in support of her assertion that Piedmont failed to show that its gas costs were prudently incurred. Second, this Commission does not have jurisdiction over either the certification or construction of the ACP project. ACP will be an interstate natural gas pipeline which, under the provisions of the federal Natural Gas Act, is subject to the exclusive jurisdiction of the FERC. As such, concerns about the need for the project, and whether the actual capacity to be provided by the project is required by the public convenience and necessity, are matters properly addressed to the FERC, not to this Commission.

Third, with respect to witness Buckley's request that the Commission conduct an inquiry into the agreements between Duke Energy utility subsidiaries subject to this Commission's jurisdiction and ACP, the Commission notes that utility self-dealing between affiliates of Duke Energy is prohibited under statutes and the Regulatory Conditions and Code of Conduct approved by the Commission in the order approving the merger between Duke Energy and Piedmont. Order Approving Merger Subject to Regulatory Conditions and Code of Conduct, Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682 (September 29, 2016). The Commission also notes that pursuant to the Regulatory Conditions and N.C. Gen Stat. § 62-153, it has reviewed the precedent agreements between ACP and Piedmont in Docket Nos. G-9, Sub 655, E-7, Sub 1062 and E-2, Sub 1052, and has authorized Piedmont to enter into agreements for service from ACP. Finally, the Commission notes that no monies have been paid under the Piedmont precedent agreements to date and, thus, Piedmont is not seeking in this docket to recover any gas or capacity costs paid to ACP. Indeed, the Commission's orders approving the ACP precedent agreements, and amendments thereto, expressly reserve any issue of reasonable costs for resolution in subsequent proceedings. The same is and will continue to be true with regard to Piedmont's future recovery of costs associated with its Robeson LNG project.

Based on the foregoing, the Commission concludes that the Company's gas costs incurred during the review period were reasonable and prudently incurred and that the Company should be permitted to recover 100% of its prudently incurred gas costs.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 17

The evidence supporting this finding of fact is contained in the testimony of Company witness Tomlinson and the revised Public Staff Panel testimony.

Company witness Tomlinson testified that based on the Company's deferred accounts end-of-period balances, as reflected on Tomlinson Exhibit_(MBT-3) and Exhibit_(MBT-4), she recommended that the increments/decrements to Piedmont's rates be placed into effect for a period of 12 months after the effective date of the final order in this proceeding.

The Public Staff Panel testified that they had reviewed Company witness Tomlinson's proposed temporary rate increment applicable to the Sales Customers Only Deferred Account balance in Tomlinson Exhibit_(MBT-4), and the proposed temporary rate decrements applicable to the All Customers Deferred Account balance in Tomlinson Revised Exhibit_(MBT-3), and agreed that they should be implemented. The Panel also recommended that Piedmont remove all temporary rates that were implemented in Docket No. G-9, Sub 710, Piedmont's last annual review proceeding.

The Public Staff Panel further testified that Piedmont should monitor the balances in both the All Customers and Sales Customers Only Deferred Accounts, and, if needed, file an application for authority to implement new temporary increments or decrements through the Purchased Gas Adjustment mechanism in order to keep the deferred account balances at reasonable levels.

Based on the foregoing, the Commission concludes that the Company's proposed temporary rates should be implemented. In addition, the Commission concludes that it is appropriate for the Company to remove the temporary rates that were implemented in Docket No. G-9, Sub 710.

IT IS, THEREFORE, ORDERED as follows:

1. That the Company's accounting for gas costs during the 12-month period ended May 31, 2018, is approved;

2. That the gas costs incurred by Piedmont during the 12-month period ended May 31, 2018, including the Company's hedging costs, were reasonably and prudently incurred, and Piedmont is hereby authorized to recover 100% of its gas costs incurred during the review period;

3. That the Company shall remove the existing temporaries that were implemented in Docket No. G-9, Sub 710, and implement the temporary rate increment for the Sales Customers Only Deferred Account and the temporary rate decrements for the All Customers Deferred Account, as found appropriate herein, effective for service rendered on and after the first day of the month following the date of this Order;

4. That Piedmont shall give notice to its customers of the rate changes allowed in this Order; and

5. That Piedmont shall file revised tariffs within five (5) days of the date of this Order implementing the rate changes approved in Ordering Paragraph No. 3 above.

ISSUED BY ORDER OF THE COMMISSION.
This the 20th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
A. Shonta Dunston, Acting Deputy Clerk

DOCKET NO. G-5, SUB 591

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Public Service Company of North Carolina, Inc. for Annual Review of Gas Costs Pursuant to N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6)	))))	ORDER ON ANNUAL REVIEW OF GAS COSTS

HEARD: Tuesday, August 14, 2018, at 10:00 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding, Commissioner Jerry C. Dockham, and Commissioner Charlotte A. Mitchell

APPEARANCES:

For Public Service Company of North Carolina, Inc.:

Andrea R. Kells, McGuireWoods LLP, 434 Fayetteville Street, Suite 2600, Raleigh, North Carolina 27601

For the Using and Consuming Public:

Gina C. Holt, Staff Attorney, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

BY THE COMMISSION: On June 1, 2018, pursuant to N.C. Gen. Stat. § 62-133.4(c) and Commission Rule R1-17(k)(6), Public Service Company of North Carolina, Inc. (PSNC or Company), filed the direct testimony and exhibits of Candace A. Paton, Rates & Regulatory Manager for PSNC, and Rose M. Jackson, General Manager – Supply & Asset Management for

SCANA Services, Inc., in connection with the annual review of PSNC's gas costs for the 12-month period ended March 31, 2018.

On June 7, 2018, the Commission issued its Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines, and Requiring Public Notice. This Order established a hearing date of Tuesday, August 14, 2018, set prefiled testimony dates, and required the Company to give notice to its customers of the hearing on this matter.

On July 19, 2018, the Company filed Revised Jackson Exhibit 1.

On July 30, 2018, the Public Staff filed the joint testimony of Geoffrey M. Gilbert, Utilities Engineer, Natural Gas Division; Julie G. Perry, Manager of the Natural Gas Section, Accounting Division; and Sonja M. Johnson, Staff Accountant, Accounting Division.

On August 3, 2018, the Company filed its Affidavits of Publication.

On August 8, 2018, the Commission issued an Order Providing Notice of Commission Questions.

On August 14, 2018, the matter came on for hearing as scheduled, and all prefiled testimony and exhibits were admitted into evidence. No public witnesses appeared at the hearing.

On September 6, 2018, the Company filed Paton Late-filed Exhibits 2 and 3 in response to the Commission's request at the hearing.

On September 24, 2018, the Joint Proposed Order of PSNC and the Public Staff was filed.

Based on the testimony and exhibits received into evidence and the entire record in this proceeding, the Commission makes the following:

FINDINGS OF FACT

1. PSNC is a corporation duly organized and existing under the laws of the State of South Carolina, having its principal office and place of business in Gastonia, North Carolina. PSNC operates a natural gas pipeline system for the transportation, distribution, and sale of natural gas to approximately 563,000 customers in the State of North Carolina.

2. PSNC is engaged in providing natural gas service to the public, is a public utility as defined in N.C. Gen. Stat. § 62-3(23), and is subject to the jurisdiction of this Commission.

3. PSNC has filed with the Commission and submitted to the Public Staff all of the information required by N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k) and has complied with the procedural requirements of such statute and rule.

4. The review period in this proceeding is the 12 months ended March 31, 2018.

5. During the review period, PSNC incurred total gas costs of $235,756,953, comprised of demand and storage charges of $91,043,579, commodity gas costs of $145,801,389, and other gas costs of ($1,088,016).

6. In compliance with the Commission's order in Docket No. G-100, Sub 67, the Company credited 75% of the net compensation from secondary market transactions, which amounted to $34,269,198, to its All Customers Deferred Account.

7. As of March 31, 2018, the Company had a debit balance (owed from the customers to the Company) of $1,443,014 in its Sales Customers Only Deferred Account and a credit balance of $13,770,526 (owed from the Company to the customers) in its All Customers Deferred Account.

8. The Company properly accounted for its gas costs incurred during the review period.

9. PSNC's hedging activities during the review period were reasonable and prudent.

10. As of March 31, 2018, the Company had a debit balance of $2,376,550 in its Hedging Deferred Account.

11. It is appropriate for the Company to transfer the $2,376,550 debit balance in the Hedging Deferred Account to its Sales Customers Only Deferred Account. The combined balance for the Hedging and Sales Customers Only Deferred Accounts is a debit balance of $3,819,564, owed by customers to the Company.

12. PSNC has adopted a gas supply policy that it refers to as a "best cost" supply strategy. This gas supply acquisition policy is based upon three primary criteria: supply security, operational flexibility, and the cost of gas.

13. PSNC has firm transportation and storage contracts with interstate pipelines, which provide for the transportation of gas to the Company's system, and both long-term and supplemental short-term supply contracts with producers, marketers, and other suppliers.

14. The gas costs incurred by PSNC during the review period were prudently incurred, and the Company should be permitted to recover 100% of such prudently incurred gas costs.

15. As proposed by PSNC witness Paton and agreed to by the Public Staff, the Company should not implement any new temporary rate changes in the instant docket at this time.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-2

These findings are essentially informational, procedural, or jurisdictional in nature and were not contested by any party. They are supported by information in the Commission's public files and records and the testimony and exhibits filed by the witnesses for PSNC and the Public Staff.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 3-4

The evidence supporting these findings of fact is contained in the testimony of PSNC witnesses Jackson and Paton, and the testimony of Public Staff witnesses Gilbert and Johnson. These findings are based on N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6).

Pursuant to N.C. Gen. Stat. 62-133.4, PSNC is required to submit to the Commission information and data for an historical 12-month review period, including PSNC's actual cost of gas, volumes of purchased gas, sales volumes, negotiated sales volumes, and transportation volumes. Commission Rule R1-17(k)(6)(c) requires that PSNC file weather normalization data, sales volume data, work papers, and direct testimony and exhibits supporting the information.

Witness Paton testified that Rule R1-17(k)(6) requires PSNC to submit to the Commission on or before June 1 of each year certain information with supporting work papers based on the 12-month period ending March 31. Witness Paton indicated that the Company had filed the required information. Witness Paton also stated that the Company had provided to the Commission and the Public Staff on a monthly basis the gas cost and deferred gas cost account information required by Commission Rule R1-17(k)(5)(c). Witnesses Gilbert and Johnson presented the results of their review of the gas cost information filed by PSNC in accordance with N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k)(6).

Based on the foregoing, the Commission concludes that PSNC has complied with the procedural requirements of N.C.G.S. § 62-133.4(c) and Commission Rule R1-17(k) for the 12-month review period ended March 31, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-8

The evidence supporting these findings of fact is found in the testimony and exhibits of PSNC witness Paton and the testimony of Public Staff witnesses Gilbert and Johnson.

PSNC witness Paton's exhibits show that the Company incurred total gas costs of $235,756,953 during the review period, which was comprised of demand and storage costs of $91,043,579, commodity gas costs of $145,801,389, and other gas costs of ($1,088,016). Public Staff witness Johnson confirmed that total gas costs for the review period ended March 31, 2018, were $235,756,953.

The Public Staff's testimony included a thorough analysis of PSNC's gas costs. That testimony showed that the level of demand and storage charges were down 2.4% from the level in last year's annual review in Docket No. G-5, Sub 578. The bulk of the reduction was attributed to changes in the cost of three sources of capacity. The most significant reduction was a $1,294,395 reduction in the rates paid to Cardinal Pipeline Company LLC as a result of a general rate case in Docket No. G-39, Sub 38. The costs of PSNC's capacity from Pine Needle LNG, which is regulated by the Federal Energy Regulatory Commission (FERC), decreased $780,633 as a result of a change in Pine Needle LNG's Electric Power and Fuel Tracker in FERC Docket No. RP17-576. PSNC leases 17,250 dekatherms per day (dts/day) of intrastate capacity from the City of Monroe. The contract between PSNC and Monroe called for payments to be made for a set term. The end of payments resulted in a $546,188 reduction in costs compared to the previous review period.

The Commission notes that the demand and storage costs paid by PSNC have increased in recent years as additional capacity was added to accommodate growth. In PSNC's Docket No. G-5 Sub 568, which covered a 12-month review period ending March 31, 2016, demand and storage costs rose sharply to approximately $89.3 million from $75.2 million during the previous review period. This increase was mostly attributed to the cost of adding 100,000 dts/day on Transcontinental Gas Pipe Line Company, LLC's (Transco's) Leidy Southeast project.

Public Staff witness Johnson stated that the Company recorded $45,692,268 of margin on secondary market transactions (SMT), including capacity release transactions and storage management arrangements, during the review period. Of this amount, $34,269,198 was credited to the All Customers Deferred Account for the benefit of ratepayers. She further testified that the bulk of the SMT margins, totaling $39,551,582, were produced by Asset Management Agreements.

PSNC witness Paton's prefiled testimony and exhibits reflected a Sales Customers Only Deferred Account debit balance of $1,443,014 (owed to the Company by customers) and a credit balance of $13,770,526 (owed to customers by the Company) in its All Customers Deferred Account as of March 31, 2018. Public Staff witness Johnson agreed with these balances and testified that PSNC properly accounted for its gas costs during the review period.

Based upon the foregoing, the Commission concludes that the Company properly accounted for its gas costs incurred during the review period. The Commission also concludes that the appropriate level of total gas costs incurred by PSNC for this proceeding is $235,756,953. The Commission further concludes that the appropriate balances as of March 31, 2018, are a debit balance of $1,443,014, owed to the Company, in its Sales Customers Only Deferred Account and a credit balance of $13,770,526, owed to customers, in its All Customers Deferred Account.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 9-11

The evidence for these findings of fact is contained in the testimony of PSNC witnesses Paton and Jackson and the testimony of Public Staff witnesses Perry and Johnson.

PSNC witness Paton testified that the Company's Hedging Deferred Account balance for the 12-month review period ended March 31, 2018, was $2,376,550, a net debit balance, due from customers. Public Staff witness Perry testified that this balance was composed of: Economic Gains – Closed Positions of ($271,330); Premiums Paid of $2,591,190; Brokerage Fees and Commissions of $14,375; and Interest on the Hedging Deferred Account of $42,316. Public Staff witness Perry further stated that the hedging charges resulted in an annual charge of $3.15 for the average residential customer which equates to approximately $0.26 per month. Witness Perry also testified that PSNC's weighted average hedged cost of gas for the review period was $3.81 per dekatherm.

PSNC witness Jackson testified that the primary objective of PSNC's hedging program has always been to help mitigate the price volatility of natural gas for PSNC's firm sales customers at a reasonable cost. She further testified that PSNC's hedging program meets this objective by having financial instruments such as call options or futures in place to mitigate, in a cost effective manner, the impact of unexpected or adverse price fluctuations to its customers.

Witness Jackson testified that the hedging program provides protection from higher prices through the purchase of call options for up to 25% of PSNC's estimated sales volume. Witness Jackson further stated that in order to help control costs, the call options are purchased at a price no higher than 10% of the underlying commodity price. She also stated that PSNC limits its hedging to a 12-month future time period, which allows PSNC to obtain more favorable option pricing terms and better react to changing market conditions.

Witness Jackson explained that PSNC's hedging program continues to utilize two proprietary models developed by Kase and Company that assist in determining the appropriate timing and volume of hedging transactions. She stated that the total amount available to hedge is divided equally between the two models.

Witness Jackson further testified that no changes were made to PSNC's hedging program during this review period. Witness Jackson stated that PSNC will continue to analyze and evaluate its hedging program and implement changes as warranted.

Public Staff witness Perry stated that her review of the Company's hedging activities involves an ongoing analysis and evaluation of the Company's monthly hedging deferred account reports, detailed source documentation, work papers supporting the derivation of the maximum targeted hedge volumes for each month, periodic reports on the status of hedge coverage for each month, and periodic reports on the market values of the various financial instruments used by the Company to hedge. In addition, the Public Staff reviews monthly Hedging Program Status Reports, monthly reports reconciling the Hedging Program Status Report and the hedging deferred account report, minutes from the meetings of SCANA's Risk Management Committee (RMC), and minutes from the meetings of the Board of Directors and its committees that pertain to hedging activities. Further, the review includes reports and correspondence from the Company's internal and external auditors, hedging plan documents, communications with Company personnel regarding key hedging events and plan modifications under consideration by SCANA's RMC, and the testimony and exhibits of the Company's witnesses in the annual review proceeding. Witness Perry testified that based on her analysis of what was reasonably known or should have been known at the time the Company made its hedging decisions affecting the review period, as opposed to the outcome of those decisions, she concluded that the Company's hedging decisions were prudent.

Witness Perry further testified that the $2,376,550 debit balance in the Hedging Deferred Account as of the end of the review period should be transferred to the Sales Customers Only Deferred Account. Based on this recommendation, Public Staff witness Johnson stated that the appropriate balance in the Sales Customers Only Deferred Account as of March 31, 2018, after the hedging balance transfer, should be a net debit balance of $3,819,564, owed by the customers to the Company.

Based on the testimony and exhibits provided by PSNC and the Public Staff, the Commission finds that PSNC's hedging program has met the objective of contributing to the mitigation of gas price volatility and avoiding rate shock to customers. The Commission concludes that PSNC's hedging activities during the review period were reasonable and prudent and that the $2,376,550 debit balance in the Hedging Deferred Account as of the end of the review period should be transferred to the Company's Sales Customers Only Deferred Account. The Commission finds that the appropriate combined balance for the Hedging and Sales Customers Only Deferred Accounts is a debit balance of $3,819,564.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12-14

The evidence for these findings of fact is found in the testimony of PSNC witness Jackson and the testimony of Public Staff witness Gilbert.

Gas Supply

PSNC witness Jackson testified that the most appropriate description of PSNC's gas supply procurement policy would be a "best cost" supply strategy, which is based on three primary criteria: supply security, operational flexibility, and cost of gas. PSNC witness Jackson stated that security of supply is the first and foremost criterion, which refers to the assurance that the supply of gas will be available when needed. Witness Jackson went on to state that supply security is obtained through PSNC's diverse portfolio of suppliers, receipt points, purchase quantity commitments, and terms. She also testified that potential suppliers are evaluated on a variety of factors, including past performance, creditworthiness, available terms, gas deliverability options, and supply location.

Witness Jackson testified that the second criterion is maintaining the necessary operational flexibility in the gas supply portfolio that will enable PSNC to react to unpredictable weather on firm sales gas usage. She noted that PSNC's gas supply portfolio must be capable of handling the monthly, daily, and hourly changes in customer demand needs. Witness Jackson also testified that operational flexibility largely results from PSNC's gas supply agreements having different purchase commitments and swing capabilities (for example, the ability to adjust purchased gas within the contract volume on either a monthly or daily basis) and from PSNC's injections into and withdrawals out of storage.

In regard to the third criterion, cost of gas, PSNC witness Jackson stated that in evaluating costs it is important to consider not only the actual commodity cost, but also any transportation-related charges such as reservation, usage, and fuel charges. She further stated that PSNC routinely requests gas supply bids from suppliers to help ensure the most cost-effective proposals. Witness Jackson further testified that in securing natural gas supply for its customers, PSNC is committed to acquiring the most cost-effective supplies while maintaining the necessary security and operational flexibility. She testified that PSNC has developed a gas supply portfolio made up of long-term agreements and supplemental short-term agreements with a variety of suppliers, including both producers and independent marketers.

Witness Jackson also testified that the majority of PSNC's interstate pipeline capacity is obtained from Transco, the only interstate pipeline with which PSNC has a direct connection. The Company also has a backhaul transportation arrangement with Transco to schedule deliveries of gas from pipelines and storage facilities downstream of PSNC's system, as well as transportation and/or storage service agreements with Dominion Energy Transmission, Inc.; Columbia Gas Transmission, LLC; Texas Gas Transmission, LLC; East Tennessee Natural Gas LLC; Dominion Energy Cove Point LNG, LP; Saltville Gas Storage Company, LLC; and Pine Needle LNG Company, LLC.

Witness Jackson further testified that PSNC engages in the following activities to lower gas costs while maintaining security of supply and delivery flexibility:

1. PSNC continues to optimize the flexibility available within its supply and capacity contracts to realize their value;

2. PSNC monitors and intervenes in matters before the FERC whose actions could impact PSNC's rates and services to its customers;

3. PSNC continues to work with its industrial customers to transport customer-acquired gas;

4. PSNC routinely communicates directly with customers, suppliers, and other industry participants, and actively monitors developments in the industry;

5. PSNC frequently has internal discussions concerning gas supply policy and major purchasing decisions;

6. PSNC utilizes deferred gas cost accounting to calculate the Company's benchmark cost of gas to provide a smoothing effect on gas price volatility; and,

7. PSNC conducts a hedging program to help mitigate price volatility.

<u>Pipeline Capacity and Storage</u>

PSNC Witness Jackson testified that in the summer of 2017 PSNC submitted a binding request for capacity on Transco's Southeastern Trail expansion project, which will provide additional firm transportation service with a receipt point at the existing Pleasant Valley Transco-Cove Point interconnection in Fairfax County, Virginia, and a delivery point at the existing Transco Station 65 pooling point in St. Helena Parish, Louisiana. In November 2017, PSNC and Transco executed a precedent agreement for this transportation service. Witness Jackson testified that the project has a target in-service date of late 2020.

Witness Jackson further noted that in previous gas cost reviews she had testified that PSNC entered into a precedent agreement with Atlantic Coast Pipeline, LLC (ACP) to acquire capacity on ACP's 550-mile pipeline project that will run from Harrison County, West Virginia, to Robeson

County, North Carolina. She provided the Commission with an update on developments concerning the status of the project and PSNC's contracting for service with ACP.

Witness Jackson also presented testimony regarding PSNC's precedent agreements with Mountain Valley Pipeline, LLC (MVP) to obtain capacity on its mainline pipeline project running from northwestern West Virginia to Pittsylvania County, Virginia, as well as on an approximately 70-mile lateral running from the termination of the mainline to delivery points at PSNC's Dan River and Haw River interconnects in Rockingham and Alamance Counties, North Carolina, respectively. The lateral project is the Mountain Valley Southgate project (MVP Southgate). Specifically, PSNC contracted for 250,000 dts/day of capacity on MVP and 300,000 dts/day on MVP Southgate. The additional 50,000 dts/day of capacity on the lateral will be used by PSNC to receive primary firm, forward-haul deliveries directly from East Tennessee through a new interconnection with MVP. Witness Jackson testified that MVP was expected be placed into service in the first quarter of 2019 and MVP Southgate would come on line in late 2020.

Witness Jackson provided testimony on the profound change that has taken place in the interstate pipeline and storage market as a result of shale gas production in the Northeast. She indicated this change has impacted the Company's gas supply security planning, requiring that additional capacity be secured to meet customer needs, particularly during periods of cold weather. She testified that:

> The Company has been able to use segmentation of the Transco firm transportation capacity and schedule backhaul deliveries of gas from Columbia Gas, Cove Point, DETI, East Tennessee/Saltville, Pine Needle, and Texas Gas - natural gas storage facilities and connecting pipelines located downstream of the PSNC system.

She distinguished "forward haul" and "backhaul":

> Forward haul involves the transportation of gas in the same direction as the physical flow of gas in the pipeline and is typically achieved when the pipeline transports gas to a delivery point downstream from the point where the gas was received by the pipeline. Backhaul involves the contractual delivery of natural gas in a direction opposite of the physical flow of gas in the pipeline; the receipt point is downstream from the point of delivery.

Witness Jackson testified that:

> PSNC's use of segmentation for backhaul deliveries on Transco can be limited because it is considered secondary firm in scheduling priority. This did not present any problems in the past, but now that gas flow on the Transco system is bidirectional in nature due to the new connected shale gas supply areas of the Northeast, PSNC has on occasion been unable to use segmentation to schedule backhaul deliveries to its city gate.

Jackson Direct Testimony, pp. 8-9.

In response to a Commission question on the reliability of backhaul to meet gas supply, witness Jackson testified that while backhaul had once been considered highly reliable and was available without any additional reservation or demand charge, PSNC has experienced supply cuts from its downstream storage facilities since Transco's Leidy Southeast and Atlantic Sunrise projects came on line with a reversal of the flow of gas on Transco's system on a primary firm basis from north to south. Witness Jackson noted these supply cuts are concerning, stating, "...we're concerned long term what type of restrictions we may see and, therefore, we have contracted for a portion of our storage withdrawal capability on the Southeastern Trail Project on Transco's system." Transcript p. 50. When asked about other efforts to mitigate the loss of backhaul as a reliable option for transporting downstream capacity, witness Jackson referenced PSNC's efforts to contract for capacity on both ACP and MVP.

In response to additional questions from the Commission, witness Jackson testified that the time horizon for getting pipeline projects on line is getting longer. She stated that if there are further delays to the pipelines' in-service dates, the Company will go to the market for "short-term capacity options." She explained that PSNC would stay in constant communication with suppliers about available capacity, either on a forward-haul or backhaul basis, and issue requests for proposal on an annual and seasonal basis. She further testified that PSNC would seek opportunities to secure bundled services for supply and transportation services delivered to PSNC's system. Additionally, witness Jackson testified that the Company looks at interstate pipelines' electronic bulletin boards and would take advantage of any opportunities to acquire existing capacity on Transco's system that might become available at a lower cost.

Part of adhering to its best cost supply strategy means PSNC must plan to have sufficient supply to serve customers' future capacity requirements on PSNC's design day, *i.e.*, the day the Company uses for planning purposes to determine the highest volume of gas it will need to meet firm customers' demand on the accepted peak coldest day that would be anticipated to be experienced in PSNC's territory. Because the Company reasonably anticipates that new customers will be added to the PSNC system going forward,[1] its design-day forecast projects customer load growth which must be accounted for in supply planning. This means adding firm pipeline and storage capacity to serve the growth in design-day needs of PSNC firm customers and to avoid a shortfall in gas supply.

Witness Jackson testified that the projected future design-day demand of PSNC's firm customers is calculated using a statistical modeling program prepared by SCANA Services Resource Planning personnel. She explained that the model assumes a 50 heating degree-day (HDD) on a 60 degree Fahrenheit base and uses historical weather to estimate peak-day demand. Witness Jackson also testified that PSNC presented its forecasted firm peak-day demand requirements for the review period and for the next five winter seasons. She further explained that the assets available to meet PSNC's firm peak-day requirements include year-round, seasonal, and

[1] PSNC is in growth mode. The Company reports an estimate of its number of customers in its annual reviews. Over the past decade, growth has averaged 10,200 customers per year. In this docket, the Company reported approximately 563,000 customers, up 13,000 from the 550,000 reported in last year's annual review.

peaking capabilities and consist of firm transportation and storage capacity on interstate pipelines as well as the peaking capability of PSNC's on-system liquefied natural gas facility.

Witness Gilbert testified that the Public Staff conducted "...an independent analysis using similar calculations to determine peak day demand levels and compare[d] that to the assets the Company ha[d] available (or [was] planning to have available when needed in the future) to meet that demand." Public Staff Direct Testimony at p. 18. The Public Staff used the review period data of customer usage and HDDs, which were calculated by taking the average of the minimum and maximum daily temperature and subtracting that quotient from 65 degrees. (For example, a low of 10 degrees and a high of 30 degrees would yield 45 HDDs.) Base load (usage that does not fluctuate with weather) plus a usage per HDD factor was developed, and the projected peak day demand was calculated. The assumption in developing a peak design-day demand was 55 HDDs (as compared to the 50 HDD on a 60 degree base used by the Company), which is the accepted peak coldest day that would be anticipated to be experienced in PSNC's territory.

Witness Gilbert testified that the results of the Public Staff's analysis were similar to the levels presented by PSNC in Revised Jackson Exhibit 1. Both witness Jackson and witness Gilbert acknowledged that their use of different HDD assumptions had not yielded a significantly different outcome for planning purposes. Witness Gilbert observed that PSNC's design-day demand models showed a shortfall of capacity beginning in the 2019 – 2020 winter season. He cited witness Jackson's testimony that in order to overcome this anticipated shortfall, PSNC has contracted for necessary capacity on ACP, which is expected to come into service by late 2019, and MVP, which is expected to have lateral facilities capable of delivering capacity to PSNC completed by late 2020.

At the hearing, with an eye toward assuring that design-day demand is not over-estimated, the Commission probed whether a reduction in demand resulting from increased efficiency should also result in a reduction in the amount of pipeline and storage capacity required on a design day. At the time the Commission approved PSNC's Customer Usage Tracker (CUT) in general rate case Docket No. G-5, Sub 495, various PSNC witnesses had testified that the CUT would more effectively support the Company's efforts to support conservation and efficiency. Among other efforts, PSNC's proposed residential and commercial high-efficiency rates were mentioned as offering a discount to customers whose dwellings and buildings comply with certain efficiency standards.

In this docket, in response to the Commission's inquiry as to whether the implementation of the CUT had impacted PSNC's design-day requirement or demand calculations, witness Jackson responded that the CUT Mechanism is not factored at all into PSNC's design-day forecast because PSNC is looking at actual throughput on the system. She reiterated that PSNC's projected design-day demand of PSNC's firm customers is calculated using a statistical modeling program prepared by SCANA Services Resource Planning personnel. Presumably, the statistical modeling program picks up efficiency improvements so that their impacts facilitated by the CUT are accounted for in PSNC's calculation of design-day demand, but are not explicitly or separately calculated.

Finally, Witness Gilbert testified regarding the prudence of PSNC's total gas costs. He testified that he had reviewed the testimony and exhibits of the Company's witnesses; monthly operating reports; gas supply and pipeline transportation and storage contracts; and the Company's responses to the Public Staff's data requests. He concluded that, in his opinion, PSNC's gas costs were prudently incurred for the 12-month review period ending March 31, 2018.

DISCUSSION AND CONCLUSIONS

Pursuant to N.C. Gen. Stat. § 62-133.4(e), the Commission is authorized to include all costs related to the purchase and transportation of natural gas to the natural gas local distribution company's system. Pursuant to that statute, in Docket No. G-100, Sub 58, the Commission adopted Rule R1-17(k), which includes "charges in connection with the purchase, storage or transportation of gas for the LDC's system supply" in the definition of gas costs.

Further, N.C. Gen. Stat. § 62-36.01 addresses the need to have natural gas local distribution companies enter into service agreements with interstate or intrastate pipelines to provide increased competition in North Carolina's natural gas industry. It authorizes the Commission, under certain circumstances, to order natural gas local distribution companies to enter into such agreements. In Docket No. G-100, Sub 91, the Commission issued Order Requiring Reporting, which required local distribution companies to include information in their annual reviews concerning their future capacity needs in order to assist the Commission in carrying out its responsibilities under that statute. Although the Commission is not exercising its authority under N.C.G.S. § 62-36.01 in this docket, it recognizes that PSNC's efforts to enter into service agreements with ACP and MVP have the desired effect of increasing competition while reducing the risk of service interruptions. As witness Jackson testified, "instead of relying on one pipeline provider, Transco, we will...in the very near future, have three pipeline providers."

PSNC witness Jackson testified that, because of the reversal of flow on Transco's system, traditional backhaul arrangements that were relied upon to get downstream pipeline and storage capacity to PSNC's system are now classified as "secondary firm" and can no longer be considered reliable. Revised Jackson Exhibit 1 shows both the forecasted firm peak-day demand requirements for the review period as well as for the next five winter seasons, and the assets available to meet those firm peak-day requirements. The Commission notes that a significant amount of capacity shown on Revised Jackson Exhibit 1 as being available to meet design-day needs, particularly seasonal and peaking storage capacity, is downstream of PSNC's system and has traditionally depended on backhaul. When PSNC first announced that it would acquire capacity on ACP, that project was scheduled to come on line in November 2018 and would have been available to firm up the delivery of that downstream capacity. Witness Jackson spoke to the actions that PSNC would now take to ensure that such downstream capacity would be available to its system on a firm basis in the near term. She also pointed to PSNC's efforts to secure more permanent, long-term capacity on Transco's Southeastern Trail, ACP and MVP/MVP Southgate.

The delays being experienced by ACP and MVP are a matter of serious concern. As mentioned above, ACP was scheduled to come on line in November 2018. In this docket, testimony was submitted that it is not going to be available until late 2019. MVP Southgate, which will both deliver gas from MVP to PSNC's system, and provide a firm path for gas from East

Tennessee/Saltville, is not expected to come on line until late 2020, which is also the in-service date for Transco's Southeastern Trail project. As discussed above, witness Jackson testified as to the steps that PSNC would take to get gas to its system on a firm basis when its customers need it. However, Revised Jackson Exhibit 1 makes clear that, if the new interstate projects are delayed, PSNC may have to go to the short-term market for considerable volumes for the next several winters. A reliance on short-term solutions raises serious questions about both their cost and their availability.

The need to firm up interstate pipeline capacity to deliver market-area storage will add significantly to demand and storage costs. As shown on Revised Jackson Exhibit 1, PSNC has contracted for 178,313 dekatherms per day of seasonal capacity. In response to a Commission question, witness Jackson stated that all of those seasonal facilities except for Saltville were depleted oil and gas reservoirs. She added that there are no depleted oil and gas reservoirs available as capacity options in North Carolina. The Commission recognizes that, to access volumes of gas on a seasonal basis, it might be necessary both to maintain existing contracts to what had been market-area seasonal storage and to secure year-round pipeline capacity to move the stored gas to PSNC's city gate. However, the Commission expects PSNC to consider all possibilities as part of its best cost approach to gas supply.

In witness Jackson's description of the Company's actions taken to accommodate its best-cost policy, she listed "Monitor and intervene in matters before the FERC whose actions could impact the rates that PSNC pays and the services it receives from interstate pipelines and storage facilities." Jackson Direct Testimony at p. 15. As required in the Docket No. G-100, Sub 91 Order Requiring Reporting, PSNC listed the FERC proceedings in which the Company participated. In sixteen of the seventeen proceedings listed in Jackson Exhibit 3, PSNC had done nothing more than file a petition to intervene. No position was taken. The Commission notes that during the time period over which PSNC took the reported actions at the FERC, the Commission itself took active positions in a number of FERC dockets.

For example, at the hearing in this docket, the Commission asked both the Public Staff and Company witnesses about Transco's Eminence Storage Field (Eminence). PSNC has not taken any position at the FERC regarding demand credits to customers where significant portions of the Eminence Storage Field are out of service. The Commission, on the other hand, has been active before the FERC on matters pertaining to Eminence.

To further explain, PSNC has contracted for capacity from Eminence under two contracts. Paton Exhibit 1, Schedule 2 shows that, during the review period, PSNC paid $938,594 for ESS Demand and Capacity and $954,471 for Eminence Demand and Capacity. Witness Jackson testified that a few years ago, PSNC contracted with Transco for additional withdrawal and injection capacity, which explains the two different contracts. She further testified that PSNC had "...not encountered any interruptions in our service so that's why we continue to contract for that storage service." Transcript, p. 76.

In Docket No. CP11-551, Transco requested that it be allowed to abandon four of seven salt dome caverns at Eminence. After granting Transco's request to abandon the caverns at Eminence, the FERC established new operating parameters for each of the remaining three caverns. However, filings at the FERC show that Transco has been taking the remaining storage caverns out of service for extended periods for testing and maintenance, thereby raising questions as to whether it can meet the certificate parameters. Despite taking significant portions of the Eminence Storage Field out of service, Transco has not been providing demand credits to customers like PSNC. PSNC has not pursued demand credits, which ultimately would benefit its own North Carolina customers.

In contrast, the Commission actively pursued the question of demand credits with the FERC and, as a result, Docket No. CP18-42 was opened. Transco asserted that it operates its system on an integrated basis and, as long as it meets its contractual obligations for capacity and deliverability, it does not matter what assets it actually uses to provide those services. PSNC filed an intervention in CP18-42, but took no position.

Following the Commission's pursuit of demand credits and the opening of the related FERC docket, Transco filed a request to reduce the certificated capacity of Eminence in Docket No. CP18-145, essentially, in the Commission's opinion, conceding that Eminence could not meet the operating parameters required by FERC in CP11-551. In effect, while Transco may have met its contractual obligations to PSNC using undefined system assets, the Commission does not believe it was, in fact, capable of meeting full contract demand for all customers at any single point in time from Eminence. PSNC paid for and should be assured of firm service from Transco at Eminence. The Commission has no way of knowing if Transco's undefined system assets would actually have been available on a firm basis if the system had experienced a design-day event. Accordingly, the Commission filed a protest intervention in CP18-145 based on the lack of support Transco provided for its requested certificate revisions. PSNC filed an intervention in CP18-145, but again, took no position.

The Public Staff has recommended that the Commission find that PSNC's gas costs were prudently incurred. The Commission agrees with and will accept that recommendation. However, the Commission remains interested in PSNC's decisions with regard to participation in matters before the FERC. In future annual reviews, the Commission will continue to monitor and closely scrutinize the positions and actions taken by PSNC on FERC matters, including Eminence.

Based upon the foregoing, the Commission concludes that the Company's gas costs incurred during the review period ended March 31, 2018, were reasonable and prudently incurred and that the Company should be permitted to recover 100% of its prudently incurred gas costs.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 15

The evidence for this finding of fact is found in the testimony of PSNC witness Paton and the testimony of Public Staff witness Gilbert.

Witness Paton testified that the Company was not proposing new temporary rate increments or decrements at this time. Specifically, PSNC witness Paton testified that the Company proposes to leave the current temporary decrements applicable to the All Customers Deferred Account in place and monitor the balance in the account to determine when or if changes are required. She stated that the Company proposes to continue its practice of taking into consideration the balance in the Sales Customers Only Deferred Account when evaluating whether to file for a change in the benchmark cost of gas. She concluded that the Company believes that making periodic and smaller adjustments in the benchmark cost of gas is preferable to making one adjustment annually based on the over- or under-collection in commodity cost of gas that may exist as of the end of the review period.

Witness Gilbert testified that the All Customers Deferred Account reflects a credit balance of $13,770,526 owed by the Company to customers. He noted that PSNC has proposed not to place a decrement in rates for the adjustment of this credit balance. At the end of May, the over-collection had decreased to $9,145,536, and the Company estimates the balance will "flip" to an under-collection of approximately $8.4 million by the end of October 2018. The Sales Customers Only Deferred Account reflects an under-collection of $1,443,014, owed by customers to the Company. The current tariff rates, which were approved in the Company's Purchased Gas Adjustment (PGA) filing in Docket No. G-5, Sub 583 and became effective January 1, 2018, are based on an over-collection of approximately $15.0 million in the All Customers Deferred Account. Witness Gilbert concluded that removing the decrements that are currently in place and implementing a new rate based on the $13,770,526 credit balance in the All Customers Deferred Account would not be beneficial to the rate payers. He noted that it is not unusual to have a change in the balances, since fixed gas costs are typically over-collected during the winter period when throughput is higher due to heating load, and under-collected during the summer when throughput is lower. He agreed with the Company's proposal to leave the current temporary decrements applicable to the All Customers Deferred Account in place and monitor the balance in the account to determine when or if changes are required. He recommended that PSNC continue to monitor the balances in both the All Customers and the Sales Customers Only Deferred Accounts and file for a request to implement new temporary increments or decrements, as applicable, through the PGA mechanism to avoid significant over-collections of its fixed gas costs. He agreed with PSNC's proposal of not taking any action on the All Customers and the Sales Customers Only Deferred Accounts at this time.

In addition to not changing the temporary decrements that PSNC currently has in place, witness Gilbert also agreed with PSNC's proposal not to place a decrement in rates for the recovery of this credit balance, but to manage it by using the PGA mechanism, pursuant to N.C.G S. § 62-133.4, which PSNC has previously used for this purpose. He concluded that requiring PSNC to implement temporary rate changes in the instant docket at this time would not be productive, and, therefore, he agreed with the Company's proposals. The Commission notes that PSNC's Summary of Deferred Gas Cost Accounts for the month of August that was filed on October 15, 2018 in Docket No. G-5, Sub 586 reported a debit balance of $2,020,888 in the All Customers Deferred Account.

Based on the testimony discussed above, the Commission notes that it is commonplace for the Company to over-collect its fixed gas costs during the winter months and under-collect during summer months and recognizes that this is what occurred during the prior review period ended March 31, 2017, in Docket No. G-5, Sub 578. Had the Commission ordered a rate decrement in that proceeding, the effect would have been counterproductive, due to the fact that by the time temporary decrements would have gone into effect in November 2017, the Company's All Customer Deferred Account was under-collected, and it would have had to file a petition to remove the decrement and perhaps implement an increment.

The Commission concludes that the same would be true in this docket. If the Commission were to require decrements, by the time rates go into effect in November the Company would likely be under-collected and the decrements would exacerbate that position. Based on the facts in the present docket, and the record as a whole, the Commission finds and concludes that it is appropriate not to require PSNC to implement new temporary rate decrements in the instant docket at this time. However, the Commission expects PSNC to continue to monitor market conditions and the Sales Only Customer Deferred Account balances and, if necessary, to file a PGA to make an appropriate adjustment to rates.

IT IS, THEREFORE, ORDERED as follows:

1. That PSNC's accounting for gas costs for the 12-month period ended March 31, 2018, is approved;

2. That the gas costs incurred by PSNC during the 12-month period ended March 31, 2018, including the Company's hedging costs, were reasonably and prudently incurred, and PSNC is hereby authorized to recover 100% of these gas costs as provided herein; and

3. That as proposed by PSNC and agreed to by the Public Staff in the instant docket, PSNC shall not implement any temporary rate changes effective for service rendered on and after December 1, 2018.

ISSUED BY ORDER OF THE COMMISSION
This the 6th day of December, 2018

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. G-40, SUB 145

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Frontier Natural Gas Company for Annual Review of Gas Costs Pursuant to G.S. 62-133.4(c) and Commission Rule R1-17(k)(6)	))))	ORDER ON ANNUAL REVIEW OF GAS COSTS

HEARD: Tuesday, March 6, 2018, at 10:00 a.m., in the Commission Hearing Room 2160, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding; and Commissioners Lyons Gray and Charlotte A. Mitchell

APPEARANCES:

For Frontier Natural Gas Company:

James H. Jeffries IV, McGuireWoods, LLP, 201 N. Tryon Street, Suite 3000, Charlotte, North Carolina 28202

For the Using and Consuming Public:

Elizabeth D. Culpepper, Staff Attorney, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300

BY THE COMMISSION: On December 1, 2017, pursuant to G.S. 62-133.4(c) and Commission Rule R1-17(k)(6), Frontier Natural Gas Company (Frontier or Company) filed the direct testimony and exhibits of Fred A. Steele, President/General Manager, in connection with the annual review of Frontier's gas costs for the 12-month period ended September 30, 2017.

On December 6, 2017, the Commission issued its Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines and Requiring Public Notice. The Order set the annual review of the Company's gas costs for hearing on March 6, 2018, set pre-filed testimony dates, and required Frontier to give notice of the hearing.

On February 15, 2018, the Public Staff – North Carolina Utilities Commission (Public Staff) filed a motion requesting that the Commission extend the date for the Public Staff to file its testimony to February 22, 2018, and the date for Frontier to file its rebuttal to March 2, 2018. The Commission granted the extension of time by order dated February 16, 2018.

On February 22, 2018, the Public Staff filed the joint direct testimony and exhibits of Jan A. Larsen, Director, Natural Gas Division; Shawn L. Dorgan, Staff Accountant, Accounting Division; and Julie G. Perry, Accounting Manager, Natural Gas & Transportation Section, Accounting Division (Public Staff Panel). On February 27, 2018, the Public Staff filed revised Pages 9, 10, and 22 to its pre-filed testimony.

On March 1, 2018, Frontier filed the rebuttal testimony of Company witness Steele and its Affidavits of Publication of Public Notice of Hearing.

No other party intervened in this docket.

On March 1, 2018, Frontier and the Public Staff filed a joint motion for witnesses to be excused from appearance at the hearing and requested that the pre-filed testimony and exhibits of all witnesses be received into the record without requiring the appearance of any such witnesses, which was granted by the Commission on March 2, 2018.

On March 6, 2018, the matter came on for hearing as scheduled, and all pre-filed testimony and exhibits were admitted into evidence. No public witnesses appeared at the hearing. In accordance with the March 2 Order, no expert witnesses took the stand or provided testimony at the hearing and all pre-filed testimony and exhibits were received and stipulated into the record.[1]

In compliance with the requirements of Chapter 138A of the North Carolina Government Ethics Act, each member of the Commission panel has made a due and diligent effort to determine whether he or she has a conflict of interest in the matter presented in this docket, and each member of the panel has determined that he or she does not have any such conflict.

On April 5, 2018, the Joint Proposed Order of Frontier and the Public Staff was filed.

Based upon the testimony and exhibits received into evidence and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

1. Frontier is a public utility as defined by G.S. 62-3(23), organized and existing under the laws of the State of North Carolina with its headquarters in Elkin, North Carolina.

2. Frontier is a natural gas local distribution company (LDC), primarily engaged in the business of purchasing, transporting, distributing, and selling natural gas to approximately 3,600 customers in North Carolina, as of September 30, 2017.

3. Frontier has filed with the Commission and submitted to the Public Staff all of the information required by G.S. 62-133.4(c) and Commission Rule R1-17(k) and has complied with the procedural requirements of such statute and rule.

[1] Presiding Commissioner Brown-Bland and Commissioner Gray did not appear at the hearing on March 6, 2018, due to another hearing which continued beyond the time it had been expected to conclude. For this reason, Commissioner Mitchell presided on March 6 to receive the evidence in accordance with the Commission's March 2, 2018 Order. At the hearing, the parties stipulated they did not object to Commissioners Brown-Bland's and Gray's continued participation as panel members in this docket notwithstanding their being unable to attend the March 6 hearing, where only testimony and exhibits as pre-filed were received into evidence.

4. The review period in this proceeding is the 12-months ended September 30, 2017.

5. During the review period, Frontier incurred total gas costs of $4,699,507, which was comprised of pipeline demand charges of $1,090,560, gas supply costs of $3,700,261, and other gas costs of ($91,314).

6. The appropriate Deferred Gas Cost Account balance at September 30, 2017, is a debit balance of $251,005, owed by Frontier's customers to the Company.

7. It is reasonable to include an adjustment of $98,159, including interest, for the proration of Frontier's Benchmark City Gate Delivered Gas Cost (Benchmark) in the calculation of its gas cost collections during the current review period.

8. Frontier properly accounted for its gas costs during the review period.

9. Frontier did not hedge during the current review period.

10. Frontier's decision not to engage in financial hedging transactions during the review period was reasonable and prudent.

11. During the review period, Frontier purchased all of its gas supply requirements from a full requirements gas supplier, with the exception of transportation imbalance cash-outs.

12. Frontier utilized pipeline capacity from Transcontinental Gas Pipe Line Company, LLC (Transco), and acquired additional year round pipeline capacity on Transco during this review period.

13. Frontier has continued its "best evaluated cost" gas purchasing supply strategy policy.

14. The gas costs incurred by Frontier during the review period were prudently incurred, and Frontier should be permitted to recover 100% of its prudently incurred gas costs.

15. Frontier should not be required to implement a rate increment in this docket.

16. The appropriate interest rate to be used to calculate interest on Frontier's deferred gas cost account should be 6.60%, effective January 1, 2018.

17. Frontier should file its annual review schedules in such a manner that they present a summary of its gas costs that agree with Frontier's monthly deferred account reports in future annual review proceedings.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-2

These findings are essentially informational, procedural, or jurisdictional and are based on evidence uncontested by any of the parties. The evidence supporting these findings is contained in the official files and records of the Commission, the testimony and exhibits of Company witness Steele, and the testimony of the Public Staff Panel.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 3-4

The evidence supporting these findings is contained in the testimony of Frontier witness Steele, the testimony of the Public Staff Panel, and the provisions of G.S. 62-133.4(c) and Commission Rule R1-17(k)(6).

G.S. 62-133.4 requires that each natural gas utility submit to the Commission information and data for an historical 12-month review period concerning its actual cost of gas, volumes of purchased gas, sales volumes, negotiated sales volumes, and transportation volumes. Commission Rule R1-17(k)(6)(c) requires the filing of work papers, direct testimony, and exhibits supporting the information.

Frontier witness Steele testified that the Company is responsible for and has complied with reporting gas costs and deferred account activity to the Commission and the Public Staff on a monthly basis as required by Commission Rule R1-17(k). The Public Staff Panel confirmed that the Public Staff has reviewed the reports filed by Frontier. The Commission, therefore, concludes that Frontier has complied with all of the procedural requirements of G.S. 62-133.4(c) and Commission Rule R1-17(k) for the review period.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-8

The evidence supporting these findings of fact is contained in the testimony and exhibits of Frontier witness Steele and the testimony of the Public Staff Panel.

Company Schedule 1 reflected that Frontier's total gas costs for the review period were $4,804,228. Public Staff witness Dorgan testified that Frontier's total gas costs for the current review period per the Company's monthly deferred account reports filed with the Commission were $4,641,053, as compared to the prior year of $5,242,868. Witness Dorgan testified that in the current review period, in order to reconcile the cost of gas to the GS-1 Reports filed with the Commission, the Company reflected the offsetting gas cost true-up entries of $149,768 as well as entries that are recorded in other cost of gas but do not impact the Company's deferred account of $58,454, resulting in a total cost of gas for the current review period of $4,699,507.

The Public Staff Panel testified that the Public Staff reviewed the testimony and exhibits of Company witness Steele, the Company's monthly Deferred Gas Cost Account reports, monthly financial and operating reports, the gas supply and transportation contracts, and the Company's responses to Public Staff data requests. The Public Staff Panel also testified it reviewed Frontier's responses to the Public Staff data requests which contained information related to Frontier's gas purchasing and hedging philosophies, key customer metrics, gas portfolio mixes, long-term contracts entered into for the purchase of additional pipeline capacity, and reconciliations of capacity versus commodity cost of gas charges.

Company witness Steele testified that Frontier's Deferred Gas Cost Account had an ending debit balance at September 30, 2017, of $262,677 owed to Frontier from customers, as shown on Company Schedule 8.

Public Staff witness Perry cited Ordering Paragraph 4 of the Commission's Order on Annual Review of Gas Costs issued on August 23, 2016, in Docket No. G-40, Sub 130 (2015 Annual Review Order), that required Frontier to "begin prorating its Benchmark cost of gas in the calculation of its gas cost collections from customers in a manner consistent with how Frontier prorates customers' bills." She explained that in accordance with the 2015 Annual Review Order, Frontier started prorating its Benchmark cost of gas rate changes in its deferred account during the 2015-2016 annual review period. Witness Perry noted that during the present review period, in Docket No. G-40, Subs 137 and 141, Frontier filed to change its Benchmark cost of gas effective February 1, 2017, and August 1, 2017, respectively. Witness Perry testified that based on the template that Frontier and the Public Staff previously agreed that the Company would use (in compliance with Ordering Paragraph 6 of the 2015 Annual Review Order), Frontier filed its February and August 2017 monthly deferred account reports with proration adjustments. Prior to the filing of Frontier's annual gas costs, the Company informed the Public Staff that they had a potential issue with the proration adjustments filed during the review period that impacted Frontier's annual review filing. The Company subsequently provided supporting calculations for the Public Staff's review related to the proposed adjustments.

Public Staff witness Perry testified that once the Public Staff was able to review the Company's proposed proration adjustment, as well as similar calculations of other LDCs, the Public Staff determined that the proration adjustment needed to be revised to reflect the actual unbilled volumes as compared to the estimated unbilled volumes when prorating a benchmark change. Based on the volume and revenue billing data provided by Frontier, witness Perry testified that the proration adjustment correction should be a debit entry of $98,159, including interest, instead of the $104,724 as proposed by Frontier, which is shown on Public Staff Panel Exhibit II. Witness Perry recommended that witness Dorgan update the Company's deferred account balance as of September 30, 2017, for this adjustment.

Public Staff witness Dorgan testified that based on (1) his review of the gas costs in this proceeding, (2) witness Perry's recommended proration adjustment to the deferred gas cost account, and (3) witness Larsen's opinion that the Company's gas costs were prudently incurred – that the appropriate balance in Frontier's Deferred Gas Cost Account at September 30, 2017, is a $251,005[1] debit balance, owed to Frontier from customers. Witness Dorgan further testifed that the activity consisted of a beginning balance of ($7,899), a commodity gas cost true-up of $249,206, commodity true-up adjustments of ($71,406), transportation customer balancing true-up of ($33,169), transportation customer balancing true-up adjustment of $5,150, a Transco refund of ($15), accrued interest of $10,982, and a rounding adjustment of ($4). Winess Dorgan testified that the balance also included a Public Staff adjustment to the benchmark proration of $98,159, including interest.

---

[1] Due to rounding of the numbers on the Public Staff Joint Testimony, page 20, the Public Staff Recommended Deferred Account Balance totals $251,005 instead of $251,004.

Company witness Steele filed rebuttal testimony, in which he testified that Frontier agreed with the Public Staff's proration adjustment.

Based on the foregoing, the Commission concludes that Frontier has properly accounted for its gas costs incurred during the review period. The Commission further concludes that the Public Staff's proration adjustment, with interest, as well as the debit Deferred Gas Cost Account balance of $251,005, owed from customers to Frontier, are appropriate and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 9-10

The evidence for these findings of fact is contained in the testimony and exhibits of Company witness Steele and the testimony of Public Staff witness Perry.

Company witness Steele testified that the Company continually monitors the NYMEX natural gas commodity market and associated hedging developments, trends, activity and costs. Witness Steele further testified that Frontier did not engage in hedging activity during the current review period of October 2016 to September 2017.

Public Staff witness Perry testified that Frontier's hedging program is an integral part of an overall gas purchasing strategy that attempts to establish price stability, utilize cost efficient purchasing, and reduce the risk of price increases to customers. Witness Perry testified that Frontier uses a weighted average, three-part approach in purchasing its physical gas supplies: first-of-the-month baseload; hedging; and daily swing. Furthermore, Public Staff witness Perry testified that a core part of Frontier's strategy is to obtain reliability and price stability by fixing components of its gas costs, primarily commodity costs, through hedging.

Public Staff witness Perry further testified that the primary difference in Frontier's hedging approach compared to other LDCs is that Frontier uses physical hedges exclusively and does not use financial hedges, such as options, futures, or swaps, which are typically used by the other North Carolina LDCs. Witness Perry explained that a physical hedge is a fixed price contract between two parties to buy or sell physical natural gas supplies at a certain future time, at a specific price, which is agreed upon at the time the deal is executed. She testified that Frontier's gas supply portfolio includes the physical purchase of fixed price gas supplies for delivery at its city gate on a monthly basis.

With respect to the company's hedging activities during the review period, Public Staff witness Perry cited witness Steele's pre-filed testimony as follows:

Q. Did Frontier investigate hedging during the test year and, if so, what were the findings and conclusions?

A. Frontier continually monitors the NYMEX natural gas commodity market and associated hedging developments, trends, activity and costs. Frontier did not engage in hedging activity during the current review period of October 2016 to September 2017. Additionally, Frontier evaluated a peak day proposal from UGI.

Witness Perry also explained that in response to a Public Staff data request, the Company explained that "Frontier has determined not to utilize a physical hedge for any natural gas for the winter 2016-2017 because of its ability to purchase almost 70% of our gas supply needs at Zone 3 FOM [First of Month] prices as opposed to Zone 5 FOM prices."

Public Staff witness Perry testified that Frontier's decision not to hedge during the review period appears to have been influenced by the fact that Frontier had sufficient physical gas purchases to serve its market during the review period rather than implementing hedges in an effort to mitigate price spikes to customers.

Public Staff witness Perry further testified that while the Commission's prior hedging orders do not differentiate between financial hedges and physical hedges, the other LDCs in North Carolina all have the ability to purchase 100% of their gas supply needs at FOM prices as opposed to Zone 5 FOM prices, yet all the other LDCs are consistently hedging to avoid the risk of price spikes to the utilities' customers. Witness Perry testified that she believes Frontier's customers are similarly at risk of unforeseen price spikes in gas prices.

Witness Perry concluded from her analysis, based on what was reasonably known or should have been known at the time the Company made its hedging decisions affecting the review period, as opposed to the outcome of those decisions, that the Company's hedging decisions were prudent. However, the Public Staff recommended that the Commission remind Frontier that the purpose of hedging is to reduce price spikes to customers, not just to secure gas supply, and put Frontier on notice that the risk is on Frontier, not its ratepayers, if price spikes occur and no hedging strategies are in place in the future.

Based on the foregoing, the Commission concludes that Frontier's hedging activities during the review period were reasonable and prudent. However the Commission takes notice that its prior hedging orders provide the appropriate standard for the review of hedging decisions by LDCs and recognize that the purpose of hedging is to reduce the volatility of commodity costs. The Commission also notes that an LDC's decisions with respect to mitigation of the effects of price spikes will be subject to review in the LDC's annual gas cost prudency review proceeding and that includes both decisions to hedge and not to hedge. In addition, the Commission reiterates to Frontier that it should address its hedging policy and program in its testimony in each annual gas cost prudency review, explaining why and how it hedged or why it did not hedge during the test period.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 11-14

The evidence for these findings of fact is contained in the testimony of Company witness Steele and the testimony of Public Staff witnesses Larsen.

Company witness Steele testified that the Company's gas supply policy is best described as a "best evaluated costs" supply strategy. This strategy is based upon the following criteria: flexibility, security/creditworthiness, reliability of supply, the cost of the gas, and the quality of supplier customer service.

NATURAL GAS – MISCELLANEOUS

Company witness Steele testified that security of gas supply is required because of the daily changes in Frontier's market requirements caused by the unpredictable nature of weather, the production levels/operating schedules of Frontier's industrial customers, the industrial customers' option to switch to alternative fuels, and customer growth during the test period. He noted that while Frontier's gas supply agreements have different purchase commitments and swing capabilities (i.e., the ability to adjust purchase volumes within the contract volume), the gas supply portfolio as a whole must be capable of handling the seasonal, monthly, daily, and hourly changes in Frontier's market requirements.

Company witness Steele testified that Frontier understands the necessity of having security of supply to provide reliable and dependable natural gas service and has demonstrated its ability to do so. He testified that Frontier's gas supply strategy and its contracts implementing this strategy have allowed Frontier to accomplish this objective.

Company witness Steele testified that the Company continues to incorporate a three-part pricing strategy to help establish price stability and obtain the optimum opportunity in savings: hedging, first of the month index purchases, and daily purchases. He also observed that Frontier will adjust the weights of each component and incorporate the best pricing methodology to obtain the optimum opportunity in savings and price stability. Company witness Steele further testified that the goal of the weighted average approach is to take advantage of any market movements in pricing that may occur as a proactive measure and/or savings opportunity.

Company witness Steele testified that in January 2016, Frontier issued requests for proposals to four potential natural gas suppliers, including Frontier's supplier at that time. Company witness Steele explained that three companies responded with proposals for Frontier's consideration, and Frontier evaluated the proposals using the criteria of their best evaluated gas supply strategy. Company witness Steele observed that in March 2016, Frontier selected UGI Energy Services, LLC (UGI) to provide its gas supply needs for the next 12-months, based on their ability to satisfy these criteria and UGI began working as Frontier's new asset manager starting April 1, 2016. Finally, Company witness Steele testified that on March 31, 2017, Frontier exercised an option for the renewal of its contract with UGI until March 31, 2020.

Public Staff witness Larsen testified that during the review period of October 1, 2016, through September 30, 2017, Frontier experienced customer growth of 7.48%, which is very similar to the prior year growth rate of 7.39%. Company witness Steele cited a similar customer growth rate of 8.3%, from the period October 31, 2016, to October 31, 2017. Public Staff witness Larsen also testified that there was a slight decrease in both Frontier's sales and transportation volumes from the prior review period. Witness Larsen concluded that since Frontier's winter throughput is largely dependent on weather due to space heating load, the volume change is correspondingly affected by a change in Heating Degree Days (HDDs) as compared to the prior period.

Public Staff witness Larsen testified that Frontier acquired an additional 2,663 dekatherms (dts) per day of Transco year round pipeline capacity effective January 2017, which results in a total pipeline capacity for Frontier of 8,613 dts per day for the current review period. Company witness Steele testified that Frontier will continue to seek incremental pipeline capacity and evaluate storage opportunities in order to serve its customers. Public Staff witness Larsen testified that in a data request response, Frontier testified that it reached out to gas companies and municipalities in order to partner to obtain additional capacity on Transco and that Frontier did not encounter any storage opportunities.

Public Staff witness Larsen's testimony cited Ordering Paragraph 6 of the Commission's Order on Annual Review of Gas Costs issued on June 13, 2017, in Docket No. G-40, Sub 135 (2016 Annual Review Order) which required: "[t]hat before the filing of Frontier's next annual review proceeding, Frontier shall have a study performed, similar to the consultant report attached to Company witness Steele's testimony as Exhibit FAS-1, discussing, among other things, peak day forecasts and determination of contract demand policy, and make it available to the Public Staff for its review."

Public Staff witness Larsen testified that attached to Company witness Steele's testimony as CONFIDENTIAL Exhibit B was a report on Design Day Study prepared by Dr. Ronald H. Brown, PhD, who utilized the Marquette University GasDay program in evaluating Frontier's projected peak day demand. Public Staff witness Larsen testified that he had evaluated the report and concluded that it complies with the 2016 Annual Review Order and accurately calculates Frontier's peak day using reasonable assumptions, such as HDDs and frequency of occurrence of such cold weather events. Public Staff witness Larsen concluded that based on the report, it appears that Frontier has adequate capacity in order to serve its firm market on peak days until the 2021-2022 winter period.

Based upon the Public Staff's investigation and review of the data filed in this docket, and the adjustment to Frontier's deferred gas cost account, witness Larsen testified that Frontier's gas costs during the review period were prudently incurred.

Based on the foregoing, the Commission concludes that the Company's gas costs incurred during the review period were reasonable and prudently incurred and that the Company should be permitted to recover 100% of its prudently incurred gas costs.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 15

The evidence for this finding of fact is contained in the testimony and exhibits of Company witness Steele and the testimony of the Public Staff Panel.

Company witness Steele testified that Frontier anticipated that the current deferred account balance will be moving back toward $0.00 over the winter months. Public Staff witness Larsen noted that Frontier did not propose any temporaries in this proceeding and further testified that Public Staff witness Dorgan determined the appropriate deferred account balance owed from customers to Frontier is a debit balance of $251,005. Public Staff witness Larsen testified that normally the Public Staff would recommend a temporary rate increment in order to collect this debit balance from customers, but that the Panel's investigation led them to conclude that Frontier's deferred account has changed significantly since the end of the review period. Consequently, Public Staff witness Larsen recommended that Frontier file for a Purchased Gas Adjustment (PGA) in mid-March for an effective date of April 1, 2018. Finally, witness Larsen testified that he believed this course of action would more quickly and accurately resolve the under-collection of gas costs and would take effect April 1, 2018, which he testified is two or more months earlier than an order would typically be issued in Frontier's annual review proceeding. Public Staff witness Larsen testified that he does not recommend any temporary rate increments or decrements at this time.

The Commission agrees with the recommendation of Public Staff witness Larsen and concludes that it is not appropriate to require Frontier to implement a temporary rate increment at this time. The Commission also takes judicial notice that on March 16, 2018, in Docket No. G-40, Sub 147, Frontier filed a PGA to increase its benchmark from $4.00 per dt to $6.00 per dt, an increase of by $2.00 per dt. On March 27, 2018, the Commission issued an Order Approving Rate Changes effective April 1, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 16

The evidence for this finding of fact is contained in the testimony and exhibits of Company witness Steele and the testimony of Public Staff witness Perry.

Public Staff witness Perry testified that in Docket No. G-40, Sub 135, Frontier's prior annual review of gas costs proceeding, the Public Staff recommended and the Commission approved in its Order on Annual Review of Gas Costs issued June 13, 2017, that Frontier should begin calculating interest on its deferred account using the net-of-tax overall rate of return approved by the Commission in its Order Approving Use of Natural Gas Bond Funds issued March 12, 2000, in Docket No. G-40, Sub 2, adjusted for any known corporate income tax rate changes, as the applicable interest rate on all amounts over-collected or under-collected from customers reflected in its Deferred Gas Cost Account.

Witness Perry further testified that in 2017 the Public Staff investigated a merger application filed by Frontier in November 2016 (Docket No. G-40, Sub 136), which caused the Public Staff to further evaluate the appropriate determinants to be used to calculate the earnings of Frontier in order to determine a reasonable overall rate of return applicable to Frontier. She explained that this review included the capital structure, debt cost from Frontier's most recent financing docket (Docket No. G-40, Sub 133), and a reasonable return on equity.

Witness Perry also noted that the 2017 Federal Tax Cuts and Jobs Act has reduced the corporate federal income tax rate from 35% to 21%, effective January 1, 2018.

Public Staff witness Perry testified that in light of the foregoing, the Public Staff recommended that Frontier begin using 6.50% as the interest rate on the deferred gas cost account effective January 1, 2018, as shown on Public Staff Panel Exhibit III.

Company witness Steele testified in rebuttal testimony that after discussions with the Public Staff, both parties had agreed to 6.60% as the interest rate on the deferred gas cost account effective January 1, 2018.

The Commission concludes that 6.60% is the appropriate interest rate to use in the deferred gas cost account effective January 1, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 17

The evidence for this finding of fact is contained in the testimony and exhibits of Company witness Steele and the testimony of Public Staff witness Perry.

Public Staff witness Perry testified that she was concerned that the amounts contained in the Company's filed annual review exhibits do not match the monthly deferred account reports filed with the Commission due to (1) the Company inserting proposed proration adjustments into the annual review exhibits that had not been filed with the Commission in the monthly deferred account reports for those months, and (2) the Company reclassifying demand and commodity charges reflected in the annual review exhibits, which do not correlate to charges reflected in the monthly deferred account reports and the invoices reviewed by the Public Staff.

Witness Perry testified that typically, if an LDC believes that a proposed adjustment is warranted, the adjustment is noted in testimony and possibly on Schedule 8 – Deferred Account with a footnote, but the LDC does not restate the total gas costs for the review period. She explained that the Public Staff's review procedures include tracing the Company's filed annual review exhibits to the monthly deferred account filings made each month during the review period. She further noted that another review procedure attempts to compare for agreement the total cost of gas reflected on Schedule 1 to the cost of gas reflected in the monthly financial statements. Witness Perry testified that by the Company inserting the proposed adjustments and restating Schedules 1 and 4, not only do the deferred account entries not agree to the filed deferred account reports, but Frontier's filed total cost of gas does not agree to the GS-1 Reports or the monthly financial reports filed by Frontier with the Public Staff and the Commission.

Public Staff witness Perry testified that she had a second issue related to Frontier's reclassifications of demand and commodity charges in the annual review exhibits as compared to the monthly deferred account reports. She explained that although the total demand and commodity charges reported in the annual review exhibits do agree to the filed monthly deferred account reports, the reclassification of the types of charges reflected in the annual review makes it virtually impossible for the Public Staff to trace specific charges into the monthly deferred account filings. She further explained that the Public Staff had a similar issue in Frontier's prior annual review of gas costs proceeding and recorded the unreconciled amounts in other supply costs. Witness Perry testified that for the current review period, the Public Staff has presented the demand and commodity charges in the Public Staff's testimony exactly as these charges were reflected on the invoices supporting the monthly deferred account entries that it audited. Witness Perry noted that the Public Staff reflected the Other Gas Costs just as these amounts were filed by the Company in the monthly deferred account filings along with entries that are recorded in other cost of gas but do not impact the Company's deferred account. She noted that in addition, the Public Staff excluded the Company's proposed proration adjustments from Other Gas Cost charges since these were not filed during the review period. Witness Perry testified that by reflecting the information in this manner the Public Staff was able to reconcile the total cost of gas to the financial statements and was also now able to state that these amounts agree to the Public Staff's audited monthly deferred account files. Frontier did not take issue with the Public Staff's expressed desire that in future annual review proceedings Frontier would file annual review schedules that present a summary of its gas costs that agree with its monthly deferred account reports.

The Commission concludes that Frontier shall file its annual review schedules in its annual review filings in such a manner that they present a summary of the gas costs that agree with. Frontier's monthly deferred account reports.

IT IS, THEREFORE, ORDERED as follows:

1. That Frontier's accounting for gas costs during the 12-month period ended September 30, 2017, is approved.

2. That the gas costs incurred by Frontier during the 12-month period ended September 30, 2017, were reasonably and prudently incurred, and Frontier is hereby authorized to recover 100% of its gas costs incurred during the period of review.

3. That, Frontier's decisions regarding mitigation against price spikes are subject to Commission review annually in the Company's gas cost prudency review proceeding and the Commission has determined in this review proceeding that Frontier's hedging activities during the review period were reasonable and prudent.

4. That Frontier shall address its hedging policy and program in its testimony in its next annual gas cost prudency review, explaining why and how it hedged or why it did not hedge during the test period.

5. That Frontier shall use the net-of-tax overall rate of return of 6.60% as the applicable interest rate on all amounts over-collected or under-collected from customers reflected in its Deferred Gas Cost Account, effective January 1, 2018.

6. That Frontier shall file its annual review schedules in its annual review filings in such a manner that they present a summary of the gas costs that agree with Frontier's monthly deferred account reports.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. G-9, SUB 698

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Piedmont Natural Gas Company, Inc., for Approval of Appendix F to its North Carolina Service Regulations	)))	ORDER APPROVING APPENDIX F AND ESTABLISHING PILOT PROGRAM

BY THE COMMISSION: On December 6, 2016, Piedmont Natural Gas Company, Inc. (Piedmont or the Company), filed a petition in the above-captioned docket requesting approval of proposed Appendix F, Statement of Alternative Gas Requirements, to its Service Regulations (Initial Version). Proposed Appendix F sets forth the terms and conditions under which Piedmont will accept Alternative Gas[1] into its system and deliver or redeliver it to Piedmont's customers. Piedmont states that the need for establishing such terms and conditions has arisen due to the potential for sourcing supplies of methane from non-traditional suppliers, including landfills, swine waste-to-energy facilities, and poultry waste-to-energy facilities.

On December 6, 2016, in Docket No. G-9, Sub 699, Piedmont filed an Application for Approval of a Receipt Interconnect Agreement between Piedmont and C2e Renewables NC (C2e), which relates to the construction of new natural gas distribution lines and facilities to receive Alternative Gas supplies from C2e at a designated receipt point.

Between December 20, 2016 and February 3, 2017, timely petitions to intervene were received and granted for the North Carolina Pork Council (NCPC); North Carolina Sustainable Energy Association (NCSEA); Enerdyne Power Systems, Inc. (Enerdyne); and the Coalition for Renewable Natural Gas (RNG).

On January 12, 2017, the Commission issued an Order Requesting Comments that (1) initiated an investigation of Piedmont's request to amend its Service Regulations; (2) directed that Public Service Company of North Carolina, Inc. (PSNC); Frontier Natural Gas Company (Frontier); Toccoa Natural Gas; the Public Staff-North Carolina Utilities Commission (Public Staff); and the North Carolina Attorney General be deemed to be parties to this proceeding; and (3) established a schedule for further interventions and for the Public Staff and other parties to file comments and reply comments.

---

[1] "Alternative Gas" is defined in Appendix F as:

> gas capable of combustion in customer appliances or facilities which is similar in heat content and chemical characteristics to natural gas produced from traditional underground well sources and which is intended to act as a substitute or replacement for Natural Gas (as that term is defined in Piedmont's North Carolina Service Regulations). Alternative Gas shall include but not be limited to biogas, biomethane, and landfill gas, as well as any other type of natural gas equivalent produced or manufactured from sources other than traditional underground well sources. For purposes of the application of Piedmont's rate schedules and its Service Regulations, Alternative Gas shall be treated in a manner equivalent to "Gas" or "Natural Gas" except to the extent that this Statement of Alternative Gas Requirements specifies more restrictive obligations applicable to Alternative Gas, in which case the provisions of this Statement of Alternative Gas Requirements shall control.

NATURAL GAS – MISCELLANEOUS

On January 24, 2017, in Docket No. G-9, Sub 701, Piedmont filed an Application for Approval of a Receipt Interconnect Agreement between Piedmont and Optima KV, LLC (Optima KV), which relates to the construction of new natural gas distribution lines and facilities to receive Alternative Gas supplies from Optima KV at a designated receipt point.

On February 20, 2017, comments were filed by the Public Staff, PSNC, NCPC, Enerdyne, NCSEA, and RNG.

On March 13, 2017, reply comments were filed by Piedmont, PSNC, NCPC, Enerdyne, NCSEA, and RNG.

On March 13, 2017, Duke University filed a Petition to Intervene Out-of-Time. On March 14, 2017, the Commission issued an Order granting Duke University's request to intervene out of time.

On May 4, 2017, the Commission issued an Order Requiring Collaborative Meetings, Reports and Additional Information. In summary, that Order made clear that, after careful consideration of the parties' positions evidenced through comments and reply comments, good cause existed for the Commission to request that the parties engage in further discussions to attempt to resolve remaining issues. That Order directed the Public Staff to convene and facilitate meetings of the parties for the purpose of discussing the remaining unresolved issues. Additionally, that Order directed the Public Staff to file reports informing the Commission of the status of the collaborative process and the progress made in developing Alternative Gas standards for Piedmont. Further, that Order directed that the Public Staff's reports include responses to questions posed by the Commission, which were set forth in Attachment A to that Order and which were intended to supplement the record in this proceeding with information related to existing standards for quality and testing of natural gas and Alternative Gas in effect in other states, how well those standards are working, and whether those standards may be applicable in North Carolina.

On May 10, 2017, the Commission issued an Order Approving Agreements with Conditions in Docket No. G-9, Subs 699 and 701, conditionally approving the Receipt Interconnect Agreements between Piedmont and C2e, and Piedmont and Optima KV, respectively, as amended. The Commission directed Piedmont and C2e and Piedmont and Optima KV to comply with Appendix F, as proposed by Piedmont and being considered by the Commission in this docket. The Commission made clear that the Agreements between Piedmont and C2e and Piedmont and Optima KV are to be subject to any revisions to Appendix F that may be made by the Commission, as well as any applicable amendments to the Commission's Rules and Regulations.

On June 28, 2017, July 31, 2017, August 30, 2017, and October 3, 2017, the Public Staff filed reports on the meetings of the parties facilitated by the Public Staff to discuss Piedmont's proposed Appendix F and the parties' responses to the Commission's questions.

On October 26, 2017, Piedmont filed a revised Appendix F, amended to reflect discussions had during the collaborative process (Revised Version). Piedmont represented to the Commission that the revised version of Appendix F had been reviewed by the parties to the collaborative process and that, to the best of Piedmont's knowledge, there were no remaining objections to the Alternative Gas standards.

On October 31, 2017, the Public Staff filed the final report as provided for in the Commission's May 4, 2017 Order (Public Staff Final Report), which included the parties' responses to the questions set forth in Attachment A to that Order.

Discussion

This docket was opened upon the filing by Piedmont of a request for approval by the Commission of proposed Appendix F to Piedmont's Service Regulations, denominated as the Statement of Alternative Gas Requirements. Appendix F sets forth the terms and conditions under which Piedmont proposes to accept and receive "Alternative Gas" onto its system and pursuant to which it will continue to accept and redeliver such gas to customers receiving service from Piedmont.

In conjunction with its proposal of Appendix F, Piedmont submitted to the Commission two Receipt Interconnect Agreements (Agreements) between Piedmont and third party Alternative Gas suppliers. Those Agreements, one with C2e and the other with Optima KV, have been designated by Piedmont as confidential, consistent with N.C. Gen. Stat. § 132-1.2, and, thus, are not part of the public record of this proceeding.

Because the proposed injection and delivery of Alternative Gas into Piedmont's system raises potential service quality and operational concerns, the Commission initiated an investigation to consider such issues and directed that PSNC, Frontier, Toccoa Natural Gas, the Public Staff, and the North Carolina Attorney General were deemed to be parties to the proceeding. NCPC, NCSEA, Enerdyne, RNG and Duke University were allowed to intervene in the proceeding as parties. The Commission requested that the Public Staff and other parties file comments and reply comments on Piedmont's proposed Appendix F.

After careful consideration of the parties' comments and reply comments filed in this docket, the Commission concluded that good cause existed to direct the parties to engage in further discussions to attempt to resolve the remaining issues related to Appendix F and Piedmont's receipt of Alternative Gas. As a result, the Commission issued an order directing the Public Staff to convene and facilitate meetings of the parties for the purpose of discussing the remaining unresolved issues. In addition, the Commission sought to supplement the record by requiring the parties, as a part of the collaborative process, to answer specific questions related to service quality and operational concerns that remained for the Commission after having reviewing the comments and reply comments filed in the docket.

The Commission appreciates Piedmont's initial proposal for guidelines governing the acceptance of Alternative Gas. In addition, the Commission appreciates the time and effort of the Public Staff to facilitate and report on the collaborative process. The Commission recognizes the effort the parties have made to work toward consensus on Appendix F.

The Commission recognizes the advantages to the State of making use of Alternative Gas. Those advantages include the general benefits of utilizing renewable resources; developing a potential in-state gas supply; the development of an Alternative Gas industry in the State with its associated tax base and jobs; providing a cost-effective and environmentally sound way for North Carolina swine and poultry producers to manage animal waste; providing landfill operators another option for the sale of the methane that they are required to collect; providing electric utilities, including Piedmont's affiliates, Duke Energy Progress and Duke Energy Carolinas, with an option for complying with the statutory requirement that they generate a set percentage of their electricity with poultry and swine waste; and allowing third parties to purchase and utilize a renewable gaseous fuel with which, for example, to generate electricity and earn Renewable Energy Credits. Thus, the Commission supports Piedmont's efforts to introduce additional sources of renewable energy to its North Carolina customers. However, the Commission must ensure that Piedmont provides adequate, reliable and economical service to its customers and that Piedmont's decision to receive Alternative Gas does not jeopardize the Company's ability to do so.

As stated in the May 4, 2017 Order:

> While there are clear benefits to the State to accommodating the receipt of Alternative Gas into the local distribution systems, the Commission is not persuaded that there is an obligation, particularly in the sense of a common carrier obligation, for LDCs to accept Alternative Gas. The LDCs' distribution systems were built to receive natural gas from the interstate pipeline system and deliver it to customers. The system has been paid for by the LDCs' customers.[1] Alternative Gas producers and other interests are asking to use the natural gas distribution system for a purpose for which it was not intended. If that can be done while holding natural gas customers harmless, then every effort should be made to accommodate interconnections with Alternative Gas providers. However, the standards for delivery of Alternative Gas must be set to require delivery into the natural gas distribution system without degrading the quality of service to natural gas customers, particularly those customers just downstream from Alternative Gas projects.

May 4, 2017 Order, p. 15.

After consideration of the record in this proceeding, and the revisions made to Appendix F subsequent to the collaborative process, the Commission has determined that it would be premature to approve unconditionally Piedmont's Appendix F, in light of the Commission's ongoing concerns related to potential service quality and operational issues. Instead, the Commission approves the Revised Version of Appendix F, as further modified in this order, as a pilot program for a period of three (3) years. During the pilot period, Piedmont will report to the Commission, as detailed below, to provide information regarding the impact of Alternative Gas on its system operations and, ultimately, its customers. Piedmont and/or other Alternative Gas suppliers may apply to the Commission to participate in the pilot program; however, it must be demonstrated to the Commission that such additions will be useful in gathering the information and data sought by the Commission. At the end of the three (3) year period, the Commission will

[1] A more accurate statement is that the system was paid for by the LDC's investors, and the investors are being repaid by customers over time through rates.

consider additional modifications to Appendix F, based on the experience gained during the pilot period.

The specific revisions made to Appendix F subsequent to the collaborative process are addressed below, in addition to the Commission's ongoing service quality and operational concerns, several of which do not pertain to specific revisions.

Testing Requirements

In general, Piedmont's proposed testing regimen is designed to test Alternative Gas prior to its initial receipt by Piedmont, on a periodic basis following initial receipt by Piedmont, when the process or compounds used to produce Alternative Gas change, and before the reinstitution of deliveries in circumstances where receipt has been disrupted as a result of non-compliance with Piedmont's standards. Appendix F includes a testing regimen consisting of five types of testing: 1) Initial, 2) Subsequent, 3) Quarterly, 4) Supplemental, and 5) Alternative Gas Source, required if a supplier determines to alter its source of production or take action that might change the character or constituents of its gas. The comments and reply comments included extensive discussion of the proposed testing requirements. Piedmont justified its proposal by explaining that if it were going to accept Alternative Gas, "third-party producers desiring to supply Alternative Gas to North Carolina customers through LDC facilities have the obligation to establish that their Alternative Gas will meet the requirements of Commission Rule R6-30." Piedmont Reply Comments, at p. 9. Commission Rule R6-30 requires that "[a]ll gas supplied to customers shall be substantially free of impurities which may cause corrosion of mains or piping, or form corrosive or harmful fumes when burned in a properly designed and adjusted burner." Duke University commented that that there are a limited number of laboratories capable of analyzing the full suite of compounds listed in Appendix F and that for some tests, on-site sampling by a dedicated laboratory technician is required to ensure sample integrity and successful testing. Moreover, Duke University considered the testing costs, at approximately $21,000 per sample for the full suite of compounds, as not insignificant and, therefore, having the potential to materially affect biogas development by substantially increasing testing complexity and costs. Duke University commented that the lack of capable laboratories together with the high cost of testing, particularly in instances in which multiple tests may be required or in which quantities injected are small in comparison to the flow in the pipeline, could present an overly burdensome barrier to Alternative Gas development in North Carolina. Public Staff Final Report, p. 4.

Subsequent to the collaborative process, Piedmont made five revisions to the testing regimen established in Appendix F. First, with regard to Initial Testing, the Initial Version required the supplier to provide Piedmont with the results of two consecutive independent laboratory tests, performed no less than seven days apart, demonstrating that the Alternative Gas conforms to the Appendix F standards. The Revised Version requires the supplier to submit one independent laboratory test before the initial receipt of gas and a "laboratory test" on a second sample taken at least seven days and no more than fourteen days after the initial test sample. The Revised Version allows the supplier to deliver gas to Piedmont's system after the results of the first test have been provided to Piedmont and makes clear that the second test must be made on a second sample. The Initial Version called for two tests, no less than seven days apart. The Revised Version clarifies that receipt of Alternative Gas may begin after the first test and adds that the second test must occur within fourteen days. Appendix F requires that, after the initial receipt of Alternative Gas by

Piedmont, three additional consecutive tests be conducted at least thirty days apart, and the results be provided to Piedmont. The clarification that the initial receipt of gas may begin after the results of the first test are provided to Piedmont means that the test conducted seven to fourteen days after the first test qualifies as the first of the three consecutive tests. In other words, the Initial Version required a total of five tests; as clarified, the Revised Version requires four tests.

Second, Subsequent Testing is required if receipt of supplier's Alternative Gas is interrupted or suspended. Similar to the requirements for Initial Testing, the Initial Version required the submittal of two consecutive independent laboratory tests, performed no less than seven days apart, demonstrating compliance with Appendix F standards. The Revised Version requires the supplier to submit one independent laboratory test before the resumption of the receipt of gas and a "laboratory test" on a second sample taken at least seven days and no more than fourteen days after the first test sample. The Revised Version allows the supplier to deliver to Piedmont's system after the results of the first test have been provided to Piedmont and makes clear that the second test must be made on a second sample. The Revised Version also clarifies that Subsequent Testing is required only when Piedmont exercises its option to stop receiving Alternative Gas and does not apply to disruptions that occur in the normal course of business.

The Commission concludes that the first two revisions to the testing protocols amount to simple and reasonable clarifications and, therefore, are accepted.

The third revision involves the Quarterly Testing requirements. Appendix F requires Quarterly Testing, pursuant to which the supplier must provide, on no less than a quarterly basis, the results from independent laboratory tests demonstrating compliance with Appendix F standards. The Revised Version allows Piedmont, at its own discretion, to waive Quarterly Testing where the percentage of Alternative Gas at a specific point is immaterial and the receipt of Alternative Gas at that point will not have a detrimental impact on Piedmont's system, its operation, or its customers.

The Commission interprets this waiver to be conditional. If the flow on Piedmont's system changes and the percentage of Alternative Gas at a specific receipt point is no longer immaterial and may have a detrimental impact on Piedmont or its customers, then the Commission expects that Quarterly Testing would again be required of the supplier. Subject to this understanding, the Commission concludes that the waiver provision is reasonable and should be accepted.

Appendix F requires a supplier to promptly notify Piedmont of a decision to alter its source of production or take action that might otherwise change the characteristics of its gas stream. Appendix F provides that Piedmont shall have no obligation to receive Alternative Gas from a supplier under these circumstances until it has been provided with the results of two consecutive independent laboratory tests, performed no less than seven days apart, indicating compliance with Appendix F standards. The Revised Version allows a supplier to request that Piedmont waive testing for one or more constituents, "where certified field testing equipment satisfactory to Piedmont is available to test for those components."

As noted by Duke University, the testing requirements included in Appendix F are expensive. Reducing the number of constituents in a "full suite of compounds" to be submitted for laboratory tests could reduce costs. Ultimately, it is Piedmont's responsibility to ensure that its system is operated in a safe and reliable manner; however, the use of field testing equipment in lieu of laboratory testing, in those instances acceptable to Piedmont, appears to be a reasonable measure that would provide Piedmont with the evidence it requires as to gas quality and that might also reduce costs for the supplier. The Commission concludes that Piedmont should be allowed to waive laboratory testing requirements where certified field testing equipment satisfactory to Piedmont is available.

The fourth and fifth revisions pertain to the testing requirements for Alternative Gas Sources. In general, Appendix F requires a supplier to provide advance notice to Piedmont of any decision to alter source of production of Alternative Gas or otherwise take action that might change the characteristics or constituent components of its gas stream. Piedmont has no obligation to receive such gas until it has been provided with the results of two consecutive independent laboratory tests, performed no less than seven days apart, demonstrating that the gas meets the standards set forth in Appendix F. The fourth revision allows Piedmont to consider requests for waivers of the requirement to test for one or more constituent compounds, if two consecutive laboratory tests demonstrate non-detectable levels of the constituent. The fifth revision allows Piedmont to consider requests for waivers of the requirement to test for constituent compounds if two consecutive laboratory tests demonstrate non-detectable levels of the constituent. Piedmont may grant or deny any such request, subject to the requirement that Piedmont must state the basis for the decision in sufficient detail to facilitate review of that decision by the Commission.

Various parties provided comments on whether testing of certain constituents should be required. NCPC noted that vinyl chloride and siloxanes are not in swine waste, and, therefore, testing for those should not be required. NCSEA, commenting on California's biogas standards, stated that the California legislature has directed state agencies to revisit rules and to study specific issues relating to, among other things, maximum siloxane specifications. RNG commented on the "Constituents of Concern" in the Initial Version of Appendix F. It argued biomethane does not include p-Dichlorobenzene, n-Nitroso-do-n-propylamine,[1] antimony lead, and methacrolein and requested that, if tests for these constituents were required, the testing not be required after a showing that the biomethane does not contain them. RNG also commented that arsenic has not been found in biogas sources at milligram levels and that vinyl chloride was an issue only at one California hazardous waste landfill.

The revision to allow waivers of the testing requirements related to constituent compounds is supported by the comments of various parties that some Alternative Gas would not contain all of the constituent compounds included in the testing required by in the Initial Version of Appendix F. In addition, the revision is supported by Piedmont's willingness to adapt to experience gained. Specifically, in its Reply Comments, Piedmont noted that experience may demonstrate that certain types of Alternative Gas or individual constituents in such gas may not be problematic, and commented that if experience, either in the form of testing or actual operations, demonstrates that it is appropriate to modify the standards and/or testing regimen set forth in Appendix F, then Piedmont would expect that appropriate adjustments would be made to Appendix F.

---

[1] RNG referenced "n-Nitroso-do-n-propylamine." Both versions of Piedmont's Appendix F included "n-Nitroso-di-n-propylamine" in its table of "Constituents of Concern."

Thus, the Commission concludes that these revisions respond to the concerns expressed by some of the parties as to whether constituents identified in Appendix F are found in biogas sources, implement Piedmont's explicit acknowledgement that experience may allow for reduced testing requirements, and, for this reason, are acceptable.

The Commission approves the testing requirements as set forth in the Revised Version with the expectation that experience and information gained during the pilot period will elucidate whether the testing requirements are barriers to entry for additional Alternative Gas suppliers and the appropriate testing regimen going forward.

The Commission recognizes that the testing requirements set forth in Appendix F are critical to Piedmont's ensuring the safe and reliable operation of its system. In response to a question from the Commission regarding what action would be taken if Piedmont's system were damaged by the receipt of Alternative Gas, Piedmont responded:

> Piedmont does not believe, based upon the information it is currently aware of, that the total exclusion of Alternative Gas is necessary but it does believe that prudent and cautious provisions regarding how and under what conditions such gas should be received should be adopted – at least until more experience with this new product is gained. If Alternative Gas is ultimately allowed onto the systems of North Carolina LDCs and damage to customer equipment or distribution/transmission facilities occurs, then that damage will be required to be repaired and the impacted facilities repaired or replaced. Delivery of the offending Alternative Gas should also be curtailed in those circumstances until additional mitigation measures are put into place to ensure no further damage to or degradation of equipment occurs as a result of the injection of Alternative Gas into LDC systems. Ultimately, changes to the provisions governing gas quality characteristics of Alternative Gas may need to be made.

Public Staff Final Report, pp. 15-16.

In the event of any damage to its system attributable to its receipt of Alternative Gas, Piedmont, not its customers, shall bear the risks of such damage. The Commission takes note of the fact that Piedmont has indicated that "[i]f Piedmont's proposed Alternative Gas standards, as revised on October 26, 2017, are approved, without modification, then Piedmont will accept responsibility for adverse customer impacts resulting from Alternative Gas received by Piedmont that is in compliance with those standards." Public Staff Final Report, p. 21. As such, the Commission expects Piedmont to ensure that a sufficient and appropriate testing regimen is required of suppliers in order to manage such risk.

Alternative Gas Quality Standards

Piedmont, in its Reply Comments, explained that Appendix F is targeted at ensuring: 1) the interchangeability of Alternative Gas with the geologic natural gas Piedmont has historically received from Transco and other upstream interstate natural gas pipelines; and 2) that the injection of Alternative Gas directly into Piedmont's system does not harm Piedmont's facilities, its customers' equipment, the public health, or the continuing reliability of service to Piedmont's customers. Piedmont Reply Comments, pp. 13-14. To this end, Appendix F establishes Alternative Gas Quality Standards with which any Alternative Gas delivered to Piedmont must comply.

With respect to gas quality, Piedmont is proposing to receive Alternative Gas into a distribution system that is currently fed by interstate pipelines. Natural gas, as it is produced from underground wells, is not a homogeneous fuel. It is a "soup" of short-chain hydrocarbons, with methane as the "broth." Other hydrocarbons, inert gases, and other constituents in the gas stream impact both the heat content and the ability of any particular "recipe" of gas to flow through the orifices in a burner. Interstate pipelines collect gas that is almost exclusively from underground wells, blend gas of varying constituents and quality, and deliver it to customers, including local distribution companies and their customers. The gas quality standards of interstate pipelines are set to accommodate a wide range of gas quality with the understanding that the gas will be blended before ultimately delivering a much more homogeneous product to the end user.

Comments presented in this docket made clear how little variation is seen in the blended gas delivered to Piedmont by its primary interstate supplier. As was shown in Piedmont's response to NCPC's Data Request No. 1, Piedmont's primary interstate pipeline supplier, Transco, typically shows a heat content with slight variations. NCPC Comments, Attachment 2. Likewise, the content by volume of nitrogen and carbon dioxide of gas on Transco was shown to be well below the maximum volumetric standards proposed by Piedmont in its Initial Version of Appendix F. The fact that the blended gas delivered by the interstates is more homogeneous allows local distribution companies like Piedmont to deliver a product to its customers that can be fairly billed on the basis of heating value and that burns in gas-fired equipment in an acceptably consistent manner. The Commission is concerned, in general, that Alternative Gas delivered to Piedmont would be consistently lower in quality than the blended gas delivered to Piedmont by Transco. As noted by Piedmont, "unlike larger interstate pipelines with ample sources of supply throughout their systems, Piedmont has very little ability to blend Alternative Gas with pipeline-delivered natural gas ...." Piedmont Reply Comments, p. 19.

Piedmont's modeling for the two Alternative Gas interconnection arrangements indicates that some customers may receive up to 100% Alternative Gas under certain operating conditions. Piedmont Reply Comments, fn. 8. In this situation and to the extent additional Alternative Gas suppliers request receipt agreements from Piedmont, the potential for the delivery of low-quality gas and associated risks to customers increases.

Subsequent to the collaborative process, four revisions to the Alternative Gas Quality Standards included in Appendix F were proposed.

The first revision involves the standard for the heating value of Alternative Gas. The Initial Version established a standard of between 980 and 1100 Btu/SCF at dry gas conditions. While the Revised Version maintains this standard, it allows Piedmont, at its own discretion, to receive gas with a heating content as low as 960 Btu/SCF. The Revised Version requires that any variance from the minimum level of 980 Btu/SCF must be granted on a non-discriminatory basis and must be set forth in a written waiver describing the scope and duration of the allowed variance.

The Initial Version established a heating value standard by relying on Transco's heating standard range of 980 Btu/SCF to 1100 Btu/SCF. Piedmont commented that a review of historical gas chromatograph data from Transco indicated that the average heat content of natural gas delivered to Piedmont has been very consistently measured at or near 1030 Btu/SCF and that, for this reason, Piedmont could have reasonably proposed that Alternative Gas delivered directly into its system match the heat content of the natural gas it has actually received from Transco. Piedmont Reply Comments, p. 19. Piedmont's response to NCPC's Data Request No. 1 summarized information on gas quality from Transco's Station 150 from October 1, 2016, through December 13, 2016. NCPC Comments, Attachment 2. That response shows a heating value range of 1027 Btu/SCF to 1051 Btu/SCF, with an average of 1031 Btu/SCF. The Commission itself monitors the gas quality information on Transco's 1Line electronic bulletin board and agrees that that range shown during the period described above is representative of the narrow range of heating values actually delivered by Transco after blending all of the gas it receives.

Piedmont maintains eleven "common gas areas" (CGAs) with different heat factors according to the heat content of the gas in those regions. The Public Staff suggested that Piedmont may want to implement "sub areas" if the injection of Alternative Gas begins to significantly change the heat content of a particular CGA. The Public Staff concluded that the CGAs (and possible sub areas) employed by Piedmont maintain reasonable accuracy for customer billing purposes. Public Staff Final Report, pp. 23, 29. According to Piedmont, CGAs are periodically evaluated, including when new receipt points are added. Piedmont plans to continue monitoring and evaluating its CGAs with the addition of receipt points for Alternative Gas supplies and will modify its CGAs as necessary to ensure that no customers are adversely impacted as Alternative Gas receipt points are added. Public Staff Final Report, p. 24.

The Heating Value standard established in the Revised Version is not representative of the heat content of gas actually delivered to Piedmont by Transco. Comments in this docket make it clear that it is economically burdensome for Alternative Gas suppliers to reach the 980 Btu/SCF minimum, much less surpass that level. The Commission is concerned with Piedmont's agreeing to accept gas with a lower heating value. Nevertheless, the Commission accepts the Heating Value standard set forth in the Revised Version, with the understanding that the pilot program will allow for the collection of data related to the actual heating value of the Alternative Gas delivered as well as any potential impacts to customers, and that Piedmont plans to continue monitoring and evaluating its CGAs with the addition of receipt points for Alternative Gas supplies and will modify its CGAs as necessary to ensure that no customers are adversely impacted as Alternative Gas receipt points are added.

The Commission is not prepared to accept, at this time, Piedmont's right to allow a variance to the minimum heating value standard as low as 960 Btu/SCF. Piedmont commented that in the professional judgment of its engineers, who are responsible for safely and reliably operating Piedmont's transmission and distribution system, a heat content for Alternative Gas lower than 980 Btu/SCF would pose an unacceptable risk of operational problems with customer equipment. Piedmont Reply Comments, p. 19. In addition, comments received in this proceeding make clear that the processes used to raise Alternative Gas to 980 Btu/SCF are expensive. Granting Piedmont the authority to pick and choose which Alternative Gas suppliers are allowed to avoid that expense raises a fundamental question of fairness. If a compelling case can be made to allow an exception to the 980 Btu/SCF minimum standard, then it should be brought before the Commission for review and approval. For the reasons discussed above, the Commission concludes that the provision to grant Piedmont authority to waive the minimum Heating Value standard is not accepted.

The second revision involves the Interchangeability standard, which is intended to ensure that the Alternative Gas received by Piedmont is interchangeable with the geologic natural gas Piedmont has historically received from Transco and other upstream interstate natural gas pipelines. The Initial Version established a standard of "WOBBE 1290 and 1370." The Revised Version requires that the Alternative Gas received from any single supplier "stay within a WOBBE variance range equal to or less than 4%."

Although the Initial Version established a standard of two discrete Wobbe numbers of 1290 and 1370, the Commission interpreted this standard to be a range of acceptable Wobbe numbers. The Commission understands a Wobbe number range as representing a range within which any Wobbe number achieved would not require adjusting gas-fired equipment. The mid-point of a Wobbe number range from 1290 to 1370 is 1330. The variance from the mid-point to 1290 and 1370 is about 3%. In effect, that is the percent tolerance that Piedmont represented to the Commission would be appropriate in the Initial Version.

Without explanation or justification, the Revised Version proposes a Wobbe number variance range of 4%. The Revised Version does not establish a Wobbe number range or reference point for the variance. Enerdyne included in its comments a whitepaper published by the Gas Technology Institute that referenced a "proposed acceptable variation of Wobbe Index of +/- 4% from historical values and the upper limit of 1400 BTU/SCF." Enerdyne Comments, EPS Exhibit 2, p. 13. However, the Public Staff's Final Report does not explain why a 4% variation of Wobbe numbers lacking any reference point should be adopted in place of Piedmont's Wobbe number range included in the Initial Version.

The Commission concludes that a range from a minimum Wobbe number to a maximum Wobbe number should be included in Appendix F and that the range should be such that customers' burners will not require adjustment. The Commission, therefore, directs Piedmont to clarify whether the listing of two discrete points instead of a range in the Initial Version was an oversight. If so, and if such a range allows for interchangeability, then an Interchangeability standard of "WOBBE from 1290 to 1370" is appropriate. If not, the Commission directs Piedmont to revise the Interchangeability standard to a range of Wobbe numbers that will allow for interchangeability and will ensure that it meet its responsibilities under Commission Rules R6-18(2) and R6-34(c). If Piedmont submits a Wobbe number range that is lower than 1290 and/or higher than 1370, the Commission directs Piedmont to provide a detailed explanation for its basis for widening the range.

Additionally, given Piedmont's lack of experience in receiving Alternative Gas, the Commission directs Piedmont to amend Appendix F to require that heat content and Wobbe numbers be reported daily to Piedmont by Alternative Gas suppliers.

The third and fourth revisions involve the Nitrogen and Total Inerts standards. The Initial Version established a Nitrogen standard of 2% by volumetric basis. The Revised Version eliminates the Nitrogen standard. The Initial Version established a Total Inerts standard of 3.2% by volumetric basis. The Revised Version increases the Total Inerts standard to 4.8% by volumetric basis. Neither the Initial Version nor the Revised Version defines what is meant by "Total Inerts."

As is made clear in the comments, nitrogen affects the quality of the gas – the higher the concentration of nitrogen, the lower the heating value and efficiency of combustion. Piedmont Reply Comments, p. 24. Piedmont noted that the percentage of nitrogen in the gas stream Piedmont has received from Transco historically has been very low, which contributes to the variance between the heat content of gas actually received from Transco and the 980 Btu/SCF standard proposed by Piedmont. Further, Piedmont noted that increasing tolerance levels of nitrogen would make it that much more difficult to attain appropriate heat content levels. Piedmont Reply Comments, p. 24. In response to NCPC's Data Request No. 1, Piedmont provided the gas quality composition at Transco's Station 150 between October 1, 2016, and December 13, 2016. NCPC Comments, Attachment 2. Although Transco has no Nitrogen standard, NCPC's Data Request No. 1 also showed that the maximum nitrogen composition of Transco's gas for the period was only 0.823%, with a minimum of 0.356% and an average composition of 0.649%. The maximum nitrogen composition of Transco's gas delivered during the period, therefore, was less than half of Piedmont's initial proposed standard of 2% by volumetric basis.

Various parties to the proceeding deemed the Nitrogen and Total Inerts standards included in the Initial Version to be arbitrary and capricious and pointed to the Nitrogen and Total Inerts standards of interstate pipelines to support of their positions calling for more liberal standards. For example, NCPC made note of the fact that the Atlantic Coast Pipeline's standard for Nitrogen is 4% and for Total Inerts, 5%. Public Staff Final Report, p. 52. However, the Commission notes that the interstate pipeline system is fundamentally different from that of a local distribution system. Interstate pipelines blend lower quality gas with higher quality gas and deliver gas to LDCs like Piedmont within a narrow quality range. Further, as noted above, Piedmont has indicated that there may be certain conditions under which its customers receive 100% Alternative Gas. Thus, the Commission notes that increased concentrations of nitrogen, as would be allowed under the Revised Version, in the situation where a customer is receiving 100% Alternative Gas would result in that customer's receiving an even lower quality gas. Piedmont generally defended the standards set forth in the Initial Version as being reasonable and prudent at this time in comparison to other gas quality standards applicable to Alternative Gas, particularly with regard to its lack of experience with Alternative Gas. Piedmont advised that the Commission should err on the side of caution in approving such standards in order to preserve the integrity, reliability, and safety of Piedmont's continuing service in North Carolina. Piedmont Reply Comments, pp. 23-25.

Various parties to the proceeding commented on the expense associated with reducing concentrations of these constituents in Alternative Gas. For example, when discussing the cost associated with decreasing the nitrogen content of Alternative Gas, RNG indicated that while nitrogen rejection units are one solution to increasing heating content and decreasing nitrogen concentration in product gas, such technology is not commonly deployed in the context of Alternative Gas projects because it adds to project complexity, cost ($3-10 million in CAPEX, and as much as 30% more power consumption), and methane loss (as much as 15% or more of a project's methane is lost), which translates to revenue loss. Public Staff Final Report, p. 11.

The Nitrogen and Total Inerts standards were modified in the Revised Version to be more liberal, consistent with the requests of the parties involved in the promotion and expansion of the use of various forms of Alternative Gas. These revisions were made with no explanation by Piedmont, in spite of the concerns it expressed regarding lack of experience with Alternative Gas and the need to proceed with caution when setting gas quality standards.

The Commission also takes note of the fact that the both the C2e project and the Optima KV project are subject to the Nitrogen and Total Inerts standards set forth in the Initial Version. Thus, at least these two suppliers determined that compliance with the standards set forth in the Initial Version is feasible.

For these reasons, the Commission concludes that the Nitrogen and Total Inerts standards set forth in the Revised Version are not acceptable. The Commission concludes that Appendix F should include the Nitrogen and Total Inerts standards set forth in the Initial Version, which Piedmont defended as being reasonable in light of its lack of experience with Alternative Gas. Additionally, the Commission concludes that Appendix F should be amended to include a definition of "Total Inerts."

Service Quality and Operational Concerns, Not Related to Specific Revisions to Appendix F

Change in Character of Service

Commission Rule R6-18 addresses changes in character of service and establishes the procedure to be followed in the event of a material change in the character of gas service. The rule draws a distinction between whether or not a material change is under the utility's control. Under Rule R6-18(1), changes under the utility's control can only be made with the approval of the Commission, and after adequate notice to the customers. Under Rule R6-18(2), in the context of changes that are not under the utility's control, the utility "shall maintain the proper combustibility of the gas supplied at the heating valve and specific gravity existing at the customers' meters."

The Commission is concerned that if the quality of gas to downstream customers – particularly the heat content – materially changes as a result of Piedmont decision to receive Alternative Gas, such change represents a "change under the control of the utility" within the meaning of Rule R6-18(1).

Both Piedmont and the Public Staff take the position that Piedmont's receipt of Alternative Gas, if done in compliance with Appendix F, would not constitute a change under the control of the utility. Public Staff Final Report, pp. 9, 27. Notwithstanding the position of the Public Staff and Piedmont, the Commission is concerned that a change in the composition of gas in a pipeline from geologically-derived pipeline gas with a heating value of 1030 Btu/SCF to 100% Alternative Gas at Appendix F's lower limit of 980 Btu/SCF might constitute a "material" change.

However, the Commission concludes that the impact on the customer is key to determining whether a material change has occurred. If Piedmont takes effective steps to bill the customer for the actual heat content of gas that they receive, and if the lower-heat-content gas does not adversely impact the performance of the customer's equipment and appliances, then an argument can be made that the impact on the customer is not material. Therefore, in order to evaluate impact on customers, the Commission directs Piedmont to provide written notice to customers located on its distribution pipeline that could be impacted by Alternative Gas with respect to the impact that

Alternative Gas could have on them. Such notice should include what to look for as an indication that the customer's equipment and appliances may need adjustment and how to contact Piedmont to obtain additional information. Piedmont should work with the Public Staff to develop an appropriate form for such public notice.

Piedmont's Right to Terminate Obligation to Receive

Both the Initial Version and the Revised Version of Appendix F include a provision allowing Piedmont to interrupt or suspend its receipt of Alternative Gas. Generally speaking, Piedmont may interrupt or suspend its receipt of Alternative Gas if the Alternative Gas proffered for delivery fails to meet the specifications of Appendix F until such Alternative Gas conforms to the standards set forth in Appendix F as verified by an "independent certified third-party laboratory satisfactory to Piedmont ...." Additionally, Piedmont has the right to interrupt or suspend its receipt of Alternative Gas under defined circumstances related to risk to public health or Piedmont's facilities until such time as correction of the problem has occurred as determined by Piedmont in the exercise of its discretion.

The Commission notes that interrupting or suspending receipt of Alternative Gas is a severe penalty, but also recognizes that Piedmont must have the right to suspend its receipt under certain circumstances, particularly where there is risk to public health or the system. The Commission is concerned, though, that, if rigorously enforced, the provision could unfairly penalize Alternative Gas suppliers. Specifically, the Commission is concerned that in the event of simple non-conformity with Appendix F standards, such as Heating Value or Interchangeability, verification from a laboratory is unnecessarily burdensome. Therefore, the Commission directs Piedmont to revise Appendix F to include a more moderate provision to address minor variances from the Heating Value, Interchangeability, and such other basic standards that do not reasonably require verification by an independent laboratory. Such provision should both ensure, to the extent possible, that customers are not harmed by an Alternative Gas supplier's failing to meet the standards of Appendix F and should provide strong encouragement for Alternative Gas suppliers to consistently meet the standards.

Impact on LNG Facilities

The Commission is aware that Piedmont's liquefied natural gas (LNG) facilities may be impacted by poor quality gas. Piedmont stated that the flow on the main 8-inch and 10-inch pipeline through Duplin County can flow south to north. Public Staff Final Report, p. 25. Piedmont's Barragan LNG facility in Bentonville is not far from that part of its system. The Commission directs Piedmont to inform the Commission of the possible impact that its receipt of Alternative Gas that is in compliance with the standards set forth in Appendix F, as amended and accepted in this Order, may have on the functioning of its LNG facilities.

Ongoing Reporting Requirements

In order that the Commission be kept apprised of the impact to customers of Piedmont's receipt of Alternative Gas and to gain understanding as Piedmont gains experience, the Commission directs Piedmont to report regularly to the Commission as follows:

1) Piedmont shall file a detailed report of each complaint received from any customer regarding Piedmont's receipt of Alternative Gas and the actions taken by Piedmont to resolve the complaint(s) no more than ten (10) business days from the date on which the complaint is received by Piedmont.

2) Piedmont shall file a report on April 1 and November 1 each year during the pilot period that includes the following information: i) the number of suppliers of Alternative Gas; ii) the monthly volume of Alternative Gas received during the previous 6-month period; iii) a detailed report of any complaints received from customers regarding Piedmont's receipt of Alternative Gas during the period, and the actions taken by Piedmont to resolve the complaint(s); and iv) the costs incurred by Piedmont to receive Alternative Gas that are not otherwise recovered under any receipt interconnection agreement.

3) In addition to the semi-annual report, Piedmont shall file in this docket, each month during the pilot period no later than fourteen (14) business days after the end of the month, a report documenting daily quantity, heat content and Wobbe numbers reported daily to Piedmont by Alternative Gas suppliers.

Conclusion

In summary, the Commission concludes that Piedmont's lack of experience with the receipt of Alternative Gas, in concert with Piedmont's fundamental obligation to provide safe and reliable service to its customers, dictate that the Revised Version of Appendix F, as modified herein, should not be approved unconditionally, but rather approved as a time-limited pilot program. The pilot program will allow Piedmont to gain experience with the receipt of Alternative Gas. If experience, either in the form of testing or actual operations, demonstrates that it is appropriate to modify the standards and/or testing regimen set forth in Appendix F, then the Commission will consider such modifications at the end of the pilot period. Therefore, the Commission approves the Revised Version of Appendix F, as modified in this order, as a pilot program for a period of three years. During the pilot period, the Commission directs Piedmont to file, semi-annually, a report providing information regarding the impact of Alternative Gas on its system operations and, ultimately, its customers. Piedmont and/or other Alternative Gas suppliers may apply to the Commission to be approved to participate in the pilot program; however, it must be demonstrated to the Commission that such additions will be useful in gathering the information and data sought by the Commission. At the end of the three-year period, the Commission will consider modifications to Appendix F based on the experience gained during the pilot period.

IT IS, THEREFORE, ORDERED as follows:

1. That Piedmont shall file with the Commission within sixty (60) days from the date of this Order a revised version of Appendix F that complies with the requirements of this Order as follows:

a. With respect to the Heating Value standard, strike Piedmont's authority to allow a variance to the minimum heating value standard as low as 960 Btu/SCF;

b. With respect to the Interchangeability standard, revise to include an appropriate range of Wobbe numbers, with detailed explanation as directed in this Order;

c. With respect to the Heating Value standard and the Interchangeability standard, revise to require that heat content and Wobbe numbers be reported daily to Piedmont by Alternative Gas suppliers;

d. With respect to the Nitrogen standard, revise to the standard included in the Initial Version;

e. With respect to the Total Inerts standard, revise to define "Total Inerts" and revise to the standard included in the Initial Version; and

f. With respect to the Termination of Obligation to Receive Gas section, revise to include provision to address minor variances from the Heating Value, Interchangeability, and such other basic standards that do not reasonably require verification by an independent laboratory;

2. That the Revised Version of Appendix F, as amended herein, is approved for use as a pilot program for a three-year pilot period, beginning on the date of the Commission's order accepting Appendix F to be filed by Piedmont in compliance with this Order;

3. That the C2e and the Optima KV projects shall be allowed to participate in the pilot program and that additional Alternative Gas suppliers shall be allowed to participate in the pilot program upon a showing to the Commission that any such project will aid in the information and data sought to be gathered through the pilot program;

4. That Piedmont shall file with the Commission within sixty (60) days from the date of this Order a detailed explanation of how it plans to monitor and evaluate its CGAs with the addition of receipt points for Alternative Gas supplies and modify its CGAs as necessary to ensure that no customers are adversely impacted;

5. That Piedmont shall file with the Commission within sixty (60) days from the date of this Order, after working with the Public Staff to develop an acceptable format, a notice to be provided to customers located on its distribution pipeline that could be impacted by Alternative Gas with respect to the impact that Alternative Gas could have on them;

6. That Piedmont shall file with the Commission sixty (60) days from the date of this Order a detailed explanation of the possible impact that its receipt of Alternative Gas that is in compliance with the standards set forth in Appendix F, as amended and accepted in this Order, may have on the functioning of its LNG facilities;

7. That Piedmont shall file a detailed report of any complaints received from customers regarding Piedmont's receipt of Alternative Gas during the pilot period and the actions taken by Piedmont to resolve the complaint(s) no more than ten (10) business days from the date on which the complaint is received by Piedmont;

8. That Piedmont shall file with the Commission, beginning sixty (60) days from the date of this Order and monthly thereafter, after working with the Public Staff to develop an acceptable format, a report documenting daily quantity, heat content and Wobbe numbers reported daily to Piedmont by Alternative Gas suppliers; and

9. That Piedmont shall file a report on April 1 and November 1 each year during the pilot period that includes the following information: i) the number of suppliers of Alternative Gas; ii) the monthly volume of Alternative Gas received during the previous 6-month period; iii) a summary of any customer complaints received during the reporting period related to the receipt of Alternative Gas and any actions taken by Piedmont to resolve the complaints; and iv) the costs incurred by Piedmont to receive Alternative Gas that are not otherwise recovered under any receipt interconnection agreement.

ISSUED BY ORDER OF THE COMMISSION.
This the 19th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Charlotte A. Mitchell did not participate in this decision

DOCKET NO. G-9, SUB 698

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Piedmont Natural Gas Company, Inc., for Approval of Appendix F to its North Carolina Service Regulations	)))	ORDER ACCEPTING COMPLIANCE FILING IN PART AND REQUIRING REVISIONS

BY THE COMMISSION: On December 6, 2016, Piedmont Natural Gas Company, Inc. (Piedmont or the Company) filed a petition in the above-captioned docket requesting approval of a proposed Appendix F to its Service Regulations. In summary, the proposed Appendix F (Initial Version) included a definition of "Alternative Gas" and set forth the terms and conditions under which Piedmont will accept Alternative Gas onto its system and deliver or redeliver it to the Company's customers. Piedmont stated that the need for establishing such guidelines has arisen due to the potential for sourcing supplies of methane from non-traditional suppliers, including landfills, swine waste-to-energy facilities, and poultry waste-to-energy facilities.

On June 19, 2018, the Commission issued an Order Approving Appendix F and Establishing Pilot Program (Appendix F Order). In the Order, among other things, the Commission directed Piedmont to file within 60 days a revised version of Appendix F that complied with the requirements of the Order, and to provide other information requested by the Commission.

On July 16, 2018, North Carolina Pork Council (NCPC) filed a motion pursuant to N.C. Gen. Stat. § 62-90(a) requesting that the Commission extend the time within which to file notice of appeal and exceptions to the Commission's Appendix F Order from Thursday, July 19, 2018, to Monday, August 20, 2018. On July 17, 2018, the Commission issued an Order granting the requested extension of time to file appeal for all parties.

On August 9, 2018, NCPC filed a Motion for Reconsideration, requesting that the Commission revise the Appendix F Order.

On August 20, 2018, Piedmont filed a Compliance Filing and Motion for Clarification and/or Reconsideration (Compliance Filing). In summary, Piedmont submitted Attachment A, Appendix F to its North Carolina Service Regulations revised to comply with the Commission's directives set forth in the Appendix F Order, submitted other items as directed by the Appendix F Order, and asked for clarification and/or reconsideration of several aspects of its Appendix F Order.

On October 1, 2018, the Commission issued an Order Denying Motions for Reconsideration and Granting in Part Motion for Clarification (Reconsideration Order). That order denied the motions for reconsideration filed by NCPC and Piedmont. Further, it granted Piedmont's request to revise Appendix F: (1) to modify the timing of the filing of the semi-annual report required in Ordering Paragraph No. 9 of the Appendix F Order, and (2) to make Piedmont rather than the Alternative Gas suppliers responsible for measuring and reporting to the Commission on a monthly basis the daily quantities, heat content, and Wobbe value of the Alternative Gas received by Piedmont.

Compliances

In Ordering Paragraph No. 1 of the Commission's Appendix F Order, the Commission directed Piedmont to revise Appendix F to, among other things: (1) strike Piedmont's authority to allow a variance to the minimum heating value standard as low as 960 Btu/SCF, (2) revise the Nitrogen standard to the standard included in the Initial Version, (3) define "Total Inerts," and (4) revise the Total Inerts standard to the standard included in the Initial Version. The Commission finds that Piedmont has complied with those requirements of the Appendix F Order.

Revision of Piedmont's Interchangeability Standard

Ordering Paragraph No. 1 of the Commission's Appendix F Order directed Piedmont to revise the Interchangeability standard to include an appropriate range of Wobbe numbers, with a detailed explanation of any changes.

In Piedmont's December 6, 2016 petition, its original Interchangeability standard was shown as "WOBBE 1290 and 1370." In the Appendix F Order, the Commission concluded "that a range from a minimum Wobbe number to a maximum Wobbe number should be included in Appendix F and that the range should be such that customers' burners will not require adjustment." It directed Piedmont to clarify whether the listing of two discrete points instead of a range in the Initial Version of Appendix F was an oversight. If so, the Commission directed that Piedmont use an Interchangeability standard of Wobbe from 1290 to 1370. The Commission stated that if the original use of two discreet points was not an oversight, Piedmont should revise the Interchangeability standard to a range of Wobbe numbers that will allow for interchangeability. The Commission added, "If Piedmont submits a Wobbe number range that is lower than 1290 and/or higher than 1370, the Commission directs Piedmont to provide a detailed explanation for its basis for widening the range."

In its Compliance Filing, Piedmont affirmed that the use of two discreet Wobbe numbers was an oversight, and that it had intended to use a range of 1290 to 1370. However, Piedmont also proposed a revised Wobbe range of 1285 to 1400. The Company stated that it, "believes that Alternative Gas within this range should pose no threat to existing customers or to the ability of customer equipment to burn such gas." Further, Piedmont explained that the lower limit of 1285 was determined using a heat content of 980 Btu/SCF and a specific gravity of 0.58, which was described as "the highest specific gravity Piedmont has experienced to date for Alternative Gas delivered to Piedmont by Optima KV – the only Alternative Gas producer actually delivering gas to Piedmont."

The Commission had Piedmont's Compliance Filing before it as of August 20, 2018, and considered that information in its Reconsideration Order. In the Reconsideration Order, the Commission stated:

> As expressed in the Appendix F Order, the Commission was convinced that the Wobbe range of 1290 to 1370 recommended by Piedmont in its Initial Version of Appendix F was appropriate. The Commission remains convinced on this point. Further, the Commission concludes that there are no new facts or additional information that support accepting Piedmont's suggested minor modification to the Wobbe range approved in the Appendix F Order.

Reconsideration Order, at p. 8.

The above conclusion incorporated the Commission's consideration of the facts cited by Piedmont in its Compliance Filing in support of its revised Wobbe range of 1285 to 1400. Specifically, the Commission was not persuaded that the ability of customer equipment to burn Alternative Gas is a sufficient criteria. Rather, the Commission placed significant weight on Piedmont's statement that the use of Piedmont's original 1290 to 1370 Wobbe numbers would not require adjustments to customers' burners. Flammable gas outside of a 1285 to 1400 Wobbe range has the ability to burn in gas equipment, as long as the equipment is adjusted to accommodate it. However, the essence of interchangeability is the ability of a stream of gas to burn in gas equipment without requiring adjustments. Given Piedmont's long-standing role and experience in maintaining the proper combustibility of the gas that it delivers to its customers, the Commission placed significant weight on Piedmont's original 1290 and 1370 Wobbe numbers as being the appropriate Wobbe range. Further, as it did in the Reconsideration Order, the Commission concludes that Piedmont did not provide persuasive support for the premise that gas with a Wobbe number as low as 1285 could burn in customers' gas equipment without requiring adjustments.

<u>Reporting of Daily Heat Content and Wobbe Values</u>

Also in Ordering Paragraph No. 1 of the Commission's Appendix F Order, the Commission directed that Appendix F be revised to require that Alternative Gas suppliers report heat content and Wobbe numbers to Piedmont on a daily basis. In its Compliance Filing, Piedmont duly made that revision. It included in Attachment C a form for the monthly report of Alternative Gas quantities, heat content, and Wobbe values.

However, in the same filing, Piedmont stated that it would prefer to gather that information directly through its own instruments. The Commission's Reconsideration Order granted Piedmont's request that Piedmont be responsible for measuring and reporting to the Commission on a monthly basis the daily quantities, heat content, and Wobbe value of the Alternative Gas that it receives, and directed that Appendix F be revised accordingly.

The Commission accepts Attachment C as the acceptable format for the monthly report of Alternative Gas quantities received, heat content daily average, and Wobbe daily average, with one addition. It directs Piedmont to add a column on the monthly report for specific gravity calculated to three decimal places.

The Commission notes that, if the quality of Alternative Gas is to be kept within the Appendix F Gas Quality Standards, it is important that it be documented that Alternative Gas suppliers are aware of the quality of gas that they are delivering on a daily basis and particularly are aware of any variance outside of the Alternative Gas Quality Standards. The Commission will leave it to Piedmont to propose a way to make Alternative Gas suppliers aware when their gas is not in compliance and to document that notification, as discussed more fully below.

Termination of Obligation to Receive Gas

In the Appendix F Order, the Commission raised a question about the "Termination of Obligation to Receive Gas" section in Appendix F. In addition to protecting the system and its customers, this provision also functions essentially as a penalty provision to compel compliance. The Commission noted that "Piedmont must have the right to suspend its receipt under certain circumstances, particularly where there is risk to public health or the system." However, it also noted that "interrupting or suspending receipt of Alternative Gas is a severe penalty." The Commission added that the provision requiring verification with a laboratory test before a supplier could resume injecting Alternative Gas into Piedmont's system, "in the event of simple non-conformity with Appendix F standards, such as Heating Value or Interchangeability," was unnecessarily burdensome. As a result, the Commission directed Piedmont:

> [t]o revise Appendix F to include a more moderate provision to address minor variances from the Heating Value, Interchangeability, and such other basic standards that do not reasonably require verification by an independent laboratory. Such provision should both ensure, to the extent possible, that customers are not harmed by an Alternative Gas supplier's failing to meet the standards of Appendix F and should provide strong encouragement for Alternative Gas suppliers to consistently meet the standards.

Appendix F Order, at p. 15.

In its Compliance Filing, Piedmont responded:

> In Attachment A, Piedmont has modified the provisions under Subsequent Testing to provide that laboratory testing may not be required prior to reconnection if the event that caused interruption or suspension of a supplier's Alternative Gas stream

consists of a non-material and/or incidental deviation from the specific Alternative Gas Quality Standards applicable to heating value, interchangeability, total sulfur, carbon dioxide, water, or hydrogen sulfide, so long as such deviations are not recurring in nature and do not pose a threat to Piedmont's facilities or equipment, the facilities or equipment of Piedmont's customers, or to Piedmont's ability to provide continuous, safe, and reliable service to the public.

Piedmont made no change under the Termination of Obligation to Receive Gas section, but rather addressed the change under Subsequent Testing. Consequently, the Commission's concern about an Alternative Gas supplier being unfairly penalized by disconnection for a relatively minor variance remains. Therefore, the Commission directs that Piedmont address this issue under the Termination of Obligation to Receive Gas section. A possible resolution would be a sentence acknowledging the possibility of minor variances, and stating that Piedmont will provide the supplier with reasonable notice of the minor variances and specify a date by which the supplier must correct the variances or face disconnection by Piedmont. The Commission directs that Piedmont file with the Commission within 30 days its proposal for providing such notice of noncompliance.

The Commission also notes that in the proposed changes to the Subsequent Testing section Piedmont did not include certain other Alternative Gas Quality Standards, such as those for nitrogen and oxygen, in its list of standards subject to the modified penalty provision. The Commission wishes to give Piedmont and the other parties to this docket as much flexibility as possible. However, the Commission monitors interstate pipeline electronic bulletin boards (EBB) – particularly 1Line, the EBB of Transcontinental Gas Pipe Line (Transco) – and is aware of the information that is available from the type of gas chromatograph used by Transco. There does not appear to be any reason that an Alternative Gas component that is listed on a gas chromatograph should require laboratory testing in the event of a suspension of receipt as a result of non-compliance. Therefore, the Commission directs Piedmont to modify the Termination of Obligation to Receive Gas section to reflect that when minor non-compliances involving those components of the Appendix F Alternative Gas Quality Standards that are reported daily on the installed gas measuring equipment result in suspension or interruption of service, an independent laboratory test will not be required prior to the resumption of service. Furthermore, Piedmont shall, within 30 days, make a filing explaining why it limited the components in the Alternative Gas Quality Standards not subject to laboratory testing to the ones included under Subsequent Testing in its Compliance Filing.

With the modifications requested above, the Commission will accept as part of the Pilot Program the continued reliance on disconnection as the only remedy for violations of Appendix F. The Commission encourages all parties to work diligently to ensure that Piedmont's Alternative Gas Quality Standards are consistently met, and it expects the disconnection remedy to be employed by Piedmont with appropriate discretion.

Customer Notification

In the Appendix F Order, the Commission noted that the impact of Alternative Gas on customers was key to determining whether a material change in Piedmont's service had occurred. The Commission stated:

> Therefore, in order to evaluate impact on customers, the Commission directs Piedmont to provide written notice to customers located on its distribution pipeline that could be impacted by Alternative Gas with respect to the impact that Alternative Gas could have on them. Such notice should include what to look for as an indication that the customer's equipment and appliances may need adjustment and how to contact Piedmont to obtain additional information.

Appendix F Order, at p. 15.

The Commission ordered Piedmont to work with the Public Staff to develop a notice to be provided to customers located on its distribution pipeline that could be impacted by Alternative Gas with respect to the impact that Alternative Gas could have on them.

Piedmont submitted Attachment D as the proposed form of customer notice agreed to by Piedmont and the Public Staff. While the notice submitted in Attachment D may be a good first step, it is not fully responsive to Ordering Paragraph No. 5 of the Commission's Appendix F Order, or the discussion about the customer notice in the body of the Order. The notice in Attachment D informs customers of the Commission's approval of quality standards, describes Alternative Gas, states that Piedmont is currently receiving Alternative Gas from a supplier near Kenansville, and extols the virtues of Alternative Gas. Beyond that, it simply states, "We do not anticipate any problems associated with our receipt of alternative gas and you should not notice any difference in the quality of service you have traditionally received from Piedmont."

The Commission notes that Piedmont's Attachment D customer notice describes the Commission-approved standards as being "...similar to standards applicable to production from traditional underground natural gas sources." That statement may be accurate as far as it goes, but it falls short of adequate notice because it does not inform the customer that such traditional underground gas can vary in quality, but is blended before being delivered. Therefore, the Commission directs that the phrase "which is similar to standards applicable to production from traditional underground natural gas sources" be stricken from the Attachment D notice.

The Commission recognizes that Piedmont is currently receiving Alternative Gas from only one supplier and the volumes from that supplier may currently be adequately blended with pipeline gas so that no impacts will be evident. Nevertheless, the Commission deems it appropriate for Piedmont to add some information to its customer notice about what to look for as a sign that Alternative Gas may be affecting the operation of the customer's equipment. As an example, the customer notice might state:

> We do not anticipate any problems associated with our receipt of alternative gas and you should not notice any difference in the quality of service you have traditionally received from Piedmont. However, if you do notice some difference

in the operation of you gas appliances, such as a constantly flickering flame, or an unusually orange or yellow flame for a period of time, please contact Piedmont at...

The Commission directs that Piedmont revise the Attachment D notice to conform with the Commission's directives above, and file the revised version within 30 days.

Impacts of Receipt of Alternative Gas on LNG Operations

In Ordering Paragraph No. 6 of the Appendix F Order, the Commission directed Piedmont to file with the Commission a detailed explanation of the possible impact that its receipt of Alternative Gas that is in compliance with Appendix F may have on the functioning of its LNG facilities. In compliance, Piedmont filed Attachment E, "Statement of Potential Impacts of Alternative Gas Receipts on Piedmont LNG Facilities." Piedmont described the impact that five components -- mercaptan, nitrogen, oxygen and toluene content, and gas temperature -- included in the Alternative Gas Quality Standards could have as "a low to medium impact on Piedmont LNG operations." Piedmont stated:

> Due to the critical importance and significant investment associated with these assets, Piedmont will not allow Alternative Gas facilities to be sited at locations that would result in quantities of such gas reaching its LNG sites at levels that would threaten the integrity of the liquefaction equipment. Piedmont will utilize system modeling tools to ensure the output of proposed Alternative Gas facilities does not impact its LNG operations.

The Commission appreciates Piedmont's candid assessment of this issue and approves its proposed solution.

Plan for Monitoring and Evaluating CGAs

In the Appendix F Order, the Commission ordered that Piedmont file within 60 days a detailed explanation of how it plans to monitor and evaluate its "common gas areas" (CGAs) with the addition of receipt points for Alternative Gas supplies, and how it will modify its CGAs as necessary to ensure that no customers are adversely impacted. Piedmont's report on CGA-related matters was attached to its Compliance Filing as Attachment F.

In Attachment F, Piedmont stated that it will use system modeling to assess heat content variances arising from Alternative Gas delivered at new receipt points. The Company stated:

> The modeling considers the amount of Alternative Gas relative to the flow of other, traditional natural gas sources into and across Piedmont's system in order to provide variances in the heat content of gas delivered to Piedmont's customers.

It further stated that:

> Piedmont's modeling indicates that no customer has been or will be materially impacted with respect to the heat content of the Alternative Gas received into Piedmont's system at Kenansville, NC at design flow rates.

A footnote in Piedmont's reply comments in this docket stated:

> Piedmont modeling for the two pending Alternative Gas interconnection arrangements indicates that some customers may receive up to 100% Alternative Gas under certain operating conditions.

Piedmont Reply Comments, fn. 8. The Commission interpreted the footnote to mean that customers downstream of Optima KV's Kenansville facility would see 100% Alternative Gas under some circumstances. Optima KV is the only Alternative Gas facility currently in operation. Piedmont's clarification that the Alternative Gas received into Piedmont's system from Optima KV at design flow rates would not materially impact the heat content of gas billed to downstream customers has the effect of deferring the need to address significant differences between the heat content of Alternative Gas and pipeline gas. Further, there does not appear to be an immediate need to establish a new CGA solely for measurement of the Appendix F standards of the Optima KV input.

In addition, Piedmont stated that "immaterial variances in heat content should not be addressed, since utility ratemaking and utility metering (absent a chromatograph on every customer meter) are not designed for perfect accuracy." The Commission agrees. It recognizes that avoiding burdensome administration and unjustified costs is a fundamental principal of utility ratemaking. In its January 25, 1990 order in Docket No. G-100, Sub 52, the Commission responded to a petition to require that bills be adjusted for atmospheric pressure. In that docket, the Commission stated, "any benefits derived from attempting to compensate for all potential measurement errors would be quickly offset by the added financial burden on [the] customers." Whether variances arise from measurement errors or differences in gas quality, there is a need to balance absolute accuracy in billing with reasonable costs.

Piedmont stated that its modeling indicates that the Alternative Gas received into its system at Kenansville will not cause a variance in heat content of more than 2% for any customer. It pointed out that gas meters are not designed for perfect accuracy and a 2% tolerance level is "included in approved meter testing protocols of both natural gas and electric utilities." It asserted that "variations within that range from Alternative Gas should not, in Piedmont's view, be considered meaningful or require adjustment." Piedmont references the standard of a 2% variance in meter accuracy as support for a 2% variance in heat content. The Commission takes note of the acceptable magnitude of meter accuracy. However, it also notes that a variance in metering accuracy could either suppress or amplify differences in the heat factor used to bill a customer within a CGA, and the actual content of the gas received by that customer.

The Commission has previously addressed the issue of variances between the heat content delivered to a customer and the heat-content billing factor used to bill that customer. In Public Service Company of North Carolina, Inc.'s (PSNC's) most recent general rate case, in Docket No. G-5, Sub 565, PSNC proposed to use a single, average heat-content adjustment factor to bill all of PSNC's North Carolina customers. PSNC witnesses testified that although PSNC was now receiving interstate gas from the south and the north, the difference in heat content was not significant.

The testimony in that PSNC rate case is consistent with Piedmont's statements in this docket that Transco's heat content does not vary much from 1030 Btu/SCF. Also, Piedmont's response to Data Request No. 1 from NCPC in this docket showed actual heat content data at Transco's Station 150 from October 1, 2016 through December 13, 2016. That Data Response showed a maximum heat content of 1051 Btu/SCF, a minimum of 1027 Btu/SCF, and an average of 1031 Btu/ SCF. NCPC Comments, Attachment 2.

In the PSNC rate case, the Commission did not determine how much variation is acceptable between the heat content delivered to a customer and the heat content factor used to bill that customer. However, since PSNC also depends heavily on Transco for its gas supply, the range of heat content values displayed in Piedmont's response to NCPC's data request is representative of the magnitude of variances in heat content that the Commission, in PSNC's rate case, agreed do not require bill adjustments. The Commission effectively recognized in the PSNC docket that, as Piedmont stated, "immaterial variances in heat content should not be addressed."

While the Commission recognizes that some variation between heat content billing factors and the actual heat content delivered is acceptable, it also notes that, with regard to the introduction of Alternative Gas, Piedmont's ratepayers should not have to pay for an unacceptable change in heat content or other attributes that might create added costs. Piedmont has stated that it intends to use CGAs to protect against such a result. The Commission agrees that Piedmont's decision to use eleven CGAs while receiving pipeline gas represents a commendably diligent effort to bill its customers fairly. However, comments in this docket made clear that at least some Alternative Gas producers would struggle to meet the low end of Piedmont's Alternative Gas Quality Standard Heating Value range. Further, as Piedmont made clear, there was relatively little variation in the heat content of pipeline gas with about 1030 Btu/SCF as the average value. Nevertheless, whether CGAs can effectively detect and measure a shifting null point between pipeline gas and low heat-content Alternative Gas without additional heat content measurements remains to be seen. This is one of the areas of uncertainty in which the Appendix F Pilot Program should help the Commission and parties gain an understanding. Pursuant to N.C. Gen. Stat. § 62-33, the Commission will work with Piedmont and the parties to better understand how the Company establishes its CGAs and what can be done to use CGAs to address how to ensure that customers are properly billed for natural gas containing Alternative Gas.

Additional Proposed Revision

In its Compliance Filing, Piedmont identified an omission in its Appendix F that it proposed to correct. As reflected on Attachment A, on page 2 of Appendix F under initial testing, Alternative Gas suppliers are required to provide the results of three consecutive lab tests of their gas performed no less than 30 days apart following Piedmont's initial receipt of Alternative Gas from a supplier. However, no upper limit as to when these test results must be provided was listed in Appendix F. If this loophole was utilized by a supplier, it would effectively eliminate the requirement to provide three consecutive lab tests following Piedmont's initial receipt of gas from such supplier. As a result, Piedmont proposed an upper limit of 45 days between such tests, and that proposed language is reflected on page two of Attachment A under the Testing Requirements section. Piedmont requested Commission authorization to include this change in its Appendix F. The Commission finds good cause to authorize Piedmont to include that change in Appendix F.

IT IS, THEREFORE, ORDERED as follows:

1. That the Interchangeability standard in Appendix F shall be a range of Wobbe numbers between 1280 and 1370, inclusive;

2. That Attachment C to Piedmont's Compliance Filing shall be modified to add a column that shows specific gravity calculated to three decimal places;

3. That within 30 days, Piedmont shall propose a modification to Appendix F that will describe a proposed notice and procedure by which an Alternative Gas supplier and the Commission will be promptly notified when the supplier is out of compliance with the Appendix F Alternative Gas Quality Standards, be given a specific date by which the variance must be corrected to avoid disconnection by Piedmont, and how such notification will be documented;

4. That the Termination of Obligation to Receive Gas provision of Appendix F shall be revised to reflect that when minor non-compliances involving those components of the Appendix F Alternative Gas Quality Standards which are reported daily on the installed gas measuring equipment result in suspension or interruption of service, an independent laboratory test will not be required prior to the resumption of service. Furthermore, Piedmont shall, within 30 days, file an explanation as to why it limited the components in the Alternative Gas Quality Standards not subject to laboratory testing to the ones included under Subsequent Testing in its Compliance Filing;

5. That Attachment D of Appendix F shall be revised as directed in the body of this Order and filed with the Commission within 30 days;

6. That Appendix F, Attachment A, page 2, shall be, and is hereby, revised to include an upper limit of 45 days between consecutive independent laboratory tests.

ISSUED BY ORDER OF THE COMMISSION.
This the 30th day of October, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

Commissioners Lyons Gray and Charlotte A. Mitchell did not participate in this decision

DOCKET NO. G-9, SUB 698

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of	)	
Application of Piedmont Natural Gas	)	ERRATA ORDER
Company, Inc., for Approval of Appendix F	)	
to its North Carolina Service Regulations	)	

BY THE COMMISSION: On October 30, 2018, the Commission issued an Order Accepting Compliance Filing in Part and Requiring Revisions (Compliance Order) in the above-captioned docket. It has come to the Commission's attention that Ordering Paragraph No. 1 of the Compliance Order incorrectly stated the lower end of the approved range of Wobbe numbers as 1280, instead of the intended 1290. Therefore, the Commission finds good cause to correct Ordering Paragraph No. 1 of the Compliance Order by revising it to state as follows:

1. That the Interchangeability standard in Appendix F shall be a range of Wobbe numbers between 1290 and 1370, inclusive.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 2nd day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
A. Shonta Dunston, Acting Deputy Clerk

DOCKET NO. G-40, SUB 142

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Frontier Natural Gas Company – Violations of Title 49, Part 192, Subpart O, Code of Federal Regulations	)	ORDER APPROVING MODIFICATION TO AGREEMENT AND STIPULATION OF SETTLEMENT

BY THE COMMISSION: On October 12, 2017, the North Carolina Utilities Commission – Pipeline Safety Section (Safety Staff) filed an Agreement and Stipulation of Settlement in this proceeding on behalf of itself and Frontier Natural Gas Company (Settlement) pursuant to which Frontier and the Safety Staff agreed to a resolution of all disputes between them in this docket. On October 31, 2017, the Commission approved the Settlement.

On May 31, 2018, Frontier filed a request for Approval of Modification to Agreement and Stipulation of Settlement. In its motion, Frontier states that the Settlement required Frontier, in consultation with Safety Staff, to perform an in-line inspection ("ILI") of a representative portion of its transmission system utilizing smart-pig technology and to also perform an internal corrosion direct assessment ("ICDA") for the Greenway and West Park segments of its transmission line by dates set forth in the Settlement. Frontier states that following approval of the Settlement and further discussions between Frontier and Safety Staff, Safety Staff and Frontier reached agreement that Frontier's ILI would include the Greenway and West Park sections of its transmission system. Frontier's ILI was conducted April 9, 2018 through April 20, 2018 and included the Greenway and West Park sections of its transmission system. Frontier states that inasmuch as an ILI inspection of the Greenway and West Park sections of its transmission system provides much more (and more granular) information about the condition of those segments of Frontier's transmission system than an ICDA would reveal, the Safety Staff and Frontier have agreed that an ICDA of those segments is no longer necessary. Thus, Frontier requests that the Commission approve the Amended Stipulation of Settlement attached to the Motion effectuating such agreement.

Upon consideration of the entire record in this proceeding, the Commission finds and concludes that approval of the Amended Stipulation of Settlement dated and filed on May 31, 2018, which modifies the Agreement and Stipulation of Settlement dated October 12, 2017, is in the public interest.

IT IS, THEREFORE, ORDERED that the May 31, 2018 Amended Stipulation of Settlement filed with the Commission is hereby approved.

ISSUED BY ORDER OF THE COMMISSION.
This the 11th day of September, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. SP-5436, SUB 1
DOCKET NO. E-22, SUB 559

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Verified Joint Notice and Request for Approval to Transfer the Certificate of Public Convenience and Necessity to Construct a 74.9-MW Solar Facility in Halifax County, North Carolina, from Chestnut Solar, LLC, to Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina	)))))))	ORDER APPROVING TRANSFER OF CERTIFICATE SUBJECT TO CONDITIONS

BY THE COMMISSION: On April 24, 2018, in Docket No. SP-5436, Sub 0, the Commission issued a certificate of public convenience and necessity (CPCN) to Chestnut Solar, LLC (Chestnut), for the construction of a 74.9-MW_{AC} solar photovoltaic electric generating facility in Halifax County, North Carolina.

On August 23, 2018, Chestnut and Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina (DENC) (collectively, the Applicants), filed a verified joint notice and request for approval (Joint Notice) to transfer the CPCN from Chestnut to DENC. DENC is an operating subsidiary of Dominion Energy, Inc.

The Applicants requested expedited approval of the transfer so that the Chestnut facility can achieve commercial operation under DENC's ownership while allowing sufficient time for the Chestnut facility to be constructed and construction milestones to be met in accordance with the Asset Purchase Agreement entered into between Chestnut and DENC.

According to the Joint Notice, DENC plans to acquire the Chestnut facility and its associated rights and assets. DENC plans to sell the entire energy output of Chestnut into the PJM Interconnection, L.L.C. (PJM) market and sell 100% of the Renewable Energy Certificates (RECs) and environmental attributes (EAs) to a third party customer (Customer) that is currently served by Virginia Electric and Power Company in its Virginia service territory.

Applicants stated that construction has not started on the Chestnut facility, and that interconnection service to the facility will be provided pursuant to an interconnection service agreement (ISA) previously entered into between and among PJM, Chestnut, and DENC. Applicants stated that the ISA was filed with the Federal Energy Regulatory Commission (FERC) on May 30, 2017, accepted by FERC on July 20, 2017, and allows for up to 74.9 MW of solar generation to be connected, which is expected to occur November 1, 2019.

In addition, Applicants stated that the original intent of Chestnut was to enter into a power purchase agreement with DENC or another buyer for sale of the output. DENC selected the Chestnut facility as the best option that would enable it to provide RECs and EAs to the Customer in a timely and economical manner. On August 3, 2018, the Applicants executed an Asset Purchase Agreement (APA) for the Chestnut facility and related assets. DENC will transfer 100%

of the RECs associated with Chestnut's output to the Customer. RECs will be tracked and retired using the PJM Environmental Information Services Generation Attribute Tracking System or other similar tracking system. DENC will not use the RECs associated with the Chestnut facility to comply with its own obligations under the North Carolina Renewable Energy and Energy Efficiency Portfolio Standard (REPS), nor will it use energy or RECs acquired for its own REPS compliance for the Customer.

Applicants stated that the electric output of the Chestnut facility will be sold into PJM under DENC's market-based rate authorization for wholesale sales of electric energy, and that DENC's purchase and operation of the Chestnut facility will not impact North Carolina customers, who will be held harmless from any costs associated with the Chestnut facility, as the Chestnut facility will be "ring fenced" so that none of its costs are included in DENC's rate base or cost of service for ratemaking purposes.Specifically, all costs incurred by DENC pursuant to the APA and Engineering, Procurement, and Construction Agreements, or in the potential provision of RECs and EAs to the Customer, will be directly assigned to the Customer through the rate it pays for the RECs and EAs. Further, DENC will directly assign or allocate costs and benefits as necessary to ensure that its North Carolina customers are in the same position they would have been had DENC not acquired the Chestnut facility or met the needs of the Customer as proposed.

The Public Staff presented this matter at the Commission's Regular Staff Conference on October 15, 2018. The Public Staff stated that it reviewed the Joint Notice and believes DENC's accounting procedures and internal controls can identify costs associated with the Chestnut facility and isolate these costs from the cost of serving DENC's North Carolina retail ratepayers, including costs in DENC's fuel rider. The Public Staff stated that these costs can be appropriately reviewed during the course of applicable ratemaking or other future proceedings.

Based on its review, the Public Staff concluded that the proposed transfer of the CPCN from Chestnut to DENC is justified by the public convenience and necessity and should be approved subject to certain conditions. The conditions are the same as those included in the Commission's Order Approving Transfer of Certificate Subject to Conditions for Pecan Solar, LLC, and Johannes Gutenberg Solar, LLC, issued on December 8, 2017, in Docket No. E-22, Sub 548. The Public Staff stated that the conditions are sufficient to ensure that DENC's North Carolina retail ratepayers will be held harmless from any costs associated with DENC's ownership and operation of Chestnut as proposed in the Joint Notice. The conditions recommended by the Public Staff to be imposed on the transfer of the certificate for the Chestnut facility are the following:

1. (Accounting Conditions) DENC shall utilize appropriate mechanisms in its accounting system and internal controls to identify, capture, and report all costs associated with the Chestnut facility in sufficient detail such that these costs are excluded from its North Carolina retail cost of service.

2. (Cost of Service Conditions) DENC shall allocate system level costs, including the costs associated with the Chestnut facility, to the Customer such that DENC's ownership and operation of the Chestnut facility will have no impact on the costs allocated to its North Carolina retail operations. This allocation procedure shall be used consistently in all DENC general rate

case and rider proceedings such that there will be no impact on DENC's North Carolina retail ratepayers as a result of DENC's ownership or operation of the Chestnut facility.

3. (Fuel Cost Conditions) DENC shall exclude from its fuel factor calculations any impacts of the Chestnut facility on total system energy volumes and system fuel costs such that DENC's ownership of the Chestnut facility will have no impact on its North Carolina retail fuel factors.

4. (REPS Conditions) DENC shall transfer all of the RECs earned by the Chestnut facility to the Customer, shall not apply the RECs associated with the Chestnut facility to its own REPS compliance obligation, and shall not seek to recover any costs associated with providing this service to the Customer from its North Carolina retail cost of service, including through its Rider RP and Rider RPE.

5. (Reporting Conditions) Upon commencing operation of the Chestnut facility, and annually thereafter, DENC shall file documentation in conjunction with its annual cost of service filings showing that DENC's North Carolina ratepayers are held harmless from any impacts resulting from DENC's ownership and operation of the Chestnut facility.

Based on the foregoing and the record in this matter, the Commission finds that the proposed transfer of the CPCN from Chestnut to DENC as proposed in the Joint Notice is justified by the public convenience and necessity and should be approved, subject to the conditions listed above.

IT IS, THEREFORE, ORDERED as follows:

1. That the transfer of the CPCN from Chestnut to DENC is approved.

2. That this approval is subject to Condition Nos. 1 through 5 as set forth above.

3. That DENC shall file a motion with the Commission informing the Commission of the date on which DENC's acquisition of the Chestnut facility is consummated and requesting a transfer of the CPCN to DENC.

ISSUED BY ORDER OF THE COMMISSION.
This the 16th day of October, 2018.

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Empire Moving and Storage Inc, 210 Loft Lane,	)	
Unit 127, Raleigh, North Carolina 27609 –	)	ORDER RULING ON
Application for Certificate of Exemption to	)	APPLICANT'S FITNESS
Transport Household Goods	)	

HEARD IN: Commission Hearing Room 2115, Dobbs Building, 430 N. Salisbury Street, Raleigh, North Carolina, on Wednesday, May 23, 2018, at 10:00 a.m.

BEFORE: Commissioner Charlotte A. Mitchell, Presiding; Commissioners Jerry C. Dockham and Lyons Gray

APPEARANCES:

For Empire Moving and Storage Inc:

Fabio Ortiz, Esq., Fabio Ortiz Law Firm, PLLC, 1031 Dresser Court, Raleigh, North Carolina 27609

BY THE COMMISSION: On January 23, 2018, Empire Moving and Storage Inc (Empire or Applicant), filed an application with the Commission pursuant to G.S. 62-261.8(1) and Rule R2-8.1 of the Rules and Regulations of the North Carolina Utilities Commission for a certificate of exemption (certificate) to transport household goods by motor vehicle for compensation within North Carolina. The application named Edgar Joshua Brickley as the sole principal of the company.

On February 6, 2018, the certified criminal history record check for Edgar Joshua Brickley was filed with the Commission as required by G.S. 62-273.1 and Rule R2-8.1(a)(3).

On February 7, 2018, the protest deadline, established in accordance with Rule R2-8.1(c), passed without the Commission's receiving a protest.

On April 10, 2018, the Commission issued an Order Scheduling Application for Hearing on May 23, 2018, at 10:00 a.m., to address questions regarding the Applicant's application and fitness. The Order also provided that the Public Staff – North Carolina Utilities Commission (Public Staff) could participate in the hearing on behalf of the using and consuming public.

On May 10, 2018, Lucy Edmondson, Staff Attorney for the Public Staff, filed notice on behalf of the Public Staff to inform the Commission that the Public Staff would not participate in the hearing.

On May 23, 2018, the hearing was held in Raleigh, as scheduled. Mr. Brickley was represented before the Commission by counsel. Mr. Brickley is the Applicant's sole principal, appeared and testified in support of the application and responded to questions from the Commission. Mr. Brickley also offered testimony from his sister, Eugenia Grace Brickley, in support of the application.

Based upon the information contained in the application, the testimony received at the hearing, and the entire record in this matter, the Commission makes the following:

FINDINGS OF FACT

1. On January 23, 2018, Edgar Joshua Brickley, on behalf of Empire Moving and Storage Inc, filed an application with the Commission for a certificate to transport household goods by motor vehicle for compensation within North Carolina. Mr. Brickley is the sole principal of the business located in Raleigh, North Carolina. Mr. Brickley is properly before the Commission seeking a certificate pursuant to G.S. 62-261(8) and Rule R2-8.1 to transport household goods by motor vehicle for compensation within North Carolina.

2. The Commission regulates public utilities in the state of North Carolina, including household goods movers.

3. Mr. Brickley has worked with several companies since graduating from high school. He has worked for Prime Energy Group, Budget Movers Express, and D.H. Griffin Construction Company.

4. Mr. Brickley possesses more than ten years of moving experience. Most of his experience involves his work with Budget Movers Express.

5. Mr. Brickley has learned from his prior adverse experiences. Through his experiences, he learned that he needed to make improvements in his life so that he can be a better father to his son and become successful in his moving business.

6. Mr. Brickley has participated in several rehabilitation programs in an effort to improve his life.

7. Mr. Brickley incorporated Empire Moving and Storage Inc (Empire), in January 2018. Empire's office is located at 201 Loft Lane, Raleigh, North Carolina 27609.

8. Eugenia Grace Brickley is Edgar Joshua Brickley's younger sister. She testified at the hearing as a character witness in support of her brother's fitness and a certificate for Empire Moving and Storage.

9. Mr. Brickley has family support from his sister and adoptive parents.

10. Mr. Brickley is committed to operating Empire so that it is fully compliant and does not violate any laws and/or Commission rules.

DISCUSSION OF EVIDENCE AND CONCLUSIONS

On May 23, 2018, Mr. Brickley appeared before the Commission to address his fitness to engage in the business of moving households goods for compensation within the state of North Carolina. Based on the evidence of record, the Commission finds that he has satisfactorily answered questions regarding his experience in the moving industry, background, and overall fitness to receive a certificate.

Mr. Brickley has approximately ten years of experience in the moving business.[1] He obtained most of his moving experience while working with Budget Movers Express (Budget). According to Mr. Brickley, while employed by Budget, he moved one bedroom to three bedroom homes.[2] He performed most of the moves on the weekends. While at Budget, he learned how to drive a truck, pack customers' household goods, wrap furniture with blankets, and coordinate travel times so that the goods arrive safely.[3] Budget was primarily a part-time job for Mr. Brickley.

Mr. Brickley worked full-time for Prime Energy Group (Prime Energy), at or around the same time he worked part-time for Budget. Prime Energy is a spray foam installation company located in Raleigh, North Carolina.[4] As an employee of Prime Energy, Mr. Brickley interacted with potential customers, assisted customers in understanding the company's product, and made sure the customers were satisfied with the product.[5]

Finally, Mr. Brickley briefly worked for D.H. Griffin Construction Company (D.H. Griffin). He worked for D.H. Griffin for a year before the economy collapsed in 2008.[6] At D.H. Griffin, he did whatever the company needed him to do. His responsibilities ranged from plumbing to nailing.[7] He was eventually laid off due to the instability of the economy and the lack of work for the construction company.

After many years working for others and earning insufficient income, Mr. Brickley decided to start his own moving company. Mr. Brickley incorporated Empire Moving and Storage Inc (Empire), in January 2018.[8] Mr. Brickley believes that the income he earns from Empire can provide him with the opportunity to improve his life and allow him to care for his son. In preparation to begin operations, Empire has purchased a GMC box truck and rented a small office in which to conduct its business.[9] Empire has not yet performed any moves or hired a staff.[10]

[10] Id.

The record shows that Mr. Brickley has matured from his adverse experiences in his past. His younger sister, Eugenia Grace Brickley, testified that she has noticed the maturation in her brother. She realizes that he has become more focused.[1] Ms. Brickley also testified that her brother is finally taking control of his life by applying for a certificate from the Commission.[2] She recognizes that this opportunity will allow her brother to better himself and the life of his son.[3] She testified that she realizes that her brother has now taken ownership of his potential success and has addressed his behavioral issues.[4]

Mr. Brickley attributes the change in his behavior to his willingness to seek assistance and help with his problems. He recognized that he has had some issues which he needed to address. He actively sought counseling and has participated in rehabilitation programs. He indicated that his involvement with these rehabilitation programs has had a positive impact on his efforts to move his life forward, so that he can become a more productive person.

Mr. Brickley testified that he is committed to making Empire successful by providing quality service to the using and consuming public. He also testified that he is committed to operating Empire so that it is fully compliant and does not violate any laws and/or Commission rules.[5] Empire is registered with the North Carolina Secretary of State and is current on its tax obligations to the North Carolina Department of Revenue.[6] Empire does not possesses a Federal Motor Carrier Number[7], which would allow it to perform intrastate moves.[8] At this time, however, Empire will only perform intrastate household goods moves within the state.

Mr. Brickley further testified that he understands that he is expected to work with customers to minimize the possibility of disputes and/or complaints about his service or broken household goods.[9] Mr. Brickley is confident that he can maintain a conflict free relationship with his customers. He informed the Commission that he has never had a problem or conflict with customers in any of his previous places of employment. He testified that he has never had any problems with any customers or co-workers.[10] In order to avoid conflicts with his customers, Mr. Brickley testified that will adopt the position to "always please the customer."[11]

The record shows that Mr. Brickley has a supportive family network. His sister supports his efforts to improve his life. His adoptive parents, who live and are employed in Raleigh, also provide important support for Mr. Brickley. Mr. Brickley is a single parent with a five year old

son. His adoptive parents assist with his son's physical and educational needs.[1] The support from his adoptive parents has made it possible for him to pursue a certificate from the Commission.

Based upon the foregoing and the evidence of record, the Commission finds and concludes that Edgar Joshua Brickley has sufficiently addressed the Commission's questions regarding his fitness, willingness and ability to engage in the business of moving households goods for compensation within the state of North Carolina, has demonstrated reasonable and adequate knowledge of the households goods moving industry, has shown an ability and intent to follow the applicable statutes and Commission rules, and has demonstrated a commitment to provide satisfactory service to the using and consuming public. Therefore, the Commission concludes that his fitness **should not be** a basis for denying Empire Moving and Storage Inc, a certificate.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 23rd day of July, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. T-4704, SUB 0

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Empire Moving and Storage, Inc.,	)	
210 Loft Lane, Unit 127, Raleigh, North	)	ORDER GRANTING
Carolina, 27609 – Application for Certificate	)	CERTIFICATE OF EXEMPTION
of Exemption	)	

BY THE COMMISSION: On January 23, 2018, in the above-captioned docket, Empire Moving and Storage, Inc. (Applicant), pursuant to G.S. 62-261.8(1) and Commission Rule R2-8.1 filed an application with the Commission for a certificate of exemption. No protests were filed to the application. The application included the required confidential SBI and FBI criminal history records check.

On April 10, 2018, the Commission issued an Order Scheduling Application for Hearing to address questions regarding the Applicant's application and fitness.

On May 10, 2018, the Public Staff – North Carolina Utilities Commission notified the Commission that it did not intend to participate in the hearing.

[1] Id. at 20.

The hearing was held in Raleigh, North Carolina on Wednesday, May 23, 2018, as scheduled. The Applicant was represented by counsel. Mr. Brickley is the Applicant's sole principal, appeared and testified in support of the application, and responded to questions from the Commission. Applicant also offered testimony from his sister, Eugenia Grace Brickley, in support of the application.

On July 23, 2018, the Commission issued an Order Ruling on Applicant's Fitness concluding that the Applicant has shown to the satisfaction of the Commission that he possesses adequate knowledge of the household goods moving industry, an ability to follow the statutes and Commission rules, and a desire to provide satisfactory service to the using and consuming public.

Upon consideration of the application for a certificate of exemption filed with the Commission on January 23, 2018, the Commission's July 23, 2018 Order, and the entire record in this docket, the Commission finds and concludes that the Applicant should be granted a certificate of exemption to transport household goods, and has complied with the terms and conditions attached to the certificate of exemption:

1. Applicant is fit, willing, and able to properly perform the service of household goods transportation within North Carolina, is familiar with the moving industry, and has a reasonable and adequate knowledge of the rules and regulations governing the moving industry, including safety requirements as enforced by the North Carolina Division of Motor Vehicles.

2. Applicant will abide by the tariff requirements as established by the Commission and adopted in Maximum Rate Tariff No. 1.

3. Applicant is financially solvent and able to furnish adequate service on a continuing basis by maintaining the required insurance protection, maintaining safe, dependable equipment, and being able to settle any damage claims which may arise.

4. Applicant will maintain and has on file with the North Carolina Division of Motor Vehicles liability and cargo insurance coverage as required by law and Commission rules and regulations.

5. Applicant will maintain and has on file with the Commission's Operations Division a certificate of general liability insurance coverage in the minimum amount of $50,000.

IT IS, THEREFORE, ORDERED as follows:

1. That the application for certificate of exemption filed by Empire Moving and Storage, Inc., be, and the same is hereby, granted, and that the Applicant is hereby authorized to transport household goods between all points and places within North Carolina.

2. That the Applicant shall maintain its books and records in such a manner that all of the applicable items of information required in the prescribed Annual Report to the Commission can be used by the Applicant in the preparation of such Annual Report. A copy of the Annual Report form shall be furnished upon request made to the Public Staff – North Carolina Utilities Commission, Transportation Rates Division.

3. That the Applicant shall maintain its books and records in such a manner that all of the applicable items of information requested in its prescribed quarterly Public Utilities Regulatory Fee Report can be used by the Applicant in the preparation of such report and payment of quarterly regulatory fee. Any questions regarding the regulatory fee report and/or regulatory fee should be directed to the Commission's Fiscal Management Division at 919-733-5265.

4. That all vehicles, whether owned or leased, and used by the Applicant in its household goods operations must be identified with Applicant's name, city, state, and certificate of exemption number on both sides of each vehicle in letters not less than three (3) inches high. Such vehicles must also be identified with Applicant's certificate of exemption number on the left upper quadrant of the rear of each vehicle in letters not less than three (3) inches high.

5. That the Applicant shall attend a Maximum Rate Tariff (MRT) Seminar no later than three (3) months from the date of this Order.

6. That this Order shall constitute a certificate of exemption until formal Certificate of Exemption No. C-2900 has been issued and transmitted to the Applicant, along with a copy of Maximum Rate Tariff No. 1.

ISSUED BY ORDER OF THE COMMISSION.
This the 23rd day of July, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. T-4704, SUB 0
DOCKET NO. T-4704, SUB 1

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of
Empire Moving and Storage, Inc.,)
210 Loft Lane, Raleigh, North Carolina) ORDER APPROVING
27609 – Application for Sale and Transfer) SALE AND TRANSFER
of Certificate No. C-2900)

THE COMMISSION: On August 17, 2018, a joint application was filed, with the Commission, in the above-captioned dockets, by Mr. Fabio Ortiz, Esq., for and on behalf of Edgar Brickley, owner of Empire Moving and Storage, Inc., Raleigh, North Carolina, as transferee, and on behalf of Eugenia Brickley, purchaser of Empire Moving and Storage, Inc., Raleigh, North Carolina, as transferor, seeking authority to sell and transfer Certificate No. C-2900, together with the operating authority contained therein, from said transferor to said transferee.

No protests were filed to the application within the 15-day protest period and the required insurance filings in the name of Empire Moving and Storage, Inc., have been filed.

TRANSPORTATION – COMMON CARRIER CERTIFICATE

Upon consideration of the record in these dockets as a whole, the Commission finds and concludes, that the request for the sale and transfer of Certificate No. C-2900 should be approved.

IT IS, THEREFORE, ORDERED as follows:

1. That the application for the sale and transfer of Certificate No. C-2900, together with the operating authority contained therein, from Edgar Brickley, owner of Empire Moving and Storage, Inc., to Eugenia Brickley, purchaser of Empire Moving and Storage, Inc., be, and the same is hereby, approved.

2. That Empire Moving and Storage, Inc., shall maintain its books and records in such a manner that all of the applicable items of information required in the prescribed Annual Report to the Commission can be used in the preparation of such Annual Report. A copy of the Annual Report form shall be furnished upon request made to the Public Staff – North Carolina Utilities Commission, Transportation Rates Division at 919-733-7766.

3. Empire Moving and Storage, Inc., shall maintain its books and records in such a manner that all of the applicable items of information requested in its prescribed quarterly Public Utilities Regulatory Fee Report can be used in the preparation of such report and payment of the quarterly regulatory fee. Any questions regarding the regulatory fee report and/or regulatory fee should be directed to the Commission's Fiscal Management Division at 919-733-5265.

4. That all vehicles, whether owned or leased, and used by Empire Moving and Storage, Inc., in its household goods operations must be identified with Empire Moving and Storage, Inc.'s name, city, state, and certificate of exemption number on both sides of each vehicle in letters not less than three (3) inches high. Such vehicles must also be identified with Empire Moving and Storage, Inc.'s certificate of exemption number on the left upper quadrant of the rear of each vehicle in letters not less than three (3) inches high.

5. That Empire Moving and Storage, Inc., shall attend a Maximum Rate Tariff (MRT) seminar no later than three (3) months from the date of this Order.

ISSUED BY ORDER OF THE COMMISSION.
This the 5th day of September, 2018.

T-4672, SUB 4 In the Matter of Proposal of All My Sons of Charlotte South, LLC, to Use an Electronic Bill of Lading DOCKET NO. T-4710, SUB 2 In the Matter of Proposal of All My Sons of Greensboro, LLC, to Use an Electronic Bill of Lading	ORDER APPROVING ELECTRONIC BILL OF LADING PROPOSAL

BY THE COMMISSION: On February 23, 2018, the Commission issued an Order Granting Petition Allowing Use of Electronic Bill of Lading and Adopting Procedure for Certificated Movers to Follow in Seeking Approval to Implement Electronic Bill of Lading for Their Specific Company in Docket Nos. T-4657, Sub 1 and T-100, Sub 49. Ordering Paragraph No. 2 of the Order instructed any Commission-certified household goods moving company seeking to use electronic bill of lading (BOL) to submit its proposal including its electronic document retention plan to the Transportation Division of the Public Staff. The Public Staff was requested to review each proposal and file a letter, memorandum, or comments recommending approval or disapproval with the Commission.

On March 23, 2018, SG of Raleigh, LLC, d/b/a All My Sons of Raleigh Moving & Storage (All My Sons of Raleigh) submitted its proposal to use an electronic BOL along with its electronic document retention plan to the Transportation Division of the Public Staff. All My Sons of Raleigh also requested approval of the same electronic BOL software on behalf of the following franchises: Bournias, LLC, d/b/a All My Sons Moving and Storage (Docket No. T-4074), All My Sons of South Raleigh, LLC, (Docket No. T-4657), All My Sons of Charlotte South, LLC, (Docket No. T-4672), and All My Sons of Greensboro, LLC (Docket No. T-4710). Each franchise would have its respective Commission-approved name appear on its electronic BOL.

On May 24, 2018, the Public Staff filed a letter concerning the March 23, 2018 electronic BOL proposal. The Public Staff concluded that the electronic BOL proposal submitted on behalf of the five All My Sons franchises satisfies the requirements for electronic BOLs as set out in the Commission's February 23, 2018 Order and recommended approval.

The Public Staff also recommended that if approval is granted, these five All My Sons franchises should be listed on Page 9-A of the MRT.

After careful consideration of the information provided and the recommendation of the Public Staff, the Commission finds good cause to grant approval of the electronic BOL proposal submitted by the five All My Sons franchises and therefore these five All My Sons franchises should be listed on Page 9-A of the MRT.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 31st day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

WATER AND SEWER – CERTIFICATE

DOCKET NO. W-218, SUB 504

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Aqua North Carolina, Inc. for Approval of a Long-Term Debt Agreement and Refinancing of Debt Maturities Pursuant to G.S. 62-153, G.S. 62-161, and Commission Rule R1-16	)))))	ORDER APPROVING ISSUANCE OF PROMISSORY NOTE

BY THE COMMISSION: On June 25, 2018, Aqua North Carolina, Inc. (Aqua NC or Company) filed a verified Application pursuant to G.S. 62-153, G.S. 62-161, and Commission Rule R1-16 for authorization to issue additional debt in accordance with an unsecured note to Aqua America, Inc. (Aqua America or Parent), similar to the approvals issued by the Commission on: July 18, 2017, in Docket No. W-218, Sub 461; on November 13, 2015, in Docket No. W-218, Sub 422; on May 8, 2012, in Docket No. W-218, Sub 337; on June 18, 2009, in Docket No. W-218, Sub 297; and on December 21, 2010, in Docket No. W-218, Sub 320. In addition, the Company requests approval to refinance certain debt that will mature on December 31, 2018.

Based upon the verified Application and the Commission's entire files and records in this matter, the Commission now makes the following:

FINDINGS OF FACT

1. Aqua NC is a public utility operating in North Carolina providing water and wastewater utility service to the public for compensation. The Company provides utility service to approximately 80,300 water customers and approximately 18,500 wastewater customers in North Carolina under authority granted by the Commission.

2. The Company is a direct, wholly-owned subsidiary of Aqua America, a Pennsylvania corporation.

3. On July 18, 2017, the Commission approved Aqua NC's request in Docket No. W-218, Sub 461 to execute a note to Aqua America for long-term debt in the principal amount up to $85,968,398.

4. Aqua NC now proposes to add additional debt in an amount not to exceed $15,000,000, for an aggregate total pushdown debt balance of $100,968,398.

5. Pursuant to G.S. 62-153, G.S. 62-161, and Commission Rule R1-16, the Company requests approval to replace the earlier note that was the subject of Commission approval in Docket No. W-218, Sub 461 with the issuance of additional debt in the form of an unsecured note, as shown in *Exhibit A* to the Verified Application. The Company asserts that the proposed issuance (i) is for a lawful object within the corporate purposes of Aqua NC as a public utility; (ii) is compatible with the public interest; (iii) is necessary, appropriate for, and consistent with the proper performance by Aqua NC of its service to the public; (iv) will not impair Aqua NC's ability

to perform that service; and (v) is reasonably necessary and appropriate for the purposes for which it is issued.

6. In the event of Commission approval, Aqua America will cancel the promissory note in the amount of $85,968,398, which was approved in Docket No. W-218, Sub 461.

7. A provision in the Commission-approved note allows prepayment of the principal plus any outstanding interest. Thus, the debt can be paid off at any time during the term of the note without penalty. In addition, the interest rates in the note reflect the coupon rates with no adjustment for premiums or discounts. The debt was issued at par. A portion of the debt issuance costs related to Aqua NC debt will be amortized over the life of the loan by the Company. An estimate of the expenses associated with the transactions is attached to the Verified Application as *Exhibit B.*

8. The Company asserts that there are significant advantages to this approach. Aqua America is well-known in the financial markets and the costs of completing this transaction at the corporate level are less than they would be at the state level.

9. The Application submits that this debt issued by Aqua NC's parent company, Aqua America, is for the benefit of Aqua NC ratepayers and thus is compatible with the public interest. Aqua America can borrow debt at lower rates than its North Carolina subsidiary could if Aqua NC were to attempt to issue debt on its own as a "stand-alone" company. Aqua NC ratepayers directly benefit from the issuance of this note due to the lower interest rates afforded to the Parent. The result is a reduction in the overall weighted cost of debt in North Carolina.

10. The purpose of borrowing capital for North Carolina is to fund rate base additions, to maintain existing facilities, and to fund the working capital and investment capital requirements of Aqua NC. A listing of the relevant projects is attached to the verified Application as *Exhibit C.*

11. In addition to the Application to add debt to the Commission-approved note, the Company respectfully requests approval to refinance $4,158,634 of debt that will mature on or before December 31, 2018. The replacement debt results in a one hundred sixty-six (1.66%) basis point reduction compared to the weighted average interest rate of the maturing debt as shown in *Exhibit G.*

12. Certain terms of the note and provisions were summarized by Aqua NC as follows:

AGGREGATE PRINCIPAL AMOUNT:

The principal sum of up to one hundred million nine hundred sixty-eight thousand three hundred ninety-eight dollars and no cents ($100,968,398) in more than one separate series.

WATER AND SEWER – CERTIFICATE

AQUA NORTH CAROLINA, INC.

13. The following Exhibits were appended to the verified Application and made a part thereof:

Exhibit A: Promissory Note between Aqua America and Aqua NC.
Exhibit B: Estimate of the expenses to be incurred in connection with the pledging of assets, the issuance and sale of securities, or the assumption of liabilities.
Exhibit C: Purpose or purposes to which the proceeds obtained are to be used.
Exhibit D: Aqua NC's balance sheet and income statements as of March 31, 2018.
Exhibit E: Please see the following link for Aqua America SEC filings: http://ir.aquaamerica.com/sec.cfm.
Exhibit F: Aqua NC's Cash Flow Statement for the Year Ended March 31, 2018.
Exhibit G: Debt Refinancing.
Exhibit H: Proposed Order Approving Verified Application for Approval of Long-Term Debt Agreement and Refinancing of Debt Maturities.

WHEREUPON, the Commission now reaches the following:

CONCLUSIONS

Based upon the foregoing Findings of Fact and the entire record in this proceeding, the Commission is of the opinion and so finds and concludes that the long-term debt transaction proposed herein:

- (i) Is for a lawful object within the corporate purposes of Aqua NC as a public utility;
- (ii) Is compatible with the public interest;
- (iii) Is necessary, appropriate for, and consistent with the proper performance by the Company of its service to the public as a utility;
- (iv) Will not impair Aqua NC's ability to perform its public utility service; and
- (v) Is reasonably necessary and appropriate for the purposes for which issued.

IT IS, THEREFORE, ORDERED that the verified Application filed by Aqua North Carolina, Inc. in this docket on June 25, 2018, is hereby approved and the Company is hereby authorized, empowered and permitted to: (1) make, execute and deliver to Aqua America a note for long-term debt in an amount not to exceed $100,968,398 principal amount; (2) refinance $4,158,634 of debt that will mature on or before December 31, 2018; and (3) take such actions as are reasonable and necessary to effectuate all transactions described in the Company's verified Application and Exhibits appended thereto.

IT IS FURTHER ORDERED that the Commission's approval in this docket does not restrict the Commission's regulatory authority to review and adjust, if the Commission deems it appropriate to do so, Aqua NC's cost of capital and/or expense levels for ratemaking purposes in the Company's next general rate case.

ISSUED BY ORDER OF THE COMMISSION
This 18th day of July, 2018.

NORTH CAROLINA UTILITIES COMMISSION

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. W-1274, SUB 5 In the Matter of Timothy F. Phelan, Post Office Box 598, Lake Junaluska, North Carolina 28745, Complainant v. Lake Junaluska Assembly, Inc., Respondent DOCKET NO. W-1274, SUB 6 In the Matter of Walt Logan, 1819 Follow Thru Road N, St. Petersburg, Florida 33710, Complainant v. Lake Junaluska Assembly, Inc., Respondent	ORDER RULING ON LAKE JUNALUSKA ASSEMBLY, INC., STATUS AS A PUBLIC UTILITY

BY THE COMMISSION: On October 11, 2017, Timothy F. Phelan (Complainant), filed a complaint with this Commission against Lake Junaluska Assembly, Inc. (Lake Junaluska), alleging that the organization is no longer eligible for exemption from Commission regulation and must file for a certificate of public convenience and necessity (CPCN). The complaint was assigned to Docket No. W-1274, Sub 5 and served on Lake Junaluska.

On October 18, 2017, Walt Logan (Complainant), filed a complaint with this Commission against Lake Junaluska alleging that the organization refuses to make available financial information regarding its operation of utility services and should no longer be exempt from Commission regulation. The complaint was assigned to Docket No. W-1274, Sub 6 and served on Lake Junaluska.

On October 24, 2017, Lake Junaluska, by and through counsel, filed a Motion to Consolidate Dockets and Extension of Time in the above-captioned proceedings.

On November 1, 2017, Lake Junaluska filed a response to the two complaints requesting that the Commission find that no adequate basis is established in the complaints sufficient to warrant revocation of the exemption from regulation previously granted by the Commission, but that Lake Junaluska be allowed to submit itself to regulation by the Commission with regard to its provision of water and wastewater services.

On November 2, 2017, the Commission issued an Order Consolidating Dockets for Disposition and Serving Response. Lake Junaluska's response was served on all parties including the Public Staff - North Carolina Utilities Commission (Public Staff) for further comment, if any.

On November 16, 2017, Complainant Phelan filed his reply agreeing with Lake Junaluska's decision to request that its water and wastewater services be regulated by the Commission. Mr. Phelan also states his belief that "there is a potential shortcoming in the current governance arrangements" of the water system and denies that "he or any other complainant oppose investments being made in the infrastructure."

On November 17, 2017, Complainant Logan filed his reply also agreeing that Lake Junaluska's grant of exemption from the Commission should be revoked. Mr. Logan, however, indicates that Lake Junaluska's response still fails to address the issue of providing residents the financial information that has previously been requested. He seeks a rate hearing in Waynesville, North Carolina, to determine if the current rates are appropriate or if adjustments are necessary.

The Commission has reviewed the entire record in these proceedings and finds that on December 19, 2007, the Commission issued an order granting an initial franchise to Southeastern Jurisdictional Administrative Council, Incorporated, d/b/a Lake Junaluska Assembly[1] to provide utility service for the Lake Junaluska Assembly in Haywood County and establishing rates. Lake Junaluska owns and operates the water distribution and wastewater collection systems and resells service provided by the Town of Waynesville to the residents of the Lake Junaluska Assembly community. Lake Junaluska currently provides water utility service to 860 customers and wastewater treatment service to 828 customers. Lake Junaluska, itself, was incorporated in 1938, but development of the community had begun in 1912. Lake Junaluska applied for the franchise in June 2007 at the behest of the North Carolina Department of Environment and Natural Resources, now the Department of Environmental Quality.

The Junaluska Assembly Community Council, created in 2005, establishes and approves the rates, terms and conditions on which water and wastewater services are furnished to Lake Junaluska customers. The Council is comprised of seven (7) residents elected from the Lake Junaluska Assembly community. Only residents of the Lake Junaluska Assembly community are eligible to be elected to the Council, and all persons receiving service from Lake Junaluska are eligible to vote in electing the members of the Council board. Many of the residents of the Lake Junaluska Assembly community were retired clergy or other individuals with professional or employment associations with the United Methodist Church. In recent years, the make-up of the community has changed as more and more property owners have no association with the United Methodist Church.

[1] Southeastern Jurisdictional Administrative Council, Incorporated, subsequently merged with and into Lake Junaluska Assembly, Incorporated, in 2008.

WATER AND SEWER – COMPLAINT

On June 23, 2009, Lake Junaluska filed a petition in Docket No. W-1274, Sub 4 for exemption from regulation pursuant to G.S. 110.5, which states:

> The Commission may exempt any water or sewer utilities owned by nonprofit membership or consumer-owned corporations from regulation under this Chapter, subject to those conditions the Commission deems appropriate, if:
> (1) The members or consumer-owners of the corporation elect the governing board of the corporation pursuant to the corporation's articles of incorporation and bylaws; and
> (2) The Commission finds that the organization and the quality of service of the utility are adequate to protect the public interest to the extent that additional regulation is not required by the public convenience and necessity.

In its petition, Lake Junaluska argued:

> The structure of [Lake Junaluska] and the [Council], all within the sphere of the United Methodist Church, is such that the Lake Junaluska Assembly community, through the [Council], meets the requirements of G.S. 62-110.5. The Commission should exempt [Lake Junaluska] from regulation under Chapter 62, subject to any reasonable condition the Commission deems appropriate.
>
> [Lake Junaluska] is operating efficiently and the residents of the Lake Junaluska Assembly community elect the [Council] Board pursuant to its Constitution and By-laws. [Lake Junaluska] is willing to accept such any reasonable condition the Commission deems appropriate, including that [Lake Junaluska's] request for exemption from regulation be granted subject to revocation if, after notice and an opportunity to be heard, the Commission finds that circumstances have changed to the extent that the public convenience and necessity require regulation in order to protect the public interest. ...
>
> The organizational structure described above, and the quality of services provided by [Lake Junaluska], and [Lake Junaluska's] goal of giving "oversight and care to the Lake Junaluska Campus [and] Residential Community" are adequate to protect the public interest to the extent that additional regulation is not now required by the public convenience and necessity.

On August 18, 2011, on the basis of the above representations, the recommendation of the Public Staff, and the lack of complaint by any customers, Lake Junaluska was granted the requested exemption from regulation as the Commission found that Lake Junaluska met the requirements for its provision of water and wastewater to be exempted from regulation pursuant to G.S. 62-110.5.

A number of residents in the Lake Junaluska Assembly community have since voiced concerns regarding the management and operation of the water and wastewater systems. Lake Junaluska has historically experienced problems accounting for the water which it purchases. Lake Junaluska attributes its water related problems with the age of the system and the need for improvements in the infrastructure. The complaints recently filed with the Commission concern the operation of the Council in setting the rates for water and wastewater service provided to the

Lake Junaluska Assembly community. The complaints challenge Lake Junaluska's operation of the utility service and request that the Commission revoke the exemption from regulation. These complaints [IMPLICITLY] call into question whether "the organization and the quality of service of the utility are adequate to protect the public interest" and justify the exemption from regulation granted pursuant to G.S. 62-110.5. After reviewing the complaints filed with the Commission, Lake Junaluska, although disputing the merits of the complaints filed against it, consents to the Commission's regulation of its water and wastewater services and agrees to file a CPCN.

Based on the foregoing, the Commission finds and concludes that the organization and the quality of service of the utility are no longer adequate to protect the public interest that the exemption granted to Lake Junaluska's in Docket No. W-1274, Sub 4 on August 18, 2011, should be revoked, and that the public utility should again be regulated by the Commission. Lake Junaluska shall have 120 days within which to file an application with the Commission for a CPCN. The Commission finds and concludes that because Lake Junaluska consents to be subject to Commission regulation and agrees to file an application for a CPCN, a hearing is not necessary in this matter. Finally, the Commission finds and concludes that while Lake Junaluska's application for a CPCN is pending no customer should be disconnected without prior approval from the Commission.

IT IS, THEREFORE, ORDERED as follows:

1. That the exemption granted to Lake Junaluska in Docket No. W-1274, Sub 4 on August 18, 2011, is hereby revoked;

2. That Lake Junaluska is a water and wastewater public utility subject to regulation by the Commission;

3. That Lake Junaluska shall file an application for a CPCN with the Commission within 120 days of the date of this Order;

4. That Lake Junaluska shall not discontinue water and/or wastewater service to any current customers while its CPCN application is pending without prior approval of the Commission; and

5. That this Order shall be served on Complainants and Respondent by both electronic mail (email), delivery confirmation requested and United States certified mail, return receipt requested and on the Public Staff by email, delivery confirmation requested.

ISSUED BY ORDER OF THE COMMISSION.
This the 23rd day of April, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

WATER AND SEWER – COMPLAINT

DOCKET NO. W-1316, SUB 0
DOCKET NO. W-1316, SUB 1
DOCKET NO. W-1316, SUB 2

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. W-1316, SUB 0 In the Matter of Fred and Vonis Waugh, 8355 Brookfield Road, Connelly Springs, North Carolina 28612, Complainants v. Pine Mountain Property Owners Association, Inc., Respondent DOCKET NO. W-1316, SUB 1 In the Matter of Burke Mountain Southeast, LLC, Complainant v. Pine Mountain Property Owners Association, Inc., Respondent DOCKET NO. W-1316, SUB 2 In the Matter of Keith and Linda Shifflett, 8550 Faraway Drive, Connelly Springs, North Carolina 28612, Complainants v. Pine Mountain Property Owners Association, Inc., Respondent	ORDER RULING ON PINE MOUNTAIN PROPERTY OWNERS' ASSOCIATION, INC., STATUS AS A PUBLIC UTILITY

BY THE COMMISSION: On April 12, 2017, the Commission issued an Order Consolidating Dockets and Requesting that the Public Staff conduct an investigation in the above-captioned proceedings.

After conducting an investigation of the issues, including interviewing the involved parties, inspecting the utility's assets and learning of the utility's initial service plans, on May 25, 2017, the Public Staff filed with the Commission its Investigation Report and Recommendations. The Public Staff reports that the Pine Mountain Property Owners' Association, Inc. (POA), provides water and wastewater utility service for compensation to commercial customers who are not POA members, namely, the Gateway Mountain Springs Chapel and Conference Center (including the restaurant) and the Second Tee (formerly the Developer's sales office). In addition, the POA provides water utility service for compensation to a residential customer in Cleveland County who is not a POA member. The Public Staff recommends: 1) that the Commission issue an Order finding that the POA is a water and wastewater public utility subject to regulation by the Commission and requiring the POA to file an application for a certificate of public convenience and necessity (CPCN) within 120 days of the Commission Order; and 2) that the Commission issue an interim Order stating the POA shall not discontinue water and/or wastewater service to any current customers pending the Commission's Order finding the POA is a public utility subject to regulation by the Commission.

On May 26, 2017, the Commission issued an Order Serving the Public Staff's Report and Recommendations Requesting Comments from the Parties.

On June 21, 2017, Complainants Fred and Vonis Waugh, owners of the Gateway Mountain Springs Chapel and Conference Center, filed comments with the Commission requesting that the Commission accept the Public Staff's recommendations.

On June 30, 2017, Complainants Ray Hollowell and Burke Mountain Southeast, LLC, filed comments with the Commission also agreeing with the Public Staff's recommendations and requesting that the Commission act on the Public Staff's recommendations.

On July 14, 2017, the Commission issued an Order Serving Complainants' Comments to Respondent.

On July 20, 2017, Respondent POA filed its Response to the Public Staff's Investigation Report and Recommendations. In its Response, POA does not contest the Public Staff's conclusion that the POA is a public utility pursuant to G.S. 62-3(23)a.2, as the POA provides water and wastewater utility service for compensation to the commercial customers not POA members. In addition, the POA provides water utility service for compensation to a residential customer not a POA member in Cleveland County.

Additionally, the POA concurs with the Public Staff's recommendation and agrees that the Commission should issue an Order or Orders in these dockets:

(a) finding that the POA concurs with the recommendations of the Public Staff and agrees that the Commission should issue an Order or Orders in these dockets consistent with the findings made by the Public Staff including that the POA is a water and wastewater public utility required to be regulated by the Commission;

(b) requiring the POA to file an application for a CPCN within 120 days of the date of the Commission Order; and

(c) stating, by interim Order, that the POA shall not discontinue water and/or wastewater service to any current customers pending the Commission's Order finding that the POA is a public utility subject to regulation by the Commission.

On July 26, 2017, the Commission issued an Order Serving POA's Response to the Public Staff's Investigation Report and Recommendations.

The Commission has reviewed the record, including all the pleadings submitted by the parties and finds and concludes that the POA is a public utility pursuant to G.S. 62-3(23)a.2 since the POA provides water and/or wastewater utility service for compensation to customers that not POA members. The Commission further finds and concludes that the POA agrees with and adopts the recommendations set forth by the Public Staff in its Investigation Report filed with the Commission on May 25, 2017. None of the Complainants oppose the Public Staff's findings and POA's intention to accept the Public Staff's recommendations. Finally, the Commission finds and concludes that because the POA consents that it is a public utility and agrees to file an application for a CPCN there is no need for a hearing in this matter.

IT IS, THEREFORE, ORDERED as follows:

1. That the POA is a water and wastewater public utility subject to regulation by the Commission;

2. That POA shall file with the Commission an application for a Certificate of Public Convenience and Necessity within 120 days of the date of this Order;

3. That the POA shall not discontinue water and/or wastewater service to any current customers pending the POA filing an application for a CPCN from the Commission; and

4. That this Order shall be served on Complainants and Respondent by both electronic mail (email), delivery confirmation requested and United States certified mail, return receipt requested and on the Public Staff by email, delivery confirmation requested.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of February, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. W-864, SUB 14
DOCKET NO. W-1314, SUB 1

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. W-864, SUB 14 In the Matter of Complaint and Petition by Public Staff for Revocation of Franchise of Webb Creek Water and Sewage, Inc. DOCKET NO. W-1314, SUB 1 In the Matter of Application of Pluris Webb Creek, LLC, for a Certificate of Public Convenience and Necessity to Provide Sewer Utility Service in the Areas Presently Served by Webb Creek Water and Sewage, Inc. in Onslow County, North Carolina.	)	ORDER RESCINDING ORDER REQUIRING THE FILING OF A JOINT PROPOSED ORDER AUTHORIZING PLURIS TO PROVIDE TEMPORARY WASTEWATER UTILITY SERVICE TO THE PINES MOBILE HOME PARK

BY THE PRESIDING COMMISSIONER: On June 7, 2017, in Docket No. W-864, Sub 14, the Public Staff – North Carolina Utilities Commission (Public Staff) filed a Complaint and Petition for Revocation (Petition for Revocation) of Franchise for Webb Creek Water and Sewage, Inc. (Webb Creek), for the Webb Creek wastewater utility system in Onslow County, North Carolina. In support of its Petition for Revocation, the Public Staff stated the franchise should be revoked pursuant to G.S. 62-112(b), due to the willful failure of Webb Creek to comply with provisions of the Public Utilities Act Chapter 62, and the Rules and Regulations of the Commission.

On July 31, 2017, the Commission issued an Order Scheduling Hearing and Requiring Notice. (Order). In the Order, the Commission scheduled an evidentiary hearing on the Public Staff's Petition for Revocation on September 6, 2017, at 9:30 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina.

On that date and at that time the Commission convened the evidentiary hearing and received evidence from the Public Staff as to the grounds that Webb Creek's certificate should be revoked. During the hearing, the Public Staff indicated that, the Commission-appointed emergency operator for the Webb Creek wastewater system,[1] Pluris Webb Creek, LLC (Pluris), had filed, on June 13, 2017, in Docket No. W-1314, Sub 1, an Application for a Certificate of Public Convenience and Necessity (CPCN Application), which if granted, would authorize it to provide sewer utility service in its own right in the current territory served by Webb Creek. After receiving

[1] On August 8, 2016, in Docket No. W-864, Sub 11, the Commission issued an Order Appointing Emergency Operator, Approving Increased Rates, and Requiring Customer Notice.

said evidence, however, the Commission suspended the revocation hearing and ordered that the Petition for Revocation be rescheduled in conjunction with a hearing which was yet to be scheduled for Pluris' CPCN Application because of the Commission's concern that there were certain overlapping issues between the Petition for Revocation and the CPCN Application. Based upon the aforementioned, the Presiding Commissioner found that good cause existed to reconvene the Revocation Hearing in Docket No. W-864, Sub 14, and to schedule said hearing in conjunction with an evidentiary hearing on the CPCN Application in Docket No. W-1314, Sub 1. Further, the Presiding Commissioner found that good cause existed to schedule both hearings on Thursday, December 7, 2017, at 9:30 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina. The Commission thereafter issued an Order Reconvening Hearing, Scheduling Hearing and Requiring Notice (the Order Reconvening Hearing). The Order Reconvening Hearing required:

> 5. That a copy of this Order shall be mailed with sufficient postage or shall be hand delivered by Pluris, the Webb Creek Emergency [Operator], to all customers served by Webb Creek within five business days following the date of this Order. Further that Pluris shall submit the Attached Certificate of Service to the Commission, properly signed and notarized, within seven days of completing such requirement.
>
> 6. That a copy of this Order shall be mailed by the Public Staff, certified mail and by first class mail with sufficient postage, no later than the five business days after the issuance of this Order, to:
>
> Mr. J. Hal Kinlaw, Jr. (#62496-056)
> Registered Agent for Webb Creek Water and Sewage, Inc.
> FCI Ashland
> Post Office Box 6001
> Ashland, KY 41105

On November 22, 2017, in accordance with the provisions of the Order Reconvening Hearing, the Public Staff prefiled the testimony of James Gregson, Interim Director, Division of Water Resources, Department of Environmental Quality, and Charles Junis, P.E., Utilities Engineer, Public Staff, Water, Sewer, and Communications Division. Also, on that date and in accordance with the provisions of the Order Reconvening Hearing, Pluris prefiled the testimony of Maurice Gallarda, the Managing Member of Pluris Holdings, LLC.

On November 27, 2017, the Commission began evidentiary hearings in Docket No. E-2, Sub 1142, in the Matter of the Application of Duke Energy Progress, LLC, for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina (DEP Rate Hearing). Because the DEP Rate Hearing was expected to carry over into and through the week of December 4, 2017, the Presiding Commissioner found that good cause existed to cancel the December 7, 2017 hearings in these matters and reschedule those hearings on Monday, January 8, 2018, at 1:30 p.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina. By Order dated December 4, 2017, the Commission issued an Order Cancelling Hearings on December 7, 2017 and Rescheduling Those Hearings on January 8, 2018. The Rescheduling Order required:

> 3. That a copy of this Order shall be mailed with sufficient postage or shall be hand delivered by Pluris, the Webb Creek Emergency [Operator], to all customers served by Webb Creek within five business days following the date of this Order. Further that Pluris shall submit the Attached Certificate of Service to the Commission, properly signed and notarized, within seven days of completing such requirement.
>
> 4. That a copy of this Order shall be mailed by the Public Staff, certified mail and by first class mail with sufficient postage, no later than the five business days after the issuance of this Order, to:
>
> Mr. J. Hal Kinlaw, Jr. (#62496-056)
> Registered Agent for Webb Creek Water and Sewage, Inc.
> FCI Ashland
> Post Office Box 6001
> Ashland, KY 41105

On December 22, 2017, pursuant to G.S. 62-116(a), Pluris filed a Supplemental Request to its CPCN Application (Supplemental Request) for authority to also serve Pines Mobile Home Park (Pines MHP). In support of the Supplemental Request, Pluris indicated it was requesting a CPCN to serve the Pines MHP, an area currently being served by Pines Utilities, Inc. pursuant to a CPCN issued in Docket No. W-822 Sub 0, and attached a map of the portion of The Pines Development[1] which is the subject of the Supplemental Request. Further, Pluris indicated that the Pines MHP was located outside of the Webb Creek service area.

On January 5, 2018, the Public Staff filed the testimony of Windley E. Henry, Accounting Manager of the Water, Sewer, and Communications Section, Accounting Division, and the supplemental testimony of Charles Junis, which addressed, in part, the Supplemental Request. Also, on that date, Pluris filed the supplemental testimony of Maurice Gallarda in support of the Supplemental Request to serve the Pines MHP.

On January 8, 2018, the Commission convened the hearings as scheduled. The aforementioned evidence was presented and received from the Public Staff and Pluris. Neither Webb Creek nor Mr. Kinlaw was present. Neither presented any testimony or evidence. At the conclusion of the hearing, the Presiding Commissioner, among other things, directed the Pluris and the Public Staff to file a joint proposed order by January 19, 2018, allowing Pluris to provide temporary service to the Pines MHP and approving rates. This Order was in error and shall and must be rescinded for the following reasons.

---

[1] The Pines Development in Onslow County, North Carolina consists of the Pines MHP with 170 units, 34 existing single-family residences in areas known as Eastport I and Timber Ridge, Section III-B&C, and other lots to be developed as single-family residences. The next phase of the Pines Development will consist of 44 new homes in Eastport Section III, Phase 1.

G.S. 62-116(a) provides in pertinent part, that "[u]pon the filing of an application in good faith for a franchise, the Commission may in its discretion, after notice by regular mail to all parties holding franchises authorizing similar services within the same territory and upon a finding that no other adequate existing service is available, pending its final decision on the application, issue to the applicant appropriate temporary authority to operate under such just and reasonable conditions and limitations as the Commission deems necessary or desirable to impose in the public interest[.]" By the clear terms of the statute, the Commission does not acquire jurisdiction to issue an order authorizing Pluris to provide temporary service to Pines MHP unless a good faith application has been filed requesting that it be allowed to provide such service in that specific territory. No such application has been filed in Docket No. W-1314, Sub 1.

As noted above, in its pleading Pluris requested that the Commission allow it to supplement its CPCN application that it has filed in this docket and add the service territory that it now requests.[1] Assuming arguendo that the Commission was inclined to do so, the Commission would nevertheless be precluded from issuing the order herein requested because the Commission has not satisfied the statutory and constitutional requirements that notice be provided to the customers in Pines MHP and to PUI[2], nor has the Commission satisfied the constitutional requirement that Pine Utilities, Inc. be given the opportunity to be heard before the Commission concerning the matter of allowing Pluris to serve customers that Pines Utilities, Inc. is obligated to serve pursuant to its CPCN. See G.S. 62-42.

In its supplemental testimony filed on January 5, 2018, Pluris indicated that on January 3, 2018, Pluris entered into a Utility Asset Purchase Agreement with PUI wherein those parties agreed, subject to Commission approval and certain other conditions, that Pluris would acquire all of PUI's utility assets and franchise. Before the Commission can act on any matters affecting PUI, Pluris is required to file with the Commission a transfer application with PUI designating the specific territory that it will be serving after the acquisition and requesting approval of rates. Pluris cannot, as it has attempted to do here, attach an unrelated request for temporary operating authority to serve the Pines MHP to Docket No. W-1314, Sub 1, an application for a CPCN to provide sewer utility service to customers in the existing Webb Creek service area. The Commission understands that Pluris plans to serve or is presently serving PUI's customers in the Pines MHP with Webb Creek's existing wastewater treatment plant. Further, based upon the testimony received in these dockets, the Commission is aware that Pluris hopes to build a new membrane bio-reactor (MBR) wastewater plant in the future to provide wastewater utility service to the Webb Creek and the

---

[1] The Commission's CPCN application permits Pluris to request Commission authority to serve multiple subdivisions or service areas in one application. However, in order for the Commission to authorize such service pursuant to a single application, the Applicant must list "each subdivision or service area" in which authorization is being requested by the Applicant in the application. See Commission Form Revised 6/04: Application for a Certificate of Public Convenience & Necessity and For Approval of Rates. See also, Commission Form Revised 6/04: Application for Transfer of Public Utility Franchise and for Approval of Rates which has the same requirements. In Pluris' CPCN application form filed in this proceeding, Pluris only lists "Webb Creek (existing)" as the subdivision or service area for which it is requesting permission to serve. Pines MHP is not listed in the application as a requested service area.

[2] Because the CPCN application indicated that Pluris would only serve customers in the Webb Creek service, notice of these hearings was only provided to Webb Creek customers and Webb Creek. No notice was provided to the Pines MHP customers or PUI.

Pines MHP service areas, as well as, other portions of The Pines Development service area.[1] However, the Commission is of the opinion, and therefore finds and concludes that with respect to Pluris' Supplemental Request, proper procedure must be followed.

Thus, for the reasons set forth herein, the Order directing Pluris and the Public Staff to file a joint proposed order authorizing Pluris to provide temporary service to the Pines MHP was issued in error. The Order is hereby rescinded.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the __1st__ day of February, 2018.

W-1314, SUB 1 In the Matter of Application of Pluris Webb Creek, LLC, for a Certificate of Public Convenience and Necessity to Provide Sewer Utility Service in the Service Areas Presently Served by Webb Creek Water and Sewage, Inc., in Onslow County, North Carolina	)	ORDER REQUIRING SPECIFIC CONDITIONS TO BE SATISFIED CONCERNING THE GRANTING OF A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY TO PLURIS WEBB CREEK, LLC

[1] Pluris has previously sought and received Commission permission to provide temporary service to customers in a portion of The Pines Development. See Docket No. W-1314, Sub 0. In that instance, Pluris filed a separate CPCN application designating the specific service area requested, the matter was scheduled for a public hearing, subject to cancellation if no significant protests were received, and customer notice was provided.

WATER AND SEWER – COMPLAINT

HEARD: Wednesday, September 6, 2017, at 9:30 a.m. and Monday, January 8, 2018, at 9:30 a.m. in the Commission Hearing Room, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina 27603

BEFORE: Commissioner Daniel G. Clodfelter, Presiding, Commissioner ToNola D. Brown-Bland and Commissioner James G. Patterson

APPEARANCES:

For the Using and Consuming Public:

William Grantmyre, Public Staff-North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300

For Pluris Webb Creek, LLC:

Daniel C. Higgins, Burns, Day & Presnell, P.A., PO Box 10867, Raleigh, North Carolina 27605

BY THE COMMISSION: On June 7, 2017, the Public Staff filed a Complaint and Petition for Revocation of Franchise in Docket No. W-864, Sub 14 requesting that the Commission revoke the franchise and certificate of public convenience and necessity (CPCN) previously issued to Webb Creek Water and Sewage, Inc. (Webb Creek).

After the Public Staff filed its Petition for Revocation, Pluris Webb Creek, LLC (Pluris) subsequently filed an Application, in Docket No. W-1314, Sub 1, requesting that Pluris be issued a certificate of public convenience and necessity authorizing it to serve the Webb Creek service area, if the Commission grants the Public Staff's request and revokes Webb Creek's CPCN and franchise.

On July 31, 2017, the Commission issued its Order Scheduling Hearing and Requiring Notice in Docket No. W-864, Sub 14, relating to the Public Staff's Complaint and Petition for Revocation. That Order required that the Public Staff serve a copy of that Order, by certified mail and first class mail with sufficient postage, no later than the next business day after the issuance of that Order, on Webb Creek's Registered Agent addressed as follows:

Mr. J. Hal Kinlaw, Jr. (#62496-056)
Registered Agent for Webb Creek Water and Sewage, Inc.
FCI Ashland
Post Office Box 6001
Ashland, Kentucky 41105

Pursuant to that Order, on August 17, 2017, the Public Staff also filed the testimony and exhibits of Charles M. Junis, Utilities Engineer, Water, Sewer, and Communications Division. The Public Staff filed its Exhibit 1 on August 31, 2017, certifying service of that Order on Webb Creek's Registered Agent.

On September 6, 2017, the Petition for Revocation came on for hearing as scheduled. No one appeared on behalf of Webb Creek when the matter was called for hearing on that date. The Public Staff presented the testimony of Public Staff witness Junis. Because there is a logical relationship between the relief requested in the Public Staff's Petition for Revocation and Pluris' Application for issuance of a CPCN in Docket No. W-1314, Sub 1, after hearing the testimony of witness Junis, the Commission recessed the hearing and ordered that it be resumed at a later date when the Commission would also take up Pluris' Application for a CPCN.

On October 31, 2017, the Commission issued its Order Reconvening Hearing, Scheduling Hearing, and Requiring Notice. Pursuant to that Order, on November 22, 2017, the Public Staff filed the supplemental testimony of Charles M. Junis and the testimony of James Gregson, Interim Deputy Director, Division of Water Resources, North Carolina Department of Environmental Quality. Also pursuant to that Order, on November 22, 2017, Pluris filed the testimony of Maurice Gallarda, P.E., Managing Member.

On December 4, 2017, the Commission issued its Order Cancelling Hearings on December 7, 2017, and Rescheduling Those Hearings on January 8, 2018. On December 13, 2017, Pluris filed its Certificate of Service reflecting that it had served the Commission's December 4, 2017 Order.

On December 22, 2017, Pluris supplemented its Application in Docket No. W-1314, Sub 1, to also request that Pluris be granted a CPCN and temporary operating authority pursuant to G.S. 62-116, for provision of wastewater utility service to the Pines Mobile Home Park (Pines MHP), which is part of The Pines Development in Onslow County, and for approval of rates (Pluris Supplemental Application). On January 5, 2018, Pluris filed the supplemental testimony of Maurice Gallarda in support of its supplemental request for authority to serve the Pines MHP.

On January 5, 2018, the Public Staff filed the supplemental testimony of Charles M. Junis and the testimony and exhibits of Windley E. Henry, Accounting Manager, Water/Communications Section, Accounting Division. On January 5, 2018, the Public Staff also filed its Exhibit 1 to the previously filed testimony of James Gregson.

The Public Staff's Petition for Revocation and Pluris' Application for a CPCN authorizing it to serve the Webb Creek service area came on for hearing as scheduled on January 8, 2018, at which time the Commission consolidated Docket No. W-864, Sub 14 with Docket No. W-1314, Sub 1. No representative appeared on behalf of Webb Creek when these matters were called for hearing on that date.

At the conclusion of the hearing, the Presiding Commissioner, among other things, directed that Pluris and the Public Staff: (1) file a joint proposed order by January 19, 2018 allowing Pluris to provide temporary service to the Pines MHP and (2) to file briefs and proposed orders concerning Public Staff's Petition for Revocation of Webb Creek's CPCN and Pluris' Application for issuance of a CPCN within 30 days of the date of the hearing. The Commission extended the time to file the latter proposed order until February 14, 2018.

On January 19, 2018, Pluris and the Public Staff filed a Joint Proposed Order Approving Temporary Operating Authority, Approving Interim Rates, Requiring Undertaking and Requiring Customer Notice (Proposed Temporary Operating Authority Order).

On February 1, 2018, the Presiding Commissioner issued an Order Rescinding Order Requiring the Filing of a Joint Proposed Order Authorizing Pluris to Provide Temporary Service to the Pines Mobile Home Park (Rescission Order). In the Rescission Order, the Presiding Commissioner held that the Commission did not have jurisdiction to issue an order authorizing Pluris to provide temporary service to the Pines MHP in either docket that was the subject of the hearing because an application requesting such relief had not been filed with the Commission and because the Commission had not satisfied statutory and constitutional requirements that Pine Utilities, Inc. (PUI), the Commission-certificated provider of sewer utility service in the Pines MHP be given the opportunity to be heard before the Commission took such action. [1]

On February 14, 2018, the Public Staff and Pluris filed a Joint Proposed Order concerning the Public Staff's Petition for Revocation of Webb Creek's CPCN and Pluris' Application for issuance of a CPCN.

Based upon the foregoing and the entire record in this matter, the Commission makes the following

FINDINGS OF FACT

General Matters

1. Webb Creek Water and Sewage, Inc. is a North Carolina corporation. By Order issued January 14, 1987, in Docket No. W-864, the Commission granted a certificate of public convenience and necessity to Webb Creek authorizing it to provide wastewater utility service in the South Queens Creek Subdivision in Onslow County. By Order dated September 4, 1987, in Docket No. W-864, Sub 2, the Commission recognized that the name of Queens Creek Subdivision had been changed to Fox Trace, and reissued the CPCN in the name of Fox Trace Subdivision.

2. Since the issuance of that CPCN, Webb Creek has extended its service to other adjoining developments. The subdivisions currently served by the Webb Creek system include:

Buckhead
Creekertown
Creekertown Villas
Cooper's Court
Foxden
Foxlair
Fox Trace Sections I, II, and III

[1] On February 12, 2018, Pluris and PUI filed an Application for Transfer of Franchise and Approval of Rates in Docket Nos. W-822, Sub 3 and W-1314, Sub 2.

Fox Trace Section IV, Phases 1 through 6
Fox Trace Section V
Fox Trace Point I and II
Jack's Branch
Jack's Branch Townhomes
Quail Roost

3. The Webb Creek wastewater treatment plant (WWTP) is an aged (30+ years old) 300,000 GPD sequencing batch reactor (SBR) wastewater treatment plant. The Webb Creek wastewater collection system consists of approximately 11.9 miles of gravity sewer, approximately 2.6 miles of force main, approximately 0.25 miles of pressure sewer, three simplex pump stations that discharge to a pressure sewer, and eight duplex pump stations.

4. The Webb Creek wastewater utility system has plant capacity to serve approximately 1,800 residential customers, Sand Ridge Elementary School, and six other commercial customers. There are currently approximately 1,070 residential customers and seven commercial customers, including the Sand Ridge Elementary School, in the Webb Creek service area.

Public Staff's Complaint and Petition for Revocation

5. Webb Creek has or had certain permits issued by the North Carolina Department of Environmental Quality (DEQ), formerly the North Carolina Department of Natural Resources (DENR), including a Collection Permit and a National Pollutant Discharge Elimination System (NPDES) permit. The NPDES Permit (Permit NC0062642), issued to Webb Creek by DENR allowing Webb Creek to discharge treated wastewater from its WWTP to Wallace Creek. That NPDES permit expired on June 30, 2017.

6. There have been numerous problems and issues with the operations, assets, equipment, and management of the Webb Creek system. Due to material non-compliance with G.S. 143-215.1, the NPDES Permit, and the Collection Permit, as of August 2016, Webb Creek had been issued over 500 Notices of Violation by DEQ's Division of Water Quality, as well as administrative penalties for construction, operations, effluent parameter discharges, and reporting violations. In addition, not all of the real property where wastewater utility system assets are located is owned by Webb Creek. Instead, certain Webb Creek system assets are located on land owned by other entities affiliated with Webb Creek through common ownership.

7. On August 3, 2016, pursuant to G.S. 62-116(b) and G.S. 62-118(b), the Public Staff filed a Petition in Docket No. W-864, Sub 11, requesting that the Commission issue an order as to the Webb Creek system: (1) declaring an emergency, (2) appointing Pluris as emergency operator (EO) of the Webb Creek system, and (3) approving an emergency rate increase for the Webb Creek wastewater utility system. On August 8, 2016, the Commission issued its Order Appointing Emergency Operator, Approving Increased Rates and Requiring Customer Notice in Docket No. W-864, Sub 11 (the EO Order).

8. Webb Creek's registered agent is Joseph Hal Kinlaw, Jr., and it is believed that Mr. Kinlaw is president of Webb Creek. Mr. Kinlaw has been a stockholder and officer of Webb Creek since he incorporated that entity in 1985. Mr. Kinlaw managed Webb Creek's operations for many years. Mr. Kinlaw is also involved in the related entities that developed the residential subdivisions served by the Webb Creek system.

9. Mr. Kinlaw is now incarcerated in federal prison at the Ashland Correctional Institute in Ashland, Kentucky, serving a 17-year sentence resulting from a conviction on charges of bank fraud. Mr. Kinlaw was sentenced and taken into custody by federal authorities on November 10, 2016, three months after issuance of the EO Order.

10. On June 7, 2017, the Public Staff filed its Complaint and Petition for Revocation of Franchise in Docket No. W-864, Sub 14 pursuant to G.S. 62-112 and Commission Rule R1-9, requesting that the Commission revoke the franchise, Certificates of Public Convenience and Necessity, and operating authority previously granted to Webb Creek.

11. G.S. 62-112 (b) provides, in pertinent part, as follows:

> Any franchise may be suspended or revoked, in whole or in part, in the discretion of the Commission, upon application of the holder thereof; or, after notice and hearing, may be suspended or revoked, in whole or in part, upon complaint, or upon the Commission's own initiative, for wilful failure to comply with any provision of this Chapter, or with any lawful order, rule, or regulation of the Commission promulgated thereunder, or with any term, condition or limitation of such franchise; provided, however, that any such franchise may be suspended by the Commission upon notice to the holder or lessee thereof without a hearing for any one or more of the following causes:
>
> (1) For failure to provide and keep in force at all times security, bond, insurance or self-insurance for the protection of the public as required in G.S. 62-268 of this Chapter.
>
> (2) For failure to file and keep on file with the Commission applicable tariffs or schedules of rates as required in this Chapter.
>
> (3) For failure to pay any gross receipts, use or privilege taxes due the State of North Carolina within 30 days after demand in writing from the agency of the State authorized by law to collect the same; provided, that this subdivision shall not apply to instances in which there is a bona fide controversy as to tax liability.
>
> (4) For failure for a period of 60 days after execution to pay any final judgment rendered by a court of competent jurisdiction against any holder or lessee of a franchise for any debt or claim specified in G.S. 62-111(b) and (c).

12. In addition to the practical, operational, and financial problems and issues resulting from the deteriorated state of the Webb Creek system and the fact that Mr. Kinlaw is serving a

lengthy sentence in federal prison, there are various legal grounds adequate for the Commission to revoke Webb Creek's franchise.

13. One such ground is that Branch Banking and Trust Company (BB&T) made loans to Webb Creek which loans were secured with utility assets owned and used by Webb Creek. Webb Creek did not obtain Commission approval for those loans as required by G.S. 62-160 and Rule R1-16 when it pledged its utility assets to secure its debts to BB&T. Compliance with those requirements is an obligation of a public utility, such as Webb Creek. This was a "wilful failure to comply with" G.S. 62-160 and Commission Rule R1-16 which are, respectively, a provision of Chapter 62 and a lawful rule or regulation of the Commission, and thus is a ground for revocation of the CPCN.

14. Webb Creek subsequently defaulted on the loans from BB&T. BB&T sued Webb Creek and Mr. and Mrs. Kinlaw in Robeson County Superior Court, and obtained a judgment against them. That judgment was transcribed in Onslow County Superior Court on April 8, 2014, in the amount of $1,624,180 in principal, plus $24,213 in interest, plus late fees of $6,528, plus interest at the legal rate on $1,624,180 from April 4, 2013, until the judgments are satisfied, plus $248,238 in attorney's fees in Onslow County File No. 14-T-43 (BB&T Judgment). The BB&T Judgment against Webb Creek poses a threat to the Webb Creek system, as it remains unsatisfied and continues to accrue interest. The failure to pay the BB&T Judgment is grounds for revocation of Webb Creek's franchise under G.S. 62-112(b)(4).

15. As detailed below, in addition to the BB&T Judgment there are significant federal, state, and local liens against Webb Creek, which are a product of failure to pay various taxes which may include a "failure to pay gross receipts, use, or privilege taxes," which would be another ground for revocation of Webb Creek's franchise. The liens of Onslow County, the United States Treasury, the North Carolina Department of Revenue, and the North Carolina Department of Commerce - Employment Security Commission against Webb Creek and the other affiliated entities which own lift station sites, pose further threats to the future of the Webb Creek system.

16. The ownership of lift station sites where Webb Creek utility system assets are located is spread among several entities other than Webb Creek, which entities are affiliated with Webb Creek by some common ownership, as follows:

System Component	Location	Owner
WWTP	250 Zachary Lane	Webb Creek
4 vacant lots (adjacent to WWTP)	252, 254, 256, and 258 Zachary Lane	Hal Kinlaw, Jr. (252) Group Eight, Ltd. (254) Hal Kinlaw, Jr. (256) Kinlaw Investment Co. (258)
Lift station no. 1	Beside 200 Glenwood Drive	Webb Creek
Lift station no. 2	Beside 149 Parnell Road	Group Eight, Ltd. (This entity owns or owned and operates or operated a convenience store.)
Lift station no. 3	Beside 102 Charlton Road	Group Eight, Ltd.

Lift station no. 4	Sandy Ridge Elementary School	Onslow County Board of Education
Lift station no. 5	Beside 227 Gray Fox Run	Group Eight, Ltd.
Lift station no. 6	Beside 136 Byrum Road	Parnell-Kinlaw Group, Inc.
Lift station no. 7	At intersection of Jessie Circle and Kelly Circle	Webb Creek
Lift station no. 8	Beside 116 Gamble Way	Hurst-Law Group, Inc.

17. Except for the Onslow County Board of Education, which owns the Sandy Ridge Elementary School, the entities other than Webb Creek owing land where Webb Creek utility assets are located are developer entities which Mr. Kinlaw is or was affiliated in some form or fashion. As of October 2015, there were recorded liens in Onslow County against Mr. Kinlaw and these various entities as follows:

<u>Group Eight Ltd.</u>

Lift Station no. 2 – Beside 149 Parnell Road
Lot – 254 Zachary Lane
Lift Station no. 3 – Beside 102 Charlton Road
Lift Station no. 5 – Beside 227 Gray Fox Run
Onslow County Property Taxes – $1,871
North Carolina Department of Commerce – Liens – $85,402
North Carolina Department of Revenue – Liens – $69,344
U.S. Treasury (IRS) – Judgments – $123,817

BB&T – Judgments – Principal	$6,048,325
– Plus Interest	$111,122
– Plus Late Fees	$123,874
– Plus Attorneys' Fees	$940,060

<u>Parnell Kinlaw Group, Inc.</u>

Lift Station no. 6 – Beside 136 Byrum Road

Onslow County Property Taxes –	$17,468
BB&T – Judgments – Principal	$6,478,035
– Plus Interest	$111,122
– Plus Late Fees	$23,768
– Plus Attorneys' Fees	$991,939

<u>Hal Kinlaw Jr.</u>

Lot – 252 Zachary Lane
Lot – 256 Zachary Lane
Onslow County Property Taxes – $14,201
First Citizens – 5 Lis Pendens – Amounts Unknown

BB&T – Six Judgments – Total Principal	$17,186,799
– Total Accumulated Interest	$256,560
– Total Late Fees	$162,933
– Total Attorneys' Fees	<u>$2,832,159</u>
Hal Kinlaw Jr. – Total	$20,438,451, plus accruing interest

Kinlaw Investment Company

Lot – 258 Zachary Lane
Onslow County Property Taxes – $2,501

BB&T – Judgment – Principal	$604,399
– Plus Interest	$5,975
– Plus Late Fees	$2,167
– Plus Attorneys' Fees	$91,881

Webb Creek Water and Sewage, Inc.

WWTP – 250 Zachary Lane
Lift Station no. 1 – Beside 200 Glenwood Drive
Lift Station no. 7 – Intersection Jessie Circle and Kelly Circle
Onslow County Property Taxes – $94,160

BB&T – Judgment – Principal	$1,624,180
– Plus Interest	$24,213
– Plus Late Fees	$6,528
– Plus Attorneys' Fees	$248,238
Total BB&T	$1,903,159, plus interest at the legal rate from April 4, 2013, until the judgment is paid

U.S. Treasury (IRS) – Judgment – $73,790
North Carolina Department of Revenue – Liens – $4,758
North Carolina Department of Commerce – Liens – $910
Webb Creek – Total $2,076,777, plus accruing interest

18. The recorded liens against Webb Creek and its assets are far in excess of the original cost net investment in the wastewater utility system assets based upon the Public Staff's determination that Webb Creek's rate base did not exceed zero.

19. Onslow County has filed several lawsuits against Webb Creek and other entities affiliated with it, including affiliates that own some of the lift station sites where Webb Creek utility assets are located, to collect unpaid real and personal property taxes owed Onslow County by these various entities. Onslow County seeks appointment of a commissioner to sell these properties in order to satisfy delinquent personal and real estate taxes owed Onslow County.

20. There may be other civil litigation pending against some of these affiliated entities which own lift station sites that may further complicate the situation with regard to sites where Webb Creek utility assets are located.

21. Another ground for revocation is that Webb Creek has been materially non-compliant with G.S. 143-215.1, the NPDES Permit and Collection Permit, and Webb Creek has been issued many Notices of Violation and administrative penalties from DEQ's Division of Water Quality for construction, operations, effluent parameter discharges, and reporting violations. This non-compliance and these violations materially violate Commission Rule R10-7, which requires compliance with DEQ permits, rules and regulations. Such violations were largely uncorrected by Webb Creek as evidenced by the necessity of Pluris, after being appointed EO in August 2016, to invest over $500,000 as of November 2017, in its efforts to address and remedy

to the extent possible issues and problems in the Webb Creek wastewater system, to recover treatment capacity that had been lost, to attempt to address compliance issues, to stabilize operations, and in an unsuccessful attempt to make arrangements with BB&T to acquire system assets.[1]

22. Webb Creek has failed to comply with provisions of Chapter 62 and Commission rules and regulations. While the full extent of such non-compliance is not known, the known facts and circumstances establish that Webb Creek's unauthorized pledging of utility assets to secure its loans from BB&T violated at least one provision of Chapter 62 (G.S. 62-160), and at least one Commission rule (Rule R1-16), which non-compliance has created obvious and significant risks for Webb Creek's ratepayers.

23. There is no reasonably foreseeable or feasible scenario in which Webb Creek would be able to resume operation of this system. The only clear path to bringing long term stability to the provision of public utility wastewater service in the Webb Creek service area involves replacing Webb Creek with a competent and well-capitalized public utility that can make the investments necessary to bring the Webb Creek system into compliance and stabilize the provision of service to the public in this service area.

Pluris' Application for a CPCN

24. Pluris Webb Creek, LLC is a public utility and a wholly-owned subsidiary of Pluris Holdings, LLC. Other wholly-owned subsidiaries of Pluris Holdings, LLC include: (1) Pluris, LLC, which is a public utility operating a wastewater utility system serving North Topsail and nearby mainland areas near Sneads Ferry in Onslow County, and (2) Pluris Hampstead, LLC, which is a public utility operating a regional wastewater system near Hampstead in Pender County.

25. Pursuant to the EO Order, Pluris has served as EO for Webb Creek since August 2016. Since its appointment as EO, Pluris has invested over $500,000 in addressing problems, issues, and critical needs in the Webb Creek system. While there is a continuing compliance issue with regard to certain effluent limit exceedances, Pluris has otherwise brought the Webb Creek system into substantial compliance with applicable environmental and operational requirements.

26. Pluris plans to acquire the assets comprising the Webb Creek system through the ongoing tax foreclosure process, or by other means. Pluris has advised the Public Staff that if Pluris is able to acquire the Webb Creek franchise and system, it will replace the 30+ year old existing SBR treatment plant with a new membrane bioreactor (MBR) wastewater treatment plant. This is what other Pluris affiliates (Pluris, LLC, and Pluris Hampstead, LLC) have done in their Commission-assigned service areas. DEQ supports this outcome, as installation of an MBR plant at Webb Creek would be a significant upgrade, including materially improved effluent quality, which is desirable both from an environmental perspective, and for bringing this system into full compliance with DEQ requirements.

[1] Per Direct Testimony of Maurice Gallarda filed on November 22, 2017, in Docket No. W-1314, Sub 1, at Page 14, Line 15.

27. While Pluris has made significant improvements to the Webb Creek wastewater system, Pluris has concluded that despite its investments in that system, full compliance with DEQ requirements cannot be achieved with the existing Webb Creek SBR WWTP. As a result, Pluris has entered into a Letter of Intent to acquire a tract of land in the immediate vicinity of the existing Webb Creek WWTP. This tract can be the site for a new MBR wastewater treatment plant to be built by Pluris, which will be adequately sized to serve the Webb Creek and The Pines Development service areas (new MBR tract).

28. Building an MBR plant from scratch would be less expensive and simpler by virtue of starting with the new MBR tract and a clean slate, rather than continuing efforts to achieve compliance with the existing aged SBR WWTP. This approach would allow Pluris to avoid or minimize issues related to acquiring the existing Webb Creek plant and plant site, the cost of such an acquisition, and the cost of later decommissioning it, and thereby avoiding potential legal issues with the existing plant.

29. Pluris is well capitalized and is prepared to make the necessary capital investment to stabilize the provision of service in the Webb Creek service area on a going forward basis provided it is able to do so under its own CPCN and not merely as EO for the Webb Creek system. If Pluris can secure the Webb Creek system assets necessary for it to provide service in the Webb Creek service area, it will be in the public interest for Pluris to be granted a CPCN and for the situation in the Webb Creek service area to be stabilized on a long-term, going-forward basis.

30. Granting a CPCN to Pluris to serve the Webb Creek service area is in the public interest, provided that Pluris can achieve sufficient progress on a path to securing the utility assets necessary to provide wastewater utility service in that service area. In order to facilitate a seamless transition in service providers and for the benefit of Webb Creek's ratepayers, it is in the public interest, that any revocation of Webb Creek's CPCN and the granting of a CPCN to Pluris should be done simultaneously.

31. It is in the public interest to grant a CPCN to Pluris authorizing Pluris to provide wastewater utility service in the service area formerly served by Webb Creek and to simultaneously revoke Webb Creek's CPCN, upon Pluris filing with the Commission a verified statement confirming that (1) Pluris has acquired the new MBR tract; (2) Pluris has purchased the lift station sites that are necessary to provide wastewater utility service through the Onslow County tax foreclosure sale process, or acquired them by other means; and (3) Pluris has acquired sufficient portions of the Webb Creek system assets to provide wastewater utility service. Such verified statement should include letters from a North Carolina licensed attorney and a North Carolina licensed professional engineer certifying that Items 2-3, respectively, have been accomplished.

32. Communications from the Webb Creek customers received by the Public Staff have been almost entirely supportive of Pluris' EO operation of the wastewater system.

33. Pluris should be required to post a total bond in the amount of $200,000 for the Webb Creek franchise. Such total bond requirement would include the $10,000 already posted in Docket No. W-1314, Sub 0, and an additional $190,000 to be posted prior to the issuance of a CPCN to Pluris.

34. The letter of credit proceeds of $100,000 obtained by the Commission through forfeiture of Webb Creek's bond security should be retained by the Commission until the Webb Creek WWTP is decommissioned. This outstanding liability poses a potential health and environmental risk to the surrounding community of Webb Creek ratepayers. If the cost to decommission that site are less than $100,000, plus accrued interest, the remaining balance should be considered cost free capital paid to Pluris, which would result in a reduction in rate base.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-4

The evidence supporting these findings of fact is contained in the pleadings and the entirety of the record. These findings are primarily jurisdictional and procedural matters, as well as foundational undisputed matters of fact established in the pleadings or otherwise. In fact, Webb Creek has made no filings in connection with these dockets and no representative of Webb Creek appeared at these hearings.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-6

The evidence supporting these findings of fact is contained in the testimony of Public Staff witnesses Junis and Gregson, the testimony of Pluris witness Gallarda, and the Commission's EO Order.

The various problems and issues with the operations, assets, equipment, and management of the Webb Creek system are established in the testimony of Public Staff witnesses Junis and Gregson. The testimony of Pluris witness Gallarda also addresses some aspects of the problems with the Webb Creek system, particularly including the problems and challenges Pluris has faced as the EO of the Webb Creek system in terms of attempting to bring that system into compliance with DEQ requirements. As detailed in the Commission's EO Order issued pursuant to the Public Staff's Petition for Appointment of an Emergency Operator, DEQ's Division of Water Quality has issued over 500 Notices of Violation and administrative penalties to Webb Creek for construction, operations, effluent parameter discharge violations, and reporting violations.

In addition, as reflected in the testimony of witness Junis in this docket and the Commission's EO Order, there are relatively unique problems and issues with the assets, equipment, and properties comprising the Webb Creek system as a product of the fact that not all of the real property where Webb Creek system assets are located is owned by Webb Creek. Public Staff witness Junis filed testimony supporting the Public Staff's Complaint and Petition for Revocation on three separate occasions. As shown therein, five of the eight Webb Creek lift station sites are owned by entities other than Webb Creek, which entities are affiliated with Webb Creek by some common ownership and/or management. The problematic issues with ownership of the lift station sites are vividly illustrated by Junis Exhibit 2, which is a copy of the Complaint filed by Onslow County against one of the Kinlaw-affiliated entities, Group Eight, Ltd., to collect delinquent property taxes and seeking the tax foreclosure sale of the three Webb Creek wastewater system lift station sites owned by Group Eight, Ltd.

EVIDENCE AND CONCLUSION FOR FINDING OF FACT NO. 7

This finding of fact relates to a procedural matter and is a foundational and a matter of fact established in the pleadings.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 8-9

The evidence for these findings of fact is contained in the testimony of Public Staff witness Junis.

The findings of fact regarding J. Hal Kinlaw, Jr., as Registered Agent for and believed to be president of Webb Creek, are supported by the testimony of Public Staff witness Junis. Witness Junis testified that Mr. Kinlaw managed Webb Creek operations for many years, but since November 10, 2016, he has been in the custody of federal authorities. Witness Junis stated that Mr. Kinlaw is presently an inmate incarcerated in the Ashland Correctional Institute in Ashland, Kentucky, serving a 17-year sentence resulting from a conviction on federal charges of bank fraud.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 10-11

Finding of Fact No. 10 is procedural and foundational and is a matter of fact established in the pleadings. Finding of Fact No. 11 is a recitation of a provision of Chapter 62 and is not subject to contest by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12-14

These findings of fact are based on the matters alleged in the Public Staff's Complaint and Petition, and are supported by the testimony of Public Staff witness Junis. BB&T made loans to Webb Creek, which loans were secured by utility assets owned by Webb Creek. Webb Creek did not obtain Commission approval to pledge utility assets, as required by G.S. 62-160 and Commission Rule R1-16 when it pledged its utility assets to secure its debts to BB&T. Webb Creek defaulted on its loans to BB&T, as detailed in the Junis testimony and, as shown by Junis Exhibit 1, which is the BB&T Judgment, BB&T has a judgment against Webb Creek, as well as Mr. and Mrs. Kinlaw, in the principal amount of $1,624,180, plus interest, late fees, and attorney's fees. The BB&T Judgment is a lien against the Webb Creek assets and thus those assets are at risk because the BB&T Judgment remains unsatisfied. The Public Staff has concluded that Webb Creek is unable to provide an adequate wastewater treatment system as Mr. Kinlaw is unavailable to perform management functions for a 17-year period, Webb Creek does not have accessible management, and it does not have access to funds to upgrade and replace aged utility plant as necessary. Webb Creek is thus totally unable to provide adequate service for the public convenience and necessity of the Webb Creek customers. While it appears doubtful that the Webb Creek corporate entity is a going concern, its failure to pay the BB&T Judgment is grounds for revocation of Webb Creek's franchise and CPCN under G.S. 62-112(b)(4).

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 15-20

The evidence supporting these findings of fact is contained in the testimony of Public Staff witness Junis, and the exhibits thereto, as well as the testimony of Pluris witness Gallarda. Junis Exhibit 2 is a copy of the Complaint filed by Onslow County against Group Eight, Ltd., a Kinlaw / Webb Creek affiliate which owns all or part of three lift station sites. Onslow County seeks to sell those sites at public auction in order to generate revenue to pay the taxes owed to Onslow County by Group Eight, Ltd. The existing reported liens against Webb Creek assets are far in excess of the value of those assets. Thus, judgment and lien creditors have the ability to force the public auction of these lift station sites, which presents significant threats to the stability of the provision of wastewater treatment service to customers in the Webb Creek service area. Webb Creek does not own or control the sites where material components of the wastewater utility system are located, as five duplex lift stations, four of which have substantial recorded liens against them totaling a combined $15.126 million, are owned by entities other than Webb Creek.

As reflected in the testimony of witness Junis, some time ago First Citizens Bank filed a number of Notices of Lis Pendens as to Mr. Kinlaw, which indicate that there is or was some litigation with him that could impact the title to real property owned in his name. The extent of any such litigation is not documented in the record, but those Lis Pendens further reflect the unsettled circumstances of Webb Creek's owner.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 21

The evidence supporting this finding of fact is contained in the testimony and exhibits of Public Staff witness Junis, the testimony of Public Staff witness Gregson, the testimony of Pluris witness Gallarda, and the Public Staff's Report filed on September 8, 2017. The record in general, and the testimony of witness Junis in particular, establishes that for some years there have been various escalating problems and issues with the operations, facilities, and management of the Webb Creek system. Due to material non-compliance with G.S. 143-215.1, the NPDES Permit, and the Collection Permit, as of August 2016, the Public Staff reported that Webb Creek had incurred over 500 Notices of Violation from DEQ's Division of Water Quality, as well as administrative penalties, for construction, operations, effluent parameter discharge exceedances, and reporting violations. Since then, the Webb Creek NPDES permit has expired.

In particular with respect to the Notices of Violation, the Public Staff reported that prior to the appointment by the Commission of Pluris as EO in August 2016, the Webb Creek facility had 39 enforcement actions initiated by the Division of Water Resources for effluent limit violation of its NPDES permit. Further, the Public Staff noted that the violation totals prior to August 2016 included: 112 biological oxygen demand (BOD) violations, seven chlorine violations, 34 fecal coliform violations, 82 enterococcus violations, two flow violations, 23 total nitrogen violations, four pH violations, one dissolved oxygen violation, and 246 frequency violations. The Public Staff observed that since August 2017 the Webb Creek wastewater system has had five BOD violations, 34 enterococcus violations, one flow violation, and four total nitrogen violations.

Public Staff witness Gregson is now Interim Deputy Director of DEQ's Division of Water Quality. His testimony establishes that when he was Regional Supervisor of DEQ's Wilmington office he began to see an increase in Webb Creek's effluent limit violations in 2014. He testified that when DEQ inspected the Webb Creek WWTP and spoke with Webb Creek's plant operator regarding the situation, the operator "actually raised concerns also with his ability to operate the plant at that time and going from 2014 probably to around mid-2015, due to the lack of commitment on the owner of the facility to spend money on the - on the plant and collection system." (January 8, 2018 Transcript p. 23). Webb Creek's effluent limit violations prompted a compliance inspection by DEQ Wilmington staff in 2015, and during that inspection they found numerous problems with pump stations, missing pumps, and poor maintenance of the facility. That inspection revealed that five of the duplex lift stations were operating with only one pump, rather than the two pumps required by DEQ regulations, and that the operator could not get the pumps repaired because Webb Creek could not pay for the pumps to be repaired. Such violations were largely uncorrected by Webb Creek as evidenced by the necessity of Pluris, after being appointed EO in August 2016, to invest over $500,000 as of November 2017, in its efforts to, among other things, address and remedy to the extent possible operational and maintenance issues and problems in the Webb Creek wastewater system.

Witness Gregson commented that one of the most pressing issues with the Webb Creek wastewater system when Pluris took over as EO was to remove and haul away the built-up sludge and to replace or add additional pumps to the pump stations that were missing pumps. He stated that Pluris also promptly fixed the inlet control valve on the third sequencing batch reactor and brought it back into service which greatly improved the operation of the plant. Witness Gregson maintained that although the plant continues to have problems consistently meeting enterococcus limits under the operation of the EO, the problem lies with the design of the facility rather than Pluris' operation of the facility.

The Public Staff contended that the extent to which Webb Creek failed to comply with DEQ requirements, the number of violations issued to it by DEQ, and Webb Creek's failure to adequately and timely address such matters, materially violate Commission Rule R10-7, which requires compliance with DEQ permits, rules, and regulations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 22-23

These findings of fact are conclusory in nature, premised on the foregoing factual matters, none of which are disputed or contested by any party. It is apparent that Webb Creek has failed to comply with various applicable provisions of Chapter 62 and/or Commission rules. While the full extent of such non-compliance is not known, the proven facts and circumstances establish that Webb Creek has materially violated at least one provision of Chapter 62 (G.S. 62-160) and several Commission Rules, including Rule R1-16 by failing to obtain authority from the Commission to pledge its utility assets to secure its loans from BB&T. That non-compliance and the BB&T Judgment has created obvious and significant risks for ratepayers in the Webb Creek service area. Webb Creek also violated Rule R10-7 by its ongoing and material failures to comply with DEQ requirements. Based on the circumstances presented, there is no reasonable, foreseeable, or feasible scenario in which Webb Creek could resume operation of its system and the only clear path to bringing long-term stability to the provision of public utility wastewater service in the Webb Creek service area requires that Webb Creek be replaced with a competent and wellcapitalized public utility that can stabilize provision of service in the Webb Creek service area.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 24-29

The evidence for these findings of fact is contained in the entirety of the record, in the testimony of Pluris witness Gallarda, in the Commission's EO Order, and in the pleadings.

The entirety of the record establishes that Pluris Webb Creek, LLC is a public utility and a wholly-owned subsidiary of Pluris Holdings, LLC. The testimony of Pluris witness Gallarda and the Commission's records establish that other wholly-owned subsidiaries of Pluris Holdings, LLC operate public utility wastewater systems in other areas in North Carolina.

The pleadings and the EO Order issued in Docket No. W-864, Sub 11 reflect the Commission's appointment of Pluris as EO of the Webb Creek system in August, 2016. The testimony of Pluris witness Gallarda details Pluris' efforts to bring the Webb Creek system into compliance with DEQ requirements. Witness Gallarda testified that Pluris has invested over $500,000 in addressing problems, issues, and critical needs in the Webb Creek system, and, by doing so, it has achieved substantial compliance with DEQ requirements. Pluris is not able, however, to achieve full compliance with those requirements because of certain problems or conditions with the existing Webb Creek WWTP that simply cannot be corrected to the point that total compliance can be achieved using the existing system assets.

The Public Staff advised the Commission in its Petition for Appointment of Emergency Operator that Pluris is interested in acquiring the Webb Creek service area. As established by witness Gallarda's testimony in the present dockets, Pluris has been working to acquire the assets comprising the Webb Creek system. Its efforts to obtain those assets through BB&T, which as a significant judgment creditor of Webb Creek by virtue of the BB&T Judgment, proved unsuccessful. Pluris now plans to acquire the assets that it needs through Onslow County's ongoing tax foreclosure cases or by other means.

Witness Gallarda's testimony establishes that Pluris believes the prudent course with regard to the future provision of service in the Webb Creek service area is to abandon the existing Webb Creek WWTP and to build a new MBR wastewater treatment plant on the new MBR tract, near the site of the existing WWTP. Public Staff's support for such an outcome is documented in the testimony of witness Junis, as well as the testimony of witness Gregson, Interim Deputy Director of DEQ's Division of Water Quality, who testified in response to a question from Public Staff counsel that MBR plants operated by other Pluris affiliates "basically produce drinking water quality effluent." (January 8, 2018 Transcript p. 34). Both the Public Staff and DEQ support this plan, as installation of an MBR plant to serve the Webb Creek service area would be a significant upgrade and is desirable from both an environmental prospective and because it would enable the system to be brought into full compliance with DEQ requirements.

In pursuit of that approach, Pluris has entered into a Letter of Intent to acquire the new MBR tract, which is the immediate vicinity of the Webb Creek WWTP. Pluris is otherwise prepared to take actions as necessary to secure Webb Creek system assets, provided that it has sufficient assurance that it will be granted a CPCN authorizing it to serve the Webb Creek service area. Pluris is able and willing to provide the management, expertise, and capital necessary to stabilize the provision of service in the Webb Creek service area on a going forward basis.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NO. 30-31

The evidence for these findings of fact is contained the testimony of Public Staff witnesses Junis and Gregson, in the testimony of Pluris witness Gallarda, and in the entire record for these proceedings.

The evidence presented in these dockets clearly indicates that Webb Creek has failed to comply with provisions of North Carolina Public Utilities Laws and Regulations Chapter 62 and the Commission's Rules and Regulations and that there is no reasonably foreseeable or feasible scenario in which Webb Creek would be able to resume operation of this system. By every indication Webb Creek is a "troubled utility." In that situation, "[i]t is, and shall continue to be the policy of this Commission to take such actions as will encourage the larger water and sewer utilities with greater operational and capital resources[] to acquire smaller, under-capitalized, less efficient systems. Such policy serves the public interest by promoting efficiencies through economies of scale and generally results in more favorable rates and an enhanced quality of service." Docket No. W-354, Sub 133, Order Determining Regulatory Treatment of Gain on Sale of Facilities (September 7, 1994).

Pluris is a large, well-capitalized sewer utility. Pluris has the technical, managerial, and financial capacity to own and operate the wastewater treatment system serving the Webb Creek service area and, given that it is currently the EO of the Webb Creek system, this would be a seamless transition if Pluris had been able to purchase Webb Creek's assets from Webb Creek and/or BB&T, i.e., Webb Creek's principal lienholder. Unfortunately, Pluris' efforts to purchase the assets that it needs from Webb Creek and/or BB&T through traditional means have been unsuccessful.

During the hearing, after acknowledging that its efforts to acquire those portions of Webb Creek's assets that it needed through the traditional method, i.e., a negotiated sale and purchase agreement had been unsuccessful, Pluris indicated that its lack of success did not diminish its desire to be the certificated provider of wastewater utility service in the Webb Creek service area. Pluris thereafter detailed a plan by which it could acquire the assets that it needed to provide such service through the use of a less traditional acquisition method. Pluris' plan has three main prongs. First, Pluris would purchase a specified parcel of land, located near the franchised service territory, considered suitable to construct a new MBR plant. Upon completion, the newly constructed plant would be used to provide wastewater utility service to the customers in Webb Creek's franchised service territory. Second, Pluris would attempt to purchase certain assets that are currently owned by Webb Creek and/or other affiliated companies in which Mr. Kinlaw has an interest which are being foreclosed upon by Onslow County for failure to pay the required property taxes. Third, Pluris would acquire sufficient portions of the Webb Creek system assets to provide service and would also post a bond in the amount of $190,000. After completion of these essential objectives, Pluris would file with the Commission a verified statement affirming that such objectives had been completed and would then expect that the Commission would award Pluris the CPCN for the Webb Creek service area at some unspecified date in the future without any further proceedings. However, Pluris testified that before it will pursue any of the aforementioned objectives of this plan, Pluris requests sufficient assurance from the Commission that it will be granted a CPCN authorizing it to serve the Webb Creek service area.

The Commission has carefully examined Pluris' non-traditional acquisition plan and its request for assurances from the Commission that are the foundation of such plan. Based on the evidence herein presented and the entire record, it is clear that Webb Creek's current troubled utility status is untenable on an ongoing basis and that Webb Creek's ratepayers/customers deserve some assurance that they will receive adequate and reliable wastewater treatment service from a financially sound and technically competent provider. From the evidence, it is also clear that traditional solutions that the Commission has employed in the past to resolve a troubled utility's problems are not an option in this case because multiple entities have potential interests in assets used by Webb Creek to provide utility service and because of the various other specific reasons discussed herein. Thus, in order to ensure that the customers in the Webb Creek service area will continue to receive adequate and reliable wastewater utility service and that their ability to receive such service shall not be impaired by those entities, the Commission must consider non-traditional, creative solutions such as the one proposed by Pluris in these proceedings. In doing so, however, the Commission is mindful of the fact that the needs of the rate-paying public must be considered and protected to the greatest extent possible.

A strength of the plan proposed by Pluris is that it potentially puts Pluris, a well-managed and well-capitalized utility provider in position to become the utility provider in Webb Creek's present service area. In its capacity as the EO, Pluris has made substantial capital expenditures to improve the quality of service received by Webb Creek's customers and has substantially addressed the concerns expressed by DEQ concerning the condition and operation of the SBR plant. Additionally, Pluris has put forth plans to demolish Webb Creek's SBR plant which is nearing the end of its useful life and to replace it with a new MBR plant which will be appropriately sized to provide service to Webb Creek and other customers in nearby areas. Both the Public Staff and DEQ are in favor of the demolition of the SBR plant and the replacement with the MBR plant. However, Pluris' proposed plan has certain limitations, including: (1) there is no assurance that Pluris will succeed with its tax foreclosure acquisition strategy and (2) there is no set timetable by which Pluris will acquire the necessary assets to become the certificated service provider.

After carefully considering the strengths and the weaknesses of the proposed plan, the Commission finds and so concludes that there is merit to Pluris' proposal. Further, the Commission is of the opinion and therefore finds and concludes that Pluris' request that it be given assurances from the Commission that it will be granted a CPCN before it embarks on such a proposal is reasonable in light of the circumstances herein described. In reaching this conclusion, the Commission takes notice of the ownership and operational issues set out by the Public Staff, DEQ, and Pluris in their respective testimony in these proceedings and concludes that the issuance of a CPCN to Pluris once the aforementioned requirements are met should resolve these issues; should bring stable and reliable service to the Webb Creek service area; and is in the overall best interests of the Webb Creek customers.

The Commission, therefore, grants Pluris assurance that: (1) Webb Creek's CPCN will be revoked on an unspecified date in the future without the need for a further hearing on this issue and (2) Pluris would simultaneously be awarded the CPCN to serve the Webb Creek franchised territory; provided, however, that the preceding shall only occur if Pluris does the following:

(1) Within six months of the date of this Order, Pluris shall file a verified statement with the Commission confirming that

(a) Pluris has acquired the new MBR tract;
(b) Pluris has purchased all lift station sites that are necessary to provide wastewater utility service through the Onslow County tax foreclosure process, acquired them by other means, or has obtained lawful control of such assets; and
(c) Pluris has acquired sufficient portions of the Webb Creek system assets to provide adequate and reliable service to the Webb Creek customers;

(2) Pluris shall include with its verified statement:

(a) A letter from a North Carolina licensed attorney certifying that Pluris has purchased, acquired ownership, or otherwise has obtained lawful control of all lift station sites that are necessary to provide wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory;
(b) A letter from a North Carolina licensed professional engineer certifying that Pluris has acquired sufficient portions of the Webb Creek system assets to provide adequate and reliable wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory;

(3) If Pluris is unable to file such verified statement within six months of the date of this Order, Pluris may petition the Commission for a three-month extension of this requirement and the extension request shall be granted. Additional request for extensions by Pluris may be granted in the discretion of the Commission.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 32

The evidence to support this finding of fact is found in the Report of the Public Staff filed on September 8, 2017, and in the entirety of the record.

In its report filed on September 8, 2017, in Docket No. W-864, Sub 11, the Public Staff stated that it had received some correspondence regarding Pluris from residents living in the Webb Creek service area, and that such correspondence has been almost entirely supportive of Pluris.

Further, there have been no public witness testimony received at any of the evidentiary hearings held in these proceedings either objecting to Pluris' request for a CPCN for the Webb Creek service territory or citing any problems or concerns regarding Pluris' emergency operations of the Webb Creek wastewater system.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 33-34

The evidence to support these findings of fact is found in the testimony of Public Staff witness Junis filed on January 5, 2018. These recommendations are supported by Pluris and are otherwise uncontested.

IT IS THEREFORE, ORDERED as follows:

1. A certificate of public convenience and necessity to provide wastewater utility service in the franchised service area presently being served by Webb Creek shall be granted to Pluris once Pluris:

(1) Files a verified statement with Commission indicating that:

(a) Pluris has acquired the new MBR tract, which Pluris has previously described to the Commission;
(b) Pluris has purchased or acquired all lift station sites that are necessary to provide wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory through the Onslow County tax foreclosure process, acquired them by other means, or has obtained lawful control of such assets;
(c) Pluris has acquired sufficient portions, of the Webb Creek system assets to provide adequate and reliable wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory; and
(d) Pluris has posted an additional bond in the amount of $190,000; for a total bond amount of $200,000 for the Webb Creek franchise including the previously posted bond of $10,000 in Docket No. W-1314, Sub 0.

(2) Pluris shall include with its verified statement:

(a) A letter from a North Carolina licensed attorney certifying that Pluris has purchased, acquired ownership, or otherwise obtained lawful control of all lift station sites that are necessary to provide wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory; and
(b) A letter from a North Carolina licensed professional engineer certifying that Pluris has acquired sufficient portions, of the Webb Creek system assets to provide adequate and reliable wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory.

The aforementioned conditions shall be accomplished by Pluris within six months from the date of this Order unless Pluris petitions the Commission for a three-month extension of this requirement and such extension request shall be granted. Additional request for extensions by Pluris shall be granted in the discretion of the Commission. Once the aforementioned conditions have been satisfied in accordance with the provisions of this Order, it is the intention of the Commission that separate orders shall be contemporaneously issued by the Commission revoking the certificate of public convenience and necessity presently held by Webb Creek, and granting a certificate of public convenience and necessity to Pluris authorizing it to provide sewer service in the area previously served by Webb Creek Water and Sewage, Inc., without further proceedings.

2. The letter of credit proceeds of $100,000 obtained by the Commission through forfeiture of Webb Creek's bond security shall be retained by the Commission until the Webb Creek WWTP is decommissioned.

ISSUED BY ORDER OF THE COMMISSION
This the 28th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. W-864, SUB 14
DOCKET NO. W-1314, SUB 1

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. W-864, SUB 14 In the Matter of Complaint and Petition by Public Staff for Revocation of Franchise of Webb Creek Water and Sewage, Inc. DOCKET NO. W-1314, SUB 1 In the Matter of Application of Pluris Webb Creek, LLC, for a Certificate of Public Convenience and Necessity to Provide Sewer Utility Service in the Areas Presently Served by Webb Creek Water and Sewage, Inc., in Onslow County	)	ORDER GRANTING PLURIS WEBB CREEK, LLC'S MOTION TO MODIFY ORDER REQUIRING THE SATISFACTION OF CERTAIN CONDITIONS BEFORE THE ISSUANCE OF A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

BY THE COMMISSION: On June 28, 2018, the Commission issued an Order Requiring Specific Conditions to be Satisfied Concerning the Granting of a Certificate of Public Convenience and Necessity to Pluris Webb Creek, LLC (Conditions Order). The Conditions Order required Pluris Webb Creek, LLC (Pluris) to meet certain conditions before the Commission would award Pluris a certificate of public convenience and necessity (CPCN) to provide wastewater utility service in the territory currently being served by Pluris as an emergency operator for Webb Creek Water and Sewage, Inc. (Webb Creek). In pertinent part, the Conditions Order stated:

> 1. A certificate of public convenience and necessity to provide wastewater utility service in the franchised service area presently being served by Webb Creek shall be granted to Pluris once Pluris:
>
> (1) Files a verified statement with Commission indicating that:

(a) Pluris has acquired the new MBR tract, which Pluris has previously described to the Commission;

(b) Pluris has purchased or acquired all lift station sites that are necessary to provide wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory through the Onslow County tax foreclosure process, acquired them by other means, or has obtained lawful control of such assets;

(c) Pluris has acquired sufficient portions, of the Webb Creek system assets to provide adequate and reliable wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory; and

(d) Pluris has posted an additional bond in the amount of $190,000; for a total bond amount of $200,000 for the Webb Creek franchise including the previously posted bond of $10,000 in Docket No. W-1314, Sub 0.

(2) Pluris shall include with its verified statement:

(a) A letter from a North Carolina licensed attorney certifying that Pluris has purchased, acquired ownership, or otherwise obtained lawful control of all lift station sites that are necessary to provide wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory; and

(b) A letter from a North Carolina licensed professional engineer certifying that Pluris has acquired sufficient portions, of the Webb Creek system assets to provide adequate and reliable wastewater utility service to the residents and/or customers located in Webb Creek's franchised service territory.

The aforementioned conditions were to be accomplished by Pluris within six months from the date of the Order unless Pluris petitions the Commission for a three-month extension of this requirement and such extension request shall be granted. Additional request for extensions by Pluris shall be granted in the discretion of the Commission.

On December 7, 2018, Pluris filed a motion Request[ing] Modification of the Conditions to be Satisfied Concerning the Granting of a CPCN to Pluris Webb Creek, LLC (Modification Motion). In the Modification Motion, Pluris stated that testing done subsequent to the date of issuance of the Conditions Order at the site that Pluris had optioned to build a new Membrane Bio Reactor (MBR) Waste Water Treatment Plant (WWTP) in order to provide adequate and reliable wastewater utility service to customers residing in the Webb Creek and Pines service territories indicated that the site was unsuitable for the construction of a WWTP, that this circumstance required Pluris to reconsider its decision not to purchase the WWTP owned by Webb Creek, that Pluris purchased Webb Creek's WWTP and three adjoining lots i.e., the new plant site, to provide adequate wastewater utility service to customers residing in the Webb Creek and Pines service territories during the year that it would take to construct the new MBR WWTP, that, as a result of its purchase of the Webb Creek WWTP, Pluris would now be responsible for the decommissioning costs of said plant, that the Commission had withheld the proceeds of Webb Creek's bond forfeiture in the Conditions Order in order to apply the proceeds to the decommissioning costs of said plant because the Commission anticipated that Webb Creek and not Pluris would continue to own the WWTP when the plant was decommissioned after the CPCN for the Webb Creek service territory had been transferred to Pluris, and that the Commission should release the proceeds of the Webb Creek's bond forfeiture to Pluris because Pluris and not Webb Creek is now the owner of the Webb Creek WWTP and Pluris and not Webb Creek would be responsible for such costs when the Webb Creek WWTP is decommissioned. Further, Pluris stated that the Public Staff had authorized Pluris to represent to the Commission that the Public Staff supports Pluris' requested modifications to the Conditions Order. Pluris thereafter requested that, because of the changed conditions detailed above, the Commission amend the Conditions Order to reflect that the Commission will disburse the proceeds, i.e., \$100,000, that the Commission received from the forfeiture of Webb Creek's bond security to Pluris upon the issuance of the CPCN to Pluris and to provide that Pluris' acquisition of the existing plant site , together with the certification by a North Carolina licensed professional engineer that the new plant site will suffice for construction of a new MBR plant which will be adequately sized to service Webb Creek and the Pines development services areas, together with satisfaction of the conditions in the Conditions Order, will suffice for revocation of Webb Creek's CPCN and issuance of a CPCN to Pluris.

On December 13, 2018, the Commission issued an Order Requesting Comments from the Public Staff Regarding Pluris' Motion to Modify the Conditions Order. (Order Requesting Comments). In the Order Requesting Comments, the Commission required the Public Staff to respond to the Modification Motion by December 18, 2018.

On December 18, 2018, the Public Staff filed Comments. In its comments, the Public Staff stated the Public Staff fully supported all the relief requested by Pluris in the Modification Motion. Further, the Public Staff stated that the construction of the new MBR WWTP on the site purchased by Pluris will save the \$175,000 purchase price for the other considered site, that the new site is much better suited for the MBR WWTP construction and that the construction of the MBR WWTP on the new plant site should reduce construction costs for the wastewater influent piping and treated effluent piping to the NPDES discharge location and provide area for future improvements as necessary.

After careful consideration, the Commission concludes that good cause exists to grant Pluris' Motion that the Conditions Order be modified as detailed above.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 21st day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. W-390, SUB 13

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. W-390, SUB 13	)	
	)	
In the Matter of	)	
Request by Public Staff – North Carolina	)	ORDER DECREASING
Utilities Commission for Appointment of	)	EMERGENCY OPERATOR'S
Carolina Water Service, Inc. of North	)	PROVISIONAL RATES AND
Carolina as Emergency Operator of	)	REQUIRING CUSTOMER NOTICE
Riverbend Estates Water Systems, Inc.,	)	
in Macon County, North Carolina	)	

BY THE COMMISSION: On May 9, 2017, in Docket No. W-390, Sub 13, the Public Staff – North Carolina Utilities Commission (Public Staff) filed a Petition pursuant to G.S. 62-116(b) and G.S. 62-118(b) requesting that the Commission issue an order: (1) declaring an emergency, (2) appointing Carolina Water Service, Inc. of North Carolina (Carolina Water) as an emergency operator (EO) of Riverbend Estates Water Systems, Inc. (REWS), and (3) approving an emergency rate increase on a provisional basis for the water system serving Riverbend Estates Subdivision in Macon County, North Carolina (EO Petition). The Riverbend Estates water system has approximately 131 metered customers in single-family residential homes.

The Public Staff presented the EO Petition to the Commission at the May 15, 2017 Commission Staff Conference. The Public Staff recommended that the Commission issue an order finding that an emergency then existed due to the abandonment by REWS of the water system serving Riverbend Estates Subdivision, appointing Carolina Water the EO, ordering the EO to make installment payments to the Town of Franklin on the purchased water arrearage, and approving an emergency rate increase at the Public Staff's recommended provisional rates being a monthly base charge for zero usage of $35.00, and a usage charge of $11.95 per 1,000 gallons.

After carefully considering the May 15, 2017 Commission Staff Conference presentation, the Commission issued an Order dated May 16, 2017, concluding "that an emergency exists for the Riverbend Estates water system which is in imminent danger of losing adequate water utility service"; adopting the Public Staff's recommendations to appoint Carolina Water as the emergency operator for the Riverbend Estates water system effective on May 16, 2017; approving the Public Staff's recommended provisional rates; and requiring that a copy of the Order be served on all customers of REWS by Carolina Water no later than 15 days from the date of the Order. On June 1, 2017, Carolina Water filed its Certificate of Service indicating that customer notice was provided as required by the May 16, 2017 Order.

On March 13, 2018, Carolina Water filed a letter with the Commission requesting, among other things, that the Commission issue an order to reduce the provisional rates currently being charged by the EO to the Riverbend Estates Subdivision customers, effective for bills rendered on and after March 13, 2018. In particular, Carolina Water requested that the Commission approve Carolina Water's uniform statewide monthly base charge for zero consumption of $24.44

(for a meter size of less than one inch) and a commodity charge of $6.86 per 1,000 gallons, which is the exact usage amount per 1,000 gallons that the Town of Franklin charges to Carolina Water for the purchased bulk water. In support of its request, Carolina Water stated that the new proposed provisional rates are lower than the EO's current provisional rates authorized by the Commission[1] and approval of such rates would bring immediate rate relief to the Riverbend Estates Subdivision customers. Carolina Water has advised the Commission that the Public Staff agrees with Carolina Water's request to reduce the EO's provisional rates.

The reduced provisional rates proposed by Carolina Water will decrease the average monthly water bill from $85.19 to $53.25 based on an average usage of 4,200 gallons for bills rendered on and after March 13, 2018.

Based upon the foregoing, the Commission finds and concludes that the provisional rates currently being charged by the EO to the Riverbend Estates Subdivision customers should be reduced to Carolina Water's uniform statewide monthly base charge for zero consumption of $24.44 (for a meter size of less than one inch) and a usage charge of $6.86 per 1,000 gallons, which is the same usage charge per 1,000 gallons that the Town of Franklin charges to Carolina Water for the bulk purchased water. Further, the Commission finds and concludes that the reduced provisional rates to be charged by the EO should be effective for bills rendered on and after March 13, 2018, and customer notice should be provided.

Furthermore, the Commission is opinion and therefore finds and concludes that by a further order of the Commission, the Public Staff should be required to audit the revenues Carolina Water has received as EO from customers and all expenses and capital expenditures for the Riverbend water system for the EO period beginning May 16, 2017 through March 13, 2018, and should file with the Commission a report including recommendations as to the amount of revenues from the provisional rates that exceeded the EO's expenditures, and that the over-collection amounts, if any, should be refunded by Carolina Water to each customer.

IT IS, THEREFORE, ORDERED as follows:

1. That the revised Schedule of Provisional Rates, attached hereto as Appendix A, is approved for Carolina Water as the emergency operator of the Riverbend Estates water system, effective for bills rendered on and after March 13, 2018.

2. That a copy of this Order, including Appendix A, shall be mailed with sufficient postage or hand delivered by Carolina Water to all its affected customers in the Riverbend Estates Subdivision within three business days after the issuance date of this Order.

3. That Carolina Water shall submit to the Commission the attached Certificate of Service, properly signed and notarized, not later than 10 days after the issuance date of this Order.

4. That, by further order of the Commission, the Public Staff shall be required to audit the revenues Carolina Water has received as EO from customers and all expenses and capital

[1] See Commission Order issued on May 16, 2017, in Docket No. W-390, Sub 13.

expenditures for the Riverbend water system for the EO period beginning May 16, 2017 through March 13, 2018, and shall file with the Commission a report including recommendations as to the amount of revenues from the provisional rates that exceeded the EO's expenditures, and that the over-collection amounts, if any, should be refunded by Carolina Water to each customer.

ISSUED BY ORDER OF THE COMMISSION.
This is the 13th day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

APPENDIX A

SCHEDULE OF PROVISIONAL RATES

for

RIVERBEND ESTATES WATER SYSTEMS, INC.
(Carolina Water Service, Inc. of North Carolina, Emergency Operator)

for providing water utility service in

RIVERBEND ESTATES SUBDIVISION

Macon County, North Carolina

WATER RATES AND CHARGES

Metered Rates: (Residential Service)

Monthly base charge, zero usage	$24.44
Usage charge, per 1,000 gallons	$ 6.86

Connection Charge:

$1,000 plus actual cost to connect to the Town of Franklin

Reconnection Charge:

If water service cut off by utility for good cause	$27.00
If water service discontinued at customer's request	$27.00

If water service is reconnected to the same customer at the same address within nine months of disconnection, then the reconnection charge shall be the base charge times the number of months disconnected.

WATER AND SEWER – EMERGENCY OPERATOR

<u>New Water Customer Charge:</u>	$27.00
<u>Bills Due:</u>	On billing date
<u>Bills Past Due:</u>	25 days after billing date
<u>Billing Frequency:</u>	Shall be monthly for service in arrears
<u>Finance Charges for Late Payment:</u>	1% per month will be applied to the unpaid balance of all bills still past due 25 days after billing date.

Issued in Accordance with Authority Granted by the North Carolina Utilities Commission in Docket No. W-390, Sub 13, on this the 13th day of March, 2018.

<u>CERTIFICATE OF SERVICE</u>

I, ______________________________, mailed with sufficient postage or hand delivered to all affected customers a copy of the Order issued by the North Carolina Utilities Commission in Docket No. W-390, Sub 13, and such Order was mailed or hand delivered by the date specified in the Order.

This the ____ day of ________________, 2018.

By: ______________________________

DOCKET NO. W-218, SUB 363A

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Aqua North Carolina, Inc., 202 MacKenan Court, Cary, North Carolina 27511, for Approval of Semiannual Adjustments to Water and Sewer System Improvement Charges pursuant to G.S. 62-133.12	))))))	ORDER APPROVING WATER AND SEWER SYSTEM IMPROVEMENT CHARGES ON A PROVISIONAL BASIS AND REQUIRING CUSTOMER NOTICE

BY THE COMMISSION: On May 1, 2018, Aqua North Carolina, Inc. (Aqua or Company), filed an application requesting authority to adjust its Water System Improvement Charges (WSIC) and Sewer System Improvement Charges (SSIC) effective July 1, 2018, pursuant to Commission Rules R7-39 and R10-26 (Application).

On June 11, 2018, the Public Staff filed a Notice of Public Staff's Plan to Present Comments and Recommendations at the Commission's June 25, 2018 Regular Staff Conference (Notice).

On June 25, 2018, the Public Staff presented this matter to the Commission at Staff Conference.

On the basis of the verified Application, the records of the Commission, and the comments and recommendations of the Public Staff, the Commission makes the following

FINDINGS OF FACT

1. Aqua is a corporation duly organized under the laws of and is authorized to do business in the State of North Carolina. Aqua is a franchised public utility providing water and/or sewer utility service to customers in North Carolina.

2. In Aqua's last general rate case, Docket No. W-218, Sub 363 (Sub 363 Rate Case), the Commission approved in its Order dated May 2, 2014, Aqua's request to utilize a WSIC and SSIC mechanism pursuant to G.S. 62-133.12, concluding that the rate adjustment mechanisms are in the public interest, and establishing WSIC and SSIC procedures for Aqua.

3. The implementation of the WSIC and SSIC for Aqua was first approved on December 22, 2014, effective January 1, 2015. The WSIC and SSIC procedures allow for semiannual adjustments to Aqua's rates every January 1st and July 1st for recovery of reasonable and prudently incurred investment in eligible system improvements completed and placed in service prior to the filing of the request.

4. Aqua's proposed adjustments to the WSIC and SSIC previously approved by the Commission on January 1, 2018, are as follows:

WATER AND SEWER – FILINGS DUE PER ORDER

	Previously Approved WSIC/SSIC Percentage	Net Change To WSIC/SSIC Percentage	Cumulative WSIC/SSIC Percentage
Uniform water	4.77%	-0.02%	4.75%
Uniform sewer	3.59%	0.40%	3.99%
Fairways/Beau Rivage water	4.27%	0.16%	4.43%
Fairways/Beau Rivage sewer	4.53%	0.00%	4.53%
Brookwood/LaGrange water	5.39%	-0.68%	4.71%

5. The WSIC/SSIC percentages above include the Experience Modification Factor (EMF) adjustments from the 2017 annual WSIC/SSIC revenue review. The impact to the rate divisions are Aqua Uniform Water – adjusted downward by -0.02% (due to overcollection in 2017), Aqua Uniform Sewer – adjusted downward by -0.06% (due to overcollection in 2017), Fairways/Beau Rivage Water – adjusted downwards by -0.08% (due to overcollection in 2017), Fairways/Beau Rivage Sewer – adjusted upwards by 0.02% (due to undercollection in 2017) and Brookwood Water – adjusted upward by 0.03% (due to undercollection in 2017).

6. The cumulative WSIC and SSIC revenue requirements after Aqua's proposed increases/decreases are as follows:

	Previously Approved WSIC/SSIC Revenue Requirement	Net Change To WSIC/SSIC Revenue Requirement	Cumulative WSIC/SSIC Revenue Requirement
Uniform water	$1,558,018	$0	$1,558,018
Uniform sewer	469,664	49,962	519,626
Fairways/Beau Rivage water	41,413	2,319	43,732
Fairways/Beau Rivage sewer	56,759	0	56,759
Brookwood/LaGrange water	249,083	(29,019)	220,064

7. Aqua's additional WSIC/SSIC revenue requirement is comprised of the calculated WSIC/SSIC revenue requirement for the current review period, plus updates to previously approved WSIC/SSIC revenue requirements which became effective on January 1, 2015, and have been updated semiannually through January 1, 2018. The updates include a roll forward of accumulated depreciation and accumulated deferred income taxes. The North Carolina state income tax rate and the NCUC regulatory fee have been set to 3% and 0.14%, respectively. The Federal Corporate Tax Rate has been updated to 21%, which impacts both the overall rate of return and deferred taxes on each previously approved revenue amount. The projected (non WSIC/SSIC) annual service revenue amounts remain at the Company's 2018 projection.

8. Aqua is proposing the above adjustments in the WSIC and SSIC in order to recover the incremental depreciation and capital costs associated with the following WSIC and SSIC projects completed and placed in service from October 1, 2017 through March 31, 2018:

Water main extension	$79,105
Treatment for secondary drinking water standards	345,204
Water main replacement	3,445,818
Total WSIC plant additions	$3,870,127

Replace lift station pumps	$30,560
Replace blowers and/or motors	552,165
Replace headworks	402,148
Total SSIC plant additions	$984,873

9. Under G.S. 62-133.12(c), eligible water system improvements include "equipment and infrastructure installed at the direction of the Commission to comply with secondary drinking water standards." During the six months ended March 31, 2018, Aqua installed one iron and manganese filter system at Well 3 in the Surry Point Subdivision at a total cost of $345,204. The Commission authorized the implementation of this filtration project in its Order Approving Secondary Water Quality Improvement Projects issued on January 18, 2017, in this docket.

10. Pursuant to G.S. 62-133.12(g), the cumulative WSIC and SSIC percentages are capped at 5% of the total annual service revenues approved by the Commission in the Sub 363 Rate Case. The total cumulative WSIC/SSIC revenue requirement calculations for Aqua NC Water, Fairways/Beau Rivage Sewer, and Brookwood/LaGrange Water have exceeded the maximum revenue cap for these entities, therefore the WSIC/SSIC surcharges for this proceeding are based on maximum allowed revenue requirement.

11. As stated by the Commission in its Order adopting Rules R7-39 and R10-26, issued on June 6, 2014, in Docket No. W-100, Sub 54, the Public Staff is to review all infrastructure improvements proposed for recovery for eligibility and reasonableness prior to making its recommendation to the Commission on WSIC or SSIC rate adjustments. Furthermore, any WSIC or SSIC rate adjustments will be allowed to become effective, but not unconditionally approved. These adjustments shall be further examined for a determination of their justness and reasonableness in the Company's next general rate case. At that time, the adjustments may be rescinded retroactively if the Commission determines that the adjustments were not prudent, just, or reasonable.

12. Based on the Public Staff's investigation to date, the Public Staff believes that the WSIC and SSIC projects included in Aqua's request are eligible water and sewer system improvements as defined in G.S. 62-133.12(b), (c), and (d).

13. The Public Staff recommended that the cumulative WSIC and SSIC percentages proposed by Aqua be implemented effective for service rendered on or after July 1, 2018, subject to true-up. The Public Staff stated that it would continue to review the justness, prudency, and reasonableness of these improvements during its review of Aqua's future WSIC and SSIC filings and in Aqua's next general rate case.

CONCLUSIONS

Based upon the foregoing, the Commission concludes that Aqua should be allowed to implement its proposed adjustments in the WSIC and SSIC percentages effective for service rendered on and after July 1, 2018. These WSIC or SSIC rate adjustments, while allowed to become effective, are not unconditionally approved, and will be subject to further examination for justness and reasonableness in the WSIC and SSIC annual review and reconciliation and Aqua's next general rate case.

IT IS, THEREFORE, ORDERED as follows:

1. That Aqua is authorized to implement the recommended Water and Sewer System Improvement Charges set forth in the attached Appendix A to Aqua's Schedule of Rates effective for service rendered on and after July 1, 2018, subject to true-up. The rates contained therein are provisional and subject to review in Aqua's next general rate case.

2. That the attached Appendix A is approved and is deemed filed with the Commission pursuant to G.S. 62-138.

3. That Aqua shall mail to each of its customers with the next regularly scheduled customer billing the Commission-approved customer notice.[1]

4. That Aqua shall submit to the Commission the attached Certificate of Service, properly signed and notarized, no later than 45 days after the date of this Order.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

APPENDIX A

AQUA NORTH CAROLINA, INC.
WATER AND SEWER SYSTEM IMPROVEMENT CHARGES

WATER SYSTEM IMPROVEMENT CHARGE

All Aqua NC water systems except as noted below	4.75% [1/]
Water systems in Brookwood and LaGrange service areas	4.71% [1/]
Water systems in Fairways and Beau Rivage service areas	4.43% [1/]
Glennburn, Knollwood, and Wimbledon systems in Gaston County	None [2/]

[1] Three separate customer notices are attached hereto as Attachments A, B, and C, respectively. The separate customer notices are intended to minimize customer confusion. Aqua shall mail the appropriate customer notice to each of its customers with the next regular customer billing.

Thornton Ridge/Timberlake system in Alamance County	None [3/]
Clear Meadow system in Mecklenburg County	None [3/]

SEWER SYSTEM IMPROVEMENT CHARGE

All Aqua NC sewer systems except as noted below	3.99% [4/]
Sewer systems in Fairways and Beau Rivage service areas	4.53% [4/]

[1/] The Water System Improvement Charge will be applied to the total water utility bill of each customer under the Company's applicable rates and charges.

[2/] These water systems, which were acquired from Wayne M. Honeycutt in Docket No. W-218, Sub 385, are not included under Aqua's uniform rates and improvements made in these systems, and are not eligible for Water System Improvement Charge recovery.

[3/] These water systems were acquired by Aqua subsequent to Aqua's last general rate case and are not included in Aqua's uniform rates.

[4/] The Sewer System Improvement Charge will be applied to the total sewer utility bill of each customer under the Company's applicable rates and charges.

Issued in Accordance with Authority Granted by the North Carolina Utilities Commission in Docket No. W-218, Sub 363A, on this the 26th day of June, 2018.

27511, for Approval of Semiannual		BROOKWOOD / LAGRANGE
Adjustments to Water and Sewer System	)	SERVICE AREAS
Improvement Charges pursuant to	)	
G.S. 62-133.12	)	

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) has issued an Order dated June 26, 2018, pursuant to G.S. 62-133.12 and Commission Rules R7-39 and R10-26, authorizing Aqua North Carolina, Inc. (Aqua), to decrease the Water System Improvement Charge (WSIC) effective for service rendered on and after July 1, 2018, in Aqua's Brookwood/LaGrange service areas in Cumberland and Hoke Counties, in North Carolina.

By Order entered in Docket No. W-218, Sub 363, on May 2, 2014, the Commission approved Aqua's request, pursuant to G.S. 62-133.12, for authority to implement a semiannual WSIC/SSIC adjustment mechanism designed to recover the incremental costs associated with eligible investments in certain water and sewer infrastructure improvement projects completed and placed in service between general rate case proceedings. The WSIC/SSIC mechanism is subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanism may not exceed 5% of the total annual service revenues approved by the Commission in Aqua's last general rate case. WSIC and SSIC charges for Aqua were first approved by the Commission on December 22, 2014, effective January 1, 2015. The WSIC and SSIC procedures allow for semiannual adjustments to Aqua's rates every January 1 and July 1. On October 31, 2014, Aqua filed for its first semiannual adjustment to the WSIC and SSIC charges to be effective January 1, 2015.

ATTACHMENT A
PAGE 2 OF 2

The Public Staff carefully reviewed Aqua's proposed WSIC, including a review of invoices, materials lists, work orders, employee timesheets, and other accounting records. On June 11, 2018, the Public Staff filed a Notice of Public Staff's Plan to Present Comments and Recommendations at the Commission's June 25, 2018 Regular Staff Conference (Notice).

Based on the application filed by Aqua and the Public Staff's Notice and recommendations, the Commission has approved the following decrease in the WSIC charge for the Brookwood and LaGrange service areas, effective for service rendered on and after July 1, 2018:

	Previously Approved WSIC Percentage	Net Change To WSIC Percentage	Cumulative WSIC Percentage
WSIC	5.39%	-0.68%	4.71%

The WSIC percentage of 4.71% will be applied to the water utility bill of each customer under Aqua's applicable service rates and charges.

The cumulative 4.71% WSIC percentage results in a $1.43 increase to the monthly average residential bill for a customer using the average of 5,817 gallons per month.

Additional information regarding the WSIC/SSIC mechanism is contained in the Commission's Order dated May 2, 2014, in Docket No. W-218, Sub 363, the Commission's Order Adopting Rules to Implement G.S. 62-133.12, dated June 6, 2014, in Docket No. W-100, Sub 54, the Aqua NC WSIC/SSIC Application filed May 1, 2018, the June 11, 2018, Public Staff Notice, and the June 26, 2018 Commission Order in Docket No. W-218, Sub 363A, all of which can be accessed from the Commission's website at www.ncuc.net, under Docket Portal, using the Docket Search feature for the docket numbers stated above (i.e., for Docket No. key: W-218 Sub 363A).

Parties interested in receiving notice of these filings may subscribe to the Commission's electronic notification system through the Commission's website at www.ncuc.net.

ISSUED BY ORDER OF THE COMMISSION.

to Water and Sewer System Improvement	)	RIVAGE SERVICE AREAS
Charges pursuant to G.S. 62-133.12	)	

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) has issued an Order dated June 26, 2018, pursuant to G.S. 62-133.12 and Commission Rules R7-39 and R10-26, authorizing Aqua North Carolina, Inc. (Aqua), to increase the Water System Improvement Charge (WSIC) and to keep constant the current Sewer System Improvement Charge (SSIC) effective for service rendered on and after July 1, 2018, in Aqua's Fairways and Beau Rivage service areas in New Hanover County, North Carolina.

By Order entered in Docket No. W-218, Sub 363, on May 2, 2014, the Commission approved Aqua's request, pursuant to G.S. 62-133.12, for authority to implement a semiannual WSIC/SSIC adjustment mechanism designed to recover the incremental costs associated with eligible investments in certain water and sewer infrastructure improvement projects completed and placed in service between general rate case proceedings. The WSIC/SSIC mechanism is subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanism may not exceed 5% of the total annual service revenues approved by the Commission in Aqua's last general rate case. WSIC and SSIC charges for Aqua were first approved by the Commission on December 22, 2014, effective January 1, 2015. The WSIC and SSIC procedures allow for semiannual adjustments to Aqua's rates every January 1 and July 1. On October 31, 2014, Aqua filed for its first semiannual adjustment to the WSIC and SSIC charges to be effective January 1, 2015.

ATTACHMENT B
PAGE 2 OF 3

The Public Staff carefully reviewed Aqua's stated WSIC and SSIC improvements, including a review of invoices, materials lists, work orders, employee timesheets, and other accounting records. On June 11, 2018, the Public Staff filed a Notice of Public Staff's Plan to Present Comments and Recommendations at the Commission's June 25, 2018 Regular Staff Conference (Notice).

Based on the application filed by Aqua and the Public Staff's Notice and recommendations, the Commission has approved the following increase in the WSIC and no change in the SSIC for the Fairways and Beau Rivage service areas, effective for service rendered on and after July 1, 2018:

	Previously Approved WSIC/SSIC Percentage	Net Change To WSIC/SSIC Percentage	Cumulative WSIC/SSIC Percentage
WSIC	4.27%	0.16%	4.43%
SSIC	4.53%	0.00%	4.53%

The WSIC percentage of 4.43% will be applied to the water utility bill of each customer, and the SSIC percentage of 4.53% will be applied to the sewer utility bill of each customer, under Aqua's applicable service rates and charges.

The 4.43% WSIC percentage results in an $0.86 increase to the monthly average residential bill for a customer using the average of 7,655 gallons per month. The 4.43% WSIC percentage also will apply to the monthly bills for the customers on water systems where Aqua purchases bulk water.

The cumulative SSIC percentage of 4.53% will be applied to the sewer utility bill of each customer under Aqua's applicable service rates and charges. The cumulative 4.53% SSIC percentage results in a $1.65 increase to the monthly residential customer flat rate sewer bill.

Additional information regarding the WSIC/SSIC mechanism is contained in the Commission's Order dated May 2, 2014, in Docket No. W-218, Sub 363, the Commission's Order Adopting Rules to Implement G.S. 62-133.12, dated June 6, 2014, in Docket No. W-100, Sub 54, the Aqua NC WSIC/SSIC Application filed May 1, 2018, the June 11, 2018, Public Staff Notice, and the June 26, 2018 Commission Order in Docket No. W-218, Sub 363A, all of which can be accessed from the Commission's website at www.ncuc.net, under Docket Portal, using the Docket Search feature for the docket numbers stated above (i.e. for Docket No. key: W-218 Sub 363A).

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) has issued an Order dated June 26, 2018, pursuant to G.S. 62-133.12 and Commission Rules R7-39 and R10-26, authorizing Aqua North Carolina, Inc. (Aqua), to decrease the Water System Improvement Charge (WSIC) and to increase the Sewer System Improvement Charge (SSIC) effective for service rendered on and after July 1, 2018, in its service areas in North Carolina.

By Order entered in Docket No. W-218, Sub 363, on May 2, 2014, the Commission approved Aqua's request, pursuant to G.S. 62-133.12, for authority to implement a semiannual WSIC/SSIC adjustment mechanism designed to recover the incremental costs associated with eligible investments in certain water and sewer infrastructure improvement projects completed and placed in service between general rate case proceedings. The WSIC/SSIC mechanism is subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanism may not exceed 5% of the total annual service revenues approved by the Commission in Aqua's last general rate case. WSIC and SSIC for Aqua were first approved by the Commission on December 22, 2014, effective January 1, 2015.

The WSIC and SSIC procedures allow for semiannual adjustments to Aqua's rates every January 1 and July 1. On October 31, 2014, Aqua filed for its first semiannual adjustment to the WSIC and SSIC charges to be effective January 1, 2015.

ATTACHMENT C
PAGE 2 OF 3

The Public Staff carefully reviewed Aqua's stated WSIC and SSIC improvements, including a review of invoices, materials lists, work orders, employee timesheets, and other accounting records. On June 11, 2018, the Public Staff filed a Notice of Public Staff's Plan to Present Comments and Recommendations at the Commission's June 25, 2018 Regular Staff Conference (Notice).

Based on the application filed by Aqua and the Public Staff's Notice and recommendations, the Commission has approved the following adjustments in the WSIC and SSIC charges, effective for service rendered on and after July 1, 2018:

	Previously Approved WSIC/SSIC Percentage	Net Change To WSIC/SSIC Percentage	Cumulative WSIC/SSIC Percentage
WSIC	4.77%	-0.02%	4.75%
SSIC	3.59%	0.40%	3.99%

The WSIC percentage of 4.75% will be applied to the water utility bill of each customer, and the SSIC percentage of 3.99% will be applied to the sewer utility bill of each customer, under Aqua's applicable service rates and charges.

The cumulative 4.75% WSIC percentage results in a $2.18 increase to the monthly average residential bill for a customer using the average of 5,170 gallons per month. The cumulative 4.75% WSIC percentage also will apply to the monthly bills for the customers on water systems where Aqua purchases bulk water.

The cumulative 3.99% SSIC percentage results in a $2.59 increase to the monthly residential flat rate sewer bill. The cumulative 3.99% SSIC percentage will also apply to the monthly metered bills for customers on sewer systems where Aqua purchases bulk sewer treatment.

Additional information regarding the WSIC/SSIC mechanism is contained in the Commission's Order dated May 2, 2014, in Docket No. W-218, Sub 363, the Commission's Order Adopting Rules to Implement G.S. 62-133.12, dated June 6, 2014, in Docket No. W-100, Sub 54, the Aqua NC WSIC/SSIC Application filed May 1, 2018, the June 11, 2018, Public Staff Notice, and the June 26, 2018 Commission Order in Docket No. W-218, Sub 363A, all of which can be accessed from the Commission's website at www.ncuc.net, under Docket Portal, using the Docket Search feature for the docket numbers stated above (i.e. for Docket No. key: W-218 Sub 363A).

DOCKET NO. W-218, SUB 363A

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Reporting Requirements from Docket No. W-218, Sub 363 – Application by Aqua North Carolina, Inc., 202 MacKenan Court, Cary, North Carolina 27511, for Approval to Implement Secondary Water Quality System Improvement Projects Pursuant to N.C. Gen. Stat. § 62-133.12	)))))))	ORDER APPROVING SECONDARY WATER QUALITY IMPROVEMENT PROJECTS

BY THE COMMISSION: N.C. Gen. Stat. § 62-133.12 authorizes the Commission in a general rate case proceeding to approve a rate adjustment mechanism to allow water and sewer utilities to recover the incremental depreciation expense and capital costs associated with reasonable and prudently incurred investments in eligible water and sewer system improvements By Order issued May 2, 2014 in Docket No. W-218, Sub 363, the last general rate case proceeding for Aqua North Carolina, Inc. (Aqua), the Commission approved Aqua's request to utilize a Water System Improvement Charge/Sewer System Improvement Charge (WSIC/SSIC) mechanism pursuant to N.C. Gen. Stat. § 62-133.12, finding that the mechanism is in the public interest.

Commission Rules R7-39(f) and R10-26(f) provide that once WSIC and SSIC mechanisms are approved and eligible water and sewer system improvements are in service, the utility (in this case, Aqua) may file a request with the Commission for authority to impose water and sewer system improvement charges pursuant to the mechanisms.

N.C. Gen. Stat. § 62-133.12(c)(2) and (c)(4) provide, in pertinent part, that specific approval from the Commission is necessary before Aqua may undertake and recover its incremental depreciation expense and capital costs through the WSIC mechanism for eligible water system improvements implemented to comply with secondary drinking water standards.

On August 14, 2018 and October 24, 2018, Aqua filed an application for approval to implement four secondary water quality system improvement projects pursuant to N.C. Gen. Stat. § 62-133.12 and Commission Rule R7-39. The four projects and their estimated costs are summarized below.

System	County	Well Gallons Per Minute	Aqua Estimated Cost 000's
Georges Grant Well 1	Wake	68	$350-$375
The Barony Well 5	Wake	77	$350-$375
Upchurch Place Wells 1 & 4	Wake	89	$350-$375
Woodvalley Well 9	Wake	38	$275-$300
		Total	$1.325-$1.425 Million

WATER AND SEWER -- FILINGS DUE PER ORDER

On November 9, 2018, the Public Staff filed its Report and Recommendations regarding Aqua's application. The Public Staff stated that it had thoroughly reviewed the four filter projects proposed by Aqua. Based upon its review of documents and other information provided by Aqua, site visits, and discussions with customers and Aqua's engineers and operations managers, the Public Staff recommended that the Commission approve the proposed projects.

In recommending approval of the projects, the Public Staff advised that decisions to install filters, such as manganese greensand or magnesium oxide, be made judiciously, as installation of such filters is many times more costly than sequestration coupled with adequate flushing. According to the Public Staff, the annual revenue requirement increase for the minimum estimated capital expenditure of $1,325,000 for the filtration systems proposed in Aqua's application is approximately $170,925 compared to the annual revenue requirement for the chemical cost for sequestration of approximately $1,268. The Public Staff stated that the sequestration treatment of iron and manganese with polyphosphates and orthophosphates on water from North Carolina water wells, coupled with comprehensive water main flushing programs, has largely provided adequate secondary standard water quality on many water systems at a very reasonable cost. The process of testing whether the iron and manganese are soluble (clear liquid) or insoluble (solid particles and visible) in raw untreated water at the well head, after treatment with polyphosphate/orthophosphate or SeaQuest® at the entry point, and in the distribution system, has been widely used in North Carolina for many years and provides extremely valuable information to assist in evaluations of whether filtration is necessary. These treatment processes are exponentially less expensive than an iron and manganese filtration system. The Public Staff recognized, however, that for secondary water quality issues of considerable magnitude and consistency, sequestration treatment and flushing may not be effective and may necessitate filtration.

As discussed in previous reports, the Public Staff strongly supports the implementation of two additional secondary water quality processes: a comprehensive water main flushing program and a comprehensive customer education program. The Public Staff recommended that Aqua continue to upgrade its flushing program. Regarding customer education, the Public Staff noted that with its input, Aqua has prepared and posted on its website (https://www.aquaamerica.com/our-states/north-carolina.aspx) a fact sheet titled "Flushing Water Mains," and a best practices document titled "Iron and Manganese in Drinking Water". According to Aqua, these documents have been made available to its employees to distribute to customers they may visit who experience a discolored water issue. The Public Staff stated that it considers the documents to be useful resources to help customers better understand flushing and minimize the negative effects of discolored water caused by the presence of iron and manganese. The Public Staff stated that Aqua most recently created the dedicated website www.ncwaterquality.com as a means for the Company to provide information to customers pertaining to iron and manganese. In addition, as part of Aqua's Water Quality Plan, the Company has begun a strategic communications initiative.

In summary, the Public Staff stated that it will continue to carefully and thoroughly review secondary water quality information and documentation presented by Aqua, meet with Aqua engineers and operations managers, conduct selected site visits, discuss secondary water quality issues with customers, and recommend, when appropriate, Commission approval of equipment and infrastructure installations.

WATER AND SEWER – FILINGS DUE PER ORDER

The Public Staff presented this matter to the Commission at its Staff Conference on November 19, 2018. The Public Staff stated that each of the filters is necessary for Aqua to provide adequate secondary standard water quality. The Public Staff therefore recommended that the Commission approve Aqua's four proposed secondary standard water quality projects.

Based upon the foregoing, Aqua's application, the Public Staff's Report and Recommendations, and the entire record in this matter, the Commission finds and concludes that Aqua should proceed to implement secondary standard water quality improvements through the installation of Aqua's proposed filtration projects.

IT IS, THEREFORE, ORDERED that Aqua is authorized to implement the four filtration projects proposed in its August 14, 2018 and October 24, 2018, applications to comply with secondary water quality standards.

ISSUED BY ORDER OF THE COMMISSION.
This the 20th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Lyons Gray did not participate in this decision.

DOCKET NO. W-1049, SUB 23

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Public Staff – North Carolina Utilities Commission, Complainant v. A&D Water Services, Inc., Respondent	)))))))	ORDER GRANTING EMERGENCY MOTION

BY THE CHAIRMAN: On September 13, 2018, the Public Staff – North Carolina Utilities Commission (Public Staff) filed a Motion Requesting Emergency Relief (Motion) in the above-captioned proceeding. In the motion, the Public Staff informs the Commission that A&D Water Services, Inc. (A&D) unlawfully terminated water service to at least three customers of a subdivision in Sapphire, Transylvania County, North Carolina. The Public Staff further states that it has spoken with Aubrey Deaver, the owner and operator of A&D, who states that he is having problems with the developer of the subdivision and terminated water service to the developer and the subdivision.

Rule 7-20(c) of the Rules Governing Water Utilities states:

> Notice of Discontinuance. — No utility shall discontinue service to any customer for violation of its rules or regulations without first having diligently tried to induce the customer to comply with its rules and regulations. After such effort on the part of the utility, service may be discontinued only after written notice of such intention, and that five (5) days, excluding Sundays and holidays, shall have been given the customer by the utility; provided, however, that where an emergency exists, or where fraudulent use of water is detected, or where a dangerous condition is found to exist on the customer's premises, the water may be shut off without such notice.

Rule 7-20(d) of the Rules Governing Water Utilities states:

> Disputed Bills. — In the event of a dispute between the customer and the utility respecting any bill, the utility shall make forthwith such investigation as shall be required by the particular case, and report the result thereof to the customer. In the event that the matter in dispute cannot be compromised or settled by the parties, either party may submit the fact to the Commission for its opinion, and pending such opinion, service shall not be discontinued.

The Chairman recognizes that A&D is a public utility providing water utility service to more than 15 customers. According to Commission records, A&D was granted a franchise to provide water utility service in the Sapphire Subdivision (now Burlingame Subdivision) in Docket No. W-1049, Sub 6 (2005). The Chairman understands that three of the customers receive water service and pay its bills to A&D. The Commission has reached out to A&D by telephone to find out more information about the reason why the customers were disconnected. A&D has confirmed that its dispute is solely with a developer and not with the customers. A&D, however, still disconnected the water extension which serves the customers in question. If true, A&D has terminated utility service to its customers without notice and in violation of Commission Rule R7-20. The Chairman further recognizes that Hurricane Florence is scheduled to hit the coastal areas of the state of North Carolina within the next 48-72 hours and travel across the state delivering heavy rain and wind. The National Meteorologists' Association is suggesting the state may endure falling trees resulting in possible power outages. The denial of utility service in the face of a pending Hurricane could mean an emergency and a significant hardship for the A&D customers. The Chairman points out that N. C. Gen. Stat. § 62-118(b) defines an emergency as the imminent danger of losing adequate water or sewer utility service or the actual loss thereof. By disconnecting the aforementioned customers who have duly paid their bills for service without cause and in violation of the Commission rules, it appears that the utility has created an emergency as the term is defined in N.C. Gen. Stat. § 62-118(b). Despite this information, A&D has informed the Commission that it will not reconnect service to that area until matters are resolved between it and the developer.

Based on the foregoing, the Chairman finds that good cause exists to grant the Public Staff's motion. The Chairman further informs A&D that if it does not adhere to the Commission's order and continues to deny utility service to said customers it may be fined a sum up to one thousand dollars ($1,000) a day pursuant to N.C. Gen. Stat. § 62-310 enforceable by N.C. Gen. Stat. § 312. Additionally, the Commission may pursuant to N.C. Gen. State § 62-118(b) seek action in Transylvania County Superior Court to appoint an emergency operator of such water or sewer utility service.

IT IS THEREFORE, ORDERED that A&D Water Service, Inc., immediately restore service to all customers in the subdivision.

ISSUED BY ORDER OF THE COMMISSION.
This the 13th day of September, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. W-218, SUB 497

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by Aqua North Carolina, Inc., 202 MacKenan Court, Cary, North Carolina 27511, for Authority to Adjust and Increase Rates for Water and Sewer Utility Service in All Service Areas in North Carolina	))))))	ORDER APPROVING PARTIAL SETTLEMENT AGREEMENT AND STIPULATION, GRANTING PARTIAL RATE INCREASE, AND REQUIRING CUSTOMER NOTICE

HEARD: Tuesday, May 8, 2018, at 7:00 p.m., Davie County Courthouse, District Courtroom, 140 South Main Street, Mocksville, North Carolina

Margaret A. Force, Assistant Attorney General, and Teresa Townsend, Special Deputy Attorney General, North Carolina Department of Justice, Post Office Box 629, Raleigh, North Carolina 27602

BY THE COMMISSION: On February 5, 2018, pursuant to Commission Rule R1-17(a), Aqua North Carolina, Inc. (Aqua NC or the Company) submitted notice of its intent to file a general rate case application.

On March 7, 2018, Aqua NC filed its verified application for a general rate increase (Application), seeking authority to: (1) increase and adjust its rates for water and sewer utility service in all of its service areas in North Carolina; (2) pass through to rates any increases in purchased bulk water rates, subject to Aqua NC providing sufficient proof of the increases, as well as any increased costs of wastewater treatment performed by third parties and billed to Aqua NC; and (3) increase certain other charges. Included with this filing were certain information and data required by NCUC Form W-1. The Company stated in its Application that it serves approximately 78,739 water customers and 17,940 sewer customers in North Carolina.

In Docket No. W-218, Sub 363 (Aqua NC's last general rate case), the Commission issued on May 2, 2014, an Order Granting Partial Rate Increase, Approving Rate Adjustment Mechanism, and Requiring Customer Notice. Except for approved tariff revisions to the rates of bulk purchased water and/or sewer systems, the present rates for water and sewer service have been in effect since January 1, 2017, pursuant to the Commission's December 20, 2016 Order Approving Tariff Revision and Customer Notice issued in Docket Nos. W-218, Sub 363; M-100, Sub 138; and M-100, Sub 142. The present Water and Sewer System Improvement Charges (WSIC/SSIC) have been in effect since January 1, 2018, pursuant to the Commission's December 18, 2017 Order Approving Water and Sewer System Improvement Charges on a Provisional Basis and Requiring Customer Notice issued in Docket No. W-218, Sub 363A.

On April 2, 2018, Aqua NC filed its Ongoing Three-Year WSIC/SSIC Plan in this docket.

On April 5, 2018, the Commission issued an Order Establishing General Rate Case, Suspending Rates, Scheduling Hearings, and Requiring Public Notice. By that Order, the Commission declared the matter to be a general rate case pursuant to N.C.G.S. § 62-137, suspended the proposed new rates for up to 270 days pursuant to N.C.G.S. § 62-134, required the parties to prefile testimony and exhibits, scheduled the matter for hearing, and required notice to all affected customers. The Order also scheduled customer hearings in Mocksville, Gastonia, Raleigh, and Wilmington, North Carolina, and set the evidentiary hearing in Raleigh, North Carolina. Additionally, the Order required Aqua NC to file reports addressing all customer service and/or service quality complaints expressed at the public hearings within 20 days of each respective hearing.

On April 6, 2018, the Commission issued an Errata Order correcting inadvertent errors contained in Appendix C of its April 5, 2018 Order.

On April 23, 2018, Aqua NC filed its certificate of service of the customer notice as required by the Commission.

On June 8, 2018, Aqua NC filed the direct testimony and exhibits of John J. Spanos, Senior Vice President, Gannett Fleming Valuation and Rate Consultants, LLC. The exhibits included depreciation studies of Aqua NC's water and wastewater plant assets as of September 30, 2017.

Public hearings were held as scheduled. The following public witnesses testified at the public hearings held in this proceeding:

May 8, 2018	Mocksville	None
May 9, 2018	Gastonia	Steve Gordon, Ashley Norris
June 25, 2018	Raleigh	Representative Joseph R. John, Sr., Rebecca Daniel, Rich Vitale, Debra Cook, Reece Dillard, Darlene Kinsey, Pat Fleming, Melissa Mitchell, Don Hess, Shannon Brien, Mark Sullivan, Susie Holmes, Kristina Heinz, Peter Jogodka, Michael Dowd, Ralph Sandle, Aimee Bickers, Robert Strazis, Chris Jones, Jack Robinson
June 26, 2018	Wilmington	Joseph Napoli, Guenter Kass, David Hough, Ronald Hess, Michael Smith, Dan Graney

Aqua NC responded to public witness testimony by its filings of May 29, July 16, and July 20, 2018.

On July 27, 2018, Aqua NC filed the direct testimony and exhibits of Shannon V. Becker, President, Aqua NC; Dr. Christopher Crockett, Chief Environmental Officer, Aqua America, Inc.[1] (Aqua America); Dylan W. D'Ascendis, Director, ScottMadden, Inc.; Dean R. Gearhart, Manager of Rates and Planning, Aqua NC; and Robert A. Kopas, Consultant, Aqua Services, Inc.[2]

On August 6, 2018, Aqua NC filed the revised direct testimony of its witness Kopas.

[1] Aqua NC is a wholly-owned subsidiary of Aqua America, Inc.

[2] Mr. Kopas retired from his position as Regional Controller for Aqua Services, Inc. on July 1, 2018. Following his retirement, Mr. Kopas served as a consultant through the conclusion of the proceedings in this docket. Tr. Vol. 5, p. 240.

On August 10, 2018, the North Carolina Attorney General's Office (AGO) filed a notice of intervention in this proceeding. The Commission recognizes the AGO's intervention pursuant to N.C.G.S. § 62-20.

The Public Staff's participation in this proceeding is recognized pursuant to N.C.G.S. § 62-15(d) and Commission Rule R1-19.

On August 20, 2018, Eric Galamb, an Aqua NC customer, filed a motion to intervene, including as attachments his proposed direct testimony and exhibits.

On August 21 and 22, 2018, the Public Staff filed the direct testimony and exhibits of Windley E. Henry, Accounting Manager, Water/Communications Section, Public Staff Accounting Division; Manasa L. Cooper, Staff Accountant, Public Staff Accounting Division; Charles Junis, Utilities Engineer, Public Staff Water, Sewer, and Telephone Division; Lindsay Darden, Utilities Engineer, Public Staff Water, Sewer, and Telephone Division; and John R. Hinton, Director, Public Staff Economic Research Division.

On August 24, 2018, Aqua NC responded to Eric Galamb's motion to intervene, arguing that Mr. Galamb's motion "actually presents a service quality complaint," and requesting that the Commission deny Mr. Galamb's motion and direct Mr. Galamb, Aqua NC, and the Public Staff "to attempt to resolve [Mr. Galamb's] complaint and report back to the Commission by a date-certain."

On August 30, 2018, Aqua NC filed a motion for extension of time to file its rebuttal testimony until September 4, 2018. Aqua NC also moved to postpone the start of the evidentiary hearing to September 11, 2018, at 1:30 p.m. These motions were granted by Commission Order of August 31, 2018.

Also on August 31, 2018, the Commission issued an Order granting, for the limited purpose of addressing whether Aqua NC's application for a general rate increase is supported by sufficient evidence, Mr. Galamb's motion to intervene in this proceeding.

On September 4, 2018, Aqua NC filed the rebuttal testimony and exhibits of its witnesses Becker; Gearhart; D'Ascendis; Kopas; Amanda Berger, Manager of Environmental Compliance, Aqua NC; Joseph Pearce, Director of Operations, Aqua NC; and Bernard F. Thompson, Director of Procurement, Aqua Services, Inc.

On September 5, 2018, the Public Staff filed the testimony and exhibits of Michelle M. Boswell, Staff Accountant, Public Staff Accounting Division, and the supplemental testimony and exhibits of its witnesses Henry, Cooper, and Junis.

On September 6, 2018, Aqua NC filed a motion requesting that the Commission enter an order excusing Company witness John J. Spanos from appearing at the evidentiary hearing, and requesting that witness Spanos' testimony and exhibits be admitted into the record as if given orally from the stand. By Order entered that same day, the Commission granted Aqua NC's motion to excuse witness Spanos.

Also on September 6, 2018, Aqua NC filed a motion to strike a portion of the prefiled direct testimony of Public Staff witness Junis. The Public Staff filed a response in opposition to Aqua NC's Motion to Strike on September 7, 2018.

On September 7, 2018, Aqua NC filed the supplemental rebuttal testimony of witness Becker.

On September 11, 2018, the Public Staff filed a motion to recess the evidentiary hearing due to Hurricane Florence, which was expected to impact Raleigh later that week.

The evidentiary hearing began as scheduled at 1:30 p.m. on September 11, 2018, in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina. Thereafter, the evidentiary hearing continued as necessary until its conclusion on Tuesday, September 25, 2018.

Prior to the presentation of testimony, the Commission denied Aqua NC's pending motion to strike. Thereafter, Mr. Galamb presented his direct testimony. Aqua NC presented the direct testimony of its witnesses Becker, Kopas, and Gearhart, and the direct and rebuttal testimony of its witness D'Ascendis. The Public Staff presented the direct testimony of its witness Hinton. The hearing was adjourned at 11:38 a.m. on September 12, 2018, due to the expected impact of Hurricane Florence.

On September 12, 2018, the Public Staff filed revised Exhibits 1 and 3 of its witness Boswell and refiled Boswell Exhibit 2.

On September 12, 2018, as requested by Presiding Commissioner Brown-Bland, the AGO filed copies of its communications with the North Carolina Department of Environmental Quality (DEQ) concerning Aqua NC.

On September 13, 2018, the Public Staff filed a motion requesting that the Commission issue an order ruling that excerpts of an audio recording made by Company witness Berger not be treated as confidential, and requesting that they be accepted into evidence.

Also on September 13, 2018, the Public Staff filed the revised supplemental exhibits of its witnesses Cooper and Henry.

On September 17, 2018, Aqua NC and the Public Staff entered into and filed a Partial Settlement Agreement and Stipulation (Stipulation). The Stipulation resolved some of the contested issues between Aqua NC and the Public Staff (Stipulating Parties) in this proceeding. However, the following disputed issues remained: (1) Return on Equity; (2) the Public Staff's removal of 50% of four Company operators' salaries and related benefits; (3) the Public Staff's reduction of executive compensation and benefits by 50%; (4) the Public Staff's reduction of Board of Director fees by 50%; (5) annualization and consumption adjustments; (6) post-test year plant additions; (7) the Public Staff's removal of 30% of bonuses paid to Aqua NC supervisory employees; (8) adjustment for Aqua NC's Neuse Colony Wastewater Treatment Plant expansion and capacity payment to Johnston County; (9) adjustment to costs related to Automatic Meter

Reading (AMR) meters and the two meter installation projects; (10) adjustment to excess capacity; (11) adjustment to sludge removal; (12) adjustment to testing; (13) adjustment for water losses from purchased water systems; (14) water quality issues, including reporting and customer complaints; and (15) Consumption Adjustment Mechanism.

The evidentiary hearing reconvened on September 18, 2018, at 10:30 a.m. Aqua NC presented the direct testimony of its witness Crockett and the rebuttal testimony of its witnesses Thompson, Gearhart, Pearce, Becker, and Berger. The Public Staff presented the direct and supplemental testimony of its witnesses Boswell, Darden, Cooper, Henry, and Junis.

On September 18, 2018, Aqua NC filed its response to the Public Staff's motion of September 13, 2018, waiving its claim of confidentiality regarding the audio recording and withdrawing its objection[1] to the recording being admitted into evidence.

On September 19, 2018, Aqua NC made a filing pursuant to requests made on the record during the evidentiary hearing by Presiding Commissioner Brown-Bland and Commissioner Mitchell for late-filed exhibits regarding the Company's communication with DEQ concerning water quality issues.

On October 3, 2018, Aqua NC filed a late-filed exhibit regarding interconnection construction for wastewater capacity purchased from Johnston County in response to a request made on the record during the evidentiary hearing by Commissioner Clodfelter.

On October 4, 2018, Aqua NC filed a late-filed exhibit concerning 2002 bulk wastewater agreement between Johnston County, Flowers Plantation and Heater Utilities, Inc., in response to requests made on the record during the evidentiary hearing by Chairman Finley and Commissioner Clodfelter.

On October 10, 2018, the Public Staff filed certain late-filed exhibits in response to requests made on the record during the evidentiary hearing by Presiding Commissioner Brown-Bland, Chairman Finley, and Commissioner Mitchell.

On October 11, 2018, the Public Staff filed a late-filed exhibit regarding the Flowers Plantation contributions in aid of construction issues in response to requests made on the record during the evidentiary hearing by Commissioner Clodfelter and Chairman Finley. On October 15, 2018, the Public Staff filed a correction to this late-filed exhibit.

On October 12, 2018, Aqua NC filed its third quarter 2018 notice of deficiency reports to DEQ.

On October 22, 2018, Aqua NC filed a motion for extension of time until October 30, 2018, for the parties to file proposed orders in this docket. On October 23, 2018, the Commission issued an Order granting this motion

[1] An objection was raised by Aqua NC in its response to the Public Staff Legal Data Request #1 in follow-up to Engineering Data Request #58.

On October 30, 2018, Aqua NC and the Public Staff filed their respective proposed orders, and the AGO and Intervenor Eric Galamb filed their post-hearing briefs.

On November 6, 2018, the Public Staff filed a late-filed exhibit, as requested during the evidentiary hearing, relating to Aqua America, Inc.'s Executive Compensation and North Carolina Supervisors' Bonuses.

On November 19, 2018, Aqua NC filed the Affidavit of Dean R. Gearhart regarding the Company's requested level of rate case expense.

On November 20, 2018, the Public Staff filed Appendices to its proposed order.

The Public Staff filed its Response to the Company's Affidavit of Dean R. Gearhart on November 26, 2018.

All late-filed exhibits were filed by the parties as requested by the Commission during the evidentiary hearing. No objections were raised to the admission into evidence of any such late-filed exhibits, and, therefore, the Commission hereby accepts such exhibits into the record.

Based on the Company's Application and corresponding NCUC Form W-1, the testimony and exhibits received into evidence at the hearings held in this proceeding, the Stipulation, the late-filed exhibits submitted at the request of the Commission during the evidentiary hearing, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT
General Matters

1. Aqua NC is a corporation duly organized under the laws of North Carolina and is authorized to do business in the State. It is a franchised public utility providing water and/or sewer utility service to customers in North Carolina. Aqua NC is a wholly-owned subsidiary of Aqua America, Inc. (Aqua America), located in Bryn Mawr, Pennsylvania.

2. Aqua NC is subject to the jurisdiction of the Commission pursuant to Chapter 62 of the North Carolina General Statutes for adjudication of Aqua NC's Application for a rate increase and for a determination of the justness and reasonableness of Aqua NC's proposed rates for its water and sewer utility operations in North Carolina.

3. The test period appropriate for use in this proceeding is the 12-month period ending September 30, 2017, updated for known and measurable changes through June 30, 2018, and including up to the close of the evidentiary hearing on September 25, 2018.

4. Aqua NC's last general rate case was decided by Commission Order (Sub 363 Order) entered on May 2, 2014, in Docket No. W-218, Sub 363. Aqua NC's present rates for water and sewer service in all of the Company's service areas have been in effect since January 1, 2017,

pursuant to Commission Order issued on December 20, 2016, in Docket Nos. M-100, Sub 138; M-100, Sub 142; and W-218, Sub 363.[1]

The Stipulation

5. On September 17, 2018, the Stipulating Parties entered into and filed the Stipulation resolving some of the disputed issues between the Stipulating Parties in this proceeding. The issues that were not resolved by the Stipulation are sometimes referred to collectively herein as the Unsettled Issues.

6. The revenue requirement effect of the Stipulation is shown in Settlement Exhibit 1 and Henry Additional Direct Partial Settlement Agreement Exhibit 1, which provide sufficient support for the annual revenue required for the issues resolved by the Stipulation.

7. The Stipulation is the product of the give-and-take in settlement between the Stipulating Parties, is material evidence in this proceeding, and is entitled to be given appropriate weight in this case, along with other evidence from Aqua NC, the Public Staff, and other intervening parties, along with consumer statements of position and the testimony of the public witnesses concerning the Company's Application.

8. The Stipulation settles only some of the disputed issues between the Stipulating Parties. The Unsettled Issues include the return on equity; removal of 50% of four operators' salaries and related benefits; reduction of executive compensation and benefits by 50%; reduction of Board of Director fees by 50%; annualization and consumption adjustments; post-test year plant additions; removal of 30% of bonuses paid to Aqua NC's North Carolina supervisory employees; adjustment for Aqua NC's Neuse Colony Wastewater Treatment Plant sewer expansion and its purchased capacity payment to Johnston County; adjustment to costs related to AMR meters and the two meter installation projects; adjustment to excess capacity; adjustment to sludge removal; adjustment to testing; adjustments for water losses from purchased water systems; water quality issues, including reporting and customer complaints; and the Consumption Adjustment Mechanism proposed by Aqua NC. The Unsettled Issues are resolved by the Commission and addressed in this Order.

Acceptance of Stipulation

9. The Stipulation will provide Aqua NC and its ratepayers just and reasonable rates when combined with the rate effects of the Commission's decisions regarding the Unsettled Issues in this proceeding.

10. The provisions of the Stipulation are just and reasonable to all parties to this proceeding and serve the public interest. Therefore, the Stipulation should be approved in its entirety.

---

[1] Pass-through rate increases for various purchased water systems have been approved pursuant to N.C.G.S § 62-133.11, subsequent to the Commission's December 20, 2016 Order.

Customer Concerns – Service and Water Quality-Related Issues

11. As of the date of the evidentiary hearing, Aqua NC served approximately 78,739 water customers and 17,940 wastewater customers. Aqua NC owns and operates 750 systems consisting of over 1,400 wells and 59 wastewater treatment plants in 51 counties in North Carolina.

12. A total of 28 customers testified at the four separate public hearings held in Mocksville, Gastonia, Raleigh, and Wilmington for the purpose of receiving customer testimony.[1] In general, public testimony received at those hearings covered water quality concerns, customer service concerns, and opposition to rate increases.

13. Customer witnesses testifying regarding water quality complained specifically about poor water quality, badly discolored water, sediment buildup related to iron and manganese concentrations in the water, damage to appliances and discoloration of laundry and household fixtures caused by poor water quality, and unsatisfactory customer service related to Aqua NC's responsiveness and dissemination of inaccurate and insufficient information regarding such matters as water flushing and service outages. Many customers complaining of water quality issues testified that they do not drink the water supplied by Aqua NC systems to their taps and, instead, have resorted to purchasing bottled water for drinking and cooking. Several customers testified that they have incurred expense to have household filters installed (by non-Aqua NC affiliated vendors) in an effort to improve the quality of water supplied to their homes by Aqua NC. Several of the customers showed the Commission pictures they had taken to demonstrate both discolored water and the effects of the sediment-laden water on their appliances and fixtures. Eleven of 19 customers who testified at the Raleigh hearing receive their water supply from the Bayleaf Master System.

14. Other specific concerns to which customers testified, which are not necessarily water quality related, include the magnitude of the rate increase requested by Aqua NC, the flat-rate sewer methodology rate design, and insufficient notice regarding the public hearing in Wilmington.

15. As of August 21, 2018, the Public Staff had received approximately 57 written customer statements of position, 43 of which complained about water quality issues. In addition, the Commission received approximately 21 written customer statements via electronic mail, primarily expressing opposition to Aqua NC's proposed rate increase and complaining of dissatisfaction with water quality and Aqua NC's customer service. While the number of written statements received in this docket is less than the number of written statements received in the Company's last general rate case filed in 2013, in both dockets, customers continue to communicate complaints that primarily concern poor water quality and Aqua NC's related customer service.

---

[1] The Honorable Joe John, member of the North Carolina House of Representatives, although not an Aqua NC customer, appeared at the Raleigh hearing to speak in support of his constituents' concerns. Approximately 55 individuals signed up to testify at the Raleigh hearing, but more than 20 of those yielded their allotted time to testify to three other individual witnesses.

16. The water quality and customer service issues described by the public witnesses, Intervenor Galamb, and customers providing customer statements of position in the present docket are in many instances a repeat of the same types of issues (i.e., discolored water, sediment in the water, damage to appliances and other household property, staining of laundry items and fixtures caused by poor water quality, and shortcomings of the Company's customer service in addressing customer calls and complaints about service and billing) brought to the Commission's attention by customers who provided statements and by witnesses who testified at the public hearings held in the Sub 363 and Sub 319 general rate case dockets.

17. Pursuant to the Commission's directive set forth in its Order Establishing General Rate Case issued in this docket, following each of the four public hearings, the Company filed verified reports with the Commission addressing the concerns raised by customer witnesses at the hearings. The reports described each of the witnesses' specific service-related and water quality concerns and comments, the Company's response, and how each concern and comment was addressed, if applicable. The reports generally explained that naturally-occurring iron and manganese is in the groundwater supply that is the source of water in many of the Aqua NC systems; that the level of iron and manganese in the Company systems meets applicable regulatory standards and poses no health risk to users; that the presence of iron and manganese in the water can cause water discoloration, problems with household appliances, and staining of fixtures and laundry; that the Company has employed various strategies to address the elevated levels of iron and manganese in its water systems (e.g., flushing, chemical sequestration, and installation of various filters); and that the Company works with the Public Staff and the North Carolina Department of Environmental Quality (DEQ) to devise optimal plans to better address the problem of iron and manganese in the Company's water systems.

<u>Quality, Remediation Efforts, and Communications</u>

18. DEQ secondary water quality standards address the acceptable levels of certain constituents, including iron and manganese concentrations, in drinking water. Secondary water quality standards serve as guidelines to operators of water systems on keeping these elements, which are not considered to pose health risks, at levels that consumers will not find objectionable for drinking or consuming due to taste, color, and odor effects. Recently, the United States Environmental Protection Agency (EPA) issued a lifetime health advisory for manganese of 0.3 mg/L and has suggested that exposure to higher levels may impact the health of children.

19. While the DEQ secondary water quality standards serve as guidelines to assist water systems in managing water qualities such as taste, color, and odor, they do not purport to address the suitability or acceptability of water for uses other than drinking, cooking, and human ingestion. The Commission's concern pursuant to N.C.G.S. § 62-43(a) for the quality of water supplied to customers goes beyond state and federal regulatory standards related to human ingestion. Separate and apart from health concerns, the degree or magnitude of water taste, color, and odor problems resulting from elevated levels of iron and manganese, which for purposes of health-related issues are sometimes designated and considered "aesthetic" concerns, can significantly limit or adversely impact customers' ability and willingness to use the water service they pay Aqua NC to provide. Persistent water quality issues related to elevated concentrations of iron and manganese and customer service issues, including slow response to customers'

concerns and the dissemination of inaccurate or incomplete information about flushing and service outages, may render the quality of service for some customers inadequate for non-consumptive purposes, such as cleaning, laundry, waste removal, and use in appliances.

20. Since February 2016 Aqua NC has received 68 Notices of Deficiency (NODs) from the Public Water Supply Section of DEQ. These NODs involved more than 50 water systems and approximately 70 different wells with elevated concentrations of iron and manganese, with most reporting manganese above 0.3 mg/L.

21. The overall quality of water service provided by Aqua NC is adequate on a companywide and systemwide basis for purposes of human consumption and ingestion. The Company meets DEQ's and EPA's health-based primary quality standards. While 26 of Aqua NC's water systems have been noted for deficiencies related to the DEQ secondary water quality standards, the Company is actively working with DEQ and the Public Staff to bring them into compliance. In addition, elements addressed by secondary water quality standards are not considered to pose health risks; EPA's recent health advisory for manganese in excess of 0.3 mg/L did not change this status. The quality of service for non-consumptive uses in some of Aqua NC's individual systems is inadequate due to (1) continued elevated levels of iron and manganese in the water source that make the water provided by Aqua NC to certain of its customers not suitable for generally accepted, non-consumptive household use, and (2) the continued need for improvement in communications with customers on these issues. The overall companywide and systemwide quality of wastewater service provided by Aqua NC is adequate and the Company generally has operated its wastewater plants in a prudent manner.

22. Operational changes and improvements may improve the quality of water in systems affected with elevated levels of iron and manganese. Iron and manganese in groundwater can be remediated through flushing, either at the system level or at customers' residences, through chemical sequestration, and/or through filtration, installed either centrally or at customers' residences.

23. Significantly enabled by the use of the WSIC mechanism, Aqua NC has expended resources and made a commitment towards addressing a number of water quality and other issues that result from the presence of iron and manganese in the source water in its service territory. Aqua NC has made investments in water quality projects to address the presence of iron and manganese totaling approximately $13,000,000 since the Commission issued its order ruling on Aqua NC's last request for general rate increase in Docket No. W-218, Sub 363.

24. After working collaboratively with the Public Staff and DEQ, Aqua NC developed a Water Quality Plan, which it began to implement in 2017. The Company's Water Quality Plan, additionally supported by resources from Aqua America, is an overall plan for addressing iron and manganese water quality issues in its service territory in North Carolina.

25. Flushing is one tool used to maintain and improve water quality in systems affected by iron and manganese. On occasion, as additional means of improving water quality, Aqua NC advises customers to flush their individual premises. When such flushing occurs, Aqua NC's customers are currently billed for the water usage during that flushing event.

26. Aqua NC has deployed in certain of its systems the chemical sequestration product SeaQuest® which is designed to address high concentrations of iron and manganese by dissolving mineral deposits in water pipes. The manufacturer of SeaQuest® recommends flushing systems in which SeaQuest® has been administered at intervals of 30, 60, 90, and 120 days. The Commission noted in its Sub 363 Order ruling on Aqua NC's request for rate increase that the Company had committed to perform the "required" flushing. Since that Order was issued on May 2, 2014, Aqua NC has failed to comply consistently with the manufacturer's recommended flushing schedule when it has administered SeaQuest®, thereby adversely impacting the water quality experienced by customers and likely resulting in increased levels of iron and manganese in the systems where SeaQuest® was deployed without proper flushing.

27. Aqua NC has installed approximately 80 new filters, including 31 greensand filters, as well as filter upgrades and replacements, as part of its efforts to remediate systems experiencing higher concentrations of iron and manganese. Of the Company's remediation options, installation of greensand filters is the most expensive to implement but it is in the Company's opinion the most effective in extracting iron and manganese from the water.

28. To improve communications with its customers, especially as it relates to better communications about water quality issues, Aqua NC has developed a Communications Plan and, in February 2018, implemented what it calls a "Close the Loop" program to assure that an Aqua NC employee contacts every customer who calls with a complaint as a means of follow-up after the customer's call or complaint has been addressed.

Regulatory Oversight and Compliance

29. Pursuant to Ordering Paragraph No. 11 of the Sub 363 Order, Aqua NC and the Public Staff were directed to work together to develop and implement a plan to address the levels of iron and manganese present in water supplied to customers from Aqua NC wells, and to file a report on these secondary water quality issues in June and December of each year the Water System Improvement Charge was in effect (the Semi-Annual Reports Concerning Secondary Water Quality Concerns).[1] These reports were to include the customers affected and the estimated cost of resolving the iron and manganese issues through the WSIC where such issues affected the lesser of 10% of customers in a subdivision service area or 25 billing customers.

30. The method used by Aqua NC to track customer complaints has resulted in some customer complaints regarding iron and manganese concentrations not being quantified for the purpose of fully complying with Ordering Paragraph No. 11 of the Sub 363 Order.

31. Aqua NC and the Public Staff agree that the Company should continue to file the Semi-Annual Reports Concerning Secondary Water Quality Concerns.

[1] Aqua NC requested that the Commission change the reporting schedule to the months of February and August which the Commission allowed by order issued in Docket Nos. W-218, Subs 363 and 363A dated October 31, 2014.

WATER AND SEWER – RATE INCREASE

32. Aqua NC should continue to file its annual Three-Year WSIC and SSIC Plan, as well as its Quarterly Earnings, WSIC/SSIC Revenues, and Construction Status reports. Additional current filings that should continue include Aqua NC's Annual Heater Acquisition Incentive Account Report, the DEQ Quarterly Notice of Deficiency filings, the Secondary Water Quality Filtration Request Executive Summary, the Semi-Annual Reports Concerning Secondary Water Quality Concerns, and the Bi-Monthly Reports on Water Quality Issues pertaining to the issues brought forward by customers in both the Sub 363 docket and the instant Sub 497 docket.

33. In its May 2, 2014 Order ruling on the Company's request for rate increase in the Sub 363 Order, the Commission stated and directed as follows:

> Aqua and the Public Staff should work together to recommend to the Commission appropriate solutions to eradicate to the extent practicable these secondary water quality issues through the use of projects that are eligible for recovery through the WSIC, if appropriate. Further, in order for the Public Staff to interact effectively with DE[Q] concerning any continuing water quality issues at Aqua systems and to be in a more informed position to work with Aqua to formulate a recommendation to the Commission regarding the need and appropriateness of more extensive improvements to address secondary water quality issues, the Commission finds and concludes that Aqua should convey *conversations with, reports to, and the recommendations of DE[Q]to the Public Staff* regarding the water quality concerns being evaluated and addressed in Aqua's systems *in a timely manner as requested by the Public Staff.*. Such communication [to the Public Staff] should be in a written format and *should be provided, at a minimum, on a bi-monthly basis.* Aqua should provide the Public Staff copies of: (a) Aqua's reports and letters to DE[Q] concerning water quality concerns in its systems; (b) responses from DE[Q] concerning reports, letters, or other verbal or written communication received from Aqua; and (c) DE[Q]'s specific recommendations to Aqua, by system, concerning each of the water quality concerns being evaluated by DE[Q]. [Emphasis added.]

34. Aqua NC and the Public Staff should continue to work together regarding the development of appropriate recommendations and solutions to improve water quality at Aqua NC's affected systems. Aqua NC should continue to report on its conversations with DEQ as the Commission previously directed in the Sub 363 Order. "Report" in this context means notification of the fact of meetings or conversations and the salient topics and points discussed in such meetings or conversations. In addition to written communications described in the Sub 363 Order as noted above, Aqua NC should take steps to ensure that the Public Staff is copied on all written communications with DEQ that relate to compliance with or deficiencies in compliance with the secondary water quality standards enforced by DEQ. Aqua NC and the Public Staff should work together to resolve any dispute that may arise between them regarding the sharing of communications with DEQ about water quality at Aqua NC's affected systems, and should not

wait until the next general rate case to notify the Commission of unresolved complaints related to DEQ communications to be shared with the Public Staff pursuant to Commission order.

Rate Base

35. The appropriate level of rate base used and useful in providing service is $190,472,859 for Aqua NC's combined operations, itemized as follows:

Item	Amount
Plant in Service	$492,295,394
Accumulated depreciation	(155,246,692)
Contributions in aid of construction (CIAC)	(196,384,493)
Accumulated amortization of CIAC	70,758,708
Acquisition adjustments	2,055,735
Accumulated amortization of acquisition adjustments	1,040,444
Advances for construction	(4,467,841)
Net plant in service	210,051,255
Customer deposits	(379,445)
Unclaimed refunds	(193,255)
Accumulated deferred income taxes	(24,849,085)
Materials and supplies inventory	2,405,967
Excess capacity adjustment	(1,322,276)
Working capital allowance	4,759,698
Original cost rate base	$190,472,859

36. It is appropriate to make the following adjustments (including applicable accumulated depreciation) of $6,655,081 to Plant in Service for Aqua NC's combined operations:

Item	Amount
Adjustment for post-test year additions	$8,769,089
Adjustment for costs related to future customers	5,992
Adjustment to remove Johnston County capacity payment	(2,120,000)
Adjustment to meters and meter installations	0
Total adjustment to Plant in Service	$6,655,081

37. By the 2014 Rate Case Order, the Commission allowed Aqua NC to include the costs related to the Company's Automated Meter Reading (AMR) aged meter replacement program in rates paid by Aqua NC's customers in the Brookwood Water Operations Rate Division. However, as part of settlement in that case, Aqua NC and the Public Staff entered into a Stipulation dated January 17, 2014, which provided, at Paragraph 15, that:

> **Automated Meter Reading – Radio Frequency.** Aqua and the Public Staff disagree about the reasonableness, prudency, and cost-effectiveness of installation of Automated Meter Reading – Radio Frequency (AMR-RF) water meters. The Stipulating Parties agree

> that although the Public Staff did not recommend an adjustment to Aqua's current investment for the installation of AMR-RF meters in this proceeding, the Public Staff has the right as a matter of law to challenge the reasonableness, prudency, and cost-effectiveness of Aqua's investment in AMR-RF meters in future cases.

The Commission approved and incorporated Stipulation Paragraph 15 as Finding of Fact No. 54 of the 2014 Rate Case Order.

38. It is inappropriate to reduce the original cost meter and meter installation rate base for the meter replacement projects of the Aqua NC Water Operations and Brookwood Water Operations rate divisions, as recommended by the Public Staff.

39. It is appropriate to include Aqua NC's investment in AMR technology in rates in this proceeding. Aqua NC's decisions to implement AMR technology in conjunction with the Company's aged meter replacement program, and to utilize contractor-provided labor for such projects were reasonable and prudent. The functionalities of AMR technology installed by Aqua NC are currently being utilized to the benefit of the ratepayers and will incrementally increase benefits to customers in the long-term as the AMR technology is fully deployed.

40. It is appropriate and prudent for Aqua NC to continue implementing its aged meter replacement program, utilizing contractor-provided labor as managed by the Company, whereby standard water meters that have reached the end of their useful lives will be replaced by AMR technology, as appropriate.

41. Aqua NC provides both water and wastewater treatment services to the Flowers Plantation development, which consists of a large number of acres generally divided between the eastern half (Buffalo Creek) and the western half (Neuse Colony), located along the Neuse River and Highway 42 in Johnston County, North Carolina. Neuse Colony originally was provided wastewater utility service by a 50,000-gallon per day (gpd) wastewater treatment plant (Neuse Colony WWTP) owned and operated by River Dell Utilities, Inc.[1] In 2003, Heater Utilities, Inc. (Heater) completed construction of a 250,000-gpd expansion of the Neuse Colony WWTP, and in 2016, Aqua NC expanded the capacity by an additional 100,000 gpd. It is reasonable and appropriate to include in rate base the full amount of $908,497, representing actual costs incurred by Aqua NC to build the 100,000-gpd Neuse Colony WWTP expansion in 2016.

42. The current total capacity at the Neuse Colony WWTP is 350,000 gpd, reflecting both the 2003 and 2016 system expansion upgrades. When originally permitted, the Neuse Colony

[1] River Dell Utilities, Inc. was subsequently transferred to Heater Utilities, Inc. (Heater). Heater was acquired by Aqua through a transfer of stock on June 1, 2004. The Commission takes judicial notice of its Order of May 26, 2004, in Docket No. W-274, Sub 465, whereby the Commission approved the transfer to Aqua of all Heater common stock. Aqua, by acquiring all of Heater's common stock, assumed all of Heater's contractual rights and obligations.

WWTP was rated by the North Carolina Department of Environmental Quality (DEQ)[1] at 360-gpd per residential customer. Aqua NC subsequently applied to DEQ for, and was granted, flow reductions that reduced the rating from 360 gpd to 240-gpd per residential customer following the 2003 system expansion, and then again from 240 gpd to the current rating of 180-gpd per residential customer following the 2016 system expansion. Based on the amount of actual capacity remaining at the Neuse Colony WWTP after applying the flow reduction rates authorized by DEQ, Aqua NC is utilizing approximately 316,000 gpd of its total 350,000 gpd of capacity. The Company collected contributions in aid of construction (CIAC) in the amount of $2,294,168, exceeding the related original plant cost of $2,166,023. Because there remains additional capacity to be utilized, the Company may continue to make such capacity available to developers, and, consequently, to collect additional CIAC from developers.

43. Aqua NC failed to collect CIAC to which it was contractually entitled for the 50% balance of its costs to construct the Buffalo Creek Pump Station and Force Main. Of the $315,687 in uncollected CIAC, Aqua NC failed to collect $218,999 subsequent to the updated cutoff of October 31, 2013, in Aqua NC's last rate case.[2] Therefore, it is appropriate to impute $218,999 in uncollected CIAC for the Buffalo Creek Pump Station and Force Main to offset Aqua NC's existing rate base.

44. In June 2018, Aqua NC reserved 250,000 gpd of wastewater treatment capacity from Johnston County, North Carolina (the County), by payment of $1,335,000, or $5.34 per gpd of capacity, for the purpose of allowing development of lots in Flowers Plantation. Aqua NC paid the County $785,000 as payment of a transmission/distribution fee. Although the Company was prudent in its decision to reserve from the County 250,000 gpd of wastewater treatment capacity in June 2018, the capacity reserved could not have been available to Aqua NC as of the end of the test year because the interconnection between the County's system and Aqua NC's has not yet been completed. Likewise, the interconnection will not be completed and placed in service within a reasonable time following the end of the test year. Therefore, it is reasonable and appropriate that the $1,335,000 of reserved capacity be removed from Plant in Service, and, thus, excluded from rate base, and that the $785,000 paid as a transmission and distribution expense be recognized as an operating revenue deduction to be amortized over six years with no unamortized balance in rate base.

45. It is appropriate to make excess capacity adjustments to Aqua NC's Sewer Operations' utility Plant in Service applicable to Aqua NC's wastewater treatment plants (WWTPs) located at Carolina Meadows, The Legacy at Jordan Lake, and Westfall (a/k/a Booth Mountain). The appropriate percentages for these WWTP excess capacity adjustments are 30.63% for the Carolina Meadows WWTP; 38.67% for The Legacy at Jordan Lake WWTP; and 35.56% for the Westfall WWTP.

46. It is appropriate to apply the excess capacity adjustment of 30.63% for Carolina Meadows WWTP to 50% of the Company's post-test year, major modification and rehabilitation

[1] Formerly known as the North Carolina Department of Environment and Natural Resources (DENR). DENR's name changed to DEQ effective September 18, 2015.

[2] Docket No. W-218, Sub 363.

upgrade project at that facility, the cost of which was approximately $1.7 million. It is appropriate to include the remaining 50% of the major modification and rehabilitation upgrade projects at the Carolina Meadows WWTP in rate base as a post-test year addition.

47. It is appropriate to include, as a part of the excess capacity adjustments in this case, the capital costs for improvements in the total amount of approximately $175,000 incurred at the Company's WWTPs prior to or during the test year.

48. It is appropriate to reduce Aqua NC Sewer Operations' rate base by $1,322,276, to remove WWTP excess capacity.

49. It is unreasonable to allow Aqua NC to utilize deferred accounting with respect to WWTP amounts determined to be excess capacity, and consequently removed from rate base, for the WWTPs serving Carolina Meadows, The Legacy at Jordan Lake, and Westfall. Aqua NC's requested accounting treatment to allow it to defer the recovery of depreciation and to capitalize carrying costs until the capacity is actually utilized is denied.

50. An adjustment to update accumulated deferred income taxes (ADIT) to include the deferred tax related to the unamortized balance of rate case expense should be made in this proceeding.

51. ADIT should be adjusted to include the deferred taxes related to post-test year plant additions.

52. It is appropriate to adjust ADIT to reflect the deferred taxes related to the unamortized repair tax credit balance.

Revenues

53. By its Application, for the test period ending September 30, 2017, Aqua NC requested a total annual revenue increase of $4,935,516, an 8.97% increase over the total revenue level generated by the rates and miscellaneous charges currently in effect for the Company, consisting of the following amounts for water and sewer operations:[1]

Item	Amount
Aqua NC Water Operations	$2,773,109
Aqua NC Sewer Operations	$628,764
Aqua NC Sewer Operations	$ 90,748
Fairways Sewer Operations	$ 671,750
Brookwood Water Operations	$ 771,145

[1] By its Application, Aqua NC requested an increase in total annual service revenues of $4,968,935, a 9.19% increase over the total annual service revenues generated by the rates currently in effect for the Company.

54. It is appropriate to make adjustments of $11,520 for Aqua NC Water Operations and $60,720 for Aqua NC Sewer Operations to reclassify availability revenues from service revenue to miscellaneous revenue, as stipulated.

55. It is appropriate to adjust late payment fees and uncollectibles based on the percentages provided by the Company in the Application.

56. For the updated test period ending June 30, 2018, the appropriate level of combined operating revenues under present rates for use in this proceeding is $56,553,038, consisting of service revenues of $55,496,957, late payment fees of $114,830, and miscellaneous revenues of $1,355,499, reduced by uncollectibles and abatements of $414,248. Aqua NC's combined operations present service revenues amount of $55,496,957 is composed of the following water and sewer service revenues:

Item	Amount
Aqua NC Water Operations	$34,566,184
Aqua NC Sewer Operations	$13,459,559
Fairways Water Operations	$ 1,084,684
Fairways Sewer Operations	$ 1,360,925
Brookwood Water Operations	$ 5,025,605

57. For the updated test period ending June 30, 2018, the appropriate level of combined operating revenues under Aqua NC's proposed rates for use in this proceeding is $61,184,627, consisting of service revenues of $60,154,323, late payment fees of $124,429, and miscellaneous revenues of $1,355,499, reduced by uncollectibles and abatements of $449,624.

58. Aqua NC and the Public Staff have agreed to the customer counts, consumption quantities, and the pro forma revenues under present rates and Aqua NC's proposed rates for the updated test period ending June 30, 2018.

<u>Operating and Maintenance (O&M) and
General and Administrative (G&A) Expenses</u>

59. It is appropriate to update salaries and wages through June 30, 2018, as stipulated.

60. Aqua NC has historically experienced some turnover in employees, and therefore, will always have some level of open positions on an ongoing basis. It is appropriate to remove five open positions from the update amount of salaries and wages, as stipulated.

61. Aqua NC has contracted with United States Infrastructure Corporation (USIC) to perform One Call/NC 811 work which is essential to the safety of interested parties and to the longevity and condition of Aqua NC's infrastructure. Such work was previously partially completed by Company personnel.

62. The Public Staff's proposed adjustment to exclude 50% of the updated labor costs (salaries and benefits totaling $73,799) of four Aqua NC field operational employees from the cost of service in this case is inappropriate.

63. Overtime pay should be adjusted to reflect each individual employee's updated payroll as of June 30, 2018, as stipulated.

64. The Public Staff's proposed accounting adjustment to allocate 30% of North Carolina supervisory employee bonuses in the amount of $29,648 to shareholders and thereby exclude those expenses from the cost of service in this case is inappropriate.

65. It is not appropriate to adopt the Public Staff's recommended adjustment to allocate to shareholders 50% of the compensation, including pension and incentive plans, of the top five Aqua America executives totaling $213,756 in compensation and $80,845 in pensions and incentive plans.

66. It is appropriate to allocate to shareholders 25% of the compensation, including pension and incentive plans, of the top five Aqua America executives totaling $106,878 in compensation and $40,423 in pensions and incentive plans, thereby removing 25% of these expenses from Aqua NC's cost of service.

67. It is appropriate to update pensions and benefits through June 30, 2018, as stipulated.

68. Employee pensions and benefits related to five open positions should be deducted from operating expenses, as stipulated.

69. It is appropriate to remove the Company's estimated pro forma adjustment to pensions and benefits and use the actual amounts as of June 30, 2018, as stipulated.

70. Aqua NC's update to pensions and benefits included the cost related to Health Advocate twice in operating expenses. The duplicate Health Advocate expenses should be deducted from updated pensions and benefits, as stipulated.

71. It is appropriate to increase sludge hauling expense by $23,049.

72. It is appropriate to include in O&M expenses annual testing expense of $926,947, consisting of $882,746 for compliance testing and $44,201 for operational testing, prior to considering the update for Notice of Deficiency (NOD) site testing expense.

73. It is appropriate to reduce post-test year testing expense by $92,112, resulting in an increase to test year testing expense for NOD site testing of $19,426 which results from the amortization of such total testing expenses of $58,278 over three years.

74. The appropriate level of annual testing expense for use in this proceeding is $946,373, including NOD site testing expense.

WATER AND SEWER – RATE INCREASE

75. On August 21, 2018, the Public Staff filed schedules which included an adjustment to decrease the Company's filed purchased water expense of $1,947,892 by $73,670. During discovery, the Company reduced its filed purchased water expense to $1,941,621.

76. Nine of Aqua NC's third-party purchased water accounts exceeded 15% water loss, with such losses ranging from 19% to 74% for the test year. The Public Staff recommended a reduction in purchased water expense for the Aqua NC systems that had greater than 15% water loss during the test year.

77. For purposes of this proceeding, it is appropriate to include an amount of recoverable water loss of 15% for a purchased water system.

78. The appropriate level of annual purchased water expense is $1,874,173.

79. It is appropriate for Aqua NC to recover total rate case expenses of $818,397, related to the current proceeding to be amortized over a four-year period, except the Company's 2017 depreciation study which should be amortized over five years, for an annual level of rate case expense of $201,666.

80. The Aqua Communications Initiative is not a ratemaking expense. This Communications Initiative is a reasonable operating expense and includes startup costs for a completed customer survey and a completed water quality website. As part of the costs are nonrecurring, it is appropriate to amortize one-half of the $83,940 costs (or $41,970) over three years, resulting in an annual expense of $13,990, as stipulated.

81. It is not appropriate to adopt the Public Staff's recommended adjustment to allocate to shareholders 50% of the compensation and expenses of the Aqua America Board of Directors totaling $58,419 in compensation and $8,691 in expenses.

82. It is appropriate to remove 25% of the Aqua America Board of Directors fees totaling $29,210 in compensation and $4,345 in expenses in this proceeding.

83. The Public Staff's proposed consumption adjustment factors should not be applied to either Aqua NC's Sewer Operations rate division or the Company's Fairways Sewer Operations rate division. The consumption adjustment factors proposed by the Public Staff should only be applied to Aqua NC's three water rate divisions (Aqua NC Water Operations, Brookwood Water Operations, and Fairways Water Operations).

84. It is appropriate to include sludge hauling expense in the calculation of the Company's annualization adjustment in this proceeding.

85. It is appropriate to exclude materials and supplies expense from the calculation of the Company's annualization adjustment in this proceeding.

86. The appropriate level of operating, maintenance, and general expenses is $31,267,804 for the combined operations.

WATER AND SEWER – RATE INCREASE

Depreciation and Amortization Expense

87. It is appropriate to make an adjustment to increase depreciation expense by $8,518 to reflect that 50% of the post-test year updates to the Carolina Meadows WWTP are included as a post-test year addition not subject to the excess capacity disallowance. A total increase to depreciation expense of $28,890 and amortization expense of $23,667 for the Carolina Meadows, The Legacy at Jordan Lake, and Westfall WWTPs is appropriate in this proceeding.

88. It is inappropriate to remove $139,727 of depreciation expense related to meters and meter installations in this proceeding as recommended by the Public Staff.

89. It is inappropriate to remove $42,676 of amortization expense in this proceeding related to the $1.497 million in CIAC collected from developers pursuant to contracts for the purchase of additional wastewater treatment capacity for the Neuse Colony WWTP.

90. An adjustment of $6,241 to amortization expense related to the imputation of CIAC in the amount of $218,999, for the Buffalo Creek force main and pump station costs that Aqua NC did not collect from developers should be made in this proceeding.

91. The appropriate level of depreciation and amortization expense for combined operations to be used in this proceeding is $10,076,409.

Other Taxes and Section 338(h) Adjustment

92. Payroll taxes should be calculated on the adjusted level of salaries and wages and the current payroll tax rates.

93. It is appropriate to remove 25% of payroll taxes to match the adjustment the Commission has made to salaries and wages related to executive compensation.

94. The appropriate level of payroll taxes for use in this proceeding is $789,484 for combined operations.

95. The appropriate level of other taxes and Section 338(h) adjustment for use in this proceeding is $1,713,809 for combined operations, consisting of $635,463 for property taxes, $789,484 for payroll taxes, $308,886 for other taxes, and a reduction of $20,024 for the Section 338(h) adjustment.

Regulatory Fee and Income Taxes

96. It is appropriate to use the current statutory regulatory fee rate of 0.14% to calculate Aqua NC's revenue requirement. The appropriate level of regulatory fee expense for use in this proceeding is $79,174.

97. The appropriate level of state income taxes for use in this proceeding is $272,043, which is based on the current state corporate income tax rate of 3%.

98. It is reasonable and appropriate to calculate federal income taxes using the current federal corporate income tax rate of 21%.

99. The appropriate level of federal income taxes for use in this proceeding is $1,847,171.

The Federal Tax Cuts and Jobs Act

100. Aqua NC and the Public Staff reached agreement regarding the appropriate ratemaking treatment in this proceeding to reflect the provisions of the Federal Tax Cuts and Jobs Act (the Tax Act) as outlined in Section III, Paragraphs II, JJ, and KK of the Stipulation filed on September 17, 2018, by Aqua NC and the Public Staff. The agreements regarding the applicable provisions of the Tax Act reached jointly by the Company and the Public Staff are appropriate.

101. The Company's revenue requirement shall reflect the reduction in the federal corporate income tax rate from 35% to 21%, on the Company's ongoing federal income tax expense.

102. The Company's protected federal excess deferred income taxes (EDIT) should be flowed back to customers by amortizing the protected EDIT over a period of time equal to the expected lifespan of the plant, property, and equipment with which they are associated, in accordance with the normalization rules of the United States Internal Revenue Service (IRS).

103. The Company's unprotected federal EDIT should be returned to ratepayers through a levelized rider over a period of three years.

104. The Company's proposal to refund to its ratepayers the overcollection of federal income taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018, and corresponding interest, through a surcharge credit for a one-year period beginning when the new base rates become effective in the current docket is reasonable and appropriate. The Company's state EDIT recorded pursuant to the Commission's Order Addressing the Impacts of HB 998 on North Carolina Public Utilities issued May 13, 2014, in Docket No. M-100, Sub 138 should be returned to ratepayers through a levelized rider that will expire at the end of a three-year period.

Rate of Return on Equity, Capital Structure, and Cost of Debt

105. The cost of capital and revenue increase approved in this Order is intended to provide Aqua NC, through sound management, the opportunity to earn an overall rate of return of 7.17%. This overall rate of return is derived from applying an embedded cost of debt of 4.63%, and a rate of return on equity of 9.70%, to a capital structure consisting of 50% long-term debt and 50% equity.

106. A 9.70% rate of return on equity for Aqua NC is just and reasonable in this general rate case.

WATER AND SEWER – RATE INCREASE

107. A 50% equity and 50% long-term debt ratio is a reasonable capital structure for Aqua NC in this case.

108. A 4.63% cost of debt for Aqua NC is reasonable for the purpose of this case.

109. The rate increase approved in this case, which includes the approved rate of return on equity and capital structure, will be difficult for some of Aqua NC's customers to pay, particularly Aqua NC's low-income customers.

110. Continuous safe, adequate, and reliable water and wastewater utility service by Aqua NC is essential to Aqua NC's customers.

111. The rate of return on equity and capital structure approved by the Commission appropriately balances the benefits received by Aqua NC's customers from Aqua NC's provision of safe, adequate, and reliable water and wastewater utility service with the difficulties that some of Aqua NC's customers will experience in paying the Company's increased rates.

112. The 9.70% rate of return on equity and the 50% equity capital structure approved by the Commission in this case will result in a cost of capital that is as low as reasonably possible. They appropriately balance Aqua NC's need to obtain equity and debt financing with the ratepayers' need to pay the lowest possible rates.

113. The authorized levels of overall rate of return and rate of return on equity set forth above are supported by competent, material, and substantial record evidence, are consistent with the requirements of N.C.G.S. § 62-133, and are fair to Aqua NC's customers generally and in light of the impact of changing economic conditions.

Revenue Requirement

114. It is reasonable and appropriate to determine the revenue requirement for Aqua NC using the rate base method as allowed by N.C.G.S. § 62-133.

115. Aqua NC's total annual operating revenues should be changed by amounts which, after pro forma adjustments, will produce the following increases (decreases) in total operating revenues:

Item	Amount
Aqua NC Water	$776,379
Aqua NC Sewer	868,496
Fairways Water	(7,441)
Fairways Sewer	720,953
Brookwood Water	537,633
Total Aqua NC	$2,896,020

These increases (decreases) will allow Aqua NC the opportunity to earn a 7.17% overall rate of return, which the Commission has found to be reasonable upon consideration of the findings in this Order.

Rate Design

116. It is appropriate to design rates in the ratio and structure as reflected in Junis Late-Filed Exhibit 11.

117. The rates and charges included in Appendices A-1, A-2, A-3, and A-4, attached hereto, are just and reasonable and should be approved.

Consumption Adjustment Mechanism

118. In its Application, Aqua NC requests Commission approval of a rate adjustment mechanism to account for variability in average monthly consumption per customer, which directly affects revenues.

119. Aqua NC failed to demonstrate that its proposed consumption adjustment mechanism is reasonable or justified.

Water and Sewer System Improvement Charges

120. Consistent with Commission Rules R7-39(k) and R10-36(k), Aqua NC WSIC and SSIC surcharges will reset to zero as of the effective date of the approved rates in this proceeding.

121. By law, the cumulative maximum charges that the Company can recover through system improvement charges between rate cases cannot exceed 5% of the total service revenues approved by the Commission in this rate case.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-4

The evidence supporting these findings of fact and conclusions is contained in the Company's Application and NCUC Form W-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding. These findings and conclusions are informational, procedural, and jurisdictional in nature and are not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-10

The evidence supporting these findings of fact is contained in the Stipulation and in the testimony of Aqua NC and Public Staff witnesses. On September 17, 2018, Aqua NC and the Public Staff entered into and filed the Stipulation, which resolved some of the issues in this proceeding between these two parties and provided for a revenue requirement increase of approximately $1,268,414 for combined operations based on the settled issues. The Stipulation is based upon the same test period as Aqua NC's Application, adjusted for certain changes in plant, revenues, and costs that were not known at the time the case was filed but occurred or became known through June 30, 2018.

The key aspects of the Stipulation are provided as follows:

Capital Structure

The Stipulating Parties agree that the capital structure appropriate for use in this proceeding is a capital structure consisting of 50.00% common equity and 50.00% long-term debt at a cost of 4.63%.

Salaries and Wages

The Company accepts the Public Staff's proposed adjustment to update salaries and wages through June 30, 2018. The Stipulating Parties agree to a revenue requirement impact adjustment in the amount of ($174,680) for combined operations to remove five open positions as set forth in the supplemental testimony of Public Staff witness Henry. The Company also accepts the Public Staff's proposed adjustment to overtime pay as set forth in the supplemental testimony of Public Staff witness Henry.

Pensions and Benefits

The Company accepts the Public Staff's proposed adjustment to update pensions and benefits through June 30, 2018. The Stipulating Parties agree to a revenue requirement impact adjustment of ($150,196) for combined operations to remove benefits related to the five open positions. The Company also accepts the Public Staff's proposed adjustment to remove duplicative Health Advocate costs.

Plant in Service

The Public Staff agrees to withdraw its proposed adjustment related to Neuse Colony rate base as reflected on Line 7 of Settlement Exhibit 1. The Company accepts the Public Staff's proposed adjustment to plant related to future customers as set forth in the supplemental testimony of Public Staff witness Cooper. The Company also accepts the Public Staff's proposed adjustment to re-allocate vehicles as set forth in the supplemental testimony of Public Staff witness Cooper.

Salaries and Wages

The Company accepts the Public Staff's proposed adjustment that reflected the adjusted level of salary wages and current payroll taxes.

Insurance Expenses

The Company accepts the Public Staff's proposed adjustment to update insurance expenses as set forth in the supplemental testimony of Public Staff witness Cooper.

Miscellaneous Expense

The Stipulating Parties agree to a revenue requirement impact adjustment of $14,009 for combined operations to allow partial recovery of the Company's costs associated with its communication initiative.

Updated Service Revenues

The Company accepts the Public Staff's proposed adjustment to updated service revenues from customer growth as set forth in the supplemental testimony of Public Staff witness Junis.

Reclassification of Revenues

The Company accepts the Public Staff's proposed adjustment to reclassify availability fees from service revenues to miscellaneous revenues.

Advances for Construction

The Company accepts the Public Staff's proposed adjustment to advances for construction.

Contract Services – Legal

The Company accepts the Public Staff's proposed adjustments to remove pre-test year legal invoices and to remove legal fees related to fines and penalties. The Company also agrees to the Public Staff's proposed adjustment removing legal fees related to legislation.

Accumulated Deferred Income Taxes (ADIT) and Excess Deferred Income Taxes (EDIT)

The Company agrees to the Public Staff's proposed adjustments to ADIT regarding unamortized rate case expense, unamortized repair tax credit, post-test year plant additions, and EDIT.

The Stipulating Parties agree to revise ADIT for any updates made to regulatory commission expenses. The Company agrees to accept the Public Staff's proposals for addressing the Tax Act. The unprotected Federal EDIT created by enactment of the Tax Act will be returned to customers through a levelized rider that will expire at the end of a three-year period. The protected EDIT will be flowed back following the tax normalization rules utilizing the average rate assumption method (ARAM) required by IRC Section 203(e). The Stipulating Parties agree that the State EDIT that Aqua NC recorded pursuant to the Docket No. M-100, Sub 138 Order will be returned to customers through a levelized rider that will expire at the end of a three-year period.

The Stipulating Parties agree to the Company's proposal to refund to the ratepayers the overcollection of federal taxes related to the decrease in federal tax rates for the period beginning January 1, 2018, and corresponding interest, as a surcharge credit for a one-year period beginning when the new base rates become effective in the current docket.

WATER AND SEWER – RATE INCREASE

Acquisition Incentive Adjustments (AIA)

Aqua NC accepts the Public Staff's proposed adjustment to AIA as set forth in the supplemental testimony of Public Staff witness Cooper.

Purchase Acquisition Adjustment (PAA)

The Company accepts the Public Staff's proposed adjustment to Mid-South growth PAA as set forth in the supplemental testimony of Public Staff witness Cooper.

Working Capital Allowance

The Stipulating Parties agree to a revenue requirement impact adjustment of ($15,972) for combined operations for working capital.

Service Revenues

Aqua NC accepts the Public Staff's proposed adjustment to late payment fees as set forth in the supplemental testimony of Public Staff witness Cooper.

Uncollectibles and Abatements

Aqua NC accepts the Public Staff's proposed adjustment to uncollectibles and abatements as set forth in the supplemental testimony of Public Staff witness Cooper.

Transportation Expense

The Company accepts the Public Staff's proposed adjustment to transportation fuel expense as set forth in the supplemental testimony of Public Staff witness Cooper.

Purchased Power Expense

Aqua NC agrees to the Public Staff's proposed adjustment to purchased power expense as set forth in the testimony of Public Staff witness Darden.

Chemical Expense

The Company agrees to the Public Staff's proposed adjustment to chemical expense as set forth in the testimony of Public Staff witness Darden.

Contract Services – Other

Aqua NC agrees to the Public Staff's proposed adjustment to remove pre-test year invoices from contract services. Aqua NC also agrees to the Public Staff's proposed adjustment to contract services related to NC 811 locates.

Regulatory Commission Expense

The Stipulating Parties agree to a methodology for calculating regulatory commission expense, also known as rate case expense, and agree to update the number in Settlement Exhibit 1, Line 33 for actual and estimated costs once supporting documentation is provided by the Company. However, Aqua NC seeks a three-year amortization period; the Public Staff supports a five-year period.

Payroll Taxes

The Stipulating Parties agree to a revenue requirement impact adjustment of $8,271 for payroll taxes as set forth in the supplemental testimony of Public Staff witness Henry.[1]

No party filed a formal statement or testimony indicating opposition to the Stipulation; however, the AGO did pursue cross-examination of Aqua NC and Public Staff witnesses at the hearing of this matter on contested, nonstipulated issues related to matters such as rate of return and quality of service issues. Pro se Intervenor Galamb participated only to present testimony. The Stipulation is binding as between Aqua NC and the Public Staff, and conditionally resolved certain specific matters in this case as between those two parties. Through the end of the evidentiary process, the AGO and Intervenor Galamb neither approved nor expressly disapproved of the partial settlement regarding the specific settled issues reflected in the terms of the Stipulation, except that Intervenor Galamb generally opposed any rate increase. There are no other parties to this proceeding.

As the Stipulation has not been adopted by all of the parties to this docket, its acceptance by the Commission is governed by the standards set out by North Carolina law. A stipulation entered into by less than all parties in a contested case proceeding under Chapter 62 "should be accorded full consideration and weighted by the Commission with all other evidence presented by any of the parties in the proceeding." State ex rel. Utilities Commission v. Carolina Utility Customers Association, Inc., 348 N.C. 452, 466, 500 S.E. 2d 690, 700 (1998). Further, "[t]he Commission may even adopt the recommendations or provisions of the nonunanimous stipulation as long as the Commission sets forth its reasoning and makes 'its own independent conclusion' supported by substantial evidence on the record that the proposal is just and reasonable to all parties in light of all the evidence presented." Id.

The Commission concludes, based upon all the evidence presented, that the Stipulation was entered into by the Stipulating Parties after full discovery and extensive negotiations and represents a reasonable and appropriate proposed negotiated resolution of certain specific matters in dispute in this proceeding and that neither the AGO nor Intervenor Galamb expressly objected to the settlement but Intervenor Galamb did not change his general position opposing any rate increase.

---

[1] The Commission observes that the revenue requirement impact of $8,271 for payroll taxes adjustment agreed to by the stipulating parties includes a reduction in the amount of $2,841 related to the Public Staff's adjustment to allocate 50% of executive compensation to shareholders, which was disputed by Aqua NC. As discussed elsewhere in this Order, the Commission has adjusted payroll taxes to reflect its adjustment to remove 25% of executive compensation.

WATER AND SEWER – RATE INCREASE

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 11-34

The evidence supporting these findings of fact is contained in the testimony and exhibits of Aqua NC witnesses Becker and Crockett, Public Staff witness Junis, Intervenor Galamb, the public witnesses, the verified reports filed by Aqua NC in response to the concerns testified to by the public witnesses, the determinations in the Sub 363 Order concerning quality of service, and the record in this proceeding.

Customer Concerns – Service and Water Quality-Related Issues

Public hearings were held in Mocksville, Gastonia, Raleigh, and Wilmington for the purpose of receiving the testimony of non-expert, public witnesses. No public witnesses appeared at the Mocksville public hearing. Customer witnesses testifying at the hearing in Wilmington primarily expressed their opposition to the Company's requested rate increase. Two public witnesses testified at the Gastonia hearing, one of whom testified regarding her inability to use discolored water at her residence. Of the 20 witnesses who testified at the Raleigh hearing, 19 testified that the poor quality of the water supplied by Aqua NC caused serious problems, including discoloration of laundry and fixtures, damage to appliances, inability and/or difficulty to use for drinking, cooking, bathing, and cleaning and did not justify the price they were paying for water service, much less an increase in Aqua NC's rates. The customers' testimony demonstrated how the poor water quality they experience at their homes causes them stress, disrupts their daily lives, and causes them to incur significant expense to repair and replace damaged and stained clothing, appliances, and plumbing fixtures and to purchase bottled water for drinking and cooking. The concerns voiced by these witnesses, as confirmed by the Company's filed Response to Customer Concerns, relate to the high concentrations of iron and manganese in their water. The water quality concerns (such as inability to drink and damage to appliances and plumbing fixtures) of the customer witnesses appearing before the Commission in this docket were essentially identical to the types of complaints of customer witnesses who testified at the public hearings held in the Subs 319 and 363 dockets in 2011 and 2013 respectively.

In addition to the effects of high concentrations of iron and manganese on their personal property, some witnesses appearing to testify in this docket expressed concerns about the potential effects of these elements on their health and the health of their families. Several witnesses testified that they had installed water filtration systems in their homes at significant cost as a result of the poor water quality supplied to their homes by the Company. Tr. Vol. 12, pp. 104-109.

Many of the witnesses, who testified about issues related to poor water quality, also testified about issues with Aqua NC's customer service. They testified about the lack of responsiveness to customer communications, inaccurate notifications to customers regarding flushing activities and other service interruptions, and concerns that customers' complaints were not being accurately recorded by the Company. Id.

Becky Daniel, a resident of Coachman's Trail subdivision served by Aqua NC's Bayleaf Master System, testified at the Raleigh public hearing. Approximately eight other customers who attended the hearing yielded their allotted time to her. Witness Daniel's testimony was typical of the testimony given by other witnesses at the Raleigh public hearing. Her testimony touched on both water quality and customer service issues she has experienced as a customer of Aqua NC. With respect to water quality, witness Daniel testified that she has experienced numerous instances of discolored water throughout the 12 years she has lived in her home, but that the instances have occurred more frequently since 2017. Tr. Vol. 3, p. 29. Witness Daniel testified that, during the second half of 2017, she flushed water for approximately 200 minutes from her home's outdoor spigots to address discolored water. She complained that she did not receive a bill credit from the Company after the flushing event. Id. at 29-30.

Witness Daniel testified further about issues with Aqua NC's customer service, including her concern that automatic messages informing callers that the Company was already aware of service issues in their areas were sometimes misleading and discouraged customers from completing their calls, and her concern that Aqua NC is not accurately recording the number of customer calls. Witness Daniel also testified about inaccurate communications from Aqua NC concerning service interruptions. Specifically, she testified that she had once received a telephone message from the Company notifying her about a service outage which she later learned did not apply to her neighborhood and that she had also received a telephone message notifying her that the Company would be flushing but the call came the day after the flushing had already commenced. Id. at 30-32.

Several of the concerns raised by witness Daniel in her testimony were similar to those raised by Intervenor Galamb, who stated that Aqua NC needs to improve on its communications with its customers. He offered his opinion that despite having two call centers, Aqua NC had done a poor job communicating with its customers. Based on his first-hand experiences with Aqua NC's customer service personnel, he asserted that no rate increase should be passed on to the customers. Further, in his opinion, the Company's poor customer service does not support a rate increase for the Company.

The Company addressed, in writing, all of the concerns raised by the witnesses at the four hearings. In its Responses to Customer Concerns filed following the public hearings, Aqua NC generally reported that it spoke to some customers immediately at the conclusion of the public hearings and/or later, in the days following the hearings, met with, called or otherwise attempted to contact the witnesses who testified at the hearings to discuss their concerns, address them and provide helpful explanations and answers regarding issues they raised. Regarding water quality, Aqua NC used the opportunity to relay that since beginning to serve North Carolina customers in 2000, it has spent a lot of time, effort, and resources trying to improve secondary water quality issues involving the presence of iron and manganese in the water supply used to serve its customers. Aqua NC explained that over the years and through the current time it has implemented iron and manganese removal techniques, such as flushing, oxidation, sedimentation and filtration, including the installation of expensive greensand filters. In the last five years, Aqua NC stated that it has installed 80 filters in the Central and Piedmont areas of North Carolina at a cost in excess of $10 million. In addition, the Company further explained that, working collaboratively with the Public Staff and DEQ, it has implemented its Water Quality Plan, pursuant to which it will continue installing new filtration treatment systems at well sites with the highest concentrations of iron and manganese at a rate of 10-15 per year and mitigating the effects of iron and manganese by increased system flushing and tank-cleaning.

The Company also addressed customer concerns about customer service. In working with witnesses such as customer witness Daniels, Aqua NC was able to understand and explain the cause of specific occurrences of periods of brown, discolored water experienced by customers, system alerts of adverse water issues that were issued to customers not affected by the alerts, and the Company's general response time upon learning of the issues that were the subject of the customer witnesses' complaints. In some cases, the discolored water was the expected but short-lived result of processes related to Aqua NC's efforts to remove or lessen the impacts of iron and manganese, and in other cases worker mishaps or errors in the normal course of work exacerbated water quality conditions, but, according to the Company, such situations were promptly corrected resulting in the return to clear water status.

The Company explained that some of the customer concerns were due to communication issues between the Company and the customers. There were some Aqua NC errors in communication but there were also failures related to customer misunderstanding of proper communications from the Company. By speaking directly with testifying customers, Aqua NC learned more about improving the communications process and made, and continues to make, adjustments and corrections to improve the overall customer service experience. For example, to improve its call center communications, the Company disabled the interactive voice response (IVR) feature utilized by its call center. Previously, IVR was used to provide an automated response about the status of service issues based on a caller's zip code. Aqua NC described the unintended problems caused by the IVR function stating, "When a zip code was entered, the automated response could indicate that a general service issue existed for an entered zip code; however, zip codes have large populations and have multiple subdivisions within them. This may result in customers being misinformed or confused about specific issues in their area." The IVR function was eliminated from Aqua NC's call system effective July 11, 2018. Tr. Vol. 12, p. 117.

The Company discussed other efforts to improve on customer communications. Examples given by the Company were a program (Close the Loop) started in the second quarter of 2018 to make sure customers are contacted after their calls and complaints have been addressed; creation of a website to educate customers about iron and manganese issues and Company efforts to improve related water quality; and a planned customer focus group to allow some customers to provide input and give direct feedback on Company efforts that deliver intended results and those that may not work as well. See Tr. Vol. 5, pp. 151-55.

Quality, Remediation Efforts, and Communications

Company witness Crockett addressed water system compliance for Aqua NC with a focus on DEQ's secondary water quality standards. He explained the difference between primary and secondary water quality standards and established that Aqua NC complied with all primary water quality standards, with the exception of an issue in the first quarter of 2018 concerning the Town of Pittsboro's delivery of water to Aqua NC that exceeded the limits for the disinfection by-products Maximum Contaminant Level for Total Trihalomethanes. As to that issue, he explained that Aqua NC and the Town were working to resolve the underlying problems.

Witness Crockett acknowledged the Company's difficulties with elevated levels of iron and manganese, which adversely affect the Company's compliance with DEQ secondary water quality standards. He described the 2016 change in DEQ enforcement policy, which produced a profusion of NODs triggered by exceeding secondary limitations for iron and manganese. Since February 2016 Aqua NC has received 68 Notices of Deficiency (NODs) from the Public Water Supply Section of DEQ. The NODs involved more than 50 Aqua NC water systems and approximately 70 different wells with elevated concentrations of iron and manganese, with most reporting manganese above 0.3 mg/L.

Witness Crockett testified that iron and manganese occur naturally in groundwater in certain locations in North Carolina. He explained that, when groundwater containing iron and manganese is pumped to the surface, once the iron and manganese come into contact with oxygen, they present as solid dark-colored particles in the water, which can discolor the water and can stain clothing and household appliances and plumbing fixtures. Tr. Vol. 7, pp. 46-47. He noted that, while iron and manganese pose what he termed primarily "aesthetic" concerns, the EPA has established a lifetime health advisory for manganese and suggests that levels above 0.3 mg/L may have the potential to impact the health of children. Id. at 47.

Witness Crockett testified that high concentrations of iron and manganese can be remediated through filtration, installed either centrally or on individual customers' premises; flushing, either by the Company at a system level or by individual homeowners to clear the system of sediment; sequestration using chemicals to suspend iron and manganese thereby keeping water clear at the tap; or a combination of any or all of the above. He discussed the merits and shortcomings of the different options, including the relative costs.

Witness Crockett discussed the Company's Water Quality Plan, which works to develop a common framework, with the support of the Public Staff and DEQ, to address secondary water quality issues, with the goal of expediting infrastructure improvements through increased capital spending to install greensand filters to address water quality issues for the customers. Id. at 52-53. He explained that non-capital operational improvements like increased tank cleaning and pipe flushing to address and lessen iron and manganese levels are also emphasized under the Plan. Id. Witness Crockett further explained that, under its Water Quality Plan, Aqua NC sites for remediation have been divided into four groups according to the levels of iron and manganese, with Group 1 sites being prioritized for the earliest treatment or remediation for public health protection, followed by Group 2 and so on. Id. at 53-54. Factors used to determine the groupings and order of prioritization shown on witness Crockett's summary of the Plan (Crockett Exhibit A) were (1) notice of deficiencies; (2) scientific, engineering, and health data; and (3) customer complaints.

Committed to providing water that is both safe for human consumption (a reference to DEQ's primary drinking water standards) and aesthetically pleasing (a reference to DEQ's secondary water quality standards), the Company's Water Quality Plan calls for increased capital investment for installation of greensand filters going forward according to the prioritization schedule at a rate of 10-15 per year. This strategy to install filters is estimated to perhaps require an investment $28,000,000 over the next seven years. Company witness Crockett acknowledged that Aqua NC appropriately considers least cost remediation measures, taking into account the efficiency of such measures, prior to the installation of greensand filters. Tr. Vol. 9, p. 117.

Aqua NC President and witness Becker also underscored the Company's work and commitment to improving water quality despite the fact that iron and manganese are prevalent elements in North Carolina aquifers in the Company's service territory. In addition to expressing commitment to the Water Quality Plan, he testified in further detail about the Company's efforts to deal with the iron and manganese issue since its last rate case decided in 2014. He described efforts to meet and work with DEQ and the Public Staff to develop ideas and plans for improving water quality for customers negatively affected by this issue. See, e.g., Tr. Vol. 5, pp. 38, 64; Tr. Vol. 7, p. 50. His testimony revealed that the Company has also been willing to consider alternatives to Aqua NC's wells for source water. He relayed an occasion, when at the urging of the Public Staff, the Company evaluated purchasing water from the Town of Holly Springs to serve one of its Brayton Park systems.

Witness Becker gave an account of remediation efforts over the last several years, including better flushing and tank washing protocols, sequestration, and filtration. He touted the over $90 million of investment the Company made in its systems since its last rate case and the over $10 million invested in the installation of 80 greensand filters. Despite the Company's efforts, witness Becker acknowledged the iron/manganese issue is difficult and negatively impacts the lives of many of Aqua NC's customers. He acknowledged that the Company made a misstep in incurring expense to sequester with SeaQuest® but not flushing on the manufacturer's recommended schedule of 30, 60, 90 and 120 days. He agreed that once the SeaQuest® began acting on the iron and manganese, customers would have experienced higher concentrations of the metals in their water if the systems were not properly flushed. Multiple systems were not flushed for extended periods of time, but the Branston system was not flushed for three years. See, e.g., Tr. Vol. 14, pp. 81, 83-86. Witness Becker was aware that DEQ had issued multiple notices of deficiency at sites where SeaQuest® had been introduced but flushing had not been properly performed.

With regard to flushing as a means of improving water quality, witness Becker testified about the Company's recommendation that customers flush the pipes at their premises on occasion. Currently, the customers are billed for the water used in this flushing process. When questioned by the Commission about bill credits to customers for such flushing, Aqua NC witness Becker stated that the Company is not opposed to exploring options to provide customers bill credits in exchange for their flushing at Aqua NC's request. Tr. Vol. 5, pp. 189-190.

Witness Junis, in discussing the due diligence the Public Staff employs when evaluating treatment options, testified regarding operational changes that can be made to improve water quality including the optimization of well pumping capacity and water pressure. Tr. Vol. 11, pp. 71-75.

With regard to its wastewater treatment systems, Aqua NC was cited and assessed civil penalties for 10 Notices of Violation (NOVs) issued by DEQ's Division of Water Resources (DWR) for non-compliance that occurred during the test year at three of its 59 wastewater treatment plants. Ex. Vol. 5, pp. 14-95; Tr. Vol. 5, pp. 62-93. The three plants were acquired but not installed by the Company. Id. at 126, 180. The violations at two of the plants were related to weather conditions and hurricanes that affected the areas where the plants are located. While the violations varied, they generally stemmed from the unauthorized release and discharge of sludge.

According to witness Becker, the non-compliances were addressed and corrected. The Company's shareholders incurred the expense related to the fines and penalties assessed for the violations, as well as attorney fee expense related to these violations before DWR. Id. at 93-94. Witness Becker testified that the plants receiving the NOVs are now in compliance. Id. at 112.

Witness Crockett and witness Becker also testified about Aqua NC's new Customer Communication Plan, which utilizes a range of approaches, including a website, to educate and communicate with customers, especially on water quality issues. Witness Becker addressed the heightened attention to customer communication across the Company. He explained the Company's statewide initiative, launched in May 2018, designed to follow up with customers who call about certain service issues, requiring the dispatch of a field technician. Named the "Close the Loop" program, it requires an initial follow-up call attempt by the field technician, after having left a door tag advising of completion of service, plus a secondary follow-up call made by designated Aqua NC office personnel a week after the service call. The second call by an office employee is focused on the customer's experience, whether the customer's issue was addressed and resolved, and answering any additional questions the customer may have. The purpose of the "Close the Loop" program is to improve customer awareness of necessary work performed on the water system or at the customer's premises, as well as to provide an additional or supplemental line of communication to answer questions and address issues.

Regulatory Oversight and Compliance

Ordering Paragraph No. 11 of the Sub 363 Order requires the Public Staff and Aqua NC to file semi-annual written reports to address secondary water quality concerns affecting the lesser of 10% or 25 customers in an individual subdivision.

Public Staff witness Junis testified that he reviewed Aqua NC's customer complaint records related to water quality issues from January 2016 through June 2018. He noted that Aqua NC tracked complaints received during normal business hours separately from those received after business hours, and that the Company records reflected different information in different formats. Tr. Vol. 12, p. 115.

Witness Junis testified that the Company issues a Lab D work order (LABD), a category of work or service order, in response to discolored water complaints received via phone calls made during business hours and online inquiries that necessitate a work order. He further testified that the Company uses LABDs to track, quantify, and report on customer water quality complaints for the purpose of complying with Ordering Paragraph No. 11 of the Sub 363 Order. Id. at 115-116. When witness Junis discovered a discrepancy between the numbers of complaints reported in Aqua NC's Eighth Semi-Annual Report Concerning Secondary Water Quality Concerns filed in Docket No. W-218, Sub 363A, and the actual number of complaints of which he was aware, he realized the Company appeared to be under-reporting complaints in the semi-annual compliance report because calls and complaints received outside of normal business hours were not being issued LABDs and, therefore, were not accounted for in the report. He testified that he then had concerns that customer complaints had been under-quantified in previous reports and that additional individual subdivision service areas may have met the 10% / 25 customer threshold established by the Commission and should have been reported on pursuant to the Sub 363 Order. Id. Witness Junis engaged in further investigation and was able to confirm that the joint semi-annual reports had in fact under-reported the number of water quality complaints received by the Company. He recommended that the Company be specifically directed to fully incorporate after-hours complaints (which the Company is now doing in conjunction with the Public Staff), and that the Seventh and Eighth Semi-Annual Reports be supplemented with additional information about after-hours complaints.

Aqua NC witness Becker testified on cross-examination that the Company outsources after business hours customer complaint call response for reasons related to cost. He further testified that the customer service agents who respond to calls received after business hours only handle emergency-related calls, and do not have the ability to track calls by issuing LABDs that customer service agents who respond to business hours calls do. Witness Becker stated that Aqua NC could potentially give after-business-hours customer service agents access to the same call tracking system, but doing so would involve additional expense. He acknowledged that he understood it was the Commission's intent that the reporting requirements set out in Ordering Paragraph No. 11 apply to all customer complaint calls, not just those received during business hours. He disclosed that Aqua NC is testing a procedure to give after-business-hours customer service agents the ability to issue LABDs. Tr. Vol.14, pp.101-103.

Ordering Paragraph No. 12 of the Sub 363 Order requires Aqua NC to provide the Public Staff with communications by and between Aqua NC and DEQ regarding water and wastewater quality concerns. Public Staff witness Junis testified in the instant proceeding that the Public Staff has actively worked with DEQ and Aqua NC to address secondary water quality issues and methods to identify and prioritize water systems in most need of a filtration system. Witness Junis further testified that the Public Staff, as its contribution to the meetings and discussions, seeks to balance cost effective solutions, including operational improvements and filtration, with safe, reliable, and clean water utility service. Tr. Vol. 12, p. 24. While he did not testify regarding Aqua NC's compliance with the Commission's directive from the Sub 363 Order, the Public Staff recommended that the Commission order Aqua NC, in the instant proceeding, to convey to the Public Staff conversations with, reports to, and the recommendations of DEQ regarding the water and wastewater quality concerns being evaluated and addressed in Aqua NC's systems in a timely manner. He recommended that such communication be in a written format and provided, at a minimum, on a bi-monthly basis and that Aqua NC be required to provide the Public Staff with copies of: (a) Aqua NC's reports and letters to DEQ concerning water quality concerns in its systems; (b) responses from DEQ concerning reports, letters, or other verbal or written communication received from Aqua NC; and (c) DEQ's specific recommendations to Aqua NC, by system, concerning each of the water quality concerns being evaluated by DEQ. Id. at 26.

In response to the recommendation of the Public Staff, Aqua NC took the position, through the testimony of witness Becker, that the provision is unduly burdensome, unnecessary, and is less productive than other modes of communication and reporting. Tr. Vol. 14, p.16. Witness Becker testified that Aqua NC is always willing to meet with the Public Staff and/or DEQ upon request or upon specified intervals to discuss issues and to provide relevant information but that because Aqua NC is constantly in conversation with its regulators, requiring this level of formality and reporting would likely hinder the open lines of communications that Aqua NC has worked to have with its environmental regulators. Id. Additionally, witness Becker testified that placing responsibility on Aqua NC to reduce to writing notes on all "conversations" with DEQ personnel is onerous, susceptible to abuse and misinterpretation, unproductive, and does not contribute to the parties' collective ability to understand and act on solutions. Witness Becker expressed concern regarding the possibility of misunderstanding, which he testified could be avoided if the entities seeking to communicate simply meet jointly with each other at specified intervals or on topics specified, exchange information, and jointly report. Id. at 16-17. Finally, witness Becker testified that the Public Staff can verify DEQ's position, leaving no opportunity for miscommunication and no concern about reliance on anyone else's interpretation, through direct communication between the agencies. Id. at 17.

Discussion and Conclusions

The evidence before the Commission establishes that the overall quality of water service provided by Aqua NC, viewed on a companywide and systemwide basis, is adequate. The Company is in compliance with federal and state primary health-based water quality standards, except, at the time of the hearing, trihalomethanes were present in water the Company purchased from the Town of Pittsboro. The Company and the Town of Pittsboro are working to resolve that issue. While 26 of Aqua NC's water systems have been noted for deficiencies related to secondary water quality standards, the Company is actively working with DEQ and the Public Staff to bring them into compliance and, elements addressed by secondary water quality standards are not considered to pose health risks; EPA's recent health advisory for manganese in excess of 0.3 mg/L did not change this status. However, the record also convincingly demonstrates that many of Aqua NC's customers for some time have been and still are paying for and receiving water from Aqua NC that they are unwilling to drink or to use for other purposes because it is not just unclear or cloudy but is brown and, on occasion, opaque. These customers incur the expense of purchasing bottled water in addition to paying Aqua NC for water utility service.

Moreover, water is required for uses other than ingestion. It is used for general cleaning, laundry, and in appliances and fixtures, among other uses. The iron and manganese-laden water supplied by Aqua NC to a not insubstantial number of its customers cannot be used for these general household purposes. Customers who try to use the water for such non-consumptive purposes find that they have to frequently buy new clothes and replace or repair appliances such as dishwashers and coffeemakers more frequently than they should because these items are stained, damaged, and ruined by the discolored, sediment-heavy water. In addition to the extra expense of repairing and replacing clothes and household fixtures frequently, many of these customers, in an effort to render their water clear and useable, pay to have in-home filtration systems installed. Filters used as part of their systems have to be replaced more frequently than otherwise because they clog quickly due to the heavy amount of sediment in the water from the Company systems.

While the water in question meets state and federal health-based regulatory standards, it does not always sufficiently meet reasonable expectations for non-consumptive domestic uses. As a result, due to the iron and manganese in the Aqua NC supplied water, affected ratepayers effectively incur notable expenses beyond the charges on their monthly bills, as well as stress and anxiety. This Commission's jurisdiction and authority encompasses more than compliance with health-based regulatory standards. The Commission is concerned that water supplied by its regulated utilities is useable for its intended purposes and does not cause, as a result of poor quality, unnecessary economic harm and damage to ratepayers and their personal property.

N.C.G.S. §62-43(a) makes it clear that the Commission has responsibility for the overall suitable quality of water and that this responsibility is not restricted or limited by the regulatory determinations of EPA or DEQ concerning human health and environmental protection.

Just as it did in its May 2, 2014 Order ruling in the Docket No W-218 Sub 363, the Commission concludes that the service-related concerns expressed by customers, especially including water quality concerns related to elevated concentrations of iron and manganese, necessitate further action by the Company. The Commission recognizes that since it issued its ruling in 2014, the Company has expended a great deal of time, effort, and investment addressing these "secondary" water quality issues; the Commission does not take the Company's effort lightly. The number of customers testifying and filing written statements about water quality concerns, compared to the number heard from during the pendency of the Sub 363 docket, has declined, but the repeat nature of the complaints about intolerable water conditions, experienced over many years, leads the Commission to conclude, that, despite its extensive efforts, Aqua NC has not yet satisfactorily resolved the water quality issues in some of its individual systems. In systems with elevated iron and manganese levels, quality of service is not adequate. Moreover, it appears that some of the same concerns that were the subject of the Commission's several directives in its Sub 363 Order remain unresolved. Accordingly, it is the Commission's determination that Aqua NC must make further and continued efforts to address customer service and water quality-related issues concerning elevated levels of iron and manganese in water supplied from Aqua NC water systems.

At a minimum, the Commission expects the Company to evaluate and implement operational changes and improvements, including those testified to by the Company, such as tank cleaning and those described by the Public Staff; for example, the optimization of well pumping capacities before investing in treatment options.

Among other efforts required of the Company to address water quality issues is an appropriately aggressive flushing program for each affected system and adherence to the flushing schedule recommended by manufacturers of sequestering products used by the Company to treat iron and manganese. The Commission concludes in accordance with the Company's admission that Aqua NC failed to follow the flushing schedule recommended following the introduction of SeaQuest® into the water system. This failure had the effect of increasing the iron and manganese in the water going to the Company's customers; exacerbating the problems some customers experienced due to poor water quality. The Company is on notice that there cannot be a repeat of this mistake and that the Commission may consider the imposition of appropriate penalties should the value of using a sequestering agent be negated in the future by the Company's failure to follow an appropriate flushing protocol.

On the subject of flushing, as noted above, when Aqua NC recommends to its customers that they flush the pipes at their premises, the customers who undertake this flushing are charged for the water used in the process. When questioned by the Commission about bill credits to customers for flushing, Aqua NC witness Becker stated that the Company is not opposed to exploring options to provide customers bill credits in exchange for their flushing at Aqua NC's request. Tr. Vol. 5, pp. 189-190. The Commission is of the opinion that the Company should work with the Public Staff to develop a policy and procedure for providing customers a bill credit when Aqua NC recommends individual premises flushing to address water quality issues.

The Commission further concludes that Aqua NC's Water Quality Plan, intended to address water quality issues through increased capital investment and improvements to operations including installation of filters and treatment such as sequestering, as well as improved tank cleaning methods and procedures and increased flushing, appears to be a reasonable start and thoughtful effort to improve the unresolved water quality issues that have continued over the last several years. While the Water Quality Plan as presented in this docket appears to be workable, the Commission expects that as the Company and the Public Staff, in conjunction with input from DEQ, will monitor the implementation and effect of actions taken in accordance with the Plan and that the Plan may need to be adjusted over time. The Commission appreciates and encourages the Company's and the Public Staff's attention and simultaneous commitment to addressing the serious water quality issues in the Company's affected water systems and to maintaining affordable service in all of its service areas in North Carolina. While quality and affordability interests must be balanced, the Commission is mindful that ratepayers must receive useable water in exchange for the rates they pay.

With regard to wastewater service, the Commission finds and concludes based on the record before it that the service is adequate and the Company operates its wastewater plants in a prudent manner. While the Company received NOVs for events and conditions at three of its 59 wastewater plants, Aqua NC corrected the situations and has not sought recovery from ratepayers for fines, penalties, and attorneys' fees related to these NOVs. The Company acted appropriately to return the plants to full compliance and at the time of the hearing the plants were in fact in compliance. Given the nature of wastewater plants owned by investor-owned utilities in North Carolina, the Commission does not find that the mere occurrence of isolated instances of non-compliance necessarily means that overall companywide wastewater service is inadequate.

Aqua NC's efforts to improve its customer service through its Customer Communications Plan demonstrate the Company's commitment to improving its customer relations by putting enhanced protocols in place to assure responsiveness to customer inquiries, concerns, and service calls. The Plan, which is tied to the Water Quality Plan, should help the Company inform and educate customers about quality improvement plans, including such implementation aspects as cost impacts of improvement measures, the work involved, and the timing of such work. Again, the Commission expects that any communications plan will be adjusted over time to meet current concerns and to incorporate lessons learned throughout the process of building a relationship of trust with customers.

Finally, the Commission concludes that in light of the persistent water quality issues related to iron and manganese, it remains appropriate that Aqua NC continue to follow the reporting requirements established in Ordering Paragraph 11 of the Commission's May 2, 2014 Order ruling on the Company's request for rate increase in the Sub 363 docket, among others to be noted in the Ordering Paragraphs of this Order. Ordering Paragraph No. 11 of the Sub 363 Order required the Public Staff and Aqua NC to file semi-annual written reports to address secondary water quality concerns affecting the lesser of 10% or 25 customers in an individual subdivision. In complying with this reporting requirement, it was necessary that the Company keep an accurate count of the numbers of water quality complaints it received from all its customers. As the Public Staff came to learn, and as later confirmed by Aqua NC, the Company failed to fully apply the reporting requirements of Ordering Paragraph 11 to all of the customer complaints it received because it did not capture for compliance purposes the complaint calls received outside the normal business hours. The Company shall correct this counting error and fully comply with the reporting requirements of Ordering Paragraph 11 of the Sub 363 Order and shall comply with all other reporting requirements identified in this Order.

In addition, so that the Public Staff may be effective in working with Aqua NC to develop solutions and make recommendations to the Commission for resolving the water quality concerns discussed throughout this Order, the Commission finds, as it did in the Sub 363 Order, that it is appropriate for Aqua NC to make reasonable efforts to keep the Public Staff informed of its communications with DEQ related to these water quality concerns. The Commission is mindful of the concerns expressed by Aqua NC witness Becker regarding formality and administrative burden and directs that the sharing of information required by this Order not be in a formal "report" format but rather in a less formal written exchange whereby the Public Staff is simply provided with copies of written communications or alerted to the fact that a meeting or conversation took place and the salient points discussed at the meeting or conversation. Additionally, the Commission agrees with witness Becker that direct communication is the most effective way to mitigate the possibility of miscommunication and encourages the Company and the Public Staff to meet with DEQ jointly and regularly for this reason.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 35-52

The evidence supporting these findings of fact is contained in the Application and Aqua NC's NCUC Form W-1 filing, the testimony and exhibits of Company witnesses Becker, Thompson, and Kopas and Public Staff witnesses Cooper, Henry, Boswell, and Junis, the Sub 363 Stipulation, and the record in this proceeding.

The following table summarizes the differences between the Company's level of rate base from its Application and the amounts recommended by the Public Staff:

Item	Company Application	Public Staff	Difference
Plant in Service	$485,345,163	$488,061,240	$2,716,077
Accumulated depreciation	(154,951,542)	(155,018,156)	(66,614)
Contributions in aid of const.	(189,897,507)	(194,983,782)	(5,086,275)
Accum. amortization of CIAC	70,605,175	70,516,485	(88,690)
Acquisition adjustments	1,925,745	2,055,735	129,990
Accum. amort. of acquis. adj.	1,044,591	1,040,444	(4,147)
Advances for construction	(4,305,936)	(4,467,841)	(161,905)
Net Plant in Service	209,765,689	207,204,125	(2,561,564)
Customer deposits	(379,445)	(379,445)	0
Unclaimed refunds	(193,255)	(193,255)	0
Accum. deferred income taxes	(35,329,190)	(24,791,481)	10,537,709
Materials and supplies inventory	2,405,967	2,405,967	0
Excess capacity adjustment	(1,233,706)	(1,589,551)	(355,845)
Working capital allowance	4,626,122	4,434,355	(191,767)
Original cost rate base	$179,662,182	$187,090,715	$7,428,533

With the Stipulation and revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute the following Public Staff adjustments to rate base:

Item	Amount
Update advances for construction	($161,905)
Remove costs related to future customers	5,992
Adjustment for Mountain Ridge AIA	75,090
Update Mid South growth PAA to 6/30/18	54,900
Accumulated amortization of acquisition adjustments	(4,147)
Adjustment to working capital	(191,767)
Adjustment for accumulated deferred income taxes	10,537,709
Total	$10,315,872

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to rate base in this proceeding.

Based on the testimony of Company witnesses Becker and Thompson, the Company disagrees with the following Public Staff adjustments to rate base:

Item	Amount
Adjustment for excess capacity	($355,845)
Adjustment for post-test year plant additions	2,648,394
Adjustment for meters and meter installations	(4,005,618)
Adjustment for wastewater capacity-Johnston County	(849,586)
Adjustment for imputed CIAC-Buffalo Creek	(324,684)[1]
Total	($2,887,339)

Excess Capacity Adjustment

Public Staff witness Junis testified that the Company's general rate case filing in this docket included excess capacity adjustments for the Carolina Meadows, The Legacy at Jordan Lake, and Westfall (aka Booth Mountain (BM)) wastewater treatment facilities. He stated that the excess capacity percentages recommended by Aqua NC are identical to the calculations done in Aqua NC's last general rate case, Docket No. W-218, Sub 363. In his prefiled testimony, witness Junis referred to Aqua NC's Application Exhibit C-1-ANC-10 for the Company's proposed calculations for excess capacity in this proceeding which reflected the following percentages: 23.83% for Carolina Meadows; 94.33% for The Legacy at Jordan Lake; and 92.44% for Westfall.

Based on the calculation methodology established by the Commission and used in Aqua NC's prior two general rate cases, witness Junis calculated the Company's wastewater excess capacity as follows:

[1] Due to a formula error on Public Staff Cooper Supplemental Exhibit I, Schedule 2-3 Revised, the actual amount in dispute of ($315,687) for the imputation of CIAC, less accumulated amortization of CIAC of $8,997 or $306,690 was inadvertently presented in the Public Staff's exhibit as ($324,684) [$315,687 plus $8,997].

Plant Name (a)	Installed Capacity (gpd) (b)	EOP REUs (c)	Flow (EOP x 400 gpd) (d)	Excess Capacity (1 – d/b) (e)
Carolina Meadows	350,000	607	242,800	30.63%
The Legacy at Jordan Lake	120,000	184	73,600	38.67%
Westfall (BM)	90,000	145	58,000	35.56%

Further, witness Junis stated that Public Staff witness Cooper implemented the updated excess capacity percentages and plant, net of accumulated depreciation and contributions in aid of construction (CIAC), to calculate the excess capacity adjustment proposed by the Public Staff.

Witness Junis also testified, in pertinent part, that on July 27, 2018, he and witness Darden inspected the WWTP at Carolina Meadows. Regarding their inspection of the Carolina Meadows WWTP, witness Junis noted that the Company completed a major modification and rehabilitation project in May 2018. Existing tankage was converted into a 90,000-gallon equalization (EQ) tank and a separate 60,000-gallon digester. In addition, a mechanical fine screen was installed to improve sanitation and to help prevent rags and other debris from damaging equipment and decreasing the efficacy of the treatment process. The building was remodeled to address mold and facilitate operational testing and chemical storage. Witness Junis further stated that Aqua NC has converted to reclaimed water for process water needs to reduce purchased water expense.

Public Staff witness Cooper testified that there was an error made by the Company in its calculation of excess capacity in this proceeding. She explained that the Company used the wrong depreciation rate in determining the net Plant in Service and depreciation expense subject to an excess capacity adjustment for the Carolina Meadows WWTP. Witness Junis corrected this mistake by reducing the depreciation rate from 5% to 4%.

Next, witness Cooper stated that she applied Public Staff witness Junis' excess capacity percentages of 30.63%, 38.67%, and 35.56% to remove from rate base the percentage of plant and accumulated depreciation related to excess capacity for the WWTPs at Carolina Meadows, The Legacy at Jordan Lake, and Westfall, respectively.

On September 5, 2018, witness Cooper filed supplemental direct testimony wherein she stated that excess capacity had been adjusted to reflect activity through June 30, 2018. As a result, the Public Staff's excess capacity adjustment increased by $518,095.

On cross-examination, witness Junis testified that Aqua NC stated in a data request response that the Carolina Meadows WWTP capacity was 350,000 gallons per day (gpd) and that it was still permitted at 350,000 gpd. Tr. Vol. 10, p. 9. He observed that Aqua NC did not provide him with any information indicating that the recent capital spending, through June 30, 2018, reduced the plant's capacity. Tr. Vol. 9, p. 101.

Further, witness Junis testified that the Public Staff has not made excess capacity adjustments against all Aqua NC plants that are overbuilt. He explained that these three WWTPs with excess capacity adjustments are unusual in that Aqua NC "took on risk from the developer." Tr. Vol. 10, p. 8.

In his rebuttal testimony, Aqua NC witness Becker testified that the Company did not disagree with Public Staff witness Junis' excess capacity calculation (as it had been used in prior cases). However, witness Becker testified that Aqua NC recommended and requested that plant amounts determined to be excess, and removed from rate base, should be allowed to receive deferred accounting treatment. He asserted that this would allow the Company to defer the recovery of depreciation and continue to capitalize carrying costs until the capacity is actually utilized. According to witness Becker, Aqua NC's proposal would provide a better matching of the new customer revenues that are utilizing the capacity with the actual costs to economically build the capacity. He further stated that Aqua NC would review on an annual basis the amount of new capacity being utilized and the deferral treatment would stop being recorded on the Company's books for any portion once it is actually being utilized.

Witness Becker testified that deferred accounting treatment does not harm current customers. He stated that portions of assets determined to be excess would continue to be removed from rate base and related expenses associated with such portions of the assets would be excluded from the Company's current revenue requirement. He contended that allowing deferral accounting treatment will do no harm to current customers and may, in fact, provide a benefit. He opined that the current treatment of excess capacity promotes short-term decision-making on projects that may otherwise realize savings opportunities from utilizing economies of scale, a result which can ultimately result in increased costs to current customers. In contrast, utilization of deferred accounting treatment for "excess" assets would likely benefit current customers through a reduced revenue requirement via realized savings that result from a company's ability to take advantage of economies of scale when building plant.

Witness Becker continued by stating that a simple example of why utilizing deferred accounting treatment for excess capacity should be beneficial to current customers would be a utility's decision to build a 100,000-gallon plant capacity that could serve current customers and expected growth for the next three years, versus building a 200,000-gallon expansion that could be utilized for current customers and expected growth over the next six years. The 200,000-gallon expansion project is likely to be much more cost effective, even when considering the time value of money, than completing two separate 100,000-gallon capacity expansion projects to a WWTP. According to the Company, this is true even though you end up with the same capacity in the end. The second 100,000 gallons of the single 200,000-gallon project, however, is also likely to be considered excess and the utility will be prevented from recovering any depreciation expense or carrying costs until it is determined to no longer be excess when using the current excess capacity treatment. Witness Becker explained that in this example, a utility is disincentivized from taking advantage of any economies of scale and prompted to make a short-term decision to build the smaller capacity plant. Management is likely to take advantage of all economies of scale that ultimately benefit customers, but the disincentive that exists from excess capacity treatment adds an unnecessary financial penalty to the utility for doing so.

Witness Becker testified that Aqua NC requested deferred accounting treatment with respect to the excess capacity recommended for adjustment by Public Staff witness Junis that results in a $32,940 reduction of the revenue requirement in this rate case. Witness Becker maintained that the financial impact to rates that would result from deferred accounting treatment in this rate case is zero, as only the prospective related depreciation expense and any carrying costs will be deferred until the excess capacity is actually being used.

In his September 7, 2018 supplemental rebuttal testimony, witness Becker testified that he had reviewed the excess capacity adjustment that Public Staff witness Cooper made in her September 5, 2018 supplemental testimony. Witness Becker noted that, based on witness Cooper's supplemental testimony, the Public Staff's initial excess capacity adjustment had been further adjusted to reflect activity through June 30, 2018. As a result, the Public Staff's excess capacity adjustment increased by $518,095.

Further, witness Becker observed that witness Cooper did not describe the nature of and reason for her additional proposed supplemental ratemaking adjustment, but that she simply stated that a supplemental adjustment had been made and she then set forth the dollar amount of that adjustment.

Witness Becker testified that he was subsequently able to determine the nature and reason for the Public Staff's additional supplemental adjustment, which he described as follows:

> Subsequent to the test year in this case, which ended on September 30, 2017, Aqua completed an upgrade project at its Carolina Meadows WWTP. The total cost of this project was approximately $1.7 million. This project was necessary to prevent further degradation and failure of the current equalization basin. The existing equalization basin was rehabilitated, which included metal restoration, sandblasting and painting. Additional work included replacement of the degraded handrails, installation of new blowers, piping and diffusers. The digester was rehabilitated, and the existing malfunctioning mechanical fine screen was replaced with a new Huber fine screen. This work was not performed to provide additional capacity at the plant, but rather to maintain the aging and deteriorating asset already in place.

Tr. Vol. 14, pp. 63-64.

According to witness Becker, these upgrades or improvements substantially benefitted current customers and were not required for the purpose of serving future customers. The Company pointed out that the Public Staff included the entire cost of this project in the Company's rate base in the exhibits to its direct testimony; i.e., in effect agreeing that the project is used and useful and appropriate for inclusion in Aqua NC's cost of service. Furthermore, the Company noted that Public Staff witness Cooper did not make an excess capacity adjustment for this project in her direct testimony but has now done so in her supplemental testimony.

Witness Becker testified that he disagreed with the adjustment. He again stated, in his rebuttal testimony, that he did not disagree with Public Staff witness Junis' excess capacity calculation (as it has been used in prior cases) but did request that plant amounts determined to be excess, and removed from rate base, should be allowed to receive deferred accounting treatment. This continues to be the Company's position. However, in his supplemental rebuttal testimony, witness Becker stated that he was then requesting that the Commission disallow the Public Staff's excess capacity adjustment for the Company's 2018 investment at the Carolina Meadows WWTP. Witness Becker testified that this adjustment is inappropriate and unreasonable. He stated that the revenue impact of this adjustment is a reduction of $59,717.

In the case of Carolina Meadows and any of the other 58 WWTPs that Aqua NC owns and maintains, witness Becker testified that WWTP rehabilitation is often needed to maintain and preserve the plant's overall condition. At Carolina Meadows, he stated that the Company spent approximately $1.7 million in making necessary rehabilitations and upgrades. He contended that these types of needed plant upgrades should not be subject to an excess capacity adjustment that effectively disallows 30.63%, as proposed by the Public Staff, of this upgrade immediately after this investment was made by the Company. Witness Becker argued that such adjustments for these types of capital expenditures are unreasonable and unfair to Aqua NC and, ultimately, to the Company's current customers who are served by and benefitted by WWTP rehabilitations and upgrades.

Witness Becker continued by stating that the Public Staff also included as part of its initial excess capacity adjustment a similar adjustment for capital costs incurred for improvements at the Company's WWTPs prior to or during the test year for this case. In that regard, the Company included approximately $175,000 for WWTP improvements which fall into that category and which were incorporated by the Public Staff as part of the excess capacity adjustment made in its direct testimony. Through oversight, Aqua NC failed to challenge that portion of the Public Staff's initial excess capacity adjustment. For that reason, witness Becker stated that Aqua NC would accept the Public Staff's initial adjustment for purposes of this case due to the Company's failure to challenge it in its rebuttal testimony, but that the Company reserves the right to contest such adjustment in its next rate case. According to witness Becker, the Company views this accommodation as a reasonable compromise at this point in the rate case. The Company does, however, request that the Public Staff's supplemental excess capacity adjustment related to the post-test year, WWTP rehabilitations and upgrades at the Carolina Meadows WWTP be rejected and disallowed.

On cross-examination by Public Staff attorney Grantmyre, witness Becker conceded that he was unaware of the Commission having ever approved deferral accounting for Aqua NC related to plant. Tr. Vol. 15, p. 67. Further, in response to cross-examination questions regarding the Company's Canonsgate WWTP, witness Becker testified that the developer paid for the initial construction of the Canonsgate 250,000-gpd WWTP in 2005, and that this plant was fully contributed to Aqua NC. He also testified that the Public Staff explained to him that as Aqua NC did not pay for the initial construction of the WWTP that was the reason why the Public Staff did not recommend a Canonsgate overbuilt-plant adjustment resulting from the 95.7% excess capacity calculated by the Public Staff based on information provided by Aqua NC as of June 30, 2018. Tr. Vol. 15, pp. 69-70. Witness Becker acknowledged that Public Staff Becker Cross-Examination

Exhibit 17 contained a list of post-test year capital expenditures in the amount of $1.249 million by Aqua NC for the Canonsgate wastewater system.

In response to questions concerning Public Staff Becker Rebuttal Cross-Examination Exhibit 19, witness Becker acknowledged that it was the June 2, 2005 Asset Purchase Agreement between Carolina Meadows, Inc. and Aqua NC, which was executed by Aqua NC's then President, Neil Phillips, that obligated Aqua NC rather than the developer to build the expansion of the Carolina Meadows WWTP from 180,000 gpd to 350,000 gpd.

During cross-examination by the Public Staff, witness Becker reiterated his position that plant upgrade costs, which are not part of the initial capacity buildout of a plant, are different from the initial costs because they are required to benefit customers. Further, witness Becker testified that he was seeking full ratemaking recovery for the Carolina Meadows post-test year, upgrade project amount of approximately $1.7 million because application of the Public Staff's proposed excess capacity adjustment to that upgrade project would cause the Company to lose or write-off 30% of the upgrade costs. In conclusion, witness Becker stated that Aqua NC is seeking "some kind of acceptable treatment where we're not losing a third of everything we spend." Tr. Vol. 15, p.81.

Based upon the foregoing, the Commission reaches three primary conclusions regarding the WWTP excess capacity issues under consideration in this case. First, the Commission concludes that the updated WWTP excess capacity adjustment percentages of 30.63% for Carolina Meadows, 38.67% for The Legacy at Jordan Lake, and 35.56% for Westfall, as proposed by the Public Staff and agreed to by Aqua NC, should be approved. Second, the Commission concludes that it is reasonable and appropriate to apply the excess capacity adjustment percentage of 30.63% at Carolina Meadows WWTP to 50% of the Company's post-test year, upgrade project at that facility, the cost of which was approximately $1.7 million. Further, with respect to the approximately $175,000 in capital costs for improvements at the Company's WWTPs prior to or during the test year that were pointed out in witness Becker's supplemental rebuttal testimony, but deliberately not challenged by Aqua NC in this rate case proceeding due to the lateness of such discovery, the Commission concludes that, at this time, it is reasonable and appropriate to include such capital costs as part of the excess capacity adjustments in this case. Third, the Commission concludes that Aqua NC's request for authority to utilize deferred accounting with respect to WWTP amounts determined to be excess capacity, and consequently removed from rate base, at the Company's Carolina Meadows, The Legacy at Jordan Lake, and Westfall WWTPs should be denied.

With respect to the appropriate excess capacity percentages to use in this proceeding for Carolina Meadows, The Legacy at Jordan Lake, and Westfall, as testified by witness Junis and as presented in Aqua NC's Application Exhibit C-1-ANC-10 in this proceeding, Aqua NC used the identical excess capacity percentages approved by the Commission in Aqua NC's last general rate case, Docket No. W-218, Sub 363. Witness Cooper testified that she implemented the updated excess capacity percentages provided by witness Junis to calculate the excess capacity adjustment. The Commission notes that witness Junis based his updated calculation of the percentages on the methodology established by the Commission in Docket No. W-218, Sub 319, which uses end-of-period REUs and the standard of 400 gpd per connection for evaluating the used and useful portion of WWTPs as determined in Docket No. W-354, Sub 128. See Commission Order issued June 10, 1994. The Commission observes that this methodology was also used in Aqua NC's last general rate case proceeding (Docket No. W-218, Sub 363), a stipulated case. Moreover, Aqua NC has agreed with the Public Staff's updated calculation of the percentages. No party contested the methodology or the agreed-upon updated percentages. Further, neither Aqua NC, nor any other party, denied that the reason the excess capacity adjustments are appropriate in this proceeding is because Aqua NC took on avoidable risk from the developers with respect to these three WWTPs. Consequently, the Commission finds and concludes that it is appropriate to continue to make excess capacity adjustments to sewer utility Plant in Service applicable to Aqua NC's Carolina Meadows, The Legacy at Jordan Lake, and Westfall WWTPs and that the updated percentages calculated by witness Junis and agreed to by Aqua NC are the appropriate percentages for use in this proceeding.

In reaching this decision, the Commission acknowledges that Aqua NC and the Public Staff have employed a methodology for calculating the excess capacity percentages in this proceeding which was decided by the Commission in the Sub 319 proceeding when this issue was last presented to the Commission for decision. However, In the Sub 319 proceeding, the only methodology proposed for calculating the excess capacity percentages was the one advocated by Public Staff witness David Furr. Aqua NC presented no evidence in the Sub 319 proceeding as to what, in its view, a reasonable method for making an excess capacity adjustment should be. In its final Order in the Sub 319 proceeding, in its discretion, the Commission used a different calculation for calculating excess capacity percentages than that presented by the Public Staff.

The Commission reminds the parties that in the past the Commission has employed a variety of formulas or methods for making excess capacity adjustments. The Commission notes that the Company did not present any evidence in this proceeding regarding how to appropriately update its excess capacity percentages or whether future growth projections in the applicable service areas as determined by any available definitive growth documentation, such as housing permits issued, should be factored into such calculations. The Commission advises the parties that should this issue arise in a future rate case proceeding, the Commission requests that more evidence be presented by the parties regarding other formulas or methods for making excess capacity adjustments such that the Commission could determine by the weight of the evidence presented whether future growth projections or any other additional factors should be included in the approved methodology.

In regard to the Company's post-test year, upgrade project at the Carolina Meadows WWTP, the cost of which was approximately $1.7 million, the Commission has given weight to both the testimony offered by the Public Staff on this issue as well as the rebuttal testimony offered by witness Becker. This is the third consecutive Aqua NC general rate case where there has been an excess capacity adjustment for the Carolina Meadows and The Legacy of Jordan Lake WWTPs, and the second for Westfall WWTP. Public Staff witness Junis' uncontroverted testimony was that these three plants were unusual in that Aqua NC took the avoidable risk from the developers. The Commission finds credible witness Junis' testimony that the Public Staff has not made excess capacity adjustments against all Aqua NC plants that are overbuilt. An example is the Canonsgate WWTP where Aqua NC made capital improvements subsequent to September 30, 2017, totaling $1.249 million and the plant was 95.7% overbuilt as shown on Public Staff Becker Rebuttal

Cross-Examination Exhibits 17 and 18. The developer paid for the original Canonsgate construction of the 250,000 gpd WWTP in 2005 and the plant was contributed to Aqua NC. Witness Becker testified that the Public Staff explained to him that since Aqua NC did not pay for the initial construction of the WWTP, the Public Staff did not recommend a Canonsgate overbuilt plant adjustment. In that regard, the Public Staff included in Plant in Service in this proceeding the $1.249 million related to capital improvements to the Canonsgate WWTP since an excess capacity adjustment was not appropriate for this plant.

Further, there was no evidence offered that the Carolina Meadows NCDEQ-DWR permitted capacity had been reduced below 350,000 gpd subsequent to these capital expenditures. The Commission agrees with the Public Staff that the improvements to the Carolina Meadows WWTP do not change the fact that the plant's capacity is still 350,000 gpd and is overbuilt. Aqua NC's then-President, Neil Phillips, assumed avoidable developer's risks when he executed the contract with Carolina Meadows, Inc. in June 2002.

However, the Commission observes that both witness Junis and witness Becker described in their testimony the specific improvements that were made to the Carolina Meadows WWTP and the Commission is of the opinion that certain of the improvements made would most likely not be related to the size of the WWTP and therefore should not be subject to an excess capacity adjustment. For example, the building that was remodeled to address mold and facilitate operational testing and chemical storage was most likely not related to the size of the WWTP.

Witness Becker testified that the upgrade project at the Carolina Meadows WWTP was not performed to provide additional capacity to the WWTP, but simply to maintain the aging and deteriorating asset already in place. Witness Junis also described the Carolina Meadows upgrade project as being "a major modification and rehabilitation project". The Commission gives great weight to the testimony of witness Becker that WWTP rehabilitation is often needed to maintain and preserve the WWTP's overall conditions. The parties did not identify which specific plant upgrades included in the approximately $1.7 million total would relate to the size of the existing WWTP. Consequently, the Commission, in its discretion, for purposes of this proceeding has concluded that 50% of the upgrade amount should be included as a post-test year addition and 50% should be subject to the excess capacity adjustment. Should this matter be an issue in a future rate case, Aqua NC and the Public Staff should present evidence to the Commission describing the specific improvements, including the applicable costs, and how each improvement should be considered for ratemaking purposes.

For these reasons, the Commission concludes that, for purposes of this proceeding, it is reasonable and appropriate to apply the excess capacity percentage of 30.63% to 50% of the $1.7 million that Aqua NC spent on the Carolina Meadows WWTP subsequent to September 30, 2017, resulting in a total Commission-approved excess capacity plant reduction adjustment for the three WWTPs of $1,322,276.

With respect to Aqua NC's request for deferred accounting treatment, the Commission has the authority to allow deferral requests with respect to extraordinary events when considered appropriate based upon the unique facts and circumstances presented for such a request. In general, in order for the Commission to grant a request for deferral accounting treatment, the utility must show that the cost items at issue are extraordinary and unusual in nature and whether absent deferral the cost items would have a material impact on the Company's financial condition.

Based upon the evidence presented, and in consideration of the Commission's decision to include 50% of the approximately $1.7 million spent at the Carolina Meadows WWTP by Aqua NC on plant improvements as a post-test year plant addition in this proceeding, the Commission is unpersuaded that the excess capacity amounts disallowed from rate base in this proceeding are either extraordinary in type or magnitude of expenditure presented. Rather, the Commission is of the opinion that the excluded WWTP amounts are the result of a management decision by Aqua NC to assume developer risks. As a result, the determination of the financial impact on Aqua NC's earned return on common equity was not necessary for the Commission's conclusion regarding the Company's request for deferral accounting treatment.

Consequently, the Commission finds and concludes that the Company's request to utilize deferral accounting with respect to the WWTP amounts determined to be excess capacity, and consequently removed from rate base in this proceeding is unreasonable and should be denied.

Adjustment for Meters and Meter Installations

Summary of Public Staff Testimony[1]

Public Staff witness Junis testified that the stipulation between the Company and the Public Staff in Docket No. W-218, Sub 363 (Sub 363 Stipulation) stated that "the Public Staff has the right as a matter of law to challenge the reasonableness, prudency, and cost effectiveness of Aqua NC's investment in AMR-RF meters in future cases." Paragraph No. 15 of the Sub 363 Stipulation.

Witness Junis stated that the Public Staff investigated Aqua NC's implementation of water metering technologies, and he then identified and defined the following acronyms associated with water metering technologies.

> RF: radio frequency, alternative mediums for data transmittance include cellular and wired.
>
> AMR: automated meter reading, typically used to describe drive-by RF meters. The communication is primarily one-way, that is the "meter" sends data to the receiver.
>
> ERT: encoder receiver transmitter or communication module, functions as the radio and antenna for the meter to send data.
>
> AMI: advanced metering infrastructure, typically used to describe fixed point networks with strategically distributed collectors or receivers that are capable of two-way communication with the meter.

[1] Witness Junis filed supplemental testimony on September 5, 2018, which replaced in its entirety his direct testimony filed on August 21, 2018 regarding this issue.

Standard meter: the meter reader has to manually read the meter reading and log it on a handheld computer device.

Aqua NC Water: Aqua North Carolina uniform water rate division.

According to witness Junis, Aqua NC has invested $4.039 million[1] in the replacement of 17,441 standard meters with AMR meters and installation of 19,768 ERTs as part of its Meter Replacement Program. The Meter Replacement Program was initiated by Aqua America and implementation began in 2017. From 2013 through 2016, Aqua NC averaged 569 Aqua NC Water meter replacements per year. In 2017, the Company replaced 15,760 Aqua NC Water meters or an increase of over 2,600%.

Witness Junis stated that the Public Staff requested a complete and detailed cost-benefit analysis in Public Staff EDR 12. In part, the Company's response states, "Aqua NC considers this part of our company-wide (Aqua America) operationally driven Meter Replacement Program." (Response to EDR 12 Q1) In other words, Aqua America is directing Aqua NC to implement RF metering technology. Witness Junis continued by stating that in response to a March 2017 Public Staff data request, Aqua NC states:

> The company-wide program for all other states utilizes the use of a mobile AMI (AMR) (RF) technology. As Aqua NC is the only state in the Aqua America (Aqua) footprint not pervasively using AMR technology, an incremental cost benefit analysis was prepared supporting our conversion from manual read meters to RF in coordination with the meter change out program.

See Junis Exhibit 4, Response to Mobile AMR Data Request No. 2 Q1a.

Witness Junis testified that in certain northern states in which Aqua America provides water utility service, some water meters are located inside the customers' homes and there is substantial, both in quantity and duration, snow covering the outdoor meter boxes. AMR meters can be helpful and cost-beneficial in those circumstances; however, these conditions are not typical in North Carolina. North Carolina is different from many of the other states in which Aqua America provides water utility service in that a majority, closer to the entirety, of the residential water meters are located outside in meter boxes, near the street or front property line, and visible with the exception of a limited number of snow-covered days. In comparison, electric utility meters are normally located on the side of a customer's house, sometimes inside fences, and a distance away from the street.

Witness Junis further stated that in response to EDR 22 Q1, the Company provided a cost-benefit analysis calculating a monthly benefit to customers of $0.11 and with what the Public Staff believes to be significant failings: the assumption that the per meter installation cost is the same for a standard meter and an AMR meter; the incremental nature does not capture the true

[1] In Public Staff Junis Supplemental Exhibit 5, Revised Junis Exhibit 10, filed on September 5, 2018, shows an amount of $3.782 million for AMR meters and meter installation costs for the Aqua NC Water Operations rate division.

cost of multiple AMR meters over the 30.30-year depreciation life determined in the 2017 Depreciation Study prepared by Gannett Fleming Valuation and Rate Consultants, LLC, and filed in this docket on June 8, 2018, with the testimony of Company witness John J. Spanos; and no costs, only benefits, are included for developing and deploying programs and services to utilize the additional data available from the read and flag logging capabilities. See Junis Exhibit 5, Aqua NC AMR Cost-Benefit.

According to witness Junis, the AMR meters installed by Aqua NC have the following noteworthy functionalities:

- When the meter is read, the receiver collects the meter reading at that moment, a history of 40 daily readings (recorded at 12:01 am ET), and any indicators.
- The indicators or flags include tamper, high consumption, and zero consumption.

These functionalities are mitigated by the following facts:

- Onsite readers can observe whether a home appears to be occupied, for sale, or vacant, evidence of meter tampering such as tool marks, signs of extensive lawn and shrub irrigation, and signs of a leak. The meter reader can enter these comments into the handheld meter reading computer and be automatically required to verify and re-enter zero or high readings.
- After implementation of AMR/AMI, the meter is not visually inspected each month and over time the meter box can become covered with dirt and/or vegetation making it difficult and time consuming to locate when a manual verification reading or maintenance is necessitated.
- The 40 day read history is **NOT** accessible by customers.
- The customers have **NOT** been notified that Aqua NC planned to and is collecting the 40 day read history.
- The Aqua NC billing system generates an estimated bill for accounts with a high consumption or missed read without providing the customer the indicator or flag. Again, the Company is **NOT** sharing the available information to the customer.

Public Staff witness Junis testified that the Public Staff communicated concerns about Aqua NC's cost-benefit analysis dating back to early 2017. As part of the Public Staff's Mobile AMR Data Request No. 2, the Public Staff created and sent to Aqua NC a modified version of Aqua NC's analysis that resulted in an unfavorable additional cost per customer per month of $0.30, not including any potential costs related to the retirement of Aqua NC's existing standard meters. Aqua NC responded by stating in part that the "updated installation price from our national vendor is currently <$45 per meter" and "the install cost has no net impact on the incremental cost to our customers as there may only be a nominal installation difference when an RF versus a standard meter is installed." (Junis Exhibit 5) First, the Company had already performed a meter replacement program in the Brookwood Water service area in 2012 and 2013 and was invoiced by an outside contractor specific individual installation costs for the meter, meter interface unit (MIU) radio (comparable to the ERT), and mounting rod by Mueller Service Co. See Junis Exhibit 6, Sub 363 ADR 55 Q11.[1] Second, the average Itron installation cost of $69.84 per AMR meter far exceeds $45 and Aqua NC's previous installation costs of standard meters by an independent contractor. The cost-benefit analyses prepared by Aqua NC materially overstate the labor costs to replace standard meters. Itron, Inc. (Itron), the previously referenced national vendor, manufactures and sells communications equipment and services including the AMR ERTs being purchased by Aqua NC.

According to witness Junis, by making a singular conservative adjustment to the Company's cost-benefit analysis, the result is an additional cost of $0.01 per month per customer without any realized benefits to the customers. See Junis Supplemental Exhibit 1, Aqua NC Labor Adjusted Cost-Benefit. The adjustment is to simply decrease the installation labor cost of a standard meter from $71.86 to the still excessive $61.39 that the Company calculated to be its average installation cost utilizing Aqua NC personnel. See Junis Supplemental Exhibit 2, EDR 56 Q2. The exhibit includes Aqua NC's calculation and the Public Staff's calculations (highlighted in grey). However, Aqua NC's calculation vastly over quantifies Aqua NC's labor cost to in-kind replace standard meters. The Company's installation cost of $61.39 assumes an average duration of 1.5 hours per meter replacement and the internal labor cost to be $21.21 per hour. However, when conducting a meter replacement project, which would likely be entire subdivisions, the laborer would be traveling from house to house with several minutes, at most, in between. Aqua NC averaged the hourly labor costs for the following field personnel:

Facility Operator Trainee	<u>Utility Technician Laborer</u>
Facility Operator I	<u>Utility Technician</u>
Facility Operator II	<u>Utility Technician I</u>
Facility Operator III	Utility Technician II
<u>Meter Reader</u>	Utility Technician III
<u>Sr. Meter Reader</u>	

Witness Junis stated that the descriptions from job postings on Aqua America's website indicate each <u>underlined above</u> position's responsibilities include either installation of meters or replacement of inoperable meters. The job descriptions for the Facility Operator group do not include installing or replacing customer water meters. Compiling the Utility Technician Laborer, Utility Technician, Utility Technician I, Meter Reader, and Sr. Meter Reader, the average hourly labor rate is $15.23 compared to the average of $21.21 for all field employees. By utilizing the average internal labor rate of $15.23 per hour and 1.86 standard meter replacements per hour, including the 93% loading for allocated costs the same as Aqua NC, the average labor installation cost per standard meter replaced is calculated to be $15.87. See Junis Supplemental Exhibit 2. This can be compared to the per meter replacement rates quoted of $71.86 by Itron and $61.39 calculated by Aqua NC.

[1] The invoices provided are an excerpt and representative of the all of the invoices provided in response to Sub 363 ADR 55 Q11.

Witness Junis stated that the Public Staff calculated an average duration of 0.54 hours or 32 minutes per meter replacement, conservatively based upon discussions with three persons with nearly 100 years of combined experience in the water utility industry, including extensive experience replacing standard water meters in Wake and Johnston Counties. In general terms, each stated that, being generous, it should only take approximately 15 minutes, and as quick as five minutes, to replace a standard water meter, including flushing the service line and recording the meter serial number, address, and in and out meter readings. Additional time would be necessary if the meter box, yoke, or other appurtenances required replacement, which the experienced professionals estimated would require about one hour on average.

According to witness Junis, adjusting Aqua NC's cost-benefit analysis for the Company's actual average costs for the meter, installation, and ERT and the Public Staff's standard meter installation cost of $15.87, the analysis results in a $0.65 cost per month per customer for Aqua NC's AMR deployment. See Junis Supplemental Exhibit 3, Updated AMR Cost-Benefit Analysis.

Witness Junis further stated that the meters being replaced as part of the program, which are predominantly standard positive displacement meters without batteries, have had an average useful life of 17.63 years per the Company's response to EDR 40 Q2. This 17.63 year average service life is a 7.37 year or 29% reduction from the former average service life. In response to EDR 12 Q1, Aqua NC states:

> The overall meter retirements have generally been consistent with past practices as the average service life has changed from 25 years to 24 years. Newer technology could shorten the average service life of the meters, however, due to group depreciation; the remaining life method; and the variability of assets within the entire account, the asset value will be recovered over the remaining life of all assets.

See Junis Exhibit 3.

According to witness Junis, the industry recognizes a 10- to 20-year useful life before degradation of functionally and accuracy necessitate replacement. As part of the Environmental Finance Center's final report on Studies (EFC Report),[1] the Public Staff posed a number of questions including:

> 12. What is the average change-out period for residential water meters (i.e. 10 years, 15 years, 1 million gallons, etc.) for the more professionally-operated North Carolina government water utilities, such as Raleigh, Durham, OWASA, CMUD, Fayetteville PWC, Greensboro, and Winston-Salem?

[1] The Report to the Public Staff of the North Carolina Utilities Commission and Aqua North Carolina, Inc. on the Studies of Volumetric Wastewater Rate Structures and a Consumption Adjustment Mechanism for Water Rates of Aqua North Carolina, Inc. prepared by the Environmental Finance Center at the UNC School of Government was filed in Docket No. W-218, Sub 363A on March 31, 2016. https://starw1.ncuc.net/NCUC/ViewFile.aspx?Id=a7fd9d58-46ed-425f-9298-c4419f319a1f.

WATER AND SEWER – RATE INCREASE

See EFC Report, p. 12.

The EFC Report stated "[m]ost of the utilities use around 15 years, although two use more than 15 years and one uses less than 15." Id. Additional factors such as flow rate, velocity, water quality, and total volume/mileage can all contribute to the degradation of meter accuracy.

Witness Junis testified that the Public Staff calculated the average standard meter replacement to cost $54.30. Aqua NC has a Commission-approved meter installation fee of $70 as part of its schedule of rates. The meter cost of $38.43 is the invoiced amount from 2015 when Aqua NC was still frequently utilizing standard meters for replacements. The cost does not reflect any potential and likely discount through national or statewide buying power (the Company bought approximately 20,000 meters since its last general rate case). The average labor cost was calculated by the Public Staff to be $15.87, as described in earlier portions of witness Junis' testimony. The total average cost of standard meter replacement would have been $54.30 in comparison to the average cost of a meter replacement completed as part of the Aqua NC Water Meter Replacement Program that was $206.43, including AMR meter, ERT, meter installation, and allocated costs. The average cost of a meter replacement completed in the Brookwood Water service area was $209.66, including AMR meter, ERT, meter installation, allocated costs, and additional appurtenances as necessary.

Witness Junis stated that the Company proposes to include in its new rates the recovery of AMR meter costs. This is in addition to the AMR meter costs being recovered through Brookwood Water rates approved in the Sub 363 Order. Aqua NC has not implemented benefits to the customers while materially increasing the cost to customers. The installation of AMR meters was imprudent, unreasonable, and not justified by a realistic and comprehensive cost-benefit analysis. The customers should not pay for the increased costs as a result of unreasonable and imprudent decisions by Aqua NC management. Witness Junis recommended reductions to rate base for Aqua NC Water and Brookwood Water in the amounts of $2,834,632 and $1,399,522, respectively. The calculations are presented in greater detail in Junis Supplemental Exhibit 5. On redirect, witness Junis stated that, as an alternative position, the Public Staff's recommended reductions to rate base could be deferred with no return until the potential benefits are accessible to customers and a thorough and reasonable cost-benefit analysis justifies the recovery of the cost in rates charged to customers.

Additionally, witness Junis recommended the disallowance of any future increase to the depreciation rate of Water Account 334.00 Meters and Meter Installations due to the early retirements that resulted from Aqua NC's Meter Replacement Program. This is a potential additional cost not considered by the cost-benefit analyses and a result of the group accounting and depreciation methodologies. According to witness Junis, this is dissimilar to the cases made by Duke Energy Progress and Duke Energy Carolinas, which claimed the retired AMR assets resulting from the implementation of AMI were an extraordinary expenditure and should be amortized over a period of time shorter than the remaining life.

WATER AND SEWER – RATE INCREASE

Summary of Company Testimony[1]

Aqua NC witness Thompson testified that he is employed by Aqua Services as Director of Procurement. In that capacity, witness Thompson stated that he is responsible for the procurement of materials and services for Aqua America; that he manages and negotiates meter and meter related material for Aqua NC; and that he works closely with the Manager of Metrology to set meter standards and on meter related issues. Witness Thompson stated that the purpose of his rebuttal testimony was to rebut the testimony of Public Staff witness Junis as it pertains to AMR capable meters.

Witness Thompson testified that he had reviewed the testimony of witness Junis and that he did not agree with the Public Staff recommendations. Witness Thompson stated that witness Junis makes the following finding: "Aqua has not implemented benefits to the customer while materially increasing the cost to customers." Witness Thompson further stated that witness Junis concluded that: "The installation of AMR meters was imprudent, unreasonable, and not justified by a realistic and comprehensive cost-benefit analysis." Witness Thompson contested and disagreed with witness Junis' conclusions. According to witness Thompson, it is inappropriate and shortsighted for the Public Staff to conclude that the deployment of a technology is imprudent before that technology is fully deployed and its benefits can be realized.

Witness Thompson testified that the cost-benefit analyses provided by the Company in response to EDR 22 Q1 demonstrate that the decision to install AMR meters was prudent and reasonable. Witness Thompson further stated that he disagreed with the recommended adjustments or comparative calculations provided by the Public Staff. Witness Junis overlooked the immediate and tangible benefits of the AMR technology that were provided and summarized in the Company's responses to multiple EDRs. AMR technology has provided Aqua NC with a reduction in estimated bills, availability of data to support customer consumption and billing inquiries, meter reading efficiency, and eliminated manual meter reading errors.

Witness Thompson testified that AMR technology has been shown to reduce the number of estimated bills for the Company. The Business Case analysis, provided to the Public Staff in discovery, shows that in 2015 Aqua NC manual read meters had an estimated bill rate of 2.63%, or 22,071 bills per year, which exceeded three times that of Aqua America's average of 0.75%. Aqua NC meters for the same period were 14% radio read, while the other Aqua America states averaged 99% radio read meters. This benefit was further defined by providing data that Aqua NC has had an 18% reduction in estimated bills in Brookwood Water. Similarly, there was a 42% reduction in estimated bills per year for Aqua NC's Water Rate Division in the areas in which it has installed the AMR technology.

Witness Thompson testified that he disagreed with witness Junis' assertion that the noteworthy functionality of the 40 daily readings provided by AMR meters is mitigated by the fact that the 40-day read history is not accessible to customers and that customers have not been notified that Aqua NC planned to and is collecting this history. According to witness Thompson, witness

[1] The Company's rebuttal testimony was filed on September 4, 2018, one day prior to the Public Staff's filing supplemental testimony for witness Junis which included various updated calculations and amounts regarding this issue.

WATER AND SEWER – RATE INCREASE

Junis discounts any operational or customer benefits that are realized by the availability of this data internally; however, this view is contrary to facts understood by utility operators and managers. The 40 daily read history is available with the 100W Endpoint Receiver Transmitter (ERT) through the data logging. The 100W ERT stores 40 days of consumption information, which can be collected by the AMR system and leveraged for timely resolution to customer billing inquiries, bill disputes, and potential leak detection. The 40 daily reads stored and collected by the AMR system are used by Aqua NC in investigating customer inquiries and resolving customer metering issues. These benefits were discussed in Aqua NC's response to DR 22 Q3. Witness Thompson stated that the most recent example of this was in August 2018, when Aqua NC noted a sharp drop in well capacity in one of the Company's critical systems. Aqua NC searched the system for leaks, utilizing the AMR that had been installed in this system. In a timely manner, a meter reader captured cycle reads for all the AMR capable meters in the area to determine if there were any customers with high consumption or possible leaks. Within a few hours, Aqua NC had the information, which included a list of customers that identified abnormal consumption in several customer accounts. Aqua NC contacted the customers and notified them of a potential leak. Aqua NC verified significant leaks on two of the identified accounts and turned their water off until repairs could be made. The customers were appreciative of the efforts. This is typical of the successful utilization of the AMR system.

Company witness Thompson testified that new technology takes time to deploy and full utilization and visibility to the customer often does not occur until the Company is able to reach some level of critical mass. The worst decision is to stop deployment. The best decision is to continue deployment and increase functionality as the buildout progresses. The current level of utilization of the data collected by the AMR system is producing tangible operational and customer benefits. The first step in the process is to implement in an organized and efficient manner AMR while aged meters are being replaced. Aqua NC will continue to refine the business processes surrounding the utilization of data.

According to witness Thompson, many of the "more professionally run" utilities, as defined by witness Junis, have communicated to their customers that the benefits of the AMR or AMI technology that they have chosen to use will be realized over time and incrementally, not immediately.

Witness Thompson disagreed with witness Junis' statement that the noteworthy functionality of the AMR meters to provide indicators and tamper detection is mitigated because customers are not aware of the indicators or flag. According to witness Thompson, witness Junis inappropriately discounts the value of operational or customer benefits, simply because the data is available internally at this point, and not directly transmitted to the customer. The indicators and tamper detection collected by the AMR meters is being used by the Company in conjunction with the data logging of the 40 daily reads to prioritize service orders and to investigate potential leaks, broken or frozen meters, and theft of service. In addition, witness Thompson stated that the tamper indicators are available immediately to the meter reader and by the next day to customer service representatives and other staff through the automated report. These benefits have been discussed in detail with the Public Staff.

Company witness Thompson also testified that AMR technology provides for more efficient meter reading. The Company's Business Case analysis provided to the Public Staff in EDR Q1 shows that the projected read rate from AMR meter reads versus manual reads was projected to increase over 600%, from 37.5 reads an hour to 264 reads an hour. This information was used by Aqua NC to judge the reasonableness of the decision to implement an AMR system.

Witness Thompson also testified that he did not agree with the Public Staff's contention that the functionalities of the AMR system are mitigated because onsite meter readers can observe whether a home appears to be occupied, whether it is for sale or vacant, evidence of meter tampering, and signs of leaks. This type of observation and recording of such observation would significantly impact the meter reader's read rate, dropping to less than 37.5 reads an hour. This would require more meter reading hours and would detract from the meter reader's ability to perform work on other service orders, like meter maintenance and customer inquiry.

Witness Thompson further testified that there are additional benefits of AMR technology that witness Junis failed to acknowledge in his testimony. Employee safety and business efficiency are additional strategic and intangible benefits of the AMR program. Reducing the hours required for meter reading decreases the opportunities for accidents both onsite and in transit, such as insect/snake/dog bites, slips, trips, and falls. The AMR program also limits Aqua NC's reasons for having to enter a customer's property, due to the ability to read the meter from a distance. Aqua America is standardizing companywide to an AMR system, which provides economies of scale that are beneficial to North Carolina customers. By implementing a companywide program, the cost of the AMR program is reduced per customer as fixed and semi-variable costs, such as software, process development and troubleshooting, are spread across a broader customer base. Further, an evolving AMR program will continue to provide more timely and accurate data, increased data integrity, and advanced analytics for improved operations and service.

Witness Thompson stated that there are also future benefits to be realized incrementally as Aqua America and Aqua NC become a 100% AMR system. The industry recognizes a 10- to 20-year useful life before degradation of functionality and accuracy necessitates replacement. Aqua NC has optimized the value of aged replacement within the recognized useful life to upgrade to AMR metering technology. Although the full benefits of this program will not be realized immediately, it is prudent to install the new technology as the Company's manual meters reach the end of their useful lives in preparation for a full utilization of the AMR technology. Otherwise, a newly installed manual meter would become obsolete before its useful life has been reached resulting in an unnecessary cost to customers.

In addition, Company witness Thompson testified that the Company is converting to AMR technology in a manner that will facilitate upgrades to Advanced Metrology Infrastructure (AMI) technology as that technology becomes more cost effective. Aqua NC has ensured that the meters and meter reading and data logging technology, ERTs that are being installed as part of this program can also be utilized if later evaluations should justify an upgrade to AMI technology. Aqua NC does not believe the additional cost of AMI (repeaters, cell towers, and security) are cost-justified, presently. Furthermore, the meters being currently installed are both AMR and AMI capable, as are the 100W ERTs that are currently being used to implement the AMR program. The 100W ERTs offer an advanced two-way meter data collection using handheld (AMR), mobile

(AMR), fixed network (AMI), and combination hybrid solutions. The meter and the 100W ERTs include AMI functionality with no change required on the premise. All programming can be completed remotely should it be justified where a dense customer base supports the added fixed network cost.

According to witness Thompson, the functionality of the AMR program will increase over time and will include significant coordination with customer operations and other Company-wide initiatives, such as customer account portal and other tools to improve the overall customer experience. Internal work flows are being tested and upgraded to increase the Company's ability to utilize all the daily data collected in a timely manner with systemic business processes.

In response to witness Junis reference to "more professionally run utilities," witness Thompson stated that Raleigh, Durham, Charlotte Water, and Greensboro are all using AMR Technology. The Fayetteville Public Works Commission (PWC), OWASA, and Winston-Salem are investing in AMI Technology. Witness Thompson stated that he was also aware that Durham, OWASA, and Fayetteville PWC all used outside contractors to install the new technology.

Witness Thompson testified that he did not agree with witness Junis' adjustments to the Company's cost benefit analysis as shown in Exhibits 7 and 8 of the Public Staff's testimony. The AMR Cost-Benefit Analysis, completed by Aqua NC and provided to the Public Staff in response to EDR 22 Q1, demonstrated the cost benefit of installing AMR meters in comparison to installing manual meters. Witness Junis adjustment, shown in Junis Exhibit 7, replaces the contractor costs for installation of manual meters with an Aqua NC-calculated cost estimate of internal labor cost for a large-scale meter replacement project. Witness Junis' adjustment, shown in Junis Exhibit 8, replaces the contractor costs for installation of manual meters with a Public Staff-calculated cost estimate of internal labor costs for a large-scale meter replacement project. The adjustment also adjusts the cost of the manual meter. Witness Thompson testified that he disagreed strongly with the overall intent and integrity of the Public Staff's adjustments. The Company's Cost-Benefit Analysis was not intended to demonstrate the prudent and reasonable choice to have contractors install the AMR meters; rather, it was showing the benefit of AMR meters over manual meters. Aqua NC does not even have the internal resources to complete a large-scale meter replacement project. Finally, witness Thompson stated that he also disagreed with the magnitude of the Public Staff's adjustments.

Witness Thompson testified that he disagreed with witness Junis' estimate of $38.43 for a manual meter as referenced in the Public Staff's testimony. For information, witness Thompson stated that he attached to his testimony, as Thompson Exhibit 1, a sales quote from Mueller Systems dated March 27, 2017. The per unit pricing for a 5/8"x3/4" Manual Water Meter is $44.64 (plus tax). This pricing does include any discounts that would be available using Company buying power. The quote shows a minimum order of 12,000 units. Despite the low demand for manual meters company-wide, Aqua NC and Aqua America have a strong relationship with Mueller for discount direct manufacturer pricing. Alternatively, Aqua NC is paying $53.85 (plus tax) for an RF capable Badger Pit Meter of the same size. Witness Thompson stated that he attached the Badger Price List as Thompson Exhibit 2. Material costs of the meter boxes (pits), pit lids, resetters, and other miscellaneous material that may be required to exchange a meter were not discussed by witness Thompson, because they are required regardless of the choice to upgrade to AMR technology.

Witness Thompson further stated that he disputed parts of the Public Staff's Calculation of Average Duration Meter Exchange and Public Staff Adjusted Calculation of Average Labor Costs per Aqua NC Meter Exchange, shown on Junis Exhibit 8. Witness Junis states that the average time required to change a meter is 0.54 hour. Additionally, he states that additional plumbing work that may be required with a meter exchange, replace or repair meter box, lid, or replace resetter could take up to one hour of an experienced professional's time. Regarding these issues, witness Thompson testified that he might agree with the Public Staff's analysis, provided that the personnel assigned to such work would always be dedicated and specialized to do meter exchange work eight hours a day. In EDR 51, Aqua NC determined an average time to change a meter is one and one-half hours. This estimate was based on current Aqua NC skill level and was consistent with the labor rate used in the calculation. This analysis also assumed that meter exchanges would be completed as time allowed throughout the day and while answering other priority service calls and incurring more travel time.

Witness Thompson stated that he disagreed that the labor associated with such efficiency could be paid at a rate on average of $15.23 per hour. The labor cost used in this calculation ignores the fact that a more qualified and higher paid professional could be required to perform additional work. This partially results because installation of approximately 25% of meters will require additional work associated with the meter pit, etc.

Further, witness Thompson testified that the Public Staff's notion that the adjusted calculation of average labor costs per Aqua NC meter exchange is comprehensive of all costs that would be incurred if the Company were to perform AMR meter installation in-house is simply not accurate. Witness Junis calculates an average cost of $14.80 per install. Junis Exhibit 8. This is based on an average labor rate of $15.23 per hour. Witness Thompson stated that he did not think the average labor rate of $15.23 per hour used in witness Junis' testimony is appropriate because it is not representative of the labor rate of a specialized and experienced professional that would be required to achieve the time efficiencies stated in the testimony duration calculation. In Thompson Exhibit 3, witness Thompson stated that he had reflected the salary ranges for Meter Service Technicians I, II and III. The Meter Service Technician I position has a median rate of $23.50/hour and a job description that states "...refers more complex issues to higher level staff". The Meter Service Technician III, with an average rate of $35.80/hour, best represents the skill level of the technicians used in the 2017 AMR Meter Exchange Project and has a job description that states, "...handles complex issues and problems, and refers only the most complex issues to higher-level staff. Possess comprehensive knowledge of subject matter."

According to witness Thompson, Aqua NC replaced an average of 562 meters per year prior to the 2017 AMR Meter Exchange Project. For Aqua NC to have completed 15,000 exchanges in 2017 (May–December), additional short-term staff would have been required. There would be added cost to hire, train, and terminate, temporary staff. Additional vehicles, equipment, and staff to provide project management and oversight would also be required. These costs were not included by the Public Staff in its labor cost per hour.

Witness Thompson stated that he also disagreed with witness Junis' contention that Aqua NC's decision to hire a contractor for AMR meter exchange and ERT installation was unreasonable and imprudent. To the contrary, the Company's decision in that regard was reasonable and prudent. It is very customary within the utility industry to hire contract labor for specific projects. It is efficient, reduces liability, and avoids the need for later layoffs and perhaps workman's compensation payments. Contractor labor costs for the 2017 AMR Meter Replacement Project were $44.51 per install, excluding tax. The description of work with Itron, using Field Deployment Manager (FDM) software required a specific installation workflow to be followed to minimize service order errors, ensure accurate reading upon installation, and minimize rework. The contractor's staff specializes in meter exchange programs and achieved the efficiencies stated in previous testimony. Aqua NC utilized a competitive bid process to award this contract, ensuring that the contractor costs were reasonable and at fair, market value for the work to be performed. Aqua NC's purchasing policy requires three bids with qualified supplier vetting. Bid awards are granted on price, experience and qualifications. The average cost of $69.84 per install referenced on page 32 of the Junis testimony and provided by Aqua NC in EDR 29, included AMR meter installations of sizes ranging from 5/8" to 4", additional plumbing work associated with the Meter Pit (Box), Pit Lid, Setter Replacement, and other tasks as outlined on project invoices are shown on the Project Summary submitted as Thompson Exhibit 4.

Discussion and Conclusions

In Aqua NC's last rate case (Docket No. W-218, Sub 363), based on a stipulation entered into by Aqua NC and the Public Staff, the Company's investment in AMR meters at that time were included in Plant in Service for the Brookwood Water rate division. In Sub 363, the stipulating parties agreed that the Public Staff has the right to challenge the reasonableness, prudency, and cost effectiveness of the Company's investment in AMR meters in future cases.

In 2017 and 2018, Aqua NC installed 17,441 AMR water meters at a total cost of $3,781,679 in Aqua NC Water Operations service areas pursuant to the Company's Meter Replacement Program. In 2012 and 2013 Aqua NC installed 8,950 AMR water meters at a total cost of $1,885,507 in Brookwood Water Operations service areas. Aqua NC is requesting that its total investment in AMR meters to date of $5,667,186 be included in utility Plant in Service in this proceeding.

In the present proceeding, the Public Staff has proposed to reduce the original costs of the AMR meters and meter installations in rate base for the Aqua NC Water Operations and Brookwood Water Operations meter replacement projects by the amounts of $2,834,632 and $1,399,522, respectively, for a total reduction to combined Plant in Service of $4,234,154. The Public Staff's adjustment also resulted in a proposed total decrease of $139,727 to depreciation expense and accumulated depreciation. As a result, the Public Staff's total revenue requirement recommended in this proceeding was reduced by $473,571.

Public Staff witness Junis testified that the AMR meters installed by Aqua NC have the following noteworthy functionalities: The receiver collects the meter reading at that moment, a history of 40 daily readings (recorded at 12:01 a.m. ET), and any indicators once the meter is read. These collected indicators or flags include tamper, high consumption, and zero consumption.

However, he contended that the biggest flaw of the current status of the Company's implementation of AMR meters, dating back to 2012 in North Carolina, is the lack of data shared with customers. Witness Junis asserted that the additional functionalities of the AMR meters are mitigated by the decreased physical presence of the onsite inspection of a meter reader.

Further, witness Junis asserted that the installation of AMR meters was not justified by a realistic and comprehensive cost benefit analysis. Witness Junis testified that the Public Staff communicated concerns about Aqua NC's cost-benefit analysis dating back to early 2017. After its investigation and analysis of the Company's AMR meter replacement program, the Public Staff concluded that Aqua NC's investment in AMR technology and the utilization of a contractor for installation was unreasonable due to the combination of the price paid per AMR meter and meter installation, lack of expense savings to offset the capital cost, and lack of quantifiable benefits passed along to customers. Aqua NC disagreed with the Public Staff's analysis and conclusion.

The Commission notes that both the Public Staff and Aqua NC expended considerable time and effort in presenting their respective positions to the Commission concerning this issue. Based upon our careful review of the testimony, the Commission reaches the following conclusions on the key components of this issue:

1. Aqua NC's decision to install AMR meters versus standard meters –

The Public Staff contended that Aqua NC's meter replacement program was initiated by its parent company, Aqua America, and the decision was not supported by an appropriate cost-benefit analysis.

Aqua NC stated that, although the meter replacement program was initiated by its parent company as part of a company-wide initiative, the installation of AMR meters was performed in conjunction with its normal meter replacement program and fully supported by a cost-benefit analysis.

The Commission concludes that it was not unreasonable for Aqua NC to select the newer AMR technology rather than the standard meter for its normal meter replacement program. Standard water meters utilize older technology whereby the meter reader has to manually read the counter located on the meter and log the reading on a handheld computer device. A new standard meter has very limited, if any, ability for adjustment for future technological advances.

The Commission determines that it would have been inappropriate for Aqua NC to invest in older technology in 2012 and 2013, and then again in 2017-2018 when the real world situation is that we live in a time when technology improvements are increasing rapidly. The Commission finds that the older standard meter technology, which has an average useful life of approximately 17 years, would not provide the required benefits to the Company or the expected benefits from its customers for a period extending 17 years into the future. The Commission recognizes that with the fast changing pace of technology, even the AMR technology has already been updated to AMI technology. In that regard, witness Thompson testified that the AMR technology installed by Aqua NC is AMI ready but AMI technology is not a prudent decision for Aqua NC at this time.

The Commission concludes that Aqua NC's decision to install AMR meters versus standard meters was reasonable and prudent.

In making its decision, the Commission has given substantial weight to the testimony of witness Thompson that the other Aqua America states are utilizing this technology for their regulated water utilities and that other North Carolina municipalities, including Raleigh, Durham, Charlotte Water, and Greensboro are all using AMR technology and Fayetteville PWC, OWASA, and Winston-Salem are investing in AMI technology.

2. Cost of AMR technology versus cost of standard meter –

The Public Staff expressed concerns about the cost of the AMR technology versus the cost of a standard meter. Witness Junis clearly and succinctly set forth the cost of the AMR technology versus the standard meter costs in his Revised Junis Exhibit 10. Further, witness Junis explained that the calculated average cost of $54.30 for in-kind standard meter replacement, including manual read meter, installation, and allocated costs, is comparable to the Meter Replacement Program projects completed for Aqua NC Water and Brookwood Water at average costs of $206.43 and $209.66, respectively, including AMR meter, ERT, installation, and allocated costs. Tr. Vol. 12, pp. 180-181.

The Commission recognizes that regarding Aqua NC's total investment-to-date in its AMR meter replacement program is $5.667 million. Of this total, approximately 61%, or $3.452 million, relates to the cost of the AMR meters ($1.635 million) and the ERTs ($1.817 million). In his adjustment, witness Junis excludes the cost of the ERTs ($1.817 million) and replaces the cost of the AMR meters ($1.635 million) with his calculated cost of $1.014 million for standard, manually-read meters.[1] As a result, the Public Staff's adjustment for the difference in technology, prior to considering installation costs, is $2.438 million.

The Commission understands that the Public Staff has concerns with the difference in costs between the AMR meters installed by Aqua NC ($3.452 million) and witness Junis' calculated costs if standard meters had been installed instead ($1.014 million); and recognizes that difference is not an insignificant amount. However, the Commission finds and concludes that the Public Staff did not sufficiently consider that the new standard meter is, for the most part, outdated technology from the moment it is installed. As a result, the Commission would not expect a new standard meter to be used by Aqua NC the entire length of its estimated useful life. Rather, the Commission considers it most likely that Aqua NC would find it necessary to replace its re-investment in standard meters prior to the end of their useful life which would result in additional costs to the customers in the future when the new technology is installed. When that situation occurs, the Commission recognizes that it would be evaluating the impact on customers related to both the cost of the Company's proposed new meter technology and the write-off by Aqua NC of its remaining investment in standard meters. Consequently, the Commission is of the opinion that although the cost of the AMR technology is significantly greater than the cost of a standard meter, the Commission must also consider, in making its decision, the potential long-term impacts on

[1] The $1.014 million is comprised of $38.43 times 17,441 meters installed at Aqua NC Water plus $38.43 times 8,950 meters installed at Brookwood Water.

customers resulting from the selection of each technology. Based upon the evidence presented in this proceeding, the Commission finds and concludes that it is a better long-term decision for both the Company and its customers to update to the newer AMR technology in conjunction with Aqua NC's normal meter replacement program. As previously mentioned, the Commission also concludes that Aqua NC's decision to invest in AMR technology is consistent with the decisions of the principal municipalities in North Carolina.

3. The decision to use an outside contractor for the meter replacement program versus using internal labor –

The Public Staff questioned Aqua NC's decision to hire a contractor for AMR meter exchange and ERT installation and maintained that Aqua NC should have performed its AMR installation program using internal labor. Aqua NC witness Thompson asserted that the Company does not have the internal staffing for such a large meter replacement program. He contended that the Company's decision to retain an outside contractor using a bid process was reasonable and prudent. Aqua NC stated that it obtained three bids from outside contractors before selecting the vendor, consistent with its purchasing policy. He stated that the bid awards are based on price, experience, and qualifications.

The Commission observes that there was extensive testimony presented by the Public Staff concerning the appropriate hourly cost of Aqua NC's internal labor and the average time it takes to change out a meter. The Commission acknowledges that the Public Staff evaluated these two critical factors in order to determine and quantify its proposed adjustment in this proceeding. The Commission acknowledges that such analysis by the Public Staff was articulate and relevant.

Aqua NC witness Thompson disagreed with the Public Staff's recommendation to use internal labor versus an outside contractor. Witness Thompson testified that Aqua NC does not have the flexibility in its staffing or staff with the right skills to be cost effective for large scale meter exchange replacement projects. He stated that additional short-term staff would have been required in order for Aqua NC to have completed approximately 15,000 meter exchanges in 2017. The Commission gives substantial weight to the testimony of Aqua NC witness Thompson concerning the additional costs that would have been incurred by the Company if this project had not been outsourced and that these costs were not included in the labor cost per hour calculated by witness Junis. In particular, these added costs include the cost to hire, train, and terminate, temporary outside/external staff. Additional vehicles, equipment, and staff to provide project management and oversight would also be required. The Commission also gives substantial weight to witness Thompson's testimony that the outside contractor specializes in meter exchange programs; uses specialized software that requires a specific installation workflow to be followed to minimize service work errors; ensure accurate readings upon installation; and minimize rework. Further, witness Thompson testified that the outside contractor, not Aqua NC, would be responsible for the correction of any problems occurring as a result of an issue with the installation of the meter. The Commission views the outside contractor's ongoing support and liability for problems that arise due to the installation as beneficial to Aqua NC and its customers; such benefits should be considered in the evaluation of the cost difference between internal labor costs and an external contractor. The Commission also gives some weight to the testimony of witness

Thompson that he was aware that Durham, OWASA, and Fayetteville PWC all used outside contractors to install the new technology.

The Commission finds the Public Staff's argument that Aqua NC should have performed its AMR installation program using in-house labor to be unpersuasive for the many credible reasons testified to by Company witness Thompson. The testimony offered by witness Thompson on this point was supported by substantial evidence.

For these reasons, the Commission finds and concludes that the Company's decision to retain an outside contractor for its meter replacement program was reasonable and prudent.

4. Lack of data being shared with customers —

Witness Junis expressed concern that customers are not aware of the data the Company has available concerning their daily usage. He also maintained that the lack of data being shared with customers is the biggest flaw of the current status of the Company's implementation of AMR meters. The Commission acknowledges that Company witness Becker testified that there are ways that this information can be provided to customers in the near future, such as including information on monthly customer bills and also on the Company's new water quality website explaining that such data is available, how it is being used by the Company, and how the customer can obtain access to it. The Commission agrees with witness Junis that customers should be notified by Aqua NC that the Company is collecting the 40-day read history and that this data should be shared with AMR-metered customers. Consequently, the Commission finds and concludes that Aqua NC should take appropriate measures to share the 40-day read history with AMR-metered customers and should notify the Commission when such information is being shared and also state how it is being provided to customers.

5. Expense savings to offset the capital cost and benefits passed along to customers —

The Commission is persuaded by the testimony of witness Thompson that the AMR technology has provided the Company with a reduction in estimated bills, availability of data to support customer consumption and billing inquiries, meter reading efficiency, and a reduction in manual meter reading errors. Further, the Commission finds the testimony of witness Thompson credible that the indicators and tamper detection collected by the AMR meters is being used by the Company in conjunction with the data logging of the 40 daily reads to prioritize service orders and to investigate potential leaks, broken or frozen meters, and theft of service.

Moreover, Company witness Berger, in her testimony regarding nonrevenue water loss, stated that the AWWA Manual 36 lists AMR/AMI technology as a primary method for addressing apparent losses for small water utilities because it limits "systematic data handling errors in customer billing systems, customer metering inaccuracies, and unauthorized consumption...." The Commission finds and concludes that this is another benefit of AMR technology for both the Company and its customers, especially given the fact that the Commission discusses elsewhere in this Order its decision that the Company should maintain a certain standard regarding its unaccounted for water.

The Commission gives substantial weight to the testimony of witness Thompson that the new technology takes time to deploy and full utilization and visibility to the customer often does not occur until the Company is able to reach some level of critical mass and that the functionality of the technology will increase as the buildout progresses. Further, the Commission agrees with witness Thompson that the current level of utilization of the data collected by the AMR system is producing tangible operational and customer benefits.

Based upon the testimony of witness Junis, the Commission recognizes that Aqua NC materially increased the rate of its meter replacement program in 2017. Witness Junis testified that Aqua NC averaged 569 meter replacements for Aqua NC Water Operations from 2013 to 2016 and that in 2017, the Company replaced 15,760 Aqua NC Water Operations meters for an increase in the number of replacements over 2,600%. Such significant step-up in the meter replacement program may be due to the reason testified to by Aqua NC witness Thompson that once the program is fully deployed, the benefits to the customers will increase or possibly due to his statement that Aqua NC is the only Aqua America state not pervasively using AMR technology. Nonetheless, the step-up in the pace of meter replacements in 2017 has significantly increased the Company's requested revenue requirement in the present rate case proceeding.

The Commission acknowledges that a slower rate of meter replacement would have smoothed out the effects to customers over a longer period of time. However, the Commission gives significant weight to the testimony of Aqua witnesses Thompson and Becker that the maximum benefits to customers will be achieved once the full deployment of the AMR technology is completed for both Aqua NC and its parent company, Aqua America. Although the full benefits of this program will not be realized immediately, the Commission finds and concludes that it was prudent for Aqua NC to install the AMR technology as the Company's manual meters reach the end of their useful lives in preparation for a full utilization of the AMR technology. Based upon the evidence presented in this proceeding, the Commission concludes that Aqua NC's decision to install AMR technology rather than standard, manually-read meters was the better long-term decision for both the Company and its customers.

With respect to the benefits to be achieved by Aqua America on a consolidated basis once full deployment of AMR technology is completed in all its operating states, the Commission finds and concludes that Aqua NC should inform the Commission within six months of the issuance date of this Order, regarding the specific nature of these expected benefits for the Aqua America subsidiaries as well as the planned timing of such benefits.

Furthermore, because the Commission has concluded that Aqua NC's decision to install AMR technology was reasonable and prudent, the Public Staff's recommendation that any future increase to the depreciation rate of Water Account 334.00 Meters and Meter Installations due to the early retirements that resulted from Aqua NC's meter replacement program should be disallowed is denied.

Issues Relating to Flowers Plantation Development, Johnston County, NC

The evidence supporting these findings of fact is contained in the Company's verified Application, the testimony and exhibits of Company witness Becker, Public Staff witnesses Junis and Cooper, the Stipulation, the late-filed exhibits filed at the request of various Commissioners on the record at the evidentiary hearing, and the entire record in this proceeding.

Aqua NC's 100,000-gpd Neuse Colony WWTP Expansion of 2016

The evidence supporting this finding of fact is contained in the Company's verified Application, the testimony and exhibits of Company witness Becker and Public Staff witness Junis, the Stipulation, and the entire record in this proceeding. This finding of fact is largely informational and pertains to (1) the uncontroverted description of the Flowers Plantation development in Johnston County, North Carolina; (2) the capacity used or reserved to provide water and wastewater service to the Flowers Plantation Development; (3) the current capacity and flow reduction changes to the Neuse Colony WWTP; and (4) the stipulated adjustment to include in rate base the full amount of $908,497 for actual costs incurred by Aqua NC to build the 100,000-gpd Neuse Colony WWTP expansion in 2016.

CIAC Collected Toward Total Capacity of Neuse Colony WWTP

This finding of fact revolves around a series of contracts entered into between 1999 and 2002 between River Dell Utilities, Inc., Rebecca Flowers Finch (d/b/a River Dell Company), and Heater Utilities, Inc. (Heater). Ex. Vol. 12, pp.139-140. Pursuant to the January 14, 1999 Purchase Agreement, Heater was responsible for the "construction of all necessary expansion to the WWTP up to the [DEQ] permitted discharge of 750,000 gpd." Ex. Vol. 12, p. 112. Additionally, the Purchase Agreement states, in pertinent part:

> There shall not be a purchase price for Existing Wastewater Facilities as Heater shall be responsible to construct all WWTP expansions and the existing 50,000 gpd WWTP shall be transferred to River Dell, at River Dell's sole option, without any purchase payment to Heater, once Heater has constructed the first expansion to the WWTP which will probably be 250,000 gpd.

Id. at 106.

The Purchase Agreement further states:

> Secondary Developer shall pay to Heater a cash contribution in aid of construction the same dollar amount per gallon that Heater paid for the cost of design, engineering and construction of the last WWTP expansion including regulatory mandated upgrades to the wastewater treatment process.

Id. at 127-28.

Company witness Becker testified that the current available capacity of the Neuse Colony WWTP is 350,000 gpd, which includes the recent 100,000-gpd capacity upgrade completed in 2016. The WWTP was originally permitted at 360-gpd per residential customer. Over time, the Company applied to DEQ for design flow reductions at the Neuse Colony WWTP, which when granted, reduced the adjusted daily sewage flow design rate from 360-gpd to 240-gpd per residential customer, and then again from 240-gpd to the current rating of 180-gpd per residential customer.

Public Staff witness Junis testified that the western half of the Flowers Plantation development (Neuse Colony) was to be served by the Company's Neuse Colony WWTP, while the eastern half of the Flowers Plantation development (Buffalo Creek) was to be served by purchased wastewater treatment capacity from the County's WWTP. He elaborated that, functionally, wastewater from both Neuse Colony and Buffalo Creek would flow to Aqua NC's Neuse Colony WWTP, where it then could be diverted to Johnston County based on operational needs. Tr. Vol. 12, pp.138-39. The point of delivery to the County's collection system, as originally contracted in the Amended Purchase Agreement, was to be located across Highway 42 from Aqua NC's Neuse Colony WWTP.

Witness Junis testified that the Company has sold (reserved), on the Neuse Colony side of the Flowers Plantation development, 561,001 gpd of wastewater capacity to developers through connection fees and capacity fees, including amounts sold (reserved) by Heater prior to its acquisition by Aqua NC. He argued that the Company oversold capacity in the Neuse Colony WWTP by at least 200,000 gpd beyond the daily sewage flow design rate originally permitted by DEQ. Witness Junis further contended that Aqua NC is obligated to provide treatment of wastewater that its current infrastructure may not be able to properly store and treat. He stated that if the obligated flow is realized in a short period of time, there would be an increased risk of wastewater overflows and/or incomplete treatment and contaminant exceedances. Finally, witness Junis testified that the Company collected 6% more CIAC for the Neuse Colony WWTP than the original cost of the utility Plant in Service, while purportedly overselling the plant capacity, which he contended would result in a CIAC shortage when the Company is necessitated by actual flows and the 80-90% rule promulgated by DEQ[1] to expand further the Neuse Colony WWTP or to purchase additional capacity from the County.

In his rebuttal testimony, Company witness Becker testified that witness Junis mistakenly based his opinion on the amount of sold (reserved) capacity on the Company's books rather than on the current flow design rate, which in witness Becker's opinion, is the proper basis upon which business decisions to build or buy (reserve) capacity are, or should be, made. Witness Becker stated that witness Junis utilized the 360-gpd and 240-gpd ratings that were initially used to sell (reserve) capacity at the Neuse Colony WWTP but failed to consider the additional flow reductions upon which the Company's decisions to build or buy are based. Witness Becker testified that Aqua NC's position is that the flow reductions granted by DEQ have, in effect, doubled the capacity available to sell (reserve) in the Neuse Colony WWTP. Tr. Vol. 14, p. 23. Based on the current flow rating of 180 gpd, witness Becker stated that the Company is only utilizing approximately 316,000 of the

[1] See generally, 15A NCAC 02H .0223 (detailing what actions must be taken when treatment plants reach average flows of 80% and/or 90% of their permitted capacity).

total 350,000 gpd of capacity, and that it collected CIAC in the amount of $2,294,168, exceeding the original plant cost of $2,166,023.

In summary, witness Becker asserted that the Company has increased CIAC cost recovery and reduced costs by obtaining the flow reductions from DEQ which allow more lots to be served by the existing capacity and will produce more revenues and more CIAC, to the benefit of both the Company and its ratepayers. Tr. Vol. 14, p. 36.

Discussion and Conclusions

As a preliminary matter, the Commission notes that when the owner and/or operator of a Commission-regulated wastewater utility receives payments from a real property developer in exchange for the obligation to provide wastewater collection and treatment capacity to the developers' lots, those payments, however denominated in the contract between the utility and the developer, are contractual rights most appropriately designated as reservation fees. Contrary to testimony from both parties in this case, payment of a reservation fee does not convey to the developer any ownership or property interests in the utility's WWTP facilities. Rather, the utility retains the relevant ownership or property rights in its WWTP facilities. Once the lots are connected thereafter to the utility's plant, the developer retains no rights whatsoever. While the lot owner maintains the right to receive monthly utility wastewater service from the monopoly utility indefinitely into the future, the utility owns the WWTP facilities throughout this process. Prior to the buildout of these lots, payment of reservation fees obligates the utility to reserve a given portion of capacity to the exclusion of other users, but does not bestow on the developers any ownership interests in the capacity of the WWTP.

Absent extraordinary circumstances, the reservation fees are tied to the specific real property – typically individual lots – under development by the developer. To the extent the lots covered by the contract between the developer and the utility do not require use of the capacity originally contemplated due to, for example, reduced flows from those lots into the WWTP, any capacity contemplated by the agreement, which is no longer necessary to serve those lots, is not fungible – it is not transferable by the developer to other property nor eligible for resale by the developer to another developer of a different tract of land. To the contrary, if the utility has available capacity remaining after serving lots that it is contractually obligated to serve, it may (and should) make this additional capacity available to other users in exchange for additional reservation fees. Where such additional capacity remains, the utility need not invest in additional WWTP facilities, but rather should make use of such unused capacity by serving more consumers without additional cost.

Given that the reservation fees represent cost-free capital, as long as the reservation is for capacity in the utility's WWTP, or capacity that is otherwise obtained by the utility, the fees received by the utility constitute Contributions in Aid of Construction (CIAC). The CIAC reduces the rate base of the utility, and, thus, the fixed costs that otherwise would be recovered over time in the monthly wastewater charge to ratepayers.

As a rate base/rate of return utility, Aqua NC should have in its rate base a reasonable level of investment per connection and should otherwise seek to maximize its CIAC. However, the

Company has a uniform wastewater rate structure. All of its investment in WWTPs, wherever located, is consolidated into the Plant in Service account. Designations for individual plants or other facilities owned by the utility are lost for ratemaking purposes. Likewise, all reservation fees to reserve capacity, wherever they originate, are consolidated in Aqua NC's regulatory books of account as CIAC and reduce Aqua NC's consolidated rate base accordingly. For ratemaking purposes, there is no need to match CIAC received by a particular developer to the WWTP in which Aqua NC builds or otherwise obtains from a third party capacity for the developer. Because Aqua NC's wastewater customers in Flowers Plantation development pay a uniform wastewater rate, funds that Aqua NC receives from developers with respect to property located anywhere in Flowers Plantation development, including in Neuse Colony and Buffalo Creek, benefit all Aqua NC wastewater customers. Therefore, assertions that Aqua NC overcollected CIAC from developers for its Neuse Colony WWTP are misguided.

The Public Staff divides its analysis of the Johnston County issues into a Neuse Colony discussion and a Buffalo Creek discussion and relies significantly on contracts executed in 1999 and 2002 that form the basis of this dichotomy. These contracts were executed many years ago on the assumption that Neuse Colony would be served by the Neuse Colony WWTP as expanded, and Buffalo Creek would be served, for a limited period of time, on an interim basis by the Neuse Colony WWTP, and then in the future ultimately served by capacity in the County's WWTP. As of the end of the test year in this case, all of the wastewater from the Flowers Plantation development is served by the Company's Neuse Colony WWTP, and, even if later served in part by the County at some point in 2019, the Aqua NC collection system will first transport all such wastewater to its Neuse Colony WWTP. At that point, all the Flowers Plantation wastewater loses its identity based on the origination point, and each gallon is treated the same. As of the end of the test year, therefore, the initial assumption that the wastewater from the Buffalo Creek side would be treated in the County's WWTP changed and evolved as the Flowers Plantation development has been built out. Therefore, the need to distinguish between wastewater collected within Neuse Colony or Buffalo Creek for purposes of establishing uniform utility rates does not exist at this time.

While an issue exists as to the Commission's approval of the 1999 and 2002 contracts, whatever approval the Commission granted, such approval did not extend expressly to the discrete paragraphs, subdivisions, and topics addressed within the contracts. Aqua NC has agreements with Flowers Plantation and other developers reserving capacity and requiring the payment of reservation fees, but for the most part, these agreements and the amount of reservation fees paid or uses to be made of such fees, have not been approved by the Commission. Reservation fees are deemed to be utility charges assessed in exchange for the right to receive future utility services, and, therefore, should be set forth in tariffs approved by the Commission.[1] Nevertheless, for ratemaking purposes there exists no need to match reservation fees to particular costs Aqua NC incurs to serve its customers. Aqua NC can use capacity in either its own WWTP facilities or capacity reserved from Johnston County to serve any customer anywhere in Flowers Plantation. Consequently, arguments that Aqua NC has oversold capacity in its WWTP are erroneous (setting aside the issue of contract reservations vs. reservations based on reductions in flow). Aqua NC's

---

[1] See e.g., Order of Clarification, In the Matter of Carolina Water Service, Inc., of North Carolina – Investigation of Tap and Plant Modification Fees, Docket No. W-354, Sub 118, et al., p. 7 (Feb. 27, 1998).

ability to serve customers in Neuse Colony is not limited by capacity in the Neuse Colony WWTP alone. Likewise, arguments that Aqua NC collected excess CIAC within Neuse Colony are misplaced.

To adopt the Public Staff's position would result in significant unused capacity and rate base at the Neuse Colony WWTP, which could not be otherwise utilized, and consequently would not be in the interest of the ratepayers or the Company. In the final analysis, this is a matter of property rights and a question of which party owns the facility. The Neuse Colony WWTP is owned by Aqua NC and not by the developers who develop the lots. There is simply no evidence to show that the policy followed by the Company has or is likely to result in outflows, incomplete treatments, or contaminant exceedances as predicted by the Public Staff. The Commission relies on DEQ determinations as to whether sufficient capacity exists to permit appropriate treatment. Flow reductions have doubled the capacity available for the Company to sell, which increases the potential capacity (reservation) fees to be collected and revenues to be generated, benefitting both the Company and its ratepayers. Accordingly, the Commission concludes that the Company has not committed capacity in excess of what is available through a combination of capacity at the Neuse Colony WWTP and capacity obtained from the County's WWTP, and, furthermore, that Aqua NC may continue to allow reservation of additional capacity for which it collects additional corresponding CIAC, as long as Aqua NC remains in compliance with DEQ determinations and regulations in so doing.

CIAC Collected for Construction of Buffalo Creek Pump Station and Force Main

On May 14, 2002, River Dell Utilities, Inc., Rebecca Flowers Finch (d/b/a River Dell Company), and Heater entered into an Amended Purchase Agreement for the purchase of the water and wastewater utility systems serving Buffalo Creek. The Amended Purchase Agreement provided that Heater "will treat the wastewater from the land at Flowers Plantation Sections I, II and IIIB on an interim basis at [the Neuse Colony WWTP], and then in the future have the County provide bulk wastewater treatment for Heater." Ex. Vol. 12, p. 172. This provision necessitated construction of a pump station and force main to deliver the wastewater from the Buffalo Creek side to the Neuse Colony WWTP. "Functionally, wastewater from both the Neuse Colony side and the Buffalo Creek side would flow to the Neuse Colony WWTP site where it would be diverted to the County based on operational needs." Tr. Vol. 12, pp. 138-139. Additionally, the Amended Purchase Agreement states, in pertinent part:

> Heater shall pay $75,000 plus 50% of the cost of the construction of the Pump Station and Force Main ... Heater's 50% payment of the balance shall be recovered equally from the first 2,000 single-family equivalents.

Ex. Vol. 12, p. 186.

Company witness Becker testified that Aqua NC failed to include a pro rata portion of the costs of construction of the Buffalo Creek Pump Station and Force Main in secondary developer contracts executed between 2006 and 2018, resulting in approximately $315,000 of uncollected CIAC, which should have been collected as contemplated for in the Amended Purchase Agreement. Witness Becker explained that part of the reason for this oversight was the complicated and unusual nature of the 1999 and 2002 multi-party contracts. Witness Becker also noted that when the Company acquired Heater in 2004, the Company's management team underwent a significant transition of key personnel. He likewise noted that, between the time when CIAC was first collected toward the Johnston County capacity purchase and when this issue came before the Commission for adjudication, four rate cases and numerous contiguous extension filings have occurred that allowed an opportunity for regulatory oversight of the secondary developer contracts in question.

In response to questions from the Commission, witness Becker noted that Aqua NC does not have a uniform connection fee and that the connection fees fluctuate by area. He further testified that, before a lot can be connected to a wastewater collection system, it is subject to review by the Public Staff and must be approved by the Commission through an application for a Certificate of Public Convenience and Necessity or a Notification of Contiguous Extension.

Witness Junis testified, and was uncontroverted by the Company, that after removing Heater's contractually-allowable investment of $75,000, overhead, and interest costs from the $1,079,301 total cost of the Buffalo Creek Pump Station and Force Main, Heater's 50% of the balance amounts to $440,816. Heater collected the $440,816 costs that were to be recovered from Rebecca Flowers Finch (d/b/a/ River Dell Company). Ex. Vol. 16, p. 289. Witness Junis further testified that $440,816, divided equally among 2,000 single-family residential equivalents (SFREs), per the terms of the Amended Purchase Agreement, would be $220.41 per SFRE. According to witness Junis, Aqua NC failed to invoice developers for CIAC, to which it was contractually entitled, in the amount of $315,687[1]. Ex. Vol. 12, pp. 145-146. On examination by Chairman Finley, witness Junis testified that approximately one-third of the CIAC for the Buffalo Creek Pump Station and Force Main should have been collected prior to the end of the updated test year period, ending October 31, 2013, in Aqua NC's last general rate case in Docket No. W-218, Sub 363. Witness Junis provided a late-filed exhibit, clarifying that Aqua NC failed to invoice and collect from developers $218,999 in CIAC for the Buffalo Creek Pump Station and Force Main subsequent to the Sub 363 updated test year cutoff of October 31, 2013.

Company witness Becker disagreed with witness Junis' proposed adjustment to impute $315,687 of uncollected CIAC for the Buffalo Creek Pump Station and Force Main. Witness Becker reiterated that the Amended Purchase Agreement was executed in 2002, that much of the Heater management team subsequently left the Company in early 2005, and that the first developer contract entered into pursuant to the Amended Purchase Agreement was not executed until 2006. Witness Becker admitted that, as a result of these changes and an oversight during the transition in management, Aqua NC failed to collect a pro rata portion of the capacity fees from developers between 2006 and 2018, resulting in approximately $315,000 of uncollected CIAC. Witness Becker contended that, with the benefit of hindsight and after numerous filings and proceedings in which these issues conceivably could have been raised, the Public Staff now is seeking what amounts to a $315,000 write-off of rate base and penalty to Aqua NC. Tr. Vol. 14, pp. 24-25.

[1] Through June 2018, Aqua NC failed to collect wastewater capacity payments from 1,432.27 SFREs (1432.27 SFREs x $220.41 per SFRE = $315,687).

In a late-filed exhibit,[1] the Public Staff stated that the Amended Purchase Agreement and a secondary developer contract were filed with the Commission on February 7, 2006, and approved[2] by the Commission in Docket No. W-218, Sub 538, by Order dated April 6, 2006.

Discussion and Conclusions

The Commission concludes that the Company did not act prudently or reasonably when it failed to collect CIAC to which it was contractually entitled in the amount of $315,687, for the construction of the Buffalo Creek Pump Station and Force Main. The Bulk Wastewater Agreement was approved by the Commission in 2002, prior to Aqua NC's acquisition of Heater. However, in the Company's Notification of Contiguous Extension filed on February 7, 2016, in Docket No. W-274, Sub 538, Aqua NC's management attached as an exhibit the Amended Purchase Agreement, which outlined Aqua NC's right to collect from developers sufficient CIAC for the construction of the Buffalo Creek Pump Station and Force Main. Similarly, the Amended Purchase Agreement was approved by Commission Order dated April 6, 2006, and Aqua was required to comply with the terms of all other Commission-approved contracts referenced herein.[3] In addition, an internal Heater memo dated August 6, 2004, clearly set forth Heater's understanding that 50% of the cost of the Buffalo Creek Pump Station and Force Main was to be collected from the secondary developers, pertaining to the first 2,000 SFREs. The amount of capacity fees as CIAC that should have been, but was not, collected by Aqua NC for the construction of the Buffalo Creek Pump Station and Force Main is not in dispute by the parties in this proceeding.

The Commission gives weight to Aqua NC's admission that it failed to include the appropriate contractual language in its contracts with secondary developers executed between 2006 and 2018. Likewise, Aqua NC does not dispute that it failed to collect CIAC in the amount of $315,687, as a result of Company management's "oversight." Tr. Vol. 14, pp. 24-25. The Commission also gives weight to Aqua NC witness Becker's admission on cross-examination, for which the Commission applauds Aqua NC for its accountability on this issue, that documentation exists demonstrating Aqua NC's intent to collect from the master developer of the Flowers Plantation the agreed-upon capacity fees as CIAC on a going-forward basis, but that Aqua NC's management failed to follow through on this. Failure of Aqua NC's management to review appropriately the contracts and other documentation addressing the utility's responsibilities and obligations undertaken by the prior owner with respect to Flowers Plantation provides insufficient excuse for failing to collect the contracted-for CIAC.

[1] On October 11, 2018, and as corrected on October 15, 2018, the Public Staff entered into the record its Late-Filed Exhibit Relating to the Flowers Plantation Contributions In Aid of Construction Issues.

[2] Ordering Paragraph 5 of the Commission's Order Recognizing Contiguous Extension and Approving Rates states "[t]hat Heater's agreements with developer, Walker Woods Development, LLC, and the developer River Dell Utilities, Inc., and River Dell Company, are hereby approved."

[3] Despite said contracts being filed with the Commission and subject to review by the Public Staff, the capacity fee Aqua NC charged to developers for the Flowers Plantation lots were neither included in Aqua NC's filed tariff, nor raised as a contested issue in any of Aqua NC's prior general rate cases or its numerous filings of contiguous extension notifications.

While the Commission agrees with Aqua NC that one contributing factor to this "oversight" could have been the fact that the pertinent capacity fees to be collected as CIAC for the Buffalo Creek Pump Station and Force Main should have been, but were not, included on the Company's tariff, the Commission is unpersuaded that this fact somehow excuses Aqua NC's responsibility to prudently manage the various contractual obligations and rights it assumed, and over which it subsequently had control, after it acquired Heater in 2004. On the other hand, Commission Orders in prior Aqua NC general rate cases have included the costs of the Buffalo Creek Pump Station and Force Main in rate base without offsetting CIAC that Aqua NC failed to collect. It is the Company's obligation to include in its filings and its rate case proceedings information concerning its ability to collect CIAC to help finance utility plant; it is not the Commission's obligation to guess about such matters. The Commission also depends on the Public Staff, as the agency responsible for investigating and auditing Aqua NC's books, to make timely recommendations with respect to cost-of-service adjustments. The contractual provisions at issue here were available for inspection and review prior to the instant case and more appropriately should have been brought to the Commission's attention in a timelier manner.[1] With that said, however, the Commission finds unpersuasive Aqua NC's contention that subsequent Commission approval of a secondary developer contract that lacked certain language pertaining to Aqua NC's right to collect capacity fees as CIAC somehow superseded the controlling terms of the 2002 Amended Purchase Agreement and Bulk Wastewater Agreement. Furthermore, upon Commission approval of the controlling Amended Purchase Agreement and Bulk Wastewater Agreement, the Commission had no reason, until the instant proceeding, to suspect that Aqua NC would not appropriately enforce the rights and obligations it was afforded pursuant to such contracts. It was Aqua NC's sole responsibility, not the responsibility of the Public Staff or of the Commission, to ensure that appropriate wording would be appropriately carried forward to future secondary contracts with developers.

For these reasons, the Commission will limit its disallowance of CIAC to that which Aqua NC failed to collect after its last rate case test year period, ending October 31, 2013, in Docket No. W-218, Sub 363. The Commission, therefore, concludes that it was not reasonable or prudent for Aqua NC's management to fail to collect sufficient CIAC to which it was entitled, in the amount of $218,999 (reflecting the amount of CIAC that the Company failed to collect subsequent to the updated cutoff date in its last rate case of October 31, 2013), for the construction costs of the Buffalo Creek Pump Station and Force Main.

The Commission further notes that Aqua NC witness Becker indicated that the Company will review the lots to determine if additional CIAC can be collected by addressing the capacity fee issue in its future contracts with secondary developers. If Aqua NC is able to collect additional capacity fees as CIAC for the construction of the Buffalo Creek Pump Station and Force Main,

[1] With respect to future proceedings to review applications for Certificates of Public Convenience and Necessity and/or notifications of contiguous extensions filed with the Commission pursuant to Commission Rule R7-38, the Commission expects that, going forward, the Public Staff will audit and more closely scrutinize water and sewer contracts governing capacity and/or connection fees between the developer, the utility, and/or any third party from whom wastewater capacity is purchased. In the future, the Public Staff shall, for all such water utility contracts (not only those to which Aqua is a party), more closely investigate developer contracts before recommending the approval of such contracts to the Commission. Likewise, the Commission also expects the applicant (utility) to disclose and account for CIAC available from third parties.

Aqua NC may request that the Commission reevaluate this issue in a future proceeding based upon what Aqua NC may be able to collect in the future from lots other than the first 2,000 SFREs (i.e., Aqua NC could, in theory, and assuming it is able to now collect these fees pursuant to future contracts executed with secondary developers, request that the imputed CIAC in this proceeding become actual cash CIAC collected prior to the Company's next general rate case).

Aqua NC's Payment to Johnston County for 250,000 gpd of Wastewater Capacity

Company witness Becker testified that the Flowers Plantation development is expected to grow by approximately 300 lots per year. Based on this anticipated growth, the Company in 2017 began reviewing its capacity needs for Buffalo Creek based on actual flows. While considering plans to expand the Neuse Colony WWTP, the Company decided to examine the option of purchasing (reserving) wastewater treatment capacity from Johnston County (the County). The Company's option to purchase (reserve) wastewater capacity from the County expires in 2022. For these reasons, the Company determined that the prudent approach was to begin acquiring (reserving) and using capacity from the County before such time as Aqua NC's option to purchase capacity from the County expires.

In a Bulk Wastewater Service Agreement executed on May 14, 2002, Heater and Johnston County agreed that at some future date (possibly after Heater built out its 750,000 gpd Neuse Colony WWTP), Heater would purchase (reserve) bulk wastewater from the County and pay the County's then-prevailing capacity fee. The Bulk Wastewater Service Agreement further provided that the County's then-current capacity fee was \$5.50 per gpd, which would be adjusted by Johnston County in the future, based on the County's cost of construction of its WWTP.

According to witness Becker's testimony, in 2009, Johnston County quoted a price of \$6.29 per gpd for capacity, which included \$4.83 per gpd for wastewater treatment capacity and \$1.46 per gpd for transmission fees to upgrade the County collection system. The Company did not consider this to be a prevailing rate as referred to in the 2002 Bulk Wastewater Service Agreement, but rather to be an initial price quote. Aqua NC reached this conclusion because Johnston County does not have published (prevailing) rates for wastewater capacity, but rather states in its guidelines that wastewater capacity fees are determined on a negotiated basis.

In 2018, Johnston County quoted a rate of \$8.48 per gpd to Aqua NC, which included a \$5.34 gpd charge for wastewater treatment capacity and \$3.14 per gpd for transmission fees to upgrade the County's collection system.[1] Aqua NC decided to begin the process of purchasing (reserving) capacity from the County in 2018, and consequently paid the \$8.48 per gpd rate.

Because Aqua NC had been collecting \$6.00 per gpd in CIAC from most developers, the Company concluded that it had appropriately charged and received sufficient funding to purchase (reserve) the 250,000 gpd of wastewater capacity from the County in 2018. The Company viewed the \$5.34 per gpd capacity charge to be reasonable, but not the \$3.14 per gpd transmission fee,

[1] This fee does not reimburse the County for the interconnection facilities between Aqua NC's Neuse Colony WWTP and the County's collection system. Aqua incurs these costs. However, the interconnection point is to the County's collection system, not directly into the County's WWTP. The \$3.14 per gpd is a fee the County assesses generically to those connecting to its transmission and connection system.

because the initial contract provided that the capacity fee could be adjusted based only on the cost of construction for the County's WWTP and it was the Company's understanding that Johnston County's WWTP had not been upgraded since 2006.

Company witness Becker stated that Aqua NC engaged the Public Staff to proactively discuss the purchase of Johnston County wastewater capacity to serve Buffalo Creek. Tr. Vol. 5, p. 39. On June 21, 2018, Aqua NC purchased 250,000 gpd of wastewater treatment capacity from Johnston County for $2,120,000.

On cross-examination by the Public Staff on September 24, 2018, witness Becker stated and then reaffirmed that Aqua NC has received the necessary engineering approvals from DEQ to construct the interconnection to the Johnston County wastewater system. Tr. Vol. 15, p. 54.

Witness Junis cited Paragraph 7.I. of the Amended Purchase Agreement, which provides, in pertinent part, that "Secondary Developer shall pay to Heater a cash contribution in aid of construction the same dollar amount per gallon as the County's then current bulk wastewater capacity fee, which at the time of the execution of this Amended Agreement is $5.50 per gallon." Ex. Vol. 12, p. 141.

Witness Junis testified that Aqua NC sold (reserved) approximately 333,671 gpd of wastewater capacity to Buffalo Creek developers. He further testified that Aqua NC charged developers CIAC in the amount of $5.50 per gpd in 2006, which was the first time the Company sold (reserved) wastewater capacity to serve Buffalo Creek. Witness Junis testified that Aqua NC subsequently charged Buffalo Creek developers CIAC in the amount of $6.00 per gpd. Witness Junis asserted that the wastewater capacity fee to be paid to the County is a negotiated rate that was provided by Johnston County to Aqua NC on at least four occasions – in 2002, in 2009, and twice in 2018. Ex. Vol. 12, p. 146.

In support of the Public Staff's position, witness Junis testified that Aqua NC collected $1,497,400 for 250,000 gpd of wastewater capacity between January 11, 2006, and November 10, 2017. Tr. Vol. 12, p. 148. He testified that, in his opinion, the capital cost of $2.120 million for the wastewater capacity purchased from Johnston County and associated CIAC of $1.497 million should be removed from rate base. Tr. Vol. 12, pp. 148-150. Witness Junis asserted that Aqua NC could have avoided creating rate base if it (1) had better tracked the quantities of capacity being sold (reserved) to developers on each side of the Flowers Plantation development; (2) better matched the CIAC to be collected with Johnston County's then-current capacity rate; and (3) incrementally purchased (reserved) capacity from Johnston County as it received the associated CIAC from developers. Tr. Vol. 12, pp. 151-152.

Witness Junis asserted that the wastewater capacity purchased (reserved) by Aqua NC from Johnston County is not used and useful, as Aqua NC has not yet interconnected to Johnston County's wastewater collection system.

The Public Staff in its late-filed exhibit confirmed that the Agreement was filed with the Commission and approved by Commission Order in Docket No. W-274, Sub 392.[1] The Agreement was not found to be filed in any other dockets.

In rebuttal, witness Becker again testified that the capacity that witness Junis contends that the Company should have been purchasing (reserving) over the last decade was not needed throughout that time, and, therefore, it would have been imprudent for the Company to purchase (reserve) additional capacity before it was needed.[2] For that reason, witness Becker argued that it would be inappropriate for the Commission to impute $622,500 of CIAC, as recommended by the Public Staff, because Aqua NC acted prudently in not purchasing (reserving) unneeded capacity over the past 12-year period.

Witness Becker testified that it is appropriate to include these costs in rate base because the capacity will be used and useful within a reasonable time frame after the close of the evidentiary hearing. He stated that he has been advised that North Carolina courts have held that customers could be assessed costs for future customers when the costs were based on a short-term projection. For these reasons, witness Becker argued that it is appropriate to include this purchase in rate base, or, in the alternative, to allow the Company to create an asset held for future use and recover carrying charges on the amount of the purchase. As a second alternative, witness Becker argued that both the purchased capacity asset and the entire amount of CIAC collected toward same should be removed as offsetting rate base assets.

Company witness Becker testified that, based on the rapid growth rate of the Flowers Plantation development and the 2022 sunset clause on Aqua NC's option to purchase wastewater capacity from Johnston County, Aqua NC determined that it needed the capacity and purchased 250,000 gpd of capacity for $8.48 per gpd. He explained that "Aqua decided to purchase as much capacity as could be purchased using the CIAC received from Buffalo Creek developments of $2,000,925" for 333,671 gpd. Tr. Vol. 14, p. 30.

Witness Becker asserted that the Amended Purchase Agreement does not explain how the $5.50 per gpd capacity fee was determined or how it is defined. He added that the capacity fee to be paid to Johnston County "shall be adjusted in the future based on the County's cost of construction of the County's wastewater treatment plant," and to the Company's knowledge, there has been no construction of the Johnston County wastewater treatment plant since 2006.

[1] Ordering Paragraph 5 of the Commission's Order Granting Franchise and Approving Rates states "[t]hat Heater's agreement with Johnston County and the developer, Rebecca Flowers, d/b/a River Dell Company, is hereby approved."

[2] Aqua NC had concerns that if the payment to Johnston County was made to reserve wastewater capacity prior to the time the actual capacity was needed, the Company would not receive rate base treatment on the asset (capacity purchased from Johnston County). On p. 20 of Aqua NC witness Becker's rebuttal testimony, he states that "the premature purchase of unneeded capacity from Johnston County benefits only [Johnston] County..." Tr. Vol. 14, p. 28. The Commission agrees with Aqua NC that it was prudent to wait to reserve capacity from the County until needed and that construction of Aqua NC's interconnection to the County should appropriately coincide with the need for the capacity. The Commission rejects inclusion of the costs of capacity payments as not yet used and useful. Had Aqua NC adhered to the Public Staff's view that the Company reserve capacity concurrently with receipt of CIAC from Buffalo Creek developers, Aqua NC for years unwisely would have expanded rate base funds ineligible to include in cost of service because not used and useful.

Tr. Vol. 14, p. 27. Witness Becker testified that, with the advantage of hindsight, Public Staff witness Junis effectively proposes to impute money (the shortage of approximately $2.49 gpd) that Aqua NC did not collect from developers as CIAC. Id. at 30-31.

Witness Becker disagreed with witness Junis' proposed adjustment to remove from Plant in Service the wastewater capacity fee of $2.120 million that Aqua NC paid to Johnston County in 2018. He stated that witness Junis does not recommend removing a corresponding amount of CIAC, but instead recommends removing only $1.497 million of CIAC. Tr. Vol. 14, p. 34. Witness Becker did not dispute that the Company "only collected an average of $5.99 per gpd from developers over the past 12 years for the first 250,000 gallons" of wastewater capacity for Buffalo Creek. Tr. Vol. 14, p. 31.

Witness Becker stated that the Bulk Wastewater Service Agreement was filed with the Commission in Docket No. W-274, Sub 392. He further stated that, had the provisions for recovery of capacity fees to be collected from developers and paid to the County been included in Heater's tariff, then it would have been less likely that these provisions "would have been overlooked." Tr. Vol. 14, p. 32. Witness Becker testified that "[t]he Commission's Orders are important, and they are relied upon by investors." Tr. Vol. 14, pp. 32-33.

Witness Becker testified that the purchased wastewater capacity from Johnston County will be used and useful within a reasonable amount of time after the test period, and, therefore, it would be appropriate to include the full amount in rate base. Alternatively, witness Becker asserted that, at the very least, the Company should be allowed to create an asset held for future use and recover carrying charges on the amount of the 250,000 gpd capacity purchase from Johnston County. Tr. Vol. 14, p. 35.

Discussion and Conclusions

The Commission has carefully reviewed the evidence and contentions of the parties on the issue of reservation and transmission fees paid to Johnston County and the reservation fees collected from Flowers Plantation developers.

As a preliminary matter, throughout the litigation of this rate case, both Aqua NC and the Public Staff have consistently treated the capacity payment to Johnston County as an asset accounted for in the same account Aqua NC uses for its Plant in Service. The Commission relies on this specific accounting classification, which was uncontested by any party to this rate case, in deciding the disputed issues related to Johnston County. In so doing, the Commission does not make any determinations as to the appropriateness or accuracy, for ratemaking purposes, of the non-dispositive accounting classifications and/or treatment of the capacity payment to Johnston County as an asset in Aqua NC's Plant in Service account.

In deciding these issues, the Commission highlights that there were several different ways it could have decided the myriad complex issues presented by the circumstances comprising the Johnston County and Flowers Plantation facts. Indeed, the parties litigated these issues zealously, but the Commission is not persuaded that any of the outcomes suggested by the parties as they pertain to these issues are (1) correct as a matter of law; or (2) preferable over the ratemaking discretion exercised by the Commission in determining these issues in the manner set forth herein.

In this case, no party has questioned whether the costs to purchase capacity from Johnston County are "known and measurable"; indeed, the Company documented these costs and has shown that they were in fact incurred. Rather, the arguments raised by the Public Staff challenging the inclusion of the Company's Johnston County capacity costs in rates hinge on whether those costs are "reasonable and prudent" and whether they are "used and useful."

The Commission notes that the published Johnston County Water and Sewer Policies do not establish a prevailing rate for wastewater treatment capacity but rather provide for a negotiated fee based on gpd of average flow based on the cost of infrastructure improvements. Furthermore, the County's capacity fee was to be adjusted in the future based on the County's cost to construct its WWTP. A negotiated fee contemplates some interaction between the parties and envisions that a mutual decision will be reached. The record is clear that no such qualifying upgrades have been made by the County to its WWTP since 2006.

The Commission further notes that it is possible that Johnston County, sometime after the execution of the May 14, 2002 Agreement, changed its policy such that increases in its prevailing capacity fee would be negotiated based on costs of infrastructure improvements, including those made to its collection system, and would not be based upon the cost of construction of its WWTP. However, even if such policy changes were made, they do not negate or otherwise supersede the contractual obligations accepted by Johnston County in the May 14, 2002 Agreement. An analysis of the rate proposals offered by the County in 2009 and 2018 must be reconciled with the provisions of the May 14, 2002 Agreement, which clearly contemplate that the capacity fee and the charges for transmission and treatment services are separate and distinct. The 2009 letter from Johnston County to the then-President of Aqua NC distinguishes the $4.83 per gpd capacity cost as being based on the unit capital cost of the County's most recent WWTP facilities expansion, which is consistent with the original Agreement. The $1.46 per gpd transmission cost was stated as another charge, separate and distinct from the capacity charge, and is not related to treatment as specifically referenced by the Agreement.

A review of the July 18, 2018 letter from Johnston County to witness Becker leads to a similar conclusion. Although the total fee proposal was $8.48 per gpd, it was separated into a proposed capacity fee of $5.34 per gpd for WWTP capacity based on the cost of the last expansion, which occurred in 2006, again consistent with the intent of the May 14, 2002 Agreement. The email from Johnston County to the Company on August 23, 2018, supports this interpretation. Accordingly, the Commission concludes that the Company's contention that the rate quoted by the County in 2018 included a capacity fee of $5.34 per gpd for capacity and a separate charge of $3.14 per gpd for transmission is reasonable.

The Public Staff alleges that it was unreasonable for the Company not to purchase capacity from the County over time or to adjust the amount of CIAC charged to developers based on the rates provided by Johnston County over time. However, to accept this argument, the Commission must ignore the existing contractual provision that the capacity charge and the transmission charge are separate and distinct charges, which is a position that the Commission does not accept. Even if the May 14, 2002 Agreement were subject to a different interpretation, the Commission is unable to conclude that Aqua NC's interpretation is unreasonable, and further notes that the Company's interpretation of the contract has remained consistent since 2002. Furthermore, the Commission notes that the 2002 Agreement is ambiguous or silent about several material issues now disputed in the instant proceeding, including whether the capacity would be reserved in small increments, when the capacity would be reserved, and the timing of when such reservation payments would be owed by Aqua NC.[1] The Agreement also states, "Heater shall pay to the County the County's then prevailing capacity fee for bulk wastewater. The current fee is $5.50 per gpd, which shall be adjusted by the County in the future, based on the County's cost of construction of the County's wastewater treatment plant."

The final capacity fee was clearly the result of a negotiated rate. Therefore, the Commission concludes that it would have been unreasonable for Aqua NC to ignore the contractual provisions that offered financial protection to the Company and its ratepayers by raising the $6.00 per gpd charge to secondary developers to match what amounted to mere offers received from Johnston County. Similarly, it would have been unreasonable for Aqua NC to purchase capacity on a piecemeal basis when the Company did not yet have a need for the capacity. Further, the approximate $6.00 per gpd CIAC capacity charge has been subject to review by both the Public Staff and the Commission in numerous rate cases and filings for contiguous extensions involving Aqua NC, of which the Commission takes judicial notice.

Reservation fees the Company pays to Johnston County should reduce the County's fixed costs recovered through the County's rates. As previously discussed herein, Aqua NC's payments to the County are to be negotiated. Aqua NC, therefore, should stress to the County that these reservation fee prepayments reduce the County's fixed costs, and thus should be reflected in a reduced capacity charge that Aqua NC pays to the County.

The Commission concludes that Aqua NC paid Johnston County $1,335,000, or $5.34 per gpd, to reserve the 250,000 gpd of capacity in the test year in this rate case. The Commission also concludes that Aqua NC paid Johnston County $785,000, or $3.14 per gpd, during the test year to defray the County's maintenance, upkeep, and potential extension of the County's transmission and distribution system. The Commission, in its discretion, concludes that it is reasonable and appropriate to treat the $785,000 differently from the $1,335,000.

The Commission concludes that the $1,335,000 should not be added to Aqua NC's rate base at this time because Aqua NC's interconnection to the County's transmission and distribution system was not completed as of the end of the test year, as extended to the close of the hearing, and thus, Aqua NC could not make use of its Johnston County capacity payment to serve customers at that time. Likewise, the Commission is not convinced that Aqua NC's interconnection to the County's transmission and distribution system will occur within a reasonable time period after the close of the test year in this case. Under the statute, Aqua NC's capacity payment to Johnston

[1] One such example of the contract's ambiguous nature includes that reservation payments "shall be paid for by Heater as Heater takes down the capacity." Ex. Vol. 12, p. 328.

County, therefore, is not used and useful. This finding is consistent with North Carolina case law holding that current customers should not have to pay for plant costs related to future customers.[1]

In so determining, the Commission relies on the Company's late-filed exhibits of October 3, 2018, which included a cover letter stating, in pertinent part, that "the permit for the construction of Aqua NC's wastewater collection system extension" interconnecting the Neuse Colony WWTP and Johnston County's collection Force Main was issued on September 28, 2018 (four days after witness Becker's testimony that Aqua NC had already received the necessary regulatory approval to construct the interconnection).[2] While not specifically requested by the Commission, yet informative, the Company provided a letter from witness Pearce in response to a request for information from DEQ that stated that "[i]t is currently estimated that the engineering plan submittal for the Pump Station will be submitted to DEQ before August 15, 2018 and for the interconnect construction to be completed by March 31, 2019." [3] However, Aqua NC did not submit a request to DEQ for an Authorization to Construct until September 4, 2018.[4] It similarly did not file with the Commission an application for the Wastewater Collection System Extension Permit until September 4, 2018, supplementing its application with additional information on September 11, 2018. The aforementioned submittals were provided by Aqua NC at minimum 20 days later than previously estimated by the Company. The Commission gives weight to the discrepancy between the expected and actual dates of these submittals as evidence of uncertainty as to the estimated completion date of March 31, 2019 (the last day of the first quarter of 2019), for the interconnection between the Neuse Colony WWTP and Johnston County's collection Force Main.

The Commission further notes, however, that the prototypical "used and useful" analysis does not apply neatly to these Aqua NC capacity reservation fees. Aqua NC will not use the capacity reserved from Johnston County to serve customers for some time after Aqua NC's interconnection to the County's system. Instead, Aqua NC needs the capacity to enable developers of lots within the Flowers Plantation to receive necessary development approvals and, ultimately, complete buildout. In this respect, timing of the interconnection is far less significant than placing on-line utility plant needed immediately or in the near term to serve load. With the County's commitment, Aqua NC can accommodate developers' needs now, even though Aqua NC's interconnection to the County's system is not yet complete. This arguably could have led the Commission to a different conclusion on the "used and useful" dispute, and is one factor relied

[2] The Wastewater Collection System Extension Permit was entered into the record as Aqua NC Johnston County Late-Filed Exhibit 3.

[3] The letter was entered into the record as Aqua NC Johnston County Late-Filed Exhibit 1.

[4] The Authorization to Construct was entered into the record as Aqua NC Johnston County Late-Filed Exhibit 2.

upon by the Commission to treat the reservation fees as capacity payments, and, thus, differently from the transmission charge.

As discussed above, the Commission determines it unwise and inappropriate to match developer capacity reservation fees that Aqua NC assesses in Flowers Plantation with any particular asset. This determination is particularly appropriate where, as is the case here, the asset is considered Plant in Service and the capacity made available under such agreement will be available to Aqua NC for use throughout Flowers Plantation. Consequently, the Commission rejects treatment that would disallow as an offset to rate base any CIAC Aqua NC collected through the end of the hearing with respect to any property being developed within Flowers Plantation. On a related note, there would be no rate base effect if the capacity purchased from Johnston County and the CIAC of equal amounts were both included in rate base; the converse also is true – there would be no rate base effect if the capacity purchased from Johnston County and the CIAC of equal amounts were both excluded from rate base. It seems clear that the intent of the parties, as memorialized in the contracts at issue here,[1] was to effectuate these transactions in a rate base-neutral and revenue-neutral manner (the developers pay Aqua NC, and then Aqua NC pays Johnston County), where feasible.[2] The Commission further notes that Aqua NC's ratepayers have benefitted over the years from the inclusion in rate base of CIAC subsequently used to purchase capacity from the County. The Commission, on balance and in exercising its discretion, endeavors to decide these issues in a manner that is both in the public interest (here, meaning rate base-neutral), and is consistent with the intent of the underlying contract.

Because Aqua NC's payments to Johnston County constitute a situation with a unique set of facts, the Commission determines to treat the $785,000 payment differently. While there are different ways that this test year payment might be appropriately treated, for ratemaking purposes, the Commission determines that the $785,000 payment should be treated as an expense on the income statement. As best the Commission can determine based on the state of the record before it, the County collects this fee to maintain, repair, and potentially expand its transmission and distribution system. It is not used to defray the costs of building or expanding the County's WWTP, at least to the extent that no such upgrades to the County's WWTP have occurred since 2006, when Aqua NC first began collecting CIAC toward its eventual capacity purchase from the County. Tr. Vol. 14, p. 27. Aqua NC will connect its transmission line from the Neuse Colony WWTP at a point on the County's collection system, not at the County's WWTP itself.

While the Commission determines to treat the $785,000 transmission fee as an expense, it further concludes, in its discretion, that this expense should not be recognized entirely in one cost of service year, but instead should be amortized and recovered over six years with no unamortized balance in rate base. Accordingly, $130,833 should be expensed in this case. This amortization

[1] This intent also is evidenced in the letter then-President of Aqua NC, Tom Roberts, wrote in April 2015, and in Ruffin Poole's e-mail of October 2013.

[2] In calculating the revenue requirement impact of the exclusion from plant in service of the $1,335,000 capacity payment to the County, the Commission uses a 2.00% depreciation rate and a useful life of 50 years.

period, in the Commission's discretion, appropriately balances the interests between Aqua NC and its ratepayers.

The Commission recognizes that there is additional CIAC yet to be collected by Aqua NC from developers as the Flowers Plantation continues to expand. In so recognizing, the Commission directs Aqua NC to charge, in all future contracts executed with Flowers Plantation developers, a reservation fee of at least $8.48 per gpd, unless and until such time as Aqua receives written communication from the County informing Aqua NC that it has changed the $8.48 per gpd rate, inclusive of the transmission and distribution expense charge, at which point the modified rate controls. The Commission further directs Aqua NC to obtain such written documentation of the current capacity fees charged by Johnston County on at least an annual basis until such time as Aqua NC's option to reserve capacity from the County expires. Finally, the Commission directs Aqua NC to use, going forward, accounting treatment and classifications for rate base purposes in a manner consistent with the treatment afforded by this Order.

Aqua NC's Request for Deferral Accounting Treatment of Purchased Capacity

Having already determined that the Company has failed to show that the capacity purchased from Johnston County is used and useful Plant in Service to Aqua NC's ratepayers as of the end of the test period in this case, or will be used and useful within a reasonable time thereafter, the Commission finds premature, and thus, moot, the Company's request, made in the alternative, to allow deferral accounting through the establishment of a regulatory asset for the Johnston County capacity costs. Therefore, the Commission concludes that the Company's request in the alternative to allow deferral accounting treatment for the capacity it purchased from the County should be denied.

ADIT

The difference in the level of ADIT is due to the differing levels of unamortized rate case expense, post-test year plant additions, unamortized repair tax credit, and EDIT recommended by the Company and the Public Staff. Based on the conclusions reached elsewhere in the Order, the Commission concludes that the appropriate level of ADIT for use in this proceeding is $24,849,085.

Summary Conclusion

Based on the foregoing, the Commission concludes that the appropriate level of rate base for combined operations for use in this proceeding is as follows:

Item	Amount
Plant in Service	$492,295,394
Accumulated depreciation	(155,246,692)
Contributions in aid of const.	(196,384,493)
Accum. amortization of CIAC	70,758,708
Acquisition adjustments	2,055,735
Accum. amort. of acquis. adj.	1,040,444

Advances for construction	(4,467,841)
Net Plant in Service	210,051,255
Customer deposits	(379,445)
Unclaimed refunds	(193,255)
Accum. deferred income taxes	(24,849,085)
Materials and supplies inventory	2,405,967
Excess capacity adjustment	(1,322,276)
Working capital allowance	4,759,698
Original cost rate base	$190,472,859

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 53-58

The evidence supporting these findings of fact is contained in the Application and in the testimony of Public Staff witnesses Cooper and Junis, and Company witness Gearhart. The following table summarizes the differences between the Company's level of operating revenues under present rates from its Application and the amounts recommended by the Public Staff:

Item	Company Application	Public Staff	Difference
Service revenues	$54,039,950	$55,496,957	$1,457,007
Late payment fees	113,213	114,830	1,617
Miscellaneous revenues	1,283,259	1,355,499	72,240
Uncollectibles & abatements	(404,234)	(414,248)	(10,014)
Total operating revenues	$55,032,188	$56,553,038	$1,520,850

With the Stipulation and the revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute the following Public Staff adjustments to operating revenues under present rates:

Item	Amount
Reflect Company pro forma level of service revenues	$1,457,007
Adjustment to late payment fees	1,617
Adjustment to reclassify availability revenues	72,240
Adjustment to uncollectibles & abatements	(10,014)
Total	$1,520,850

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to operating revenues under present rates in this proceeding.

Summary Conclusion

Based on the foregoing, the Commission concludes that the appropriate level of operating revenues under present rates for combined operations for use in this proceeding is as follows:

WATER AND SEWER – RATE INCREASE

Item	Amount
Service revenues	$55,496,957
Late payment fees	114,830
Miscellaneous revenues	1,355,499
Uncollectibles & abatements	(414,248)
Total operating revenues	$56,553,038

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 59-86

The evidence supporting these findings of fact is contained in the Application and Aqua NC's NCUC Form W-1 filing, the testimony of Public Staff witnesses Cooper, Henry, Boswell, Feasel, Junis, and Darden, and Company witnesses Gearhart, Becker, Kopas, Pearce, and Berger.

The following table summarizes the differences between the Company's level of O&M and G&A expenses from its Application and the amounts recommended by the Public Staff:

Item	Company Application	Public Staff	Difference
Salaries and wages	$10,582,933	$10,048,145	($534,788)
Employee pensions and benefits	3,307,897	3,021,650	(286,247)
Purchased water/sewer	2,390,335	2,316,616	(73,719)
Sludge removal	536,333	559,382	23,049
Purchased power	3,660,633	3,570,667	(89,966)
Fuel for power production	26,809	26,809	0
Chemicals	1,403,799	1,521,967	118,168
Materials and supplies	505,720	505,720	0
Testing fees	971,148	902,172	(68,976)
Transportation	919,149	919,149	0
Contractual services – eng.	2,750	2,750	0
Contractual services – acctg.	188,101	188,101	0
Contractual services - legal	263,190	196,144	(67,046)
Contractual services - other	4,258,718	4,199,984	(58,734)
Rent	309,942	309,942	0
Insurance	963,266	650,674	(312,592)
Regulatory commission expense	224,568	92,562	(132,006)
Miscellaneous expense	1,497,272	1,444,151	(53,121)
Interest on customer deposits	32,388	32,388	0
Annual. and consumption adj.	7,051	127,978	120,927
Total O&M and G&A expense	$32,052,002	$30,636,951	($1,415,051)

With the Stipulation and the revisions made by the Public Staff in the supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute the following Public Staff adjustments to O&M and G&A expenses:

WATER AND SEWER – RATE INCREASE

Item	Amount
Update salaries & wages through 6/30/18	($40,329)
Remove open positions	(174,436)
Adjustment to reflect actual overtime pay	(18,568)
Update pensions & benefits through 6/30/18	(36,587)
Remove benefits related to open positions	(149,986)
Adjustment to remove original pro forma allocated benefits	6,364
Remove duplicate Health Advocate benefits	(9,445)
Adjustment to insurance expense	(312,592)
Adjustment to communication initiative	13,989
Adjustment to remove legal invoices before test year	(12,942)
Adjustment for legal fees related to fines and penalties	(10,099)
Adjustment to purchased power	(89,966)
Adjustment to chemicals	118,168
Adjustment to contract services to remove pre-test yr. invoices	(1,366)
Adjustment to contract services for NC 811 locates	(57,368)
Remove legal fees related to legislation	(44,005)
Adjustment to payroll taxes	8,260
Total	($810,908)

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to the O&M and G&A expenses in this proceeding.

The Company disagrees with the following Public Staff adjustments to O&M and G&A expenses, as evidenced by the testimony of Company witnesses Gearhart, Becker, Kopas, Pearce, and Berger:

Item	Amount
Remove ½ of operators' salaries	($58,051)
Adjustment to remove 30% of bonuses	(29,648)
Adjustment to allocate 50% of executive compensation to shareholders	(213,756)
Remove ½ of four operators' benefits	(15,748)
Adjustment to allocate executive benefits to shareholders	(80,845)
Adjustment to board of directors fees	(67,110)
Annualization and consumption adjustment	120,927
Adjustment to sludge removal	23,049
Adjustment to testing	(68,976)
Adjustment to regulatory commission expense	(132,006)
Adjustment to purchased water	(73,719)
Total	($595,883)

These contested adjustments affect salaries and benefits, miscellaneous expense, sludge removal, testing, regulatory commission expense, and purchased water.

Salaries and Benefits

With the Stipulation and revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute the following Public Staff adjustments to salaries and wages:

Item	Amount
Update through 6/30/18	$ (40,329)
Remove open positions	(174,436)
Actual overtime payroll	(18,568)
Total	$ (233,333)

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to salaries and wages in this proceeding.

Based on the testimony of Company witnesses Kopas, the Company disagrees with the following Public Staff adjustments to salaries and wages:

Item	Amount
Remove operators' salaries	$ (58,051)
Remove 30% of STI bonus	(29,648)
Remove 50% of executive compensation	(213,756)
Total	$ (301,455)

The difference in the level of employee pensions and benefits is due to the differing levels of salaries and wages recommended by the Company and the Public Staff. Based on the conclusions reached elsewhere in the Order regarding the levels of salaries and wages, the Commission concludes that the appropriate level of employee pension and benefits for use in this proceeding is $3,077,822.

The Public Staff and the Company disagree on the following items concerning salaries and benefits: (1) an adjustment to salaries and wages and related benefits that quantifies the expense savings as a result of USIC performing the One Call/NC 811 work previously performed by Aqua NC personnel; (2) an adjustment to remove 30% of employee bonuses that are related to earnings per share; and (3) an adjustment to allocate executive compensation and related benefits to shareholders.

Operators' Salaries and Benefits

In his direct testimony, Aqua NC witness Gearhart testified that the Company added a new contract in 2018 for USIC to perform One-Call/NC 811 responsibilities. Witness Gearhart explained that the amount included was based on estimated calculations and a pending contract with the contractor. He stated that, during discovery, the Company submitted the executed contract and the initial invoices received from USIC to the Public Staff. Tr. Vol. 5, p. 221.

Public Staff witness Junis testified that Aqua NC filed a pro forma adjustment to the Contract Services – Other expense in the amount of $507,880, which Public Staff witness Junis cited to Column (g) of Aqua NC's Application Exhibit B3-m, for USIC to perform utility locates and other activities in response to the NC 811 system. Tr. Vol. 12, p. 152.

Witness Junis described the Public Staff's recommended adjustment to normalize the annual expense to an amount of $450,511, based on actual locate tickets received during the months of May and June 2018, after USIC started to perform the responsibilities. Tr. Vol. 12, p. 153. The Company agreed to Public Staff witness Junis' proposed adjustment as part of the Stipulation.

Witness Junis testified that, in an effort to quantify the expense savings as a result of USIC performing the One Call/NC 811 work previously performed by Aqua NC personnel, the Public Staff made multiple data requests. See Junis Exhibit 21, EDR 33 Q2 and Junis Exhibit 22, EDR 45 Q1. Witness Junis testified that Aqua NC management originally planned to hire six full-time employees to fully perform the work the Company had been deficient in completing. The evaluation had excluded supervisor time necessary to conduct a cursory review and assign workable tickets in the Company's service territory. Witness Junis stated that Mr. Joe Pearce, Aqua NC's Director of Operations, estimated the expense that Aqua NC avoided by contracting USIC to be approximately $693,667, which includes the fully loaded costs of 10 field staff and one supervisor. Furthermore, the Company stated:

> Approximately 10% of 811 work orders are currently being worked...the remaining 90% are not being addressed timely. This delinquency has exposed ANC to fines/penalties, lawsuits, and significant repair costs necessary to fix damaged unmarked lines.

EDR 45 Q1, p. 1.

Based on an allegation of Aqua NC's inability to quantify the actual expense incurred in the test year to address One Call/NC 811 tickets, the responses referenced above, and the fact that the Company has stated approximately 40% of all the tickets were workable and only 10% of those were being completed, Public Staff witness Junis recommended reducing workforce expense for 50% of a Field Supervisor I's workload and 50% of three Utility Technicians' workload, one from each of the three regions, to complete tickets that the Company responded to prior to contracting with USIC.

In his rebuttal testimony, Aqua NC witness Becker testified that he disagreed with the Public Staff's proposed adjustment to reduce the Company's workforce labor and benefits expense by 50% for four positions, due to Aqua NC's decision to contract with USIC to do line locates. Witness Becker asserted that witness Junis seeks to arbitrarily eliminate part of Aqua NC's workforce, overriding a responsible management decision to redeploy employees to other tasks, due to management's decision to employ an outside vendor to comply with One Call/NC 811 work. According to witness Becker, witness Junis' adjustment is essentially the elimination of two full time employees (FTEs) and that adjustment should be summarily rejected as it: (a) reflects an unsupportable and inappropriate intrusion into management decisions; (b) ignores Aqua NC's demonstrated need and prerogative to contract with outside vendors for completion of a range of activities which are not the Company's core competencies, specifically including line locates; and (c) ignores the fact that there was no staff reduction, as staff time was reassigned to other core services.

Witness Becker further stated that Aqua NC began looking at the possibility of outsourcing the One Call/NC 811 work in 2017. During that year, the Company's operations management team made and supported a recommendation to outsource line locate work related to One Call/NC 811 requirements. The Company determined that these functions are more reasonably managed and handled by outside vendors who specialize in the activity. The contract with USIC was executed on February 26, 2018, and USIC began to handle Aqua NC's NC 811 call volume on May 1, 2018.

Company witness Becker testified that certain factors supported the Company's decision to rely on an outside vendor to meet this function. Specifically, witness Becker stated that management focused on the choices and the evaluation of alternatives, including hiring more FTEs to perform the work internally, and decided to outsource this activity based on the following factors:

(1) The skill set necessary to complete line locates is different than those of water and wastewater professionals;
(2) Using Aqua NC's water and wastewater professionals to complete the large volume of line locates is disruptive to their normal work schedules;
(3) This work is episodic and includes emergency locate requirements;
(4) It is an inefficient use of a water/wastewater supervisor's time to continuously manage this effort; and
(5) Using a firm with statewide coverage, specific expertise, and ongoing activity in Aqua NC's areas of operation provides efficiencies and assurance of consistency.

According to witness Becker, it was clear to Aqua NC management that use of outside, specialized resources was the most appropriate option. The decision to contract line locate work additionally included, but was not limited to, consideration of benefits of avoiding additional hires for line locates, elimination of the responsibility of managing a non-core service, and reduction of risk and liability related to unaddressed line locates. Time previously spent by Aqua NC employees to respond to line locate work orders is now used for other water and wastewater duties which are more directly in line with Aqua NC's core services. These services, the need for which is increasing over time, not decreasing, include maintenance on filters, pumps, lift stations, wastewater treatment plant equipment, and collection and distribution lines; reporting requirements; environmental regulatory compliance; flushing initiatives; sludge hauling; testing; "Close the Loop" initiatives; and meeting customer expectations.

Witness Becker argued that the Public Staff has not made or supported any claim in this case that Aqua NC is overstaffed. To the contrary, Aqua NC's field workforce and supervisors are fully utilized daily to handle their workload. Witness Junis' testimony does not state that Aqua NC has either an excessive field supervisory or field staff workforce. Moreover, prior to the Public Staff's filing of testimony in this rate case, witness Becker stated that he had never heard anyone from the Public Staff or any other regulatory agency state that Aqua NC is overstaffed for field personnel. Witness Becker asserted that he could confidently state that the Company's field staff employees are fully utilized. Further, he asserted that, to the contrary, the Public Staff has, on several occasions in public forums in the past year, stated that Aqua NC was significantly understaffed in some respects.

Witness Becker stated that Aqua NC's intent related to line locate work was and is to cost-effectively meet regulatory requirements and reduce the Company's risk of asset damage and liability.

Witness Becker further testified that he disagreed with witness Junis' assumption that an Aqua NC supervisor was spending half of his/her time managing the One Call/NC 811 process. He stated that such assumption was incorrect and that, in fact, the lack of a supervisor, or half of a supervisor, was one of the drivers for the need to outsource this program.

Witness Becker testified that he could not say at this time whether there will be repair savings by having reduced contract claims. However, he asserted that any attempt to meaningfully correlate use of outside vendors with a change in the repair cost experience is, at this point, sheer hypothesis and is definitely not known and measurable. Witness Becker observed that the program has just begun, results will be tracked and monitored, and those results will be available for a future audit. Witness Becker contended that the proposed reduction of the expenses for employees who are actually on payroll and fully deployed doing necessary work shows indifference on the part of the Public Staff to: (a) management's prerogative to make deployment decisions; (b) the reality of Aqua NC's need for the staff; and (c) the fact that this is an opportunity to retain and use existing staff for legitimate purposes, rather than having to hire new employees.

Witness Becker recommended that the Commission reject, as inappropriate and unwarranted, all recommendations associated with reduction in workforce due to Aqua NC's decision to contract with a professional, specialized outside vendor to perform line locate services. The amount of labor previously expended addressing line locates was minimal; however, all previous time spent by these Aqua NC field staff and supervisors related to the provision of line locate services was filled with work on other core water and wastewater services necessary for operations.

Further, witness Becker noted that it is essential to Aqua NC, as a regulated utility, that regulation observe the difference between proper regulatory oversight and an attempt to supplant management's obligation to prudently run the business. Witness Becker maintained that rejection of this adjustment and of the Public Staff's insufficient rationale is appropriate. He also stated that such action would provide needed guidance about the proper balance that should be struck between the regulator and the regulated, with respect to the responsibility to manage the business on a day-to-day basis.

Based upon the foregoing, the Commission agrees with Aqua NC's decision to contract with USIC in 2018 to perform its One Call/NC 811 line locate responsibilities. Further, the Commission agrees with and finds reasonable witness Becker's testimony which recites the five factors, as previously listed herein, which led the Company to retain USIC as an outside vendor to perform the required One Call/NC 811 line locates. The Commission acknowledges that the Public Staff did not challenge Aqua NC's decision in this regard.

The Commission gives significant weight to the testimony of witness Becker that time previously spent by Company employees to respond to line locate work orders can now be used for other water and wastewater duties which are more directly in line with Aqua NC's core services. In his testimony, witness Becker listed various core services, including maintenance on filters, pumps, lift stations, WWTP equipment, collection and distribution lines, reporting requirements, environmental regulatory compliance, flushing initiatives, sludge hauling, testing, "Close the Loop" initiatives, and meeting customer expectations. The Commission recognizes the necessity for Aqua NC employees to devote additional effort to customer service and water quality concerns expressed by customers as a result of the customer testimony and statements received in this proceeding. The Commission is of the opinion that such additional needed effort cannot be accomplished simultaneously with Aqua NC's reducing its current operations personnel. Further, witness Becker testified concerning several new initiatives the Company has recently implemented to improve its customer communications and overall quality of service. The Commission recognizes that such new initiatives would require additional time and effort to be expended by Aqua NC's existing employees. Consequently, for these reasons, the Commission finds and concludes that the Public Staff's proposed adjustment to exclude 50% of the updated labor costs and benefits of four Aqua NC field operational employees from the cost of service in this case is inappropriate.

__Employee Bonuses Related to Earnings per Share__

Public Staff witness Henry stated in his direct testimony that Aqua NC's Application included bonuses paid to North Carolina employees during the test year, including Short-Term Incentive (STI) bonuses and achievement awards. He testified that after examining Aqua NC's bonus policies, he found it appropriate to recommend an adjustment to remove 30% of the STI bonuses paid to the North Carolina employees. He further testified that according to Aqua NC's most recent policies for the STI Plan, 60% of the metric weight depended on financial while 50% of the 60% is directly related to Aqua America's earnings per share. Witness Henry testified that earnings per share directly benefit the shareholders' value instead of being for the ratepayers' benefit. He testified that, therefore, the Public Staff recommended an adjustment to remove 30% of the bonuses from expenses and allocate them to the Company's shareholders.

Henry Supplemental Exhibit 1, Schedule 2 Revised, line 6 as filed on September 13, 2018 shows the Public Staff's recommended adjustment to allocate to shareholders 30% of the North Carolina supervisors' bonuses related to Aqua America's earnings per share totaling $29,648. This is the same amount as presented in witness Henry's direct testimony.

Aqua NC witness Kopas testified on rebuttal that he disagreed with Public Staff witness Henry's adjustment to allocate 30% of bonuses paid to North Carolina supervisory employees to shareholders. Witness Kopas stated that, for the reasons set forth in his testimony regarding the Company's opposition to the Public Staff's accounting adjustment to executive compensation, the STI is part of the total compensation paid to attract and retain qualified supervisory employees at Aqua NC. He testified that this financial metric reinforces to employees that it is their responsibility to serve Aqua NC's customers in a prudent and efficient manner. He further testified that the Company's ability to provide reliable service to its customers is directly related to its financial viability and linking a portion of those employees' compensation to a financial target encourages employees to achieve customer-based objectives in a cost-efficient manner. Witness Kopas testified that the STI (or supervisory bonus) program for Aqua NC has been in place without any ratemaking adjustment having been proposed or made in the Company's last two rate case proceedings.

After reviewing all of the evidence presented, the Commission concludes that the Public Staff's proposed adjustment to exclude 30% of the bonuses paid to North Carolina supervisory employees in the amount of $29,648 from the cost of service in this case is unreasonable and inappropriate for the reasons testified to by Aqua NC witness Kopas.

First, the Commission gives substantial weight to Aqua NC witness Kopas' rebuttal testimony that Aqua NC's STI is part of the total compensation paid to attract and retain qualified supervisory employees who actually work for Aqua NC in North Carolina and directly provide service to customers in this State in a manner designed to ensure that those customers are served in a prudent and efficient manner.

Second, the Commission gives great weight to witness Kopas' testimony that linking a portion of the compensation of North Carolina supervisory personnel to a financial target, as is the case with the STI, clearly encourages those employees to achieve customer-based objectives in a cost-effective manner.

Third, the Commission gives little weight to Public Staff witness Henry's testimony, which emphasizes his earnings per share analysis as essentially benefiting only the Aqua America shareholders' value with no stated benefit to ratepayers. The Commission agrees with Aqua NC that employee compensation packages that include financial metrics appropriately incentivize individuals to achieve goals that support strong operations of a company that ultimately does benefit ratepayers.

Further, the Commission concludes that if it approved the Public Staff's position on this issue, it would send the wrong message to Aqua NC and its North Carolina-based supervisory personnel. The Public Staff does not propose to exclude any of the salaries or other benefits earned by Aqua NC's North Carolina supervisory personnel in this case, and the Commission finds no reasonable basis to exclude any portion of the STI program from the Company's cost of service in this proceeding. Also, the Commission notes that witness Kopas specified that there have been no similar ratemaking adjustments either proposed or made in Aqua NC's last two rate case proceedings.

Finally, although the Public Staff specified in its proposed order that the Commission should not discourage incentive pay for Aqua NC's North Carolina supervisors and that the incentive metrics should benefit Aqua NC's customers, the Commission does not find the examples provided by the Public Staff reasonable or appropriate. The examples are not specific enough to be adopted in this case. However, the Commission finds that Aqua NC should review its STI bonus plan and consider basing the 50% of the 60% financial weighting of its current bonus plan on a more customer-specific metric.

Accordingly, for the reasons set forth above, the Commission concludes that the Public Staff's proposed adjustment to allocate 30% of North Carolina supervisory employee STI bonuses in the amount of $29,648 to shareholders and thereby exclude those expenses from the cost of service in this case is inappropriate and unsupported by the facts in this case. Therefore, the Public Staff's proposed adjustment to exclude 30% of North Carolina supervisory employee bonuses from Aqua NC's cost of service in this proceeding is hereby denied.

__Executive Compensation and Benefits Related to Shareholders__

Public Staff witness Henry testified that the Public Staff has proposed an adjustment to remove 50% of the compensation, including pension and incentive plans, of the top five executive officers of Aqua America as listed in the 2017 Annual Meeting of Shareholders Proxy Statement from Aqua NC's cost of service in this proceeding. He testified that Aqua America is the second largest investor owned water and wastewater utility in the United States with its shares traded on the New York Stock Exchange (NYSE) having a $6.709 billion market capitalization at the August 17, 2018, market close as reported by Morningstar. He further testified that Aqua America's market capitalization is larger than the cumulative market capitalization of $6.297 billion of the next four largest investor-owned water utilities which are American States Water Co. (NYSE), California Water Service Group (NYSE), SJW Group (NYSE), and Connecticut Water Service, Inc. (NASDAQ).

Witness Henry testified that the five executives identified by the Public Staff are: (1) the President and Chief Executive Officer; (2) the Executive Vice President and Chief Financial Officer; (3) the Executive Vice President and Chief Operating Officer; (4) the Executive Vice President, Strategy and Corporate Development; and (5) the Senior Vice President, General Counsel and Secretary. He asserted that the Public Staff's recommendation is not based on the premise that the compensation of the identified Aqua America executive officers is excessive or should be reduced. Witness Henry testified that the Public Staff's recommendation is based on the Public Staff's belief that it is reasonable and appropriate for the shareholders of the very large water and wastewater utilities to bear some of the cost of compensating those individuals who are most closely linked to furthering shareholder interests, which are not always the same as those of ratepayers.

Witness Henry further testified that executive officers have fiduciary duties of care and loyalty to shareholders, but not to customers. Consequently, witness Henry maintained, the Company's executive officers are obligated to direct their efforts not only to minimizing the costs and maximizing the reliability of the Company's service to customers, but also to maximizing the Company's earnings and the value of its shares. Witness Henry testified that it is reasonable to expect that management will serve the shareholders as well as the ratepayers; therefore, he argued that a portion of management compensation and pension should be borne by the shareholders.

Public Staff witness Henry testified that in addition to salaries and pensions, these five executive officers receive compensation from incentive plans, including an Annual Cash Incentive Award that for 2016 was based upon Aqua America's budgeted annual net income, and in 2017 the Award was weighted 60% based upon earnings per share. He testified that there are also Long-Term Incentive Awards in the form of Performance Share Awards of Aqua America shares that for 2016 were weighted 60% based on Total Shareholder Return and in 2017 were weighted 45% based upon Total Shareholder Return. He further testified that their Stock Options are based upon achieving at least an adjusted return on equity equal to 150 basis points below the return on equity granted by the Pennsylvania Public Utility Commission during Aqua America's Pennsylvania subsidiary's last rate case proceeding.

Witness Henry testified that the 2017 Proxy Statement on page 46 states:

> The Compensation Committee [of the Board of Directors] believes that by providing the named executive officers with the ability to earn stock options, the named executive officers' interests are aligned with the shareholders' interests as the value of the stock option is a function of the price of the Company's stock.

Public Staff Henry Supplemental Exhibit 1, Schedule 2 Revised, line 7 shows the Public Staff's recommended adjustment to remove 50% of the executive compensation for the top five Aqua America executives totaling $213,756, and Public Staff Henry Supplemental Exhibit 1, Schedule 3 Revised, line 7 shows the Public Staff recommended adjustment to remove 50% of the top five Aqua America executives' pensions and incentive plans totaling $80,845.

Public Staff witness Henry also testified that in each of the respective recent general rate cases, both Duke Energy Progress LLC, (DEP) in Docket No. E-2, Sub 1142, and Duke Energy Carolinas LLC (DEC) in Docket No. E-7, Sub 1146, excluded in their E-1 filings 50% of the compensation of the top four executive officers, as shown on Public Staff Henry Redirect Exhibit 1. He testified that in both cases the Public Staff recommended removing the compensation for a fifth executive, specifically the Chief Legal Officer. He testified that DEP and the Public Staff (in the DEP case) and DEC and the Public Staff (in the DEC case) stipulated to removing 50% of the compensation and benefits of the five top officers. Witness Henry testified that it is the Public Staff's principled position that work and loyalties are divided between shareholders and customers.

Aqua NC witness Kopas, in his rebuttal testimony, contested Public Staff witness Henry's proposed adjustment to remove 50%, including pension and incentives, of Aqua America's top five executives' compensation that is allocated to Aqua NC. Witness Kopas stated that Aqua America sets compensation levels for its executives to attract and retain qualified personnel and to remain competitive in the market. Noting witness Henry's acknowledgement that the Company's executive officers are obligated to direct their efforts to minimizing the costs and maximizing the reliability of the Company's service to customers, witness Kopas framed differently than witness Henry the value to ratepayers of the executives' obligation to support earnings and share value. Witness Kopas focused on the extent to which the efforts of Aqua America's executives benefit ratepayers through controlling costs and managing a strong overall company which allows it to attract capital at lower costs. Witness Kopas asserted that Aqua America officers have a responsibility not only to all investors in the Company, which includes both shareholders and bondholders, but also to employees and "most of all - to customers."

Further, noting the extent of regulation both on the environmental side and the financial side, witness Kopas explained that Aqua America officers are charged with the responsibility of meeting these standards of providing safe and reliable water and wastewater service to customers served by Aqua NC. Witness Kopas asserted that only upon its success in serving ratepayers is Aqua NC afforded an opportunity to earn a return on the dollars invested by shareholders. Witness Kopas offered his opinion that the ability of Aqua NC as a public utility to meet the needs of its customers is the highest priority of all Company employees, and that only then will the financial returns be achieved to attract both debt and equity capital needed in the business. He maintained that executive compensation is a necessary part of the Company's overall cost of service to meet the needs of its customers and that a reduction of 50% to Aqua America executive compensation including pension and incentive plans is not warranted.

Finally, witness Kopas testified that in the 2011 Aqua NC rate case (Docket No. W-218, Sub 319), the Commission rejected the Public Staff's proposed adjustment to remove 50% of the executive compensation for the top four Aqua America executives, however that the Commission did conclude that a 25% adjustment to the executive compensation expense item was reasonable in that case. Witness Kopas stated that if the Commission concludes that an accounting adjustment to executive compensation is justified in this case, then the Company, as an alternative proposal, requests that the percentage disallowance be set at no greater than the 25% adjustment that was found reasonable by the Commission in Docket No. W-218, Sub 319.

On cross-examination by the Public Staff, Aqua NC witness Kopas testified on the executive compensation provisions outlined in the Aqua America, Inc. 2018 Annual Meeting of Shareholders Proxy Statement (Proxy Statement), as filed with the United States Securities and Exchange Commission that was identified during the evidentiary hearing as Public Staff Kopas Rebuttal Cross-Examination Exhibit 2. As requested on cross-examination, witness Kopas read into the record that page 25 of the Proxy Statement states that an objective of the Aqua America executive compensation program was to align the interests of the named executive officers and shareholders.

Witness Kopas also testified that page 27 of the Proxy Statement states that Equity Incentives are:

> Designed to reward named executive officers for (1) enhancing our financial health, which also benefits our customers (2) improving our long-term performance through both revenue increases and cost control, and (3) achieving increases in the Company's equity and in absolute shareholder value and shareholder value relative to peer companies, as well as helping to retain executives due to the long-term nature of these incentives.

Witness Kopas testified that page 28 lists the components of compensation paid to the named executive officers in 2017 and that the Long-Term Equity Incentive Awards provide restricted stock units, performance share units, and options. He testified that page 28 states that the compensation objective for restricted stock units is to: "Align executive interests with shareholder interests; retain key executives."

Witness Kopas stated that the compensation objective for the performance share units as shown on page 28 of the Proxy Statement is to: "Align executive interests with shareholder interests; create a strong financial incentive for achieving or exceeding long-term performance goals."

Witness Kopas further testified that the compensation objective for the options as shown on page 28 of the Proxy Statement states: "Align executive interests with shareholder interests; through performance-based nature, provides strong incentives to achieve core company goals".

Aqua NC witness Kopas further testified that on page 33 it states that for the 2017 annual cash incentive award metrics that 60% of the award is based upon earnings per share. He testified that for the annual cash incentive award, earnings per share metric, the five executives received a 110% payout. Witness Kopas testified that page 36 of the Proxy Statement shows that all five of the executives' actual 2017 cash incentives were substantially greater than the 2017 target cash incentives.

Witness Kopas further stated that the Proxy Statement outlines the performance share awards on page 37 and notes, in part:

> The performance goals to be achieved under the PSU awards have been based on the following performance goals, with the weighting of each goal assessed each year. The Company's total shareholder return (TSR) at the end of the performance period as compared to the TSR of the other large investor-owned water companies (American Water Works Company, American States Water Company, Connecticut Water Service, Inc., California Water Service Group, Middlesex Water Company, and SJW Corporation); the Company's TSR compared to the TSR for the companies in the S&P Midcap Utility Index (Appendix A); the achievement of maintaining Operating and Maintenance expenses within the Company's regulated operations over the performance period; and, the achievement of the three-year cumulative total earnings before taxes in non-Aqua Pennsylvania subsidiaries.

Witness Kopas testified that for the total shareholder return compared to the S&P 400 Utilities Index there was a 127.78% payout to the five executives.

Company witness Kopas further testified that page 41 of the Proxy Statement states:

> Stock Options. In 2017, the Compensation Committee added performance-based stock options to the grants to the named executive officers. The Compensation Committee believes that the award of stock options, when paired with performance and service-based stock awards, completely aligns the interests of the named executive officers with those of the shareholders.

> The Compensation Committee believes that by providing the named executive officers with the ability to earn stock options, the named executive officers' interests are aligned with the shareholders' interests as the value of the stock option is a function of the price of the Company's stock. In addition, stock options provide the use of an additional performance metric for the earning of long-term equity compensation.

Witness Kopas testified that the five executive positions in the Proxy Statement are the same five positions that the Public Staff recommended removal of 50% of their salaries, pensions, and incentive plans.

After considering all of the evidence in the record, the Commission finds the Public Staff's proposed adjustment to allocate 50% of the top five Aqua America executives compensation, including pensions and incentive plans, to shareholders to be unreasonable and not supported by the evidence presented. However, the Commission is persuaded by the record of evidence that an adjustment to remove 25% of the compensation, including pension and incentive plans, of the top five Aqua America executives totaling $106,878 in compensation and $40,423 in pensions and incentive plans is reasonable and appropriate in this proceeding.

In reaching this conclusion, the Commission gives some weight to Aqua NC witness Kopas' rebuttal testimony that adequate compensation plans are necessary to attract and retain qualified executive leadership. The Commission also gives some weight to witness Kopas' testimony that the interests of Aqua NC ratepayers and Aqua America, Inc. shareholders are aligned in terms of the necessity to attract very large amounts of capital at a reasonable cost. The Commission generally agrees that shareholders provide the capital that is essential to the capital-intensive water and wastewater industry, and thus, ratepayers depend on corporate leadership to attract the shareholders whose investment is essential to the ability to serve those ratepayers. This evidence does not support a 50% adjustment as proposed by the Public Staff.

Further, the Commission gives little weight to the Public Staff's observation that the Commission approved 50% adjustments for executive compensation for DEP in its Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase issued on February 23, 2018, in Docket No. E-2, Sub 1142, and for DEC in its Order Accepting Stipulation, Deciding Contested Issues, and Requiring Revenue Reduction issued on June 22, 2018, in Docket No. E-7, Sub 1146. Both DEC and DEP originally filed their rate cases reflecting removal of 50% of the executive compensation of the top four executive officers and later in the proceedings, the Company and the Public Staff reached a stipulation to remove 50% of the executive compensation for the top five executive officers; therefore, the Commission did not resolve the issue through litigation in either case.

The Commission also notes that Aqua NC witness Kopas stated that if the Commission concludes that an accounting adjustment to executive compensation is justified, then Aqua NC recommends as an alternative proposal that the percentage disallowance be set at no greater than 25%, consistent with the Commission's decision in Aqua NC's 2011 rate case proceeding (Docket No. W-218, Sub 319).

Therefore, for the reasons set forth above, the Commission concludes that the Public Staff's proposed adjustment to exclude from the Company's cost of service 50% of the executive compensation for the top five executives named by the Public Staff is inappropriate. However, the Commission is persuaded by the evidence presented including Aqua America, Inc.'s 2018 Proxy Statement that a portion of these expenses should be allocated to the Company's shareholders and that witness Kopas' alternative proposal to remove 25% of such costs is reasonable. The Commission also notes that this decision is consistent with the Commission's decision in Aqua NC's 2011 rate case (Docket No. W-218, Sub 319). The Commission finds it appropriate to allocate 25% of the executive compensation including pensions and incentive plans of the top five Aqua America executives as identified by the Public Staff, to the shareholders, and, therefore, to remove $106,878 in executive compensation salaries and $40,423 in executive pension and incentive plans for a total of $147,301 from Aqua NC's cost of service in this case.

<u>Miscellaneous Expense (Board of Directors Compensation and Expenses)</u>

Public Staff witness Henry testified that the Public Staff has proposed an adjustment to remove 50% of the compensation and expenses associated with the Board of Directors of Aqua America that have been allocated to Aqua NC in this proceeding. Witness Henry specified that the allocations to Aqua NC encompass the Board of Directors' compensation and other miscellaneous expenses. He further testified that the premise of the adjustment is closely linked to the premise of the adjustment made by the Public Staff related to executive compensation. Witness Henry maintained that it is reasonable and appropriate for the shareholders of the very large water and wastewater utilities to bear a reasonable share of the costs of compensating those individuals who have a fiduciary duty to protect the interests of shareholders, which may differ from the interests of ratepayers.

Public Staff witness Henry testified that the Aqua America, Inc. Board of Directors Corporate Governance Guidelines (The Board of Directors Guidelines) state in Section II:

> RESPONSIBILITIES OF THE BOARD
>
> 1. It is the responsibility of the Board to provide guidance and direction on the Corporation's general business goals and strategy, and to provide general oversight of, and direction to, management so that the affairs of the Corporation are conducted in the long-term interests of all its shareholders.

Public Staff witness Henry further testified that Aqua America allocated to Aqua NC $116,838 for Board of Directors compensation and $17,381 for Board of Directors expenses. He testified that the Public Staff recommends that 50% of the Board of Directors' compensation totaling $58,419, and 50% of the Board of Directors' expenses totaling $8,691 be removed as a shareholder expense as shown on Public Staff Henry Supplemental Exhibit 1, Schedule 4 Revised, lines 2 and 3.

Aqua NC witness Kopas stated in his rebuttal testimony that he opposes the Public Staff's proposed adjustment related to Board of Directors compensation and expenses for the same reasons he opposed the Public Staff's proposed adjustment to remove 50% of the compensation paid to the top five executive officers. Aqua NC maintained in its proposed order that the Board of Directors' fiduciary responsibilities inure to the benefit of ratepayers, in terms of assuring the provision of sufficient capital at reasonable costs to support this capital-intensive industry. Witness Kopas stated that, as an alternative to full recovery in cost of service of the Board of Directors' compensation and expenses, he recommended that, at most, the Commission impose a 25% adjustment, consistent with the adjustment made by the Commission regarding executive compensation for the top four executives in 2011, in Docket No. W-218, Sub 319.

On cross-examination by the Public Staff, witness Kopas testified that Public Staff Kopas Rebuttal Cross-Examination Exhibit 1 as admitted into evidence is the Aqua America Board of Directors Guidelines. He testified that on page one it states:

> The following corporate governance guidelines will provide the principles by which the Board of Directors (the "Board") of Aqua America, Inc. (the "Corporation"), will organize and execute its responsibilities along with the requirements of the Corporation's Articles of Incorporation, Bylaws and the laws and regulations governing the Corporation and the Board.

See Public Staff Kopas Rebuttal Cross-Examination Exhibit 1.

Witness Kopas further testified on cross-examination that on page six under Roman Numeral II, Responsibilities of the Board, Number 1, it states:

> It is the responsibility of the Board to provide guidance and direction on the Corporation's general business goals and strategy and to provide general oversight of and direction to management so that the affairs of the Corporation are conducted in the long-term interests of all its shareholders.

See Public Staff Kopas Rebuttal Cross-Examination Exhibit 1.

Witness Kopas also testified that on page eight, paragraph 10, of the Board of Directors Guidelines it states:

> The Executive Compensation Committee will periodically review the compensation package for directors and make recommendations to the Board for any changes. Such reviews shall take place annually. The Board should make changes in its director compensation and only upon recommendation by the Executive Compensation Committee and after discussion and approval by the Board. Both the Executive Compensation Committee and the Board should be guided by the following principles: compensation should fairly pay directors for the work required; compensation should align directors' interests with the long-term interests of shareholders, while not calling into question their objectivity, and the structure of

> the compensation should be simple, transparent, and easy for shareholders to understand.

See Public Staff Kopas Rebuttal Cross-Examination Exhibit 1.

Witness Kopas further testified that he accepted, subject to check, that the word "customer" does not appear even once in the Aqua America Board of Directors Guidelines. Tr. Vol. 12, pp. 202-203.

Based upon consideration of all of the evidence presented in this case, the Commission finds that it is appropriate to remove 25% of the Board of Directors' compensation and expenses from the Company's cost of service in this proceeding. In reaching this conclusion, the Commission has given some weight to the testimony of Aqua NC witness Kopas. The Commission generally agrees with Aqua NC's assertions that adequate compensation is required to attract extremely competent, qualified members of a Board of Directors to lead a company such as Aqua America, Inc. and that North Carolina ratepayers and Aqua America, Inc. shareholders share a mutual interest in a highly skilled and qualified Board. The Commission also generally agrees that ratepayers' best interests depend on a regulated utility's ability to attract capital; in this instance, to support the level of investment required by Aqua NC as a regulated water and wastewater service provider in this state. As stated by Aqua NC, these financial and investment decisions are made at the parent company level and are integrally related to and supportive of the local company's ability to provide safe and reliable service.

However, the Commission is not convinced by Aqua NC's recommendation that no amount of the Board of Directors compensation and expenses should be removed in this proceeding. The Commission agrees with Public Staff witness Henry that a reasonable share of the cost should be removed but does not agree with the Public Staff that a reasonable amount is 50%. Clearly, based on the Board of Directors Guidelines as entered into evidence in this proceeding as Public Staff Kopas Rebuttal Cross-Examination Exhibit 1 one of the responsibilities of the Board of Directors is to provide guidance and direction to the Company so that the affairs of the Corporation are conducted in the long-term interest of all of its shareholders.

The Commission notes that Aqua NC witness Kopas provided the Commission with an alternative proposal to remove 25% of the Board of Directors compensation and expenses from Aqua NC's cost of service in this proceeding, and the Commission finds this alternative proposal to be fair and reasonable.

Accordingly, for the reasons set forth above, the Commission concludes that the Public Staff's proposed adjustment to exclude from cost of service 50% of the expenses associated with Board of Directors' compensation and expenses, in the amounts of $58,419 and $8,691, is inappropriate. However, the Commission is persuaded that a portion of the Board of Directors' compensation and expenses should be allocated to the Company's shareholders, and that Aqua NC witness Kopas' alternative proposal to remove 25% of such costs is reasonable. Therefore, the Commission finds it appropriate to allocate 25% of the Board of Directors' fees to the shareholders and, therefore, to remove $29,210 in Board of Directors' compensation and $4,345 in Board of Directors' expenses from Aqua NC's cost of service in this proceeding.

WATER AND SEWER – RATE INCREASE

Sludge Removal

The Public Staff and the Company disagree as to the appropriate amount of expenses related to sludge hauling. This disagreement centers on the time period that should be used to calculate the expenses.

In its Application, Aqua NC included sludge expense of $536,333 for the test year. On July 20, 2018, the Company provided a post-test year update to sludge expense that included an increase in sludge disposal amounts in the Central/Cary region in 2018. The Company's initial update proposed an increase of $89,875 to the test year sludge expense. On September 4, 2018, Company witness Pearce filed rebuttal testimony proposing a revised increase of $70,424 to the test year sludge expense, which reflects the one-year average of sludge hauling records ending in June 2018.

On August 21, 2018, the Public Staff filed schedules, which included an adjustment to increase sludge expense by $23,049 to incorporate updated sludge hauling expense amounts provided by the Company. With this adjustment, the Public Staff's recommended sludge expense reflects the two-year average of sludge hauling records ending in June 2018 and reflects the projected annual costs for two WWTPs, The Legacy at Jordan Lake and Westfall, which began producing sludge in 2018 after the test year. The projected annual costs for the two WWTPs were based on available historical data for 2018 provided by the Company.

In her prefiled direct testimony, Public Staff witness Darden testified that the Company's sludge hauling data from its Cary/Central region shows an increase in the quantity of sludge hauled in the post-test year period from January 2018 through June 2018 as compared to the test year. Further, witness Darden testified that more significant increases occurred in March, April, and May 2018, and that there was a return to a level closer to the two-year average in June 2018. Tr. Vol. 9, p. 24. On redirect-examination, witness Darden testified that data provided by the Company for July 2018 showed a return to a sludge hauling level below the two-year average. Tr. Vol. 9, p. 47. Witness Darden Redirect Examination Exhibit 1 is a graph showing monthly sludge hauling quantities for the Company's Central/Cary region from July 2016 through July 2018. Ex. Vol. 9, p. 44. The graph shows the two-year average sludge hauling quantity advocated by the Public Staff, which is approximately 300,000 gallons, and the one-year average quantity advocated by the Company, which is approximately 350,000 gallons. The graph shows an increased volume of sludge hauled during the months of March through May 2018 ranging between approximately 425,000 gallons and 600,000 gallons. It also shows a decrease to a level of approximately 325,000 gallons in June 2018, and a further decrease to a level of approximately 290,000 gallons in July 2018.

Witness Darden noted that increased sludge hauling could be a response to sludge storage approaching full capacity and an attempt to prevent associated compliance and operational issues. Witness Darden explained that, if this were the case, sludge hauling could return to regular maintenance levels once sludge levels were reduced. Tr. Vol. 9, p. 24. Witness Darden testified that operational changes could also affect sludge hauling levels. Tr. Vol. 9, p. 36.

Witness Darden opined that, due to the short time frame over which the most significant increases in the Company's sludge hauling occurred, it was unclear whether these increases represented a peak or a trend. Tr. Vol. 9, pp. 24-25. Due to the uncertainty as to whether the comparatively significant increases in sludge hauling that occurred in March through May 2018 would continue going forward, and in order to avoid annualizing what could be an isolated peak in sludge hauling levels, witness Darden advocated the use of a two-year average ending in June 2018 to determine sludge expenses. Tr. Vol. 9, p. 25. Witness Darden noted that the two-year average takes into account The Legacy at Jordan Lake and Westfall WWTPs, which both began producing sludge in 2018. Id. Witness Darden further noted that the two-year average accounts for the operational changes the Company indicated it made at the WWTPs by incorporating sludge hauling data provided by the Company through June 2018. Tr. Vol. 9, pp. 32-33.

Aqua NC witness Pearce testified in prefiled rebuttal testimony that the Company had made changes to its WWTP operations to reduce mixed liquor suspended solids concentrations that would, in turn, increase sludge production. Tr. Vol. 13, p. 122. Witness Pearce provided an example calculation to demonstrate how decreasing mixed liquor suspended solids results in an increased sludge production rate. Tr. Vol. 13, p. 123. The calculation assumes a number of values including values for WWTP operating capacity, hydraulic retention time, and mixed liquor suspended solids concentration. Witness Pearce did not indicate the source of the values used in his example calculation. Witness Pearce also included in his rebuttal testimony a graph from the 1992 edition of the Water Environment Federation Manuals of Practice showing net sludge production as compared to solids retention time. Tr. Vol. 13, pp. 123-124. Witness Pearce extrapolated from the graph that a greater than 10% increase in sludge production would result from improving the pollutant removal efficiency of WWTPs. Like the example calculation provided by witness Pearce, the graph and extrapolation assumed values the source of which witness Pearce did not disclose. Witness Pearce gave no indication in his prefiled rebuttal testimony whether the values upon which his example calculation and extrapolation were based represent actual operational data from one or more of the Company's WWTPs. It was not until he was questioned about the source of the assumptions on cross-examination that witness Pearce asserted that his example calculation and extrapolation were based on actual data from an Aqua NC WWTP. Tr. Vol. 13, p. 134. Witness Pearce recommended sludge expense, totaling \$606,756.78 (\$507,699.28 for Aqua NC Sewer and \$99,057.50 for Fairways Sewer) based on data from July 2017 through June 2018. Tr. Vol. 13, p. 125. This amount represents an increase of \$70,424 over the amount of sludge expenses stated in the Company's Application.

On cross-examination, witness Pearce verified that, based on the extrapolation from the graph included in his rebuttal testimony, operational changes made the second week of April 2018 would result in an approximately 10% increase in sludge production. When confronted with the fact that the Company's actual sludge hauling data shows an increase in sludge hauling far in excess of 10%, witness Pearce testified that the 10% increase he estimated would be accurate "over the 12-month period." Tr. Vol. 13, pp. 135-136. Witness Pearce acknowledged that the actual sludge hauling levels for eight of the 12 months that make up the test period advocated by the Company were lower than the Company's one-year average level. Tr. Vol. 13, p. 131.

On redirect-examination of witness Pearce, the Company introduced Aqua Pearce Redirect Exhibit 1. That exhibit is a graph showing monthly sludge hauling quantities for the Company's

Central/Cary region from July 2016 through August 2018. Ex. Vol. 9, p 65. Witness Pearce testified that he had received the Company's sludge hauling logs for the month of August 2018, and that the level of sludge hauled during the month of August 2018 was higher than the two-year average advocated by the Public Staff. Tr. Vol. 13, p. 145.

The Commission has carefully reviewed the evidence in this docket and concludes that it is appropriate to adjust sludge hauling expense by $23,049 based on the two-year average advocated by the Public Staff. By basing sludge hauling expenses on an average of the two-year period ending June 2018, this will take into account the addition of two WWTPs that started producing sludge in 2018 and it will reflect other operational changes made at some of the Company's WWTPs. The use of the two-year period average also ensures that the uncharacteristically high levels of sludge hauling that occurred during the months of March, April, and May 2018 are given appropriate emphasis in determining expenses. Although the Commission acknowledges that the operational changes made to the Company's WWTPs in April 2018 have increased the quantity of sludge hauled by Aqua NC for several months in 2018, the Commission is not persuaded by the testimony of witness Pearce that such operational changes would result in the approximately 10% increase in sludge production rate indicated by his example calculation. Witness Pearce did not clearly set forth the source of the values used in his example calculation for which he bases his estimated 10% increase in the sludge production rate. Consequently, the Commission gives minimal weight to the testimony of witness Pearce in that regard.

For the foregoing reasons, the Commission determines that using the two-year average advocated by the Public Staff rather than the one-year average advocated by the Company will produce a level of sludge hauling expense that is more representative of the Company's actual ongoing sludge hauling expense.

__Testing Expense__

In its Application, the Company included testing expenses of $971,149 for the test year. On July 20, 2018, the Company provided a post-test year update to testing expense that included an increase in NOD site testing. The Company's update increased test year testing expense by $111,538. In her direct testimony, Public Staff witness Darden recommended that testing expenses in the amount of $882,746 should be approved, with an increase of $19,426 for NOD site testing. Witness Darden's pro forma adjustments resulted in a decrease of $88,402 to the level of test year compliance and operational testing expense as proposed by the Company in its Application and a decrease of $92,112 to Aqua NC's proposed post-test year update of $111,538 to NOD testing expense.

__Annual Compliance and Operational Testing Expenses__

Witness Darden testified that she did not agree with Aqua NC's use of its per book amounts or the manner in which the Company calculated pro forma adjustments. Witness Darden further stated that the Company's calculations did not account for the variation in the frequency with which specific water quality tests must be performed, as some tests are conducted with different frequencies of every three, six, or nine years, and therefore should be amortized by the number of years. The Company filed a testing expense with pro forma adjustments based on comparisons of the test year to the past three years individually and as an average. Witness Darden testified that she disagreed with the Company's amortization, noting that it does not capture the amortization of tests with frequencies that exceed one year. Tr. Vol. 9, p. 39.

Public Staff witness Darden calculated testing expenses in the present case in the same manner that the Public Staff has traditionally calculated the testing expense – using current testing schedules going forward, amortizing the expense over the number of years corresponding to the testing frequencies for the various tests, and using the current unit costs of the tests. Tr. Vol. 9, p. 18. Witness Darden noted that the Company provided the Public Staff with the schedules establishing the current required compliance testing frequency for each of its water and wastewater systems.

On cross-examination, witness Darden acknowledged that her calculations did not include operational testing and were based on EDR 3. Witness Darden noted that Aqua NC has not tracked operational testing historically, and that the appropriate amount of operational testing expense has been agreed upon by the Company and the Public Staff in the past. Further, witness Darden testified that, in this case, the Company and the Public Staff did not agree. Witness Darden recommended that the testing expense should include the required compliance testing and the NOD testing update provided by Aqua NC. Witness Darden testified on cross-examination that the Public Staff recognizes that operational testing should be recovered as long as it is reasonable and cost-effective. Tr. Vol. 9, pp. 41-42.

Company witness Berger testified on rebuttal that she disagreed with the adjustments made by Public Staff witness Darden and noted that witness Darden began her inquiries by requesting, in EDR 3, "the minimum water system testing test type and frequency as determined by DEQ". Witness Berger testified that the information requested did not provide a full picture and did not contain sufficient information to warrant the adjustments made by witness Darden.

Witness Berger asserted that the information requested by the Public Staff in EDR 3 and the follow-up request on August 3, 2018, only accounted for minimum testing compliance required by DEQ. Witness Berger further stated that compliance testing is designed to determine compliance with the rules and regulations at a moment in time, not just the time in which the compliance testing occurred. Witness Berger then explained the difference between compliance testing and operational testing, noting that operational testing is utilized by the operator to determine the effectiveness of treatment and for proactive identification of issues. Tr. Vol. 16, p. 136.

Witness Berger testified that operational testing is performed continuously based on need and judgment of the operator. She observed that regulatory agencies do not establish operational testing requirements but they do expect the utility to understand the treatment methods used to ensure the delivery of drinking water that meets regulatory requirements.

Further, witness Berger acknowledged under cross-examination on September 25, 2018, that the Company was unable to provide the Public Staff with operational testing expenses when the Public Staff requested them on September 5, 2018. In particular, she testified, "if we could have been asked to provide the operational . . . versus the compliance we could have done so, just not on such a short timeline." Tr. Vol. 16, p. 166. However, when asked if Aqua NC currently is tracking compliance and operational testing separately, witness Berger responded that some of the Company's operational testing expenses were still not being tracked. Id.

On cross-examination, witness Berger also stated that the Public Staff's request for information concerning the test year level of operational testing would have required her to go line-by-line through each monthly invoice–typically 150-250 pages each. To comply with the Public Staff's request, in this regard, as best as possible within the short time frame, witness Berger testified that a software package was utilized to provide approximately 85-90% of the data requested from 2016 up to August 31, 2018. She commented "[a]nd I think it had over 20,000 entries in it so it provided at least some known documentation to support". Tr. Vol. 16, pp. 164-165.

The Commission recognizes that both the Public Staff and the Company are in agreement that operational testing is a reasonable operating expense; it is a testing expense incurred by Aqua NC separate and apart from the compliance testing required by DEQ, and a reasonable level of this type of testing expense should be included in test year operating expenses. However, in the present proceeding neither the Public Staff nor Aqua NC has submitted to the Commission evidence which clearly supports the dollar amount of a reasonable level of operational testing expense. Aqua NC contends that the Public Staff did not ask for this specific information early-on in the audit process in EDR 3, and therefore the Company had insufficient time to accumulate this information and provide it to the Public Staff for review. The Public Staff asserts that Aqua NC does not track its per book operational testing expense separately from its per book compliance testing expense such that the information can be readily identified and provided to the Public Staff for review.

Historically, the Public Staff has restated the amount of compliance testing for all regulated water utilities because per book amounts, typically, do not reflect: (1) current testing schedules going forward; (2) the amortization of the expense over the number of years corresponding to the testing frequencies for the various tests; and (3) the current unit costs of the tests. Aqua NC's per book accounting for testing expense provides no reason for exception to this practice by the Public Staff. The Commission acknowledges that in Aqua NC's last rate case proceeding (Sub 363), Public Staff witness David Furr filed similar testimony regarding the problems that arise when per book amounts are used to calculate pro forma testing expense. As a result of prior rate case audits by the Public Staff and Commission decisions, the Company should be well aware of the Public Staff's method for calculating its recommended pro forma level of testing expense.

Based upon the testimony received in this proceeding, the Commission recognizes the distinction between compliance testing and operational testing and finds that operational testing is essential to the proper operation of a water utility. Further, during the course of the hearing in this matter, there was much discussion about the need to maintain and improve water quality for customers. The Commission understands that operational testing is an essential part of that effort. However, in this proceeding, the Commission is not persuaded that the level of operational testing expense the Company seeks to recover is reasonable. The Company did not maintain adequate records of its operational testing expenses separate from its compliance testing such that the Company could provide the Public Staff with an appropriate analysis of the cost data for its test year operational testing expense in its Application. A review of such expenses for reasonableness is necessary in order for the Public Staff to make a recommendation to the Commission for inclusion in test year operating expenses in this proceeding.

The Commission understands from the testimony of witness Darden that historically, Aqua NC and the Public Staff were, through discussions, were able to agree upon a testing expense amount which included both compliance and operational testing expense; however, in the present proceeding the parties have not been able to agree on testing expense. In her rebuttal testimony, witness Berger referenced Aqua NC's response to NCUC Form W-1, Item 12(b), which presented comparisons between Aqua NC's test year operating expenses and its prior three years' per books operating expenses, in support of the Company's position that the Public Staff's recommended level of testing expense is incomplete. Nonetheless, witness Berger did not specify what portion of the testing expense included on Aqua NC's NCUC Form W-1, Item 12(b) related to the level of operational testing incurred in the test year and prior years; nor did she provide the amount of operational testing agreed upon by the Company and the Public Staff and approved in prior rate case proceedings.

The Commission is of the opinion that, as discussed previously in this Order, due to the need for Aqua NC to maintain and improve water quality for customers in the future, some level of operational testing fees will be required to accomplish that objective. In this proceeding, the Public Staff did not present a level of operational testing fees expense for the Commission's consideration. The Commission agrees with the testimony of witness Darden that Aqua NC's use of per book numbers to calculate its proposed level of operational testing fees expense is flawed as it does not generally reflect current testing schedules going forward, the appropriate amortization periods, and the current unit costs of the tests. Further, Aqua NC's per book amounts do not track operational testing expense such that those expenses can be readily quantified. The Commission is of the opinion that Aqua NC's utilization of a software package to provide approximately 80-90% of the data requested by the Public Staff for the period 2016 through August 31, 2018 and providing that information to the Public Staff to sort out does not equate to sufficient evidence. Further, Aqua NC's contention that since such report contained approximately 20,000 entries, it provided at least some known documentation to support actual operational testing expense does not satisfy the Company's responsibility in documenting this expense. The Commission does not dispute that Aqua NC has incurred operational testing expense during the test year and such expense will continue. However, it is the responsibility of the utility to provide justification for the costs it seeks to recover from customers in a manner that can be audited and evaluated by the Public Staff within a reasonable timeframe. In all fairness, the Commission does acknowledge that the Public Staff could have sought this information sooner in its discovery process; nonetheless, that does not alter the requirement that Aqua NC should provide this information in a manner that can be effectively reviewed and evaluated by the Public Staff.

Although the Commission finds that Aqua NC failed to provide sufficient and specific evidence concerning its test year level of operational testing in the present proceeding, the Commission determines that some level of operational testing expense is important. Thus, due to the lack of specific evidence in the record on this issue, in order to determine an appropriate level of operational testing fees to include in this proceeding, the Commission has examined its prior Aqua NC rate case final orders with respect to total testing fees approved for Aqua NC Water Operations. Based upon a review of the level of total testing fees approved by the Commission in the Sub 363 Order and Sub 319 rate case proceedings for Aqua NC Water Operations, and considering that there are many factors involved when calculating the total ongoing level of testing expense, the Commission, in its discretion, finds and concludes that 50% of the amount in dispute or $44,201, should be included for operational testing expense in this proceeding.

Furthermore, the Commission strongly encourages Aqua NC to maintain its books and records on a going-forward basis in a manner that will allow the Company to track its operational testing expense separately from its compliance testing expense such that those expenses can be readily quantified by Aqua NC, presented to the Public Staff for review of reasonableness, and proffered to the Commission for inclusion in test year operating expenses in the Company's next rate case. If Aqua NC should determine that such separate accounting would be cost-prohibitive to implement, the Commission recommends that the Company work with the Public Staff to formulate a mutually-acceptable method to determine and present operational testing costs in future rate case proceedings.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of testing expense is $926,947, consisting of $882,746 for compliance testing and $44,201 for operational testing, prior to considering the update for the NOD site testing expense.

<u>NOD Testing Expense</u>

Witness Darden testified that the Company filed updated testing expenses for a post-test year sampling program in Aqua NC's Central Cary area as a result of NODs for approximately 50 systems. DEQ and Aqua NC set up short-term sampling for the sites that were issued NODs. In calculating testing expenses associated with NOD sites, the Company annualized the amount spent between January and June 2018 and arrived at a total of $111,538. Whereas, Public Staff witness Darden recommended the addition of $58,278 as a sub-category to testing expense to account for NOD site testing. Tr. Vol. 9, p. 21. In calculating this amount, witness Darden applied a price decrease which took effect in April 2018 to the period April through June 2018. For ratemaking purposes, witness Darden testified that the total NOD site testing expense would be averaged over three years. Witness Darden disagreed with annualizing these costs, as the Company proposed, on the basis that DEQ Public Water Supply Section (PWSS) could reduce the sampling frequencies for NOD sites after the third testing quarter, which ended September 30, 2018. Under cross-examination, witness Darden noted that the testing that occurred during the one-year period ending September 2018 would provide a historical benchmark, and, therefore, it was likely that reductions in sampling frequencies would occur after that point. She stated that additional sampling data may not be necessary at the same sampling frequency for every site. Tr. Vol. 9, pp. 43-44. For example, if all the samples at a particular site are consistent, the sampling frequency could be reduced due to the consistency and the fact that the samples provide a benchmark of historical testing data. Tr. Vol. 9, p. 45. Witness Darden testified on redirect that if certain sites are consistently producing the same results on a monthly basis, the testing frequency could be changed to quarterly, then to semiannually, and then to annually if the historical data supported it. Also, she pointed out that when treatment is installed, a different sampling schedule would be utilized from the sampling schedule that had been required for the initial monitoring. Tr. Vol. 9, p. 50.

Due to the likelihood that sampling frequencies will be reduced after September 2018, the Public Staff recommended that the actual expenses of $58,278 spent on the NOD site testing be recovered over three years and that testing expenses continue to be tracked and then recovered in future rate cases. Therefore, the Public Staff recommended an increase to test year operating expenses for NOD site testing of $19,426 which results from the amortization of such total testing expenses of $58,278 over three years.

Company witness Berger testified in her prefiled rebuttal testimony that witness Darden was incorrect when she testified that sampling frequencies for NOD sites could be reduced after the third quarter of 2018. She further testified that, pursuant to the State's rules regarding the concentration of iron and manganese, DEQ determines the sampling frequencies required for these constituents, and that the requirement to sample for these constituents is ongoing. Tr. Vol. 16, p. 140. However, on cross-examination, witness Berger acknowledged that, in practice, the utility submits a recommendation regarding the appropriate testing frequency to DEQ for its approval. She further acknowledged that DEQ has the authority to amend testing schedules for NOD sites. Tr. Vol. 16, p. 169. In an excerpt from an audio recording made by witness Berger of an August 29, 2018, meeting between Aqua NC, DEQ PWSS, and the Public Staff, Bob Midgette, the head of the operational branch of DEQ PWSS, stated that he anticipates Aqua NC could reduce NOD site testing frequency from monthly to quarterly in 2019, and possibly to annually thereafter if the data support such a reduction.[1] When asked about Mr. Midgette's statement under cross-examination, witness Berger acknowledged, "[Mr. Midgette] does make that recommendation on a specific case-by-case basis where we have the data that demonstrates that we have a resolution in place that, yes, we can propose [a reduction in testing frequencies]." Witness Berger went on to testify that the Company intended to use surplus NOD testing expenses resulting from any reductions in NOD testing frequencies to perform sampling on non-NOD sites to proactively address secondary water quality issues. Tr. Vol. 16, p. 176.

The Commission finds and concludes that the evidence of record demonstrates that NOD site-testing frequencies will be reduced after September 2018 and it is, therefore, appropriate that actual costs should be recovered and amortized over three years as recommended by the Public Staff. The future costs associated with the NOD site testing are not currently known and measurable and, therefore, it is appropriate that they be recovered in future rate cases. Based upon the foregoing, the Commission concludes that the total annual testing expense for use in this proceeding, including the increase of $19,426 for NOD site testing recommended by the Public Staff is $946,373 ($926,947 + $19,426).

Purchased Water

In its Application, Aqua NC included purchased water expense of $1,947,892 for the test year ending September 30, 2017. Public Staff witness Junis proposed an adjustment to decrease the Company's filed purchased water expense of $1,947,892 by $73,670. The Company and the Public Staff disagree on the appropriate amount of allowable, recoverable water loss.

---

A CD containing the excerpts from the audio recording transcribed in Exhibit 5 was entered into the record as Public Staff Berger Cross-Examination Exhibit 6.

WATER AND SEWER – RATE INCREASE

Company witness Gearhart stated in his direct testimony that for all purchased water systems, the test year actual volumes of water purchased were used with the most recent/known vendor pricing applied to that volume. He explained that a pro forma adjustment was made to include purchased water expense from the City of Belmont, because in June 2018 the City of Belmont began to supply water to three of Aqua NC's subdivisions which had previously been supplied from Aqua NC's wells.[1] Witness Gearhart testified that during discovery, the Company found that there were purchased water systems with abnormal volume activity during the test year. He stated that these systems merited adjustments and in response to a Public Staff engineering data request, resulted in a reduction in the Company's annual purchased water expense. The Company adjusted the purchased water expense to $1,941,621, a decrease of $6,271 from the originally filed amount. He stated that the response also included an adjustment for the vendor's price increase that went into effect in July 2018. Tr. Vol. 5, pp. 217-218.

Public Staff witness Junis testified that Aqua NC's operations resulted in test year water losses exceeding 15% for nine of its third-party water provider accounts. The highest two being the City of Asheville and the City of Concord that resulted in 74% and 64% unaccounted for purchased water, respectively. Tr. Vol. 12, p.155.

In response to Public Staff EDR 13,[2] the Company provided explanations for unaccounted for purchased water supplied by the City of Asheville, City of Concord, City of Mount Airy, Davidson Water, Harnett County, Iredell Water, Town of Pittsboro, and Town of Spruce Pines. The response stated in part that "Aqua NC has a purchased water loss percentage of 13%." Witness Junis testified that the overall 13% included a surplus (Aqua NC sells more gallons than it buys) from the City of Lincolnton and Aqua NC buys approximately half of the overall purchased water for its Aqua NC Water rate division from Johnston County and sells that purchased water to customers in the Flowers Plantation development. Tr. Vol. 12, pp. 155-156.

In response to Public Staff EDR 53,[3] the Company provided an update to its purchased water workpapers, which witness Junis testified that the update included the quantity of gallons purchased from the City of Lincolnton and an increase in the cost of purchasing water utility service from Johnston County. Witness Junis provided Table 12 in his direct testimony that details the Company's purchased water quantities, water losses, and the Public Staff's recommended adjustment based on an acceptable level of water loss of 15%. Tr. Vol. 12, p. 156.

Based on the most recent, available information, Public Staff witness Junis concluded that the customers should not pay for excessive water loss due to lack of oversight, maintenance, and repair. Witness Junis recommended a decrease of $73,670[4] to the purchased water expense filed by the Company.

[1] These affected subdivisions include Heather Glen, Highland on the Point, and Southpoint Landing Subdivisions located in Gaston County, North Carolina. See Docket No. W-218, Sub 491 for additional information.

[2] The Company's response to Public Staff EDR 13 Q1 was entered into the record as Junis Exhibit 23.

[3] The Company's response to Public Staff EDR 53 Q3 with witness Junis' adjustments was entered into the record as Junis Exhibit 24.

[4] Exhibit B3-b-a to the Application listed a variance of $49.64 between columns (i) and (j) that was excluded from the Application, however, it was included in the Company's and witness Junis' workpapers. Whether the variance

WATER AND SEWER – RATE INCREASE

In reference to the non-revenue water analysis that Company witness Berger included in her rebuttal testimony, under cross-examination Public Staff witness Junis stated that the difficulty with utilizing that method is there is not the level of detail, in terms of information available to do a water balance analysis as described by the American Water Works Association (AWWA). Tr. Vol. 10, p. 123. On cross-examination, witness Junis agreed that Aqua NC does not meter hydrant flow when flushing, and stated that doing so would provide the level of detailed information necessary for an accurate non-revenue water or water balance analysis. Tr. Vol. 10, p. 126.

Concerning the issue of water loss that was captured prior to water main replacements to address leaks, Public Staff witness Junis testified that he considered whether it is appropriate for the Company to recover both the extremely high water loss amount that the Aqua NC system is not now experiencing due to leak repairs and the capital costs associated with the repairs. Tr. Vol. 10, p. 128.

Public Staff witness Junis clarified that allowing for a reasonable amount of water losses is not the same as discouraging the Company from doing flushing. The reasonable amount of water losses may include flushing amounts. The Public Staff requested records of the Company's flushing and the Company could not quantify their flushing. Tr. Vol. 10, p. 129.

On cross-examination, Public Staff witness Junis stated that the 15% of allowable water loss is reasonable due to AWWA information. AWWA recommends that action needs to be taken to address water loss at 15%. Witness Junis further clarified that, after the Company addressed water loss issues for systems exceeding 15%, those systems were under the 15% water loss threshold. Tr. Vol. 10, p. 130.

In her rebuttal testimony, Company witness Berger contended that the Public Staff's use of the concept for Unaccounted for Water is an outdated measure of water loss and that a certain amount of water is necessary for system processes to maintain compliance with DEQ regulations. Tr. Vol. 16, pp. 123-124.

On cross-examination, Company witness Berger stated that water loss calculations should consider other factors that contribute to water loss including environmental factors and construction factors. Tr. Vol. 16, p. 146. Company witness Berger pointed out that her rebuttal testimony included background information indicating that, for a number of systems, water loss was due at least in part to operational flushing to address Disinfection-By-Product (DBP) issues. Tr. Vol. 16, p. 148. On further cross-examination, witness Berger confirmed that, with the exception of the Town of Pittsboro, her rebuttal testimony, filed on September 4, 2018, was the first time Aqua NC indicated that DBP flushing contributed to its water loss, even though Aqua NC had previously provided two responses to data requests on that very issue. Tr. Vol. 16, pp. 154-155.

---

is included or not would impact the filed amount and the recommended adjustment but not the recommended level of expense. For the purposes of discussion, the variance has been reduced ($73,719.33 - $49.64 = $73,669.69) from witness Junis' adjustment.

In her rebuttal testimony, Company witness Berger testified that witness Junis failed to investigate root causes and did not consider the Company's proactive measures to address customer concerns and regulatory requirements. Tr. Vol. 16, p. 134. However, on cross-examination, witness Berger agreed that witness Junis' request for a detailed explanation for water losses in EDR 13, Q 1 was an investigation of the root causes of those losses. Tr. Vol. 16, p. 151. The Public Staff contended that witness Berger's testimony on cross-examination contradicted her prefiled rebuttal testimony on this issue.

In reference to a Public Staff engineering data request[1] in the rebuttal testimony of Company witness Berger, she stated that the Company was unable to provide historical data for flushing records at this time, due to the short timeline to satisfy this request. She also stated that the Company cannot provide an accurate estimate of the amount of flushing required in the future. Tr. Vol. 16, p. 156.

Under cross-examination, Company witness Berger confirmed that Aqua NC had 74% water losses in the Asheville system for the test year. Company witness Berger stated that she does not think it is reasonable for customers to pay for 74% water loss. She stated that she does agree it is high, but that it was a case where the circumstances behind the specific leak and attempts by the Company to repair the leak should be considered. Tr. Vol. 16, pp. 158-159.

In her rebuttal, Company witness Berger stated that witness Junis failed to factor the costs involved in any potential infrastructure improvements that may be associated with further addressing the water loss issues. Tr. Vol. 16, p. 134. Under cross-examination, witness Berger agreed that water main replacements, main extensions to eliminate dead ends to help address DBP issues, and treatment systems and filters to comply with water standards are all eligible for recovery between rate cases through the WSIC mechanism. She added that she did not see where witness Junis had applied that reasoning in his calculation. Tr. Vol. 16, pp. 159-160.

While the Commission acknowledges that the testimony presented by Aqua NC in this proceeding explains several operational reasons why some level of water loss in Aqua NC's systems will exist, the Commission finds that it is in the best interest of both Aqua NC and its customers for the Company to be mindful of an acceptable standard of water loss as it monitors its water losses from period to period. The Commission is of the opinion that with an established water loss standard in place, Aqua NC will more aggressively seek to investigate water losses and will strive to identify the cause(s), and make the necessary corrections, if applicable, more expeditiously. Public Staff witness Junis recommended that an acceptable standard for water loss should be 15% based on an AWWA recommendation that action needs to be taken to address water loss occurring at that level. Although Aqua NC witness Berger disagreed with witness Junis' utilization of a maximum system-specific acceptable overall water loss of 15%, in part, because it fails to consider the size, age, or operating characteristics of individual systems, she did not offer any other acceptable standard or detailed criteria to hold Aqua NC accountable to an acceptable level of water loss. Rather, witness Berger testified that the Company performs water audits in accordance with the AWWA Manual 36, Water Audits and Loss Control Programs. In particular,

[1] Public Staff Engineering Data Request #58, Questions 3-5 and 7 with the Company's responses were entered into the record as Public Staff Berger Rebuttal Cross-Examination Exhibit 3.

witness Berger stated that Aqua NC reviews water purchased versus water billed and then requires its operations group to investigate and provide explanations.

Based upon the evidence received in this proceeding, the Commission agrees with the Public Staff that an acceptable water loss percentage should be applied to Aqua NC's purchased water expense. The Commission finds and concludes that 15% is a reasonable and appropriate amount of recoverable water loss for use in this proceeding. The Commission accepts for purposes of this proceeding that the 15% of recoverable water loss encompasses reasonable levels of necessary operational flushing, flushing due to compliance issues, and leaks; and also encourages the Company to monitor and address water losses. Accordingly, as recommended by the Public Staff, the Commission finds that the appropriate level of annual purchased water expense in this proceeding is $1,874,173.

Regulatory Commission Expense

In regard to regulatory commission expense, which is also known as rate case expense, the Public Staff and the Company disagree on the amortization period for the applicable expenses. In its Application, Aqua NC included a three-year amortization period for rate case expense. In her direct testimony filed on August 21, 2018, Public Staff witness Cooper recommended a three-year amortization period for rate case expense, except for the depreciation study, which she recommended a five-year amortization period.[1]

As part of her supplemental testimony, Public Staff witness Cooper recommended an amortization period of five years for rate case expense instead of the three years she initially recommended in her prefiled direct testimony. Her supplemental testimony did not explicitly explain the Public Staff's reasoning for the adjustment to the recommended amortization period. On cross-examination, Public Staff witness Cooper testified that five years was more favorable to customers because of the extraordinary number of attorneys that were representing the Company.[2] This would in turn result in a substantial increase in attorney fees for this proceeding. The Public Staff contended that another reason for its recommendation of a five-year amortization is the fact that the Company utilizes the WSIC and SSIC mechanism for upgrades and improvements between rate cases. Because the Company has the ability to recover some of those costs before a rate case is filed, it seems reasonable to the Public Staff that there would be a greater time span between rate case filings. As noted by the Public Staff, the time span between this rate case and the previous rate case was approximately four and a half years. Tr. Vol. 8, p. 114.

On cross-examination, witnesses Cooper and Henry agreed that it is possible that Aqua NC would hit the 5% cap on WSIC before the next five years lapse, in light of the emphasis on capital investments in the conversations about solutions to the secondary water quality concerns expressed by customers. Witness Cooper acknowledged on cross-examination her understanding that it has been usual and customary for the Public Staff to recommend utilization of a three-year amortization period for regulatory commission expense in water and wastewater cases. Witness

[1] See Cooper Exhibit 1, Schedule 3-5, Column B filed on August 21, 2018.

[2] On August 23, 2018, a Notice to Appear was filed on behalf of the Company adding three additional attorneys for this proceeding. This brought the total number of attorneys representing the Company to six, including Aqua America attorney Kim Joyce.

Henry testified that this case has imposed a major workload on both the Public Staff and the Company, acknowledged (implicitly) by the participation of multiple Public Staff attorneys, and he agreed that a largely unsettled case of this sort would be expected to result in increased legal fees. He noted that the Public Staff is interested in smoothing out that financial impact to customers by amortizing those fees over a longer period, and he also acknowledged the potential of a cash flow impact for the Company if a longer amortization period is used.

As stated earlier, the recommendation for the five-year amortization was filed in the supplemental testimony of Public Staff witness Cooper, but there was no rebuttal filed by the Company related to this issue. On cross-examination, Company witness Gearhart stated that this issue was not included in his rebuttal testimony because he had not been made aware that witness Cooper's proposed amortization period had changed. Tr. Vol. 13, p. 104.

Witness Gearhart testified on cross-examination by the Public Staff that in the Company's initial schedules, the amortization period was listed as three years, except for the depreciation study, which was five years. Referring to the relevant pages from the rate case Orders of 2009, 2010, 2011, 2012, and 2014, he noted that the amortization period for these kinds of expenses was three years in all instances, except for expenses associated with depreciation studies. Witness Gearhart disagreed with the Public Staff's change in methodology, stating that it does not reflect the amount of time that historically existed between rate cases. He stated that this is the first time during his tenure where Aqua NC's rate case interval has exceeded three years, and argued that this interval was an outlier, noting that the Company was "...spending a lot of money." He testified that the Company's Three Year WSIC plan has a $27,000,000 cap, and that the cap is anticipated to be met in the next three years.

Witness Becker agreed on cross-examination that Aqua NC continued to collect in its revenue requirement for rate case expenses that were amortized for three years in the last rate case, pursuant to the Sub 363 Order. However, he noted that this is the first time the Company has been able to stay out that long, that the continuation of revenues based on the prior amortization has helped the Company hold off on a rate case filing, and that it has offset increases in other expenses that have not been updated since the last rate case. He agreed on cross-examination that with respect to that single item, one could say the Company had "over-recovered."

Witness Becker, on redirect-examination, discussed the efforts, commitment of resources, and difficulty associated with attempting to respond to discovery requests that delved into events that occurred as far back as 2005, for purposes of meeting challenges posed in this rate case. He contended that the Company's effort to reconstruct the history and the inputs into Aqua NC's decisions over the period of time from 2005 until now was comprehensively undertaken and was very difficult. He also discussed, on redirect-examination of his rebuttal testimony, a series of examples of the magnitude and pace of the discovery process, which started late and continued through the Friday before the commencement of the evidentiary hearing on the following Tuesday.

Witness Becker discussed the Company's need for a heightened level of legal counsel for this rate case as a result of the certainty or the likelihood that: (a) there would be no global settlement discussions of any kind prior to the Public Staff filing its testimony; (b) certain significant issues were not going to settle, under any foreseeable circumstances; (c) the Company would have 10 days from receipt of the Public Staff's testimony to respond, attempt to negotiate, and develop extensive rebuttal testimony; (d) significant impacts on company rate base were at stake; (e) little time would remain after the filing of rebuttal to prepare for a fully-litigated case; and (f) the Company was accused by the Public Staff of mismanagement. Additionally, witness Gearhart spoke to the volume of discovery in this case, which required internal response and legal support. Witness Becker testified that Aqua NC had conducted the case up to that point with the assistance of two consulting attorneys and had no internal staff – legal or otherwise – dedicated entirely to regulatory support.

In its proposed order, Aqua NC requested that it be allowed to recover its total rate case expenses related to the current proceeding over a four-year period, except for the 2017 depreciation study for which a five-year amortization period was requested.

On November 19, 2018, as required by the September 17, 2018 Stipulation, Aqua NC filed the affidavit of Dean R. Gearhart which provided the rate case expense incurred to date in conjunction with the present proceeding. Affiant Gearhart requested that the Commission approve and include total rate case costs in this proceeding in the amount of $818,397. Affiant Gearhart explained that he provided the Public Staff all required documentation related to such update and that all cost amounts provided were for actual costs incurred to date except for one estimate related to the costs of preparing and mailing notices to customers once the Commission issues its final order in this proceeding.

As detailed in the affidavit of Gearhart, the total rate case costs consists of the following:

Description	Amount
Aqua Service Company Capitalized Time	$5,699
Billing Analysis/Rate Design	52,416
Consultants	38,536
Depreciation Study	58,664
External Audit Fee	2,000
Legal Fees – Current Proceeding	417,876
Legal Fees – Defending WSIC/SSIC[1]	55,560
Mailing/Printing Customer Notices	99,737
NCUC Hearing Costs[2]	11,057
NCUC Rate Case Filing Fee	500
ROE/Capital Structure Witness	48,537
Travel Expenses	1,815
Environmental Finance Center Studies[3]	26,000
Total Rate Case Expense	$818,397

[1] This expense is for the costs associated with defending the Commission's final Order in the Sub 363 rate case before the North Carolina Supreme Court in response to the appeal taken by the North Carolina Department of Justice.

[2] This expense item is for the costs associated with outside court reporting services.

[3] The Environmental Finance Center "Studies of Volumetric Wastewater Rate Structures and a Consumption Adjustment Mechanism for Water Rates of Aqua North Carolina, Inc." were filed jointly by Aqua NC and the Public Staff in Docket No. W-218, Sub 363A on March 31, 2016. These studies were prepared for use in this proceeding and were in fact used and cited by both Aqua NC and the Public Staff in this case.

Consequently, as a result of these final updated rate case costs, Aqua NC requested that the Commission include in rates in this proceeding annual rate case expense of $201,666.

On November 26, 2018, the Public Staff filed its response to Gearhart's affidavit. The Public Staff stated that it has reviewed the documentation filed by Aqua NC for rate case expense as listed in the affidavit of Gearhart. The Public Staff contended that while it does not dispute that the Company has provided documentation supporting the expenses listed in the affidavit, due to the magnitude of the expenses, in particular the legal fees from the rate case proceeding in the amount of $417,876, the Public Staff maintains its previously stated position that all rate case expenses should be amortized over a five-year period to mitigate the impact to customers.

The Commission has weighed the facts and specific circumstances of this case and concludes that the appropriate and reasonable amortization period for regulatory commission expense should be four years, except for the depreciation study amortization period which should remain at five years, as proposed by Aqua NC and the Public Staff, which is consistent with prior Commission orders.

Aqua NC's initial proposal to amortize rate case expenses over three years is consistent with prior practice, and the Commission specifically does not by this ruling reject the standard practice. The Public Staff's proposal, revised from its original position in its supplemental testimony, to apply a five-year amortization period to Aqua NC's regulatory commission expenses in this case, is, for the most part, a recognition of the significantly increased costs of this case, driven by the parties' exercise of their right to fully litigate these significant issues. Aqua NC's revised proposal for a four-year amortization period presented in its proposed order is viewed by the Commission as a compromise position by the Company based upon the unique circumstances of this case.

The costs of defense of any proceeding before this Commission are influenced in great measure by two factors: the vigor of the opposition of the consumer advocates and other intervenors, and the extent of the possibility of settlement of some or all of the contested issues. In this case, costs were clearly driven by a vigorous application of Public Staff resources on behalf of the ratepayers, whether measured by personnel, by amount or complexity of discovery, or by the sheer scope of the investigation, in terms of the duration of the period of examination. Similarly, the Company mounted an extensive and committed effort to contest and litigate a full slate of issues before this Commission. This case was unlike Aqua NC's last litigated rate case proceeding, being Docket No. W-218, Sub 319, which evidentiary hearing lasted approximately three days, or any other water and wastewater litigation before this Commission in recent memory. The present proceeding illustrates the proposition that parties are entitled to try their cases. Furthermore, the evidentiary hearing in this present proceeding included seven days of hearings scattered over the course of 11 business days. The hearing began on September 11, 2018 and, due to the impacts of Hurricane Florence[1] and other previously-calendared Commission hearings and commitments in September, concluded on September 25, 2018. There are costs to such

---

[1] Hurricane Florence made landfall over Wrightsville Beach, North Carolina on Friday, September 14, 2018. In preparation for the hurricane, the hearing was adjourned midday on September 12, 2018 and was reconvened the morning of September 18, 2018.

undertakings, and so long as such costs are reasonably incurred, they should be recoverable in a timely fashion.

The Commission is also mindful of the testimony that suggests that the length of the interval since Aqua NC's last case (four years) is an anomaly, and that – given the magnitude of current and planned expenditures on water quality improvements – the interval until the next rate case may not be of such duration. Specifically, the Company suggested that its WSIC expenditures will cap in about three years. However, in recognition of the significantly increased costs of this case, driven by the parties' exercise of their right to fully litigate the significant issues involved in this particular proceeding, the Commission in of the opinion that a four-year amortization period for rate case expense is an appropriate compromise based upon the facts and circumstances of this proceeding.

Therefore, in this case, for good cause shown, and without suggesting a change to the standard three-year amortization period, the Commission concludes based on the evidence presented in this proceeding that it is reasonable and appropriate to utilize a four-year amortization period for all allowable rate case related costs, as recommended by Aqua NC in its proposed order, except for the depreciation study which should be amortized over five years, as proposed by the Company and the Public Staff.

Communications Initiative

Public Staff witness Cooper testified that Aqua NC applied for rate case expenses including what the Company describes as a Communications Initiative totaling $133,000. She testified that the Public Staff removed from rate case expense the $133,000 estimate which included $58,000 to The Paige Group and $75,000 for Aqua Efforts – Customer Education and Mailings. She testified these expenses were not incurred during the test year and, although the communications contain information on Aqua NC's water quality plans, these are Aqua NC self-promotional communications. She further testified the timing of the mailings suggests that the purpose was to promote a more positive image of Aqua NC going into the customer hearings in this rate proceeding. She testified Aqua NC's retention of a public relations firm to develop the mailings, which easily could have been developed in-house, further demonstrates the mailings were primarily for public relations purposes. She further testified it is not appropriate for customers to pay for expenses associated with Aqua NC's self-promotion.

Public Staff witness Cooper testified that Aqua NC filed this rate increase Application on March 7, 2018. The informational mailings to all Aqua NC water customers were sent on February 19, 2018. She testified subsequent mailings were sent to Raleigh area subdivisions that had experienced Aqua service issues, including Brayton Park, Brandon Station, Stillwater Landing, Stonehenge, Wildwood Green, and Coachman's Trail, in June 2018 prior to the June 25, 2018, Commission public witness hearing in Raleigh.

Public Staff witness Cooper testified while the mailings provided some information useful to customers, the Aqua NC website www.ncwaterquality.com has useful customer information and customers could be directed to this useful website information by regular customer bill notations or regular billing inserts. She testified even if Aqua NC deemed the letters appropriate for a mailing, the Company could have included the letters as a monthly billing insert at a lower cost.

Aqua NC witness Becker testified on rebuttal that he agreed that the entirety of the Communications Initiative should not be included in rate case expense, but he believes the entire amount should be recoverable, with 50% as rate case expense and 50% as a line-item in cost of service. He testified Aqua NC's communications plan is directly related to its Water Quality Plan. He testified Aqua NC is pressing forward with a water quality operations program that is utilizing a combination of increased capital and operational process improvements to address water quality. He testified Aqua NC's ability to educate and communicate with Aqua NC's customers on this issue is a critical piece of the success of the program.

Aqua NC witness Becker testified the specific functions performed by the consulting firm The Paige Group included the following:

- Developed www.ncwaterquality.com content for each section of the website.
- Developed a letter to all Aqua NC customers mailed in February 2018 announcing the Company's water quality improvement plan/approach and directing customers to the website.
- Developed 18 distinct letters to customers within various Aqua NC systems that have been most engaged with Aqua NC on secondary water quality issues. The letters outlined any improvement work already completed in each system, discussed any future planned work, and directed customers to the water quality website. All letters issued in June 2018.
- Developed a bill insert in June/July 2018 directing all customers to the water quality website.
- Developed two e-newsletters (one issued in June and another issued in August) to customers that signed up to receive updates on the water quality website.
- Developed a customer "print on the run" (POTR, similar to a bill insert), issued in August directing customers to the water quality website.

He testified all of these communications are designed to direct customers to the information on Aqua NC's Water Quality Plan, which is found at www.ncwaterquality.com. He further testified the materials are essential to efforts to educate Aqua NC customers, both about infrastructure investment, the necessity and components of rate increases, and in particular about secondary water quality issues.

Aqua NC witness Becker concluded rebuttal stating that Aqua NC's recommendation is that the Communications Initiative expenses be recoverable either as rate case expenses or as an expense line item.

On cross-examination, Aqua NC witness Becker testified The Paige Group conducted an Aqua NC survey to understand what customers want to see, how they want to see it, where they want to see it, and how often they want to see it. He testified The Paige Group designed Aqua NC's water quality website, but website updates would be necessary at less cost. He further testified some of the future communications could be prepared by Aqua NC in-house personnel, but Aqua NC intended to utilize The Paige Group or another consultant going forward on customer communications. Witness Becker also testified that the actual Communications Initiative cost was $83,000, instead of the $133,000 estimate that Aqua NC provided the Public Staff.

After carefully evaluating the evidence, including the agreement reached between Aqua NC and the Public Staff on this issue, the Commission concludes that the actual costs of $83,940 for the Communications Initiative are not rate case expenses as the information provided to customers does not educate the customers on rate case issues. The Commission concludes that the Communications Initiative expenses are reasonable operating expenses to educate customers on water quality issues. The Commission concludes that as the $83,940 includes the completed Aqua NC customer survey and the completed design of Aqua NC's water quality website, the reasonable ongoing expenses will be reduced. The Commission concludes that one half of the $83,940 expense, which is $41,970, should be amortized over three years thereby providing the reasonable ongoing annual expense of $13,990 to be included in the operating expenses, as stipulated.

Annualization/Consumption Factor

In his direct testimony, Public Staff witness Junis testified that updating the test year billing data to the 12-month period ending June 30, 2018, resulted in a higher level of bills than reflected in the originally filed application for the 12-month test year period ending September 30, 2017. He stated that he had adjusted the consumption for the updated data using a three-year average (July 2015 through June 2018) compared to only using the 12 months ended June 30, 2018. According to witness Junis, the consumption adjustment resulted in a 0.47% decrease for Aqua NC Water, a 1.85% decrease for Aqua NC Sewer, a 1.21% increase for Brookwood Water, a 2.97% increase for Fairways Water, and a 0.91% decrease for Fairways Sewer to reflect the difference between the test year per customer usage and the three-year average for the period ended June 30, 2018.

Witness Junis further testified that using the data in his billing analysis exhibit updated through June 30, 2018, Public Staff witness Henry calculated the growth and consumption factors referred to in his testimony. In addition, witness Junis stated that he recommended that Public Staff witness Henry apply the growth and consumption factors to the sewer and water short-term variable expenses identified by the EFC. (EFC Report, pp. 6 and 11) The exceptions were for sludge removal, purchased wastewater treatment, and purchased water expenses. Witness Junis stated that the sludge removal expense was calculated by Public Staff witness Darden to be the annual average of the updated two-year period ending June 2018, which includes recent growth and changes in consumption. According to witness Junis, short-term variability of the purchased wastewater treatment and purchased water expenses are almost entirely matched by variability of the commodity revenues of those systems.

Aqua NC witness Gearhart disagreed with the Public Staff's annualization and consumption adjustments. According to witness Gearhart, the purpose of this adjustment is to update variable expenses to match Aqua NC's period-end (June 30, 2018) customer count using a calculated "Annualization Factor" along with a "Consumption Factor" that is calculated using current consumption levels versus Aqua NC's three-year average consumption. Witness Gearhart further stated that the methodology to apply these factors has been consistently applied over Aqua

NC's last two rate cases; however, the Public Staff has changed from its prior methodology in three areas, as follows:

1. <u>The "Consumption Factor" has been applied in this case to Aqua NC's two Sewer Rate Divisions; whereas the consumption factor should only apply to Aqua NC's three Water Rate Divisions.</u>

Witness Gearhart testified that in Aqua NC's two previous rate cases (Docket Nos. W-218, Sub 319 and W-218, Sub 363), the consumption factor was not applied to either the Aqua NC Sewer or Fairways Sewer rate entities. According to witness Gearhart, the variable expenses for these sewer entities is primarily customer driven, while the consumption factor is designed to apply to only water rate entities.[1]

Further, witness Gearhart stated that, as a result, on Cooper Exhibit I, Schedule 3-5(a)(1), the Consumption Factor on line 2 for Aqua NC Sewer, should be changed from -1.85% to 0.00% and that line 4 for Fairways Sewer should be changed from -0.91% to 0.00%.

2. <u>Adjustments for Sludge Hauling expense that have been part of the annualization calculation in each of Aqua NC's last two rate cases (Docket Nos. W-218, Sub 319 and W-218, Sub 363) have been excluded from the annualization calculation in this rate proceeding.</u>

Company witness Gearhart stated that Public Staff witness Junis recommended that an annualization and consumption adjustment should be applied to items identified as short-term variable expenses by the EFC study, filed with the Commission on March 31, 2016, in Docket No. W-218, Sub 363A. <u>See</u> pages 6 and 11. Nonetheless, he testified that witness Junis specifically excludes sludge hauling expense, which is recommended for inclusion in the calculation by the EFC study on page 6 and included in the prior Public Staff rate case calculations mentioned above.

Witness Gearhart further stated that, despite Aqua NC's disagreement with the Public Staff's position concerning the ongoing level of sludge hauling expense calculated by Public Staff witness Darden and contested in Aqua NC witness Pearce's rebuttal testimony, the annualization factor is a separate calculation to take the historic balances (or averages) and annualize them for current end-of-period customer counts.

According to witness Gearhart, sludge hauling is the removal of wastewater solids from a WWTP. The increase in wastewater based on the Company's current customer count (as of

---

[1] In response to Question 1 of Public Staff EDR 60 (entered in the record in this case as Public Staff Gearhart Rebuttal Cross-Examination Exhibit 1), witness Gearhart responded that:

> The basis for this contention was the fact that the consumption factor used in this adjustment is based on customer gallons billed. Applying that factor to sewer entitles where the vast majority of customers are flat rate and have no billed consumption would seem to be inappropriate.
>
> This factor has not been applied to sewer entitles for any Aqua NC rate cases dating back to at least 2007 and neither the company nor the Public Staff have disagreed on this concept.

June 30, 2018) will result in the requirement to remove more sludge material. Public Staff witness Junis excluded sludge hauling expense from his calculation, citing the fact that sludge hauling expense was calculated separately by the Public Staff to be the annual average of the two-year period ending June 2018. Witness Gearhart noted that the mid-point of these two years is June 2017. Since Aqua NC's total sewer customer count has increased by 4.2% since June 2017, witness Gearhart testified that this does not represent the expense levels that will be incurred using the current customer count at June 30, 2018. He stated that an average understates the actuality of an end-of-period number and undermines the intent of the annualization adjustment and the Company's opportunity to recover the costs associated with these customers.

Further, witness Gearhart stated that witness Junis' reasoning to selectively exclude an expense line that is directly related to customer counts from the annualization adjustment because it was separately updated using an average is flawed.

For the reasons stated, witness Gearhart requested that sludge hauling expense be added to the annualization adjustment calculation for this case, consistent with the practice in the Company's two prior rate cases.

On cross-examination by the Public Staff, witness Gearhart testified that, while he agreed that if water customers use less water, there would be less wastewater and less sludge produced, because only a small population of Aqua NC's sewer customers are metered sewer customers "...it isn't appropriate to apply the [consumption] adjustment to the entire population of the sewer rate entities ... both historically and logically, to the Company's way of thinking." Tr. Vol. 13, p. 109.

3. <u>Materials and Supplies Expense has been erroneously excluded from the Annualization and Consumption Adjustments despite being included in the previous two rate orders cited above.</u>

Witness Gearhart testified that materials and supplies expense is a variable expense where a large portion of the annual amounts increases with both the number of customers served and the level of annual consumption supported. Neither the Company nor the Public Staff has disputed this position in previous rate proceedings; however, witness Junis excluded these expenses from his annualization calculation. Witness Gearhart requested that materials and supplies expense be added to the annualization and consumption adjustment calculations for this case.

Witness Gearhart concluded by stating that witness Junis' exclusion of certain variable expenses effectively reduces revenues to which Aqua NC is entitled, and excludes legitimate costs associated with the number of customers which the Company serves as of June 30, 2018, at its current level of consumption. Per the Company's calculations, the impact of failing to apply the annualization and consumption adjustment factors to the three items enumerated above reduces the expenses which the Company is entitled to recover in this case.

Based upon the foregoing, the Commission concludes that the Public Staff's proposed consumption adjustment factors should not be applied to either Aqua NC's Sewer Operations rate division or the Company's Fairways Sewer Operations rate division. The consumption adjustment factors proposed by the Public Staff should only be applied to the Company's three Water

Operations rate divisions (Aqua NC Operations Water, Brookwood Operations Water, and Fairways Operations Water). Further, the Commission finds and concludes that Aqua NC's sludge hauling expense should be included in the calculation of the Company's annualization adjustment, whereas Aqua NC's materials and supplies expense should be excluded from the calculation.

The Commission reaches these conclusions for several reasons. First, the Commission finds the rebuttal testimony offered by Company witness Gearhart to be more persuasive on the annualization and consumption adjustment issues than the testimony offered by Public Staff witness Junis, except for the testimony by witness Gearhart concerning the inclusion of materials and supplies expense in the calculation of the annualization adjustment. The Commission gives more weight to the testimony of witness Junis concerning that particular contested matter.

Second, a consumption adjustment factor was not applied to either of the Aqua NC Sewer Rate Divisions in the Company's two prior rate cases and the Commission does not find good cause to depart from that treatment in this case. The Commission gives substantial weight to Aqua NC witness Gearhart's argument that the Public Staff's consumption factors used in these adjustments were based on the gallons billed for a small number of metered sewer customers and the factors were applied to sewer entities where the vast majority of the sewer customers are flat rate customers that have no billed consumption. The Commission concludes that such calculations would be inappropriate and would not result in reasonable consumption adjustments for Aqua NC's sewer rate entities.

Third, the annualization adjustment for sludge hauling expense was applied in the Company's two prior rate cases. The Commission does not find good cause to depart from that treatment in this case. The Public Staff has not offered adequate justification in support of its proposal to convince the Commission to change precedent and exclude sludge hauling expense from the annualization adjustment in this case. The Commission agrees with witness Gearhart that the Public Staff's proposal to selectively exclude sludge hauling expense from the annualization adjustment because it was separately updated by use of a two-year average, is flawed and should be rejected.

Fourth, the Commission gives substantial weight to the fact that the EFC Report does not include materials and supplies expense as a variable expense in its analysis as pointed out by Public Staff witness Junis. Although witness Gearhart testified that materials and supplies expense is a variable expense "where a large portion of the annual amounts increases with both the number of customers served and the level of annual consumption", he did not provide any specific examples of the types of materials and supplies expense that Aqua NC incurs which are variable that would indicate that the EFC Report is incorrect in that regard.

Accordingly, for the reasons set forth above, the Commission finds and concludes that the Public Staff's proposed consumption adjustment factors should not be applied to either Aqua NC's Sewer Operations rate division or the Company's Fairways Sewer Operations rate division, and Aqua NC's sludge hauling expense should be included in the calculation of the Company's annualization adjustment whereas its materials and supplies expense should be excluded.

Summary Conclusion

Based on the foregoing, the Commission concludes that the appropriate level of O&M and G&A expenses for combined operations for use in this proceeding are as follows:

Item	Amount
Salaries and wages	$10,242,720
Employee pensions and benefits	3,077,822
Purchased water/sewer treatment	2,316,616
Sludge removal	559,382
Purchased power	3,570,667
Fuel for power production	26,809
Chemicals	1,521,967
Materials and supplies	505,720
Testing fees	946,373
Transportation	919,149
Contractual services-engineering	2,750
Contractual services-accounting	188,101
Contractual services-legal	196,144
Contractual services-other	4,330,817
Rent	309,942
Insurance	650,674
Regulatory commission expense	201,666
Miscellaneous expense	1,477,705
Interest on customer deposits	32,388
Annualization & Consumption Adj.	190,392
Total O&M and G&A expenses	$31,267,804

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 87-91

The evidence supporting these findings of fact is contained in the testimony of Public Staff witnesses Cooper and Junis and Company witnesses Gearhart and Becker. The Company's level of depreciation and amortization expense on its Application is $9,926,332. The Public Staff's recommended level of depreciation and amortization expense is $9,986,078 for a difference of $59,746.

With the Stipulation and revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute the following Public Staff adjustments to depreciation and amortization expense:

Item	Amount
Adjustment for post-test year plant additions	$146,775
Update costs related to future customers	173
Update Mid South growth PAA to 6/30/18	1,647
Adjustment for Mountain Ridge AIA	2,500
Total	$151,095

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to depreciation and amortization expense in this proceeding.

Based on the testimony of Company witnesses Gearhart and Becker, the Company disagrees with the following Public Staff adjustments to depreciation and amortization expense:

Item	Amount
Adjustment for Neuse Colony WWTP CIAC	\$51,673[1]
Adjustment for meters and meter installations	(139,727)
Adjustment for excess capacity	(3,295)
Total	(\$91,349)

Neuse Colony WWTP CIAC

The Public Staff made an adjustment to reduce amortization expense by \$42,676 related to the CIAC collected towards the total capacity of the Neuse Colony WWTP and \$8,997 for the imputation of CIAC for the Buffalo Creek force main and pump station costs that Aqua NC did not collect from developers. As discussed elsewhere in this Order, the Commission has concluded that the adjustment recommended by the Public Staff to remove from rate base the CIAC collected by Aqua NC in the amount of \$1.497 million related to the Neuse Colony WWTP is not appropriate in this proceeding. Further, the Commission concluded that the adjustment for the imputation of CIAC for the Buffalo Creek force main and pump station costs should be \$218,999 rather than \$315,687. Therefore, the Commission concludes that the Public Staff's adjustment of \$8,997 should be adjusted to \$6,241 and that \$6,241 of amortization expense should be included in this proceeding.

Meters and Meter Installations

The Public Staff made an adjustment to remove \$139,727 of depreciation expense related to its removal of \$2,834,632 and \$1,399,522 in AMR meters and related installation costs from Plant in Service for Aqua NC Water Operations and Brookwood Water Operations. As discussed elsewhere in this Order, the Commission disagreed with the Public Staff's adjustments to remove these costs from Plant in Service. Therefore, the Commission concludes that the corresponding adjustment to remove \$139,727 of depreciation expense is inappropriate and should not be made in this proceeding.

[1] Comprised of \$42,676 related to the amortization of the \$1.497 million in CIAC plus \$8,997 in amortization expense related to the imputed CIAC in the amount of \$315,687. Due to an inadvertent error, the Public Staff reduced total amortization expense by the \$8,997 adjustment rather than increasing amortization expense as it intended.

Excess Capacity

The Public Staff made an adjustment to increase depreciation expense by $20,372 and amortization expense by $23,667 for excess capacity for the Carolina Meadows, The Legacy at Jordan Lake, and Westfall WWTPs. As discussed elsewhere in this Order, the Company contended that approximately $1.7 million of rehabilitation and upgrades that were made in 2018 for the Carolina Meadows WWTP should not be subject to an excess capacity adjustment because this would disallow 30.63% of the upgrade immediately after the investment is made by the Company. In the present Order, the Commission has concluded that 50% of the $1.7 million rehabilitation and upgrades should be included as part of the excess capacity adjustment and 50% should be included in rate base as a post-test year update. Therefore, the Commission concludes that the corresponding adjustment to increase depreciation expense by $28,890 and amortization expense by $23,667 related to the Carolina Meadows, The Legacy at Jordan Lake, and Westfall WWTPs is appropriate and should be made in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 92-95

The evidence supporting these findings of fact is contained in the testimony of Public Staff witnesses Henry and Cooper, and Company witness Gearhart. The following table summarizes the differences between the Company's level of other taxes and Section 338(h) adjustment from its Application and the amounts recommended by the Public Staff:

Item	Company Application	Public Staff	Difference
Property taxes	$635,463	$635,463	$0
Payroll taxes	779,805	788,065	8,260
Other taxes	308,886	308,886	0
Section 338(h) adjustment	(20,024)	(20,024)	0
Total	$1,704,130	$1,712,390	$8,260

With the Stipulation and revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit I, the Company does not dispute any of the Public Staff adjustments to other taxes.

Therefore, the Commission finds and concludes that the adjustments listed above, which are not contested, are appropriate adjustments to be made to other taxes in this proceeding.

The difference in the level of payroll taxes is due to the differing levels of salaries and wages recommended by the Company and the Public Staff. Based on the conclusions reached elsewhere in this Order regarding the levels of salaries and wages, the Commission concludes that the appropriate level of payroll taxes for use in this proceeding is $789,484.

Summary Conclusion

Based on the foregoing, the Commission concludes that the appropriate level of other taxes for combined operations for use in this proceeding is as follows:

Item	Amount
Property taxes	$635,463
Payroll taxes	789,484
Other taxes	308,886
Section 338(h) adjustment	(20,024)
Total	$1,713,809

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 96-99

The evidence supporting these findings of fact is contained in the testimony of Public Staff witnesses Boswell, Henry, and Cooper, and Company witness Kopas.

The following summarizes the differences between the Company's level of regulatory fee and income taxes from its Application and the amounts recommended by the Public Staff:

Item	Company Application	Public Staff	Difference
Regulatory fee	$77,046	$79,174	$2,128
Deferred income taxes	(639,532)	(120,648)	518,884
State income taxes	186,463	295,538	109,075
Federal income taxes	1,266,088	2,006,711	740,623
Total	$890,065	$2,260,775	$1,370,710

With the Stipulation and revisions made by the Public Staff in its supplemental testimony and Revised Supplemental Cooper Exhibit 1 and in the testimony of witness Boswell and Boswell Revised Exhibit2, the Company agreed with the Public Staff's adjustment to deferred income tax of $120,648 to reflect the annual amortization of protected federal EDIT.

Regulatory Fee

The difference in the level of regulatory fee is due to the differing levels of revenues recommended by the Company and the Public Staff. Based on conclusions reached elsewhere in this Order regarding the levels of revenues, the Commission concludes that the appropriate level of regulatory fee for use in this proceeding is $79,174.

State Income Taxes

The difference in the level of state income taxes is due to the differing levels of revenues and expenses recommended by the Company and the Public Staff. Based on the conclusions reached elsewhere in this Order regarding the levels of revenues and expenses, the Commission concludes that the appropriate level of state income taxes for use in this proceeding is $272,043.

Federal Income Taxes

The difference in the level of federal income taxes is due to the differing levels of revenues and expenses recommended by the Company and the Public Staff. Based on the conclusions reached elsewhere in this Order regarding the levels of revenues and expenses, the Commission concludes that the appropriate level of federal income taxes for use in this proceeding is $1,847,171.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 100-104

The evidence in support of these findings of fact is contained in the testimony of Company witness Kopas, the testimony of Public Staff witness Boswell, the Stipulation filed in this docket, and the entire record in this proceeding.

On December 22, 2017, the Tax Act was signed into law. Among other provisions, the Tax Act reduced the federal corporate income tax rate from 35% to 21%, effective January 1, 2018.[1] It also repealed the manufacturing tax deduction and eliminated bonus depreciation.

When the federal corporate income tax rate is reduced, as it was in the Tax Act, a portion of the accumulated deferred income tax that the utility has accumulated from the ratepayers will never be needed by the utility for the payment of taxes. This portion is classified as federal EDIT. The IRC requires that certain EDIT must be normalized, or flowed back, subject to certain limitations. Federal EDIT that is subject to this limitation is classified as protected federal EDIT. All other types of federal EDIT are termed unprotected, in that there are no limitations placed upon them by the IRS with regard to the length of time over which they may be returned to ratepayers.

In its Application, the Company reflected tax expense at the reduced federal corporate income tax rate of 21%. Aqua NC witness Kopas recommended in his direct testimony that the overcollection of federal taxes related to the reduction in the federal corporate income tax rate to income earned after January 1, 2018 be returned to customers over a one-year period as a credit beginning when the new base rates are implemented to reflect the new income tax rate.

Further, in the revised direct testimony of Company witness Kopas filed on August 6, 2018, the Company proposed to return federal protected EDIT to ratepayers over a period of time equal to the expected lifespan of the plant, property and equipment with which they are associated (based on the average rate assumption method (ARAM) as required by the IRS), return federal unprotected EDIT to ratepayers over 20 years, and return state EDIT to ratepayers over four years.

In testimony filed on September 5, 2018, Public Staff witness Boswell presented the Public Staff's proposal regarding the flowback of federal and state EDIT. She included four adjustments based on the information provided by the Company. First, she recommended the return of

[1] In response to the enactment of the Tax Act, on January 3, 2018, the Commission opened a rulemaking docket (Docket No. M-100, Sub 148, i.e., the Tax Docket) for the purpose of determining how the Commission should proceed. In the Order establishing the Tax Docket, the Commission placed certain public utilities on notice that the federal corporate income tax expense component of all existing rates and charges, effective January 1, 2018, would be billed and collected on a provisional rate basis.

protected federal EDIT based upon the Company's calculation of the net remaining life of the timing differences, as required under the IRC. For unprotected federal EDIT, she recommended removing the federal EDIT regulatory liability associated with the unprotected differences from rate base, and placing it in a rider to be refunded to ratepayers over three years on a levelized basis, with carrying costs. Witness Boswell stated that immediate removal of unprotected federal EDIT from rate base increases the Company's rate base and mitigates regulatory lag that may occur from refunds of unprotected federal EDIT not contemporaneously reflected in rate base. Further, witness Boswell maintained that refunding the unprotected federal EDIT over three years allows the Company to properly plan for any future credit needs. For state EDIT related to House Bill 998 (HB 998) and addressed in Docket No. M-100, Sub 138, witness Boswell recommended returning that EDIT to customers through a levelized rider that would expire at the end of a three-year period. Finally, witness Boswell testified that the Public Staff does not oppose the Company's proposal to refund to ratepayers the overcollection of federal taxes related to the decrease in federal tax rates for the period beginning January 1, 2018, and corresponding interest, as a credit for a one-year period beginning when the new base rates become effective in the current docket.

On September 17, 2018, the Company and the Public Staff jointly filed a Stipulation. The Stipulation settles, among other items, the treatment of federal EDIT, state EDIT related to HB 998 and addressed in Docket No. M-100, Sub 138, and the overcollection of federal corporate income taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018. The Stipulation specifically states in Section III, Paragraphs II, JJ, and KK, as follows:

> II. The Company agrees to accept the Public Staff's proposals for addressing the Federal Tax Cuts and Jobs Act (the Tax Act). The unprotected Federal EDIT created by enactment of the Tax Act will be returned to customers through a levelized rider that will expire at the end of a three-year period. The protected EDIT will be flowed back following the tax normalization rules utilizing the average rate assumption method (ARAM) required by IRC Section 203(e).
>
> JJ. The state EDIT that the Company recorded pursuant to the Commission's May 13, 2014 Order in Docket No. M-100, Sub 138 will be returned to customers through a levelized rider that will expire at the end of a three-year period.
>
> KK. The Stipulating Parties agree to the Company's proposal to refund to the ratepayers the overcollection of federal taxes related to the decrease in federal tax rates for the period beginning January 1, 2018, and corresponding interest, as a surcharge credit for a one-year period beginning when the new base rates become effective in the current docket.

The AGO stated in its post-hearing brief that ratepayers should promptly enjoy the benefits of Aqua NC's cost savings resulting from recent changes in the federal tax law. The AGO asserted that recent reductions in federal and state corporate income tax rates result in lower operating expenses for utilities, with a favorable impact on the cost of public utility service, and produce an excess accumulation of funds for deferred income taxes that may be returned to ratepayers. The AGO noted that the Commission determined in its recent Order in a generic proceeding that the issue of how to reflect the changes in federal tax rates in new utility rates would be determined for Aqua NC in this general rate case proceeding. See Order Addressing the Impacts of the Federal Tax Cuts and Jobs Act on Public Utilities in Docket No. M-100, Sub 148 issued on October 5, 2018, p. 69. The AGO stated that it supports rate adjustments to flow through the benefits of tax changes to ratepayers as soon as possible.

The AGO further noted that the changes in tax rates have five impacts on rates as proposed by Aqua NC or resolved by agreement between Aqua NC and the Public Staff:

1. Operating expenses will reflect the federal corporate income tax rate reduction from 35% to 21%;

2. The amount of tax expense that was overcollected in rates from January 1, 2018 until new rates take effect will be returned to ratepayers as a bill credit over a period of one year;

3. The excess accumulated deferred income taxes associated with the change in the North Carolina corporate income tax rate under HB 998 will be returned to ratepayers in a rider to rates over a three-year period;

4. The unprotected excess accumulated deferred income taxes associated with the reduction in the federal corporate income tax rate will be returned to ratepayers in a rider to rates over a three-year period; and

5. The protected excess deferred income taxes associated with the reduction in the federal corporate income tax rate will be returned to ratepayers in rates over a period of 20 plus years reflecting the period required by federal tax provisions.

See p. 9 of Stipulation filed on September 17, 2018.

The AGO maintained that it supports the prompt adjustment of rates to reflect the tax reductions both through the reduction in operating expenses and the return of excess deferred income taxes. The AGO noted that in the recent Duke Energy Carolinas rate case in Docket No. E-7, Sub 1146, the AGO recommended a return of excess deferred taxes over a period of two years or less, so that ratepayers are able to benefit as soon as possible from the amounts they are owed.[1] The AGO asserted that although two years is preferable, in light of the resolution of the issue as proposed by Aqua NC and the Public Staff, the AGO does not oppose the return of excess deferred taxes over a three-year period under the circumstances of this case.

[1] See p. 141 of the AGO's post-hearing brief filed on April 27, 2018 in Docket No. E-7, Sub 1146.

WATER AND SEWER – RATE INCREASE

Based upon all of the evidence of record in this case, the Commission finds it appropriate to accept the Stipulation by the Company and the Public Staff concerning the tax issues. Therefore, the following will be accepted and approved by the Commission in this proceeding:

1. The Company's revenue requirement shall reflect the reduction in the federal corporate income tax rate from 35% to 21%, on the Company's ongoing federal income tax expense.

2. The Company's protected federal EDIT shall be flowed back to customers following the tax normalization rules utilizing the ARAM as required by the rules of the IRS.

3. The Company's unprotected federal EDIT shall be returned to ratepayers through a levelized rider over a period of three years.

4. The Company shall refund to its ratepayers the overcollection of federal income taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018, and corresponding interest, through a surcharge credit for a one-year period beginning when the new base rates become effective in the current docket.

5. The Company's state EDIT recorded pursuant to the Commission's Order Addressing the Impacts of HB 998 on North Carolina Public Utilities issued May 13, 2014, in Docket No. M-100, Sub 138 shall be returned to ratepayers through a levelized rider that will expire at the end of a three-year period.

Finally, both the Company and the Public Staff included the same language in their respective proposed orders in this docket to specify that if new base rates are not established prior to completion of the refund to customers related to the levelized rider established for the flowback of excess deferred income taxes (approximately thirty-six months) the Company will file new tariffs for any rate division whose rates exceed the initial increase requested in the Application. The Company and the Public Staff also stated that the new base rates will be implemented the first month after the credit expires. They further provided language to state that the sole purpose of any new tariffs implemented at the time the rider for unprotected federal EDIT expires is to reduce the rates approved in Docket No. W-218, Sub 497 to a level no greater than the amount noticed for each rate division in that docket. The language states that there will be no deferral for recovery of the difference between the originally approved amount and the amount resulting from the new tariffs. Since it appears the Company and the Public Staff agree to this language, the Commission finds it appropriate to approve such language for inclusion in this Rate Order.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 105-113

The evidence supporting these findings of fact and conclusions is contained in the Company's Application and corresponding NCUC Form W-1, the testimony and exhibits of the public witnesses, the testimony and exhibits of Company witness D'Ascendis, Public Staff witness Hinton, the Stipulation, and the entire record of this proceeding.

Rate of Return on Equity

In its Application and in the direct testimony of Aqua NC witness Dylan D'Ascendis, the Company requested approval for its rates to be set using a rate of return on equity of 10.90%. In his rebuttal testimony, witness D'Ascendis reduced his recommended rate of return on equity to 10.80% after removing his adjustment for flotation cost. For the reasons set forth herein, the Commission finds that a rate of return on equity of 9.70% is just and reasonable.

Rate of return on equity, also referred to as the cost of equity capital, is often one of the most contentious issues to be addressed in a rate case. In the absence of a settlement agreed to by all parties, the Commission must exercise its independent judgment and arrive at its own independent conclusion as to all matters at issue, including the rate of return on equity. See, e.g., State ex rel. Utils. Comm'n v. Carolina Utils. Customers Ass'n, 348 N.C. 452, 466, 500 S.E.2d 693, 707 (1998). In order to reach an appropriate independent conclusion regarding the rate of return on equity, the Commission should evaluate the available evidence, particularly that presented by conflicting expert witnesses. State ex rel. Utils. Comm'n v. Cooper, 366 N.C. 484, 491-93, 739 S.E.2d 541, 546-47 (2013) (Cooper I). In this case, the evidence relating to the Company's cost of equity capital was presented by Aqua NC witness D'Ascendis and Public Staff witness Hinton. No other rate of return on equity expert evidence was presented by any party.

In addition to its evaluation of the expert evidence, the Commission must also make findings of fact regarding the impact of changing economic conditions on customers when determining the proper rate of return on equity for a public utility. Cooper I, 366 N.C. at 494, 739 S.E.2d at 548. This was a factor newly announced by the Supreme Court in its Cooper I decision and not previously required by the Commission or any appellate courts as an element that must be considered in connection with the Commission's determination of an appropriate rate of return on equity. The Commission's discussion of the evidence with respect to the findings required by Cooper I is set out in detail in this Order.

Cooper I was the result of the Supreme Court's reversal and remand of the Commission's approval of the agreement regarding the rate of return on equity in a stipulation between the Public Staff and Duke Energy Carolinas, LLC (DEC) in Docket No. E-7, Sub 989. The Commission has had occasion to apply both prongs of Cooper I in subsequent orders, specifically the following:

- Order Granting General Rate Increase, Docket No. E-2, Sub 1023 (May 30, 2013) (2013 DEP Rate Order), which was affirmed by the North Carolina Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 444, 761 S.E.2d 640 (2014) (Cooper III)[1];

- Order on Remand, Docket No. E-7, Sub 989 (Oct. 23, 2013) (DEC Remand Order), which was affirmed by the North Carolina Supreme Court in State

[1] An intervening case, State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 430, 758 S.E.2d 635 (2014) (Cooper II), arose from Dominion North Carolina Power's 2012 rate case and resulted in a remand to the Commission, inasmuch as the Commission's Order in that case predated Cooper I.

ex rel. Utils. Comm'n v. Cooper, 367 N.C. 644, 766 S.E.2d 827 (2014) (Cooper IV);

- Order Granting General Rate Increase, Docket No. E-7, Sub 1026 (Sep. 24, 2013), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 741, 767 S.E.2d 305 (2015) (Cooper V);

- Order on Remand, Docket No. E-22, Sub 479 (July 23, 2015), which was not appealed to the Supreme Court;

- Order Approving Rate Increase and Cost Deferrals and Revising PJM Regulatory Conditions, Docket No. E-22, Sub 532 (Dec. 22, 2016);

- Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase, Docket No. E-2, Sub 1142 (Feb. 23, 2018); and

- Order Accepting Stipulation, Deciding Contested Issues, and Requiring Revenue Reduction, Docket No. E-7, Sub 1146 (June 22, 2018).

In order to give full context to the Commission's decision herein and to elucidate its view of the requirements of the General Statutes as they relate to rate of return on equity, as interpreted by the Supreme Court in Cooper I, the Commission deems it important to provide in this Order an overview of the general principles governing this subject.

A. Governing Principles in Setting the Rate of Return on Equity

First, there are, as the Commission noted in the 2013 DEP Rate Order, constitutional constraints upon the Commission's rate of return on equity decisions established by the United States Supreme Court Decisions in Bluefield Waterworks & Improvement Co. v. Pub. Serv. Comm'n of W. Va., 262 U.S. 679 (1923) (Bluefield), and Fed. Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944) (Hope):

> To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting an return on equity, the Commission must still provide the public utility with the opportunity, by sound management, to (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utilities Commission v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S.E.2d 705, 757 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return" in Bluefield and Hope. Id.

2013 DEP Rate Order, p. 29.

Second, the rate of return on equity is, in fact, a cost. The return that equity investors require represents the cost to the utility of equity capital. In his dissenting opinion in Missouri ex rel. Southwestern Bell Tel. Co. v. Missouri Pub. Serv. Comm'n, 262 U.S. 276 (1923), Justice Brandeis remarked upon the lack of any functional distinction between the rate of return on equity (which he referred to as a "capital charge") and other items ordinarily viewed as business costs, including operating expenses, depreciation, and taxes:

> Each is a part of the current cost of supplying the service; and each should be met from current income. When the capital charges are for interest on the floating debt paid at the current rate, this is readily seen. But it is no less true of a legal obligation to pay interest on long-term bonds ... and it is also true of the economic obligation to pay dividends on stock, preferred or common.

Id. at 306 (Brandeis, J. dissenting) (emphasis added). Similarly, the United States Supreme Court observed in Hope, "From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business ... [which] include service on the debt and dividends on the stock." Hope at 603.

Leading academic commentators also define rate of return on equity as the cost of equity capital. Professor Charles Phillips, for example, states that "the term 'cost of capital' may be defined as the annual percentage that a utility must receive to maintain its credit, to pay a return to the owners of the enterprise, and to ensure the attraction of capital in amounts adequate to meet future needs." Phillips, Charles F., Jr., The Regulation of Public Utilities (Public Utilities Reports, Inc. 1993), p. 388. Professor Roger Morin approaches the matter from the economist's viewpoint:

> While utilities enjoy varying degrees of monopoly in the sale of public utility services, they must compete with everyone else in the free open market for the input factors of production, whether it be labor, materials, machines, or capital. The prices of these inputs are set in the competitive marketplace by supply and demand, and it is these input prices which are incorporated in the cost of service computation. This is just as true for capital as for any other factor of production. Since utilities must go to the open capital market and sell their securities in competition with every other issuer, there is obviously a market price to pay for the capital they require, for example, the interest on capital debt, or the expected return on equity.
>
> * * *
>
> [T]he cost of capital to the utility is synonymous with the investor's return, and the cost of capital is the earnings which must be generated by the investment of that capital in order to pay its price, that is, in order to meet the investor's required rate of return.

Morin, Roger A., Utilities' Cost of Capital (Public Utilities Reports, Inc. 1984), at pp. 19-21. Professor Morin adds: "The important point is that the prices of debt capital and equity capital are set by supply and demand, and both are influenced by the relationship between the risk and return expected for those securities and the risks expected from the overall menu of available securities." Id. at 20 (emphasis added).

Changing economic circumstances as they impact Aqua NC's customers may affect those customers' ability to afford rate increases. For this reason, customer impact weighs heavily in the overall ratemaking process, including, as set out in detail elsewhere in this Order, the Commission's own decision of an appropriate authorized rate of return on equity. In addition, in the event of a settlement, customer impact no doubt influences the process by which the parties to a rate case decide to settle contested matters and the level of rates achieved by any such settlement.

However, a customer's ability to afford a rate increase has absolutely no impact upon the supply of or the demand for capital. The economic forces at work in the competitive capital market determine the cost of capital – and, therefore, the utility's required rate of return on equity. The cost of capital does not go down because some customers may find it more difficult to pay for an increase in water and wastewater prices as a result of prevailing adverse economic conditions, any more than the cost of capital goes up because some customers may be prospering in better times.

Third, the Commission is and must always be mindful of the North Carolina Supreme Court's command that the Commission's task is to set rates as low as possible consistent with the dictates of the United States and North Carolina Constitutions. State ex rel. Utils. Comm'n v. Pub. Staff-N. Carolina Utils. Comm'n, 323 N.C. 481, 490, 374 S.E.2d 361, 370 (1988). Further, and echoing the discussion above concerning the fact that rate of return on equity represents the cost of equity capital, the Commission must execute the Supreme Court's command "irrespective of economic conditions in which ratepayers find themselves." (2013 DEP Rate Order, p. 37.) The Commission noted in that Order:

> The Commission always places primary emphasis on consumers' ability to pay where economic conditions are difficult. By the same token, it places the same emphasis on consumers' ability to pay when economic conditions are favorable as when the unemployment rate is low. Always there are customers facing difficulty in paying utility bills. The Commission does not grant higher rates of return on equity when the general body of ratepayers is in a better position to pay than at other times, which would seem to be a logical but misguided corollary to the position the Attorney General advocates on this issue.

Id. Indeed, in Cooper I the Supreme Court emphasized "changing economic conditions" and their impact upon customers. Cooper I, at 548.

Fourth, while there is no specific and discrete numerical basis for quantifying the impact of economic conditions on customers, the impact on customers of changing economic conditions is embedded in the rate of return on equity expert witnesses' analyses. The Commission noted this in the 2013 DEP Rate Order: "This impact is essentially inherent in the ranges presented by the return on equity expert witnesses, whose testimony plainly recognized economic conditions – through the use of econometric models – as a factor to be considered in setting rates of return." 2013 DEP Rate Order, p. 38.

Fifth, under long-standing decisions of the North Carolina Supreme Court, the Commission's subjective judgment is a necessary part of determining the authorized rate of return on equity. State ex rel. Utils. Comm'n v. Pub. Staff, 323 N.C. 481, 490, 374 S.E.2d 361, 369 (1988). As the Commission also noted in the 2013 DEP Rate Order:

> Indeed, of all the components of a utility's cost of service that must be determined in the ratemaking process, the appropriate [rate of return on equity] the one requiring the greatest degree of subjective judgment by the Commission. Setting a return on equity [rate of return on equity] for regulatory purposes is not simply a mathematical exercise, despite the quantitative models used by the expert witnesses. As explained in one prominent treatise,
>
>> Throughout all of its decisions, the [United States] Supreme Court has formulated no specific rules for determining a fair rate of return, but it has enumerated a number of guidelines. The Court has made it clear that confiscation of property must be avoided, that no one rate can be considered fair at all times and that regulation does not guarantee a fair return. The Court also has consistently stated that a necessary prerequisite for profitable operations is efficient and economical management. Beyond this is a list of several factors the commissions are supposed to consider in making their decisions, but no weights have been assigned.
>>
>> The relevant economic criteria enunciated by the Court are three: financial integrity, capital attraction and comparable earnings. Stated another way, the rate of return allowed a public utility should be high enough: (1) to maintain the financial integrity of the enterprise, (2) to enable the utility to attract the new capital it needs to serve the public, and (3) to provide a return on common equity that is commensurate with returns on investments in other enterprises of corresponding risk. These three economic criteria are interrelated and have been used widely for many years by regulatory commissions throughout the country in determining the rate of return allowed public utilities.

> In reality, the concept of a fair rate of return represents a "zone of reasonableness." As explained by the Pennsylvania commission:
>
> > There is a range of reasonableness within which earnings may properly fluctuate and still be deemed just and reasonable and not excessive or extortionate. It is bounded at one level by investor interest against confiscation and the need for averting any threat to the security for the capital embarked upon the enterprise. At the other level it is bounded by consumer interest against excessive and unreasonable charges for service.
>
> As long as the allowed return falls within this zone, therefore, it is just and reasonable. . . . It is the task of the commissions to translate these generalizations into quantitative terms.
>
> Charles F. Phillips, Jr., The Regulation of Public Utilities, 3d ed. 1993, pp. 381-82 (notes omitted).

2013 DEP Rate Order, pp. 35-36.

Thus, the Commission must exercise its subjective judgment so as to balance two competing rate of return on equity-related factors – the economic conditions facing the Company's customers and the Company's need to attract equity financing in order to continue providing safe and reliable service.

The Supreme Court in Cooper V affirmed the 2013 DEC Rate Order, in which this framework was fully articulated. But to the framework we can add additional factors based upon the Supreme Court's decisions in Cooper III, Cooper IV, and Cooper V. Specifically, the Supreme Court held that nothing in Cooper I requires the Commission to "quantify" the influence of changing economic conditions upon customers (see, e.g., Cooper V, 367 N.C. at 745-46; Cooper IV, 367 N.C. at 650; Cooper III, 367 N.C. at 450), and, indeed, the Supreme Court reiterated that setting the rate of return on equity is a function of the Commission's subjective judgment: "Given th[e] subjectivity ordinarily inherent in the determination of a proper rate of return on common equity, there are inevitably pertinent factors which are properly taken into account but which cannot be quantified with the kind of specificity here demanded by [the appellant]." Cooper III, 367 N.C. at 450, quoting State ex rel. Utils. Comm'n v. Pub. Staff-North Carolina Utils. Comm'n, 323 N.C. 481, 490 (1988).

Finally, the Supreme Court discussed with approval the Commission's reference to and reliance upon expert witness testimony that used econometric models that the Commission had noted "inherently" contained the effects of changing economic circumstances upon customers, and also discussed with approval the Commission's reference to and reliance upon expert witness testimony correlating the North Carolina economy with the national economy. See, e.g., Cooper V, 367 N.C. at 747; Cooper III, 367 N.C. at 451.

It is against this backdrop of overarching principles that the Commission turns to the evidence presented in this case.

B. Application of the Governing Principles to the Rate of Return Decision

1. Evidence from Expert Witnesses on Cost of Equity Capital

Company witness D'Ascendis recommended in his direct testimony a rate of return on equity of 10.90%. This 10.90% was based upon his indicated cost of common equity of 10.60%, a recommended size adjustment of 0.20% and a recommended flotation adjustment of 0.11%. He rounded down his cost of common equity with these adjustments to 10.90%. In his rebuttal testimony, witness D'Ascendis eliminated his adjustment for flotation costs and amended his recommended cost of equity to 10.80% for Aqua NC.

Witness D'Ascendis' recommendation was based upon his Discounted Cash Flow (DCF) model, his Risk Premium Model (RPM), and his Capital Asset Pricing Model (CAPM), applied to market data of a proxy group of eight publicly-traded water companies (Utility Proxy Group). He also applied the DCF, RPM, and CAPM to a proxy group of domestic, non-price regulated companies (Non-Price Regulated Proxy Group) which he described as comparable in total risk to the his Utility Proxy Group.

The results derived from witness. D'Ascendis' analyses in his direct testimony are as follows:

Summary of D'Ascendis' Common Equity Cost Rate Analyses

Utility Proxy Group	
Discounted Cash Flow Model	8.95%
Risk Premium Model	11.07
Capital Asset Pricing Model	10.39
Cost of Equity Models Applied to Non-Price Regulated Proxy Group	11.57
Indicated Common Equity Cost Rate Before Adjustments	10.60%
Size Adjustment	0.20
Flotation Cost Adjustment	0.11
Indicated Common Equity Cost Rate Cost Rate After Adjustments	10.91%
Recommended Common Equity Cost Rate After Adjustments	10.90%

Witness D'Ascendis concluded that a common equity cost rate of 10.60% for Aqua NC is indicated before any Company-specific adjustments. He then adjusted upward by 0.20% to reflect Aqua NC's smaller relative size as compared with the members of his Utility Proxy Group, resulting in a size-adjusted indicated common equity cost rate of 10.80%. As noted above, he also adjusted upward the indicated common equity cost rate by an additional 0.11% to reflect flotation costs in his direct testimony, but eliminated the 0.11% flotation cost adjustment in his rebuttal testimony.

Witness D'Ascendis testified he used the single-stage constant growth DCF model. He testified his unadjusted dividend yields are based on the proxy companies' dividends as of January 12, 2018, divided by the average of closing market prices for the 60 trading days ending January 12, 2018.[1] He made an adjustment to the dividend yield because dividends are paid periodically, usually quarterly.

For witness D'Ascendis' DCF growth rate, he testified he used only analysts' five-year forecasts of earning per share (EPS) growth. He testified the mean result of his application of the single-stage DCF model is 9.09%, the median result is 8.81%, and the average of the two is 8.95% for his Utility Proxy Group.

Aqua NC witness D'Ascendis used two risk premium methods. He testified his first method is the Predictive Risk Premium Model (PRPM), while the second method is a RPM using a total market approach. He testified that the inputs to his PRPM are the historical returns on the common shares of each company in the Utility Proxy Group minus the historical monthly yield on long-term U.S. Treasury securities through December 2017. He testified he added the forecasted 30-year U.S. Treasury Bond yield, 3.54% to each company's PRPM-derived equity risk premium to arrive at an indicated cost of common equity. He testified the mean PRPM indicated common equity cost rate for the Utility Proxy Group is 12.36%, the median is 12.09%, and the average of the two is 12.23%.

Witness D'Ascendis testified his total market approach RPM adds a prospective public utility bond yield to an average of (1) an equity risk premium that is derived from a beta-adjusted total market equity risk premium, and (2) an equity risk premium based on the S&P Utilities Index. He calculated his adjusted prospective bond yield for the Utility Proxy Group to be 4.84%, and the average equity risk premium to be 5.06% resulting in risk premium derived common equity to be 9.90% for his RPM using his total market approach.

To determine the results of his risk premium method, he testified that he averaged the PRPM result of 12.23% and the RPM results of 9.90% and the indicated cost of equity from his risk premium method was 11.07%.

For his CAPM, witness D'Ascendis testified he applied both the traditional CAPM and the empirical CAPM (ECAPM) to the companies in his Utility Proxy Group and averaged the results. For his CAPM beta coefficient, he considered two methods of calculation: the average of the Beta coefficients of the Utility Proxy Group companies reported by Bloomberg Professional Services, and the average of the Beta coefficients of the Utility Proxy Group companies as reported by Value Line resulting in a mean beta of .78 and a median beta of .74.

---

[1] See Schedule DWD-3, page 1, column 1.

Witness D'Ascendis testified that the risk-free rate adopted for both applications of the CAPM is 3.54%. This risk-free rate of 3.54% is based on the average of the *Blue Chip* consensus forecast of the expected yields on 30-year U.S. Treasury bonds for the six quarters ending with the second calendar quarter of 2019, and long-term projections for the years 2019 to 2023 and 2024 to 2028.

Witness D'Ascendis stated that he used three sources of data to determine the risk premium in his CAPM: historical, Value Line, and Bloomberg, that when averaged, result in an average total market equity risk premium of 8.69%. He testified that the mean result of his CAPM/ECAPM analyses is 10.53%, the median is 10.25%, and the average of the two is 10.39%.

Witness D'Ascendis also selected 11 domestic non-price regulated companies for his Non-Price Regulated Proxy Group that he believes are comparable in total risk to his Utility Proxy Group. He calculated common equity cost rates using the DCF, RPM, and CAPM for the Non-Price Regulated Proxy Group. His DCF result was 13.37%, his RPM cost rate was 11.28%, and his CAPM/ECAPM cost rate was 10.91%.

Witness D'Ascendis also made a 0.20% equity cost rate adjustment due to Aqua NC's small size relative to the Utility Proxy Group. He testified that the Company has greater relative risk than the average company in the Utility Proxy Group because of its smaller size compared with the group, as measured by an estimated market capitalization of common equity for Aqua NC (whose common stock is not publicly-traded).

Public Staff witness Hinton recommended a common equity cost rate of 9.20%. Public Staff witness Hinton testified that, according to Moody's Bond Survey, yields on long-term "A" rated public utility bonds as of July 2018 were 4.27% as compared to 4.63% for January, 2014 which is the time of filing of the Public Staff and Company Stipulation in the last Aqua NC rate case (Sub 363) that included a 9.75% cost of equity. He further testified that the relative decrease in long-term bond yields since the last rate case is not indicative of an increase in financing costs for utilities; rather, it portends a lowering of financing costs for long-term capital. However, he testified that there has been an increase in the cost of short-term financing.

Witness Hinton stated that the current lower interest rates and stable inflationary environment of today indicate that borrowers are paying less for the time value of money. He testified that this is significant since utility stocks and utility capital costs are highly interest rate-sensitive relative to most industries. Furthermore, given that investors often view purchases of the common stocks of utilities as substitutes for fixed income investments, the reductions in interest rates observed over the past 10 years or more has paralleled the decreases in investor required rates of return on common equity.

Witness Hinton testified that he generally does not rely on interest rate forecasts. Rather, he believes that relying on current interest rates, especially in relation to yields on long-term bonds, is more appropriate for ratemaking in that, it is reasonable to expect that as investors are pricing bonds, they are based on expectations on future interest rates, inflation rates, etc. He testified that while he has a healthy respect for forecasting, he is aware of the risk of relying on predictions of rising interest rate cases. He presented a case that can be observed in the testimony of Company witness Ahern in the 2013 Aqua NC rate case. In that case, witness Ahern identified several point forecasts of 30-year Treasury Bond yields that were predicted to rise to 4.3% in 2015, 4.7% in 2016, and 5.2% in 2017. He presented a graph of 30-Year US Treasury Bonds yields which showed in 2016 the range was approximately 2.50% to 3.10%, and in 2017 the range was approximately 2.25% to 3.10%. Tr. 6, p. 175.

Witness Hinton testified he used the DCF model and the RPM to determine the cost of equity for the Company. He testified that the DCF model is a method of evaluating the expected cash flows from an investment by giving appropriate consideration to the time value of money. The DCF model is based on the theory that the price of the investment will equal the discounted cash flows of return. The return to an equity investor comes in the form of expected future dividends and price appreciation. He testified that as the new price will again be the sum of the discounted cash flows, price appreciation is ignored and attention focused on the expected stream of dividends.

Witness Hinton testified that he applied the DCF method to Aqua America and to a comparable group of water utilities followed by the Value Line Investment Survey (Value Line). He testified that the standard edition of Value Line covers nine water companies. He excluded Connecticut Water Service, Inc. and the SJW Group because of a merger of the two companies and also excluded Consolidated Water Co. because of its significant overseas operations.

Witness Hinton calculated the dividend yield component of the DCF by using the Value Line estimate of dividends to be declared over the next 12 months divided by the price of the stock as reported in the Value Line Summary and Index sections for each week of the 13-week period May 25, 2018 through August 17, 2018. He testified that a 13-week averaging period tends to smooth out short-term variations in the stock prices. This process resulted in an average dividend yield of 2.1% for his proxy group of water utilities.

To calculate the expected growth rate component of the DCF, Public Staff witness Hinton employed the growth rates of his proxy group in EPS, dividends per share (DPS), and book value per share (BVPS) as reported in Value Line over the past 10 and five years. He also employed the forecasts of the growth rates of his proxy group in EPS, DPS, and BVPS as reported in Value Line. He testified that the historical and forecast growth rates are prepared by analysts of an independent advisory service that is widely available to investors, and should also provide an estimate of investor expectations. He testified that he included both historical known growth rates and forecast growth rates, because it is reasonable to expect that investors consider both sets of data in deriving their expectations.

Witness Hinton incorporated the consensus of various analysts' forecasts of five-year EPS growth rate projections as reported in Yahoo Finance. He testified that the dividend yields and growth rates for each of the companies and for the average for his comparable proxy group are shown in Exhibit JRH-3.

Witness Hinton concluded based upon his DCF analysis that a reasonable expected dividend yield is 2.1% with an expected growth rate of 6.1% to 7.1%. Thus, he testified that his DCF analysis produces a cost of common equity for his comparable proxy group of water utilities of 8.20% to 9.20%.

Witness Hinton testified that the equity risk premium method can be defined as the difference between the expected return on a common stock and the expected return on a debt security. The differential between the two rates of return are indicative of the return investors require in order to compensate them for the additional risk involved with an investment in the Company's common stock over an investment in the Company's bonds that involves less risk.

Witness Hinton testified that his method relies on approved returns on common equity for water utility companies from various public utility commissions as reported in a RRA Water Advisory, published by the Regulatory Research Associates, Inc. (RRA), a group within S&P Global Market Intelligence (RRA Water Advisory). In order to estimate the relationship with a representative cost of debt capital, he regressed the average annual allowed equity returns with the average Moody's A-rated yields for Public Utility bonds from 2006 through 2018. His regression analysis, which incorporates years of historical data, is combined with recent monthly yields to provide an estimate of the current cost of common equity.

Witness Hinton testified that the use of allowed returns as the basis for the expected equity return has two strengths over other approaches that involve various models that estimate the expected equity return on common stocks and subtracting a representative cost of debt. He stated that one strength of his approach is that authorized returns on equity are generally arrived at through lengthy investigations by various parties with opposing views on the rate of return required by investors. He testified that it is reasonable to conclude that the approved allowed returns are good estimates of the cost of equity.

Witness Hinton testified that the summary data of risk premiums shown on his Exhibit JRH-4, page 1 of 2, indicates that the average risk premium is 4.95% with a maximum premium of 5.78% and minimum premium of 3.73%, which when combined with the last six months of Moody's A-rated utility bond yields produces yields with an average cost of equity of 9.11%, a maximum cost of equity of 9.94%, and a minimum cost of equity of 7.89%. He performed a statistical regression analysis as shown on Exhibit JRH-4, page 2 of 2 in order to quantify the relationship of allowed equity returns and bond costs. He testified that by applying the allowed returns to the current utility bond cost of 4.16%, resulted in a risk premium of 5.53%, and a cost of equity of current estimate of the equity risk premium of equity of 9.69%.

Witness Hinton concluded that based on all of the results of his DCF model that indicate a cost of equity from 8.20% to 9.20% with a central point estimate of 8.70%, and the risk premium model that indicates a cost of equity of 9.69%, he determined that the investor required rate of return on equity for Aqua NC is between 8.70% and 9.69%. He concluded that 9.20% is his single best estimate of the Company's cost of common equity.

Witness Hinton testified as to the reasonableness of his recommended return, that he considered the pre-tax interest coverage ratio produced by his cost estimates for the cost of equity.

He testified that based on his recommended capital structure, cost of debt, and equity return of 9.20%, the pre-tax interest coverage ratio is approximately 3.7 times. He testified that this tax interest coverage should allow Aqua NC to qualify for a single "A" bond rating.

Witness Hinton testified that his recommended return on common equity takes into consideration the impact of the water and sewer system improvement charges pursuant to N.C.G.S. § 62-113.12 on the Company's financial risk. He testified that these improvement charges are seen by debt and equity investors as supportive regulation that mitigates business risk. Witness Hinton stated that he believes that this mechanism is noteworthy and is supportive of his 9.20% return on equity recommendation.

Witness Hinton testified that it is not appropriate to add a risk premium to the cost of equity due to the size of the company. He testified that from a regulatory policy perspective, ratepayers should not be required to pay higher rates because they are located in the franchise area of a utility of a size which is arbitrarily considered to be small. He further testified if such adjustments were routinely allowed, an incentive would exist for large existing utilities to form subsidiaries when merging or even to split-up into subsidiaries to obtain higher allowed returns. He further testified that Aqua NC operates in a franchise environment that insulates the Company from competition and it operates with procedures in place that allow for rate adjustments for eligible capital improvements, cost increases, and other unusual circumstances that impact its earnings.

Witness Hinton observed that Aqua NC is owned 100% by Aqua America. A potential investor cannot purchase Aqua NC stock. All Aqua NC paid in equity capital is infused by Aqua America. He testified that, as stated in the testimony of Aqua NC company witness D'Ascendis, Aqua America is the second largest investor owned water and wastewater utility in the United States with its shares traded on the New York Stock Exchange (NYSE) and had a $6.9 billion market capitalization at the January 12, 2018, market close as reported by Value Line. He testified that Aqua America's market capitalization of $6.9 billion is larger than the cumulative market capitalization of the next four largest investor owned water utilities. These four are American States Water Co. (NYSE), California Water Service Group (NYSE), SJW Group (NYSE), and Connecticut Water Service, Inc. (NASDAQ).

In his rebuttal testimony, Aqua NC witness D'Ascendis disagreed with witness Hinton that a 9.20% common equity rate is appropriate for Aqua NC and stated that the Public Staff's recommendation would not be sufficient to maintain the integrity of presently invested capital and permit the attraction of needed new capital at a reasonable cost in competition with other firms of comparable risk.

Witness D'Ascendis also disagreed with witness Hinton's exclusion of the CAPM and comparable earnings model (CEM), both of which witness Hinton used as a check on his DCF and RPM in a previous proceeding involving Aqua NC (Docket No. W-218, Sub 319). According to witness D'Ascendis, both the academic literature and the Commission support the use of multiple models in determining a return on common equity. Witness D'Ascendis then attempted to supplement what would have been witness Hinton's analysis with a CAPM and CEM, which indicated results of 11.02% and 12.23%, respectively.

Witness D'Ascendis objected to witness Hinton's DCF analysis and he also took issue with witness Hinton's use of historical growth rates in EPS, DPS and BVPS as well as his use of projected growth rates in DPS and BVPS. He asserted that it is appropriate to rely exclusively upon security analysts' forecasts of EPS growth rates in a DCF analysis for multiple reasons.

First, he believed that individual investors who could potentially invest in utility stocks generally have more limited informational resources than institutional investors and are therefore likely to place greater significance on the opinions and projections expressed by financial information services such as Value Line, Reuters, Zacks, and Yahoo! Finance, which are all easily accessible and/or available on the Internet and through public libraries. Witness D'Ascendis testified that security analysts have significant insight into the dynamics of the industries and individual companies they analyze, as well as company's abilities to effectively manage the effects of a changing industry, economic or market environment. Second, over the long run, there can be no growth in DPS without growth in EPS. Security analysts' earnings expectations have a more significant, but not exclusive, influence upon market prices than dividend expectations, providing a better matching between investors' market price appreciation expectation and the growth component of the DCF model. Third, there is academic support for the superiority of analysts' forecasts of growth in EPS as the growth component in the DCF model. Witness D'Ascendis asserted that witness Hinton should have relied exclusively upon the Value Line and Yahoo! Finance EPS forecasts.

Witness D'Ascendis also disagreed with witness Hinton's application of his RPM because of his use of annual average authorized returns on equity for water companies instead of using individual cases and his use of current interest rates instead of projected interest rates. According to witness D'Ascendis, using current or historical measures, such as interest rates, are inappropriate for cost of capital and ratemaking purposes because they are both prospective in nature.

In addition, witness D'Ascendis disagreed with witness Hinton on risk due to size. Witness D'Ascendis emphasized that because it is the rate base of a specific regulated jurisdictional utility to which a regulatory allowed rate of return will be applied, it is the unique risk of that rate base which needs to be reflected in the allowed rate of return, including any additional risk due to small size. In addition, the corporate structure of the owners of that rate base is irrelevant as it is the use of the funds which gives rise to the investment risk, not the source of those funds. It matters not whether the rate base is held privately, by a municipality, by a large holding company, by a small holding company, by an equity investment fund, multiple shareholders or a single shareholder. Only the riskiness of the particular rate base is relevant. The size of any given jurisdictional rate base is not arbitrary, it is what it is, and it is imminently relevant relative to the size of any publicly traded utilities from whose market data a common equity cost rate recommendation is derived. Therefore, there is no incentive for "large existing utilities to form subsidiaries when merging or even to split-up into subsidiaries" because it is the risk of the regulated rate base which is relevant.

Witness D'Ascendis testified that witness Hinton's corrected cost of common equity analysis results in a common equity cost rate of 10.57% for witness Hinton's comparable group of water utilities before adjustment for Aqua NC's increased risk due to size relative to the proxy group.

On cross-examination, witness D'Ascendis testified he was aware that 99% of Aqua NC's customers were residential and that Aqua NC's systems were geographically diversified across North Carolina including Ashe County, the Hendersonville area, the Charlotte area, the Greensboro and the Winston-Salem areas, the Raleigh area, the Fayetteville area, and also the Atlantic Coast from New Hanover County to Carteret County. He testified Aqua NC has approximately 100,000 customers in North Carolina and that there is not a regulated water company in North Carolina anywhere near Aqua NC's size.

Witness D'Ascendis testified that Public Staff D'Ascendis Cross-Examination Exhibit 1 showed at the market close on September 7, 2018, as listed in the Morningstar investment publication, Aqua America's market capitalization was at $6.65 billion, which was greater than the combined market capitalizations of the next four largest water companies. He further testified that SCANA Corporation (SCANA) had a market capitalization of $5.22 billion which is less than Aqua America's $6.65 billion, and that SCANA is the parent company and owner of 100% of the common stock of South Carolina Electric and Gas (SCE&G), and Public Service Company of North Carolina, Inc. (PSNC). He also testified an investor could not buy stock in the Company, and instead would buy the stock of Aqua America.

Witness D'Ascendis testified on cross-examination that Public Staff D'Ascendis Cross-Examination Exhibit 2 was his response to a Public Staff data request showing water and wastewater utility general rate cases in which he testified recommending a return on equity range or a specific return on equity. He testified in the United Utility Services Company general rate case in South Carolina with a decision in December 2013. In that case, he recommended a return on equity range of 10.45% to 11.45% which had a mid-point of 10.95%, and the Commission approved a 9.35% return on equity which was 160 basis points below his mid-point.

Witness D'Ascendis testified that in the Carolina Water Service, Inc. general rate case in South Carolina, with a decision on December 22, 2015, he recommended a return on equity range of 10.00% to 10.50% which had a mid-point of 10.25%, and the Commission approved a return on equity of 9.34% which was 91 basis points below his mid-point. He further testified in the Aqua Illinois, Inc. general rate case in Illinois with decision on March 2, 2018. In that case, he recommended a specific return on equity of 10.85%, and the Commission approved a return on equity of 9.60%, which was 125 basis points below his recommendation.

Witness D'Ascendis testified in the Middlesex Water Company general rate case in New Jersey with decision on March 6, 2018, and recommended a specific return on equity of 10.70%. The Commission approved a return on equity of 9.60%, which was 110 basis points below his recommendation. He testified that in the current Aqua Virginia, Inc. general rate case, Aqua Virginia recently agreed in a settlement to a 9.25% return on equity, which the Hearing Examiner accepted. Witness D'Ascendis recommended a specific return on equity of 10.60%, and the

Hearing Examiner accepted 9.25% return on equity which was 135 basis points below his specific recommendation.

Witness D'Ascendis testified that most of the authorized returns on equity on Public Staff D'Ascendis Direct Cross-Examination Exhibit 2 were the result of settlements which the Commission approved. He testified there were only three general rate cases with litigated returns on equity: Columbia Water Company in Pennsylvania where in January 2014, with the Commission approved return on equity of 9.75% being 160 basis points below his recommended specific return on equity of 11.35%; Emporium Water Company in Pennsylvania where the Commission in January 2015, approved a 10.00% return on equity, which was 105 basis points below his recommended specific return on equity of 11.05%; and Carolina Water Service, Inc. in South Carolina where on May 26, 2018, the Commission approved return on equity of 10.50% which was within his range of 10.45% to 10.95%. He testified that this South Carolina decision is the most recent litigated return on equity and he considered it the most relevant.

Witness D'Ascendis testified that Public Staff Direct Cross-Examination Exhibit 3 is a RRA Water Advisory, dated July 27, 2018, which lists water utility rate case decisions in the years 2014 through 2017, and through June 30, 2018. He testified that in 2018 through June 30, 2018, the average approved return on equity was 9.41%. He testified that the four 2018 California return on equity decisions have fully forecasted test years, full decoupling, and three year rate plans. He testified that these California decisions dated March 22, 2018, were all fully litigated. The approved returns on equity were: California America Water with 9.20% approved return on equity, California Water Service with 9.20% approved return on equity, Golden State Water Co. with 8.90% approved return on equity, and San Jose Water Co. with 8.90% approved return on equity. He testified that more relevant was the recent Duke Energy Carolinas case Docket No. E-7, Sub 1146 with a settlement that approved a 9.90% return on equity.

Witness D'Ascendis further testified in 2014 where the RRA Water Advisory reported 13 Commission decisions with approved returns on equity, none were 10.00% or above. He testified in 2015 where the RRA Water Advisory reported 11 Commission decisions with approved return on equites, only two were 10.00% or above, being Maryland American Water at 10.00% and Kona Water in Hawaii with 10.10% return on equity. He testified in 2016 where the RRA Water Advisory reported nine Commission decisions with approved returns on equity, only Hawaii Water Service at 10.10% return on equity, had an approved return on equity at 10.0% or above. He testified in 2017 where the RRA Water Advisory reported nine Commission decisions with approved returns on equity, only Utilities, Inc. of Florida with a formula approved return on equity of 10.40% and a 41.92% approved common equity capital structure, had an approved return on equity at 10.00% or above.

Witness D'Ascendis further testified on cross-examination that the four California water utilities with the litigated March 22, 2018, 8.90% and 9.20% return on equity decisions, and Middlesex Water with the March 24, 2018 decision, are companies included in his Utility Proxy Group, with Golden State Water being a subsidiary of American States Water.

2. Evidence of Impact of Changing Economic Conditions on Customers

WATER AND SEWER – RATE INCREASE

As noted above, utility rates must be set within the constitutional constraints made clear by the United States Supreme Court in Bluefield and Hope. To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting a return on equity, the Commission must nonetheless provide the public utility with the opportunity, by sound management, to (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utils. Comm'n v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S.E.2d 705 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return" in Bluefield and Hope. Id.

a. Discussion and Conclusions Regarding Evidence Introduced During the Evidentiary Hearing

In this case, all parties had the opportunity to present the Commission with evidence concerning changing economic conditions as they affect customers. The testimony of witnesses D'Ascendis and Hinton, which the Commission finds entitled to substantial weight, addresses changing economic conditions.

As to the impact of changing economic conditions on Aqua NC's customers, Public Staff witness Hinton testified he reviewed information on the economic conditions in the areas served by Aqua NC, specifically, the 2014, 2015, and 2016 data on total personal income from the Bureau of Economic Analysis (BEA) and the Development Tier Designations published by the North Carolina Department of Commerce for the counties in which Aqua NC's systems are located. The BEA data indicates that from 2014 to 2016, total personal income weighted by the number of water customers by county grew at a compound annual growth rate (CAGR) of 3.20%, which is slightly lower than the rate of 3.40% for the whole State.

Witness Hinton testified the North Carolina Department of Commerce annually ranks the State's 100 counties based on economic well-being and assigns each a Tier designation. The most distressed counties are rated a "1" and the most prosperous counties are rated a "3". The rankings examine several economic measures such as, household income, poverty rates, unemployment rates, population growth, and per capita property tax base. For 2017, the average Tier ranking that has been weighted by the number of water customers by county is 2.6. He testified that both these economic measures indicate that there has been improvement in the economic conditions for Aqua NC's service area relative to the 2013 rate case.

Aqua NC witness D'Ascendis testified on economic conditions in North Carolina that he reviewed. He testified he reviewed: unemployment rates from the United States, North Carolina, and the counties comprising Aqua NC's service territory; the growth in Gross National Product (GDP) in both the United States and North Carolina; median household income in the United States and in North Carolina; and national income and consumption trends.

He testified that the rate of unemployment has fallen substantially in North Carolina and the U.S. since late 2009 and early 2010, when the rates peaked at 10.00% and 11.30%, respectively.

He testified that by December 2017, the unemployment rate had fallen to less than one-half of those peak levels: 4.10% nationally; and 4.50% in North Carolina.

He testified that he was also able to review (seasonally unadjusted) unemployment rates in the counties served by Aqua NC. At its peak, which occurred in late 2009 into early 2010, the unemployment rate in those counties reached 12.52% (52 basis points higher than the Statewide average); by December 2017 it had fallen to 4.48% (8 basis points higher than the Statewide average).

Witness D'Ascendis testified that for real Gross Domestic Product growth, there also has been a relatively strong correlation between North Carolina and the national economy (approximately 69%). Since the financial crisis, the national rate of growth at times (during portions of 2010 and 2012) outpaced North Carolina. He testified that since the third quarter of 2015, however, North Carolina has consistently exceeded the national growth rate.

Witness D'Ascendis testified as to median household income, the correlation between North Carolina and the U.S. is relatively strong (approximately 88% from 2005 through 2015). Since 2009 (that is, the years subsequent to the financial crisis), median household income in North Carolina has grown at a faster annual rate than the national median income (3.62% vs. 2.47%).

Witness D'Ascendis noted that in the Commission's Order on Remand in Docket No. E-22, Sub 479, the Commission observed that economic conditions in North Carolina were highly correlated with national conditions, such that they were reflected in the analyses used to determine the cost of common equity. He testified that those relationships still hold: Economic conditions in North Carolina continue to improve from the recession following the 2008/2009 financial crisis, and they continue to be strongly correlated to conditions in the U.S., generally. He testified unemployment, at both the State and county level, continues to fall and remains highly correlated with national rates of unemployment; real Gross Domestic Product recently has grown faster in North Carolina than the national rate of growth, although the two remain fairly well correlated; and median household income also has grown faster in North Carolina than the rest of the country, and remains strongly correlated with national levels.

b. Evidence Introduced During Public Hearings and Further Conclusions

The Commission's review also includes consideration of the evidence presented during the public hearings by public witnesses, almost all of whom presently are customers of Aqua NC. The hearings provided 28 witnesses the opportunity to be heard regarding their respective positions on Aqua NC's Application to increase rates. The Commission held four evening hearings throughout Aqua NC's service territory to receive public testimony. The testimony presented at the hearings illustrates the difficult economic conditions facing many North Carolina citizens. The Commission accepts as credible, probative, and entitled to substantial weight, the testimony of the public witnesses.

c. Commission's Decision Setting Rate of Return and Approving Rate Increase Takes Into Account and Ameliorates the Impact of Current Economic Conditions on Customers

As noted above, the Commission's duty under N.C.G.S. § 62-133 is to set rates as low as reasonably possible without impairing the Company's ability to raise the capital needed to provide reliable water and wastewater service and recover its cost of providing service. The Commission is especially mindful of this duty in light of the evidence in this case concerning the impact of current economic conditions on customers.

Chapter 62 of the North Carolina General Statutes in general, and N.C.G.S. § 62-133 in particular, set forth an elaborate formula the Commission must employ in establishing rates. The rate of return on cost of property element of the formula in N.C.G.S. § 62-133(b)(4) is a significant, but not independent one. Each element of the formula must be analyzed to determine the utility's cost of service and revenue requirement. The Commission must make many subjective decisions with respect to each element in the formula in establishing the rates it approves in a general rate case. The Commission must approve accounting and pro forma adjustments to comply with N.C.G.S. § 62-133(b)(3). The Commission must approve depreciation rates pursuant to N.C.G.S. § 62-133(b)(1). The decisions the Commission makes in each of these subjective areas have multiple and varied impacts on the Decisions it makes elsewhere in establishing rates, such as its decision on rate of return on equity.

Economic conditions existing during the test year, at the time of the public hearings, and at the date of this Commission Order affect not only the ability of Aqua NC's consumers to pay water and wastewater utility rates, but also the ability of Aqua NC to earn the authorized rate of return during the period rates will be in effect. Pursuant to N.C.G.S. § 62-133, rates in North Carolina are set based on a modified historic test period.[1] A component of cost of service as important as return on investment is test year revenues.[2] The higher the level of test year revenues the lower the need for a rate increase, all else remaining equal. Historically, and in this case, test year revenues are established through resort to regression analysis, using historic rates of revenue growth or decline to determine end of test year revenues.

When costs and expenses grow at a faster pace than revenues during the period when rates will be in effect, the utility will experience a decline in its realized rate of return on investment to a level below its authorized rate of return. Differences exist between the authorized return and the earned, or realized, return. Components of the cost of service must be paid from the rates the utility charges before the equity investors are paid their return on equity. Operating and administrative expenses must be paid, depreciation must be funded, taxes must be paid, and the utility must pay interest on the debt it incurs. To the extent revenues are insufficient to cover the entire cost of service, the shortfall reduces the return to the equity investor, last in line to be paid. When this occurs, the utility's realized, or earned, return is less than the authorized return.

This phenomenon, caused by incurrence of higher costs prior to the implementation of new rates to recover those higher costs, is commonly referred to as regulatory lag. Just as the Commission confronts constitutional and statutory restrictions in making discrete decrements to rate of return on equity to mitigate the impact of rates on consumers, it also confronts statutory constraints on its ability to adjust test year revenues to mitigate for regulatory lag. However, the

[1] N.C.G.S. § 62-133(c).

[2] N.C.G.S. § 62-133(b)(3).

WSIC and SSIC legislation N.C.G.S. § 62-133.12 and Commission Rules R7-39 and R10-26, have mitigated the regulatory lag for Aqua NC. The Commission, in its expert experience and judgment and based on evidence in the record, is aware of the effects of regulatory lag in the existing economic environment. However, just as the Commission is constrained to address difficult economic times on customers' ability to pay for service by establishing a lower rate of return on equity in isolation from the many subjective determinations that must be made in a general rate case, it likewise does not address the effect of regulatory lag on the Company by establishing a higher rate of return on equity. Instead, in setting the rate of return, the Commission considers both of these negative impacts in its ultimate decision fixing Aqua NC's rates. The Commission keeps all factors affected by current economic conditions in mind in the many subjective decisions it makes in establishing rates. In doing so in the case at hand, the Commission approved the 9.70% rate of return on equity in the context of weighing and balancing numerous factors and making many subjective decisions. When these decisions are viewed as a whole, including the decision to establish the rate of return on equity at 9.70%, the Commission's overall decision fixing rates in this general rate case results in lower rates to consumers in the existing economic environment.

Consumers pay rates, a charge in dollars per 1,000 gallons for the water they consume and a monthly flat rate for residential wastewater customers. Investors are compensated by earning a return on the capital they invest in the business. Consumers do not pay a rate of return on equity.

All of the scores of adjustments the Commission approves reduce the revenues to be recovered from ratepayers and the return to be paid to equity investors. Some adjustments reduce the authorized rate of return on investment financed by equity investors. The adjustments are made solely to reduce rates and provide rate stability to consumers (and return to equity investors) to recognize the difficulty for consumers to pay in the current economic environment. While the equity investor's cost was calculated by resort to a rate of return on equity of 9.70% instead of 10.80%, this is only one approved adjustment that reduced ratepayer responsibility and equity investor reward. Many other adjustments reduced the dollars the investors actually have the opportunity to receive. Therefore, nearly all of these other adjustments reduce ratepayer responsibility and equity investor returns in compliance with the Commission's responsibility to establish rates as low as reasonably permissible without transgressing constitutional constraints.

For example, to the extent the Commission makes downward adjustments to rate base, or disallows test year expenses, or increases test year revenues, or reduces the equity capital structure component, the Commission reduces the rates consumers pay during the future period when rates will be in effect. Because the utility's investors' compensation for the provision of service to consumers takes the form of return on investment, downward adjustments to rate base or disallowances of test year expenses or increases to test year revenues, or reduction in the equity capital structure component, reduce investors' return on investment irrespective of its determination of rate of return on equity.

The rate base, expenses, and revenue adjustments are instances where the Commission makes decisions in each general rate case, including the present case, that influence the Commission's determination on rate of return on equity and cost of service and the revenue requirement. The Commission always endeavors to comply with the North Carolina Supreme Court's requirements that it "fix rates as low as may be reasonably consistent" with

U.S. Constitutional requirements irrespective of economic conditions in which ratepayers find themselves. While compliance with these requirements may have been implicit and, the Commission reasonably assumed, self-evident as shown above, the Commission makes them explicit in this case to comply with the Supreme Court requirements of Cooper I.

Based on the changing economic conditions and their effects on Aqua NC's customers, the Commission recognizes the financial difficulty that the increase in the Company's rates will create for some of Aqua NC's customers, especially low-income customers. As shown by the evidence, relatively small changes in the rate of return on equity have a substantial impact on a utility's base rates. Therefore, the Commission has carefully considered the changing economic conditions and their effects on Aqua NC's customers in reaching its decision regarding the Company's approved rate of return on equity. The Commission also recognizes that the Company is investing significant sums in system improvements to serve its customers, thus requiring the Company to maintain its creditworthiness in order to compete for large sums of capital on reasonable terms. The Commission must weigh the impact of changing economic conditions on Aqua NC's customers against the benefits that those customers derive from the Company's ability to provide safe, adequate, and reliable water and wastewater service. Safe, adequate, and reliable water and wastewater service is essential to the well-being of Aqua NC's customers.

The Commission finds and concludes that these investments by the Company provide significant benefits to Aqua NC's customers. The Commission concludes that the return on equity approved by the Commission in this proceeding appropriately balances the benefits received by Aqua NC's customers from Aqua NC's provision of safe, adequate, and reliable water and wastewater service with the difficulties that some of Aqua NC's customers will experience in paying Aqua NC's increased rates.

The Commission in every case seeks to comply with the North Carolina Supreme Court mandate that the Commission establish rates as low as possible within constitutional limits. The adjustments the Commission approves in this case comply with that mandate. Nearly all of them reduced the requested return on equity and benefit consumers' ability to pay their bills in this economic environment.

d. Summary and Conclusions on the Rate of Return on Equity

The Commission has carefully evaluated the return on equity testimony of Aqua NC witness D'Ascendis and Public Staff witness Hinton. The results of each of the models or methods used by these two witnesses to derive the return on equity that each witness recommends is shown below:

	D'Ascendis	Hinton
Utility Proxy Group		
DCF	8.95%	8.70%
Risk Premium	11.07%	9.69%
CAPM	10.39%	-----
Non-Price Regulated Proxy Group		
Using DCF, Risk Premium, and CAPM	11.57%	
Indicated Return on Equity Before Adjustment	10.60%	9.20%
Size Adjustment	0.20%	-------
Recommended Return on Equity	10.80%	9.20%

The range of these results is 8.70% to 11.57%. Further, underlying the low result of 8.70% is a range of 8.20% to 9.20%, according to witness Hinton's testimony concerning his application of the DCF. Similarly, underlying the high result of 11.57% is a range of 10.91% (CAPM) to 13.37% (DCF), according to witness D'Ascendis' testimony concerning the cost of equity models applied to his Non-Price Regulated Proxy Group. Such a wide range of estimates by expert witnesses is not atypical in proceedings before the Commission with respect to the return on equity issue. Neither is the seemingly endless debate and habitual differences in judgment among expert witnesses on the virtues of one model or method versus another and how to best determine and measure the required inputs of each model in representing the interest of their intervening party. Nonetheless, the Commission is uniquely situated, qualified and required to use its impartial judgment to determine the return on equity based on the testimony and evidence in this proceeding in accordance with the legal guidelines discussed above.

In so doing, the Commission finds and concludes that the testimony of Company witness D'Ascendis regarding the DCF and CAPM analyses of his Utility Proxy Group and the risk premium analysis testimony of Public Staff witness Hinton are credible, probative, and are entitled to substantial weight.

Company witness D'Ascendis, noting that Aqua NC is not publicly-traded, first established a group of eight relatively comparable risk water companies that are publicly-traded (Utility Proxy Group). He testified that use of the companies of relatively comparable risk companies as proxies is consistent with principles of fair rate of return established in the Hope and Bluefield cases, which are recognized as the primary standards for the establishment of a fair return for a regulated public utility. He then applied the DCF, the CAPM, and the risk premium models to the market data of the Utility Proxy Group. The average of his DCF result of 8.95% and CAPM result of 10.39% for his Utility Proxy Group is 9.67%. The Commission approved return on equity of 9.70% is thus supported by the 9.67% average of the results of witness D'Ascendis' application of the DCF and CAPM models.

Witness Hinton applied a risk premium analysis by performing a regression analysis using the allowed returns on common equity for water utilities from various public utility commissions, as reported in a RRA Water Advisory, with the average Moody's A-rated bond yields for public utility bonds from 2006 through 2018. The results of the regression analysis were combined with recent monthly yields to provide the current cost of equity. According to witness Hinton, the use of allowed returns as the basis for the expected equity return has strengths over other (risk premium) approaches that estimate the expected equity return on equity and subtract a representative cost of debt. He testified that one strength of his approach is that authorized returns on equity are generally arrived at through lengthy investigations by various parties with opposing views on the rate of return required by investors. Thus, it is reasonable to conclude that the approved returns are good estimates for the cost of equity. Witness Hinton testified that applying the significant statistical relationship of the allowed equity returns and bond yields from the regression analysis and adding current bond cost of 4.16% resulted in a current estimate of the cost of equity of 9.69%, which again, is supportive of the Commission's approved return on equity of 9.70%.

Witness Hinton also applied the DCF model to a proxy risk group of publicly traded water utilities. To determine the expected growth rate component in his application of the DCF, witness Hinton testified that the employed both historical and forecasted growth rates of earnings per share (EPS), book value per share (BVPS), and dividends per share (DPS). He concluded that an expected growth rate of 6.10% to 7.10% should be combined with a dividend yield of 2.10% which produced his cost of equity estimate of 8.20% to 9.20% for his comparable risk group based on his DCF analysis. Witness Hinton testified that it was reasonable to expect that investors consider both historic and forecast growth rates in deriving their expectations. In contrast, witness D'Ascendis relied exclusively on analysts' forecasts of EPS growth. In rebuttal, he also testified that there is a significant body of empirical evidence supporting the superiority of using analysts' EPS growth rates in a DCF analysis. Witness D'Ascendis also testified in rebuttal that it is unclear how much weight witness Hinton gave to each of his projected and historical growth rates in arriving at his high and low growth estimates for his proxy risk group, because witness Hinton's range of growth rates bears no logical relationship to the array of growth rates that witness Hinton evaluated. The Commission notes that the higher end of witness Hinton's DCF estimate of 9.20%, based on a growth rate of 7.10% is actually close to witness D'Ascendis DCF estimate of 8.95% and deserving of some weight. However, given the conflicting evidence concerning whether the use of historic or forecasted growth rates is more appropriate, the lack of clarity as to how the growth rate range was determined, and all the evidence in the record in this proceeding, the Commission gives little weight to the lower end of witness Hinton's DCF result.

Witness D'Ascendis also used two risk premium methods to estimate the cost of equity to Aqua NC. He testified that his first method is the PRPM and the second method is a RPM using a total market approach. In his PRPM, he employed the Eviews© statistical software applied to the historical returns on the common shares of each company in his Utility Proxy Group minus the historical monthly yields on long-term U.S. Treasury securities through December 2017 to arrive at a predicted annual equity risk premium. He then added the forecasted 30-year U.S. Treasury security to each company's PRPM derived equity risk premium. Using this approach, he calculated a cost of equity estimate of 12.23%. In his total market approach RPM, he added a prospective public utility bond yield to an average of (1) an equity risk premium that is derived from a beta-adjusted total market equity risk premium, and (2) an equity risk premium based on the S&P Utilities Index. His RPM result produced a rate of return estimate of 9.90%. Averaging his PRPM result of 12.23% and his total market approach RPM, he determined that the cost of equity is 11.07% using his risk premium methods.

The Commission gives little weight to the risk premium testimony and result of 11.07% of witness D'Ascendis. The PRPM result of 12.23% is unreasonably high. Further, the Commission is skeptical that investor expectations are influenced by a method analyzing economic time series with time-varying volatility using the statistical software employed by witness D'Ascendis. However, the Commission does note that the total market approach RPM result of 9.90% derived by witness D'Ascendis is somewhat supportive of the Commission approved return on equity of 9.70%.

In addition to estimating the cost of equity for his Utility Proxy Group of publicly-traded water utilities, witness D'Ascendis attempted to estimate the cost of equity for another proxy group consisting of 11 domestic, non-price regulated companies. In order to select a proxy group of domestic, non-price regulated companies similar in risk to the Utility Proxy Group, he testified that he relied on the beta coefficients and related statistics derived from Value Line regression analyses of weekly market prices over the last five years. After selecting the 11 unregulated companies, he applied the DCF, RPM, and CAPM in the identical manner used for his Utility Proxy Group, with certain limited expectations. The results of the DCF, RPM, and CAPM applied to the non-price regulated proxy group are 13.37%, 11.28%, and 10.91%, respectively. The Commission concludes that these results are unreasonably high. Each of these results are higher than witness D'Ascendis' estimates of the cost of equity for his own Utility Proxy Group and deserve no weight, particularly with respect to the DCF. The Commission further concludes that given the difference in these results, the risk of the two groups is not equal and the Utility Proxy Group is more reliable as a proxy for the investment risk of common equity in Aqua NC.

After determining that the indicated cost of equity from the DCF, CAPM, and risk premium methods applied to both of his proxy groups equals 10.60%, witness D'Ascendis then adjusted the indicated cost of equity upward by 0.20% to reflect Aqua NC's smaller size compared to companies in his Utility Proxy Group. He testified that the size of the company is a significant element of business risk for which investors expect to be compensated through higher returns. Witness D'Ascendis calculated his size adjustment as described in his prefiled direct testimony and stated that even though a 2.89% upward size adjustment is indicated, he applies a 0.20% size premium to Aqua NC's indicated common equity cost rate. Witness Hinton testified that he does not believe it is appropriate to add a risk premium to the cost of equity of Aqua NC due to size for several reasons. First, from a regulatory policy perspective, witness Hinton stated that ratepayers should not be required to pay higher rates because they are located in the franchise area of a utility which is arbitrarily considered to be small. Further, if such adjustments were routinely allowed, an incentive would exist for large utilities to form subsidiaries or split-up subsidiaries to obtain higher returns. In addition, he noted that Aqua NC operates in a franchise environment that insulates the Company from competition with procedures in place for rate adjustments for circumstances that impact its earnings. He noted that Aqua NC is also owned by Aqua America, Inc., the second largest publicly-traded water utility in the United States. Finally, while witness Hinton stated that while there are studies that address how the small size of a company relates to higher returns, he is aware of only one study that focuses on the size of regulated utilities and risk and that study concluded that utility stocks do not exhibit a significant size premium. In rebuttal, witness D'Ascendis maintained that a small size adjustment was necessary based on the results of studies he cited and discussed and contended that the study concerning size premiums for utilities discussed by witness Hinton was flawed. He also testified that the fact that Aqua NC is a subsidiary of Aqua America, Inc. is irrelevant for ratemaking purposes because it is the rate base of Aqua NC to which the overall rate of return set in this proceeding will be applied which is consistent with the stand-alone nature of ratemaking.

Based upon the evidence in the record in this proceeding, the Commission concludes that a size adjustment of 0.20% is not warranted and should not be approved. It is not irrelevant that Aqua NC is a subsidiary of Aqua America. The Commission determines there is insufficient evidence to authorize an adjustment to the approved rate of return on equity in this case. The record simply does not indicate the extent to which Aqua NC's size alone justifies added risk. While a small water/wastewater utility might face greater risk than a publicly traded peer group, because for example the service area was confined to a hurricane prone coastal geographic area, evidence of such factual predicates is absent from the record. The Commission notes that the witnesses also disagreed with respect to whether the studies discussed in the testimony concerning size and risk are reliable or even applicable to regulated utilities. The Commission concludes that the testimony regarding these studies is not convincing and does not support a size adjustment. In addition, while witness D'Ascendis calculates and testifies that a 2.89% upward size adjustment is indicated, he applies a size premium of 0.20% to Aqua NC's indicated cost of equity. The Commission thus concludes that the 0.20% adjustment is not supported by his testimony and is rather arbitrary.

Having determined that the appropriate rate of return on equity based upon the evidence in this proceeding is 9.70%, the Commission notes that there was considerable discussion during the hearing concerning the authorized returns on equity for water utilities in other jurisdictions. While the Commission has relied upon the record in this proceeding and is certainly aware that returns in other jurisdictions can be influenced by many factors, such as different capital market conditions during different periods of time, settlements versus full litigation, the Commission concludes that the rate of return on equity trends and decisions by other regulatory authorities deserve some weight as (1) they provide a check or additional perspective on the case-specific circumstances, and (2) the Company must compete with other regulated utilities in the capital markets, meaning that a rate of return significantly lower than that approved for other utilities of comparable risk would undermine the Company's ability to raise necessary capital, while a rate of return significantly higher than other utilities of comparable risk would result in customers paying more than necessary. Public Staff D'Ascendis Cross-Examination Exhibit 3, the RRA Water Advisory publication showing approved return on equity decisions for water utilities across the country from January 2014 through June 30, 2018, is helpful. According to this exhibit, the average rate of return on equity for water utilities is 9.59% in 2014, 9.76% in 2015, 9.71% in 2016, 9.56% in 2017, and in the only seven cases reported on for the first six months of 2018 the average is 9.41% with a range of 8.9% to 10.5%. This authorized return data is generally supportive of the Commission approved return on equity of 9.70% based upon the evidence in this proceeding. To the extent it is not, the record evidence justifies any such difference.

In its post-hearing brief, the AGO notes that the 10.80% rate of return on equity requested by Aqua NC is substantially higher than the 9.75% return on equity stipulated to accept in its last general rate case in Docket No. W-218, Sub 363. In this case, the AGO, in its role as consumer advocate, argues that the DCF model is relied upon by investors using widely available current market data and the DCF results produced by expert witnesses for Aqua NC and the Public Staff show that a 9.2% return on equity is more than sufficient to attract the investment dollars needed for adequate service. However, unlike the AGO, the Commission cannot ignore the other evidence in this proceeding. When other such evidence is considered and weighed by the Commission as discussed hereinabove, the Commission finds and concludes that the reasonable and appropriate return on equity is 9.70%.

The Commission notes further that its approval of a rate of return on equity at the level of 9.70% or for that matter at any level, is not a guarantee to the Company that it will earn a rate of return on equity at that level. Rather, as North Carolina law requires, setting the rate of return on equity at this level merely affords Aqua NC the opportunity to achieve such a return. The Commission finds and concludes, based upon all the evidence presented, that the rate of return on equity provided for herein will indeed afford the Company the opportunity to earn a reasonable and sufficient return for its shareholders while at the same time producing rates that are just and reasonable to its customers.

<u>Capital Structure</u>

Aqua NC witness D'Ascendis recommended the use of a ratemaking capital structure consisting of 50.00% long-term debt and 50.00% common equity. He testified this capital structure is based on a test year capital structure for Aqua NC, ending September 30, 2017. He testified that a capital structure consisting of 50.00% long-term debt and 50.00% total equity is appropriate for ratemaking purposes for Aqua NC in the current proceeding because it is comparable, but conservative, to the average capital structure ratios (based on total permanent capital) maintained by the water companies in his Utility Proxy Group on whose market data he based his recommended common equity cost rate.

Public Staff witness Hinton also testified in recommending a 50.00% long-term debt and 50.00% common equity capital structure. The Stipulation also supports a 50.00% long-term debt, 50.00% common equity capital structure. No other party presented evidence as to a different capital structure.

Accordingly, the Commission finds and concludes that the recommended capital structure of 50.00% common equity and 50.00% long-term debt is just and reasonable to all parties in light of all the evidence presented.

<u>Cost of Debt</u>

In its Application, the Company proposed a long-term debt cost of 4.76%. The Stipulation provides for a 4.63% cost of debt. The Commission finds for the reasons set forth herein that a 4.63% cost of debt is just and reasonable.

Public Staff witness Hinton, in his supplemental testimony, supported the embedded cost of Aqua NC's long-term debt on June 30, 2018, of 4.63%. The 4.63% debt cost of the Stipulation gives customers the benefit of reductions in Aqua NC's lower cost of debt after the end of the test year.

No intervenor offered any evidence supporting a debt cost below 4.63%. The Commission, therefore, finds and concludes that the use of a debt cost of 4.63% is just and reasonable to all parties based upon all the evidence presented.

EVIDENCE AND CONCLUSION FOR FINDINGS OF FACT NOS. 114-115

The following schedules summarize the gross revenues and rate of return that the Company should have a reasonable opportunity to achieve based on the increases and decreases in revenues approved in this Order for each rate entity. These schedules, illustrating the Company's gross revenue requirements, incorporate the adjustments found appropriate by the Commission in this Order.

SCHEDULE I
Aqua North Carolina, Inc.
Docket No. W-218, Sub 497
Net Operating Income for a Return
For the Twelve Months Ended September 30, 2017
Combined Operations

	Present Rates	Increase Approved	After Approved Increase
Operating Revenues:			
Service revenues	$55,496,957	$2,916,600	$58,413,557
Late payment fees	114,830	6,240	121,070
Miscellaneous revenues	1,355,499	0	1,355,499
Uncollectibles & abatements	(414,248)	(26,820)	(441,068)

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 116-117

The evidence supporting these findings of fact and conclusions are contained in the Application and NCUC Form W-1 of Aqua NC, and in the testimony of Public Staff witness Junis.

In its Application, the Company proposed a company-wide rate increase of 9.19% over the total revenue level generated by the rates currently in effect. When compared to the present schedule of Commission-approved rates, the Company's proposed schedule of rates[1] indicates the Company was seeking to increase the ratio of base charges to commodity charges of the average monthly residential metered bill for the Aqua NC Water, Aqua NC Sewer, and Fairways Sewer rate divisions.

In its proposed order, the Public Staff stated that witness Junis provided multiple iterations of his billing analysis and rate design[2] as part of his direct and supplemental testimonies and late-filed exhibits requested by the Commission in this proceeding. The Public Staff asserted that in each iteration, witness Junis clearly designed rates to remain at or adjust closer to a 40% to 60% split between the base facilities charges and the metered commodity charges, respectively, balancing the promotion of conservation and sustainability of revenues, for the average monthly metered residential bill for each of the Company's rate divisions. The Public Staff pointed out that no party submitted evidence rebutting witness Junis' rate design.

In its proposed order, Aqua NC stated that the Company and the Public Staff did not negotiate rate design issues during their settlement discussions and there are no provisions

[1] The Company's proposed schedule of rates was entered into the record as Exhibit O to the NCUC form "Application for Rate Increase."

[2] Witness Junis' billing analyses and rate designs were entered into the record as Junis Exhibit 25, Junis Supplemental Exhibit 7, and Junis Late-Filed Exhibit 11.

governing rate design structure in the Stipulation filed by those parties. Aqua NC further stated that, to the best of its knowledge, there was no specific narrative testimony filed by either the Company or the Public Staff or cross-examination which directly addressed rate design structure issues. Aqua NC cited Exhibit JW to the Company's Application in support of its proposed rate design and requested that the Commission design new rates in this proceeding utilizing the following ratios of base facilities charges to variable consumption charges: Aqua Water – 44%/56%; Fairways Water – 50%/50%; and Brookwood Water – 44%/56%.

The Company further requested that the Commission adopt and approve the Company's proposed rate design, rather than the Public Staff's rate design reflected in the billing analysis contained in Junis Late-Filed Exhibit 11 and Table 2 (Average Monthly Residential Bill Calculations) of the late-filed exhibit, both filed on October 10, 2018. Aqua NC also asserted that its proposed metered water rate design ratios will help to minimize the Company's demonstrated risk which results from consistently declining consumption by customers.

The Commission concludes that due to the lack of evidence presented in this rate case proceeding pertaining to Aqua NC's request to increase the ratio of base charges to commodity charges of the average monthly residential metered bill for the Aqua NC Water, Aqua NC Sewer, and Fairways Sewer rate divisions, the Commission cannot properly evaluate such request at this time. The Commission gives substantial weight to the fact that witness Junis provided multiple iterations of his billing analysis and rate design as part of his direct and supplemental testimonies and late-filed exhibits requested by the Commission in this proceeding and Aqua NC did not file any rebuttal testimony concerning this issue. Consequently, the Commission finds and concludes that it is appropriate for the rate design of the approved rates to remain at or adjust closer to a 40% to 60% split between the base facilities charges and the metered commodity charges, respectively, as presented by the Public Staff in this proceeding. The rate design and rates, necessary and appropriate to provide Aqua NC a reasonable opportunity to recover the approved revenue requirement in this proceeding, are reflected in Appendices A-1, A-2, A-3, and A-4, attached hereto.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 118-119

The evidence supporting these findings of fact and conclusions can be found in the Application and NCUC Form W-1 of Aqua NC, and in the testimony of Aqua NC witness Becker and the testimony of Public Staff witness Junis.

In his testimony, Aqua NC witness Becker asserted that, over the last several years, the average consumption per customer has varied widely due to environmental factors, conservation, and pricing impact. Witness Becker cited the "Studies of Volumetric Wastewater Rate Structures and a Consumption Adjustment Mechanism for Water Rates of Aqua North Carolina, Inc."[1] completed by the EFC at the UNC School of Government, which provides in pertinent part that, "[t]he analysis demonstrates that average water use has declined significantly among Aqua water customers, relative to test year average water use, although it has recently stabilized close to 5,000 gallons/month average for ANC customers." Tr. Vol. 5, pp. 43-44.

[1] The EFC Report was filed in Docket No. W-218, Sub 363A on March 31, 2016.

Witness Becker asserted that, though the trend is one of declining consumption, it should be noted that consumption can also increase significantly during periods of warm weather. He also asserted that declining consumption can be attributed to several factors including more efficient plumbing fixtures and household appliances, governmental programs encouraging greater efficiency in water use, changes in landscaping patterns, and consumer responses to these price signals. Id. at 44.

Witness Becker further testified that persistent decline in consumption has eroded Aqua NC's opportunity to earn its authorized return and that in order to minimize the impact of significant swings in customer consumption patterns, the Company proposes the Consumption Adjustment Mechanism (CAM) for approval by the Commission. Id. at 45.

Witness Becker explained how the proposed CAM would operate. He detailed that an average monthly consumption per metered bill would be established based on the total metered consumption and the total metered bills of all metered residential and commercial premises included in the applicable rate division tariff. Annually, the actual average monthly consumption per metered bill would be compared to the average monthly consumption calculated for use to determine rates within the previous rate case. If the current average monthly consumption is within a range of +/- 1%, then no credit/surcharge adjustment would be required. However, if it is outside the range, then the total annual revenue excess/shortfall[1] would be computed and divided by the number of bills and then divided by 12 months to establish the monthly CAM to be applied to the monthly bills for the metered accounts. Id. at 45-46.

On cross-examination, witness Becker agreed that legislation at the North Carolina General Assembly similar to the proposed CAM had not been ratified. Id. at 58-59.

Public Staff witness Junis testified that the Public Staff believes any new rate mechanism, such as the CAM, should be authorized by the North Carolina General Assembly before being considered by the Commission for rulemaking. Tr. Vol. 12, p. 160. Witness Junis further testified that, during the 2017-2018 Session, House Bill 752 would have added language to N.C.G.S. § 62-133 authorizing customer usage tracking and rate adjustments but it was not enacted. Witness Junis concluded that the General Assembly did not authorize this mechanism though it made other changes to Chapter 62 of the Public Utilities Act specifically involving water and wastewater utilities. Thus, according to the Public Staff, the Commission should not authorize a CAM. Tr. Vol. 12, pp. 160-61.

Witness Junis further explained that, if the average monthly usage was 5,000 gallons, then the proposed 1% threshold for consumption variance would amount to 50 gallons per day of shower flow. He asserted that the trigger for the mechanism was too narrow. Id. at 161.

Witness Junis testified that the proposed mechanism as described in witness Becker's testimony utilized average usage per bill and ignored the short-term revenue gains from growth. Witness Junis cited the EFC Report which confirmed in the short-term that the revenues from

[1] The difference between the current monthly average and the rate case average monthly consumption multiplied by 12 months and then multiplied by the consumption tariff rate.

growth exceed the associated costs. He explained that the proposed CAM would allow Aqua NC to increase rates for decreased average usage even if the customer growth resulted in the Company otherwise collecting its full revenue requirement. Id. at 162.

In his rebuttal testimony, Company witness Becker again cited the EFC Report, which provides in pertinent part that, "[t]hat analysis demonstrates that average water use ... has recently stabilized close to 5,000 gallons/month average for ANC customers." Tr. Vol.14, p. 49.

Upon questioning from Presiding Commissioner Brown-Bland, witness Becker contested the 2016 conclusion by the EFC that consumption had stabilized, based on his experience in Virginia and noting the price elasticity of demand. Becker asserted that the phenomenon of reduced consumption is almost universally experienced among both public and private water providers, and that one of the drivers of the instant case is reduced consumption per customer. Conversely, though the trend is one of declining consumption, witness Becker observed that consumption can also increase significantly during extended periods of warm weather; therefore, fluctuation is a factor that should also be addressed.

Further, witness Becker disagreed with the Public Staff's objections to the CAM and asserted that none of them present an impediment to Commission approval of a CAM. He even asserted that proof of the declining average consumption had been presented and was not refuted by the Public Staff, despite the purportedly contradictory finding of the EFC that average water use has stabilized and the inconsistency of the consumption factors that range from negative 1.83% to positive 2.97% across the five Aqua NC rate divisions.

In its post-hearing brief, the AGO expressed opposition to Aqua NC's request for the implementation of the CAM. The AGO maintained that the proposed mechanism is not authorized by the ratemaking provisions in Chapter 62 and Aqua NC has not justified the approval of a non-statutory rider. Further, the AGO contended that the new rider would harm consumers by increasing the frequency of changes to rates outside of a general rate proceeding, by shifting business risks from investors to users, and by discouraging water conservation efforts.

The AGO explained that legislation was introduced in the General Assembly in 2017 that, if adopted, would have authorized the creation of a rate adjustment mechanism for water and wastewater utilities based on changes in consumption – if such a mechanism were determined by the Commission to be in the public interest. However, the legislation was not enacted. See Ex. Vol. 5, pp. 12-13.

The AGO concluded that, in light of the General Assembly's decision not to authorize this rate adjustment mechanism, the Commission should reject Aqua NC's request that it approve such a mechanism as an exercise of discretion. Tr. Vol. 12, p. 161.

Further, the AGO pointed out that that North Carolina appellate courts have approved the Commission's use of non-statutory riders in very limited circumstances such as (1) highly variable and unpredictable expense or volume levels, (2) of significant magnitude, (3) that are beyond the control of the utility. State ex rel. Util. Comm. v. Edmisten, 291 N.C. 327, 230 S.E.2d 651 (1976); State ex rel. Util. Comm. v. Public Service Co., 35 N.C. App. 156, 241 S.E.2d 79 (1978); See

Order Approving Partial Rate Increase, p. 11, Docket No. G-5, Sub 356 (N.C.U.C. Sept. 25, 1996) (holding that absent extraordinary circumstances, current law does not allow riders).

The AGO contended that 2016 EFC report, upon which Aqua NC relies to establish a decline in consumption, found there was initially a significant decline relative to test year consumption but that usage stabilized more recently. Tr. Vol. 5, p. 44. The AGO argued that the variations in usage are considered "a hindrance" by Aqua NC to its ability to earn its allowed return on equity, but that such variations are not of a sufficient magnitude to justify an extraordinary rate mechanism. Tr. Vol. 5, p. 62.

Moreover, the AGO maintained that the mechanism is designed to make rate adjustments for changes in per customer consumption without consideration of other factors that tend to offset the impact, such as growth in the number of customers that Aqua NC serves. Tr. Vol. 5, pp. 45-46, 57. Aqua NC is a growing company, and as it increases its customer count, its revenues collected in usage rates taking into account growth, may fully offset any reduction in per-customer consumption. Tr. Vol. 12, p. 162.

The AGO noted that Aqua NC's CAM proposal would trigger a rate adjustment based on a collar; i.e., if the actual average monthly consumption per bill is higher than plus 1% or lower than minus 1% of the average monthly consumption established in the last rate case. The AGO further noted that Aqua NC contends that having the collar means that the mechanism would address only "significant" changes in per-customer consumption. However, the AGO pointed out that Public Staff witness Junis questioned the significance of a 1% variation in average consumption, as a 1% change could occur from a relatively small departure from normal habits, such as by shortening a daily shower by less than a minute. Tr. Vol. 12, p. 161.

Furthermore, the AGO argued that the proposed rider harms consumers by increasing the frequency of changes to rates outside of general rate proceedings. In a general rate case, Aqua NC would be required to "net" all costs and benefits of operation at the time rates are set, taking into consideration offsetting cost decreases as well as other offsetting factors. Instead, by authorizing changes in rates targeted to variations in per-customer consumption, the AGO opined that the Commission would be allowing Aqua NC to shift normal business risk associated with a single factor from its investors to ratepayers. Aqua NC's incentives to actively manage costs and to operate efficiently in order to maximize the Company's return would be reduced if risks are shifted in that manner. Finally, the AGO maintained that consumers will tend to be discouraged from investing in water conservation measures if their efforts are met with an offsetting rate increase.

In sum, the AGO concluded that the new rate adjustment mechanism proposed by Aqua NC in this proceeding should be rejected because it is not authorized by statute, is not justified, and would be harmful to consumers.

The Commission has carefully evaluated the evidence presented in this proceeding concerning Aqua NC's request to implement a CAM. The Commission finds persuasive the evidence presented by the Public Staff and agrees with the arguments of the AGO that the proposed CAM is not appropriately structured. More specifically, the Commission agrees with Public Staff witness Junis that the 1% threshold is too narrow, and would inappropriately trigger a rate change based on relatively small departures from normal consumption habits, such as shortening a daily shower by less than one minute. The Commission, therefore, finds that Aqua NC has not demonstrated that a consumption adjustment mechanism is reasonable or justified in this case.

In making this finding, the Commission gives substantial weight to the arguments of the Public Staff and the AGO that the mechanism was designed to make rate adjustments for changes in per customer consumption without consideration of other factors that tend to offset the impact, such as growth in the number of customers that the Company serves and periods of warm weather. The Commission concludes that these factors are relevant in determining whether circumstances establish that a decline in consumption denies the Company a reasonable opportunity to earn its authorized rate of return and whether the CAM is reasonable or justified based on the evidence in this case.

The Commission also gives significant weight to the EFC Report which demonstrates that the average water use by Aqua NC customers has recently stabilized close to 5,000 gallons per month average for Aqua NC customers. The Commission accepts the undisputed evidence that average consumption for Aqua NC Water Operations for the purposes of this proceeding, is approximately 5,000 gallons per month on average, as calculated by witness Junis, and agreed to by the Company. The Commission finds unpersuasive the testimony of Company witness Becker that he expects consumption to decrease further given consumption patterns he observed while working at another Aqua America company in Virginia.

Based upon the foregoing and the entire record herein, the Commission finds that Aqua NC has failed to demonstrate that its proposed CAM is reasonable or justified for the purposes of this case. The Commission, therefore, concludes that Aqua NC's request for approval to implement its proposed CAM should be denied.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 120-121

The evidence supporting these findings of fact is contained in the testimony of Public Staff witness Henry.

Witness Henry testified that consistent with Commission Rules R7-39(k) and R10-36(k), Aqua NC WSIC and SSIC surcharges will reset to zero as of the effective date of the approved rates in this proceeding. Additionally, witness Henry stated that by law, the cumulative maximum charges that the Company can recover between rate cases cannot exceed 5% of the total service revenues approved by the Commission in this rate case.

The Commission's previously approved WSIC/SSIC improvement charge rate adjustment mechanisms continue in effect, although these surcharges have been reset to zero in this rate case. Further, the Company's Commission-authorized WSIC mechanism will, on a going-forward basis, apply to Aqua NC's customers receiving water utility service from (1) Timberlake and Thornton Ridge water systems in Alamance County; (2) Wimbledon, Glennburn, and Knollwood water systems in Gaston County; and (3) Clear Meadow water system in Mecklenburg County, which have been incorporated into Aqua NC Water Operations uniform rates in this proceeding. The WSIC/SSIC mechanisms are designed to recover, between rate case proceedings, the costs associated with investment in certain completed, eligible projects for water or sewer improvements. The WSIC/SSIC surcharges are subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanisms may not exceed 5% of the total annual service revenues approved by the Commission in this rate case proceeding.

Based on the service revenues set forth and approved in this Order, the maximum WSIC/SSIC charges as of the effective date of this Order are:

	Service Revenues		WSIC & SSIC Cap
Aqua NC Water	$35,345,847	x 5% =	$1,767,292
Aqua NC Sewer	$14,330,238	x 5% =	$ 716,512
Fairways Water	$ 1,077,223	x 5% =	$ 53,861
Fairways Sewer	$ 2,084,779	x 5% =	$ 104,239
Brookwood Water	$ 5,575,470	x 5% =	$ 278,774

IT IS, THEREFORE, ORDERED as follows:

1. That the Stipulation between Aqua NC and the Public Staff, is hereby approved.

2. That the Schedule of Rates, attached hereto as Appendices A-1, A-2, A-3, and A-4, are hereby approved and deemed filed with the Commission pursuant to N.C.G.S. § 62-138.

3. That the attached Schedule of Rates is hereby authorized to become effective for service rendered on and after the issuance date of this Order.

4. That a copy of the Notice to Customers, attached hereto as Appendices B-1, B-2, and B-3, shall be mailed with sufficient postage or hand delivered to all affected customers in each relevant rate division, respectively, by Aqua NC in conjunction with the next regularly scheduled billing process.

5. That the Company shall file the attached Certificate of Service, properly signed and notarized, not later than 45 days after the issuance of this Order.

6. That neither the Stipulation entered and filed on September 17, 2018, nor the parts of this Order pertaining to the contents of that agreement shall be cited or treated as precedent in future proceedings.

7. That the 2017 water and wastewater depreciation studies and rates filed by Aqua NC in this docket are reasonable and appropriate for use in setting water and sewer rates in this proceeding and are proper for the Company to use in booking depreciation expenses going forward. The 2017 water and wastewater depreciation rate studies are hereby approved as filed.

8. That the Chief Clerk shall establish Docket No. W-218, Sub 497A as the reporting requirement docket for Commission-required reports as ordered herein and also for WSIC/SSIC filings.

9. That Aqua NC shall continue to file bi-monthly reports addressing water quality concerns raised by customers at the public hearings in W-218 Sub 363, in situations where the iron/manganese concerns remain, and in this proceeding, including but not limited to customers served within the Bayleaf Master System. Such reports shall describe measures taken by Aqua NC to address water quality issues and shall include summaries of customer concerns raised, results of water laboratory analyses (including soluble and insoluble concentration levels of iron and manganese) to measure baseline concentration levels and the effectiveness of chemical sequestration treatment, flushing regimens, and cost estimates to install filtration systems (greensand or other filtration options deemed appropriate) or to procure alternate water sources. The first of the bi-monthly reports, which shall cover the time period of November-December 2018, shall be due on January 31, 2019, and shall continue to be filed until further Order of the Commission.

10. That the Public Staff and Aqua NC shall continue to work together to develop and implement plans to identify and respond to water quality concerns that occur in significant numbers in individual subdivision service areas. At a minimum, the Public Staff and Aqua NC are required to file a written report with the Commission, on February 1 and August 1 each year in which the WSIC is in effect, on secondary quality concerns that are affecting its customers. If a particular secondary water quality concern has affected or is affecting 10% of the customers in an individual subdivision service area or 25 billing customers in an individual service area, whichever is less, the customers affected and the estimated expenditures that are necessary to eradicate to the extent practicable water quality issues related to iron and manganese through the use of projects that are eligible for recovery through the WSIC shall be detailed in the written report. The written report shall also contain a recommendation as to whether the Commission should order Aqua NC to pursue such corrective action and/or an underlying reason why the action should or should not be undertaken. If there are no secondary water issues or if the secondary water quality issues are below the 10%/25 threshold previously set forth, Aqua NC and the Public Staff shall so inform the Commission, but they need not report secondary water quality issues resolved by Aqua NC without the assistance or expectation of assistance of the WSIC; Aqua NC shall develop a process that allows it to capture all water quality-related complaints for compliance with this Ordering Paragraph, regardless of the time of day they are received; and Aqua NC and the Public Staff shall supplement the Seventh and Eighth Semi-Annual Reports Concerning Secondary Water Quality Concerns with any after-hours call data that was not included when the reports were first filed with the Commission.

11. That Aqua NC shall also continue to file its annual Three-Year WSIC and SSIC Plan, as well as its Quarterly Earnings, WSIC/SSIC Revenues, and Construction Status reports, its Annual Heater Acquisition Incentive Account Report, the DEQ Quarterly Notice of Deficiency filings, and the DEQ Secondary Water Quality Filtration Request Executive Summary.

12. That the Public Staff shall file quarterly reports beginning April 30, 2019 for the first quarter of 2019 detailing the number of water quality complaints against Aqua NC received

by Public Staff (including by its Consumer Services Division), the nature of those complaints, and the final resolution.

13. That at any time after a year from the issuance of this Order, Aqua NC may request that the Commission revise or eliminate the regular and periodic reporting requirements ordered herein due to demonstrated and significant progress in customer satisfaction with improvements made in water quality related to levels of iron and manganese.

14. That Aqua NC shall promptly provide to and share with the Public Staff information concerning all meetings and conversations (in summary note form) with, reports to, and the recommendations of DEQ regarding the water quality concerns being evaluated and addressed in Aqua NC's systems. Such communication to the Public Staff shall not be considered or treated as a formal report authored by Aqua NC, but rather as notification of the occurrence of communications between the Company and DEQ and notification of salient topic and content points, shall be in a written format and shall be provided, at a minimum, on a bi-monthly basis until otherwise ordered by the Commission. Without limitation on the foregoing, Aqua NC shall provide the Public Staff copies of: (a) Aqua NC's reports and letters to DEQ concerning water quality concerns in its systems; (b) responses from DEQ concerning reports, letters, or other oral or written communication received from Aqua NC; (c) DEQ's specific recommendations to Aqua NC, by system, concerning each of the water quality concerns being evaluated by DEQ; and (d) communications from DEQ to Aqua NC indicating DEQ's dissatisfaction with Aqua NC's response to DEQ's concerns, directions or recommendations concerning water quality affected by iron and manganese.

15. That Aqua NC shall file copies of its North Carolina Water Quality Plan and Customer Communication Plan, including, without limitation in its Water Quality plan, Aqua NC's methods to identify and address the presence of iron and manganese at levels reasonably known by Aqua to damage pipes and appliances and to be objectionable to customers for drinking and to identify and address other potential contaminants in the Company's water systems; and detailing in its Customer Communication plan (a) the Company's plans to provide timely and accurate notice to its customers of any water quality problems requiring health alerts and to communicate the steps the Company plans to address the problems; (b) the Company's plans to provide better targeted and timely notice of flushing events to customers most likely to be impacted; (c) the Company's plan to establish a dedicated contact or a special call routing protocol for customers encountering sudden or worsening water quality issues; and (d) the Company's plan to invite customers, at least as it pertains to Bayleaf customers, to participate in focus groups to improve customer understanding of issues affecting water quality. See Tr. Vol. 5, pp. 151-55. Such information shall be filed with the Commission within 90 days after issuance of this Order.

16. That as part of its Communication Plan, Aqua NC shall recommend the appropriate and most effective type of individual filtration systems for those customers served by systems affected by iron and manganese.

17. That given the number of customers and systems affected by iron and manganese, Aqua NC shall investigate and evaluate the possibility of entering into agreements with vendors of home water filtration systems and replacement filters for such systems for a discount for Aqua NC customers and shall file a report with the Commission on the status of this evaluation within

90 days after issuance of this Order and every 90 days thereafter until such investigation and evaluation is complete.

18. That Aqua NC shall work with the Public Staff to develop an appropriate robust general flushing plan for each of its North Carolina systems affected by iron and manganese (or identified as a Group 1 site in the Three-Year WSIC/SSIC Plan Update dated April 20, 2018 (or the most recent version thereof)) and submit the plans for filing with the Commission within 180 days of the issuance of this Order.

19. That Aqua NC's general flushing plan filed pursuant to Ordering Paragraph 11 shall be subordinate to the manufacturer's recommended flushing schedule whenever a sequestering agent, including SeaQuest® is introduced into a Company water system. Aqua NC shall follow the manufacturer's recommended flushing schedule, and any time Aqua NC does not follow the manufacturer's recommendation, the Company shall make a filing with the Commission if the recommended flushing does not occur within 60 days of the recommended time for flushing; such filing shall be made within 60 days of departing from the original recommended schedule, explaining the reasons the flushing schedule could not be followed.

20. That Aqua NC shall work with the Public Staff to develop a policy and procedure for providing customers a bill credit when Aqua NC recommends that a customer flush his/her individual line to address a water quality issue. Within 90 days from the issuance of this Order, Aqua NC and the Public Staff shall submit to the Commission for approval their proposed policy and procedure for determining to whom, how and when bill credits will be given as well as how much the flushing bill credit will be.

21. That Aqua NC and the Public Staff shall give full consideration to evaluation and pursuit of a permanent alternate source of water for the Bayleaf Master System or for those points of entry in the Bayleaf Master System for which Aqua NC has no reasonable belief that the water from such points of entry will be suitable consistently for domestic use after reasonable corrective action.

22. That all future reports filed with the Commission related to the two annual reporting requirements established in Docket No. 218, Sub 274 by Ordering Paragraph Nos. 7 and 19, as modified in Docket No. W-218, Sub 319 by lOrdering Paragraph Nos. 7 and 8, regarding Aqua NC's analysis of the terms of its debt issues and the Heater Acquisition Incentive Account, respectively, shall be filed in Docket No. W-218, Sub 497A, until further order of the Commission.

23. That Aqua NC shall file and request approval of all future contracts with developers/secondary developers within 30 days after signing said contracts, and, in the case of informal agreements or contracts that are effective without signing, Aqua NC shall file a detailed written description of the terms of those agreements within 30 days after entering into such agreements. The requirements of this ordering paragraph shall apply to all future contracts, including those covering contiguous expansions. If the contracts have provisions which allow for charges in excess of what is being collected as CIAC, the referenced charges or fees shall be specifically brought to the attention of the Commission for its approval or disapproval.

24. That Aqua NC shall prepare amendments to its tariffs detailing its connection/capacity fee practices and procedures on a subdivision-by-subdivision basis. Within 30 days following issuance of this Order, Aqua NC shall propose for Commission approval a proposed schedule in which it will include in its tariffs all connection fees included in its rates, as ordered by this ordering paragraph.

25. That Aqua NC shall, within 30 days following issuance of this Order, make a compliance filing to show its present and future accounting treatment, in a manner consistent with the findings and conclusions of the Commission herein, of the capacity purchased from, and transmission expenses paid to, Johnston County. Such filing shall include the net rate base adjustment and total revenue requirement effect to the Company as a result of the Commission's determinations of these issues herein.

26. That Aqua NC shall take the appropriate measures to share the 40-day read history collected by the Company's AMR technology with the AMR-metered customers and shall notify the Commission when such information is being shared, including how such information is being provided to customers.

27. That within six months following the issuance date of this Order, Aqua NC shall file a report informing the Commission regarding the specific nature of the expected benefits to be achieved on a consolidated basis for the Aqua America subsidiaries, including Aqua NC, once full deployment of AMR technology is completed in all Aqua America operating states. Such report shall also indicate the planned timing of such expected benefits.

28. That the amount of tax expense that was overcollected in rates from January 1, 2018 until the new rates approved herein take effect shall be returned by Aqua NC to ratepayers as a bill credit over a period of one year.

29. That the excess accumulated deferred income taxes associated with the change in the North Carolina corporate income tax rate under HB 998 shall be returned by Aqua NC to ratepayers in a rider to rates over a three-year period.

30. That the unprotected excess accumulated deferred income taxes associated with the reduction in the federal corporate income tax rate shall be returned by Aqua NC to ratepayers in a rider to rates over a three-year period.

31. That the Chief Clerk shall close Docket No. W-218, Sub 363A and Docket No. W-218, Sub 319A.

ISSUED BY ORDER OF THE COMMISSION.
This the 18th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Daniel G. Clodfelter concurring in part and dissenting in part.

DOCKET NO. W-218, SUB 497

Commissioner Daniel G. Clodfelter, concurring in part and dissenting in part:

I join in all of the Commission's findings and conclusions and in its Order, except for Findings of Fact 64, 65, 66, 81, and 82. To the extent, but only to the extent, the Commission's determination of the Company's revenue requirement and, ultimately, the approved schedule of rates depend on those five findings I dissent. The Commission's Order fully canvasses the evidence pertinent to these five findings. On this record I find the analysis and position taken by the Public Staff with respect to the matters addressed by those five findings to be more persuasive as a general matter of fact and policy, but in this case especially so in light of the ongoing work the Company needs to undertake to address and resolve customer issues relating to iron and manganese levels in the water from a number of its wells.

/s/ Daniel G. Clodfelter
Commissioner Daniel G. Clodfelter

APPENDIX A-1
PAGE 1 OF 8

SCHEDULE OF RATES

for

AQUA NORTH CAROLINA, INC.

for providing water and sewer utility service in

ALL ITS SERVICE AREAS IN NORTH CAROLINA AND THE EMERGENCY OPERATION OF MOBILE HILL ESTATES

WATER UTILITY SERVICE

►*All Aqua NC systems except as noted below*

Monthly Metered Service (residential and commercial customers):

Base facility charge (zero usage, based on meter size)

<1" meter	$ 19.25
1" meter	$ 48.13
1½" meter	$ 96.25
2" meter	$ 154.00
3" meter	$ 288.75
4" meter	$ 481.25
6" meter	$ 962.50

Usage charge, per 1,000 gallons	$ 5.83

For bulk purchased water system usage charges see attached Appendix A-2

Monthly Unmetered Service (flat rate): [1/]

Residential customers	$ 39.66
Commercial customers, per residential equivalent unit (REU)	$ 67.42

▶*Brookwood and LaGrange Service Areas*
Cumberland and Hoke Counties

Monthly Metered Service (residential and commercial customers):

Base facility charge (zero usage, based on meter size)

<1" meter	$ 14.03
1" meter	$ 35.08
1½" meter	$ 70.15
2" meter	$ 112.24
3" meter	$ 210.45
4" meter	$ 350.75
6" meter	$ 701.50

Usage charge, per 1,000 gallons	$ 3.76

For bulk purchased water system usage charges see attached Appendix A-2

WATER AND SEWER – RATE INCREASE

Monthly Unmetered Service (flat rate): 1/

Residential customers	$ 33.17
Commercial customers (per REU)	$ 56.39

►*Fairways and Beau Rivage Service Area – New Hanover County*

Monthly Metered Service (residential and commercial customers):

Base facility charge (zero usage, based on meter size)

<1" meter	$ 8.36
1" meter	$ 20.90
1½" meter	$ 41.80
2" meter	$ 66.88
3" meter	$ 125.40
4" meter	$ 209.00
6" meter	$ 418.00

Usage charge, per 1,000 gallons	$ 1.53

OTHER MATTERS

Specific Service Area Connection Charges and Capacity Fees: 2/
(see attached Appendix A-3)

Connection in All Other Service Areas: 2/

<1" meter	
For taps made to existing mains installed inside franchised service area	$800.00
For individual connections installed outside franchised service area3/	Actual cost of installation 4/
1" meter or larger	120% of actual cost of making tap, including setting meter and box

WATER AND SEWER – RATE INCREASE

Meter Installation Fee:	$70.00

(The fee will be charged only where cost of meter installation is not otherwise recovered through connection charges.)

Production and Storage Contribution in Aid of Construction Fee: [3/]

For individual connections outside franchised service areas where lot owner has made no contribution in aid of construction toward production and storage facilities	$1,700 per residential equivalent unit (REU)

Reconnection Charges: [5/]

If water service cut off by utility for good cause	$35.00
If water service discontinued at customer's request	$15.00

Billing Service Charge: [6/]	$2.00 per month per bill

SEWER UTILITY SERVICE

►*All Aqua systems except as noted below*

Monthly Unmetered Service (flat rate):

Residential customers	$ 72.04
Commercial customers (per REU)	$ 100.86

STEP system flat rate (Monticello, Holly Brook, Saddleridge)	$ 32.00

Monthly Metered Service (commercial customers):

Base facility charge (zero usage, based on meter size)

<1" meter	$ 26.11
1" meter	$ 65.28
1½" meter	$ 130.55

2” meter	$ 208.88
3” meter	$ 391.65
4” meter	$ 652.75
6” meter	$1,305.50

Commercial usage charge, per 1,000 gallons	$ 8.92

For bulk purchased sewer system charges see attached Appendix A-2

►*Fairways and Beau Rivage Service Area – New Hanover County*

Monthly Unmetered Service (flat rate):

Residential customers	$ 58.56
Commercial customers (per REU)	$ 81.98

Monthly Metered Service (commercial customers):

Base facility charge (zero usage, based on meter size)

<1” meter	$ 20.72
1” meter	$ 51.80
1½” meter	$ 103.60
2” meter	$ 165.76
3” meter	$ 310.80
4” meter	$ 518.00
6” meter	$1,036.00

Commercial usage charge, per 1,000 gallons	$ 9.46

OTHER MATTERS

Specific Service Area Connection Charges and Capacity Fees: [2/]
(See attached Appendix A-3)

Connection in All Other Service Areas:

None when tap and service line installed by developer.

Actual Cost if Aqua NC makes tap or installs service line.

Sewer Plant Capacity Fee per GPD (DEQ Design Requirements) – River Park Development:

Sewer Plant Capacity Fee per GPD (See Docket No. W-218, Sub 143)	$ 10.00

Sewer Plant Capacity Fee per GPD – Flowers Plantation Development (Buffalo Creek):
(See Docket No. W-218, Sub 497)

Sewer plant capacity fee per GPD	$ 5.34
Transmission fees per GPD	3.14
Total fees per GPD	$ 8.48

These are the actual rates per GPD paid by Aqua NC to Johnston County on June 21, 2018. Such rates per GPD are subject to change based on future negotiations between Aqua NC and Johnston County.

Developer Contribution to Aqua NC – 50% Aqua NC's Cost of Buffalo Creek Pump Station and Force Main – Flowers Plantation Development (Buffalo Creek):

Pursuant to Amended Purchase Agreement dated May 14, 2002, between River Dell Utilities, Inc., Rebecca Flowers Finch (d/b/a River Dell Company), and Heater Utilities, Inc. (See Docket No. W-274, Sub 538 and Docket No. W-218, Sub 497)

$440,816 divided equally among the first 2,000 single-family residential equivalents (SFREs) or $220.41 per SFRE

Reconnection Charges: [5/]

If sewer service cut off by utility for good cause	Actual Cost

Grease Traps:

The Utility may require installation and/or proper operation of grease traps on grease producing commercial facilities. Failure to properly operate grease traps will result in disconnection of service pursuant to Commission Rule R10-16.

New Customer Account Fee: $ 20.00

(If customer receives both water and sewer utility service from Aqua NC, then the customer shall only be charged a new account fee for water.)

Grinder Pump Installation Fee – Governors Club Subdivision: Actual Cost
(See Docket No. W-218, Sub 277)

The homeowner or house builder shall be required to prepay in full to the outside contractor installing the grinder pump the entire cost of the installation, including the applicable engineering inspection fee, as specified in Aqua NC's Grinder Pump Installation In-house Procedures, a copy of which is filed with the Commission.

Once the grinder pump is initially installed, it will be the responsibility of Aqua NC to maintain, repair, and replace the grinder pump. However, if damage to a grinder pump is shown to be due to homeowner negligence, the homeowner will be liable for the cost of the repair or replacement of the grinder pump.

Returned Check Charge:	$25.00
Bills Due:	On billing date
Billing Frequency:	Monthly for service in arrears
Bills Past Due:	15 days after billing date
Finance Charges for Late Payment:	1% per month will be applied to the unpaid balance of all bills still past due 25 days after billing date

Availability Rates:

Woodlake Subdivision:
Water $5.00 per month
Sewer $3.75 per month

Governors Village Subdivision, Governors Forest Subdivision, Governors Village Townhomes:
Sewer only $150.00 per year per residential lot

Governors Club:
Sewer only $20.00 per month

Notes:

1/ The Utility, at its expense, may install a meter and charge the metered rate.

2/ In most areas, connection charges do not apply pursuant to contract and only the $70.00 meter installation fee will be charged to the first person requesting service (generally the builder). Where Aqua NC must make a tap to an existing main, the charge will be $800.00, and where main extension is required, the charge will be 120% of the actual cost.

3/ Individual connections outside franchised service areas may be made pursuant to this tariff in the following circumstances: (1) upon request of a bona fide customer as that term is defined in Commission Rule R7-16(a)(1); (2) the customer shall be located either within 100 ft. of a Franchised Service Area or located within 100 ft. of an existing Aqua NC main; and (3) the request may come from no more than two customers located in the same area (requests for more than two connections require an application for a new franchise or a request for approval of a contiguous extension). To connect such a customer, Aqua NC shall file a notice with the Commission in Docket No. W-218, Sub 177, at least 30 days before it intends to make the tap. This notice shall include an explanation of the circumstances requiring the tap and an 8.5" x 11" map showing the location of the tap in relation to Aqua NC's existing main. If the Public Staff does not object to the tap within the 30-day period, or upon written notice within that period from the Public Staff that it will not object, Aqua NC may proceed with the connection.

APPENDIX A-1
PAGE 8 OF 8

4/ Actual cost for such a connection shall include installation of a 6" or smaller main extension (if necessary), tap of the main, service line, road bore (if necessary), meter box, meter, backflow preventer (if necessary), and Aqua NC's direct labor costs. Aqua NC shall give a written cost quote to the customer(s) applying for connection before actually beginning the installation work.

5/ When service is disconnected and reconnected by the same unit owner within a period of less than nine months, the entire flat rate and/or base charge rate will be due and payable before the service will be reconnected.

If sewer disconnection is required, after all reasonable efforts by the Utility to encourage the customer to comply with the provisions of the tariff have been made, the Utility may install a valve or other device appropriate to cut off or block the customer sewer line.

Prior to disconnection, the Utility shall give the customer written notice at least seven days prior to disconnection. Said notice shall include, at the minimum, a copy of this reconnect provision and the estimated cost to make the cut off and install the valve or other device.

In the event that an emergency or dangerous condition is found or fraudulent use is detected, sewer service may be cut off without notice. In such an event, notice as described above, will be given as soon as possible.

Upon payment of outstanding balance, actual cost of termination and reconnection and other fees (for example, deposit if required by the Utility), the Utility shall restore the service no later than the next business day.

6/ Aqua NC is authorized to include on its monthly water bill the charges resulting from sewer service provided by the Town of Cary, the Town of Fuquay-Varina, Wake County, and various Commission appointed emergency operators where specifically approved by the Commission. Aqua NC will bill the Town of Cary, the Town of Fuquay-Varina, Wake County, or emergency operator $2.00 per month per bill for providing this service.

Issued in Accordance with Authority Granted by the North Carolina Utilities Commission in Docket No. W-218, Sub 497, on this the 18th day of December, 2018.

Base facility charge/REU	$ 40.40
Usage charge, per 1,000 gallons	$ 6.11

IMPACT ON AVERAGE RESIDENTIAL BILL

The impact on the average monthly residential bill including the reset of the water and sewer system improvement charge (WSIC and SSIC) is as follows:

	Water	Sewer
Average bill under prior rates	$47.05	$65.57
Average bill under approved rates	$48.23	$72.04

The average monthly residential bills are based on the uniform rates for non-purchased water and sewer systems based on an average usage of 4,971 gallons per month. The average residential bills for the bulk purchased water and sewer systems will vary.

WATER AND SEWER – RATE INCREASE

RATE ADJUSTMENT MECHANISM:

The Commission-authorized WSIC and SSIC rate adjustment mechanisms continue in effect. These charges have been reset to zero in the Docket No. W-218, Sub 497 rate case, but Aqua NC may, under the Rules and Regulations of the Commission, apply for a rate surcharge on May 1, 2019, to become effective July 1, 2019. The WSIC/SSIC mechanisms are designed to recover, between rate case proceedings, the costs associated with investment in certain completed, eligible projects for water and sewer system improvements. The WSIC/SSIC mechanisms are subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanisms may not exceed 5% of the total annual service revenues approved by the Commission in this general rate case proceeding. Additional information regarding the WSIC/SSIC mechanisms is contained in the Commission's Order and can be accessed from the Commission's website at www.ncuc.net, under Docket Information, using the Docket Search feature for docket number "W-218 Sub 497" or W-218 Sub 497A".

CREDIT/REFUNDS DUE TO REDUCTIONS IN CORPORATE FEDERAL AND STATE INCOME TAX RATES:

On December 22, 2017, President Donald J. Trump signed into law the Tax Cuts and Jobs Act (The Tax Act), which among other things, reduced the federal corporate income tax rate from 35% to 21%, effective for taxable years beginning after December 31, 2017. In the present rate case proceeding, the Commission reduced Aqua NC's revenue requirement to reflect the reduction in the federal corporate income tax rate from 35% to 21%, on the Company's ongoing federal

income tax expense. Further, the Commission is requiring that Aqua NC refund to its customers the overcollection of federal income taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018, and corresponding interest, through a surcharge credit for a one-year period beginning with the effective date of the new rates.

With respect to excess deferred income taxes (EDIT) resulting from reductions in the corporate federal and state income tax rates, the Commission is requiring that: (a) Aqua NC's Protected Federal EDIT shall be flowed back to customers following the tax normalization rules utilizing the average rate assumption method (ARAM) as required by the rules of the Internal Revenue Service; (b) Aqua NC's Unprotected Federal EDIT shall be returned to ratepayers through a levelized rider over a period of three years; and (c) Aqua NC's State EDIT shall be returned to customers through a levelized rider that will expire at the end of a three-year period.

WATER AND SEWER – RATE INCREASE

Aqua NC will provide the applicable dollar amounts concerning (1) the one-year surcharge credit and (2) the federal and state EDIT riders (refunds) shown as separate line items on individual customers' monthly bills, along with explanatory information.

ISSUED BY ORDER OF THE COMMISSION.
This the 18th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION

*(REU = Residential Equivalent Unit)

WATER AND SEWER – RATE INCREASE

IMPACT ON AVERAGE RESIDENTIAL BILL

The impact on the average monthly residential bill including the reset of the WSIC is as follows:

	Water
Average bill under prior rates	$30.17
Average bill under approved rates	$33.98

The average monthly residential bills are based on the rates for non-purchased water systems based on an average usage of 5,306 gallons per month. The average residential bills for the bulk purchased water systems will vary.

RATE ADJUSTMENT MECHANISM:

The Commission-authorized WSIC rate adjustment mechanism continues in effect. This surcharge has been reset to zero in the Docket No. W-218, Sub 497 rate case, but Aqua NC may, under the Rules and Regulations of the Commission, apply for a rate surcharge on May 1, 2019, to become effective July 1, 2019. The WSIC mechanism is designed to recover, between rate case proceedings, the costs associated with investment in certain completed, eligible projects for water and sewer system improvements. The WSIC mechanism is subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC mechanism may not exceed 5% of the total annual service revenues approved by the Commission in this general rate case proceeding. Additional information regarding the WSIC mechanism is contained in the Commission's Order and can be accessed from the Commission's website at www.ncuc.net, under Docket Information, using the Docket Search feature for docket number "W-218 Sub 497" or W-218 Sub 497A".

CREDIT/REFUNDS DUE TO REDUCTIONS IN CORPORATE FEDERAL AND STATE INCOME TAX RATES:

On December 22, 2017, President Donald J. Trump signed into law the Tax Cuts and Jobs Act (The Tax Act), which among other things, reduced the federal corporate income tax rate from 35% to 21%, effective for taxable years beginning after December 31, 2017. In the present rate case proceeding, the Commission reduced Aqua NC's revenue requirement to reflect the reduction in the federal corporate income tax rate from 35% to 21%, on the Company's ongoing federal income tax expense. Further, the Commission is requiring that Aqua NC refund to its customers the overcollection of federal income taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018, and corresponding interest, through a surcharge credit for a one-year period beginning with the effective date of the new rates.

With respect to excess deferred income taxes (EDIT) resulting from reductions in the corporate federal and state income tax rates, the Commission is requiring that: (a) Aqua NC's Protected Federal EDIT shall be flowed back to customers following the tax normalization rules utilizing the average rate assumption method (ARAM) as required by the rules of the Internal Revenue Service; (b) Aqua NC's Unprotected Federal EDIT shall be returned to ratepayers through a levelized rider over a period of three years; and (c) Aqua NC's State EDIT shall be returned to customers through a levelized rider that will expire at the end of a three-year period.

APPENDIX B-2
PAGE 4 OF 4

Aqua NC will provide the applicable dollar amounts concerning (1) the one-year surcharge credit and (2) the federal and state EDIT riders (refunds) shown as separate line items on individual customers' monthly bills, along with explanatory information.

ISSUED BY ORDER OF THE COMMISSION.
This the 18th day of December, 2018.

Application by Aqua North Carolina, Inc.,	)	
202 MacKenan Court, Cary, North Carolina 27511,	)	NOTICE TO CUSTOMERS IN
for Authority to Increase Rates for Water and	)	FAIRWAYS AND BEAU RIVAGE
Sewer Utility Service in All of Its Service Areas	)	SERVICE AREAS
in North Carolina	)	

WATER AND SEWER – RATE INCREASE

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission has issued an Order authorizing Aqua North Carolina, Inc. (Aqua NC), to decrease its rates for water service and increase its rates for sewer service in its Fairways and Beau Rivage service areas in New Hanover County. The new approved water and sewer rates are as follows:

WATER UTILITY SERVICE

Monthly Metered Service (Residential and Commercial customers)

Base charge, per month (zero usage, based on meter size)	
<1" meter	$ 8.36
1" meter	$ 20.90
1½" meter	$ 41.80
2" meter	$ 66.88
3" meter	$ 125.40
4" meter	$ 209.00
6" meter	$ 418.00
Usage charge, per 1,000 gallons	$ 1.53

SEWER UTILITY SERVICE

Monthly Unmetered Service (flat rate)

Residential customers	$ 58.56
Commercial customers (per *REU)	$ 81.98
*(REU = Residential Equivalent Unit)	

Commercial Monthly Metered Service (based on metered water usage)

Base facility charge (zero usage, based on water meter size)

<1" meter	$ 20.72
1" meter	$ 51.80
1 1/2" meter	$ 103.60
2" meter	$ 165.76
3" meter	$ 310.80
4" meter	$ 518.00
6" meter	$1,036.00

Usage charge, per 1,000 gallons $ 9.46

IMPACT ON AVERAGE RESIDENTIAL BILL

The impact on the average monthly residential bill including the reset of the WSIC and SSIC is as follows:

	Water	Flat Rate Sewer
Average bill under prior rates	$19.26	$38.09
Average bill under approved rates	$19.13	$58.56

The average monthly residential bills listed above are based on an average usage of 7,042 gallons per month.

RATE ADJUSTMENT MECHANISM:

The Commission-authorized WSIC and SSIC rate adjustment mechanisms continue in effect. These charges have been reset to zero in the Docket No. W-218, Sub 497 rate case, but Aqua NC may, under the Rules and Regulations of the Commission, apply for a rate surcharge on May 1, 2019, to become effective July 1, 2019. The WSIC/SSIC mechanisms are designed to recover, between rate case proceedings, the costs associated with investment in certain completed, eligible projects for water and sewer system improvements. The WSIC/SSIC mechanisms are subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanisms may not exceed 5% of the total annual service revenues approved by the Commission in this general rate case proceeding. Additional information regarding the WSIC/SSIC mechanisms is contained in the Commission's Order and can be accessed from the Commission's website at www.ncuc.net, under Docket Information, using the Docket Search feature for docket number "W-218 Sub 497" or W-218 Sub 497A".

CREDIT/REFUNDS DUE TO REDUCTIONS IN CORPORATE FEDERAL AND STATE INCOME TAX RATES:

On December 22, 2017, President Donald J. BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Aqua North Carolina, Inc., 202 MacKenan Court, Cary, North Carolina 27511, for Authority to Adjust and Increase Rates for Water and Sewer Utility Service in All Service Areas in North Carolina	)))))	ORDER CLARIFYING CALCULATION OF REFUND OF STATE AND UNPROTECTED FEDERAL EXCESS DEFERRED INCOME TAXES

BY THE COMMISSION: On December 18, 2018, the Commission issued an Order Approving Partial Settlement Agreement and Stipulation, Granting Partial Rate Increase, and Requiring Customer Notice (Order) in the above-captioned docket, a general rate case proceeding for Aqua North Carolina, Inc. (Aqua NC or Company). With regard to Aqua NC's unprotected federal excess deferred income taxes (EDIT) and state EDIT addressed in this general rate case proceeding, on Pages 135-136 of its Order, the Commission concluded that it was appropriate to accept and approve the Partial Settlement Agreement and Stipulation (Stipulation) by Aqua NC and the Public Staff filed on September 17, 2018. The following language was included in the Commission's Order:

. . .

3. The Company's unprotected federal EDIT shall be returned to ratepayers through a levelized rider over a period of three years.

. . .

5. The Company's state EDIT recorded pursuant to the Commission's Order Addressing the Impacts of HB 998 on North Carolina Public Utilities issued May 13, 2014, in Docket No. M-100, Sub 138 shall be returned to ratepayers through a levelized rider that will expire at the end of a three-year period.

After the Order was issued, Aqua NC sought informal clarification of the term "levelized rider" as it was used by the Commission. Specifically, Aqua NC communicated by email to the Commission and all parties that it sought clarification of whether "levelized rider" meant monthly refunds over the three-year period based on a flat (equal) per customer rate or monthly refunds over the three-year period based upon a calculation utilizing the customer's total service bill (base and commodity charges). Aqua NC stated its interpretation of such wording is that a flat per customer rate over the three-year period would be appropriate.

The Attorney General's Office (AGO) argued that the return of the EDIT using a flat per customer rate would more fairly spread the effects of the rider to reduce the customer's monthly base charge than a method based upon the percentage of the customer's total service bill. Further, the AGO expressed the view that lower fixed monthly charges tend to be less burdensome for low income and elderly consumers.

The Public Staff – North Carolina Utilities Commission (Public Staff) responded that basing the amount returned on customers' total service bills is the most fair and equitable method of returning the EDIT because it most nearly approximates the manner in which the EDIT was collected from customers. The more a customer paid in service charges, the more he or she contributed to EDIT collected by Aqua NC, and the amount contributed should be reflected in the amount returned. The Public Staff commented that a rider based on total service bills, as the Public Staff recommends, would be calculated as a percentage for each rate entity in a manner similar to that used to calculate the Company's water system improvement charge (WSIC) and sewer system improvement charge (SSIC) surcharges.

Regarding Aqua NC's request for clarification of the meaning of "levelized rider" with respect to the refunds of the unprotected federal EDIT and state EDIT, in the December 18, 2018 Order, the Commission adopted such wording from Page 9, Section III, Paragraphs II. and JJ. of the Stipulation. In adopting the language agreed upon by the Public Staff and Aqua NC, the Commission accepted and intended the term "levelized rider" to mean the total dollar amount of the refunds of EDIT, including carrying costs calculated utilizing an annuity factor based upon the capital structure and cost rates for debt and common equity (net of tax) approved in the Commission's Order, divided equally over a three-year period—not to mean a flat per customer monthly refund amount. The Commission hereby clarifies its Order concerning the refunds to customers of the unprotected federal EDIT and the state EDIT accordingly.

Further, the Commission agrees with the Public Staff that basing the amounts to be refunded on customers' total service bills rather than on a flat per customer rate is the fairer and more equitable method of returning the EDIT because it most nearly approximates the manner in which the EDIT was collected from customers. Consequently, the Commission finds and concludes that the total dollar amount of the EDIT refunds shall be equally divided over a three-year period and the monthly refunds to customers over the three-year period shall be calculated based upon each customer's total service bill, which includes base and commodity charges.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 28th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. W-218, SUB 497

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by Aqua North Carolina, Inc.,	)	
202 MacKenan Court, Cary, North Carolina 27511,	)	
for Authority to Adjust and Increase Rates for	)	ERRATA ORDER
Water and Sewer Utility Service in All Service	)	
Areas in North Carolina	)	

BY THE PRESIDING COMMISSIONER: On December 18, 2018, the Commission issued an Order Approving Partial Settlement Agreement and Stipulation, Granting Partial Rate Increase, and Requiring Customer Notice in the above-captioned docket. It has come to the attention of the Commission that Appendix B-1 contains an inadvertent error with respect to the average bill under prior rates for sewer utility service stated on Page 6 of 7. The average bill under prior rates was stated as $65.57 rather than $67.57.

The Presiding Commissioner finds good cause to order the correction of the error in Appendix B-1.

IT IS, THEREFORE, ORDERED as follows:

1. That the amended Appendix B-1, attached hereto, shall be substituted for the Appendix B-1 attached to the Order issued on December 18, 2018, in this docket.

2. That except as amended herein, the Order issued on December 18, 2018, shall remain in full force and effect.

3. That the Notice to Customers, attached as Appendix B-1, shall be mailed with sufficient postage or hand delivered by Aqua North Carolina, Inc. (Aqua NC) to all affected customers in conjunction with the next regularly scheduled billing process; and that Aqua NC shall submit to the Commission the attached Certificate of Service properly signed and notarized no later than 35 days after the date of this Order.

ISSUED BY ORDER OF THE COMMISSION.
This the 28th day of December, 2018.

Usage charge, per 1,000 gallons	$ 8.92
All service areas unless noted differently below	
Park South Station and Parkway Crossing Service Areas	
Base facility charge:	As shown above
Usage charge/1,000 gallons	$ 6.45
Hawthorne Green (formerly Vista Park Apartments)	
Base facility charge/REU	$ 40.40
Usage charge, per 1,000 gallons	$ 6.11

IMPACT ON AVERAGE RESIDENTIAL BILL

The impact on the average monthly residential bill including the reset of the water and sewer system improvement charge (WSIC and SSIC) is as follows:

	Water	Sewer
Average bill under prior rates	$47.05	$67.57
Average bill under approved rates	$48.23	$72.04

The average monthly residential bills are based on the uniform rates for non-purchased water and sewer systems based on an average usage of 4,971 gallons per month. The average residential bills for the bulk purchased water and sewer systems will vary.

RATE ADJUSTMENT MECHANISM:

The Commission-authorized WSIC and SSIC rate adjustment mechanisms continue in effect. These charges have been reset to zero in the Docket No. W-218, Sub 497 rate case, but Aqua NC may, under the Rules and Regulations of the Commission, apply for a rate surcharge on May 1, 2019, to become effective July 1, 2019. The WSIC/SSIC mechanisms are designed to recover, between rate case proceedings, the costs associated with investment in certain completed, eligible projects for water and sewer system improvements. The WSIC/SSIC mechanisms are subject to Commission approval and to audit and refund provisions. Any cumulative system improvement charge recovered pursuant to the WSIC/SSIC mechanisms may not exceed 5% of the total annual service revenues approved by the Commission in this general rate case proceeding. Additional information regarding the WSIC/SSIC mechanisms is contained in the Commission's Order and can be accessed from the Commission's website at www.ncuc.net, under Docket Information, using the Docket Search feature for docket number "W-218 Sub 497" or W-218 Sub 497A".

CREDIT/REFUNDS DUE TO REDUCTIONS IN CORPORATE FEDERAL AND STATE INCOME TAX RATES:

On December 22, 2017, President Donald J. Trump signed into law the Tax Cuts and Jobs Act (The Tax Act), which among other things, reduced the federal corporate income tax rate from 35% to 21%, effective for taxable years beginning after December 31, 2017. In the present rate case proceeding, the Commission reduced Aqua NC's revenue requirement to reflect the reduction in the federal corporate income tax rate from 35% to 21%, on the Company's ongoing federal income tax expense. Further, the Commission is requiring that Aqua NC refund to its customers the overcollection of federal income

taxes related to the decrease in the federal corporate income tax rate for the period beginning January 1, 2018, and corresponding interest, through a surcharge credit for a one-year period beginning with the effective date of the new rates.

With respect to excess deferred income taxes (EDIT) resulting from reductions in the corporate federal and state income tax rates, the Commission is requiring that: (a) Aqua NC's Protected Federal EDIT shall be flowed back to customers following the tax normalization rules utilizing the average rate assumption method (ARAM) as required by the rules of the Internal Revenue Service; (b) Aqua NC's Unprotected Federal EDIT shall be returned to ratepayers through a levelized rider over a period of three years; and (c) Aqua NC's State EDIT shall be returned to customers through a levelized rider that will expire at the end of a three-year period.

WATER AND SEWER – RATE INCREASE

Aqua NC will provide the applicable dollar amounts concerning (1) the one-year surcharge credit and (2) the federal and state EDIT riders (refunds) shown as separate line items on individual customers' monthly bills, along with explanatory information.

ISSUED BY ORDER OF THE COMMISSION.
This the 28th day of December, 2018.

HEARD: Tuesday, May 15, 2018, at 7:00 p.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

Wednesday, June 20, 2018, at 9:30 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner Charlotte A. Mitchell, Presiding, Chairman Edward S. Finley, Jr., and Commissioner James G. Patterson

APPEARANCES:

For KRJ Inc., d/b/a KRJ Utilities:

Robert H. Bennink, Jr., Bennink Law Office, 130 Murphy Drive, Cary, North Carolina 27513

For the Using and Consuming Public:

Gina C. Holt and William E. Grantmyre, Staff Attorneys, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300

BY THE COMMISSION: On December 4, 2017, KRJ, Inc., d/b/a KRJ Utilities (KRJ or Company) filed a letter notifying the North Carolina Utilities Commission (Commission or NCUC) of its intent to file a general rate case as required by Commission Rule R1-17(a).

On January 10, 2018, KRJ filed an application with the Commission seeking authority to increase its rates and charges for water utility service in Southern Trace Subdivision and for water and sewer utility service in Rockbridge Subdivision, both in Wake County, North Carolina.

By letter dated and filed on January 25, 2018, the Public Staff – North Carolina Utilities Commission (Public Staff) informed the Company that, pursuant to Commission Rule R1-17(f)(1), certain additional information needed to be filed to complete the Company's rate increase application.

On January 30, 2018, the Company filed its response to the Public Staff's January 25, 2018 letter, which provided the identified additional information in compliance with the provisions of Commission Rule R1-17(b).

By Order dated February 6, 2018, the Commission declared this docket to be a general rate case, suspended the Company's proposed rates, scheduled public and evidentiary hearings, and required customer notice. The Commission's Order specified that KRJ's direct testimony should be filed on or before May 8, 2018; that the Public Staff and intervenors should prefile testimony on or before May 21, 2018; and that KRJ should prefile any rebuttal testimony no later than June 4, 2018.

The intervention and participation by the Public Staff was made and recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Rule R1-19(e) of the Rules and Regulations of the Commission.

KRJ filed the Commission-required Certificate of Service on February 20, 2018, indicating that the Company provided the Notice to Customers in compliance with the February 6, 2018 Order.

On May 4, 2018, KRJ filed the direct testimony and exhibits of its witness, James R. Butler, P.E.

On May 18, 2018, the Public Staff filed a motion for extension of time to file testimony until May 25, 2018, which was granted by Commission Order issued on that same date.

On May 24, 2018, the Public Staff filed a second motion for extension of time to file testimony until May 31, 2018, which was granted by Commission Order issued on May 25, 2018.

On May 30, 2018, the Company filed a Report on Customer Comments from Public Hearing held in Raleigh, North Carolina on May 15, 2018.

On May 31, 2018, the Public Staff filed a third motion for extension of time to file testimony until June 7, 2018, which was granted by Commission Order issued on June 1, 2018.

Subsequent to the filing of the Company's Application in this docket, the Public Staff engaged in substantial discovery of KRJ regarding the matters addressed by the Company's Application and further examined the relevant books and records of KRJ with respect to the Company's Application. The Public Staff's discovery efforts spanned a period of 19 weeks, entailed 10 sets of data requests directed to the Company and numerous informal follow-up questions. The Public Staff also conducted field inspections of the water system at Southern Trace Subdivision and the water and sewer system at Rockbridge Subdivision.

Following completion of the Public Staff's investigation of the Company's Application and accompanying documents, review of the results of its examination of the Company's books and records, and review of the Company's responses to the Public Staff's data requests, the Stipulating Parties corresponded and participated in meetings and conference calls over the course of several business days to discuss possible settlement.

WATER AND SEWER – RATE INCREASE

After significant negotiations, the Stipulating Parties were ultimately able to arrive at a settlement of all issues in this case. The Stipulation reflects the stipulated rate of return on rate base and operating margin and the Company's revenue requirements. The Stipulation and the new water and sewer rates set forth therein reflect an increase of 16.1% in KRJ's combined water and sewer revenues when compared to the Company's total operating revenues under present rates.

On June 7, 2018, the Public Staff prefiled the testimony and exhibits of Public Staff witnesses Iris Morgan, Staff Accountant, Water Section, Accounting Division; and Gina Y. Casselberry, Utilities Engineer, Water, Sewer, and Telecommunications Division; and the affidavit of John R. Hinton, Director, Economic Research Division.

On June 7, 2018, the Public Staff also filed a Stipulation entered into by KRJ and the Public Staff (Stipulating Parties). In the Stipulation, the Stipulating Parties agreed that the levels of rate base, revenues, and expenses set forth in Morgan Exhibit I and Morgan Exhibit II, which were incorporated by reference therein, are the appropriate levels for use in this proceeding.

On June 8, 2018, the Public Staff filed the corrected testimony and exhibits of Iris Morgan.

Eleven different witnesses testified at the public hearing in Raleigh on May 15, 2018. Three of those witnesses, who reside in KRJ's Southern Trace service area and are water utility customers, were Thomas D. Rains, Jacqueline Walker, and Shelley Iverson. The remaining eight witnesses, who reside in the Company's Rockbridge service area and are water and sewer utility customers, were Craig. E. Buzak, Pat Foran, Robert C. Herbert, Jr., Taunia Teel, Brian Maxwell, Gerald Daniel, Kathleen Kendzierski, and Ginger Rodgers.

On Wednesday, June 20, 2018, the evidentiary hearing was convened in Raleigh, North Carolina as scheduled. Five customers testified at the evidentiary hearing. our of those witnesses, who reside in KRJ's Southern Trace service area and are water utility customers, were Shelley Iverson, Jacqueline Walker, Gregory Cols, and Gabriel Hoxie. Witnesses Iverson and Walker, who previously testified at the public hearing, offered additional testimony. The fifth customer witness was Veronica Long, who resides in the Company's Rockbridge service area and is a water and sewer utility customer.

The prefiled testimony presented by KRJ witness Butler and Public Staff witnesses Morgan and Casselberry, and the Hinton affidavit, were copied into the record as if given orally from the witness stand. The following documents were admitted in evidence: the exhibits to the testimony of KRJ witness Butler; KRJ's Application, including attached exhibits; KRJ's additional information filed on January 30, 2018; the report filed by KRJ related to customer testimony at the public hearing held on May 15, 2018; the Stipulation; and the exhibits to the testimony of Public Staff witnesses Morgan and Casselberry.

On July 10, 2018, the Public Staff filed certain late-filed exhibits as requested by the Commission during the evidentiary hearing. These exhibits were prepared by Public Staff witnesses Morgan and Casselberry.

On July 10, 2018, KRJ filed the Verified Affidavit and Late-Filed Exhibit of James R. Butler.

On July 11, 2018, KRJ and the Public Staff filed a Joint Proposed Order.

On the basis of the Application; the Stipulation; the testimony of the public witnesses; the testimony and exhibits of KRJ witness Butler; the testimony and exhibits of Public Staff witnesses Morgan and Casselberry; the affidavit of John R. Hinton; and the entire record in this proceeding, the Commission is of the opinion that the provisions of the Stipulation are just and reasonable. Accordingly, the Commission now makes the following

FINDINGS OF FACT

1. KRJ is a corporation duly organized under the law and is authorized to do business as a regulated investor-owned water and sewer public utility in the State of North Carolina. The Company is subject to the regulatory oversight of this Commission. KRJ provides water utility service to customers in the Southern Trace Subdivision and water and sewer utility service to customers in the Rockbridge Subdivision.

2. KRJ is properly before the Commission pursuant to Chapter 62 of the General Statutes of North Carolina seeking a determination of the justness and reasonableness of its proposed rates and charges for its water and sewer utility operations.

3. As of March 31, 2018, KRJ served 190 water customers at Southern Trace Subdivision and 324 water and sewer customers and three water-only customers at Rockbridge Subdivision.

4. A total of 14 different customers testified at the public hearing and the evidentiary hearing (including two customers who testified at both hearings),[1] with many of those witnesses expressing service-related concerns. Those concerns generally included level of service (including repairs), water quality, communications, and other concerns. In addition, most, if not all, of the customers who appeared as witnesses testified in opposition to the proposed rate increase.

5. KRJ filed a report with the Commission, verified by Company witness James R. Butler, addressing the service-related concerns and other comments expressed by the 11 customers who testified at the public hearing. Such report described each of the witnesses' specific service-related concerns and comments, the Company's response, and how each concern and comment was addressed, if applicable. KRJ witness Butler, during his testimony at the evidentiary hearing, responded to and addressed in detail the service-related concerns and comments offered by the five customers who testified at that hearing.

6. The overall quality of service provided by KRJ is adequate.

[1] Eleven customer testified at the public hearing and five customers testified at the evidentiary hearing.

WATER AND SEWER – RATE INCREASE

7. The test period for this rate case proceeding is the 12-month period ended June 30, 2016, updated to March 31, 2018, and adjusted for certain known, actual, and measurable changes in plant, revenues, and costs based upon circumstances and events occurring or becoming known through May 31, 2018, prior to the close of the evidentiary hearing in this proceeding.

8. The Company's present rates have been in effect since they were approved by the Commission for the Southern Trace Subdivision in a general rate case Order dated January 14, 2005, in Docket No. W-1075, Sub 4, and for the Rockbridge Subdivision in the Order Granting Certificate of Public Convenience and Necessity and Approving Rates dated November 30, 2006, in Docket No. W-1075, Sub 5. The approved rates for both Southern Trace and Rockbridge Subdivisions were subsequently reduced by the Commission for the repeal of the gross receipts tax and State corporate income tax rate reductions.

9. On Junes 7, 2018, KRJ and the Public Staff filed a Stipulation which settled all issues between the Company and the Public Staff. The Public Staff filed a Corrected Stipulation Page 8 on June 14, 2018. The Stipulation reflects an agreed-upon increase of approximately 16.1% in KRJ's combined water and sewer revenues above the Company's total operating revenues under present rates.

10. The levels of rate base, revenues, and expenses set forth in Morgan Exhibit I and Morgan Exhibit II, attached to the corrected testimony of Public Staff witness Morgan filed on June 8, 2018, which are incorporated by reference herein, are the reasonable and appropriate levels for use in this proceeding.

11. The original cost rate base used and useful in providing service to the Company's customers is $83,398 for Southern Trace water operations, $448,926 for Rockbridge water operations, and $336,054 for Rockbridge sewer operations. The stipulated revenue requirements result in a 43.3% increase in total water revenues for Southern Trace water operations compared to the applied for 81.8% increase; a 90.4% increase in total water revenues for Rockbridge water operations, compared to the applied for 136.3% increase; and a 14.3% decrease in total sewer revenues for Rockbridge sewer operations compared to the applied for 52.4% increase.

12. The levels of total operating revenues under present rates appropriate for use in this proceeding are $74,797 for Southern Trace water operations; $85,093 for Rockbridge water operations; and $274,950 for Rockbridge sewer operations, for a total level of operating revenues for combined operations of $434,840 as follows:

	Service Revenues Under Present Rates	Misc. Revenues & Uncollectibles Present Rates	Total Operating Revenues Under Present Rates
Southern Trace Water	$74,606	$191	$ 74,797
Rockbridge Water	$82,944	$2,149	$ 85,093
Rockbridge Sewer	$265,667	$9,283	$274,950
Total	$423,217	$11,623	$434,840

WATER AND SEWER – RATE INCREASE

13. The overall levels of operating revenue deductions, including depreciation, regulatory fees, and taxes, under the present rates which are reasonable and appropriate for use in this proceeding are $97,299 for Southern Trace water operations, $120,634 for Rockbridge water operations, and $218,897 for Rockbridge sewer operations.

14. The reasonable level of plant in service for use in this proceeding consists of the following balances for water and sewer operations:

Southern Trace Water Operations	$389,501
Rockbridge Water Operations	$1,472,674
Rockbridge Sewer Operations	$5,305,677

15. Accumulated depreciation consists of the following balances for water and sewer operations:

Southern Trace Water Operations	$ 257,622
Rockbridge Water Operations	$ 462,569
Rockbridge Sewer Operations	$1,450,273

16. Contributions in aid of construction (CIAC), reduced by accumulated amortization of CIAC, consist of the following amounts for water and sewer operations:

Southern Trace Water Operations	$ 59,327
Rockbridge Water Operations	$ 574,071
Rockbridge Sewer Operations	$3,541,012

17. The overall levels of total operating expenses under present rates appropriate for use in this proceeding are $88,089 for Southern Trace water operations; $103,128 for Rockbridge water operations; and $173,305 for Rockbridge sewer operations, for a total level of operating expenses under present rates for combined operations of$364,522.

18. It is reasonable and appropriate for KRJ to recover total rate case costs of $66,759, related to the current proceeding, to be amortized and collected over a three-year period, for an annual level of rate case expense of $5,027 for Southern Trace water, $8,653 for Rockbridge water, and $8,573 for Rockbridge sewer The total rate case costs in the amount of $66,759 include the cost of the application filing fee of $250, legal fees of $26,793, administrative fees of $37,988, and office supplies and overhead of $1,728.

19. The affidavit of Public Staff witness Hinton supports and justifies approval of an overall rate of return on rate base and an operating margin of 7.75% for KRJ in this rate case. The return of 7.75% was agreed to by the Company and the Public Staff in the Stipulation. The stipulated return of 7.75% is just, reasonable, and appropriate for use in setting rates in this proceeding. This stipulated rate of return will provide the Company with a reasonable opportunity, by sound management, to produce a fair return for its shareholders, considering changing economic conditions and other factors, to maintain its facilities and services in accordance with

the reasonable requirements of its customers in the territory covered by its franchises, and to compete in the market for capital funds on terms that are fair to its customers and to its existing investors. The stipulated overall rate of return, together with the Company's supported levels of rate base and operating expenses, result in a revenue requirement that is just and reasonable to the Company's customers in light of changing economic conditions.

20. It is reasonable and appropriate to determine the revenue requirement for KRJ for Rockbridge water and sewer rates using the rate base method as allowed by N.C. Gen. Stat. § 62-133 and the operating ratio methodology for Southern Trace water rates as allowed by N.C. Gen. Stat. § 62-133.1.

21. The overall rate of return that the Company should be allowed an opportunity to earn on its rate base in Rockbridge Subdivision is 7.75%.

22. The Company should be allowed a 7.75% margin on operating revenue deductions requiring a return for the Southern Trace Subdivision, which results in an operating ratio of 92.97% (including taxes) or 92.81% (excluding taxes). KRJ's reasonable and appropriate operating revenue reductions requiring a return in this case are $97,194, which produces a net operating income for return of $7,533.

23. It is reasonable and appropriate to use the current statutory regulatory fee rate of 0.14% to calculate KRJ's revenue requirement.

24. It is reasonable and appropriate to use the current State corporate income tax rate of 3% and the federal income tax rate of 21% to calculate KRJ's revenue requirement.

25. The agreed-upon stipulated rates will provide KRJ with a net increase in its annual level of authorized service revenues through rates and charges approved in this case by $70,105, a 16.1% increase, consisting of an increase for Southern Trace water operations of $32,377, an increase for Rockbridge water operations of $76,944, and a decrease for Rockbridge sewer operations of $39,216. After giving effect to these authorized increases in water revenues and a decrease in sewer revenues, the total annual operating revenues for the Company will be $504,945, consisting of the following levels of just and reasonable operating revenues:

	Service Revenues Under Stipulated Rates	Misc. Revenues & Uncollectibles Stipulated Rates	Total Operating Revenues Under Stipulated Rates
Southern Trace Water	$106,983	$191	$107,174
Rockbridge Water	$159,888	$2,149	$162,037
Rockbridge Sewer	$226,451	$9,283	$235,734
Total	$493,322	$11,623	$504,945

26. In the next general rate case filed by KRJ for the Company's Southern Trace and Rockbridge service areas, the stipulated amounts agreed to in this case, as approved herein by the Commission, for plant in service, accumulated depreciation, contributions in aid of construction

(CIAC), depreciation and amortization expense, and original cost rate base, shall be used as the starting point for the Company's rate case application and the Public Staff's investigation.

27. It is reasonable and appropriate for the Commission to authorize KRJ to increase its reconnection charge for Southern Trace Subdivision from $23.91 to $25.00, if water service is cut off by the Company for good cause; increase the reconnection charge for Southern Trace Subdivision from $19.12 to $20.00, if water service is disconnected at the customer's request; and increase the Southern Trace returned check charge from $23.96 to $25.00. For Rockbridge Subdivision, it is reasonable and appropriate to authorize KRJ to increase the Company's reconnection charge from $14.40 to $15.00 if water service is cut off for good cause or if water service is disconnected at the customer's request; and to increase the Company's returned check charge from $23.96 to $25.00. The Company's tariffs for Southern Trace and Rockbridge Subdivisions should continue to reflect a late charge of 1% per month to be applied to the unpaid balance of all bills still past due 25 days after the billing date. The Schedule of Rates (attached hereto as Appendices A-1 and A-2) for KRJ water and sewer utility service, agreed to by KRJ and the Public Staff, is just and reasonable and should be approved.

28. It is fair and reasonable to approve the stipulated provision which provides that no changes will be made to the Company's currently authorized tap fees. Therefore, KRJ's tap fees should continue to be reflected on the Company's approved rate schedule as follows:

Southern Trace:	
Water per Residential Equivalent Unit (REU)	$ 500.00
Rockbridge:	
Water per REU	$1,000.00
Sewer per REU	$8,000.00

29. It is fair and reasonable to approve the stipulated provision which provides that no changes will be made to the Company's originally-authorized availability fees for Rockbridge Subdivision. Therefore, the availability fees for Rockbridge Subdivision should continue to be reflected on the Company's approved rate schedule as follows:

Water – monthly availability rate per REU	$15.00
Sewer – monthly availability rate per REU	$70.00

30. The Stipulating Parties acknowledge that the Company is currently required, pursuant to Commission Order in Docket No. W-1075, Sub 5 (Sub 5 Order), and the Sub 5 Stipulation between the Public Staff and KRJ, which was incorporated by reference in the Order, to disclose the current Rockbridge water and sewer rates in marketing materials, with lot purchase agreements, and in the restrictive covenants pertaining to all lots in the Rockbridge Subdivision, to notify future customers in Rockbridge of the utility rates prior to their purchasing their lots or residences. As recommended by the Stipulating Parties, the Commission finds that this notice requirement is no longer necessary and that it should be rescinded, as the Rockbridge Subdivision is now at approximately 80% build-out and the Company's resources could be better placed elsewhere. Furthermore, the stipulated flat sewer rate of $58.25 for Rockbridge Subdivision is in line with the currently-approved flat sewer rates charged by other Commission-regulated public

utilities in North Carolina and the referenced notice requirement was unique to KRJ due to the facts and circumstances presented in Docket No. W-1075, Sub 5.

31. The Stipulating Parties acknowledge that, pursuant to Decretal Paragraph No. 5 of the Sub 5 Order, the Commission required KRJ to file annual reports, beginning on October 31, 2007, regarding the status of the Rockbridge Subdivision and utility system. KRJ was also required to continue to file these annual reports until 90% (367) of the homes in Rockbridge are receiving utility service. As recommended by the Stipulating Parties, the Commission finds that this annual report is no longer necessary and that it should be rescinded, as the Rockbridge Subdivision is now at approximately 80% build-out and the Company's resources could be better placed elsewhere. Furthermore, KRJ continues to be required to file a detailed annual report pursuant to N.C. Gen. Stat. § 62-36 and Commission Rule R1-32.

32. The following charts show the average monthly customer bills at the Company's present rates, including percentage increases and decreases, compared to the Commission-approved rates in this proceeding:

Southern Trace Subdivision

	Present Rates	Commission-Approved Rates
Monthly Metered Water Rates		
Base charge, zero usage	$19.12	$19.12
Usage charge, per 1,000 gallons	$ 2.66	$ 5.44
Average Bill	$32.73	$46.95
(Average usage 5,115 gallons)		
Percent Increase		43.45%

Rockbridge Subdivision

	Present Rates	Commission-Approved Rates
Monthly Metered Water Rates		
Base charge, zero usage	$14.40	$16.30
Usage charge, per 1,000 gallons	$ 1.49	$ 5.41
Average Bill	$21.13	$40.75
(Average usage 4,520 gallons)		
Percent Increase		92.85%
Monthly Flat Rate Sewer	$68.33	$58.25
Percent Decrease		(14.75%)
Combined Water and Sewer	$89.46	$99.00
Net Percent Increase		10.66%

33. The Stipulation contains the provision that the Stipulating Parties agree that, except for Paragraph 4.G. thereof (i.e., see Finding of Fact No. 26 above), none of the positions, treatments, figures, or other matters reflected in the agreement should have any precedential value,

nor should they otherwise be used in any subsequent proceedings before this Commission or any other regulatory body as proof of the matters in issue.

34. The Stipulation contains the provision that the agreements made therein do not bind the Stipulating Parties to the same positions in future proceedings, and the parties reserve the right to take different positions in any future proceedings. The Stipulation also contains the provision that no portion of the Stipulation is binding on the Stipulating Parties unless the entire Stipulation is accepted by the Commission.

DISCUSSION AND CONCLUSIONS

The evidence for the following conclusions is contained in the Application; the Stipulation; the testimony of the public witnesses; the testimony and exhibits of KRJ witness Butler, including his Verified Affidavit and Late-Filed Exhibit; the testimony and exhibits of Public Staff witnesses Morgan and Casselberry, including their Late-Filed Exhibits; the Public Staff Hinton affidavit; KRJ's Report on Customer Comments from Public Hearing in Raleigh, North Carolina, filed on May 30, 2018; and the entire record in this proceeding.

I. <u>Public and Evidentiary Hearings and Service Quality</u>

A public hearing was held in Raleigh on May 15, 2018, at 7:00 p.m., in Commission Hearing Room 2115 for the benefit of public or customer witnesses. Public witnesses were also given the opportunity to testify at the evidentiary hearing which was held in Raleigh on June 20, 2018, beginning at 9:30 a.m. Eleven different customers testified during the May 15, 2018 public hearing. Five customers, including two customers who also testified at the public hearing, testified at the evidentiary hearing. A total of 14 different customers testified at both hearings. Many customers expressed service-related concerns. Those concerns generally included level of service (including repairs), water quality, communications, and other concerns. In addition, most, if not all, of the customers who appeared as witnesses testified in opposition to the proposed rate increase.

In response to the customer comments, KRJ filed a report with the Commission on May 30, 2018, which was verified by KRJ witness James R. Butler, P.E., addressing the service-related and other concerns expressed by the customers who testified at the Raleigh public hearing. The report described each of the witnesses' specific service-related and other concerns, the Company's response, and how each concern was addressed, if applicable. A total of 11 witnesses testified at the Raleigh public hearing. Three of those witnesses reside in KRJ's Southern Trace service area and are water utility customers. The remaining eight witnesses reside in the Company's Rockbridge service area and are water and sewer utility customers. Customers variously raised issues about the level of service (including repairs), water quality, communications, and other concerns.

The Raleigh public hearing report is summarized and discussed below. In that report, KRJ initially set forth general comments applicable to both the Southern Trace and Rockbridge utility systems which are set forth, in pertinent part, as follows:

****

A public hearing was held by the Commission in Raleigh on May 15, 2018, which was attended by representatives of the Public Staff and the Company. An evidentiary hearing will be held in Raleigh on June 20, 2018, to receive evidence and to examine the expert witnesses. Eleven customers testified, while numerous others attended the hearing but chose not to testify. Customers were given a full and fair opportunity to express their complaints and concerns. In addition, the Public Staff will conduct its own independent investigation to assess the quality of water and sewer utility service provided by KRJ to its customers at Southern Trace and Rockbridge.

The rate-setting process before the NCUC is rigorous and intensive, as it should be, and the burden of proof is on KRJ in this case to prove in a judicial arena that it merits additional rates. The public's assurance of fairness is found in the strict, highly-skilled oversight of the Public Staff and the Commission. Consumers can review every document that is filed and every NCUC Order that is issued on the Commission's website. The rate case procedures are open and fair. Rates charged by KRJ must be based on cost of service and must be justified by detailed proof which is carefully examined and may be challenged by the Public Staff in a contested legal proceeding. Rate increases, while controversial, are necessary to support prudent investment by public utilities, such as KRJ, in the capital-intensive water and sewer utility industry.

...KRJ is always willing to speak with customers regarding any questions they may have regarding billing, service, rates, etc. The Company takes very seriously its duty as a public utility in North Carolina to provide its customers with adequate, efficient, and reasonable service at reasonable rates as required by North Carolina law and the rules and regulations promulgated by the NCUC and NCDEQ.

...the water supplied by KRJ at Southern Trace and Rockbridge is potable and entirely safe to drink. It meets all State and Federal Safe Drinking Water Act requirements for potability and safety. KRJ concedes that customers may experience intermittent problems with the appearance of the water, such as cloudiness or a milky appearance, but those problems are generally transient and do not present health concerns. That said, by offering these comments, KRJ does not mean to minimize, in any way, customer testimony regarding their water quality concerns. To the contrary, the Company is fully committed to rectifying any problems, once reported, which are capable of correction as expeditiously as possible.

However, as a matter of full disclosure, some customers at Southern Trace recently experienced an episode of "muddy" brown water and air which was first reported to KRJ on the morning of Thursday, May 24, 2018. Company personnel were immediately dispatched to resolve the reported water quality problems and worked diligently for two days to do so. The situation is now stable. A copy of the May 28, 2018 Incident Report which KRJ sent to David Furr, who is the Director *of the Public Staff Water and Sewer Division, is attached to this report as Exhibit A. KRJ's Incident Report describes in detail the actions taken by the Company to address and resolve the situation.*

...the water pressure supplied by KRJ consistently meets or exceeds minimum State requirements and standards. As the case with any water system, pressure varies somewhat from time to time during the day due to the necessary expenditure and replenishment of water in the storage facilities that are a part of the water system.

...KRJ has implemented certain important and significant customer communication and service policy changes in response to the testimony offered by customers at the public hearing which are detailed later in this report.

Report Regarding Southern Trace Water System

The three witnesses served with water utility service by KRJ at Southern Trace were Thomas D. Rains, Jacqueline Walker, and Shelley Iverson. KRJ offered the following general responses to customer comments regarding the Southern Trace water system.

1. **Replacement of Submersible Pump at Well 2**

The replacement of the failed submersible pump located within well 2, which occurred during the period of time in July and August 2015, was complicated by failure of suppliers to provide proper replacement equipment. Much of the problems were as a result of the pump being powered by a 15-horsepower single phase submersible motor, which is quite difficult to find. Maintaining one as a spare is ill advised as there is a recognized "shelf" life of such a device which could render it unusable at a future date. At such time as the pump must again be replaced, KRJ will consider replacing it with the combination of a 3-phase pump powered by a modified variable frequency drive (VFD) to convert the only power available within Southern Trace (single phase) to 3-phase.

2. **Diminished Pumping Capacity of Well 2**

After replacement of the pump in well 2, it was determined in August 2015 that the yield of well 2 had diminished from its original 78 gallons per minute (gpm) to approximately 25 gpm. Fortunately, well 3 had been placed into service in June 2015 to augment production from wells 1 and 2. Upon identifying the decline in production of well 2, KRJ immediately set about locating a suitable contractor who could successfully renovate the well to recover as much of the lost capacity as possible. Such a contractor is not the typical well driller, but one who utilizes very specialized equipment and technique. The first such contractor provided a totally unresponsive proposal. KRJ's pursuit of a contractor continued through yet another, who declined to provide a quotation due to the scope of the project. KRJ is waiting on a proposal from a third prospective contractor.

At this time, the available well yield from all three wells serving Southern Trace is approximately 91 gpm; with the full capacity of well 2 restored, the well production capacity would be 144 gpm. Even with the reduced production from well 2, no low-pressure complaints were received by KRJ's office during 2017. However, the current situation does point out the limitation of the Southern Trace water system, and any small system, to support irrigation loads. A single in-ground irrigation spray head will discharge approximately 5 gpm. Were three irrigation systems each operating four spray heads at a time to be actuated simultaneously, the demand would consume two-thirds of the well production, leaving only 31 gpm, under current conditions, to accommodate domestic needs. KRJ has consistently attempted to educate its customers of the need to refrain from irrigation of lawns as small well-sourced water systems are not designed to accommodate other than domestic usage; such effort appears to have had some success.

3. **Electronic Pressure Control System**

Although the current system controlling the operation of the wells at Southern Trace is functioning well, KRJ intends to pursue a system that will utilize a control system that utilizes an electronic pressure transducer, which will produce more accurate pressure measurement than the pressure switches currently used; cellular data transmission, to avoid local interference with the radio communications system; and computer-based control logic. To date, equipment manufacturers have been identified, quotes obtained, and cellular field strength measurements made, to determine the most desirable cellular system to use. Scheduling of the installation will depend on availability of funds.

4. **Water Pressure Variations**

Pressure variations are both normal and necessary in any water system due to the necessary partial expenditure and replacement of water within the tank to assure that the water is turned over and does not lose its chlorine residual. When demand exceeds the pumping rate of the wells, pressure tanks (or elevated storage tanks) serve to provide water to the system when instantaneous demand rate exceeds instantaneous production rate. Water storage tanks serve as "shock absorbers" between demand and supply by contributing or receiving water from the distribution system. They may be either pressure tanks, as at Southern Trace, or an elevated storage tank, as at Rockbridge.

In its report, KRJ then discussed specific Southern Trace customer comments. With certain exceptions as discussed below (in particular, the extensive testimony of customer Thomas Rains. and certain other specific concerns expressed by a few customers), the summary of Southern Trace customer testimony included in the report and the Company's specific responses to those comments are incorporated herein by reference and will not be repeated in this Order, because they are adequately and fully addressed in the general comments set forth above.

WATER AND SEWER – RATE INCREASE

Response of KRJ to Testimony of Thomas Rains

First, KRJ wants to acknowledge appreciation for Mr. Rains' positive comments during his testimony to the effect that, in his opinion, during the last three years, customers have not experienced water pressure problems at Southern Trace to the extent they did in 2015, and that, in fairness to KRJ, the water system seems to be operating better today than it did in 2015. Next follows the Company's response to Mr. Rains' other less positive comments:

Test Year. As was stated by Public Staff Attorney William Grantmyre, the Public Staff will update the test year in this case for ratemaking purposes to the period April 1, 2017 - March 31, 2018, to be more reflective of current circumstances. KRJ has been fully cooperative with the Public Staff during its investigation and has supplied voluminous utility records during the discovery process.

Failure to Upgrade System. The service lives of various components of a water system vary widely from 10 years for mechanical items such as pumps to 50 years for buried mains and services. Normal water utility practice is to replace items as they indicate pending failure or in fact fail, unless upgrade is necessary to accommodate changes in system demand or water quality. Premature replacement of plant facilities serves only to unduly expedite the expenditure of capital funds and could needlessly exaggerate and expedite the necessity of more frequent, higher rate increases. The Southern Trace water system is less than 20 years old. Accepted service lives of principal system components are as follows: Storage tanks – 50 years; distribution mains - 50 years; wells - 50 years; well pumps - 7 years. With the exception of well pumps, failure due to age of the system is well into the future. KRJ stocks most routinely-needed repair parts, such as electric or electronic components and chemical feed equipment repair kits.

System Design. The entire water source, including the treatment and distribution system at Southern Trace, was designed, permitted and constructed consistent with the requirements of the NCDEQ, or that agency's predecessors. All water systems exhibit differing pressures at different locations due to their different elevations above sea level due to the effects of gravity; and Southern Trace is no exception. There is approximately 100 feet of elevation differential from the front (highest) to back (lowest) portions of the system, thereby resulting in a differential pressure at any given time of approximately 43 psi.

The system controls that cause the operation of the well pumps, the source of the pressure in the system, are set to cause the submersible pumps in the wells to run, pumping water into the system, at 70 psi, and cause the pumps to stop at 78 psi. The difference between system demand rate and pumping rate is accommodated by the two hydropneumatic tanks located proximate to well 1, which is also in the higher area of the subdivision. The result of this is that normal operation of the system causes pressures to be 70-80 psi at the higher areas and 110-120 psi in the lower areas. As a comparison, Raleigh's "497" system exhibits pressures ranging from 40 psi to 135 psi.

The issue at Southern Trace is not "pressure" but the "perception of pressure." As was stated, when customers located at the higher portions of the system observe reduced pressure, those at the lower ends of the system do not observe the same reduction. Stated differently, if the pressure at the higher portions of the system drop by 45 psi (from 80 to 35 psi) that change is very easily observed; whereas, if the same drop occurs at the lower portions of the system, which they will, the change in pressure from 120 to 75 psi will not be observed by affected customers, as all of the houses have code-required pressure reducing valves, which deliver a uniform pressure to the household plumbing, normally around 50 psi.

It should be noted that the required minimum pressure on a public water supply system is 30 psi. System pressure at Southern Trace is noted by the operator during each of his periodic rounds and system pressure is consistently observed to be in excess of 30 psi. KRJ knows of no way, other than continuous education of the customers, to address the issue; and clearly not by a physical system that would introduce not only additional complexity in the system but additional opportunities for mechanical failure.

"Remote" Management of the System / Lack of On-Site Engineering. The portion of the management that exists out of the Wake County area is that of customer support, accounting, and billing. KRJ's management contractor, Management Group[1] of NC, Inc. (MGNC), has trained personnel in the Wake County area to cause meter readings, customer collections, and, as necessary, triage system issues. Mr. Butler, the Vice President of MGNC, to whom Mr. Rains referred several times during his testimony, does live some distance from Wake County, but often returns to perform periodic observations of the systems of KRJ and provide technical support to other contract personnel, such as plant operators. He is both a licensed Professional Engineer and holds Treatment Operator Certifications well in excess of those required to operate the Southern Trace water system.

During the period of system duress in the spring/summer of 2015, Mr. Butler was on site in Southern Trace on three separate occasions to gain knowledge of exactly what was happening. The sequence of events during 2015 was: the submersible pump in well 2 failed; the particular model of pump was not available within the Continental United States, due to the manufacturer, and the large (15 horsepower) single-phase motor required due to the availability of electric power within Southern Trace; a new pump was ordered after the pump supplier advised KRJ's well contractor that it was a proper replacement based on his translation of the model number of the pump that failed; and the new pump was installed. This would have been the end of the issue, were it not for the fact that the supplier was incorrect in his translation of the model number which resulted in the new pump that been installed being incapable of performing. A proper replacement pump was obtained, and installed, only to find that its motor was defective. The pump had to be again removed from the well, a new motor affixed, and the pump had to again be reinstalled. Barring external damage, such as lightning, the pump should be functional for the remained of its anticipated service life of 7 years.

Overhaul of the Entire System. As stated previously, with the exception of the need for remediation work at well 2, the system is well within its useful life, and such an expense is not warranted.

Irrigation Demand. It is true that KRJ has opined on several occasions that increased demand for water imposed by irrigation systems may be exacerbating the water pressure/availability issues. Point of fact, it has been explained to Mr. Rains and many other customers that small water systems, such as the one serving Southern Trace, are not designed to accommodate irrigation demands, only domestic water usage. Unfortunately, a builder in the lower portion of the system offered in-ground irrigation systems to the prospective home purchasers, without the knowledge or consent of KRJ. Fortunately, recently, as was acknowledged by Mr. Rains, their use and potential for system stress has reduced.

KRJ's report also addressed the following additional specific comments from Southern Trace customers:

Cloudy Water. Intermittent cloudy water in systems with hydropneumatic tanks is not uncommon due to dissolution of air from within the tank into the water. As the water is tested consistent with the Safe Drinking Water Act and has been found compliant with the requirements of the Act, the cloudiness does not reflect any safety or health hazard.

Coloration of Water. As Public Staff attorney Grantmyre observed, the coloration of the water is most likely due to oxidized iron. Iron, although potentially imparting undesirable coloration, is not considered a health hazard, which is why it is on the United States Environmental Protection Agency's (USEPA) "Secondary" contaminant list as an aesthetic issue, rather than the "Primary" list which identifies health-risk contaminants. KRJ utilizes a process known as "sequestration" where a National Sanitation Foundation (NSF) approved chemical sequestering agent is added to the water containing free ion iron, which is colorless. The sequestering agent combines with the iron ion, as well as manganese, to prevent it from being oxidized by the chlorine added as a disinfectant, which would impart a color. Ideally, the distribution system would be flushed frequently to expel any settled sequestered iron. With the reduced yield of well 2, at present, flushing operations must be undertaken at less frequent intervals to conserve potable water.

Odor of Water. KRJ has no explanation for the odor that Ms. Iverson reports, as KRJ has not received odor complaints from the customers served by the Southern Trace system in many years.

Water Pressure. Ms. Iverson's residence is located in the "higher" portion of the subdivision, thus not enjoying the greater pressures present toward the lower areas.

The water pressure that KRJ maintains, except in periods where demand exceeds well output, is well above the 30-psi minimum and approaches in some cases the 80-psi maximum allowed by the plumbing code. Given the elevation above sea level of the residence, it is very possible that her residence is equipped with an unnecessary pressure reducing valve installed when the house was constructed. Mr. Butler contacted Mr. Iverson and provided information on re-setting the device to cause it to deliver the maximum pressure it will allow.

Report Regarding Rockbridge Water and Sewer Systems

The eight witnesses served with water and sewer utility service by KRJ at Rockbridge were Craig. E. Buzak, Pat Foran, Robert C. Herbert, Jr., Taunia Teel, Brian Maxwell, Gerald Daniel, Kathleen Kendzierski, and Ginger Rodgers. KRJ offered the following general responses to customer comments regarding the Rockbridge water and sewer systems.

1. **Water Leaks**

The water leaks spoken to by the customers providing testimony were, with one exception, as a result of service line leaks and not main breaks. The exception was when a main which had been marked was drilled into in 2017 by a contractor installing fiber-optic cable. The customers are correct in their observations that the vast majority of the service line leaks occurred on three specific streets within the 2006-2007 initial development phase of Rockbridge. What KRJ has determined is that the rock present in those areas fractures when being excavated during underground installations resulting in knife-like shards that if allowed to come in contact with the polyethylene tube service lines will over time cut the service, resulting in a water service leak. *Following the hearing, KRJ has established a new policy that if a given service line presents a leak for two occasions, it will be replaced rather than being repaired.*

2. **Repair Response Times and Improved Communications with Customers**

The customers offering testimony also observed their difficulty in obtaining information on repair of reported water leaks and that the leaks were not repaired in a timely fashion. *The day following the hearing, KRJ initiated a new protocol providing for improved communication between the plant operating personnel, maintenance/construction supervisor, contract manager, and utility contractor used to make repairs to assure that all Company personnel are kept abreast of the situations as they evolve so that customer inquiries can be answered with the best information possible and that the coordination of all utility personnel is significantly improved. The utility contractor was also counseled on the necessity that the response to reported problems should be as expeditious as possible and that the contractor was expected to provide timely completion of clean-up activities, including surface restoration, such as seeding or pavement repair. Mr. Butler will utilize his field technician in addition to the field maintenance/construction* *supervisor to triage the reported problems to better direct the repair contractor as to what materials and equipment they may require to address the problem. Additionally, to facilitate documentation and timely response to service issues, MGNC (through Mr. Butler) has established a new e-mail account -* ***info@mgnc.biz*** *- that is dedicated to receipt and response to customer reports of service issues and inquiries associated with other water/sewer utility matters.* That e-mail address will soon appear on monthly customer bill statements.

3. **Unwillingness of Certain Customers to Drink the Water Supplied by KRJ**

Several customers testified that they do not drink the water provided by KRJ and, instead, purchase bottled water. Although that may be their preference, or response to inaccurate information, they should be aware that KRJ's water system serving Rockbridge has had only one instance of a contaminant exceeding EPA's established levels. That instance was the identification of uranium, which is naturally occurring in some rock formations in the Wake County and some adjoining counties, and Gross Alpha which is most often associated with the presence of uranium in water. That situation never became such that the North Carolina Department of Environmental Quality Public Water Supply Section, USEPA's agent in enforcing the Federal Safe Drinking Water Act, declared a health emergency, requiring that alternate drinking water be provided.

The entire uranium issue was resolved by KRJ's installation of a uranium removal system which was placed into operation in June of 2016. No uranium has been detected in finished water samples since that time and the gross alpha has fallen to levels well below those acceptable under the Safe Drinking Water Act.

4. **Rate Case Test Year**

As was stated by Public Staff attorney Grantmyre, the Public Staff has updated the test year for ratemaking purposes in this case through the period April 1, 2017 - March 31, 2018, to be more reflective of current circumstances. KRJ has been fully cooperative with the Public Staff during its investigation and has supplied voluminous utility records during the discovery process.

5. **System Outages**

KRJ is aware of three system outages which occurred during the three-year period from 2015 through 2017: one associated with the damage caused by the fiber-optic installer, one where a control relay failed, and one caused by an error of the contractor installing the uranium removal system. To guard against significant pressure drops or equipment trips, a remote alarm system was installed at Rockbridge some time ago.

Although the current system controlling the operation of the wells at Rockbridge is functioning well, KRJ is pursuing a system that will utilize a control system that utilizes an electronic pressure transducer, which will produce more accurate pressure measurement than the pressure switches currently used; cellular data transmission, to avoid proximal interference; and computer-based control logic. To date, equipment manufacturers have been identified, quotes obtained, and cellular field strength measurements made, to determine the most desirable cellular system to use. Scheduling of the installation will depend on availability of funds.

6. **Water Pressure Variations**

Pressure variations are both normal and necessary in any water system due to the necessary partial expenditure and replacement of water within the tank to assure that the water is turned over and does not lose its chlorine residual and when demand exceeds pumping rate as the tank serves to provide water to the system when instantaneous demand rate exceeds instantaneous production rate. The water level in the Rockbridge elevated tank is designed to fluctuate between 115 feet to 144 feet above the base of the tank which translates to a normal pressure variation of 13 psi.

7. **Chlorine-Related Complaints**

Chlorine is required to be continuously applied, more recently by USEPA, to all public drinking water systems placed into operation since the mid-1970s. USEPA sets the maximum concentration of chlorine in drinking water to be 3.5 mg/L. Some people may exhibit higher sensitivity to chlorine than others and the Company sympathizes with those customers who offered testimony in that regard; for that reason, KRJ attempts to maintain the chlorine concentration as low as possible while complying with applicable regulations. The electronic control system for the application of chlorine and all other water treatment chemicals is such that they are applied in a flow proportional manner. Some variation in chlorine concentrations will always exist throughout a distribution system due to distance from the water plant and changes in flow patterns within the system. KRJ must maintain the chlorine concentration leaving the treatment facility at a level that assures at least a 0.1 mg/L concentration throughout the distribution system. Representative copies of recent operating reports which indicate actual chlorine residual measurements within the distribution system, as filed with the North Carolina Department of Environmental Quality, are attached to this report as Exhibit B.

In its report, KRJ then discussed specific Rockbridge customer comments. With certain exceptions as discussed below, the summary of Rockbridge customer testimony included in the report and the Company's specific responses to those comments are incorporated herein by reference and will not be repeated in this Order, because they are adequately and generally addressed in the general comments set forth above.

WATER AND SEWER – RATE INCREASE

Maintenance of Spray Fields. KRJ's ownership and the maintenance and construction supervisor have been consulted regarding the maintenance of the spray fields and they have committed to more frequent mowing and maintenance of those areas. To a large degree, the cost of mowing of the spray fields has to date been absorbed by the developer of Rockbridge; KRJ will be paying for mowing of the spray fields beginning this summer. In the specific case of the field to which Mr. Buzak referred, the slopes from the curb to the fields will be re seeded, as grass cover is sparse. The field itself has not yet been placed into service and is therefore not visited as often as those that are in service. The "geyser" referred to was a result of vandalism of both a control valve and a spray riser, both of which have been repaired.

Billing Practices. The Schedule of Rates ordered by the Commission for Rockbridge states: "Bills Past Due: 15 days after billing date." KRJ has always considered that the "billing date" was the date that the bills are mailed and applied to earned income and receivable ledger accounts. The "Date Mailed" that appears on the bill is the date that the bills are physically delivered to the United States Postal Service. Mr. Butler advises each new customer at the time that he is contacted by the customer to initiate their customer account that KRJ holds the "Past Due Date" uniform as the 5th day of each month and that the bills are mailed no less than 15 days prior to the "Past Due Date". The assertion that the bills are mailed after the "Due Date" is incorrect. A copy of a sample redacted utility bill is attached to this report as Exhibit C.

M&M Response. The statement from M&M reported by Mr. Daniel to the effect that that, recently, KRJ did not want to send a plumber out on a weekend to make a repair because "it was too expensive" was not, nor has it ever been, the position or attitude of KRJ regarding necessary repairs. KRJ sincerely apologizes to Mr. Daniel for the unauthorized and inappropriate comment. Newly-adopted protocols require that KRJ representatives triage reported leaks as soon as possible, and determine the most appropriate level of response, which includes "immediate" and "next working day" response times, depending on the severity of the issue.

Dress of Leak Repair Site. Subsequent to the hearing, Mr. Butler contacted the maintenance and construction supervisor and asked that personnel be sent to Mr. Daniel's residence to more appropriately dress the site of the service line repair. The supervisor revisited the site on May 23 and reports that the area has now been re-shaped and additional seed and mulch were added. Mr. Butler then attempted to contact Mr. Daniel to determine the customer's level of satisfaction with the site repair, but the cell phone number on file with KRJ was incorrect.

Milky Water. There are two potential causes for "milky water". The first is trapped air within water mains recently placed into service where the air becomes entrained in the water as microscopic bubbles. The second is insufficient alkalinity in the water which results in the water evolving carbon dioxide, the fizz in soda pop. KRJ augments alkalinity by the addition of lime slurry as part of the treatment process.

Minor variations in water quality from the wells may result in the lime slurry feed rate being insufficient, as KRJ attempts to minimize the application of lime to a concentration just above the effective level since alkalinity is observed by the customer as hardness. When KRJ receives such a complaint, it immediately determines whether the lime feed system is operating properly and, if appropriate, slow flushes the potentially offending water main in an attempt to purge it of any air-laden water.

Smell in the water. KRJ is unsure as to what smell Ms. Kendzierski is referring unless it is chlorine, which is spoken to in KRJ's general responses.

Uranium Issue. The issue regarding uranium and gross alpha exceedances is discussed in KRJ's general responses that precede the Company's customer-specific responses. At no time did the State of North Carolina or KRJ recommend or require acquisition of treatment systems by the customers; however, it is understood that some did so at their own choosing.

Raleigh Evidentiary Hearing (June 20, 2018)

The evidentiary hearing was convened in Raleigh, North Carolina as scheduled. Five customers testified at the evidentiary hearing. Four of those witnesses, who reside in KRJ's Southern Trace service area and are water utility customers, were Shelley Iverson, Jacqueline Walker, Gregory Cols, and Gaylord Hoxie. Witnesses Iverson and Walker, who previously testified at the public hearing, offered additional testimony. The fifth customer witness was Veronica Long, who resides in the Company's Rockbridge service area and is a water and sewer utility customer.

KRJ witness Butler, during his testimony at the evidentiary hearing, responded to and addressed in detail the service-related concerns and comments offered by the five customers who testified at the evidentiary hearing. He also expounded on and explained many of the observations and comments contained in the Company's written report, particularly as they applied to the customer testimony offered at the evidentiary hearing. Mr. Butler fully addressed and responded to the customer testimony from the evidentiary hearing which pertained to the late-May 2018 incident report attached to his prefiled testimony as Exhibit A.

Public Staff witness Casselberry testified that her investigation included review of customer complaints; contact with the Division of Water Resources (DWR), Public Water Supply Section (PWSS) and Water Quality (WQ); review of Company records and analysis of revenues at existing and proposed rates; and site inspection of the three KRJ utility systems. Witness Casselberry testified that she had contacted representatives of the Raleigh regional office regarding the operation of the KRJ water and sewer systems. She testified that none of the regional office personnel she contacted expressed any concerns with the water systems or the sewer system serving KRJ customers.

Witness Casselberry further testified that on May 15, 2018, she inspected the three KRJ systems with Mr. Rod Butler and other members of the Public Staff. The water systems in Southern Trace and Rockbridge were in good condition and adequately maintained. The new uranium removal system in Rockbridge was installed and operational. All of the chemical feed pumps used for treatment were operating and the containers were approximately 85 percent full. The WWTP in Rockbridge was in good condition. Witness Casselberry testified that she did not notice anything unusual about the operation of the plant, nor did she detect any odor, other than next to the intake and bar screen which is normal. She stated that the ponds were well maintained and had plenty of free board. The wastewater effluent spray fields located near the entrance to Rockbridge were adequately maintained. Witness Casselberry stated that is the Public Staff's opinion that the water and sewer systems in Southern Trace and Rockbridge are adequately maintained and operating properly.

Further, witness Casselberry testified that the Public Staff received six written complaints. She stated, in her prefiled direct testimony that the public hearing was held as scheduled and eleven customers testified. The two primary concerns in Southern Trace were water pressure and coloration of the water. Mr. Rains had concerns with the design of the system and operations. The primary complaints in Rockbridge Subdivision were response time to water leaks, system outages, water pressure, chlorine levels and the safety of the water. KRJ was required to file a report addressing customer complaints and concerns.

Witness Casselberry testified that on May 30, 2018, KRJ filed its Report on Customer Comments from Public Hearing in Raleigh, North Carolina as required by the Commission. She stated that she read the report and commended KRJ for its thorough response concerning customer complaints. Witness Casselberry stated that the Public Staff is satisfied with the Company's response to customer concerns, the implementation of its new procedures and policies to improve response times to leaks and customer complaints, and its commitment to install supervisory control and data acquisition (SCADA) control systems in Southern Trace and Rockbridge Subdivisions. Witness Casselberry concluded her testimony by stating that she had no further recommendations.

Conclusions Regarding Overall Quality of Service

Based upon the foregoing, and after careful review of the testimony of the customers at the public and evidentiary hearings, the testimony of Company witness Butler, the Report on Customer Comments provided by KRJ, and the Public Staff's engineering and service quality investigation, the Commission concludes that the overall quality of service provided by KRJ is adequate. In reaching this conclusion, the Commission notes that the Company has initiated certain important and significant customer communication and service policy changes in response to the testimony offered by customers at the public and evidentiary hearings.

Furthermore, the Commission notes that Public Staff witness Casselberry testified that none of the North Carolina environmental agency regional office personnel she contacted expressed any concerns with water quality or KRJ's operation of the water and sewer systems serving its customers. In addition, witness Casselberry stated that the water and sewer systems at Southern Trace and Rockbridge Subdivisions were observed, during her inspection, to be adequately maintained and operating properly. Witness Casselberry also testified that the Public Staff was satisfied with KRJ's report and the Company's "thorough response concerning customer complaints", as well as the implementation by KRJ of new procedures and policies to improve response times to leaks and customer complaints.

Notwithstanding the above observations, the Commission recognizes the validity of the customer complaints regarding specific service quality issues voiced at the hearings and does not intend, in any way, to minimize those complaints. With respect to the concerns expressed concerning communications with KRJ, the Commission strongly supports that customers must be able to quickly and easily voice their concerns to their utility company and also receive a timely response that their concern will be addressed as soon as possible or within a specified estimated time period. Otherwise, customers become frustrated and are likely not to report their concerns to the utility resulting in rate case proceedings being the first time the company, the Public Staff, and/or the Commission become aware of a quality of service concern. It is imperative that customers are able to communicate with the utility when a problem arises; that the utility respond to the customer without delay; and that the problem is addressed by the utility within a reasonable time period. The Company's newly-established e-mail account dedicated to the receipt and response to customer reports of service issues and other inquiries associated with water/sewer utility matters should help address this service-related concern. However, the Commission is of the opinion that KRJ should also seek to obtain and maintain the current email addresses and/or telephone numbers for its customers in Southern Trace and Rockbridge Subdivisions in order to better communicate with its customers concerning matters pertaining to their utility service. KRJ should also establish a process for customers to update KRJ concerning such contact information as needed.

Further, KRJ's newly-initiated protocol for providing for improved communication and coordination between the plant operating personnel, maintenance/construction supervisor, contract manager, and utility contractor used to make repairs to assure that all Company personnel are kept abreast of the situations as they evolve so that customer inquiries can be answered with the best information possible should also aid in addressing this service-quality concern expressed by the public witnesses.

The Commission acknowledges that the Public Staff testified it is satisfied with the Company's response to customer concerns and the implementation of new procedures and policies to improve response times to leaks and customer complaints. However, to ensure that these new procedures and policies are effective in improving KRJ's communications with customers and also aid in addressing the reported service-related concerns as expeditiously as possible, the Commission will require the Public Staff, not later than six months from the date of this Order, to follow up on the concerns expressed by customers of KRJ at the public and evidentiary hearings and file a report on the implementation status of the service improvements described in KRJ's report filed with the Commission on May 30, 2018.

With respect to the coloration of the water and low pressure issues expressed by the customers in Southern Trace Subdivision, the Commission encourages KRJ to continue its efforts to restore Well 2 to increased pumping capacity as soon as practicable to help alleviate these concerns. The Commission is of the opinion and therefore finds and concludes that KRJ should provide the Commission an update on a quarterly basis regarding the status of obtaining a contractor and once such contractor has been obtained, the estimated start date and completion date of the project. Such quarterly reporting should continue until KRJ has reported to the Commission the actual project completion date for restoring Well 2 to increased pumping capacity.

In regard to the concerns expressed by customers in Rockbridge Subdivision concerning the Company's response time to leaks, system outages, water pressure, chlorine levels, and the safety of the water, the Commission agrees with the Public Staff that KRJ's implementation of new procedures and policies should improve response time to leaks and other customer complaints. Moreover, the Company's newly-adopted protocols that require KRJ representatives to triage reported leaks as soon as possible, and determine the most appropriate level of response, which includes "immediate" and "next working day" response times, depending on the severity of the issue should adequately address customer customers. Further, following the hearing, KRJ expressly stated it has established a new policy that if a given service line presents a leak for two occasions, the line will be replaced rather than repaired. With respect to customer concerns regarding the safety of the water, the Commission notes that KRJ reported that the entire uranium issue was resolved with the installation of a uranium removal system which was placed into operation in June of 2016. KRJ stated that no uranium has been detected in finished water samples since that time and the gross alpha has fallen to levels well below those acceptable under the Safe Drinking Water Act.

Accordingly, the Commission, after careful review of the Company's detailed service report and KRJ witness Butler's testimony at the evidentiary hearing, concludes that the Company has acted in good faith to address and remedy service problems. The Commission also notes that some of the customers who testified at the public hearing voiced no current or ongoing service quality complaints which personally affected their utility service.

For the foregoing reasons, the Commission concludes that the overall quality of the water and sewer service provided by KRJ to its customers is adequate.

II. Cost of Capital

Public Staff witness Hinton testified by affidavit that the purpose of his affidavit was to recommend to the Commission a fair rate of return to be employed as a basis for determining the appropriate revenue requirement for KRJ to provide water utility service at Southern Trace Subdivision and water and sewer utility service at Rockbridge Subdivision in Wake County, North Carolina.

For the water utility service and the sewer utility service, witness Hinton recommended that KRJ be granted a 7.75% margin on operating revenue deductions or a 7.75% overall return on rate base. Witness Hinton testified that, after investigation, the Public Staff determined that (1) KRJ's reasonable level of operating expenses is greater than its rate base for Southern Trace water utility service and (2) for the Rockbridge Subdivision, the Company's utility rate base is greater than the reasonable level of operating expenses for both water and sewer utility service. As allowed under N.C. Gen. Stat. § 62-133.1, witness Hinton stated that he used the operating ratio method to evaluate KRJ's proposed rate increase for utility service in the Southern Trace Subdivision and that, as allowed under N.C. Gen. Stat. § 62-133, he used the rate base method to evaluate KRJ's proposed rate increase for utility service in the Rockbridge Subdivision.

Witness Hinton stated that, as outlined in Docket No. W-173, Sub 14, a Montclair Water Company docket, several factors should be considered when judging the adequacy of a return.

These are interest coverage, adequacy of the income level after interest expense, the level of inflation, and the quality of service.

In considering the Montclair factors in conjunction with this proceeding, witness Hinton testified that he did not incorporate any consideration with respect to quality of service. He stated that interest coverage has been provided at an adequate level; and that the level of inflation has been factored into the U.S. Treasury bond rate by investor expectations of the future levels of inflation. Witness Hinton opined that the recommended margin on expenses and overall return on rate base provide an adequate level of income after interest expense.

For these reasons, witness Hinton recommended to the Commission that KRJ be granted a 7.75% margin on operating revenue deductions and a 7.75% return on rate base.

In Paragraphs 4.C., 4.D., and 4.E. of the Stipulation, KRJ and the Public Staff stated the following in support of an authorized return of 7.75% in this proceeding:

> C. The Stipulating Parties stipulate and agree that an overall return on rate base and an operations margin of 7.75% are appropriate to use to establish rates in this proceeding. For purposes of this proceeding, this agreed overall rate of return is deemed by the Stipulating Parties to be a reasonable rate of return that will provide the Company with a reasonable opportunity, by sound management, to produce a fair return for its shareholders, considering changing economic conditions and other factors, to maintain its facilities and services in accordance with the reasonable requirements of its customers in the territory covered by its franchises, and to compete in the market for capital funds on terms that are fair to its customers and to its existing investors. Each of the Stipulating Parties further agrees that such stipulated overall rate of return, together with the Company's supported levels of rate base and operating expenses, results in a revenue requirement that is just and reasonable to the Company's customers in light of changing economic conditions.
>
> D. The overall rate of return that the Company should be allowed an opportunity to earn on its rate base in Rockbridge Subdivision is 7.75%.
>
> E. The Company should be allowed a 7.75% margin on operating revenue deductions requiring a return for the Southern Trace Subdivision, which results to an operating ratio of 92.97% (including taxes) or 92.81% (excluding taxes).

N.C. Gen. Stat. § 62-133(b)(4) requires the Commission to fix rates for service which will enable a public utility, by sound management, to produce a fair profit for its stockholders, in view of current economic conditions, maintain its facilities and services and compete in the market for capital, and no more. This is the ultimate objective of ratemaking. Utilities Commission v. General Telephone Company, 281 N.C. 318, 189 S.E.2d 705 (1972).

Accordingly, the Commission is of the opinion that, based on the affidavit submitted by Public Staff witness Hinton and the applicable provisions of the Stipulation as set forth above, there is adequate evidence in the record to support (a) the return of 7.75% agreed to by the Public Staff and KRJ and (b) a finding that such return should allow KRJ to properly maintain its facilities and services, provide adequate service to its customers, and produce a fair return, thus enabling the Company to attract capital on terms that are fair and reasonable to its customers and investors. Consequently, the Commission finds and concludes that the return of 7.75% that was agreed to by KRJ and the Public Staff is just and reasonable, should be approved, and is appropriate for use in this proceeding considering the impact of changing economic conditions on customers and relevant statutory and case law.

III. Overall Conclusions

At the evidentiary hearing, the Commission posed several questions to the Public Staff's witnesses for which late-filed exhibits were provided. In its late-filed exhibits, the Public Staff acknowledged that it had erroneously calculated the loss on disposal of property for both the Southern Trace and Rockbridge water systems. Further, the Public Staff stated that KRJ did not in any way contribute to these errors. The Public Staff did not quantity the revenue requirement amount of the errors, either individually for Southern Trace and Rockbridge Subdivisions or on a combined total company basis. Nevertheless, the Public Staff requested that the Commission approve in full the Stipulation as originally filed, including all of the revenue requirements that were achieved through good faith difficult negotiations. In support of its position, the Public Staff contended that KRJ had relinquished several significant issues that KRJ planned to litigate when it agreed to the Stipulation and that it would now be unfair to KRJ to lessen the agreed-upon revenue requirements as a result of these errors.

In response to the questions posed by the Commission at the evidentiary hearing, KRJ filed the Verified Affidavit and Late-Filed Exhibit of James R. Butler. In its affidavit, KRJ asserted that the Company would be materially impacted to the detriment of the Company if the amounts for loss on disposal of property were adjusted as a result of the discovery of these errors. KRJ submitted that, upon further review of its books and records, there were at least six additional instances of loss from disposal of equipment incurred by KRJ during the three-year period ending June 30, 2018, which could have been included for cost recovery in this case, but were not. KRJ detailed these additional losses from disposal of equipment in Attachment A to witness Butler's affidavit. Similar to the Public Staff, KRJ did not quantify the revenue requirement amount of these errors or the amount by which the six additional instances of loss on disposal of equipment would mitigate the revenue requirement impact; but rather, maintained that the Stipulation as originally filed, which was agreed to only after intense and extensive negotiations with the Public Staff, is fair to both the Company and its customers.

The Commission recognizes that, to date, the parties have expended considerable time, effort, and expense to achieve a settlement in this proceeding. The Commission notes that Paragraph 15 of the Stipulation states that "no portion of this Stipulation shall be binding on the Stipulating Parties unless the entire Stipulation is accepted by the Commission". In general, the Commission encourages the various parties in a general rate case proceeding to work together to reach a stipulation, if possible. Such stipulations provide benefits to both the utility and its customers. However, in this particular rate case proceeding, the Commission is aware that errors exist in the Stipulation. The Commission acknowledges that if the parties were to engage in further negotiations at this point in time, it would likely materially increase the amount of rate case expense to be included in the new rates that would ultimately be approved for customers. Moreover, the Commission notes that the Public Staff, the consumer advocate for customers in this proceeding, who was a party to the lengthy and difficult settlement negotiations, continues to support Commission approval of the Stipulation as originally filed notwithstanding acknowledgment of its errors.

At this juncture, the Commission is of the opinion that it would be beneficial to both the Company and its customers for the Commission to accept the Stipulation of KRJ and the Public Staff as originally filed. Although the Commission is not bound to accept the Stipulation as filed, based upon all evidence of record, the Commission finds and concludes that the Stipulation represents a reasonable result for both KRJ and its customers. The Commission observes that in reaching a stipulation with the Public Staff in this proceeding KRJ has agreed to accept, without further litigation before the Commission and resulting rate case expense, a 43.3% increase in total operating revenues for Southern Trace Subdivision when it applied for a 81.8% increase and a 10.5% increase in total operating revenues for Rockbridge Subdivision (Water and Sewer Operations combined) when it applied for a total increase of 72.2%.

However, in light of the errors identified in the Public Staff's testimony and exhibits and the Company's statement that KRJ would be materially impacted to the detriment of the Company if the amounts for loss on disposal of property were adjusted as a result of the discovery of the errors, and that the additional instances of loss on disposal provided by KRJ witness Butler in his Verified Affidavit, which would likely mitigate these errors, have not been reviewed and accepted by the Public Staff, the Commission is of the opinion that it would be reasonable and appropriate to require KRJ to not file a general rate case prior to October 10, 2019, with changes in rates effective no sooner than August 6, 2020. This condition, imposed by the Commission, attached to the Stipulation as originally filed would benefit both customers and the Company. Customers would be shielded from the possibility of further rate increases for the next two years and KRJ would be able to implement the stipulated rates effective upon issuance of this Order.

Therefore, after carefully reviewing the Stipulation and all of the evidence of record, including the Late-Filed Exhibits filed by Public Staff witnesses Morgan and Casselberry and the Verified Affidavit and Late-Filed Exhibit filed by KRJ witness Butler, and with the condition that KRJ would not have any further general rate case increases for the next two years, the Commission finds and concludes that the Stipulation is the product of the give-and-take settlement negotiations between KRJ and the Public Staff; that the Stipulation constitutes material evidence; that the Stipulation is entitled to be given appropriate weight in this proceeding, along with all other evidence in the record; and that the Stipulation is fully supported by competent evidence in the record.

Accordingly, based on the foregoing findings of fact and the entire record in this proceeding, the Commission concludes that the stipulated rates, the stipulated rate of return of 7.75%, and all of the other provisions of the Stipulation, which are incorporated herein by reference, are just and reasonable and should be approved. Further, KRJ should not file a general rate case prior to October 10, 2019, with changes in rates effective no sooner than August 6, 2020.

IT IS, THEREFORE, ORDERED as follows:

1. That the Stipulation filed by KRJ and the Public Staff in this docket on June 7, 2018, as amended on June 14, 2018, is incorporated by reference herein and is hereby approved in its entirety with the condition imposed by the Commission discussed hereinabove and expressly stated in Decretal Paragraph No. 15 hereinbelow.

2. That the Schedules of Rates, attached hereto as Appendices A-1 and A-2, are hereby approved and deemed to be filed with the Commission pursuant to N.C. Gen. Stat. § 62-138.

3. That the Schedules of Rates, attached hereto as Appendices A-1 and A-2, are hereby authorized to become effective for service rendered on and after the issuance date of this Order.

4. That the Notice to Customers, attached hereto as Appendix B, shall be mailed with sufficient postage or hand delivered to all affected customers in conjunction with KRJ's next regularly scheduled billing process.

5. That KRJ shall file the attached Certificate of Service, properly signed and notarized, not later than 10 days after the Notice to Customers is mailed or hand delivered to customers.

6. That, with the exception of Stipulation Paragraph 4.G. discussed in Decretal Paragraph 7 below, the Stipulation, and the parts of this Order pertaining to the contents of that agreement shall not be cited or treated as precedent in future proceedings.

7. That, in the next general rate case filed by KRJ for the Company's Southern Trace and Rockbridge service areas, the stipulated amounts agreed to in this case, as approved herein by the Commission, for plant in service, accumulated depreciation, contributions in aid of construction, depreciation and amortization expense, and original cost rate base, shall be used as the starting point for the Company's rate case application and the Public Staff's investigation.

8. That the provision whereby KRJ is currently required, pursuant to Commission Order in Docket No. W-1075, Sub 5, to disclose the current Rockbridge Subdivision water and sewer rates in marketing materials, with lot purchase agreements, and in the restrictive covenants pertaining to all lots in the Rockbridge Subdivision, to notify future customers in Rockbridge of the utility rates prior to their purchasing their lots or residences, is hereby rescinded.

9. That the provision whereby KRJ is currently required, pursuant to Commission Order in Docket No. W-1075, Sub 5, to file annual reports, beginning on October 31, 2007, on the status of the Rockbridge Subdivision and utility system, is hereby rescinded.

10. That Docket No. W-1075, Sub 5 is hereby closed.

11. That the Late-Filed Exhibits filed by Public Staff witnesses Morgan and Casselberry and the Verified Affidavit and Late-Filed Exhibit filed by KRJ witness Butler are hereby admitted in evidence in this proceeding.

12. That, not later than six months from the date of this Order, the Public Staff shall follow up on the concerns expressed by customers of KRJ at the public and evidentiary hearings and shall file a report on the implementation status of the service improvements described in KRJ's report filed with the Commission on May 30, 2018.

13. That in order to facilitate improved electronic, voice, and/or written communications between the Company and its customers, within 30 days of the issuance date of this Order, KRJ shall seek to obtain the current email addresses and/or telephone numbers of its customers in Southern Trace and Rockbridge Subdivisions. The Company shall file a written report with the Commission not later than six months after the issuance date of this Order detailing the status of obtaining such contact information. Such report shall also state the process established for a customer to notify KRJ when needed concerning any future changes to a customer's contact information.

14. That KRJ shall update the Commission on a quarterly basis concerning the status of the project to restore Well 2 in Southern Trace to increased pumping capacity. The first quarterly report shall be filed on or before October 15, 2018, for the quarter ending September 30, 2018. Such quarterly reporting shall continue until the actual project completion date has been reported by KRJ.

15. That KRJ shall not file a general rate case prior to October 10, 2019, with changes in rates effective no sooner than August 6, 2020 (after a six-month suspension period under N.C. Gen. Stat. § 62-134).

ISSUED BY ORDER OF THE COMMISSION.
This the 6th day of August, 2018.

Linnetta Threatt, Deputy Clerk

APPENDIX A-1

SCHEDULE OF RATES
For

KRJ, INC., D/B/A KRJ UTILITIES
for providing water utility service

in
SOUTHERN TRACE SUBDIVISION
Wake County, North Carolina

Monthly Metered Water Rates:

Base charge, zero usage	$ 19.12
Usage charge, per 1,000 gallons	$ 5.44

WATER AND SEWER – RATE INCREASE

Tap on Fee:	$500.00 per REU

Reconnection Charges:

If water service is cut off by utility for good cause	$25.00
If water service cut off by utility at customer's request	$20.00

Returned Check Charge:	$25.00
Bills Due:	On billing date
Bills Past Due:	15 days after billing date
Billing Frequency:	Shall be monthly for service in arrears
Finance Charge For Late Payment:	1% per month will be applied to the unpaid balance of all bills still past due 25 days after the billing date

---

Issued in Accordance with Authority by the North Carolina Utilities Commission in Docket No. W-1075 Sub 12, on this the 6th day of August, 2018.

DOCKET NO. W-1166, SUB 17

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by MECO Utilities, Inc., Post Office Box 2359, Swansboro, North Carolina 28584-2359, for Authority to Increase Rates for Water and Sewer Utility Service in Mobile Estates Mobile Home Park in Wake County, North Carolina	)	ORDER GRANTING PARTIAL RATE INCREASE AND REQUIRING CUSTOMER NOTICE

BY THE COMMISSION: On October 31, 2017, MECO Utilities, Inc. (MECO or Applicant), filed a letter notifying the Commission of its intent to file a general rate case as required by Commission Rule R1-17(a). On December 4, 2017, MECO filed an application with the Commission seeking authority to increase its rates for providing water and sewer utility service in Mobile Estates Mobile Home Park (Mobile Estates) in Wake County, North Carolina. By Order dated December 18, 2017, the Commission established a general rate case, suspended rates, scheduled hearing, and required customer notice. The Notice to Customers stated that the March 22, 2018 public hearing may be canceled and the matter decided on the filings if no significant protests are received from consumers on or before February 15, 2018.

On December 21, 2017, MECO filed its certificate of service. The notice period expired on February 15, 2018. No customer protests were received.

On March 2, 2018, the Public Staff – North Carolina Utilities Commission (Public Staff) filed the Affidavit of Calvin C. Craig, III, Financial Analyst, Economic Research Division, and the testimony and exhibits of Manasa L. Cooper, Staff Accountant, Water/Communications Section, Accounting Division, and Gina Y. Casselberry, Utilities Engineer, Water, Sewer, and Communications Division.

On March 9, 2018, the Public Staff filed a Stipulation dated March 8, 2018, executed by MECO and the Public Staff (the Stipulation) in which MECO agreed to accept the Public Staff's recommended annual revenue requirements and recommended rates. The Stipulation further stated that: (1) MECO does not contest any of the Public Staff adjustments, but reserves the right to contest the adjustments, or similar adjustments, in future MECO proceedings including general rate cases; (2) MECO and the Public Staff agree that the scheduled March 22, 2018 evidentiary hearing should be canceled and customer notice given; (3) MECO and the Public Staff agree that the Public Staff will prepare a proposed order, which MECO shall review and agree to prior to filing with the Commission; (4) MECO and the Public Staff request that the Commission issue the rate case order as soon as reasonable practical, after the filing of the proposed order, and waive the 15-day period to file exceptions, so that the Commission approved rates will be effective on and after the date of the Commission's order.

Also, on March 9, 2018, the Public Staff filed a motion to cancel the hearing which had been scheduled for Thursday, March 22, 2018. On March 12, 2018, the Commission issued an

Order canceling the Thursday, March 22, 2018 hearing and requiring customer notice. On March 15, 2018, MECO filed its certificate of service indicating that customer notice had been provided as required by the March 12, 2018 Order.

On April 10, 2018, MECO and the Public Staff filed a Joint Proposed Order.

Based upon the verified application, the Stipulation, the affidavit of Public Staff witness Craig, the testimony and exhibits of Public Staff witnesses Cooper and Casselberry, and the Commission's files and records, the Commission is of the opinion that the provisions of the Stipulation are just and reasonable. Accordingly, the Commission makes the following

FINDINGS OF FACT

1. MECO is a public utility as defined by G.S. 62-3(23) and is before the Commission pursuant to its application for an increase in its rates and charges for water and sewer utility service under G.S. 62-137.

2. The test year established for use in this proceeding is the 12-month period ended September 30, 2017.

3. MECO provides water and sewer utility service to approximately 271 customers in Mobile Estates Mobile Home Park in Wake County, North Carolina.

4. MECO provides utility service by purchasing bulk water and bulk sewer treatment from the Town of Cary.

5. The present rates have been in effect since August 21, 2017, pursuant to a Commission Order Approving Tariff Revision and Requiring Customer Notice issued on that same date in Docket No. W-1166, Sub 16, which was MECO's last pass through rate increase from the Town of Cary.

6. MECO's present rates and the Applicant's proposed rates are as follows:

Monthly Metered Water Service:	Present	Proposed
Base charge, zero usage	$ 13.81	$ 16.50
Usage charge, per 1,000 gallons	$ 6.44	$ 7.69

Monthly Metered Sewer Service:	Present	Proposed
Base charge, zero usage	$ 12.14	$ 16.09
Usage charge, per 1,000 gallons	$ 9.96	$ 13.20

7. Under the Applicant's proposed rates, the average combined water and sewer monthly bill would increase from $84.17 to $106.75, or 26.8%, based on the average monthly usage of 3,550 gallons.

WATER AND SEWER – RATE INCREASE

8. MECO and the Public Staff entered into a Stipulation on March 8, 2018, which was filed with the Commission on March 9, 2018, that settled all their issues. MECO and the Public Staff are the only formal parties to this proceeding.

9. Paragraph No. 7 of the Stipulation contains the provision that MECO does not contest any of the Public Staff's adjustments, but reserves the right to contest the adjustments, or similar adjustments, in future MECO proceedings including general rate cases.

10. The Applicant is providing adequate service to its customers.

11. The reasonable original cost rate base for use in this proceeding is $4,268 for water operations and $2,135 for sewer operations, both of which are entirely comprised of cash working capital.

12. The Applicant's total annual operating revenues under present rates for the 12-month period ended September 30, 2017, are shown below:

	Service Revenues	Other Revenues & Uncollectibles	Total Operating Revenues
Water Operations:	$118,945	($313)	$118,632
Sewer Operations:	$153,981	($421)	$153,560

13. The Applicant's total annual operating revenues under proposed rates for the 12-month period ended September 30, 2017, are shown below:

	Service Revenues	Other Revenues & Uncollectibles	Total Operating Revenues
Water Operations:	$142,063	($313)	$141,750
Sewer Operations:	$204,074	($421)	$203,653

14. By its application, MECO requested a total annual increase in its water and sewer utility service rates of $73,211, which would produce the following additional annual service revenues and percentage increases:

Water Operations:	$23,118	19.4%
Sewer Operations:	$50,093	32.5%

15. It is reasonable and appropriate to include total rate case costs of $6,695 related to this rate case proceeding, amortized over three years, resulting in annual rate case expense of $2,232. It is reasonable and appropriate to allocate the annual amount of rate case expense of $2,232 between water and sewer operations, based upon a 50/50 allocation factor resulting in annual rate case expense for water operations of $1,116 and for sewer operations of $1,116.

16. The appropriate levels of operations and maintenance (O&M) expenses for use in this proceeding are as follows:

Water Operations:	$111,374
Sewer Operations:	$162,997

17. Since the entire amount of the original cost rate base for both water and sewer operations is comprised entirely of cash working capital, the appropriate level of depreciation expense for use in this proceeding is $0 for water operations and $0 for sewer operations.

18. It is reasonable and appropriate to calculate regulatory fees using the statutory rate of 0.14%.

19. It is reasonable and appropriate to calculate federal income taxes based upon the adjusted levels of revenues and expenses and the statutory corporate rate of 21% prescribed in the Tax Cut and Jobs Act of 2017, which became effective January 1, 2018.

20. It is reasonable and appropriate to calculate state income taxes based upon the adjusted levels of revenues and expenses, and the State corporate income tax rate of 3%, which became effective January 1, 2017.

21. The operating ratio method, which allows a return on operating revenue deductions, is the proper method for determining MECO's water and sewer revenue requirements.

22. The Public Staff recommended a 7.50% margin on expenses, which results in an operating ratio of 93.18% (including taxes) or 93.02% (excluding taxes) for water operations and for sewer operations.

23. The 7.50% margin on expenses is just and reasonable for use in this general rate case proceeding.

24. The operating revenue deductions requiring a return (total operating expenses, excluding regulatory fee and income taxes) are $111,461 for water operations and $163,110 for sewer operations.

25. The total annual revenues necessary to allow MECO the opportunity to earn the 7.50% return found just and reasonable are as follows:

	Service Revenues	Other Revenues & Uncollectibles	Total Operating Revenues
Water Operations:	$122,855	($313)	$122,542
Sewer Operations:	$179,746	($421)	$179,325

26. The agreed-upon rates will provide MECO with a total increase in its annual level of service revenues of $29,675, consisting of an increase for water operations of $3,910 (an increase of 3.3%) and an increase for sewer operations of $25,765 (an increase of 16.8%).

27. The water and sewer service rates agreed to by MECO and the Public Staff as provided in Paragraph No. 5 of the Stipulation and in Casselberry Exhibit No. 4, and are as follows:

WATER AND SEWER – RATE INCREASE

Metered Water Residential Service:	
Base charge, zero usage	$ 14.03
Usage charge, per 1,000 gallons	$ 6.72
Metered Sewer Residential Service:	
Base charge, zero usage	$ 10.42
Usage charge, per 1,000 gallons	$ 12.69

28. Since MECO is a purchased water and sewer treatment system it is appropriate and reasonable to calculate the water and sewer usage charges based upon the cost for purchased water and sewer treatment from the Town of Cary.

29. MECO should be allowed to increase its returned check charge for processing non-sufficient-funds (NSF) checks from $23.91 to $25.00. It is also reasonable and appropriate to authorize the Applicant to increase its disconnection/reconnection charge from $14.35 for water operations and $14.05 for sewer operations to $15.00 for both water and sewer operations when made during scheduled working hours and from $28.68 for water operations and $28.09 for sewer operations to $30.00 for both water and sewer operations when made during after-hours on normal workdays or in an emergency action on weekends or holidays.

30. The Schedule of Rates for water and sewer utility service agreed to by MECO and the Public Staff, as provided in Appendix A of the Joint Proposed Order filed on April 10, 2018, and attached hereto as Appendix A, is just and reasonable and should be approved.

31. Under the Schedule of Rates approved herein, the average combined water and sewer monthly bill will increase from $84.17 to $93.36, or 10.9%, based on the average monthly usage of 3,550 gallons.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1 THROUGH 7

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, and the testimony and exhibits of Public Staff witnesses Cooper and Casselberry. These findings are primarily jurisdictional and informational and are uncontested.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 8 AND 9

The evidence supporting these findings of fact is contained in the Stipulation between MECO and the Public Staff entered into on March 8, 2018, and filed with the Commission on March 9, 2018.

On March 9, 2018, the Public Staff filed a Stipulation dated March 8, 2018, executed by MECO and the Public Staff in which MECO agreed to accept the Public Staff's recommended annual revenue requirements and recommended rates. Further, the Stipulation stated, among other things, that although MECO does not contest any of the Public Staff adjustments in this proceeding, MECO reserves the right to contest the adjustments, or similar adjustments, in future MECO proceedings including general rate cases.

Based upon the foregoing findings of fact and the entire record in this proceeding, the Commission finds and concludes that the provisions of the Stipulation filed on March 9, 2018 are just and reasonable and that the levels of rate base, revenues, and expenses set forth in Cooper Exhibit I, which are incorporated herein by reference, recommended by the Public Staff and agreed to by MECO are the appropriate levels for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 10

The evidence supporting this finding of fact is contained in the affidavit of Public Staff witness Casselberry and in the Commission's records.

Public Staff witness Casselberry testified that Mobile Estates is a mobile home park located in the Town Limits of Cary, in Wake County, North Carolina, on the east side of Maynard Road, approximately 400 yards south of the intersection of Maynard and Chatham Streets. She observed that the mobile home park has approximately 276 rental spaces and at September 30, 2017, MECO provided water and sewer utility service to 271 customers. Further, witness Casselberry testified that MECO purchases water and sewer treatment from the Town of Cary.

Moreover, witness Casselberry stated that there have been no customer protests and the Public Staff has not discovered any service problems. Witness Casselberry concluded, based upon her investigation, that the Applicant is providing adequate service to its customers.

Based upon the foregoing, the Commission finds and concludes that the quality of water and sewer utility service provided by the Applicant to its customers is adequate.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 11

The evidence supporting this finding of fact is contained in the Commission's records, the verified application, and in the testimony and exhibit of Public Staff witness Cooper.

The adjustments made by the Public Staff to the Applicant's original cost rate base for water operations included adjustments to plant in service, accumulated depreciation, and cash working capital and for sewer operations included an adjustment to cash working capital.

Witness Cooper testified that the amount of original cost plant in service provided by the Applicant in its application was \$6,754 for water operations and \$0 for sewer operations. She stated that in response to a Public Staff data request, it was discovered that the \$6,754 amount for water operations was regulatory commission expense from Docket No. W-1166, Sub 8 (Sub 8 Proceeding), the Applicant's last general rate case proceeding. Witness Cooper pointed out that regulatory commission expense should not have been included in plant in service by the Applicant. She removed this amount from plant in service which resulted in \$0 plant in service for water operations.

Further, witness Cooper determined based upon a formal inquiry to the Applicant that there have been no additions to water or sewer plant in service since the Sub 8 Proceeding. As a result, witness Cooper recommended \$0 net plant in service for both water and sewer operations for purposes of this proceeding.

Witness Cooper stated that the Public Staff included 1/8 of total operations and maintenance expenses, less purchased water and sewer expense, in original cost rate base as a measure of cash working capital which provides the Applicant with the funds necessary to carry on the day-to-day operations of the water and sewer utility business.

The adjustments made by witness Cooper to the various components of original cost rate base resulted in an amount of original cost rate base for use in this proceeding of $4,268 for water operations and $2,135 for sewer operations, both of which consist entirely of cash working capital.

In the Stipulation between the Public Staff and MECO filed on March 9, 2018, MECO agreed to accept the Public Staff's recommended annual revenue requirements and rates. Further, MECO did not contest any of the Public Staff's adjustments in this proceeding but reserved the right to contest the adjustments or similar adjustments in future MECO proceedings, including general rate cases.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of original cost rate base for use in this proceeding is $4,268 for water operations and $2,135 for sewer operations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12 THROUGH 14

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, the testimony and exhibits of Public Staff witnesses Cooper and Casselberry.

Witness Casselberry calculated annual water service revenues of $118,945 under the current Commission-approved rates and $142,063 under the Applicant's proposed rates. Further, witness Casselberry calculated annual sewer service revenues of $153,981 under the current Commission-approved rates and $204,074 under the Applicant's proposed rates.

Witness Cooper calculated miscellaneous revenues of $425 for water operations and $549 for sewer operations. She included bad debt expense of ($738) for water operations and ($970) for sewer operations.

Pursuant to Paragraph No. 7 of the Stipulation, the Applicant does not contest any of the Public Staff's adjustments, but reserves the right to contest the adjustments, or similar adjustments, in future MECO proceedings, including general rate cases.

Based upon the foregoing, the Commission finds and concludes that the appropriate levels of total annual operating revenues at present and proposed rates for use in this proceeding for water operations are $118,632, consisting of $118,945 in service revenues, $425 in other revenues, and ($738) for bad debt expense, and for sewer operations are $153,560, consisting of $153,981 in service revenues, $549 in other revenues, and ($970) in bad debt expense.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 15 AND 16

The evidence supporting these findings of fact is contained in the Commission's records and in the testimony and exhibits of Public Staff witnesses Cooper and Casselberry. The following table summarizes the amounts that the Public Staff recommended for inclusion in determining the proper level of total O&M expenses for use in this proceeding for water and sewer operations:

Item	Water Amount	Sewer Amount
Contract operating services	$23,663	$15,739
Maintenance and repairs	395	0
Purchased water	77,231	0
Purchased sewer	0	145,920
Testing	7,116	0
Permit fees and licenses	1,681	0
Other expense	172	222
Rate case expense	1,116	1,116
Total O&M expenses	$111,374	$162,997

The Public Staff made adjustments to the levels of contract operating services, maintenance and repairs, testing, permit fees and licenses, purchased water, and purchased sewer based upon recommendations by witness Casselberry. Witness Cooper stated that the Applicant did not include an amount for rate case expense in its application. Witness Cooper explained that she calculated an amount of rate case expense for this proceeding based upon the cost of the filing fee, the costs for copying and mailing notices to customers, legal fees, and contract management fees. Witness Cooper recommended that the total rate case costs of $6,695 be amortized over three years resulting in annual rate case expense of $2,232. She recommended that the annual rate case expense be allocated between water and sewer operations based upon a 50/50 allocation factor which resulted in annual rate case expense of $1,116 for water operations and $1,116 for sewer operations.

In the Stipulation between the Public Staff and MECO filed on March 9, 2018, MECO did not contest any of the Public Staff's adjustments in this proceeding but reserved the right to contest the adjustments or similar adjustments in future MECO proceedings, including general rate cases. Further, in the Stipulation, MECO agreed to accept the Public Staff's recommended annual revenue requirements and recommended rates.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of O&M expenses for use in this proceeding is for water operations is $111,374 for water operations and $162,997 for sewer operations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 17 THROUGH 20

The evidence supporting these findings of fact is contained in the Commission's records, and in the testimony and exhibits of Public Staff witnesses Cooper and Casselberry. The following table summarizes the amounts that the Public Staff recommended for inclusion in determining the proper level of total ongoing depreciation expense and taxes for use in this proceeding:

WATER AND SEWER – RATE INCREASE

Item	Water Amount	Sewer Amount
Depreciation expense	$ 0	$ 0
Other taxes	87	113
Regulatory fees	172	251
State income taxes	327	479
Federal income taxes	2,222	3,252
Total depreciation and taxes	$ 2,808	$ 4,095

The Public Staff made adjustments to the levels of depreciation expense, other taxes, regulatory fees, and state and federal income taxes. In the Stipulation between the Public Staff and MECO filed with the Commission on March 9, 2018, MECO did not contest any of the Public Staff's adjustments in this proceeding but reserved the right to contest the adjustments or similar adjustments in future MECO proceedings, including general rate cases.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of depreciation expense and taxes for use in this proceeding is $2,808 for water operations and $4,095 for sewer operations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 21 THROUGH 26

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, the affidavit of Public Staff Financial Analyst Craig, and the testimony and exhibits of Public Staff witnesses Cooper and Casselberry.

With respect to the Applicant's rate increase request for water operations, witness Cooper testified that based upon her investigation, the Applicant's original cost rate base at September 30, 2017, is $4,268 and the level of operating revenue deductions requiring a return (total operating expenses excluding regulatory fees and income taxes) is $111,461. Witness Cooper stated that pursuant to G.S. 62-133.1, she used the operating ratio method to evaluate the Applicant's proposed revenue requirement for water operations. She calculated an increase in the gross revenue requirement using the overall rate of return of 7.50%, the reasonable rate recommended by Public Staff Financial Analyst Craig. Witness Cooper stated that the resulting total revenue requirement for water operations would be $122,542, of which $122,855 is service revenues. She recommended that water service rates be set to reflect a $3,910 increase, resulting in an annual level of water service revenues of $122,855.

In regard to MECO's rate increase request for sewer operations, witness Cooper testified that based upon her investigation, the Applicant's original cost rate base at September 30, 2017, is $2,135 and the level of operating revenue deductions requiring a return (total operating expenses excluding regulatory fees and income taxes) is $163,110. Witness Cooper stated that pursuant to G.S. 62-133.1, she used the operating ratio method to evaluate the Applicant's proposed revenue requirement for sewer operations. She calculated an increase in the gross revenue requirement using the overall rate of return of 7.50%, the reasonable rate recommended by Public Staff Financial Analyst Craig. Witness Cooper stated that the resulting total revenue requirement for sewer operations would be $179,325, of which $179,746 is service revenues. She recommended that sewer service rates be set to reflect a $25,765 increase, resulting in an annual level of sewer service revenues of $179,746.

For both water operations and sewer operations, Financial Analyst Craig recommended that MECO be granted a 7.50% margin on expenses, which relates to an operating margin of 93.18% (including taxes) or 93.02% (excluding taxes). He stated that his recommendation was based upon his investigation of the cost of capital for small water and sewer companies. Further, he recommended that the operating ratio method, as allowed under G.S. 62-133.1, be used to evaluate MECO's proposed rate increase as the Public Staff determined during its investigation that MECO's rate base is less than the reasonable level of operating expenses.

Financial Analyst Craig explained that, as outlined in Docket No. W-173, Sub 14, Montclair Water Company, several factors should be considered when judging the adequacy of return. Such factors include interest coverage, adequacy of the income level after interest expense, the level of inflation, and the quality of service. Financial Analyst Craig contended that interest coverage has been provided at an adequate level, that the level of inflation has been factored into the U.S. Treasury bond rate by investor expectations of the future levels of inflation. He opined that the Public Staff's recommended margin on expenses would provide an adequate level of income after interest expense. Further, Financial Analyst Craig commented that in considering these factors in conjunction with this proceeding, he has not incorporated any consideration with respect to quality of service.

Moreover, witness Casselberry testified that, based upon her investigation, the Public Staff concludes that MECO should be granted a partial rate increase for providing water and sewer utility service. Witness Casselberry recommended that service revenues should be increased to reflect annual service revenues of $122,855 for water operations and $179,746 for sewer operations.

In the Stipulation between the Public Staff and MECO filed on March 9, 2018, MECO did not contest any of the Public Staff's adjustments in this proceeding but reserved the right to contest the adjustments or similar adjustments in future MECO proceedings, including general rate cases. Further, in the Stipulation, MECO agreed to accept the Public Staff's recommended annual revenue requirements and recommended rates.

Based upon the foregoing, the Commission finds and concludes that the operating ratio method is the appropriate method for evaluating the Applicant's proposed revenue requirement and that the 7.50% operating margin on expenses recommended by Financial Analyst Craig is just and reasonable and should be approved. Consequently, the Commission finds and concludes that MECO should be allowed to increase its rates so as to produce total annual operating revenues of $122,542 for water operations and $179,325 for sewer operations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 27 THROUGH 31

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, the affidavit of Public Staff Financial Analyst Craig, the testimony and exhibits of Public Staff witnesses Cooper and Casselberry, and the Joint Proposed Order.

WATER AND SEWER – RATE INCREASE

Witness Casselberry testified that MECO is a purchased water and sewer treatment system. As a result, witness Casselberry calculated the Public Staff's recommended water and sewer usage charges based upon the cost for purchased water and sewer treatment from the Town of Cary. She commented that the Public Staff's recommended base charges for water and sewer utility service reflects the remaining expenses associated with providing water and sewer utility service. Witness Casselberry explained that by setting MECO's usage charges for water and sewer based on purchased water and sewer treatment costs from the Town of Cary, should MECO request a pass through, any increase to the usage charges would be directly associated with the increased cost from the Town of Cary for purchased water and sewer treatment.

In regard to miscellaneous charges, in its application the Applicant requested approval to increase its returned check charge from $23.91 to $25.00 and its disconnection/reconnection charge from $14.35 for water operations and $14.05 for sewer operations to $15.00 for both water and sewer operations when made during scheduled working hours and from $28.68 for water operations and $28.09 for sewer operations to $30.00 for both water and sewer operations when made during after-hours on normal workdays or in an emergency action on weekends or holidays. The Public Staff reviewed the Applicant's request to increase these miscellaneous charges and found that the proposed returned check charge and disconnection/reconnection fees to be fair and reasonable. Accordingly, the proposed increases to the returned check charge and the disconnection/reconnection fees were included in Appendix A of the Joint Proposed Order filed with the Commission by MECO and the Public Staff.

Therefore, the Commission finds and concludes that it is reasonable and appropriate to authorize MECO to increase its returned check charge for processing non-sufficient-funds (NSF) checks and its disconnection/reconnection charges as requested by the Applicant and recommended by the Public Staff.

WHEREUPON, the Commission reaches the following

CONCLUSIONS

The Commission, having carefully reviewed the Stipulation and all of the evidence of record, finds and concludes that the Stipulation is the product of the give-and-take settlement negotiations between MECO and the Public Staff; that it constitutes material evidence; that it is entitled to be given appropriate weight in this proceeding, along with the other evidence in the record; and that it is fully supported by the record. Accordingly, based upon the foregoing findings of fact and the entire record in this proceeding, the Commission concludes that the stipulated revenue requirements, stipulated rates, and all the other provisions of the Stipulation entered on March 8, 2018, and filed with the Commission on March 9, 2018, which are incorporated herein by reference, are just and reasonable and should be approved.

IT IS, THEREFORE, ORDERED as follows:

1. That the application for rate increase filed by MECO Utilities, Inc., on December 4, 2017; the affidavit of Public Staff Financial Analyst Calvin C. Craig, III, and testimony and exhibits of Public Staff witnesses Manasa L. Cooper, Staff Accountant, Accounting

Division and Gina Y. Casselberry, Utilities Engineer, Water, Sewer, and Communications Division filed by the Public Staff on March 2, 2018; and the Stipulation between MECO Utilities, Inc. and the Public Staff filed on March 9, 2018, in this docket are hereby received as evidence in this proceeding.

2. That MECO Utilities, Inc., is authorized to increase its rates and charges for providing water and sewer utility service in Mobile Estates Mobile Home Park in Wake County, North Carolina, as reflected in the Schedule of Rates, attached hereto as Appendix A. These rates and charges shall be effective for service rendered on and after the date of this Order.

3. That the Schedule of Rates, attached as Appendix A, is hereby approved and deemed filed with the Commission pursuant to G.S. 62-138.

4. That the Notice to Customers, attached as Appendix B, shall be mailed with sufficient postage or hand delivered by MECO to all customers affected by the new rates no later than 10 days after the date of this Order; and that MECO shall submit to the Commission the attached Certificate of Service, properly signed and notarized, not later than 15 days after the date of this Order.

ISSUED BY ORDER OF THE COMMISSION.
This the 4th day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

APPENDIX A
PAGE 1 OF 2

SCHEDULE OF RATES

for

MECO UTILITIES, INC.

for providing water and sewer utility service in

MOBILE ESTATES MOBILE HOME PARK
Wake County, North Carolina

Monthly Metered Water Rates:

Base charge, zero usage	$ 14.03, minimum
Usage charge, per 1,000 gallons	$ 6.72

WATER AND SEWER – RATE INCREASE

Monthly Metered Sewer Rates:

Base charge, zero usage	$ 10.42, minimum
Usage charge, per 1,000 gallons	$ 12.69

Reconnection Charge:

If water utility service is cut off by utility for good cause (Rule 7-20), or	1/
If water utility service discontinued at customer request, or	1/
If sewer utility service discontinued for good cause (Rule R10-16e)	1/

1/ If reconnection is made during scheduled working hours	$15.00
If reconnection is made after-hours on normal workdays	$30.00
If reconnection is made in an emergency action on weekends or holidays	$30.00

Note: [Commission Rule R10-16(f): Whenever sewer service is discontinued for any reason, the utility shall send a report of termination of service to the local county board of health.]

Returned Check Fee:	$25.00
Bills Due:	On billing date
Bills Past Due:	15 days after billing date

Billing Frequency:	Shall be monthly in arrears
Finance Charge for Late Payment:	1% per month will be applied to the unpaid balance of all bills still past due 25 days after the billing date.

Issued in Accordance with Authority Granted by the North Carolina Utilities Commission in Docket No. W-1166, Sub 17, on this the __4th__ day of May, 2018.

APPENDIX B

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

NOTICE TO CUSTOMERS
DOCKET NO. W-1166, SUB 17

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

Notice is hereby given that the North Carolina Utilities Commission has issued an Order granting an increase in rates and charges to MECO Utilities, Inc. (MECO), for providing water and sewer utility service in Mobile Estates Mobile Home Park in Wake County, North Carolina. The matter was scheduled for hearing subject to cancellation if significant protests were not received. The protest period has expired and no protests were received subsequent to customer notice. The hearing previously scheduled for March 22, 2018, was canceled by Commission Order issued March 12, 2018 and customer notice was provided.

The Commission has approved the following rates, effective for service rendered on and after the date of this Notice to Customers:

Monthly Metered Water Rates:	
Base charge, zero usage	\$ 14.03
Usage charge, per 1,000 gallons	\$ 6.72
Monthly Metered Sewer Rates:	
Base charge, zero usage	\$ 10.42
Usage charge, per 1,000 gallons	\$ 12.69

The approved rates will increase the average monthly combined water and sewer bill from \$84.17 to \$93.36, based on an average usage of 3,550 gallons.

Further, the Commission approved MECO's request to increase its returned check charge to \$25.00 and its disconnection/reconnection charge to \$15.00 when made during scheduled working hours and to \$30.00 when made during after-hours on normal workdays or in an emergency action on weekends or holidays.

ISSUED BY ORDER OF THE COMMISSION.
This the 4th day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. W-71, SUB 12

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Ridgecrest Water Utility, Post Office Box 128, Ridgecrest, North Carolina 28770, for Authority to Increase Rates for Water Utility Service in its Ridgecrest Service Area in Buncombe County, North Carolina	)))))	ORDER GRANTING RATE INCREASE AND REQUIRING CUSTOMER NOTICE

BY THE COMMISSION: On October 30, 2017, Ridgecrest Water Utility (Ridgecrest or Applicant) filed an application with the Commission seeking authority to increase its rates and charges for water utility service in its Ridgecrest Service Area in Buncombe County, North Carolina. Ridgecrest serves approximately 314 water customers. The present water rates were established pursuant to the Commission's Recommended Order Granting Rate Increase and Requiring Customer Notice issued on December 22, 2015, in Docket No. W-71, Sub 11 (Sub 11 Proceeding), a general rate case proceeding.

By Order dated November 28, 2017, the Commission declared the proceeding to be a general rate case and suspended the proposed new rates for up to 270 days. By Order dated December 18, 2017, the Commission scheduled a public hearing for Thursday, March 29, 2018, in the Buncombe County Courthouse, Courtroom 1A, 60 Court Plaza, Asheville, North Carolina, subject to cancelation if no significant protests were received by February 2, 2018, subsequent to customer notice.

On February 13, 2018, the Company filed its certificate of service indicating that customer notice had been served as required by the December 18, 2017 Order.

The Commission received only one protest in response to the customer notice, which was filed on February 13, 2018. On February 16, 2018, the Public Staff filed a motion to cancel the previously scheduled hearing. By Order issued on February 23, 2018, the Commission canceled the hearing and directed the Applicant to notify its customers of the cancellation.

On March 9, 2018, the Applicant filed its certificate of service indicating that notice of cancellation of the hearing had been given as required by the February 23, 2018 Order.

On March 13, 2018, the Public Staff filed the affidavit and exhibits of Lindsay A. Quant, Utilities Engineer, Water, Sewer, and Communications Division, and the affidavit of June Chiu, Staff Accountant, Water/Communications Section, Accounting Division. In these affidavits, the Public Staff found the Applicant's proposed rates to be reasonable and recommended approval. Additionally, Public Staff witness Quant stated that the Applicant is providing adequate service to its customers. On March 15, 2018, the Public Staff filed Chiu Exhibit I, which was inadvertently omitted from the Affidavit of witness Chiu filed on March 13, 2018.

On April 5, 2018, the Public Staff filed a motion requesting that the Commission approve the rates that it had recommended. In its motion, the Public Staff represented that Ridgecrest has agreed with the Public Staff's recommendations. Further, the Public Staff's motion was accompanied by a proposed order.

On April 16, 2018, the Public Staff filed a Revised Chiu Exhibit I to replace Chiu Exhibit I that was filed on March 13, 2018. In its filing, the Public Staff stated that the revisions to Chiu Exhibit I were necessary to correct the Public Staff's adjustments related to state and federal income taxes, but did not otherwise affect the Public Staff's recommended revenue increase or rates for Ridgecrest.

Based upon the foregoing, the verified application, the affidavits and exhibits filed by the Public Staff, and the entire record in this matter, the Commission makes the following

FINDINGS OF FACT

1. Ridgecrest is a public utility pursuant to G.S. 62-2(23), is subject to the jurisdiction of the Commission, and is properly before the Commission seeking authority to increase its rates and charges for water utility service to its customers in Buncombe County, North Carolina.

2. The test period established for use in this proceeding is the 12-month period ended December 31, 2016.

3. The Applicant's present and proposed rates filed in its application are as follows:

	Present Rates	Proposed Rates
Residential Rates:		
Base charge, zero usage (bi-monthly minimum)	\$ 16.98	\$ 18.00
Usage charge, per 1,000 gallons	\$ 5.30	\$ 5.55

4. The Public Staff received one customer protest letter on January 1, 2018, which was filed with the Commission on February 13, 2018.

5. On average, Ridgecrest provides metered water utility service to approximately 305 residential water customers (Ridgecrest Community) and to the additional facilities at the Ridgecrest Conference Center (Conference Center). Water service to the Ridgecrest Community and the Conference Center is metered. The water system also provides unmetered service to the Conference Center camp areas.

6. The appropriate water system allocation factor for the Ridgecrest Community usage for purposes of this proceeding is 45.95%, with 54.05% allocated to the Conference Center and Conference Center camp areas.

7. The water system serving the Ridgecrest Service Area consists of 11 wells, two water treatment facilities with treatment equipment, three water storage tanks, a number of

pressure reducing valves to help regulate water pressure at different elevations, and distribution water mains. Ridgecrest's water system is generally in good condition and is adequately operated and maintained.

8. The Applicant is providing adequate service to its customers.

9. Ridgecrest's original cost rate base for water operations consists of the following components:

Plant in service	$1,290,890
Accumulated depreciation	(923,049)
Net plant in service	367,841
Residential allocation factor	45.95%
Net utility plant in service to residents	169,023
Contributions in aid of construction	(35,141)
Amortization of accumulated tap fees	19,098
Cash working capital	11,307
Average tax accruals	(455)
Original cost rate base	$ 163,832

10. The appropriate annual level of service revenues for use in this proceeding is $107,775 under the Applicant's present rates and $113,260 under the Applicant's proposed rates.

11. The Applicant requested an increase in rates that would produce $5,485 in additional service revenues, an increase of 5.09% over present annual service revenues.

12. It is reasonable and appropriate to include total rate case costs of $503 related to this rate case proceeding and the unamortized balance of the Sub 11 Proceeding in the amount of $259, amortized over three years, resulting in annual rate case expense of $254.

13. The appropriate level of operations and maintenance expenses for use in this proceeding is $90,458.

14. The appropriate level of depreciation and amortization expense for use in this proceeding is $12;517.

15. The appropriate level of other taxes for use in this proceeding is $2,437.

16. It is reasonable and appropriate to calculate regulatory fees using the statutory rate of 0.14%.

17. Ridgecrest is a not-for-profit entity and does not have state or federal income taxes included in its water rates.

18. The appropriate level of total operating revenue deductions under present rates for use in this proceeding is $105,404. Operating revenue deductions requiring a return, exclusive of regulatory fee, amount to $105,252.

19. Pursuant to G.S. 62-133, the rate base method is the appropriate method for determining the Applicant's revenue requirement for water operations in this proceeding.

20. The rates proposed by the Applicant in this proceeding will produce an overall return of 5.32% on rate base. This return is not in excess of a reasonable level, and accordingly, the proposed rates are reasonable.

21. Based on the Public Staff's investigation, the Public Staff recommended that the applied for increase in service revenues of $5,485, or 5.09%, is justified.

22. The rates requested by Ridgecrest and recommended by the Public Staff are just and reasonable and should be approved.

23. The Applicant's proposed water rates shown below and provided in Appendix A, attached hereto, are just and reasonable and should be approved.

Residential Rates:	
Base charge, zero usage	
(bi-monthly minimum)	$ 18.00
Usage charge, per 1,000 gallons	$ 5.55

24. Ridgecrest should be allowed to increase its rates and charges so as to produce total annual operating revenues of $114,120, comprised of $113,260 in service revenues, $2,284 in miscellaneous revenues, and bad debt expense of ($1,424).

25. The Applicant's request to increase its returned check charge from $10.00 to $15.00 is reasonable and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1 THROUGH 3

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, and the affidavits of Accountant Chiu and Engineer Quant. These findings are primarily jurisdictional and informational and are uncontested.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 4 THROUGH 8

The evidence supporting these findings of fact is contained in the affidavit of Engineer Quant and in the Commission's records.

Engineer Quant stated that her investigation of Ridgecrest's rate case application included a field inspection, review of the Applicant's records, review of customer complaints, review of records from the North Carolina Division of Environmental Quality (NCDEQ), and the gathering of information from other sources.

WATER AND SEWER – RATE INCREASE

Engineer Quant observed that as a result of the customer notice, the Public Staff received one customer complaint. She commented that such complaint concerned the frequency of another rate increase and also addressed a service-related issue concerning a lack of customer service support during a particular outage incident. Engineer Quant contacted both Ridgecrest and the customer to discuss the complaint.

Engineer Quant noted that Ridgecrest provides metered water utility service to the Ridgecrest Community, consisting of approximately 305 water customers, and to the additional facilities at the Conference Center. Further, she commented that the water system also provides unmetered service to the Conference Center camp areas. Engineer Quant maintained that the original water system's installation/configuration is such that the facilities are scattered throughout the camp and the locations of the distribution mains are not known; as a result, she opined that it is not realistic to meter the camping facilities.

Further, Engineer Quant stated that the overall number of water utility customers fluctuates seasonally. She observed that, although the number of customers rises in the summer months and during the winter holiday seasons, Ridgecrest has not reported significant customer growth. Engineer Quant contended that due to the varying number of customers throughout the year, the average customer count of 305 customers was utilized in her rate analysis for this proceeding.

With respect to the water system allocation factor to the Ridgecrest Community, Engineer Quant stated that Ridgecrest originally calculated a factor of 46.06%. The Public Staff determined and the Applicant acknowledged that the consumption data was miscalculated. Engineer Quant stated that based upon the updated, corrected consumption data, the appropriate water system allocation factor was 45.95% for the Ridgecrest Community usage.

Engineer Quant inspected the Ridgecrest water system on February 28, 2018, with Mr. Daniel Redding, Facilities Manager for Ridgecrest and Mr. Raymond Sylvestre, Water Plant Operator. She described the water system as consisting of 11 wells, two water treatment facilities with treatment equipment, three water storage tanks, a number of pressure reducing valves to help regulate water pressure at different elevations, and distribution water mains. She noted that an interconnection with the Town of Black Mountain water system provides an emergency backup water supply. She commented that sewer utility service for the Ridgecrest Service Area is provided by the Metropolitan Sewerage District of Buncombe County (MSD).[1]

Further, Engineer Quant reviewed NCDEQ records and discussed the operation of the water system with Ms. Kimberly Barnett of the Asheville Regional Office of the Public Water Supply Section (PWSS). She commented that Ms. Barnett conducted a sanitary survey of the water system on April 14, 2016, and Ms. Barnett concluded that "[o]verall the system was in good working order with no major deficiencies noted on the date of the survey".

[1] Per Engineer Quant, an estimate of water/sewer usage for the Conference Center camp areas is based on NCDEQ wastewater flow design rates for camps of 60 gallons per person per day.

Further, Engineer Quant maintained that the water system is up to date on sampling and monitoring with the exception of Disinfection By Products sampling in the last quarter of 2017. She noted that Ridgecrest is required to provide public notice in 2018 to return to compliance.

Engineer Quant concluded that, based upon the Public Staff's investigation, the information provided by the Applicant and NCDEQ, and the lack of significant customer complaints, the Applicant is providing adequate service to its customers. Therefore, the Commission finds and concludes that the quality of water utility service provided by the Applicant to its customers is adequate.

Moreover, with respect to the water system allocation factor, the Commission finds and concludes that a water system allocation factor for the Ridgecrest Community usage of 45.95% recommended by the Public Staff based upon the revised consumption data provided by the Applicant is reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 9

The evidence supporting this finding of fact is contained in the Commission's records, the verified application, and in the affidavit and exhibit of Accountant Chiu.

The adjustments made by the Public Staff to the Applicant's original cost rate base included adjustments to plant in service, accumulated depreciation, contributions in aid of construction, amortization of accumulated tap fees, cash working capital, and average tax accruals.

Accountant Chiu observed that the total amount for plant in service included on the application did not agree to the amount that was approved by the Commission in the Sub 11 Proceeding. She calculated an amount for plant in service beginning with the amount approved by the Commission in the Sub 11 Proceeding and to that amount, she included the additional plant items capitalized since that rate case. Based on the recommendation of Engineer Quant, she capitalized $5,030 for motors for Well #4 and Well #13 and $4,900 for a pump and control box for Well #10.

Accountant Chiu explained that the amount of accumulated depreciation recommended by the Public Staff in this proceeding was calculated based on the year each plant asset was placed in service and the number of years in service, using the half-year convention in the first year of an asset's depreciable life. Further, Accountant Chiu stated that the Public Staff included one-eighth of operating expenses in original cost rate base as a measure of cash working capital which provides the Applicant with the funds necessary to carry on the day-to-day operations of the water utility business.

The adjustments made by Accountant Chiu to the various components of original cost rate base resulted in an amount of $163,832 for original cost rate base for use in this proceeding. The Applicant did not contest the Public Staff's adjustments to original cost rate base.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of original cost rate base for use in this proceeding is $163,832.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 10 AND 11

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, the affidavit and exhibits of Engineer Quant, and the affidavit and exhibit of Accountant Chiu.

Engineer Quant calculated annual water service revenues of $107,775 under the currently approved rates and $113,260 under the Applicant's proposed rates. According to the Public Staff's calculations, the Applicant's requested rates in this proceeding produce $5,485 in additional annual service revenues. The Applicant did not contest the Public Staff's calculations of water service revenues.

Based upon the foregoing, the Commission finds and concludes that the appropriate levels of annual service revenues at present and proposed rates for use in this proceeding are $107,775, and $113,260, respectively.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12 AND 13

The evidence supporting these findings of fact is contained in the Commission's records, the affidavit and exhibits of Engineer Quant, and the affidavit and exhibit of Accountant Chiu. The following table summarizes the amounts that the Public Staff recommended for inclusion in determining the proper level of total O&M expenses for use in this proceeding:

Item	Amount
Salaries and wages	$62,281
Administrative and office	7,004
Maintenance and repairs	7,733
Transportation	166
Electric power	10,191
Testing	939
Item	Amount
Chemicals	1,432
Permit fees and licenses	372
Purchased water treatment	16
Rate case expense	254
Miscellaneous	70
Total O&M expenses	$90,458

The Public Staff made adjustments to the levels of administrative and office, maintenance and repairs, electric power, chemicals, testing, transportation, and permit fees based upon recommendations by Engineer Quant. Accountant Chiu stated that the Applicant did not include an amount for rate case expense in its application. Accountant Chiu explained that she calculated an amount of rate case expense for this proceeding based upon the cost of the filing fee and the costs for copying and mailing notices to customers. She also calculated an amount of $259 of unamortized rate case expense from the Sub 11 Proceeding. Accountant Chiu recommended that the combined rate case costs of $762 related to costs of this proceeding and the unamortized balance of the Sub 11 Proceeding be amortized over three years resulting in annual rate case expense of $254.

The Applicant did not contest the Public Staff's adjustments to its O&M expenses.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of O&M expenses for use in this proceeding is $90,458.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 14 THROUGH 17

The evidence supporting these findings of fact is contained in the Commission's records, the affidavit of Engineer Quant, and the affidavit and exhibit of Accountant Chiu. The following table summarizes the amounts that the Public Staff recommended for inclusion in determining the proper level of total ongoing depreciation and amortization expense, regulatory fees, and taxes for use in this proceeding:

Item	Amount
Depreciation expense	$13,922
Amortization expense	(1,405)
Property taxes	0
Payroll taxes	2,277
Regulatory fees	160
State income taxes	0
Federal income taxes	0
Total depreciation and taxes	$14,954

The Public Staff made adjustments to the levels of depreciation and amortization expense, payroll taxes, and regulatory fees. Further, Accountant Chiu reclassified the amount of permit fees inadvertently recorded to gross receipts tax to O&M expenses. The Applicant did not contest the Public Staff's adjustments to depreciation and amortization expense, regulatory fees, and taxes.

Based upon the foregoing, the Commission finds and concludes that the appropriate level of depreciation and amortization expense, regulatory fees, and payroll taxes for use in this proceeding is $14,954.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 18 THROUGH 24

The evidence supporting these findings of fact is contained in the Commission's records, the verified application, the affidavit and exhibits of Engineer Quant, and the affidavit and exhibit of Accountant Chiu.

Accountant Chiu stated that based upon her investigation, the Applicant's original cost rate base at December 31, 2016, is $163,832 and the level of operating revenue deductions requiring a return (total operating expenses excluding regulatory fees and income taxes) is $105,252. Accountant Chiu stated that pursuant to G.S. 62-133, she used the rate base method to evaluate the Applicant's proposed revenue requirement. Accountant Chiu stated that the Applicant's proposed revenues are not unreasonable and would not be unfair to customers. She recommended that water rates be set to reflect the $5,485 increase requested by the Applicant, for an annual level of total operating revenues of $114,120.

Further, Engineer Quant concluded that, based upon her investigation, the rates requested by the Applicant are justified and should be approved.

Based upon the foregoing, the Commission finds and concludes that the rate base method is the appropriate method for evaluating the Applicant's proposed revenue requirement and that the monthly rates for water utility service requested by the Applicant and recommended by the Public Staff are just and reasonable and should be approved. Consequently, the Commission finds and concludes that Ridgecrest Water Utility should be allowed to increase its rates and charges so as to produce total annual operating revenues of $114,120.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 25

The evidence supporting this finding of fact is contained in the Commission's records, the verified application, and the affidavit of Engineer Quant.

In its application, Ridgecrest requested approval to increase the returned check charge from $10.00 to $15.00. Engineer Quant recommended approval of the Applicant's proposed returned check charge.

Therefore, the Commission finds and concludes that the Applicant's request to increase its returned check charge from $10.00 to $15.00, is just and reasonable and should be approved.

WHEREUPON, the Commission reaches the following

CONCLUSIONS

Based upon all the evidence including the Public Staff's recommendations, the Commission finds and concludes that the Applicant has sufficiently demonstrated the need to increase its rates for providing water utility service. Therefore, the Commission concludes that the rates proposed by the Applicant and recommended by the Public Staff are just and reasonable and should be approved. Further, the Commission finds and concludes that the Applicant's request to increase its returned check charge to $15.00 is reasonable and should be approved.

IT IS, THEREFORE, ORDERED as follows:

1. That the application for rate increase filed by Ridgecrest Water Utility on October 30, 2017, and the affidavits and exhibits of Public Staff witnesses Lindsay A. Quant, Utilities Engineer, Water, Sewer, and Communications Division, and June Chiu, Staff Accountant, Water/Communications Section, Accounting Division filed by the Public Staff on March 13, 2018 and March 15, 2018, in this docket are hereby received as evidence.

2. That Ridgecrest Water Utility is authorized to increase its rates for water utility service in its Ridgecrest Service Area in Buncombe County, North Carolina, as reflected in the Schedule of Rates, attached hereto as Appendix A. These rates shall be effective for service rendered on and after the date of this Order.

3. That the Schedule of Rates, attached hereto as Appendix A, is hereby approved and deemed filed with the Commission pursuant to G.S. 62-138.

4. That a copy of the Notice to Customers, attached hereto as Appendix B, shall be mailed or hand delivered to all customers of the Applicant within 15 days of the date of this Order, and that the Applicant shall submit to the Commission the attached Certificate of Service, properly signed and notarized, not later than 30 days after the issuance date of this Order.

ISSUED BY ORDER OF THE COMMISSION.
This the 25th day of April, 2018.

Linnetta Threatt, Deputy Clerk

APPENDIX A

SCHEDULE OF RATES

for
RIDGECREST WATER UTILITY
for providing water utility service to its customers in

RIDGECREST SERVICE AREA
Buncombe County, North Carolina

Bi-Monthly Residential Rates:	
Base charge, zero usage	\$18.00
Usage charge, per 1,000 gallons	\$ 5.55
Tap Fee:	Actual Cost
Reconnection Fee/Change of Service Fee:	\$25.00
Returned Check Fee:	\$15.00
Bills Due:	On billing date
Bills Past Due:	25 days after billing date
Billing Frequency:	Bi-monthly for service in arrears

Finance Charge for Late Payment:	1.0% per month will be applied to the unpaid balance of all bills still past due 25 days after the billing date

Issued in Accordance with Authority Granted by the North Carolina Utilities Commission in Docket No. W-71, Sub 12, on this the 25th day of April, 2018.

APPENDIX B

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

NOTICE TO CUSTOMERS

DOCKET NO. W-71, SUB 12

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

Notice is hereby given that the North Carolina Utilities Commission has issued an Order granting an increase in rates to Ridgecrest Water Utility (Ridgecrest). The Order approved the following rates for water utility service provided in Ridgecrest Service Area on and after the date of this Notice:

Residential Rates:

Base charge, zero usage (bi-monthly minimum)	$ 18.00
Usage charge, per 1,000 gallons	$ 5.55

Based upon the average bi-monthly customer consumption of 8,000 gallons, the average bi-monthly water bill will increase from $59.38 to $62.40, or 5.09%.

Further, the Commission approved Ridgecrest's request to increase its returned check charge from $10.00 to $15.00.

This the 25th day of April, 2018.

APPEARANCES:

For Water Resources, Inc.:

No counsel of record

For the Using and Consuming Public:

John D. Little, Staff Attorney
Public Staff – North Carolina Utilities Commission
4326 Mail Service Center
Raleigh, North Carolina 27699-4300

HINTON, HEARING EXAMINER: On April 18, 2018, Water Resources, Inc. (WRI or Company) filed an application with the Commission seeking authority to increase its rates for water utility service in Rocky River Plantation Subdivision (Rocky River) in Cabarrus County and River Walk Subdivision (River Walk) in Mecklenburg County, North Carolina.

By Order dated May 14, 2018, the Commission declared this docket to be a general rate case, suspended the Company's proposed rates, scheduled a hearing, and required customer notice.

WRI filed the Commission-required Certificate of Service on February 20, 2018, indicating that the Company provided the Notice to Customers in compliance with the May 14 Order.

On August 29, 2018, the Public Staff filed its direct testimony of witnesses June Chiu and David C. Furr and the Affidavit of Bob R. Hinton.

Subsequent to the filing of WRI's Application in this docket, the Public Staff engaged in substantial discovery of WRI regarding the matters addressed by the Company's Application and further examined the relevant books and records of WRI with respect to its Application. The Public Staff also conducted field inspections of the water systems at Rocky River and River Walk.

Six Consumer Statements of Position were filed on September 12, 2018. The issues in these statements concern the magnitude of the requested rate increase, customer service, and water quality.

On September 20, 2018, a hearing was held at the Mecklenburg County Courthouse in Mecklenburg County, Charlotte, North Carolina. No members of the public or WRI customers were present. The Company offered the testimony of Dennis Abbott, and the Public Staff offered the testimony of David C. Furr. The testimony and exhibits of June Chiu, David C. Furr, and the affidavit of Bob R. Hinton were received in evidence at the Public Staff's request.

The Public Staff indicated the correct rates and charges are contained in Public Staff Witness Furr's Exhibit 8 to his Pre-Filed Direct Testimony. The Public Staff also indicated that Public Staff's Witness Furr's summary of the agreed upon rates and charges at the September 20, 2018 hearing were not correct.

Based on the foregoing, the verified Application, the testimony and exhibits presented at the hearing, and the entire record in this proceeding, the Hearing Examiner makes the following:

FINDINGS OF FACT

1. WRI is a corporation duly organized under the law and is authorized to do business in the State of North Carolina. The Company is subject to the regulatory oversight of this Commission.

2. WRI is properly before the Commission pursuant to N.C. Gen. Stat. § 62-1 et seq. seeking a determination of the justness and reasonableness of its proposed rates and charges for its water utility operations.

3. As of December 31, 2017, WRI served 114 water customers at Rocky River in Cabarrus County, and 32 water customers at River Walk in Mecklenburg County.

4. The Company's existing and proposed rates are as follows:

	Proposed Rates	Present Rates
Rocky River		
Monthly Metered Water Rates:		
Base charge, zero usage	$ 9.28	$11.20
Usage charge, per 1,000 gallons	$ 2.57	$ 3.10

WATER AND SEWER – RATE INCREASE

River Walk

Monthly Metered Water Rates:		
Base charge, zero usage	$37.6	$40.68
Usage charge, per 1,000 gallons	$ 9.42	$10.18

5. The test period in this proceeding is the 12 months ending December 31, 2017.

6. Neither water system is in compliance with North Carolina Department of Environmental Quality (DEQ) regulations.

7. A sanitary survey for Rocky River was conducted by DEQ on March 29, 2018, and WRI was sent a Notice of Deficiency letter, dated April 3, 2018. The stated deadlines for resolving the issues was July 31, 2018, and further extended to July 31, 2018. As of August 16, 2018, the following items were not resolved:

a. The hypochlorite solution injection point is not in the location shown on the approved plans for the chemical feed system improvements, which violates the requirements of 15A NCAC 18C.1304(a);

b. A faucet or spigot for sampling treated water prior to delivery to the first customer was not provided, which violates the requirements of 15A NCAC 18C.0402(e);

c. The well house provided for Well 1 was not secured with a lock and key, which violates the requirements of 15A NCAC 18C.0402(f);

d. Totalizing meters for Well 1 and Well 2 were not functional, which violates the requirements of 15A NCAC 18C.0402(g)(6); and

e. Approximately three residual disinfection tests in the distribution system are performed per week. The water system is classified as a B Distribution system, which requires a minimum of five residual disinfection tests to be performed in the distribution system per week. This is a violation of the requirements of 15A NCAC 18C.1302(a)(1)(A).

8. The DEQ Notice of Deficiency letter, dated April 3, 2018, also made the following recommendations:

a. Due to the results from the iron and manganese field readings occasionally exceeding the secondary maximum contaminant levels, it is recommended that the water filter be evaluated by a qualified professional to assess the operation and maintenance of the water filter;

b. That the Hach Iron and Manganese Color Disc Test Kit used to measure the iron and manganese concentrations reported on the monthly operation reports, be calibrated in accordance with the manufacturer's instructions, that no expired reagents are used, and that the test kit be stored and maintained in accordance with the manufacturer's instructions;

c. That the elevated storage tank be regularly inspected by a qualified professional and that the vent be inspected on a regular basis to ensure that the screen in intact; and

d. That the holes observed in the lower portion of the western wall of the building containing the filter be repaired.

9. Water meters at Rocky River are over 25 years old, and the Public Staff has recommended that they be replaced.

10. Cases of cloudy water due to suspended air, and brown water due to high iron content have been observed at Rocky River, and WRI should take steps to better monitor water quality.

11. A sanitary survey for River Walk was conducted by DEQ on December 6, 2017, and WRI was sent a Notice of Deficiency letter, dated January 2, 2018. The stated deadlines for resolving issues was extended to May 2, 2018. As of August 16, 2018, the following items were not resolved:

a. The cover over the well holes for Well 1 was not secured against unauthorized access, and a locking mechanism was not provided, which violates the requirements of 15A NCAC 18C.0405(f);

b. A properly sized vacuum relief valve is not provided for the hydropneumatic tank, which violates the requirements of 15A NCAC 18C.0405(c)(3); and

c. The Department of Labor inspection for the hydropneumatic tank is expired, which violates the requirements of 15A NCAC 18C.0405(c)(5).

12. The DEQ Notice of Deficiency letter, dated January 2, 2018, also made the following recommendations:

a. To achieve a proper free chlorine residual in the water system, that the drop pipe, tubing, and injection point associated with the hypochlorite treatment equipment be cleaned or replace as necessary to ensure the proper flow of chemicals. If the Operator Responsible Charge is unable to increase the sodium hypochlorite feed rate after the corrective actions have been taken, that further investigation into the issue be performed until a solution can be identified and implemented;

b. That the leaking Well 1 blow-off valve be repaired or replaced;

c. That the hydropneumatic tank and ground storage tank be either replaced or cleaned and recoated by a qualified professional;

d. That trees and limbs surrounding both well houses and water tanks be trimmed as necessary to ensure that no water system components would be damaged in the event of falling trees and limbs; and

e. That bacteria sampling sites be rotated on a monthly basis and that bacteria sample siting plan be developed.

13. Insulation in the River Walk water treatment building needs to be properly installed.

14. WRI should investigate any possible operational issues that may be causing high power expenses.

15. WRI's customer service and communications needs to improve.

16. WRI should keep a log of customer complaints. The log should include the date and time the customer contacted WRI or its answering service, a description of the complaint, what was done to resolve the issue, and the date and time that resolution of the issue was communicated back to the customer. A copy of these records should be filed in this docket on a quarterly basis until further order of the Commission.

17. WRI should return customer calls within 60 minutes of receipt, and document this in the log book of customer complaints.

18. WRI should respond to outages within 60 minutes of receiving an outage report from a customer, and document this in the log book of customer complaints.

19. The original cost rate base for use in this proceeding for Rocky River is ($1,176), consisting of plant in service of $77,743, plus cash working capital of $6,498, less accumulated depreciation of $71,546, contributions in aid of construction of $13,295, and average tax accruals of $576.

20. The original cost rate base for use in this proceeding for River Walk is $21,851, consisting of plant in service of $33,633, plus cash working capital of $3,438, less accumulated depreciation of $15,023, contributions in aid of construction of $0, and average tax accruals of $197.

21. The appropriate level of total revenues for use in this proceeding for Rocky River is $32,084 under the Company's present rates and $38,862 under the proposed rates.

22. The appropriate level of total revenues for use in this proceeding for River Walk is $33,366 under the Company's present rates and $36,055 under the proposed rates.

23. The appropriate level of operating revenue deductions for Rocky River under present rates for use in this proceeding is $56,026. Operating revenue deductions exclusive of regulatory fee and income taxes amount to $55,981.

24. The appropriate level of operating revenue deductions for River Walk under present rates for use in this proceeding is $30,551. Operating revenue deductions exclusive of regulatory fee and income taxes amount to $29,646.

25. It is reasonable and appropriate to determine the revenue requirement for WRI water rates using the operating ratio methodology as allowed by N.C. Gen. Stat. § 62-133.1.

26. A margin of 7.5% on operating revenue deductions requiring a return is appropriate for use in this proceeding.

27. WRI's present and proposed service revenues for the 12-month period ending December 31, 2017 are as follows:

	Present	Proposed
Rocky River	$32,829	$39,607
River Walk	$33,468	$36,157

28. The revenues generated by the Company's proposed water rates for Rocky River are not unreasonable and would not be unfair to its customers.

29. The annual service revenue requirement for River Walk necessary to allow the Company the opportunity to earn the 7.5% return found just and reasonable is $32,696, which is a decrease of $773 from the service revenues at present rates.

30. The following rates will produce the annual level of revenues approved herein for water operations at River Walk:

Base Charge, zero usage	$37.50
Usage charge, per 1,000 gallons	$ 9.07

31. WRI agrees with the Public Staff's rates and recommendations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 1-5

(Background Information)

These findings of fact are essentially informational, procedural, and jurisdictional in nature, and the matters which they involve are for the most part uncontroversial. They are supported by information contained in the verified Application, the affidavit and testimony and Exhibits of the Public Staff's witnesses and Company witness Abbott, and the Commission files and records regarding this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 6-18

(Violations of Water Systems Regulations and Recommendations)

These findings of fact are found in the testimony and exhibits of Public Staff witness Furr, and are uncontested by WRI. At the hearing held on September 20, 2018, Company witness Abbott did not contest any of the findings, and agreed to the Public Staff recommendations.

The Hearing Examiner agrees with the Public Staff's observations and recommendations. WRI needs to take the operation of its water systems seriously and devote considerably more attention to them than it has in the past. WRI should be ordered to take the corrective measures recommended by Public Staff witness Furr. WRI should be aware that if these corrective measures are not implemented, the Commission has the authority to impose substantial penalties.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 19-25

(Original Cost Rate Base, Total Revenue, Operating Revenue, Revenue Requirement)

These findings of fact are based on the testimony and exhibits of Public Staff witness Chiu. WRI did not take issue with the Public Staff's position on these issues.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 26

(7.5% Operating Margin)

This finding of fact is based on the affidavit of Public Staff witness Bob Hinton, and the testimony and exhibits of Public Staff witness Chiu. WRI did not take issue with the Public Staff's position on this issue.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 27

(Proposed Service Revenues)

This finding of fact is based on the testimony and exhibits of Public Staff witnesses Furr and Chiu, and are uncontested by WRI.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 28-29

(Annual Service Revenue)

These findings of fact are based on the testimony and exhibits of Public Staff witness Chiu, and are uncontested by WRI.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 30

(Rate Recommendation)

This finding of fact is based on the testimony and exhibits of Public Staff witness Furr. Although Public Staff witness Furr's Pre-filed Direct Testimony and his summary of the proposed rates were not accurate, the correct rates are contained in Public Staff witness Furr's Exhibit 8.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT 31

(Agreement of Public Staff and WRI to Recommended Rates)

This finding of fact is based on the testimony and exhibits of the Public Staff's witnesses and Company witness Abbott.

IT IS, THEREFORE, ORDERED as follows:

1. That the Schedules of Rates, attached hereto as Appendix A and B, are hereby approved and deemed to be filed with the Commission pursuant to N.C. Gen. Stat §. 62-138;

2. That the Schedules of Rates, attached hereto as Appendix A and B, are hereby authorized to become effective for service rendered on and after the effective date of this Order;

3. That the Notice to Customers, attached hereto as Appendix C, shall be mailed with sufficient postage or hand delivered to all affected customers in conjunction with WRIs next regularly scheduled billing process;

4. That WRI shall file the attached Certificate of Service, properly signed and notarized, not later than 10 days after the Notice to Customers is mailed or hand delivered to customers;

5. That WRI correct the deficiencies stated in findings of fact 7 and 11 within 90 days of the date of this order;

6. That WRI complete the recommendations identified in findings of fact 8, 9, and 12, within 6 months of the date of this order;

7. That WRI investigate any possible operational issues that may be causing high power expenses at River Walk;

8. That WRI shall file a report with the Commission within 90 days after the date this Recommended Order becomes final and effective; showing that the requirements of ordering paragraphs 5 above have been completed;

9. That WRI shall file a report with the Commission within 6 months after the date this Recommended Order becomes final and effective, showing that the recommendations of ordering paragraph 6 above have been completed;

10. That WRI keep a log of customer complaints. The log shall include the date and time the customer contacted WRI or its answering service, a description of the complaint, what was done to resolve the issue, and the date and time that resolution of the issue was communicated back to the customer. A copy of these records shall be filed in this docket on a quarterly basis until further order of the Commission;

11. That WRI return customer calls within 60 minutes of receipt, and document this in the log book of customer complaints; and

12. That WRI respond to outages within 60 minutes of receiving an outage report from a customer, and document this in the log book of customer complaints.

ISSUED BY ORDER OF THE COMMISSION.
This the 21st day of November, 2018.

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by Etowah Sewer Company, Inc., Post Office Box 1659, Etowah, North Carolina 28729, for Transfer of the Sewer Utility System Serving Etowah in Henderson County, North Carolina, to the City of Hendersonville (Exempt From Regulation)	))))))	ORDER RESCINDING COMMISSION'S ORDER APPROVING TRANSFER TO OWNER EXEMPT AND REQUIRING CUSTOMER NOTICE

BY THE COMMISSION: On July 21, 2016, Etowah Sewer Company, Inc. (Etowah), and the City of Hendersonville, North Carolina (Hendersonville), filed an application with the Commission seeking authority to transfer Etowah's sewer utility service serving the unincorporated community of Etowah in Henderson County, North Carolina, to Hendersonville, which is exempt from Commission regulation. Attached to the application was a purchase agreement under which Hendersonville had agreed to purchase the Etowah sewer system for $1,026,000. Etowah currently provides sewer utility service to approximately 375 residential customers and 42 commercial customers in the unincorporated community of Etowah in Henderson County. Hendersonville provides water utility service to this service area.

On November 22, 2016, the Commission issued an Order Approving Transfer to Owner Exempt, Canceling Franchise, Releasing Bond, and Requiring Customer Notice (Order Approving Transfer). The Order Approving Transfer authorized Etowah to transfer its sewer utility system to Hendersonville, required Etowah to provide written notification to the Commission within five days after the closing of the transfer of the sewer system was completed, allowed the cancellation of the franchise granted to Etowah in Docket No. W-933, Sub 0, effective on the date Etowah filed with the Commission written notification that the closing of the transfer of the sewer system had been completed, allowed the release of the $20,000 bond and surety held by the Commission to Etowah upon receipt of written notification to the Commission that closing of the transfer of the sewer system had been completed, and required customer notice. Certificates of Service were filed by both Etowah and Hendersonville.

On March 2, 2018, Etowah filed a letter with the Commission requesting that the Order Approving Transfer be rescinded. In its letter, Etowah stated that after completion of negotiations with Hendersonville, it learned of an inter-local agreement between Hendersonville and Henderson County, which required County approval prior to Hendersonville providing sewer utility service within the County. At the regular County Board of Commission's meeting on July 19, 2017, the County voted against the project. Etowah indicated that as a result, the sale of the system will not take place.

On March 26, 2018, the Public Staff presented the matter at the Commission's Staff Conference and recommended that the Order Approving Transfer be rescinded, and that customers be notified.

Based on the foregoing, the Commission is of the opinion that the Order Approving Transfer should be rescinded and that customers should be notified.

IT IS, THEREFORE, ORDERED as follows:

1. That the Order Approving Transfer to Owner Exempt, Canceling Franchise, Releasing Bond, and Requiring Customer Notice, issued on November 22, 2016, is hereby rescinded effective the date of this Order.

2. That a copy of this Order shall be mailed with sufficient postage or hand delivered by Etowah to all customers affected no later than 10 days after the date of this Order; and that Etowah shall submit to the Commission the attached Certificate of Service, properly signed and notarized, not later than 15 days after the date of this Order.

ISSUED BY ORDER OF THE COMMISSION.

DOCKET NO. W-1317, SUB 12

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Recommendation of Penalty by the N.C. Underground Damage Prevention Review Board against Scott Beatty for Violation of the Underground Utility Safety and Damage Prevention Act	)))))	ORDER IMPOSING PENALTY

BY THE COMMISSION: On August 8, 2018, the Underground Damage Prevention Review Board (the Board) notified the Commission that the Board made a final determination in the above-captioned proceeding, recommending a penalty be assessed against Scott Beatty of Everything Underground, for a violation of the provisions of Chapter 87, Article 8A of the General Statutes. The Board recommends that Mr. Beatty in be required to pay a civil penalty of $1,000.00. The Board further states that it notified Mr. Beatty of its determination and that the time period for Mr. Beatty to request a hearing before the Board has expired. Pursuant to N.C.G.S. § 87-129(b1), the Commission shall issue an order imposing the Board's recommended penalty.

IT IS, THEREFORE, ORDERED as follows:

1. That upon the recommendation of the N.C. Underground Damage Prevention Review Board Scott Beatty of Everything Underground, shall be, and is hereby, required to pay a civil penalty of $1000.00;

2. That the Chief Clerk of the Commission shall deliver a copy of this order to Scott Beatty of Everything Underground, with an explanation of the right to appeal provided in N.C.G.S. § 87-129(b1), attached hereto as Attachment A; and

3. That Scott Beatty of Everything Underground, shall, within thirty days of the date of this order, file with the Commission either a notice of appeal or evidence of completion of the required training and education.

ISSUED BY ORDER OF THE COMMISSION.
This the 13th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Attachment A. Explanation of Right to Appeal under N.C.G.S. § 87-129.

Pursuant to the foregoing Order Imposing Penalty, the North Carolina Underground Damage Prevention Review Board (the Board) determined that you violated one or more provisions of the Underground Utility Safety and Damage Prevention Act (the Act) and recommended that a penalty be assessed against you.

You have the right to appeal the Board's determination by initiating an arbitration proceeding before the Utilities Commission within 30 days of the date of this Order. If you elect to initiate an arbitration proceeding, you must file a written request in the docket assigned to your case and pay a filing fee of $250.00 to the Utilities Commission at the following address:

M. Lynn Jarvis, Chief Clerk
North Carolina Utilities Commission
4325 Mail Service Center
Raleigh, NC 27699-4300

When the Utilities Commission receives your written request and the $250.00 filing fee, the Commission will direct the parties to the dispute to select an arbitrator. An arbitrator is a neutral third party selected by the parties to resolve the dispute. The parties are responsible for selecting and contracting with the arbitrator. Upon completion of the arbitration process, the arbitrator will deliver a report to the Utilities Commission and the Utilities Commission will enter an order encompassing the outcome of the arbitration process, including a determination of fault, a penalty, and assessing the costs of arbitration to the non-prevailing party.

DOCKET NO. W-1160, SUB 32

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Notification by KDHWWTP, LLC, Post Office Box 3629, Kill Devil Hills, North Carolina 27948, of Intention to Begin Operations in an Area Contiguous to a Present Service Area to Provide Sewer Utility Service at 111 Carolyn Drive, Kill Devil Hills, Dare County, North Carolina	))))))	ORDER RECOGNIZING CONTIGUOUS EXTENSION

BY THE COMMISSION: On November 9, 2017, KDHWWTP, LLC (KDH), filed a notification of intention to begin operations in an area contiguous to a present service area. KDH desires to expand sewer utility service to a new customer, Florida OBX, LLC (Florida OBX) at 111 Carolyn Drive, Kill Devil Hills, Dare County, North Carolina. The service area covered is the area shown on the plans attached as Appendix B to the notification form filed in this docket. Florida OBX is located close to the footprint of KDH's service territory. KDH states that there are no other sewer service providers, either public utility or municipal, in the location which KDH proposes to serve. KDH's proposed rates are the same as currently approved in its present franchised service area.

The Public Staff presented this matter at the Commission's Staff Conference on March 5, 2018.

Based upon the verified notification and the entire record in this matter, the Commission makes the following

FINDINGS OF FACT

1. KDH presently holds a sewer franchise serving approximately 62 customers in Dare County, North Carolina, and its record of service is satisfactory.

2. KDH has an unusual certificate of public convenience and necessity because the service area was defined as customers being served rather than a geographical area.[1] Florida OBX is located close to the existing customers and along an existing KDH main. KDH states that there are no other sewer service providers, either public utility or municipal, in the location that KDH proposes to serve. In the unusual circumstance of a service area defined by customers rather than geography, and especially given the unusual history of this franchise, and without creating a precedent for other cases, the Commission will treat the matter as a contiguous extension.

3. Under Permit No. WQ0002829, dated July 14, 2017, the North Carolina Department of Environmental Quality, Division of Water Resources (DWR) approved modifying the disposal capacity from 500,000 gallons per day (gpd) to 660,000 gpd.

[1] See Docket No. W-1160, Sub 0.

4. KDH has entered an agreement with Florida OBX to sell capacity from its wastewater treatment plant at its Commission-approved capacity fee of $12.98 per gpd. Under the agreement, Florida OBX is allocated 1,320 gpd of capacity for a total purchase price of $17,133.60. Pursuant to the agreement, Florida OBX will install any required wastewater pump station as well as necessary piping and equipment to connect to the existing KDH collection system. Upon completion, and upon request of KDH, the pump station and pipes will be conveyed to KDH at no cost. The pump station will require a DWR Water Quality Permit prior to connecting to KDH system.

5. KDH has requested waiver of filing the five-year projected income and cash flow statements as only one customer is being added using only 1,320 gpd of capacity, which will not have a significant impact on KDH's revenues and expenses. The Public Staff supported this request, and the Commission finds the request reasonable under the circumstances.

6. KDH has the technical, managerial, and financial capacity to provide sewer utility service for the proposed service connection.

7. KDH posted a $150,000 bond in Docket No. W-1160, Sub 16, which was designated to cover all extensions of service up to the 500,000 gallons per day of wastewater treatment capacity. Therefore, no additional bond will be required for this application.

CONCLUSIONS

Based on the foregoing and the recommendations of the Public Staff, the Commission is of the opinion that the bond previously posted in Docket No. W-1160, Sub 16, should be accepted as covering the notification in this docket; that prior to accepting Florida OBX onto the KDH system, KDH shall obtain ownership and operational responsibility for the pump station and line from the pump station to the KDH collection system and a DWR Permit issued in the name of KDH; that KDH should file written notification with the Commission when such requirements have been met; and that the notification to provide sewer service to 111 Carolyn Drive, Kill Devil Hills, Dare County, North Carolina should be recognized.

IT IS, THEREFORE, ORDERED as follows:

1. That the $150,000 bond and surety filed in Docket No. W-1160, Sub 16, is intended to cover the service expansion in this notification and is hereby accepted and approved.

2. That the contiguous extension of sewer utility service from KDH's existing service area to 111 Carolyn Drive, in Kill Devil Hills, Dare County, North Carolina, is hereby recognized.

3. That Appendix A constitutes the Certificate of Public Convenience and Necessity.

4. That the Schedule of Rates previously approved for KDH (see Docket Nos. W-1160, Sub 24 and M-100, Sub 138 Order Approving Tariff Revision and Requiring Customer Notice dated December 7, 2016) are recognized as being applicable for service to a commercial customer. These are the same rates approved by the Commission for KDH's other franchised areas.

5. That prior to accepting the customer, KDH shall obtain ownership and operational responsibility for the pump station and line from the pump station to the KDH collection system and a DWR Permit issued in the name of KDH. Further, KDH shall file a written notification with the Commission when these requirements have been met.

ISSUED BY ORDER OF THE COMMISSION.

DOCKET NO. WR-910, SUB 24

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Southwood Realty Company, Post Office Box 280, Gastonia, North Carolina 28053, for Certificate of Authority to Charge for Water and/or Sewer Service Utilizing the Hot Water Capture, Cold Water Allocation Method in The Park Apartments in Gaston County, North Carolina	)))))))	ORDER GRANTING HWCCWA CERTIFICATE OF AUTHORITY AND APPROVING RATES

BY THE COMMISSION: On January 5, 2018, Southwood Realty Company (Applicant), filed an application with the Commission seeking a **hot water capture, cold water allocation (HWCCWA)** certificate of authority to charge for water and/or sewer utility service provided in The Park Apartments in Gaston County, North Carolina, and for approval of rates. The Applicant purchases water and sewer service from Two Rivers Utilities (TRU).

On July 14, 2017, in Docket No. WR-910, Sub 22, the Commission granted a full-capture certificate of authority to the Applicant for providing water and sewer service to all 118 units at The Park Apartments. In this current application, the Applicant is requesting that the full-capture certificate of authority for The Park Apartments (all 118 units) be converted to a HWCCWA certificate of authority.

Based upon the filings of the Applicant, the Public Staff has recommended approval of an Administrative Fee of $13.20 (consisting of $3.75 for the Applicant's meter reading, billing, and collecting costs plus a pass through of TRU's $9.45 base charge for water and sewer service). Based upon 4,000 gallons per month usage and rates of $2.95 per 1,000 gallons for water and $3.88 per 1,000 gallons for sewer, the total monthly bill will be $40.52 ($27.32 usage charge and $13.20 administrative fee).

Based upon the foregoing, the Commission is of the opinion that the Applicant should be granted a HWCCWA certificate of authority to charge for water and/or sewer service and that the Public Staff's recommended rates should be approved. Further, the Commission finds and concludes that the full-capture certificate of authority granted on July 14, 2017, in Docket No. WR-910, Sub 22, should be canceled. The Commission is also of the opinion that, if TRU's base charge should be reduced for any reason, the Applicant should be required to notify the Commission immediately for a tariff revision.

IT IS, THEREFORE, ORDERED as follows:

1. That Southwood Realty Company, is granted a HWCCWA certificate of authority to charge for water and/or sewer service for The Park Apartments in Gaston County, North Carolina, pursuant to G.S. 62-110(g)(1) and Commission Rules R18-1 through R18-8 (see

http://www.ncuc.net/ncrules/Chapter18.pdf). This Order shall constitute the Certificate of Authority to Charge for Water and/or Sewer Service.

2. That the Schedule of Rates, attached as Appendix A, is approved and deemed to be filed with the Commission pursuant to G.S. 62-138. **Said Schedule of Rates is authorized to become effective for service rendered on and after the date of this Order.**

3. That, if TRU's base charge should be reduced for any reason, the Applicant shall notify the Commission immediately for a tariff revision.

4. That a copy of the Notice to Customers, attached as Appendix B, shall be mailed with sufficient postage or hand delivered by the Applicant to all its customers in The Park Apartments contemporaneously with the next billing to customers.

5. That the full-capture certificate of authority issued to Southwood Realty Company, in Docket No. WR-910, Sub 22, is hereby canceled.

6. That, if the service area is sold or the ownership changes, the Applicant and the new owner shall file an Application for Transfer of Authority (Form WR2 may be found on the Commission's website – www.ncuc.net). Failure to do so may result in revocation of the certificate of authority and suspension of rates.

ISSUED BY ORDER OF THE COMMISSION.

DOCKET NO. WR-2488, SUB 0 DOCKET NO. WR-1642, SUB 1 In the Matter of Application by Evolve Sneads Ferry, LLC, 2918-A Martinsville Road, Greensboro, North Carolina 27408, for Authority to Transfer Certificate of Authority to Charge for Water and/or Sewer Utility Service in Evolve at Stones Bay Apartments (formerly The Quarters at Stones Bay Apartments, Phase II) in Onslow County, North Carolina from The Quarters at Stones Bay II, LLC DOCKET NO. WR-2488, SUB 1 In the Matter of Application by Evolve Sneads Ferry, LLC, 2918-A Martinsville Road, Greensboro, North Carolina 27408, for Certificate of Authority to Charge for Water and/or Sewer Service in Evolve at Stones Bay Apartments (formerly The Quarters at Stones Bay Apartments, Phase I) in Onslow County, North Carolina	ORDER GRANTING TRANSFER OF CERTIFICATE OF AUTHORITY, GRANTING CERTIFICATE OF AUTHORITY, COMBINING CERTIFICATES OF AUTHORITY, AND APPROVING RATES

BY THE COMMISSION: On January 23, 2018, Evolve Sneads Ferry, LLC (Applicant), filed an application with the Commission seeking authority to transfer the certificate of authority to charge for water and/or sewer utility service provided in Evolve at Stones Bay Apartments (formerly The Quarters at Stones Bay Apartments, (Phase II) in Onslow County, North Carolina, from The Quarters at Stones Bay II, LLC and for approval of rates.

On January 31, 2018, in Docket No. WR-2488, Sub 1, the Applicant filed an application with the Commission seeking a certificate of authority to charge for water and/or sewer utility service provided in Evolve at Stones Bay Apartments (formerly The Quarters at Stones Bay Apartments, Phase I) in Onslow County, North Carolina, and for approval of rates.

In its applications, the Applicant has requested to combine The Quarters at Stones Bay Apartments, Phases I and II into one apartment complex known as Evolve at Stones Bay Apartments and for the Commission to combine the two separate certificates of authority to charge for water and/or sewer utility service in Evolve At Stones Bay Apartments into one certificate of authority which includes both phases. The Applicant purchases water service from Onslow Water and Sewer Authority (ONWASA).

Based upon the filings of the Applicant, the Public Staff has recommended approval of an Administrative Fee of $7.79 (consisting of $3.75 for the Applicant's meter reading, billing, and collecting costs plus a pass through of ONWASA's $4.04 base charge for water service). Based upon 4,000 gallons per month usage and rates of $3.75 per 1,000 gallons for water, the total monthly bill will be $22.79 ($15.00 usage charge and $7.79 administrative fee).

Based upon the foregoing, the Commission is of the opinion that the Applicant should be granted a certificate of authority to charge for water service in Evolve at Stones Bay Apartments (consisting of the combined Phases I and II) and that the Public Staff's recommended rates should be approved. The Commission is also of the opinion that, if ONWASA's base charge should be reduced for any reason, the Applicant should be required to notify the Commission immediately for a tariff revision.

IT IS, THEREFORE, ORDERED as follows:

1. That Evolve Sneads Ferry, LLC, is granted a certificate of authority to charge for water service in Evolve at Stones Bay Apartments (consisting of the combined Phases I and II) in Onslow County, North Carolina, pursuant to G.S. 62-110(g)(1). This Order shall constitute the Certificate of Authority to Charge for Water Service.

2. That the Schedule of Rates, attached as Appendix A, is approved and deemed to be filed with the Commission pursuant to G.S. 62-138. **Said Schedule of Rates is authorized to become effective for service rendered on and after the date of this Order.**

3. That, if ONWASA's base charge should be reduced for any reason, the Applicant shall notify the Commission immediately for a tariff revision.

4. That a copy of the Notice to Customers, attached as Appendix B, shall be mailed with sufficient postage or hand delivered by the Applicant to all their customers in Evolve at Stones Bay Apartments contemporaneously with the next billing to customers.

5. That the certificate of authority issued to The Quarters at Stones Bay II, LLC, in Docket No. WR-1642, Sub 0, is hereby canceled.

6. That, if the service area is sold or the ownership changes, the Applicant and the new owner shall file an Application for Transfer of Authority (Form WR2 may be found on the Commission's website – www.ncuc.net). Failure to do so may result in revocation of the certificate of authority and suspension of rates.
