ONE-HUNDRED EIGHTH REPORT

OF THE

NORTH CAROLINA

UTILITIES COMMISSION

ORDERS AND DECISIONS

Volume I

ISSUED FROM
JANUARY 1, 2018 THROUGH DECEMBER 31, 2018

ONE-HUNDRED EIGHTH REPORT
of the
NORTH CAROLINA UTILITIES COMMISSION

ORDERS AND DECISIONS

Issued from

January 1, 2018, through December 31, 2018

Edward S. Finley, Jr., Chairman

*Bryan E. Beatty, Commissioner

ToNola D. Brown-Bland, Commissioner

Jerry C. Dockham, Commissioner

James G. Patterson, Commissioner

Lyons Gray, Commissioner

Daniel G. Clodfelter, Commissioner

*Charlotte A. Mitchell, Commissioner

North Carolina Utilities Commission
Office of the Chief Clerk
M. Lynn Jarvis
4325 Mail Service Center
Raleigh, North Carolina 27699-4325

The Statistical and Analytical Report of the North Carolina Utilities Commission is printed separately from the volume of Orders and Decisions and will be available from the Office of the Chief Clerk of the North Carolina Utilities Commission upon order.

*Charlotte A. Mitchell was sworn in on January 26, 2018, replacing Bryan E. Beatty.

LETTER OF TRANSMITTAL

December 31, 2018

The Governor of North Carolina
Raleigh, North Carolina

Sir:

Pursuant to the provisions of Section 62-17(b) of the General Statutes of North Carolina, providing for the annual publication of the final decisions of the Utilities Commission on and after January 1, 2018, we hereby present for your consideration the report of the Commission's significant decisions for the 12-month period beginning January 1, 2018, and ending December 31, 2018.

The additional report provided under G.S. 62-17(a), comprising the statistical and analytical report of the Commission, is printed separately from this volume and will be transmitted immediately upon completion of printing.

Respectfully submitted,

NORTH CAROLINA UTILITIES COMMISSION

Edward S. Finley, Jr., Chairman

ToNola D. Brown-Bland, Commissioner

Jerry C. Dockham, Commissioner

James G. Patterson, Commissioner

Lyons Gray, Commissioner

Daniel G. Clodfelter, Commissioner

Charlotte A. Mitchell, Commissioner

M. Lynn Jarvis, Chief Clerk

DOCKET NO. M-100, SUB 147

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Amendment to Certain Rules	)))	ORDER AMENDING RULE R1-28 TO REQUIRE THREE-HOLE PUNCHED COPIES TO COURT REPORTER

BY THE COMMISSION: In an effort to provide for judicial economy and to assist the Court Reporter in the execution of duties, the Commission finds good cause to amend Rule R1-28(e) in Chapter 1, Practice and Procedure of the Commission's Rules and Regulations to require the 15 paper copies be three-hole punched.

IT IS, THEREFORE, ORDERED that current Commission Rule R1-28 is amended effective as of the date of this Order as set forth herein in Appendix A.

ISSUED BY ORDER OF THE COMMISSION.
This the 17th day of April, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Brown-Bland did not participate in this decision.

APPENDIX A

Rule R1-28. GIVING NOTICE OR FILING PAPERS WITH THE COMMISSION BY MAIL; ELECTRONIC FILING.

(a) Any notice, motion, pleading, or other document or paper may be filed with or served on the Commission by hand delivery, courier service, or United States mail, unless required by statute to be filed or served by some other means, but the same shall not be deemed filed or served until the day and date actually received at the office of the Commission in Raleigh. Rule R1-27 also applies to giving notice of filing papers by mail. In addition, any notice, motion, pleading, or other document may be electronically filed with the Commission using the Commission's online electronic filing system.

(b) An electronic filing may consist of one or multiple files, but all of the files in a filing must be either public or confidential and the filing so marked when made electronically. Except as provided in Section (e) below, do not file paper copies of documents that are filed electronically. Other provisions of any statute, rule, or order regarding the content and format of specific filings remain applicable.

(c) If filed electronically, post-hearing briefs, proposed findings of fact, and conclusions of law shall be filed in noncompressed editable Microsoft Word or ASCII Text format; where possible, all other documents filed electronically should also be filed in a noncompressed editable or searchable format rather than in an image file format.

(d) The typed characters representing the name of a person shall be sufficient to show that such person has signed the pleading or other document for purposes of electronic filing. Verification pages, when required, shall be printed, signed, notarized, converted to an electronic format, and included in the electronic filing as a separate file.

(e) The following documents should be filed electronically; provided, however, fifteen (15) three-hole punched paper copies of the entire filing, one of which shall be single-sided, must be provided to the Commission on the following business day in lieu of the number of copies required pursuant to the applicable statute, rule, or order. If such filing is made electronically on the day of or day before a hearing on the matter, the paper copies shall be provided to the Commission no later than one (1) hour prior to the scheduled start of the hearing. The failure to provide the required number of paper copies within the prescribed timeframe may result in the electronic filing being rejected and excluded from the record in that proceeding.

(1) For all Class A and B electric, telephone, natural gas, water, and sewer utilities, applications for or filings of a general increase in rates, fares, or charges for revenue purposes or to increase the rate of return on investment or to change transportation rates, fares, etc. pursuant to Rule R1-17, and all testimony and exhibits of expert witnesses filed by any party to the general rate case proceeding.

(2) For all Class A and B electric utilities, applications for changes in rates in annual rate rider proceedings pursuant to G.S. 62-133.2, 62-133.8, and 62-133.9, and Rules R8-55, R8-67, and R8-69, and all testimony and exhibits of expert witnesses filed by any party to such proceeding.

(3) For all Class A and B natural gas utilities, applications for changes in rates in annual prudency review proceedings pursuant to G.S. 62-133.4 and Rule R1-17(k), and all testimony and exhibits of expert witnesses filed by any party to such proceeding.

(4) Other documents, such as testimony and exhibits of expert witnesses, as ordered in specific proceedings.

(f) Fingerprint cards and criminal history record release forms required to be filed by applicants for certificates of exemption to transport household goods pursuant to G.S. 62-273.1 and Rule R2-8.1 may not be filed electronically, but must be filed on paper pursuant to Section (a).

(g) Reports on performance results required to be filed by local exchange telephone companies and competing local providers pursuant to Rule R9-8(d) may be filed electronically, provided that an electronic copy in Excel is also provided to the Public Staff. The electronic copy in Excel may be emailed to the Public Staff at communications@psncuc.nc.gov.

(h) Both paper and electronic filings must be received by the Commission by 5:00 p.m. Eastern time to be considered to be filed on that business day. A filing may be made electronically at any time, but filings submitted after 5:00 p.m. Eastern time are considered to be filed on the next business day. A filing that does not comply with all applicable statutes, rules, or orders may be rejected, unless the filing is accompanied by a motion requesting a waiver of the applicable requirement of a rule or order and the motion is granted. If a filing is rejected, the document is deemed not to have been filed with the Commission. A filing that requires a filing fee is not considered to be filed until the fee has been submitted to the Commission.

DOCKET NO. M-100, SUB 148

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
The Federal Tax Cuts and Jobs Act	)	ORDER ADDRESSING THE
	)	IMPACTS OF THE FEDERAL
	)	TAX CUTS AND JOBS ACT
	)	ON PUBLIC UTILITIES

BY THE COMMISSION: On December 22, 2017, President Donald J. Trump signed into law the Tax Cuts and Jobs Act (the Federal Tax Cuts and Jobs Act or the Tax Act). Among other provisions that are contained in this tax reform are provisions that will upon implementation reduce the tax rate of most, if not all, investor-owned public utilities providing services in North Carolina. Specifically, the new federal legislation reduces the federal corporate income tax rate from 35% to 21%, effective for taxable years beginning after December 31, 2017. This reduced tax rate when effectuated will have an immediate and favorable impact on the cost of providing the aforementioned public utility services to consumers in North Carolina.

On January 3, 2018, the Commission issued an Order Ruling That Certain Components of Certain Public Utility Rates Are Provisional as of January 1, 2018, Initiating a Generic Proceeding, and Requesting Comments in response to the Federal Tax Cuts and Jobs Act (the Order). The Order concluded that each and every public utility subject to the provisions of the Order were placed on notice that the federal corporate income tax expense component of all existing rates and charges, effective January 1, 2018, would be billed and collected on a provisional rate basis pending further investigation and disposition of this matter by the Commission, with accompanying deferred accounting for the amount of reduced rates. The Commission further specifically found it appropriate to exclude any water and/or wastewater public utility with $250,000 or less in annual operating revenues from the directives of the Order.

In addition, the Commission requested comments and reply comments in regard to how the Commission should proceed in response to the enactment of the Federal Tax Cuts and Jobs Act. Also in the Order, the following companies were specifically requested to file initial comments: Duke Energy Carolinas, LLC (DEC); Duke Energy Progress, Inc. (DEP); Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina (DENC); Piedmont Natural Gas Company, Inc. (Piedmont); Public Service Company of North Carolina, Inc. d/b/a PSNC Energy (PSNC); Frontier Natural Gas Company, LLC (Frontier); Toccoa Natural Gas (Toccoa); Aqua North Carolina, Inc. (Aqua); and Utilities, Inc. (hereinafter collectively referred to as the Utilities). Additionally, the North Carolina Utilities Commission - Public Staff (Public Staff) was requested to file initial comments, and other interested parties were encouraged to file comments.

The Commission requested that the Utilities include the following information in their initial comments:

(1) the estimated annual cost-of-service effect, on an item-by-item basis, of the changes to the levels of income tax expenses expected due to the enactment of the Federal Tax Cuts and Jobs Act. Please show the amount of each change and the related levels of tax expense before and after each change. Such information is to be presented on an NCUC jurisdictional basis (e.g., on a NC retail or NC intrastate basis, as appropriate); and

(2) a complete detailed narrative explanation of how the Utility proposes to account for and treat excess deferred income taxes that were accrued in earlier years under federal corporate income tax rates that were in excess of those set forth in the Federal Tax Cuts and Jobs Act.

The following parties filed a timely petition to intervene in this docket, and, by Order, the Commission granted each petition to intervene: Cardinal Pipeline Company, LLC (Cardinal), the Carolina Industrial Groups for Fair Utility Rates (CIGFUR), the Carolina Utility Customers Association, Inc. (CUCA) (along with its initial comments), the North Carolina Justice Center and the North Carolina Housing Coalition (jointly the Low-Income Advocates), and the North Carolina Sustainable Energy Association (NCSEA).

On January 12, 2018, the Attorney General filed its Notice of Intervention pursuant to N.C. Gen. Stat. § 62-20.

Toccoa filed its initial comments on January 24, 2018. On February 1, 2018, the following parties filed initial comments: the Attorney General, Aqua, Carolina Water Service, Inc. of North Carolina (CWSNC), CIGFUR, DEC and DEP (jointly, DEC/DEP), DENC, Frontier, the Low-Income Advocates, Piedmont, PSNC, and the Public Staff.

On February 9, 2018, Nucor Steel-Hertford (Nucor) filed a Petition to Intervene Out-of-Time.

On February 13, 2018, the Attorney General filed a Motion for Extension of Time to File Reply Comments. In its Motion, the Attorney General requested an extension of time for all parties to file reply comments by no later than February 20, 2018.

By Order dated February 14, 2018, the Commission granted the Attorney General's Motion for Extension of Time to File Reply Comments.

On February 16, 2018, the Commission issued an Order Allowing Petition to Intervene Out-of-Time for Nucor.

On February 20, 2018, the Attorney General, CIGFUR, DEC/DEP, DENC, the Low-Income Advocates, Nucor, Piedmont, and the Public Staff filed reply comments.

On February 28, 2018, the Public Staff filed its Clarification to Reply Comments.

On March 1, 2018, DEC/DEP filed Supplemental Comments taking into consideration the Commission's February 23, 2018 DEP rate case order and the reply comments of the parties.

On March 2, 2018, the Public Staff filed a letter concerning DEC/DEP's March 1, 2018 Supplemental Comments.

On March 27, 2018, DEP filed Supplemental Comments.

On April 3, 2018, the Public Staff filed a letter to address DEP's March 27, 2018 Supplemental Comments.

On April 6, 2018, CWSNC filed a Procedural Request Regarding Implementation of the Federal Tax Cuts and Jobs Act in this generic docket and Docket No. W-354, Sub 360.

On June 22, 2018, the Commission issued its Order Accepting Stipulation, Deciding Contested Issues, and Requiring Revenue Reduction in DEC's rate case proceeding (Docket No. E-7, Sub 1146) wherein the Commission addressed most of the impacts of the Tax Act on DEC.

INITIAL COMMENTS

Electric Utilities

DEC/DEP maintained that it is the Companies' intent that customers will receive the benefits of tax reform. DEC/DEP stated that they propose to accomplish this with solutions that will lower customer bills in the near-term, help mitigate volatility due to future rate increases, and protect the Companies' current credit quality for the benefit of customers. DEC/DEP asserted that they have worked diligently and successfully over the years to serve their customers while maintaining strong balance sheets to support and fund their obligations. DEC/DEP opined that a solid financial foundation has helped the Companies keep customers' rates significantly below the national average for many decades, all while providing safe, reliable and increasingly clean energy for North Carolina.

DEC/DEP asserted that electric utilities are one of the most capital intensive industries in the country and that, in part, is why utilities are heavily regulated. DEC/DEP noted that the Companies invest in infrastructure not because of federal tax policy, but because it is critical, necessary and often legally required that they do so. DEC/DEP stated that their statutory obligation to serve requires the financial wherewithal to support the commitments to their customers on a reliable and cost-effective basis at all times. DEC/DEP maintained that credit quality drives access to affordable capital, and for this reason it is in the best interest of customers to prevent a weakening of the Companies' cash flows and credit quality from pre-Tax Act levels. DEC/DEP stated that as they continue to modernize the energy grid, avoid and reduce outages through new technology, help customers become even more energy efficient through the deployment of advanced metering and technology infrastructure, increase the ability of the grid to connect more distributed and renewable energy resources, and overall transform the customer experience, the need to maintain much-needed cash flow and a strong balance sheet are more important than ever.

DEC/DEP stated that recent federal tax reform provides the Commission with a unique opportunity to help reduce and smooth out volatility in customer rates over the short- and long-term, while maintaining the Companies' pre-Tax Act credit quality and the ability to provide safe, reliable and affordable energy. DEC/DEP asserted that the Commission has substantial discretion in its ratemaking treatment of these tax changes and specifically noted the North Carolina Supreme Court decision in State ex rel. Utilities Comm'n v. Nantahala Power and Light Co., 326 N.C. 190, 388 S.E.2d 118 (1990) (herein after the Nantahala case). DEC/DEP noted that the Supreme Court in that case held that the Commission had the authority to address tax reform through a rulemaking proceeding, rather than only through a general rate case proceeding and that such action did not constitute single-issue ratemaking because there were no adjudicative-type facts in dispute that would require individual hearings. DEC/DEP maintained that the Nantahala case supports the ability of the Commission to determine how to address changes resulting from federal tax reform, but does not mandate that the Commission address such impacts in any particular manner. DEC/DEP stated that, as such, the Commission has the authority to grant the Companies' proposed treatment of the federal tax reform changes. DEC/DEP asserted that adjusting utility rates solely to account for the impact of the reduction in the federal corporate income tax rate and the flow back of excess deferred income tax (EDIT) is not appropriate. DEC/DEP stated that the Commission should also take into account all other impacts of the Tax Act as well as other non-tax inputs that could affect rates. DEC/DEP maintained that the Tax Act represents a unique opportunity to deliver savings to customers, but as with all ratemaking actions, the interests of customers and the Companies should be balanced.

DEC/DEP noted that the headline change to the corporate tax code is a reduction of the statutory federal corporate income tax rate from 35% to 21%. DEC/DEP stated that this reduction in the federal corporate income tax rate, however, is accompanied by many other provisions that serve to broaden the tax base and to "pay for" the effect of the 21% tax rate. DEC/DEP noted that most of the provisions of the Tax Act take effect beginning January 1, 2018.

DEC/DEP maintained that most changes to the corporate tax code apply to all U.S. corporations equally, while a limited set of others affect regulated utilities uniquely. DEC/DEP noted that for utilities in general, and the Companies in particular, the key provisions of the Tax Act that will affect customer rates are as follows: (1) reduction in the federal corporate income tax rate from 35% to 21%; (2) retention of net interest expense deductibility; (3) elimination of bonus depreciation; (4) elimination of the manufacturing deduction; and (5) normalization of EDIT resulting from the Tax Act.

DEC/DEP stated that the Tax Act makes five principal changes to the tax code that affect regulated electric utilities, as follows:

(1) Reduction in Federal Corporate Income Tax Rate

DEC/DEP noted that the new statutory federal corporate income tax rate of 21% represents a 40% reduction from the previous rate of 35%. DEC/DEP stated that this will lower a key component of cost of service, i.e., income taxes. DEC/DEP stated that in contrast to this lower cost of service impact, however, rate base will be higher in future rate proceedings due to the elimination of bonus depreciation and the reduced value of accelerated depreciation due to the lower federal corporate income tax rate.

(2) Interest Expense Deductibility

DEC/DEP stated that the Tax Act generally provides that net interest expense is deductible only to the extent it does not exceed a stated percentage of an adjusted taxable income calculation, a calculation that becomes even more restrictive four years hence. DEC/DEP maintained, however, that regulated utilities are exempt from this limitation provision and may deduct their interest expense without limitation. DEC/DEP stated that Duke Energy and Edison Electric Institute (EEI) (a regulated electric utility trade association) fought hard to achieve this important exemption, and the Companies' customers will retain the significant benefits that flow from it.

(3) Depreciation and Expensing of Capital

DEC/DEP maintained that the Tax Act generally provides that corporations may immediately expense capital as it is placed in service, akin to 100% bonus depreciation. However, DEC/DEP noted, the Tax Act specifically prohibits the immediate expensing of capital by regulated utilities. DEC/DEP stated that, instead, utilities are directed to use modified accelerated cost recovery system (MACRS) depreciation for capital investment placed in service. DEC/DEP asserted that though no longer accompanied by "bonus" depreciation, MACRS still represents a significantly accelerated rate of depreciation compared to book depreciation. DEC/DEP noted that, as a result, deferred taxes will continue to accrue under MACRS, but will do so at a slower rate compared to bonus depreciation and at a much slower rate under the lower 21% federal corporate income tax rate and this will cause a more rapid increase to rate base relative to pre-Tax Act.

(4) Manufacturing Deduction

DEC/DEP stated that prior to the Tax Act, domestic manufacturers were granted a tax deduction based on a certain percentage of qualifying manufacturing income, and the production of electricity qualified for this tax benefit. DEC/DEP noted that in order to avail itself of this deduction, a corporation had to be in a taxable income position and this was often not the case recently for most regulated utilities because of the impact of bonus depreciation. DEC/DEP maintained that, unfortunately, the elimination of bonus depreciation for utilities in the Tax Act coincided with the elimination of this tax deduction for all manufacturers, which is directionally detrimental to customer rates.

(5) Excess Deferred Income Taxes

DEC/DEP noted that at the end of 2017, the Companies had a significant net deferred tax liability, booked at a 35% federal corporate income tax rate and driven overwhelmingly by accelerated and bonus depreciation of fixed assets for tax purposes. DEC/DEP maintained that because a deferred tax liability represents taxes collected from customers, but not yet paid to taxing authorities, and because the ultimate payment of these taxes will now occur at a 21% corporate income tax rate, down from 35%, the balance of the deferred tax liability must be re-measured. DEC/DEP stated that this resulting "excess" deferred tax balance becomes a regulatory liability. DEC/DEP asserted that the Tax Act requires that excess deferred taxes generally associated with property, and specifically connected to the accelerated depreciation of property, must be normalized into customers' rates in a highly-prescribed manner that mimics the remaining life of the underlying assets. DEC/DEP stated that these are known as "protected" excess deferred taxes. DEC/DEP noted that all other excess deferred taxes (i.e., unprotected EDIT) may be treated by the Commission like any other regulatory liability in the rate-setting process.

DEC/DEP asserted that pursuant to the Commission's January 3, 2018 Order, DEC/DEP will defer (by being booked in FERC Accounts 229 and 254) as a regulatory liability (1) all excess accumulated deferred income tax (ADIT) balances created by the Tax Act, and (2) the estimated difference between customer revenues actually earned and what would have been earned taking into account the reduced corporate income tax rate beginning January 1, 2018, until the Commission determines the timing and nature of such benefits to customers.

DEC/DEP asserted that implementation of the Tax Act has the potential to adversely affect the Companies' cash flows needed to fund ongoing operations and new infrastructure investments, and makes having a strong equity to debt capital structure even more important post-Tax Act reform. DEC/DEP stated that an unmitigated cash flow shortfall could force the Companies to rely excessively on third-party capital to fund DEP and DEC, to the ultimate detriment of their financial condition. DEC/DEP maintained that DEC, for example, is in the midst of a base rate proceeding where the Company has demonstrated that its revenues are already insufficient to provide recovery of its reasonable costs and earn a reasonable return. DEC/DEP argued that adjusting the Companies' rates downward in isolation for just the reduction in the federal corporate income tax rate will make an undesirable situation worse from an overall cash flow perspective. DEC/DEP noted that in petitions to intervene filed in this proceeding, as well as in filings made in the pending DEP and DEC rate cases, some intervenors have called for the Commission to reduce customer rates and the Companies' revenues immediately for 100% of the impacts of the Tax Act. DEC/DEP stated that those intervenors argue for an immediate use of only the benefits under the Tax Act, to the exclusion of other provisions of the Tax Act, in isolation and without regard to the utility's current financial position and other relevant factors. DEC/DEP asserted that in the longer-term, one of the unintended consequences of the Tax Act is that the lower tax rate and the elimination of bonus depreciation will increase the Companies' rate base over time, which has the corresponding effect of increasing customer rates over time. DEC/DEP stated that they respectfully assert that implementing such an approach offered by other intervenors would be unsound policy and would be detrimental to customers over the longer-term.

DEC/DEP maintained that stand-alone utility and consolidated financing structures are based on pre-Tax Act capital flows and were formed to support significant investments to benefit customers. DEC/DEP noted that if incoming cash flows decrease pursuant to tax reform, credit metrics will weaken and financial pressure will increase. DEC/DEP asserted that in a tangible sign of this risk, on January 19, 2018, Moody's changed Duke Energy Corporation's rating outlook from stable to negative in response to the financial impacts of the Tax Act and regulatory uncertainties related thereto. DEC/DEP further noted that Moody's changed the ratings outlook of Piedmont Natural Gas, Inc. and 22 other utilities and utility holding companies from stable to negative.

DEC/DEP attached as Exhibits 1 and 2 to their comments the estimated effect of the Tax Act on DEP's and DEC's cost of service. DEC/DEP stated that these estimates are based on the cost of service studies from Docket Nos. E-7, Sub 1026 and E-2, Sub 1023, respectively, which are the rate cases in which current rates were established. DEC/DEP noted that these exhibits also show a resulting reduction in the annual revenue requirement of $104 million for DEP and $172 million for DEC, and translate that into a decrement rate per kilowatt hour, based on the kilowatt hours in those cases.

DEC/DEP further noted that based on the DEP NC 2013 rate case, the total tax expense savings is $104 million. DEC/DEP maintained that the Company (DEP) will not know the level of tax expense savings based on the pending rate case until the Commission order is received. DEC/DEP noted that the difference between the actual amount of tax expense savings based on the rates set in Docket No. E-2, Sub 1142 and the $104 million would be deferred into a regulatory liability account for consideration in a future proceeding. DEC/DEP stated that based on the DEC NC 2013 rate case, the total tax expense savings is $172 million. DEC/DEP stated that the Company (DEC) will not know the level of tax expense savings based on the pending rate case until the Commission order is received. DEC/DEP maintained that the difference between the actual amount of tax expense savings based on the rates set in Docket No. E-7, Sub 1146 and the $172 million would be deferred into a regulatory liability account for consideration in a future proceeding.

DEC stated that it would propose to continue this deferral until new rates can be established in its currently pending rate case in Docket No. E-7, Sub 1146 that reflect the benefits of the lower tax expense. DEP noted that it would propose to continue this deferral until an order is issued by the Commission in its currently pending rate case in Docket No. E-2, Sub 1142. DEP stated that at that time, it will recalculate the cost of service impacts of the Tax Act based on the compliance cost of service, and start deferring based on the updated decrement rate per kilowatt hour. DEC/DEP stated that should the Commission establish a rider for DEP to reflect the benefit, DEP would stop the deferral when the rider was effective.

DEC/DEP maintained that the attached exhibits only show the impact of the Tax Act on base rates. DEC/DEP stated that they expect there may be additional benefits for customers through reduced rider rates, which will be handled in the respective annual rider filings and experience modification factors.

DEC/DEP stated that they propose to pass on savings from the income tax expense reduction to customers. DEC/DEP maintained that in passing on the tax expense savings to customers, the Commission has and should use its ability to implement the Tax Act changes in a way that provides customers with near-term benefits, while minimizing customer rate volatility over both the shorter and longer-term. DEC/DEP noted that with two pending rate cases before it, the Commission has the unique opportunity to help mitigate rate increases by applying the federal income tax expense savings to offset a portion of the requested increases. DEC/DEP asserted that this could be accomplished by offsetting items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEC/DEP stated that the use of accelerated depreciation would benefit customers by lessening future rate increases caused by rate base growth resulting from the Tax Act.

DEC/DEP proposed to hold the EDITs to be addressed in future rate cases for the benefit of customers. DEC/DEP stated that, specifically, for excess deferred income taxes, the Companies propose to establish regulatory liabilities. DEC/DEP noted that similar to the liabilities created as a result of North Carolina House Bill 998's State corporate income tax rate changes and in compliance with Docket No. M-100, Sub 138, the amortization of these liabilities should be addressed in the Companies' next general rate proceedings. DEC/DEP further stated that it is important to note that a significant portion of the EDIT resulting from the Tax Act will be subject to Internal Revenue Service (IRS) normalization restrictions.

DEC/DEP noted that with respect to DEC, the Company proposes to address federal tax reform impacts in its pending rate case in Docket No. E-7, Sub 1146, for which the evidentiary hearing is currently scheduled to begin on February 27, 2018[1]. DEC/DEP noted that with respect to DEP, the Company also has a pending rate case in Docket No. E-2, Sub 1142; however the record in that case has been closed, and DEP anticipated that the Commission would issue a final order in the near term[2]. DEC/DEP stated that once the Commission order in that rate case proceeding is received, DEP will be able to calculate the impacts of the Tax Act on tax expense based on a compliance cost of service with the Commission's order. DEP proposed to defer the resulting estimated impacts to a regulatory liability, until DEP's next rate case. DEC/DEP maintained that as an alternative, the Commission could approve a rider in Docket No. M-100, Sub 148 to reduce DEP customer rates including any potential offsets.

DEC/DEP requested that the Commission approve and adopt the recommendations contained in their initial comments, enabling the Companies to provide benefits to customers and continue building the energy future their customers and communities deserve.

DENC noted that among other modifications to the Internal Revenue Code, such as repealing the deduction for income attributable to domestic production activities and modifying the cost recovery rules for property, the Tax Act reduces the federal corporate income tax rate from 35% to 21%, effective for taxable years beginning after December 31, 2017.

DENC provided as Attachment 1 to its initial comments the impact of the Tax Act on DENC's base non-fuel cost of service, addressing: (1) the reduction of the federal corporate income tax rate from 35% to 21%, and (2) the repeal of the Section 199 Domestic Production Activities Deduction. DENC noted that Section 13305 of the Tax Act repeals the Section 199

[1] The evidentiary hearing was subsequently changed to begin on March 5, 2018. The Commission issued its Order in DEC's rate case proceeding on June 22, 2018.

[2] The Commission issued its Order in DEP's rate case proceeding on February 23, 2018.

Domestic Production Activities Deduction; removing this federal tax deduction increases income tax expense by $0.7 million. DENC maintained that overall, annual North Carolina jurisdictional income tax expense is expected to decrease by approximately $10.8 million with a corresponding increase to operating income of the same amount beginning January 1, 2018.

DENC also noted that it reduced the balance of ADIT in its financial records to reflect an estimated amount of EDIT for the Virginia Electric and Power Company system effective December 31, 2017. DENC stated that, however, such estimate and the portion allocable to the North Carolina retail operations will be further refined throughout the coming year as a more detailed analysis is completed and needed guidance from the IRS is forthcoming.

DENC further stated that in addition to the Company's base non-fuel rate cost of service, the Tax Act impacts the Company's Rider EDIT, as approved in the Company's 2016 Base Rate Case Order. DENC noted that Rider EDIT is a decrement rider that refunds to customers over a two-year period, commencing on November 1, 2016 through October 31, 2018, a regulatory liability for EDIT associated with recent reductions in the North Carolina corporate income tax rate. DENC noted that the regulatory liability approved by the Commission was calculated using a tax gross-up factor that included a 35% federal income tax rate in effect prior to the enactment of the Tax Act. DENC maintained that beginning January 1, 2018, the federal corporate income tax component of the tax gross-up factor will be reduced from 35% to 21% pursuant to the Tax Act. DENC provided as Attachment 1 to its initial comments a schedule showing the reduction in the regulatory liability and the associated reduction to the Rider EDIT credit of $1.4 million for the period January 1, 2018 through October 31, 2018 due to the change in the tax gross-up factor.

DENC asserted that in accordance with Generally Accepted Accounting Principles (GAAP), the Company recorded in its financial records a reduction in the balance of EDIT effective December 31, 2017, to reflect an estimate of the impact of the Tax Act. DENC stated that the reductions in ADIT associated with the Company's regulated operations and recognized for ratemaking purposes were reclassified to regulatory liability accounts. DENC noted that the predominant amounts of EDIT established as a regulatory liability are associated with utility property depreciation and related book-tax timing differences that are subject to the Internal Revenue Code's normalization rules pursuant to new Internal Revenue Code (IRC) Section 1561(d) that contains similar provisions to the rules promulgated in Section 203(e) of the Tax Reform Act of 1986. DENC maintained that pursuant to Section 13001 of the Tax Act, the Company is required to use the average rate assumption method (ARAM) for purposes of amortizing EDIT over the remaining regulatory lives of the property that gave rise to the original reserve for deferred taxes. DENC stated that amortizing such EDIT using a methodology other than ARAM would violate the normalization rules and would result in the loss of the use of accelerated depreciation by the Company and a cash penalty equal to the amount by which the excess deferred tax reserve is reduced more rapidly than permitted under the Tax Act. DENC asserted that, accordingly, the Company will begin amortizing the estimated plant-related EDIT for financial accounting purposes effective January 1, 2018 subject to adjustment pending additional guidance from the IRS.

DENC further noted that as directed by the Commission in the Order, DENC is now treating the federal corporate income tax component of its existing approved rates and charges as provisional rates that are subject to deferral accounting. DENC stated that this includes the Company's currently-approved and effective base rates (fuel and non-fuel), as well as: (i) annual riders for fuel and fuel-related costs, the Company's demand-side management programs and energy efficiency program costs (DSM/EE), and Renewable Energy and Energy Efficiency Portfolio Standard (REPS) compliance costs, and (ii) Rider EDIT.

DENC maintained that for purposes of the Company's base non-fuel rates and Rider EDIT, the Company intends to address the cost of service impacts and disposition of deferred amounts due to the Tax Act through the Commission's general ratemaking procedure set forth in N.C. Gen. Stat. § 62-130 and N.C. Gen. Stat. § 62-133. DENC stated that this approach ensures that the Company has sufficient time to comprehensively evaluate the direct and indirect impacts of this complex new tax legislation in determining the Company's updated cost of service. DENC asserted that the differences between rates in effect at January 1, 2018, including provisional components, and revenues that would have been billed incorporating the IRC as now amended by the Tax Act, will be held in a deferred account. DENC argued that this approach is reasonable and fair to customers and the Company, as the Company is now collecting these amounts on a provisional basis. DENC stated that through the Company's next general rate case, DENC will comprehensively address all impacts from the Tax Act as part of its updated cost of service filed in that proceeding. DENC maintained that North Carolina's general ratemaking procedures provide the most reasonable and appropriate mechanism to assess the ongoing justness and reasonableness of the Company's rates, and to affect future rate changes in a manner that ensures both customers and the utility are treated fairly based upon a comprehensive review of increases or decreases in the Company's total cost of service.

DENC further stated that for the Company's rates and charges with approved deferral accounting and experience modification factors (i.e., fuel factor, DSM/EE, and REPS riders), the Company proposes to defer any differences between rates in effect at January 1, 2018, including any provisional components, and revenues that would have been billed incorporating the IRC as now amended by the Tax Act, through the ordinary deferral accounting process. DENC noted that any such differences will be addressed in future annual rider proceedings where applicable.

Natural Gas Utilities

Frontier noted that it is in a unique situation with regard to the provision of natural gas sales and distribution service in North Carolina at rates approved by the Commission. Frontier stated that when it was established and granted the necessary certification to serve customers in Ashe, Surry, Watauga, Wilkes, Yadkin, and Warren counties, the initial rates established were not based on a cost of service. Frontier maintained that at the time initial rates were approved for Frontier, the Company had not installed the necessary distribution system to attach customers, but needed to have rates established that were competitive with other available fuels. Frontier commented that as the Commission noted in Docket No. G-38, Sub 1, "[i]t is more accurate to describe the rates to be established in this proceeding as initial franchise rates, recognizing that they are based upon estimates of construction costs, expenses, revenues, and financing costs and upon a determination that they are competitive with alternative fuels." (Order Awarding Certificate and Approving Rates for Warren County, Docket No. G-38, Sub 1, at p.10 (March 27, 1997)).

Frontier stated that pursuant to numerous intervening Commission orders and settlements, Frontier continues to operate under the same initial franchise rates with the exception of the Gross Receipts Tax removed from margin rates and recovered through a surcharge which kept the Company whole in 1999, and a reduction in residential and small commercial rates as agreed to in a stipulation when Frontier was acquired by Energy West Inc. in 2007. Frontier noted that it has never undergone a general rate case proceeding under N.C. Gen. Stat. § 62-133 and has never had the Commission determine cost-of-service based rates for the services it provides. Frontier asserted that there has been no rate case where investment, expense, capital structure, return on equity, among other rate case items, have been considered or acted on by the Commission.

Frontier noted that in the Commission's 2013 proceeding addressing the decrease in the State corporate income tax rate (Docket No. M-100, Sub 138), the Public Staff acknowledged that Frontier provides gas service pursuant to rates established in connection with the granting of its certificate, not rates established in a general rate case based on specific items of cost. Frontier also noted that, therefore, the Public Staff recommended that the Commission not adjust Frontier's rates as a result of HB 998 (the State legislation decreasing the State corporate income tax rate). Frontier maintained that the Commission agreed with the Public Staff and found it appropriate to exclude Frontier from further consideration by the Commission in that docket. Frontier stated that the Commission's ruling effectively exempted Frontier from any obligation to flow-through the State corporate income tax reductions adopted in HB 998 on the grounds that its rates were not cost-based in the first instance; therefore, it made little sense to compel the adoption of a cost-based adjustment to those rates. Frontier argued that the same logic would compel a similar result in this docket.

In response to the two questions posed by the Commission in its January 3, 2018 Order, Frontier noted that in the absence of a prior Frontier rate case, there is no specific rate case detail to base a response on. Frontier requested that it be allowed to continue charging its existing rates that have been in effect with minimal changes for 20 years. Frontier further noted that the excess deferred income taxes will be treated in a manner specified by the IRS rules and regulations; specifically, Frontier will amortize the excess over the remaining life of the assets.

Piedmont stated that it intends to pass the benefits of tax reform back to all customers served pursuant to Piedmont's Commission-approved rate schedules. Piedmont maintained that it proposes to effectuate that intent through solutions that will lower customer bills in the near-term, help mitigate volatility due to future rate increases, and protect the Company's current credit quality for the benefit of customers. Piedmont asserted that it has worked diligently and successfully over the years to provide high-quality service to its customers while maintaining a strong balance sheet in order to support and fund its ongoing operations. Piedmont stated that a solid financial foundation has helped the Company keep customer rates for natural gas service at reasonable levels while providing safe, reliable and environmentally friendly energy for the State of North Carolina. Piedmont maintained that the Commission has played a critical role in Piedmont's ability to achieve these goals.

Piedmont asserted that natural gas utilities are a very capital intensive operation, which is part of the reason why they are structured as regulated monopolies. Piedmont stated that it makes capital investments in new infrastructure because those investments are necessary to provide critical energy services to the State and to ensure that its natural gas transmission and distribution systems continue to maintain the highest level of safety, not because of federal tax policy. Piedmont argued that its obligation to serve the public requires that Piedmont maintain the financial wherewithal to support such service at all times. Piedmont asserted that some aspects of the Tax Act will disrupt Piedmont's cash flows and have negatively impacted its credit ratings. Piedmont stated that inasmuch as credit quality drives access to affordable capital, it is important, and in the best interest of customers, to prevent a weakening of the Company's cash flow and reverse the degradation of its credit quality.

Piedmont maintained that recent federal tax reform provides both Piedmont and the Commission with an opportunity to reduce customer rates and smooth rate volatility over both the short- and long-term while also preserving Piedmont's ability to provide safe, reliable and affordable energy without endangering its credit quality. Piedmont asserted that the Commission has substantial discretion in its ratemaking treatment of these tax changes. Piedmont argued that adjusting utility rates solely to account for the impact of the reduction in the federal corporate income tax rate and the flow back of EDIT should not be automatic, rather the Commission should consider all matters that could affect rates. Piedmont stated that the Tax Act represents a unique opportunity to deliver savings to customers, but as with all ratemaking actions, the long-term and short-term interests of customers must be balanced.

Piedmont stated that it is proposing to reduce customer bills through the flow-through of tax rate reductions under its Integrity Management Rider (IMR) mechanism while deferring tax rate reductions on its base rates until the next general rate case proceeding where such deferral can be amortized and used to offset any requested base rate increase in that docket. Piedmont maintained that for EDIT, the Company will establish a regulatory liability and, similar to the Commission's treatment of EDIT in Docket No. M-100, Sub 138, would propose that those liabilities be addressed in the Company's next general rate case proceeding. Piedmont also noted that a significant portion of the EDIT resulting from the federal income tax rate change will be subject to normalization restrictions.

Piedmont asserted that, if approved, its proposal will provide customers with the benefit of savings under the Tax Act through rate reductions commencing with its upcoming June 1, 2018 IMR rate adjustment and minimization of rate volatility over both the short- and long-term, while sparing Piedmont, and ultimately customers, from the undesirable impacts of the Tax Act on Piedmont's cash flows and credit quality. Piedmont asserted that its proposal, which represents a balanced approach that benefits customers while minimizing any weakening of credit quality, should be approved by the Commission.

Piedmont maintained that the headline change to the federal corporate tax code is a reduction of the statutory federal corporate income tax rate from 35% to 21%, but this reduction in the tax rate is accompanied by many other provisions that serve to broaden the tax base and to "pay for" the effect of the 21% tax rate. Piedmont noted that most provisions of the Tax Act take effect beginning January 1, 2018.

Piedmont stated that most changes to the corporate tax code apply to all U.S. corporations equally, while a limited set of others affect regulated utilities uniquely. Piedmont maintained that for utilities in general, and Piedmont in particular, the key provisions of the Tax Act that will affect customer rates are as follows: (1) reduction in the federal corporate income tax rate from 35% to 21%; (2) retention of net interest expense deductibility; (3) elimination of bonus depreciation; and (4) normalization of EDIT resulting from the Tax Act.

Piedmont asserted that the purpose of the Tax Act was to stimulate business investments, create jobs and grow the economy. Piedmont stated that an expectation that the financial health of Piedmont not be harmed by tax reform is consistent with these policy objectives and serves as a theme of Piedmont's initial comments.

Piedmont highlighted the following four principal changes to the tax code that affect regulated natural gas utilities due to the Tax Act:

(1) Reduction in Federal Corporate Income Tax Rate

Piedmont noted that the new statutory federal corporate income tax rate of 21% represents a 40% reduction from the previous rate of 35%. Piedmont stated that this will lower a key component of cost of service, i.e., income taxes. Piedmont stated that in combination with the elimination of bonus depreciation, a lower corporate income tax rate will slow the accumulation of deferred income taxes and have an increasing effect on rate base, thereby causing an effect that is opposite to the lower cost of service effect.

(2) Interest Expense Deductibility

Piedmont stated that the Tax Act generally provides that net interest expense is deductible only to the extent it does not exceed a stated percentage of an adjusted taxable income calculation, a calculation that becomes even more restrictive four years hence. Piedmont maintained, however, that regulated utilities are exempt from this limitation provision and may deduct their interest expense without limitation.

(3) Depreciation and Expensing of Capital

Piedmont maintained that the Tax Act generally provides that corporations may immediately expense capital as it is placed in service, akin to 100% bonus depreciation. However, Piedmont noted, the Tax Act specifically prohibits the immediate expensing of capital by regulated utilities. Piedmont stated that, instead, utilities are directed to use MACRS depreciation for capital investment placed in service. Piedmont asserted that though no longer accompanied by "bonus" depreciation, MACRS still represents a significantly accelerated rate of depreciation compared to book depreciation. Piedmont noted that, as a result, deferred taxes will continue to accrue under MACRS, but will do so at a slower rate compared to bonus depreciation and at a much slower rate under the lower 21% federal corporate income tax rate and this will cause a more rapid increase to rate base relative to pre-Tax Act.

(4) Excess Deferred Income Taxes

Piedmont noted that at the end of 2017, it had a significant net deferred tax liability, booked at a 35% federal corporate income tax rate and driven overwhelmingly by accelerated and bonus depreciation of fixed assets for tax purposes. Piedmont maintained that because a deferred tax liability represents taxes collected from customers, but not yet paid to taxing authorities, and because the ultimate payment of these taxes will now occur at a 21% corporate income tax rate, down from 35%, the balance of deferred tax liability must be re-measured. Piedmont stated that this resulting "excess" deferred tax balance becomes a regulatory liability. Piedmont asserted that the Tax Act requires that excess deferred taxes generally associated with property, and specifically connected to the accelerated depreciation of property, must be normalized into customers' rates in a highly-prescribed manner that mimics the remaining life of the underlying assets. Piedmont stated that these are known as "protected" excess deferred taxes. Piedmont noted that all other excess deferred taxes may be treated by the Commission like any other regulatory liability in the rate-setting process. Piedmont stated that if all excess deferred tax liability balances are normalized for rate-setting purposes, the impact to Piedmont from a return of the excess ADIT to customers would be neutral to pre-Tax Act cash flow even as customers will realize a rate benefit over time.

Piedmont asserted that pursuant to the Commission's January 3, 2018 Order, Piedmont will defer as a regulatory liability (1) all excess ADIT balances created by the Tax Act, and (2) the estimated difference between customer revenues actually earned and what would have been earned taking into effect the reduced corporate income tax rate beginning January 1, 2018, until the Commission determines the timing and nature of such benefits to customers.

Piedmont maintained that the implementation of the Tax Act has the potential to adversely affect Piedmont's cash flows needed to fund ongoing operations and new infrastructure investments. Piedmont stated that a cash flow shortfall resulting from the immediate flow-through of tax rate reductions and the excess ADITs could force Piedmont to rely, to a much larger extent, on third-party capital to fund its operations to the ultimate detriment of Piedmont's financial condition and the public interest inherent in maintaining low debt costs. Piedmont asserted that evidence of this detrimental impact from the Tax Act has already arrived in the form of a downgrade to the ratings outlook maintained by Moody's Investors Services for Piedmont and other public utilities issued on January 19, 2018. Piedmont noted that it attached a copy of the downgrade notice as Exhibit 1 to its initial comments. Piedmont maintained that these ratings outlook downgrades are driven by the negative cash-flow consequences of a reduction in federal corporate income tax rates in combination with a reduction in tax deferrals resulting from the loss of bonus depreciation. Piedmont stated that Moody's, in its revised ratings outlook, downgraded Piedmont from stable to negative. Piedmont noted that in the discussion of its downgrades, Moody's makes it clear that it expects the downgraded utilities to attempt to manage the negative impacts of the Tax Act through regulatory mechanisms and holds out some hope that ratings outlooks could return to stable for some of the downgraded utilities if effective regulatory relief is granted.

Piedmont noted that in petitions to intervene filed in this proceeding, as well as in filings made in the pending DEP and DEC rate cases, some intervenors have called for the Commission to reduce customer rates and the utilities' revenues immediately for 100% of the impacts of the Tax Act. Piedmont stated that they argue for an immediate pass-through of only the benefits under the Tax Act, to the exclusion of other provisions of the Tax Act, in isolation and without regard to the utility's current financial position and other relevant factors. Piedmont argued that implementing this approach would be unsound policy and would be detrimental to customers over the longer-term.

Piedmont asserted that stand-alone utility and consolidated financing structures are based on pre-tax reform capital flows and were formed to support significant investments to benefit customers. Piedmont argued that an immediate flow back resulting from tax reform would significantly lower Piedmont's cash recovery creating pressure to incur additional debt to fund operations. Piedmont maintained that both of these actions will affect Piedmont's credit metrics and ability to continue to issue debt at the cost embedded in current customer rates. Piedmont stated that customers benefit directly from a strong balance sheet and strong investment grade credit ratings through low cost of capital and strong access to capital during all market conditions. Piedmont noted that this was particularly evident during the recent Great Recession. Piedmont asserted that, conversely, a decrease in incoming cash flows both increases risk and increases debt costs over time. Piedmont maintained that the Commission should consider these very real consequences of the Tax Act when determining how to adopt appropriate regulatory requirements for Piedmont in this circumstance. Piedmont asserted that its proposals avoid these results while still providing a meaningful degree of immediate rate relief to customers and ensuring that customers ultimately receive the full benefit of the Tax Act.

Piedmont provided as Exhibit 2 to its initial comments the estimated effect of the Tax Act on Piedmont's cost of service. Piedmont noted that this amount, $19,822,593, is based on the Commission-approved Stipulation from Piedmont's most recent general rate case filing in Docket No. G-9, Sub 631. Piedmont stated that it would propose to provide customers with the benefits of its reduced cost of service in two ways. First, Piedmont proposed to implement the new reduced federal corporate income tax rate in calculating surcharges due under its IMR mechanism. Piedmont estimated the impact on its most recent IMR rate change to be approximately $6 million. Piedmont stated that, second, it would seek continued deferral of any excess income tax collections resulting from continuing to charge its current base rates until Piedmont's next general rate case that Piedmont anticipates filing in the next 12 to 24 months. Piedmont noted that this deferred liability could then be amortized and used to offset any rate increase sought in that general rate proceeding. Piedmont asserted that this deferral should not have a carrying charge or interest component associated with it, consistent with the notion of balancing the positive and negative effects of the Tax Act. Piedmont stated that, as an alternative, the Commission could approve a rider in this proceeding to reduce customer rates. Piedmont noted that it also proposed to defer action to address any return of excess ADIT resulting from the Tax Act until Piedmont's next general rate case which is consistent with the manner in which the Commission has addressed this issue in prior tax cut implementation proceedings. Piedmont asserted that this approach to adjusting for excess deferred income taxes would also have a smoothing effect on rates going forward.

Piedmont maintained that by returning a portion of the benefit of the Tax Act to customers through near-term rate decreases in the IMR mechanism and a portion through an amortized offset to any rate increase request in Piedmont's next general rate case proceeding, Piedmont believes that its proposals will achieve an appropriate balance of passing through the benefits of the Tax Act to customers while protecting Piedmont from the negative effects of an immediate flow-through on its credit metrics and financing structures to the ultimate benefit of its customers.

PSNC noted that in response to the Commission's January 3, 2018 Order, attached as Appendix A to its initial comments is a schedule showing the estimated annual effect to PSNC's cost-of-service, on an item-by-item basis, of the changes to the levels of federal corporate income tax expense expected due to the enactment of the Tax Act. PSNC stated that column (a) sets forth the net operating income for return, rate base, and overall return as determined in PSNC's last general rate case, Docket No. G-5, Sub 565, as adjusted to reflect the reduction in the State corporate income tax rate from 4% to 3% effective January 1, 2017. PSNC noted that column (b) sets forth the decrease in federal income tax expense and the revenue requirement impact of that decrease. PSNC further noted that column (c) sets forth the adjusted net operating income for return and return on rate base prior to reducing rates to reflect the reduction in the federal corporate income tax rate. PSNC stated that column (d) sets forth the decrease in revenue and associated adjustments to cost of service. PSNC maintained that in order to simplify the calculation and due to their immateriality, these amounts do not reflect any resulting impact on the cash working capital component of rate base. PSNC noted that column (e) sets forth PSNC's cost of service adjusted for changes resulting from the Tax Act.

PSNC further stated that the reduction in the federal corporate income tax rate from 35% to 21% will result in EDIT. PSNC stated that it proposes, and requests Commission approval, to record the adjustment to deferred taxes as a regulatory liability which will result in no net change in rate base until amortization of the liability begins. PSNC maintained that in accordance with Financial Accounting Standards Board requirements, the adjustments to deferred taxes will be grossed up to a pre-tax amount when recorded as a regulatory liability. PSNC noted that it proposes that the amortization of the regulatory liability be addressed in PSNC's next general rate case.

In addition, PSNC proposed to adjust its rates by allocating the annual revenue requirement impact of the Tax Act changes to the various rate schedules based on the volumes determined in PSNC's most recent general rate case, Docket No. G-5, Sub 565. PSNC stated that the change in rates applicable to each rate schedule will be used to determine the appropriate level of deferred revenue to record per ordering paragraph two of the January 3, 2018 Order. PSNC asserted that due to the administrative burden of implementing a refund by recalculating previously issued bills, PSNC proposes to refund provisionally collected amounts by moving the balance in the regulatory liability account to the Company's All Customers Deferred Account. PSNC noted that this is the same treatment that PSNC used to refund provisionally collected amounts in Docket No. M-100, Sub 138 (the State corporate income tax rate change generic proceeding).

PSNC noted that Appendix B to its initial comments sets forth the adjustments to rates resulting from the decrease in revenue requirement due to enactment of the Tax Act. PSNC stated that proposed rates are set forth on Appendix C.

PSNC also noted that contemporaneous with filing its initial comments, on February 1, 2018, it submitted its Application to Refund Overcollection in Docket Nos. G-5, Sub 565 and M-100, Sub 138[1]. PSNC stated that as indicated therein, the determination of the revenues being billed and collected on a provisional basis pursuant to this docket will include amounts over collected due to the error in adjusting rates for the decrease in the State corporate income tax rate from 4% to 3%, effective January 1, 2017.

Toccoa noted that it is a municipally-owned natural gas system and that it is therefore not a Sub C business corporation. Toccoa stated that because it is a municipally-owned natural gas system, it is not subject to income or other tax obligations. Toccoa maintained that, therefore, based on information and belief, no tax allowances were included in any determination of Toccoa's revenue requirements when the Commission established its rates.

Toccoa stated that because it is not subject to income tax, there will be no changes to the levels of income tax expenses due to the enactment of the Tax Act. Toccoa maintained that, therefore, no adjustment to Toccoa's existing rates would be necessary or appropriate as a result of the passage of the Tax Act.

Water/Wastewater Utilities

Aqua filed the Affidavit of Shannon V. Becker, the Company's President, as its initial comments. Aqua stated that the Company intends to file a general rate case in early-March 2018[2]. Therefore, Aqua requested that the impact of the Tax Act on the Company's rates be resolved in its soon-to-be-filed general rate case and determined in the Order to be issued by the Commission in that proceeding.

Aqua also noted that it will track and defer any benefit that is recognized as a result of the decrease in the federal corporate income tax rate from 35% to 21% on the currently payable piece of federal income tax included in customer rates. Aqua stated that these changes will be recorded to a regulatory liability for consideration in the Company's upcoming general rate case proceeding. Aqua maintained that the information requested by the Commission in its January 3, 2018 Order will certainly be examined as part of the soon-to-be-filed general rate case application and, therefore, recommended that the Commission deal with the issue entirely in that rate case. Aqua estimated the impact on annual revenues due to the Tax Act to be a reduction of $1.5 million.

Aqua also stated that with respect to the Commission's question on how Aqua intended to treat EDIT, the Company proposed to account for the excess deferred federal income taxes by reducing the deferred taxes ratably over the regulatory life of the underlying property. Aqua explained that this issue is broken down into two components, protected and non-protected. Aqua

[1] On February 8, 2018, PSNC filed a letter providing the final amount to be refunded to PSNC's customers due to incorrectly calculating its base rates to reflect the 3% State corporate income tax rate, effective January 1, 2017. On March 28, 2018, the Public Staff filed a letter containing specific recommendations concerning PSNC's February 1, 2018 and February 8, 2018 filings.

[2] On February 5, 2018, Aqua filed its 30-day notice of intent to file a general rate case in Docket No. W-218, Sub 497. Aqua filed its general rate case application on March 7, 2018.

maintained that the protected items must be accounted for by the average rate assumption method (ARAM) or a straight-line method no faster than ARAM in order to not violate normalization accounting. Aqua stated that it intends to defer the process of amortizing these excess deferred taxes until they are addressed in the upcoming rate case filing. Aqua noted that the non-protected excess deferred federal income taxes will be amortized on a yet-to-be-determined period, but will also be added to the regulated liability for consideration in the upcoming rate case. Aqua stated that this issue can be most logically and efficiently dealt with in the upcoming rate case, given the coincidence of timing of the rate case and the January 1, 2018 reduction in the federal corporate income tax rate from 35% to 21%. Aqua asserted that by utilizing this deferral accounting method, all of the effects of the Tax Act will be appropriately captured for proper consideration in the Company's upcoming rate case.

CWSNC filed the Affidavit of Anthony Gray, the Company's Senior Financial and Regulatory Analyst, as its initial comments. CWSNC stated that it agrees that the Commission should consider the impact of the federal corporate income tax change on the existing rates of utilities such as CWSNC. However, CWSNC stated that it believes that all aspects of the revenue requirement calculation need to be considered in this matter and that the new federal corporate income tax rate should not be considered in isolation when determining the impact upon current utility rates[1].

CWSNC noted that its current utility rates were set based upon rate base and operating expense levels, along with the federal corporate income tax rate of 35%, which were in place at the time of the Company's last rate case in 2017. CWSNC stated that the impact upon utility rates cannot be analyzed by only looking at the impact due to the change in just one component of the Company's revenue requirement. CWSNC stated that if the true impact is going to be analyzed for the change in the federal corporate income tax rate, then all other components of the Company's revenue requirement calculation need to be taken into consideration because it is likely that those other components have changed since the rates were last set by the Commission. CWSNC maintained that, for example, the Tax Act now renders Contributions in Aid of Construction (CIAC) for water and wastewater utilities taxable revenue, eliminating the exemption CIAC previously enjoyed. CWSNC noted that this could offset some of the savings from the reduced federal corporate income tax rate.

CWSNC stated that, nevertheless, it has calculated the annual cost of service changes as directed in the Commission's January 3, 2018 Order as a result of the federal corporate income tax rate change as shown on Exhibit 1 to its initial comments.

CWSNC stated that with respect to EDIT, although exact figures will not be available to the Company for at least 60 days, CWSNC has been collaborating with external tax professionals to assess the impact of the excess ADIT due to the change in the federal corporate income tax rate. CWSNC noted that its proposed accounting treatment of the issue is described in Exhibit 2 attached to its initial comments.

[1] The Commission notes that CWSNC filed a 30-day notice of intent to file a general rate case application on March 23, 2018, in Docket No. W-354, Sub 360. CWSNC filed its general rate case application on April 27, 2018.

CWSNC maintained that it also recommends that the Commission consider the impact of the Tax Act upon CIAC. CWSNC noted that the Tax Act removes the tax exemption for CIAC. CWSNC noted that, thus, effective January 1, 2018, water and wastewater utilities like CWSNC will have to begin paying income taxes on cash and property CIAC they receive. CWSNC stated that this change will negatively affect CWSNC's opportunity to earn a reasonable return on its property used and useful in public service if the Company is not allowed to collect the appropriate tax on the CIAC received. CWSNC stated that it will immediately seek to collect from developers (and others) who transfer property and cash to the Company as CIAC based upon the new treatment under the Tax Act; however, there may be some amounts that are not collected as a result of the timing of the tax reform change. CWSNC noted that it does not believe that collection of this tax resulting from a change in the federal tax law requires any modification to its tariff; however, if the Commission believes state law mandates such a change, CWSNC requested clarification and immediate authorization to collect the taxes in the interim.

Other Parties

The Attorney General stated that it recommends that the Commission exercise its rulemaking authority in this proceeding to order the utilities to flow through these federal tax reductions to consumers as soon as possible in the form of rate decreases.

The Attorney General noted that utility rates have been established by the Commission assuming that the utility pays a 35% federal corporate income tax rate, and that tax rate has changed to 21%, a substantial decrease. The Attorney General maintained that the impact affects investor-owned public utilities, generally, and to the extent that utility rates are not adjusted to reflect the new, lower federal income tax rates, utilities would receive large windfalls.

The Attorney General asserted that the Commission has authority to flow through the effect of tax changes to consumers in the form of rate reductions by ordering appropriate adjustments in a rulemaking proceeding, and did so when federal income tax rates for corporations were decreased from 46% to 34% effective July 1, 1987. (See Nantahala case).

The Attorney General recommended that the Commission order utilities to flow through these federal tax reductions to consumers as soon as possible in the form of rate decreases.

CIGFUR stated that CIGFUR I, II, and III are associations of large industrial retail purchasers of electric power from DENC, DEP, and DEC. CIGFUR noted that because income taxes are a major component of utility revenue requirements, the new federal tax law will have a substantial and material impact on the revenue requirements of DENC, DEP, and DEC and consequently on the ratepayers of these electric utilities.

CIGFUR asserted that the Commission should pass the substantial and material benefits of the new federal tax law on to ratepayers and may properly do so through this rulemaking proceeding. CIGFUR noted that the Commission is charged with setting just and reasonable rates for public utilities under Chapter 62 of the North Carolina General Statutes. CIGFUR stated that while Chapter 62 authorizes the Commission to modify base rates through a general rate case, there are exceptions. CIGFUR maintained that in 1990, the North Carolina Supreme Court affirmed a Commission order changing rates via a rulemaking proceeding under similar circumstances: the substantial decrease to the federal corporate income tax rate as a result of the Tax Reform Act of 1986. CIGFUR noted that the Supreme Court held that the Commission properly ordered affected utilities, through a rulemaking procedure, to lower their rates to reflect savings generated by the Tax Reform Act of 1986 when the final rule applied uniformly to the affected utilities that were similarly situated and (1) the tax reduction affected all utilities uniformly, (2) a large number of utilities were affected, making individual hearings for all inappropriate, and (3) no adjudicative-type facts were in dispute so as to require a trial-type hearing for each individual utility.

CIGFUR maintained that it understands that the impact of the new federal tax law will be substantial and material upon the revenue requirements of DEC, DEP, and DENC and will thus trigger the Commission's authority to pass tax reduction savings onto ratepayers via a rulemaking procedure as contemplated by the Nantahala court decision. CIGFUR asserted that in addition to the Commission's January 3, 2018 Order requiring impacted utilities to place the difference between revenues billed under present rates and the savings afforded by the reduction in the federal corporate income tax rate from 35% to 21% in a deferred account, CIGFUR requested that the Commission: (1) order that all public utilities subject to the docket file information setting forth each company's assessment of the new federal tax law on its North Carolina intrastate operations, including its proposal to adjust rates to reflect the reduction in the corporate income tax effectuated by the new federal tax law as soon as practicable and certainly no later than March 1, 2018; (2) issue an order establishing procedures to implement tariff reductions and refunds related to the corporate income tax savings related to the new federal tax law; (3) order that all affected utilities begin filing quarterly reports, no later than April 30, 2018, reflecting the status of the deferred account which the utilities were required to establish pursuant to ordering paragraph no. 2 of the Commission's January 3, 2018 Order; and (4) order each utility to establish a regulatory liability account to address EDIT resulting from the new federal tax law.

CIGFUR asserted that notwithstanding the Commission's authority to address the tax reduction outside of a general rate case, both DEP and DEC have general rate cases pending before the Commission, Docket Nos. E-2, Sub 1142 and E-7, Sub 1146, respectively. CIGFUR noted that it believes that it would be appropriate for the Commission to address the impacts of the new federal tax law through these general rate case proceedings as doing so is both efficient and will reduce confusion among DEP's and DEC's ratepayers.

CIGFUR stated that while in its late stages, DEP's general rate case remains pending before the Commission[1]. CIGFUR noted that the record is closed, however, CIGFUR asserted that the Commission may properly take judicial notice of the new federal tax law and the 40% reduction in the corporate income tax rate. CIGFUR quoted N.C. Gen. Stat. § 62-65(b) that states, "the Commission may take judicial notice of . . . federal statutes, . . . generally recognized technical and scientific facts within the Commission's specialized knowledge, and such other facts and evidence as may be judicially noticed by justices and judges of the General Court of Justice." CIGFUR also provided a quote from a 1998 court decision, as follows: "[f]urthermore, under Rule 201 of the North Carolina Rules of Evidence, the Commission, sitting as a trial tribunal, may

[1] The Commission issued its Order in DEP's rate case proceeding on February 23, 2018.

judicially notice facts that are 'not subject to reasonable dispute in that [they are] either (1) generally known within the territorial jurisdiction of the trial court or (2) capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned'." CIGFUR asserted that the Commission may properly take judicial notice in its discretion and at any state in the proceeding. CIGFUR requested that the Commission take judicial notice of the Tax Act in Docket No. E-2, Sub 1142, and, accordingly, order DEP to amend its filing to comport with the new tax law, which should be the basis for final approved rates.

In addition, CIGFUR noted that the evidentiary hearing in DEC's general rate case is fast approaching. CIGFUR stated that requiring DEC to update its application to comport with the Tax Act prior to the start of the evidentiary hearings on February 27, 2018 will provide much-needed transparency and accuracy on a significant component of DEC's revenue requirement.[1]

CIGFUR stated that revised and accurate income tax expense and revenue requirements are critical in informing the Commission's determination of just and reasonable rates for DEP and DEC; if the Commission approves rates based on inflated tax numbers, such rates will be unreasonable and in violation of N.C. Gen. Stat. § 62-131. CIGFUR further asserted that setting base rates based upon incorrect tax rates and then later refunding the excess and resetting rates in a separate proceeding will be an inefficient use of the resources of the Commission, the Public Staff, the utility, and ultimately, the using and consuming public. CIGFUR argued that the pending general rate cases are the most efficient and economic vehicle for effectuating the substantial and material impact of the Tax Act. CIGFUR also stated that addressing the federal corporate income tax reduction through the pending general rate cases will avoid ratepayer confusion, which is of great importance considering the significant public scrutiny that is being afforded to DEP's and DEC's general rate case proceedings.

CIGFUR stated that it believes that the Commission should, as quickly as practicable, pass the substantial and material benefits of the Tax Act onto ratepayers through the most efficient means available, be that through this rulemaking proceeding or through pending general rate cases.

CUCA noted that the Commission has dealt with tax rate changes twice in the past 30 years. CUCA stated that in 1986, the Commission established Docket No. M-100, Sub 113 to address utility rates in light of the 1986 Tax Reform Act. CUCA further noted that in 2013, the Commission opened Docket No. M-100, Sub 138 to address the changes from North Carolina Session Law 2013-316 (House Bill 998), An Act to Simplify the North Carolina Tax Structure and to Reduce Individual and Business Tax Rates.

CUCA maintained that the Commission is vested with the power to change rates absent of a rate case that result from a change in taxation of regulated utilities based on the 1990 Supreme Court decision in State ex rel. Utilities Comm'n v. Nantahala Power and Light Co., 326 N.C. 190, 388 S.E.2d 118 (1990). CUCA noted that it is aware of the Commission's Order of October 9, 2014 in Docket No. M-100, Sub 138, specifically in regard to single-issue ratemaking. CUCA noted that the Commission Order stated, in part, as follows:

[1] The evidentiary hearing was subsequently set to begin on March 5, 2018. The Commission issued its Order Accepting Stipulation, Deciding Contested Issues, and Requiring Revenue Reduction in DEC's rate case proceeding on June 22, 2018.

> However, the ratemaking doctrine against single-issue ratemaking in full force in this state, designed to present changes to utility rates outside general rate cases, should be adhered to except in limited, closely circumscribed situations. The insubstantial and immaterial changes at issue in this docket do not fit within the exception. The limitations should be preserved to prevent single-issue ratemaking in the future when tax rates increase in insubstantial and immaterial ways.

CUCA stated that it has estimated the monetary value of this tax rate change to be approximately $116.9 million annually for DEP and $182.4 million annually for DEC. CUCA maintained that these values translate into rate changes for DEC and DEP of 3.55% and 3.66%, respectively. CUCA noted that it has provided the calculations of the values in Appendix 1 as attached to its initial comments. CUCA stated that it did not estimate the rate changes for DENC, PSNC, Piedmont, or Frontier but that CUCA believes that the rate changes for DENC and the three gas utilities will be in the same percentage range as the above-stated rate changes for DEC and DEP. CUCA asserted that in keeping with the Commission's decision in Docket No. M-100, Sub 138, CUCA argues that the rate changes at issue due to the federal tax changes are both substantial and material and do not entail single-issue ratemaking as previously discussed by the Commission.

CUCA stated that it also recognizes that the Commission has previously addressed the issue of EDIT in Docket No. M-100, Sub 138. CUCA noted that the Commission, in that docket, required the establishment of a regulatory liability account for the EDIT that would be addressed in the next rate case for each of the Companies. CUCA stated that it has estimated the issue of EDIT to be approximately $875 million for DEP and over $1.6 billion for DEC. CUCA stated that it estimated these amounts based upon values found in the FERC Form 1 reports of DEP and DEC allocated to the North Carolina retail consumer and from Form E-1, item 45A of the ongoing DEP and DEC rate cases. CUCA stated that given the fact that DEC and DEP have pending rate cases before the Commission, CUCA requested that the Commission address the issue of EDIT in these ongoing cases.

CUCA requested that the Commission order: (1) the creation of a deferred account to capture all of the changes related to the difference between revenues billed under rates now in effect relative to the attendant cost of service based on the federal income tax component from 35% to 21%; (2) an immediate reduction of rates paid by consumers to account for the change in federal income tax rates from 35% to 21%; (3) the creation of a regulatory liability account for each Company to address the change in EDIT as a result of the recent federal tax rate change; and (4) that the issue of EDIT be addressed in the pending DEC and DEP general rate cases.

The **Low-Income Advocates** asserted that the crucial question before the Commission in this docket is how best to take advantage of the tax cut for the benefit of customers. The Low-Income Advocates maintained that several principles should guide the Commission's determination.

First, the Low-Income Advocates stated that excess revenues due to the reduction in the public utilities' cost of service should not accrue to the Companies' shareholders. The Low-Income

Advocates noted that because a utility is authorized a rate of return from captive retail ratepayers, its shareholders are insulated from the fluctuations of the markets. The Low-Income Advocates stated that allowing utility shareholders to reap the benefits of the tax cut would result in a windfall.

Next, the Low-Income Advocates maintained that the public utilities should not be allowed to keep any excess revenues they collect (or have collected) through existing rates and spend those ratepayer dollars however they want for capital or operating expenses.

The Low-Income Advocates also stated that although the Commission has the authority to reduce rates to account for the impact of the tax cut on the public utilities' cost of service, the Commission should not simply order utilities to reduce their rates to account for the entire impact of the tax cut, or to flow all of the over-collections due to the tax cut to their customers in the form of rebates or decrement riders. The Low-Income Advocates asserted that the reduction in the federal corporate income tax has a material and substantial impact on the public utilities' cost of service; therefore, adjustment of rates in light of the tax cut outside a general rate case would not run afoul of the prohibition on single-issue ratemaking in conflict with the Nantahala case.

In addition, the Low-Income Advocates maintained that the utilities should be required to invest some portion of the tax savings for the residential class in measures that reduce customer bills. For example, the Low-Income Advocates stated, the Commission could require electric and natural gas utilities to invest a portion of the tax savings in energy efficiency programs for low-income customers. The Low-Income Advocates noted that because each dollar invested in energy efficiency yields up to four dollars in cost savings to the utility's system[1], directing a portion of utilities' tax savings to such programs would have a greater "bang for the buck" than simply reducing utility rates. The Low-Income Advocates maintained that, similarly, water utilities could be required to invest in water-conservation programs. The Low-Income Advocates stated that such investments would yield greater bill reductions than a simple rate reduction or rebate.

Finally, the Low-Income Advocates maintained that if rates for residential customers are reduced, the Commission should not simply order an across-the-board reduction in rates and charges for the class. Instead, the Low-Income Advocates argued, the Commission should examine whether it is appropriate to require greater reductions in fixed, monthly charges than in the volumetric rate.

The Low-Income Advocates noted that the information that the Commission has directed the utilities to file in their initial comments regarding the impact of the tax cut on their cost of service will assist the Low-Income Advocates in formulating a proposal for how the tax cut monies should be spent for the benefit of low-income residential customers. The Low-Income Advocates stated that they therefore intend to put forth such a proposal in their reply comments.

---

[1] The Low-Income Advocates cited ACEEE, Press Release, New Report Finds Energy Efficiency is America's Cheapest Energy Resource (Mar. 25, 2014), http://aceee.org/press/2014/03/new-report-finds-energy-efficiency-a. "Each dollar invested in electric energy efficiency measures yields $1.24 to $4.00 in total benefits for all customers, which include avoided energy and capacity costs, lower energy costs during peak demand periods like heat waves, avoided costs from building new power lines, and reduced pollution."

The **Public Staff** stated that it believes it is permissible for the Commission to address the effects of the Tax Act through this docket. The Public Staff maintained that the Tax Act will result in a significant reduction in the federal corporate income taxes paid by most, if not all, utilities regulated by the Commission. The Public Staff further noted that this reduction will, in turn, result in a reduction in the cost of providing public utility services to North Carolina customers, which the Public Staff believes is sufficiently substantial and material to justify an exception to the doctrine against single-issue ratemaking.

The Public Staff stated that, at a minimum, the items addressed by the Commission in this docket should include: (1) a reduction in rates to reflect the reduction in the federal corporate income tax rate; (2) the flowback to customers of EDIT; and (3) the effects of changes to the taxability of Contributions in Aid to Construction (CIAC), all of which are results of the Tax Act.

Finally, the Public Staff stated that it anticipates that individual utilities may raise unique issues related to the impacts of the Tax Act. The Public Staff stated that it will address these issues in reply comments.

REPLY COMMENTS

Electric Utilities

DEC/DEP stated that in their initial comments, the Companies identified the amount of reduction in annual revenue requirements related to reduced income tax expense resulting from the Tax Act and presented the Commission with a balanced solution to reflect the benefits of the Tax Act through options that will lower customer bills in the near-term, help mitigate volatility due to future rate increases, and uphold the Companies' pre-Tax Act credit quality for the benefit of customers. DEC/DEP noted that based upon the cost of service studies, from Docket Nos. E-7, Sub 1026 and E-2, Sub 1023, respectively, the Companies estimated reductions in the annual revenue requirement of $104 million for DEP and $172 million for DEC, and translated that into a decrement rate per kilowatt hour, based on the kilowatt hours in those cases. DEC/DEP stated that based on the DEP NC 2013 rate case, the total tax expense savings is $104 million. DEC/DEP noted that DEP will not know the level of tax expense savings based on the pending rate case until the Commission order is received[1]. DEC/DEP noted that the difference between the actual amount of tax expense savings based on the rates set in Docket No. E-2, Sub 1142 and the $104 million would be deferred into a regulatory liability account for consideration in a future proceeding. DEC/DEP further noted that based upon the DEC NC 2013 rate case, the total tax expense savings is $172 million. DEC stated that it will not know the level of tax expense savings based on the pending rate case until the Commission order is received. DEC/DEP noted that the difference between the actual amount of tax expense savings based on the rates set in Docket No. E-7, Sub 1146 and the $172 million would be deferred into a regulatory liability account for consideration in a future proceeding.

DEC/DEP noted that in the current DEC rate case proceeding, DEC proposed to apply the decrement to North Carolina retail services beginning January 1, 2018, and defer the resulting

[1] The Commission issued the DEP rate case Order on February 23, 2018.

amount into a regulatory liability until new rates can be established in its currently pending rate case. DEC/DEP further noted that DEC provided additional detail in its rebuttal testimony of witnesses David Fountain, Stephen DeMay, and Jane McManeus filed on February 6, 2018 in Docket No. E-7, Sub 1146.

DEC/DEP noted that in DEP's rate case proceeding, DEP proposed to apply the decrement to North Carolina retail services beginning January 1, 2018, and defer the resulting amount into a regulatory liability until new rates can be established in its next general rate case, or in the alternative to reduce rates in a rider to be established by the Commission in this generic docket. DEC/DEP proposed options to help mitigate future rate increases by applying the federal income tax expense savings to offset items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEC/DEP asserted that nothing in the intervenors' initial comments changes the Companies' recommendation that the Commission should implement a balanced solution to ensure that customers receive the benefits of tax reform.

DEC/DEP noted that the Public Staff, the Attorney General's Office, CIGFUR, and the Low-Income Advocates, in their initial comments, all agree with DEP and DEC that customers should receive the benefits of federal tax reform. DEC/DEP stated that to the extent that these intervenors are asking for the Commission to reduce customer rates and the Companies' revenues immediately for 100% of the benefits of the Tax Act, however, they do so without regard to the utilities' current financial position and other relevant factors. DEC/DEP asserted that rate decreases pursuant to federal tax reform will decrease cash flows, which will weaken credit metrics. DEC/DEP argued that the weakened metrics will reduce financial flexibility and could ultimately result in increased financing costs, which, in turn, impact customer bills. DEC/DEP maintained that in a tangible sign of this risk, on January 19, 2018, Moody's changed the rating outlook of Duke Energy Corporation and 23 other utilities and utility holding companies from stable to negative in response to the financial impacts of the Tax Act and regulatory uncertainties related thereto.

DEC/DEP stated that as discussed in their initial comments, one of the consequences of the Tax Act is that the lower tax rate and the elimination of bonus depreciation will increase the Company's rate base over time, which has the corresponding effect of increasing customer rates over time. DEC/DEP maintained that they have proposed that the Commission could mitigate these impacts by offsetting items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEC/DEP noted that the accelerated depreciation would be accomplished by creating a North Carolina retail regulatory liability. DEC/DEP stated that that liability would then be used to reduce depreciation expense on the specific asset or group of assets the next time depreciation rates are updated, similar to the way that the DEP Harris Nuclear Plant accelerated depreciation was used to reduce depreciation expense in Docket No. E-2, Sub 1023. DEC/DEP asserted that the use of accelerated depreciation would benefit customers by lessening future rate increases caused by rate base growth resulting from the Tax Act. DEC/DEP stated that their proposed response to the federal tax reform, therefore, provides the Commission with an opportunity to help reduce and smooth out volatility in customer rates over the short- and long-term, while maintaining the Companies' pre-Tax Act credit quality for the benefit of customers.

DEC/DEP requested that the Commission approve and adopt their recommendations to deliver savings to customers in a manner that balances the interests of customers and the Companies.

DENC stated that it agrees with the Public Staff and certain other parties that the enactment of the Tax Act has a material impact on the Company's future cost of service and should benefit North Carolina ratepayers through lower utility rates. DENC maintained that given the magnitude of the Tax Act's impact on the Company's future cost of service, DENC recognizes that the Commission may deem it appropriate to expeditiously address the federal corporate income tax changes through a rulemaking procedure under the Public Utilities Act. DENC noted that the 1990 North Carolina Supreme Court Nantahala decision established the Commission's authority under the Public Utilities Act to require single-issue ratemaking adjustment by rulemaking procedure outside of a general ratemaking process to pass through a similarly material reduction in federal corporate income tax rates.

DENC maintained that it recognizes the Public Staff's and other parties' objective of ensuring that provisionally-collected amounts are expeditiously recognized in the Company's utility rates. However, DENC asserted that efficiencies would be achieved by comprehensively addressing all federal income tax issues in the Company's next general rate case. DENC stated that to balance these interests, the Company commits to filing a single-issue adjustment to its base rate cost of service on or before June 30, 2019, if the Company has not filed a general rate case as of that date.

DENC asserted that for the Company's non-base rates and charges with approved deferral accounting and experience modification factors (i.e., fuel factor, riders for the Company's demand-side management programs and energy efficiency program costs, and Renewable Energy and Energy Efficiency Portfolio Standard compliance costs), the Company continues to recommend addressing the impact of the Tax Act in upcoming annual rider proceedings where applicable.

DENC also maintained that with regard to addressing excess deferred federal income taxes associated with the Tax Act's federal corporate income tax rate reduction, the Company also recommends that the Commission address the effect of the EDIT in the Company's next general rate case. DENC argued that this approach will ensure that ratepayers receive the benefit of EDIT created by the Tax Act, while also preserving the Company's ability to deduct accelerated depreciation on its federal income tax returns for the benefit of ratepayers. DENC stated that as explained in the Company's initial comments, the predominant portion of EDIT is subject to the IRC's normalization rules. DENC maintained that certain tax technical issues have yet to be resolved and additional guidance from the IRS is expected. DENC argued that addressing the ratemaking treatment of EDIT in the Company's next general rate case rather than through rulemaking allows for additional time to resolve these issues to ensure that the Company's rates and charges are maintained in accordance with the IRC's normalization rules.

DENC opined that provisional recovery and deferral accounting combined with its commitment to file a single-issue proceeding to address these impacts by June 30, 2019, if it has not yet filed a base rate case, appropriately balances the desire to expeditiously pass the benefits of the Tax Act to ratepayers with the Company's approach to efficiently adjusting its rates and charges to comprehensively address all base rate cost of service impacts resulting from the Tax Act. DENC maintained that if the Commission determines that it is appropriate to reduce utility rates through a rulemaking procedure on a more accelerated schedule, the Company recommends that the Commission only order DENC to adjust the income tax expense portion of operating income in the Company's cost of service and leave the other elements of the tax changes enacted in the Tax Act for review in the Company's next general rate case. DENC stated that, in any case, it stands ready to work with the Public Staff and to take whatever action the Commission directs to provide the benefits of the Tax Act to the Company's customers.

Natural Gas Utilities

Piedmont noted that it proposes to flow-through tax reductions under its IMR mechanism, while deferring tax rate reductions on its base rates until its next general rate case proceeding where such deferral can be amortized and used to offset any requested base rate increase in that docket. Piedmont stated that for excess deferred income taxes, it proposes to establish a regulatory liability and, similar to the Commission's treatment of excess deferred income taxes in Docket No. M-100, Sub 138, would propose that these liabilities be addressed in the Company's next general rate proceeding as well.

Piedmont asserted that while some intervenors request that the Commission reduce customer rates and the utilities' revenues immediately to account for 100% of the impacts of the Tax Act, Piedmont submits that its proposals represent a more balanced approach. Piedmont recommended that customers receive an immediate benefit in the form of savings under the Tax Act through rate reductions commencing with its upcoming June 1, 2018 IMR rate adjustment, but that tax rate reductions on its base rates be deferred until its next general rate case proceeding.

Piedmont proposed to defer some of the savings associated with the Tax Act because customers benefit directly from a strong balance sheet and strong investment grade credit ratings through low cost of capital and strong access to capital during all market conditions. Piedmont stated that adopting an immediate pass-through of only the benefits under the Tax Act, in isolation and to the exclusion of other provisions of the Tax Act, would be detrimental to Piedmont's long-term financial stability and credit ratings. Piedmont noted that as an example of this type of impact of the Tax Act, on January 19, 2018, Moody's changed the rating outlook of Piedmont and 23 other utilities and utility holding companies from stable to negative in response to the financial impacts of the Tax Act and regulatory uncertainties related thereto. Piedmont stated that, in addition, one attribute of the Tax Act is that it will increase rate base at a faster rate than has been experienced in recent years due to the elimination of bonus depreciation for new capital investment going forward. Piedmont asserted that preserving the benefits of a lower tax rate until Piedmont's next general rate case will serve as a natural hedge against increasing rate base and help stabilize customer rates over the long run.

Piedmont maintained that, thus, in order to minimize the negative impacts of the Tax Act on Piedmont's cash flows and credit quality in the long run and stabilize customer rates, Piedmont fully supports the adoption of a balanced approach that provides customers some benefits now, and some later.

Water/Wastewater Utilities

No water/wastewater utility filed reply comments.

Other Parties

The Attorney General stated that many of the utilities do acknowledge in their initial comments that ratepayers should benefit from the recent reductions in the federal corporate income tax rate. However, the Attorney General maintained that the Commission should not adopt proposals put forth by utilities that would prevent consumers from receiving these benefits fully and immediately, as opposed to on a delayed basis.

The Attorney General asserted that as a matter of public policy, utility service should be economical, rates should be just and reasonable, and where a major change in federal taxes has had a substantial effect on the cost of public utility service, across all utilities, it is appropriate to flow through the benefit to North Carolina ratepayers.

The Attorney General noted that when Congress passed the Tax Reform Act of 1986, the Commission found that the significant reduction to the tax rate would have an immediate and favorable impact on the cost of providing public utility services to consumers in North Carolina and concluded that it was incumbent on the Commission to take the appropriate action as required so as to preserve and flow through to ratepayers, as a reduction to public utility rates, any and all cost savings realized in this regard which would otherwise accrue solely to the benefit of the stockholders. The Attorney General further noted that the North Carolina Supreme Court, affirming the Commission's final decision in that proceeding, observed that the purpose of the Commission's proceeding in 1986 was to take the effect of the reduction in tax rates and flow it through to the ratepayers. The Attorney General asserted that by responding quickly through the rulemaking proceeding, significant over-collections by public utilities were avoided and customers benefitted from prompt rate reductions.

The Attorney General maintained that, undeniably, as the Commission indicated in its January 3, 2018 Order initiating this proceeding, the impact of the recent reduction in the federal corporate income tax rate from 35% to 21% has a substantial downward impact on the cost of service for utilities. The Attorney General argued that, nevertheless, contrary to the long-standing North Carolina legal authorities and principles of sound ratemaking, many of the initial comments filed by investor-owned utilities indicate that they do not support promptly flowing through the full benefits of the December 22, 2017 enactment of the Tax Act in utility rate reductions to ratepayers. The Attorney General stated that, instead, most of the utilities propose to make accounting entries that defer part or all of the over-collection of income taxes to be considered in future rate proceedings. The Attorney General asserted that these proposals are not acceptable.

The Attorney General stated that the investor-owned public utilities in their initial comments do acknowledge that utility ratepayers should benefit from the changes in the federal corporate income tax rate; however, by and large they want to (a) delay as long as possible returning money collected from ratepayers for past income tax over-collections, (b) continue to over-collect income taxes until their next rate cases, and (c) avoid telling ratepayers the magnitude of these past and continuing over-collections.

The Attorney General noted that, for example, DEC/DEP stated in their initial comments that it is the Companies' intent that customers will receive the benefits of tax reform. However, the Attorney General maintained, despite the fact that both of the Duke Energy North Carolina subsidiaries have pending general rate cases, Duke has only supplied information in this proceeding from rate cases that used test years that are several years old, and also has suggested using deferral accounting, instead of a prompt rate reduction, to address part of the adjustment to cost of service revenues. The Attorney General stated that, further, DEC/DEP do not identify how much the Companies hold in accounts for ADIT, do not report the EDIT amount that they have accrued based on the reduction in federal income taxes, and do not propose to return any of the EDIT amounts to ratepayers until they file future general rate cases. The Attorney General maintained that instead, DEC/DEP propose to hold onto those excess funds, apparently for several years, as cost-free capital.

The Attorney General observed that other utilities also suggest limiting or deferring the benefit of income tax reform rather than flowing it through to ratepayers promptly. The Attorney General noted that DENC proposed to defer the amount that is accounted for provisionally, relating to the impact of tax reform on cost of service, and to hold onto the excess amount that has accrued in deferred income taxes for consideration in its next general rate case. The Attorney General noted that CWSNC made a similar proposal, and that Piedmont proposed to defer the benefits of tax reform for consideration in a future general rate case, other than with respect to revenues that are recovered in periodic surcharges for the Integrity Management Rider. The Attorney General specified that, like DEC/DEP, Piedmont did not reveal the current balances of ADIT and EDIT accounts.

The Attorney General argued that allowing utilities to hold onto the excess is particularly unreasonable if the utility has a pending general rate case or if rates were recently established. The Attorney General stated that DEC has acknowledged that it is appropriate to address the effect of tax reform in the pending DEC general rate case, but suggests that it is not appropriate to address tax reform in the pending DEP case because the evidentiary hearing has already been held in that case. The Attorney General asserted, however, that the fact that the evidentiary hearing has already occurred in the DEP case should not postpone action until another rate case is filed years from now. The Attorney General argued that the effects of the changes in the tax law are known and measurable, and may be addressed either in late-filed exhibits or by identifying the increment in rates relating to the Tax Act as provisional, pending further consideration and determination similar to the provisional treatment ordered in this proceeding. The Attorney General maintained that, alternatively, the rates established in the general rate case may be adjusted subsequently by findings made in this rulemaking proceeding with reliance on factors determined in the rate case proceeding.

The Attorney General argued that the Commission should not be persuaded to delay rate reductions based on the justification offered by DEC/DEP for continuing to over-collect from ratepayers and to delay returning over-collections. The Attorney General stated that DEC and DEP contend that prompt action to flow over-collected taxes back to customers will affect DEC/DEP's cash flow and may therefore harm ratepayers. The Attorney General maintained that it appears from DEC/DEP's comments that DEC/DEP and other utilities have experienced high cash flows in recent years in part because their rates are established based on the inclusion in their revenue requirements of the full federal corporate income tax rate, whereas income taxes actually incurred and paid may be significantly less than that due to bonus depreciation and other factors. The Attorney General stated that DEC/DEP's comments propose to continue over-collecting the known and measurable adjustment to its expense for income taxes because of a hypothetical impact that rate reductions and the return of excess funds would have on DEC/DEP's credit rating. The Attorney General asserted that the fact that Moody's has placed Duke Energy Corporation on a credit watch for possible downgrade does not mean that the credit ratings of Duke Energy or its North Carolina subsidiaries will suffer. The Attorney General argued that far less does it provide evidence of the extent or effect of such a downgrade. The Attorney General maintained that Duke's credit rating is high relative to many of its peers, and the effect of a slight downgrade would be small relative to the benefit ratepayers receive from a rate reduction and the return of excess funds held by Duke. The Attorney General stated that DEC/DEP's argument unfairly seeks to maintain unreasonably high utility rates merely to prop up DEC/DEP's cash flow, without any attempt to weigh the relative benefits and harms that its proposal would have on ratepayers.

The Attorney General noted that DEC/DEP suggest that the substantial beneficial impact of the federal corporate income tax rate reduction provides headroom for the Commission to allow rate increases that DEC and DEP support but other parties have disputed, such as for high coal ash costs, storm costs, and accelerated depreciation of some meters. The Attorney General argued that, however, ratepayers will not benefit if income tax-related utility rate reductions are used to mask unreasonable cost recovery proposals.

The Attorney General maintained that as a result of the scant information provided by the utilities in their initial comments, the public and the Commission do not know how much EDIT have been accrued. The Attorney General argued that, however, this information is known to the utilities because publicly-traded utilities must report this data in their annual reports to shareholders, and the information should be reported and considered in this docket as well. The Attorney General maintained that the amount of EDIT may be very large. The Attorney General further noted that according to an estimate provided in comments filed by CUCA, based on FERC Form 1 filings, DEC has over $1.6 billion of excess accrued deferred income taxes allocated to North Carolina retail customers, and DEP has approximately $875 million.

The Attorney General argued that the utilities' proposals are unjust and unreasonable to ratepayers. The Attorney General stated that to the extent that the cost of service effect associated with the lower corporate income tax rate is not flowed through in rates, utilities will continue to over-collect revenues, and customers will continue to be forced to pay excessive rates to build up utility accounts that essentially lend cost-free capital for utility operations. The Attorney General stated that, similarly, if the utilities' proposals are accepted and they are allowed to retain the funds they are currently holding in EDIT accounts, i.e., excess deferred income taxes that were collected in earlier years when the federal income tax rate was higher than it is following the Tax Act, then the utilities would continue to maintain these excess funds as cost-free capital. The Attorney General argued that not returning dollars to consumers who struggle to pay their bills, or to consumers who would use their money for different purposes if given the opportunity, results in an undue burden on ratepayers and communities in North Carolina.

The Attorney General requested that the Commission take prompt action to require the utilities to provide a full accounting of the past and present extent of over-collection of taxes and then to order immediate utility rate reductions that reflect the full impact of the federal income tax reduction on cost of service and that return excess deferred income taxes that have accrued as soon as allowed under federal tax law.

CIGFUR noted that because income taxes are a major component of utility revenue requirements, the Tax Act will have a substantial and material impact on public utilities' revenue requirements and consequently on the ratepayers of these utilities. CIGFUR stated that DENC estimated in its initial comments that its annual North Carolina jurisdictional income tax expense will decrease by approximately $10.8 million with a corresponding increase to operating income of the same amount beginning January 1, 2018. CIGFUR also noted that DEC/DEP estimated in their initial comments that the Tax Act results in a reduction of $104 million in DEP's annual revenue requirement and a reduction of $172 million for DEC.

CIGFUR argued that the Commission should adjust customer rates to pass tax savings onto ratepayers in the form of rate decreases as soon as practicable. CIGFUR maintained that DENC acknowledged that it is now treating the federal corporate income tax component of its existing approved rates and charges as provisional and will hold the amounts in a deferred account. CIGFUR stated that DENC proposed to address the cost of service impacts and disposition of deferred amounts due to the Tax Act through its next general rate case. CIGFUR further stated that with respect to DEP, the Company proposed to defer the tax savings to a regulatory liability, until DEP's next rate case, but also offers an alternative that the Commission could approve a rider in this generic docket (Docket No. M-100, Sub 148) to reduce DEP customer rates. CIGFUR noted that with respect to DEC, the Company proposed that federal tax reform impacts should be addressed in its pending general rate case, Docket No. E-7, Sub 1146.

CIGFUR maintained that it supports implementing the federal corporate income tax reduction through the general rate case process for utilities with pending general rate case proceedings, and thus supports DEC's proposal to address the Tax Act through its pending rate case, Docket No. E-7, Sub 1146. However, CIGFUR stated that it opposes DENC's and DEP's proposals to defer cost savings until their next general rate cases, which may not occur for several years. CIGFUR rather recommended that the Commission consider the holistic impact of the Tax Act and adjust customer rates to pass tax savings onto ratepayers in the form of rate decreases as soon as practicable.

CIGFUR further stated that EDIT should be refunded to ratepayers through a decrement rider as soon as practicable. CIGFUR maintained that in the early years of a given capital asset, the utility collects more in tax expense from ratepayers than it pays out to the IRS due to the difference in accelerated depreciation for tax purposes and straight-line depreciation for ratemaking purposes. CIGFUR noted that that situation reverses once the ratemaking depreciation expense begins to exceed the tax depreciation. CIGFUR asserted that assuming that tax rates stay constant over the life of a capital asset, the total tax expense paid by the ratepayers to the utility should match the tax expense the utility pays the IRS. CIGFUR stated that as a result of the differences in depreciation timing and because tax funds are ratepayer supplied, in the early years of a given capital asset ratepayers provide the utility an interest-free loan, reflected as a credit to the utility's ADIT liability account.

CIGFUR maintained that due to the Tax Act, DENC's, DEP's, and DEC's future tax liabilities will not be as high as anticipated when rates were originally designed. CIGFUR stated that the amount by which DENC's, DEP's, and DEC's current ADIT balances exceeds their future income tax liability as a result of the Tax Act are the EDIT at issue. CIGFUR noted that further, until the Commission adjusts utility rates to reflect the new lower tax rate, the utilities will continue to collect excess income tax from ratepayers at the 35% tax rate, which the Commission approved for DENC, DEP, and DEC in Docket Nos. E-22, Sub 532, E-2, Sub 1023, and E-7, Sub 1026, respectively.

CIGFUR asserted that these EDIT should be promptly flowed back to ratepayers; however, DENC, DEP, and DEC argue against returning EDIT to ratepayers in a timely manner and instead propose to defer their EDIT as regulatory liabilities until their next general rate cases. CIGFUR stated that it opposes long-term deferral of EDIT and proposes that, concurrent with the immediate rate reductions discussed in its reply comments, the Commission establish a decrement rider for each utility to refund EDIT to ratepayers over a two or three year period.

CIGFUR concluded by stating that it opposes the long-term deferral of tax savings and proposes that as soon as possible the Commission reduce customer rates to pass the substantial and material benefits of the Tax Act onto ratepayers and concurrently establish decrement riders to refund EDIT.

The <u>Low-Income Advocates</u> stated that the crucial question before the Commission remains how best to take advantage of the federal tax cut for the benefit of customers. The Low-Income Advocates asserted that the Commission should reject the utilities' proposals to retain the benefits of the tax reduction. The Low-Income Advocates maintained that the Commission should not follow DEC/DEP's, DENC's, or Piedmont's recommendations. The Low-Income Advocates noted that, first, in the case of DEC/DEP, their pending rate cases are not yet decided. The Low-Income Advocates argued that it would be premature to set aside funds that belong to customers now for costs that have not yet been authorized by the Commission as an appropriate cost of service. The Low-Income Advocates stated that even though an order from the Commission in the DEP rate case is likely to be issued soon[1], given the possibility of appeal, the contested issues will not likely be fully resolved for some time. The Low-Income Advocates noted that Duke and the other regulated public utilities should not be allowed to continue over-collecting or to hold on to previously over-collected deferred taxes pending the resolution of those contested issues.

[1] The Commission issued the DEP rate case Order on February 23, 2018.

The Low-Income Advocates noted that, moreover, even if all of the contested issues were quickly resolved in DEP's and DEC's pending rate cases, the basis for those rates would include outdated figures for tax collections within the utilities' base rates, and would thus lead to an over-collection and inflated rates for customers unless they were adjusted by the Commission. The Low-Income Advocates stated that, in addition, the longer the lag time in adjusting rates to account for the dramatically reduced tax liabilities faced by the utilities, the greater chance that some ratepayers will not receive any benefit from the utilities' tax cut. The Low-Income Advocates maintained that, for example, a Duke customer who paid rates over the last several years was over-paying for both excess accumulated deferred income taxes and, since January 1, 2018, for the income-tax component of Duke's cost of service. The Low-Income Advocates stated that if that customer moves out of Duke's service territory before any adjustments are made by the Commission, the customer will never recoup those overpayments.

The Low-Income Advocates asserted that the Commission should direct the utilities to use the tax savings to reduce fixed monthly charges. The Low-Income Advocates urged the Commission to require the utilities, as soon as practicable, to first apply the tax reductions to reduce utilities' fixed, monthly charges. The Low-Income Advocates stated that this will not only lower customers' bills, it will maximize the chance that low-income customers, who are disproportionately low-volume customers, receive the full value of benefit from such a reduction. The Low-Income Advocates maintained that applying the reductions to the fixed charges also guarantees that all customers will get an equal benefit from the reduced rates. The Low-Income Advocates stated that otherwise, high-volume users would potentially see a greater reduction in their bills than would a low-volume user.

The Low-Income Advocates recommended that the Commission order a portion of the previously over-collected taxes (EDIT) to flow back to ratepayers in the form of investments in low-income efficiency programs. The Low-Income Advocates asserted that the accumulated deferred income taxes have already been collected from customers, and given the change in the federal corporate income tax rate enacted by Congress, have been over-collected. The Low-Income Advocates stated that this excess is now a regulatory liability that should be returned to customers. The Low-Income Advocates noted that consistent with the requirements for the normalization method of accounting for deferred taxes for regulated public utilities, the public utilities in this docket should return the difference between the deferred income taxes accounted for under the higher federal corporate income tax rate under prior law and the lower rate that was recently established in the Tax Act. The Low-Income Advocates asserted that a portion of the EDIT should be returned to ratepayers in the form of direct investments in low-income energy efficiency. The Low-Income Advocates noted that based on the initial comments it is not clear what the total change in the EDIT will be over the next several years, or how fast the utilities can return the over-collected deferred income taxes to ratepayers under normalization rules. The Low-Income Advocates stated that at a minimum, it would be reasonable for the public utilities to invest at least 25% of EDIT for low-income efficiency.

The Low-Income Advocates further stated that for DEP and DEC, this objective can most readily be achieved by directing a portion of their EDIT to the Helping Home Fund, a program administered by the North Carolina Community Action Association that supplements the federal Weatherization Assistance Program by providing efficiency upgrades to low-income households.

The Low-Income Advocates asserted that there is precedent for using a regulatory liability for the benefit of retail customers to fund energy-efficiency investments for the utility's low-income customers. The Low-Income Advocates noted that the Helping Home Fund was itself established out of a $20 million regulatory liability from DEP (in the context of its 2013 general rate case proceeding stipulation) for the benefit of its North Carolina low-income residential customers.

The Low-Income Advocates maintained that as to DENC, it could replicate the Helping Home Fund in DENC's North Carolina territory with the assistance of community action agencies that operate in the Northeast corner of the State. The Low-Income Advocates stated that the gas and water utilities could direct a portion of EDIT to their existing efficiency programs for low-income customers, or propose alternative methods for making direct investments in low-income efficiency programs.

The Low-Income Advocates stated that there are several sound policy reasons for using some of the already over-collected tax revenues for targeted investment in low-income energy efficiency rather than rebates or a decrement rider.

The Low-Income Advocates maintained that based on an ACEEE 2014 Press Release (http://aceee.org/press/2014/03/new-report-finds-energy-efficiency-a) each dollar invested in energy efficiency yields up to $4 in benefits for customers. The Low-Income Advocates asserted that, based on information in the same ACEEE Press Release, investments in energy efficiency reduce customer bills, lower energy costs during periods of high demand, avoid or defer the need to build or upgrade power plants and transmission infrastructure, and reduce air and water pollution. The Low-Income Advocates stated that energy efficiency is the least-cost energy resource; the energy savings achieved through energy efficiency programs are approximately one-half to one-third the cost of generating the same amount of electricity from traditional sources such as fossil fuels.

The Low-Income Advocates stated that low-income households are more likely than the average household to have older and less efficient appliances. The Low-Income Advocates further noted that low-income households, minority households, renting households, and low-income households residing in multifamily buildings experience higher than average energy burdens, meaning that they pay a higher percentage of their income on energy bills. The Low-Income Advocates asserted that the Southeast faces some of the highest energy burdens in the nation and that households with high energy burdens must face difficult trade-offs between paying utility bills and paying for other necessities such as food, prescriptions, transportation, and medical care. The Low-Income Advocates noted that utility investments in energy efficiency help to alleviate high energy burdens faced by low-income households while bringing system-wide benefits that are shared by all customers.

The Low-Income Advocates urged the Commission to use the reduced income tax portion of the public utilities' cost of service to lower customer bills as soon as possible. The Low-Income Advocates asserted that this should take the form of lower fixed, monthly charges for residential customers and for a portion of the EDIT, the utilities should make investments in efficiency measures that directly benefit low-income customers, such as the Helping Home Fund.

Nucor noted that it owns and operates a steel recycling facility located in Hertford County, North Carolina, that produces steel plate. Nucor stated that it is a customer of DENC and takes service pursuant to a special contract for electric service, as amended, subject to the jurisdiction of the Commission. Nucor maintained that it, therefore, reviewed DENC's initial comments in this proceeding and has concerns regarding DENC's planned ratemaking in response to the Tax Act.

Nucor noted that DENC indicated that it will comprehensively address all impacts from the Tax Act as part of its updated cost of service filed in the Company's next general rate case. Nucor asserted that DENC's proposed approach is inadequate and objectionable.

Nucor argued that DENC makes no commitment as to when it will file its next general rate case application[1]. Further, Nucor stated that DENC initiated its last general rate case, Docket No. E-22, Sub 532, on March 31, 2016. Nucor noted that that proceeding was not resolved until issuance of the Commission's Order on December 22, 2016. Nucor asserted that the inherent delay in flowing through the federal tax reductions to DENC's customers via a speculative and lengthy general rate case proceeding is unwarranted and would be unfair to DENC's customers.

Nucor stated that as the Attorney General correctly observes, this is not the first time the Commission has dealt with this very issue. Nucor noted the 1990 North Carolina Supreme Court decision concerning the Commission's treatment of the 1986 Federal Tax Act.

Nucor maintained that the Commission has the authority to address the tax reduction resulting from the Tax Act outside of a general rate case and should do so with respect to DENC. Nucor asserted that the Commission should require that DENC pass through the benefits of the federal tax changes to DENC's ratepayers in a timely manner.

The **Public Staff** maintained that Toccoa, in its initial comments, noted that, as a municipally-owned natural gas system, it is not subject to income and other tax obligations. The Public Staff further noted that Toccoa asserted that, consequently, no tax allowances were included in the determination of Toccoa's revenue requirement when its rates were established, and no adjustment to its rates are required as a result of the Tax Act. The Public Staff stated that, for the reasons set forth in Toccoa's comments, it agrees that no adjustment should be made to Toccoa's rates in response to the tax reduction in the Tax Act.

The Public Staff commented that based on its review of the Tax Act and the initial comments of the other parties, it has the following proposals.

The Public Staff recommended that the Commission seek to resolve issues raised in this docket in any pending general rate cases for the utilities subject to the provisions of this docket (the subject utilities). The Public Staff stated that currently, DEC has a pending rate case in Docket No. E-7, Sub 1146. The Public Staff recommended that the issues raised in this docket be addressed in that general rate case.

---

[1] In its reply comments, DENC committed to filing a single-issue adjustment to its base rate cost of service on or before June 30, 2019 if the Company has not filed a general rate case as of that date.

Further, the Public Staff stated that it does not oppose Aqua's request to resolve the issues raised in this docket related to the income tax changes resulting from the Tax Act in the general rate proceeding it intends to file, provided Aqua files a general rate case on or before April 1, 2018[1].

The Public Staff noted that the Commission has dealt with similar issues in two prior Commission proceedings in Docket Nos. M-100, Sub 113 and M-100, Sub 138. The Public Staff commented that in Docket No. M-100, Sub 113, the Commission addressed tax reductions from the Federal Tax Reform Act of 1986. The Public Staff maintained that, among other things, the Federal Tax Reform Act of 1986 reduced the top corporate income tax rate from 46% to 34%. The Public Staff stated that in Docket No. M-100, Sub 138, the Commission addressed the tax reductions from House Bill 998 (S.L. 2013-316), which, among other things, changed the net State income tax rate imposed on C Corporations and amended the gross receipts and franchise taxes.

Further, the Public Staff recommended that the Commission direct the subject utilities to reduce their rates to reflect any and all cost savings resulting from the reduction in the federal corporate income tax expense component of the cost of providing utility service as soon as practicable. The Public Staff asserted that the rates for riders should also be reduced in each subject utility's respective annual rider filings to reflect the reduction in the federal corporate income tax rate.

The Public Staff also recommended that the Commission direct the subject utilities to refund the amount collected in the deferred account established by the Commission in this proceeding that represents the difference between revenues billed under the prior federal income tax rate and the federal income tax rate resulting from the Tax Act starting January 1, 2018.

The Public Staff maintained that, as in Docket Nos. M-100, Sub 113 and M-100, Sub 138, the Commission should require that the EDIT resulting from the decrease in the federal corporate income tax rate established in the Tax Act be flowed back to the ratepayers. The Public Staff asserted that the treatment of EDIT in those dockets should provide a framework for the treatment of EDIT created by the Tax Act.

The Public Staff stated that the Tax Act provides that certain EDIT should be flowed back to the ratepayers subject to certain limitations. The Public Staff specified that the EDIT subject to these limitations is generally referred to as the "protected EDIT." The Public Staff noted that the EDIT that is not subject to limitations in the timing of flow back is generally referred to as the "unprotected EDIT."

The Public Staff asserted that the protected EDIT should be flowed back as soon as practicable in accordance with federal tax normalization rules. The Public Staff stated that compliance with federal tax normalization rules slows the return of the protected EDIT to ratepayers as compared to what regulators might otherwise desire. The Public Staff stated that it

[1] Aqua filed its general rate case application on March 7, 2018 in Docket No. W-218, Sub 497.

does not recommend delaying the return of the protected EDIT or in any way further slowing the return of the protected EDIT to ratepayers, other than the delay required under federal law.

The Public Staff further recommended that the flow back of the unprotected EDIT should be addressed in the next general rate case filed by each of the subject utilities, except for those with currently pending general rate cases, as previously noted.

The Public Staff stated that arguments raised by the subject utilities related to cost of capital and cash flow should not be addressed in this docket. The Public Staff argued that absent compelling evidence of financial harm to the utilities, the ratepayers should receive the benefit of the tax reductions from the Tax Act as soon as possible. The Public Staff asserted that cost of capital is appropriately addressed in a general rate case. The Public Staff maintained that if a subject utility believes its cost of capital has changed and earnings are insufficient to achieve the new cost of capital, it should file a general rate case to address this issue.

The Public Staff also noted that the Tax Act changes the taxable treatment of CIAC for water and wastewater companies. The Public Staff stated that this could have a significant impact on water and wastewater companies in that contributed plant is a significant portion of the plant additions by these companies. The Public Staff recommended that the Commission open a new docket to address the implications of the inclusion of CIAC in taxable income for water and wastewater companies. The Public Staff further recommended that the treatment of CIAC should follow the precedent established in Docket No. M-100, Sub 113, and that water and wastewater companies should seek to collect the income tax on CIAC from the contributor using the full gross-up method. The Public Staff recommended that the Commission allow individual companies seeking to use the present value method to do so with prior approval of the Commission. The Public Staff recommended that in opening a new docket, the Commission should provide notice of this change to all water and wastewater companies, not just the utilities subject to this docket, and direct those companies to seek to collect the income tax on CIAC from contributors of plant for new contributions contracted for on or after the date of the opening of that new docket.

The Public Staff also noted that Frontier asserted that its rates are not based on cost of service, and therefore, it should not be subject to this docket. The Public Staff asserted that Frontier has been collecting funds from its ratepayers in order to pay Frontier's federal income tax obligations. The Public Staff stated that the Tax Act reduces the federal tax obligations of Frontier and that its ratepayers should benefit from the reduction in the federal corporate income tax resulting from the Tax Act. Accordingly, the Public Staff recommended that Frontier be subject to the provisions of this docket.

Finally, the Public Staff stated that to implement the recommendations outlined in its reply comments, the Public Staff requested that the Commission direct the subject utilities to file with the Commission and the Public Staff rate reductions to address the changes by March 30, 2018. The Public Staff stated that the subject utilities should also be required to file workpapers with the Commission and the Public Staff to support the rate reduction calculations. The Public Staff maintained that once rates are established, the subject utilities should continue to file quarterly reports on the status of their EDIT deferred account, and the deferral account established under this proceeding that represents the difference between revenues billed under the prior federal income tax rate and the federal income tax rate resulting from the Tax Act starting January 1, 2018.

PUBLIC STAFF CLARIFICATION TO REPLY COMMENTS

The Public Staff noted that on February 20, 2018, it filed reply comments in this docket. The Public Staff maintained that regarding Frontier, the Public Staff stated the following:

> "Frontier asserts that its rates are not based on cost of service, and therefore, it should not be subject to this docket. Frontier has been collecting funds from its ratepayers in order to pay Frontier's Federal income tax obligations. The Act reduces the Federal tax obligations of Frontier and its ratepayers should benefit from the reduction in the federal corporate income tax resulting from the Act. Accordingly, the Public Staff recommends that Frontier be subject to the provisions of this docket."

The Public Staff maintained that in Docket No. G-40, Sub 136, the Commission approved a merger between Frontier and FR Bison Holdings, Inc., subject to certain regulatory conditions. The Public Staff noted that Regulatory Condition #10, provided that the Public Staff would not request a change in Frontier's margin rates unless certain exceptions apply. The Public Staff stated that the Regulatory Condition in its entirety reads:

> "**Rate Case Moratorium.** Neither Frontier nor the Public Staff will request a change in Frontier's margin rates until after December 31, 2021, except as set forth below. For purposes of this provision, the margin rate is defined as the tariff rate less the benchmark cost of gas and temporary increments and/or decrements imposed pursuant to G.S. 62-133.4 or Commission Rule R1-17(k). The exceptions to the moratorium imposed by this Condition are as follows: (a) Should Frontier or the Public Staff believe that Frontier should implement a pipeline safety rate adjustment mechanism pursuant to G.S. 62-133.7A, either party shall have the right to apply to or petition the Commission to initiate a general rate case proceeding; and (b) effective July 1, 2019, should Frontier's rolling twelve-month earned return on average rate base, based on a reasonable pro forma capital structure and reasonable regulatory adjustments, exceed 12.00% for two quarters in any consecutive four-quarter period, the Public Staff shall have the right, after notice to and consultation with Frontier's management, to petition the Commission to initiate a general rate case proceeding."

The Public Staff asserted that, consistent with the Regulatory Condition, the Public Staff seeks to clarify that in its comments submitted on February 20, 2018, the Public Staff is not requesting the Commission to change Frontier's margin rates. The Public Staff stated that it recognizes that the Commission is not bound by the Public Staff's agreement with Frontier with respect to any change in margin rates and may find in its discretion that Frontier should be directed to reduce its rates to reflect the changes in the Tax Act. The Public Staff stated that, notwithstanding the foregoing, the Public Staff does request that Frontier be subject to any reporting requirements adopted in this docket.

DEC/DEP SUPPLEMENTAL COMMENTS

DEC/DEP requested that the Commission accept its Supplemental Comments that take into consideration the Commission's February 23, 2018 DEP rate case Order and the reply comments filed by other parties in the docket. DEC/DEP stated that their Supplemental Comments offer more specific proposals on how DEC and DEP could implement the impacts of the Tax Act to benefit customers.

DEC/DEP stated that after now having had the opportunity to review the DEP rate case Order, as well as the reply comments filed by the other parties in this docket seeking more detailed information, the Companies proposed to accomplish this intention through specific solutions that will lower customer bills in the near-term, help mitigate volatility due to future customer rate increases, and protect the Companies' pre-Tax Act credit quality for the benefit of customers. DEC/DEP stated that DEC proposes to incorporate these benefits into its pending base rate case proceeding in Docket No. E-7, Sub 1146, and DEP proposes to address the adjustments either through its next base rate case proceeding or through a decrement rider established by the Commission in this proceeding.

DEC proposed several adjustments to reduce the amounts of its requested rate increase in its pending general rate case in Docket No. E-7, Sub 1146 to reflect the changes in the Tax Act. DEC noted that in its proposed rate request filed in Docket No. E-7, Sub 1146, DEC's proposed rate increase of $647 million reflects a federal corporate income tax rate of 35%. DEC stated that the underlying test period income tax expense and all pro forma adjustments related to income tax expense reflect a federal corporate income tax rate of 35%. DEC maintained that, in addition, the proposed rate increase reflects accumulated deferred tax amounts in rate base without adjusting for the change in tax rate. DEC stated that to address the federal corporate income tax rate change, the Company proposes that customer rates authorized by the Commission should:

(1) Incorporate a $216 million reduction in revenue requirements to reflect federal corporate income taxes at a 21% rate, rather than a 35% rate. DEC noted that the $216 million is the $241 million on Line 8 of Boswell Supplemental Exhibit 1, Schedule 1, Page 1, Revised, in Docket No. E-7, Sub 1146, minus $25 million to reflect the tax rate impact on the additional adjustments that DEC agreed to in rebuttal testimony and in the partial settlement filed in that docket. DEC stated that the Public Staff has already incorporated the tax rate change impact into its partial settlement and additional adjustments;

(2) Incorporate reductions totaling $96 million in proposed revenue requirements to return EDIT to customers under the following proposals:

    (a) <u>Protected Federal EDIT related to Property, Plant and Equipment</u>

    DEC proposed to return EDIT for which there are IRS requirements (protected deferred income taxes) based on the method required by IRS rules. DEC stated that specific IRS rules apply to deferred income taxes related to property, plant and equipment for which there are differences in book versus tax depreciation with regard to method of depreciation and depreciable life. DEC proposes to reduce its revenue requirements by \$34 million to return approximately 3.1% of the balance of EDIT to customers annually over the remaining life of the property, plant and equipment to which the deferred taxes are related. DEC stated that this proposal complies with IRS tax normalization rules. DEC maintained that the revenue requirement reduction of \$34 million is a net amount that incorporates both the decrease in operating expenses related to the tax rate change and the increase in rate base associated with the lesser amount of accumulated deferred income taxes that are deducted from rate base.

(b) Unprotected Federal EDIT related to Property, Plant and Equipment

DEC noted that for EDIT related to property, plant and equipment, but not subject to IRS tax normalization rules, DEC proposes to return that EDIT over 20 years. DEC proposes to reduce its revenue requirements by \$37 million per year. DEC stated that this proposal serves to refund the excess tax amounts over a period that considers the long lives of the property, plant and equipment to which these tax amounts relate. DEC stated that this period aligns with the timeframe that the benefits (i.e., deferred tax liability offset to rate base) would be received by customers absent the change in tax rate. DEC maintained that the revenue requirement reduction of \$37 million is a net amount that incorporates both the decrease in operating expenses related to the tax rate change and the increase in rate base associated with the lesser amount of accumulated deferred income taxes that are deducted from rate base.

(c) Unprotected Federal EDIT – Other

DEC stated that it proposes to return over five years through a rider EDIT related to timing differences between book income and taxable income that are: (1) not subject to IRS normalization rules; and (2) are not related to property, plant and equipment. DEC noted that the rider would incorporate a \$40 million reduction in operating expense per year over the five year period. DEC maintained that the reduced accumulated deferred income taxes that are deducted from rate base equate to approximately \$15 million and will be reflected in base rate adjustments rather than the rider. DEC stated that these represent a partial offset to the impact to rate base; and

(3) Incorporate an increase in proposed revenue requirements of \$200 million to collect certain expenses on an accelerated basis. DEC stated that in doing so, the Company intends to minimize customer rate volatility, and minimize financing costs over the long term.

DEC stated that the reduction in the federal corporate income tax rate has a dual effect on customer rates – a decrease in operating expenses and an increase in rate base. DEC noted that this accelerated return of EDIT to customers creates a rate reduction that is followed by a rate increase. DEC stated that its proposal would smooth out this rate volatility. DEC maintained that this approach does not ask customers to pay costs that are not appropriate costs of providing electric service, but rather adjusts the timing of payment of the costs in a manner that minimizes steep changes in rates. DEC stated that the amount of accelerated expense recovery proposed by the Company, although discretionary, is designed to achieve this objective.

DEC asserted that one option would be for the Commission to allow DEC to record \$200 million per year for accelerated depreciation for AMR meters and/or certain coal-fired plants. DEC stated that under this option, customers would benefit in the future through lower depreciation expense following the next depreciation study.

DEC stated that another option is for the Commission to use this reduction in the federal corporate income tax rate to offset the ongoing necessary investments in coal ash basin closure expense to comply with the EPA's Coal Combustion Residuals Rule and the North Carolina Coal Ash Management Act. DEC maintained that if the Commission were to deny DEC's request for ongoing recovery of annual coal ash basin closure expense (the ongoing compliance costs) in DEC's pending rate case, DEC would propose to record \$200 million amortization expense per year to the same regulatory asset to which the ongoing compliance costs are recorded, thereby reducing customers' future obligation.

DEC noted that the net effect of the proposed adjustments to the revenue increase requested in Docket No. E-7, Sub 1146 is a reduction of \$72 million in base rates, plus an annual revenue reduction of \$40 million through a five-year rider, for a total benefit to customers of \$112 million per year for five years. DEC/DEP stated that they have proposed that the Commission could mitigate these impacts by offsetting items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEC/DEP noted that the accelerated depreciation would be accomplished by creating a North Carolina retail regulatory liability and that liability would then be used to reduce depreciation expense on the specific asset or group of assets the next time depreciation rates are updated, similar to the way that the DEP Harris Nuclear Plant accelerated depreciation was used to reduce depreciation expense in Docket No. E-2, Sub 1023.

DEC stated that the amounts set forth in its proposal are based on DEC's rebuttal testimony and Agreement and Stipulation of Partial Settlement with the Public Staff in Docket No. E-7, Sub 1146. DEC/DEP maintained that any further changes to proposed revenue requirements resulting from the Commission rulings in Docket No. E-7, Sub 1146, such as the return on equity authorized by the Commission, may affect these amounts. DEC/DEP noted that, in addition, all EDIT amounts are by necessity estimated, pending completion of the Company's federal income tax return in 2019 for tax year 2018.

DEC stated that it is proposing an approach to reduce customer bills in the near term and help to offset rate increases in the future. DEC maintained that, importantly, customers benefit if the Company can access low-cost capital – this allows the Company to keep bills as low as possible while making the investments necessary to build the energy future customers expect. DEC argued that this is possible because the Company maintains strong credit quality and any treatment of tax reform should support maintaining the Company's pre-Tax Act credit quality. DEC stated that its approach will balance the importance of delivering savings to customers and upholding the Company's financial strength, which ultimately benefits customers.

DEC/DEP noted that the Commission's DEP rate case Order required DEP to recalculate a revenue requirement and file it for approval with the Commission. DEC/DEP stated that DEP is working with the Public Staff to complete these calculations[1]. DEC/DEP maintained that DEP proposes to make a supplemental filing in the future which proposes more specific recommendations after the Commission has approved a compliance revenue requirement in Docket No. E-2, Sub 1142.

PUBLIC STAFF'S MARCH 2, 2018 LETTER

The Public Staff stated that DEC has failed to provide its proposal as outlined in its March 1, 2018 Supplemental Comments in the multiple supplemental filings filed in its pending general rate case in Docket No. E-7, Sub 1146. The Public Staff noted that, instead, DEC filed its proposal in this docket, which in all likelihood will be resolved after the Commission's Order in DEC's pending rate case, thus delaying the flow back of the benefits of the Tax Act.

The Public Staff maintained that it believes the Supplemental Comments should not have been filed in this docket and the issues raised in the Supplemental Comments are more appropriately handled in DEC's pending general rate case. The Public Staff commented that its proposals for implementing the impacts of the Tax Act in DEC's general rate case are set forth in the direct and supplemental testimonies of witness Michelle Boswell and, thus, there is sufficient evidence in the rate case docket for resolving this issue. The Public Staff further stated that as a general rulemaking docket, the appropriate matters to be considered in this docket are the general manner in which the Commission will direct the utilities subject to this docket to flow back both the immediate reduction in the income tax expense and the EDIT resulting from the Tax Act. The Public Staff noted that DEC's Supplemental Comments proposed specific accounting rate base adjustments to offset the impact of the reduced tax rate, which are inappropriate for a general rulemaking docket and only can be resolved in the pending general rate case. The Public Staff asserted that ratepayers should receive the benefit of the tax reductions from the Tax Act as soon as possible and that the Commission should implement the impacts of the Tax Act in DEC's pending general rate case.

DEP'S SUPPLEMENTAL COMMENTS

DEP stated that its supplemental comments take into consideration the Commission's February 23, 2018 Order in DEP's general rate case proceeding, the reply comments filed by other parties in this docket, and the Commission's March 8, 2018 Order Approving Compliance Filing and Change in Rates in DEP's general rate case proceeding.

---

[1] DEP filed the calculations on March 2, 2018, and the Commission issued its Order approving the compliance filing and change in rates on March 8, 2018.

DEP stated that its supplemental comments update DEP's estimated annual cost of service effect of the changes to the levels of income tax expenses expected due to the Tax Act provided in DEP's initial comments in this docket. DEP maintained that this update is based on the revenue requirement approved by the Commission in its March 8, 2018 Order Approving Compliance Filing and Change in Rates. DEP stated that the supplemental comments also outline DEP's more specific proposal as promised in DEC/DEP's March 1, 2018 supplemental comments filed in this docket.

DEP asserted that it continues to propose that the benefits of the Tax Act be addressed in the Company's next general rate case proceeding or through a decrement rider established by the Commission in this proceeding.

DEP provided an updated estimated effect of the Tax Act on DEP's cost of service approved in its recent rate case. DEP noted that the rates based on this cost of service study will become effective for service rendered on or after March 16, 2018. DEP further noted that the resulting reduction in annual revenue requirement is $104 million which was also the estimate provided in DEP's initial comments in this docket based upon its 2013 rate case.

DEP stated that this updated $104 million reduction is comprised of a $111 million decrease in base rates and a $7 million increase in the NC EDIT rider both related to the lower federal corporate income tax rate. DEP stated that Updated Exhibit 2b shows how the revenue requirement reduction translates into a decrement rate of $0.00278 per kWh. DEP stated that it plans to update the decrement to the new rate shown in Updated Exhibit 2b and to apply it to North Carolina retail services provided beginning March 16, 2018. DEP further stated that it would propose to continue this deferral until new rates can be established in its next general rate case proceeding. DEP maintained that should the Commission decide to order a rate change in this docket which incorporates this impact, DEP would stop the deferral when the new rates became effective.

DEP asserted that while it continues to propose that the benefits of the Tax Act be addressed in the Company's next general rate case proceeding, should the Commission decide to reduce customers' rates in this docket instead, DEP submits the following proposal to benefit customers in the short-term and long-term.

1. Incorporate a $104 million reduction in revenue requirements to reflect federal corporate income taxes at a 21% rate, rather than a 35% rate.

2. Incorporate reductions totaling approximately $45 million in proposed revenue requirements to return excess accumulated deferred income taxes to customers under the following proposals:

<u>Protected Federal EDIT related to Property, Plant and Equipment</u>

Return EDIT for which there are IRS requirements (protected deferred income taxes) based on the method required by IRS rules. Specific IRS rules apply to deferred income taxes related to property, plant and equipment for which there are differences in book versus tax depreciation. These differences are related to the method of depreciation and depreciable life. DEP would propose to reduce its revenue requirements by approximately $37 million to return approximately 4.29% of the balance of excess deferred taxes to customers annually over the remaining life of the property, plant and equipment to which the deferred taxes are related. This proposal complies with IRS tax normalization rules. The revenue requirement reduction of $37 million is a net amount that incorporates both the decrease in operating expenses related to the tax rate change and the increase in rate base associated with the lesser amount of accumulated deferred income taxes that are deducted from rate base,

Unprotected Federal EDIT related to Property, Plant and Equipment

Return excess deferred income taxes related to property, plant and equipment, but not subject to IRS tax normalization rules over 20 years. This proposal would reduce the Company's revenue requirement by approximately $13 million per year. This proposal serves to refund the excess tax amounts over a period that considers the long lives of the property, plant and equipment to which these tax amounts relate. This period aligns with the timeframe that the benefits (i.e., deferred tax liability offset to rate base) would be received by customers absent the change in tax rate. The revenue requirement reduction of $13 million is a net amount that incorporates both the decrease in operating expenses related to the tax rate change and the increase in rate base associated with the lesser amount of accumulated deferred income taxes that are deducted from rate base. DEP's proposal helps to smooth out volatility in customer rates over the long term for the benefit of customers.

Unprotected Federal EDIT – Other

Using a rider, collect over five years the excess deferred taxes related to timing differences between book income and taxable income that are: (1) not subject to IRS normalization rules; and (2) are not related to property, plant, and equipment. For DEP, the deferred income taxes and resulting excess deferred income taxes in this category are a net asset, instead of a net liability. As a result, the balance actually needs to be collected from customers as opposed to returned. The rider would incorporate an approximately $7 million increase in operating expense per year over the five-year period. The increased accumulated deferred income taxes that are deducted from rate base equate to an approximate $2 million reduction in revenue requirements and would be reflected in a base rate adjustment rather than the rider.

DEP noted that the EDIT balances in each category will continue to fluctuate and will not be final until the Company files its 2018 tax returns in late 2019. DEP stated that, therefore, adjustments and true-ups may need to be made in future rate cases.

3. Incorporate an increase in proposed revenue requirements of $100 million to collect certain expenses on an accelerated basis. In doing so, the Company intends to minimize customer rate volatility, and minimize financing costs over the long term.

DEP asserted that the reduction in the federal corporate income tax rate has a dual effect on customer rates – a decrease in operating expense and an increase in rate base. DEP stated that this accelerated return of excess deferred income taxes to customers creates a rate reduction that is followed by a rate increase. DEP maintained that its proposal would smooth out this rate volatility. DEP asserted that this approach does not ask customers to pay costs that are not appropriate costs of providing electric service, but rather adjusts the timing of payment of the costs in a manner that minimizes significant step changes in rates. DEP stated that the amount of accelerated expense recovery proposed by the Company is designed to achieve this objective.

DEP stated that the net effect of the proposed adjustments is a reduction of $56 million in base rates, netted with an annual revenue increase of $7 million through a five-year rider. DEP noted that both DEC and DEP have proposed that the Commission could mitigate these impacts by offsetting items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEP noted that the accelerated depreciation would be accomplished by creating a North Carolina retail regulatory liability. DEP stated that liability would then be used to reduce depreciation expense on the specific asset or group of assets the next time depreciation rates are updated, similar to the way that the DEP Harris Nuclear Plant accelerated depreciation was used to reduce depreciation expense in Docket No. E-2, Sub 1023.

DEP stated that one option is to use this reduction in the federal corporate income tax rate to offset the ongoing necessary investments in coal ash basin closure expense to comply with the EPA's Coal Combustion Residuals Rule and the North Carolina Coal Ash Management Act. DEP maintained that it would propose to record $100 million amortization expense per year to the same regulatory asset to which the ongoing compliance costs are recorded, thereby reducing customers' future obligation.

DEP noted that another option would be to allow DEP to record $100 million per year for accelerated depreciation for AMR meters and/or certain coal-fired plants. DEP stated that under this option, customers would benefit in the future through lower depreciation expense following the next depreciation study.

DEP noted that this proposed approach would reduce customer bills in the near term and help to offset rate increases in the future. DEP asserted that customers benefit if the Company can maintain its ability to access low-cost capital. DEP stated that this enables the Company to maintain its strong credit quality and any treatment of tax reform should support maintaining the Company's pre-Tax Act credit quality. DEP maintained that its approach will balance the importance of delivering savings to customers and upholding the Company's financial strength, which ultimately benefits customers.

PUBLIC STAFF'S APRIL 3, 2018 LETTER

The Public Staff asserted that the Commission's initial Order in this docket provided utilities and interested parties the opportunity to file initial comments and reply comments. The Public Staff noted that DEP has twice filed supplemental comments in this docket after the Commission's deadline for filing comments has passed. The Public Staff maintained that should the Commission choose to consider DEP's late-filed comments, the Public Staff requests the Commission to reopen the docket in order to allow all parties to file additional comments.

The Public Staff asserted that ratepayers should receive the benefit of the tax reductions from the Tax Act as soon as possible. The Public Staff noted that as requested in the Public Staff's reply comments, the Public Staff requests the Commission to: (1) direct DEP to reduce its rates to reflect any and all cost savings resulting from the reduction in the federal income tax expense component of the cost of providing utility service as soon as practicable; (2) direct DEP to flow back the protected EDIT as soon as practicable in accordance with federal tax normalization rules, and (3) address the unprotected EDIT in the next general rate case filed by DEP.

The Public Staff commented that DEP's supplemental comments recommend that all of the impacts of the Tax Act be addressed in its next general rate case, but DEP provides an alternative proposal should the Commission decide to take action in this docket.

The Public Staff asserted that the issue of the flow back of the unprotected EDIT is more appropriately handled in a general rate case and not in a general rulemaking proceeding. The Public Staff stated that it is also opposed to DEP's proposal to create a false category of unprotected EDIT to delay the flowback of the benefits of the Tax Act to ratepayers over a period of 20 years. The Public Staff maintained that it is also opposed to the proposal to "smooth out rate volatility" by slowing the flowback of benefits to ratepayers by accelerating the depreciation of some unknown assets in the amount of $100 million.

DISCUSSION AND CONCLUSIONS

After reviewing all of the comments, reply comments, and supplemental filings filed in this proceeding and the entire record of evidence, the Commission notes that there are four distinct issues the Commission must decide in this proceeding, as follows:

> <u>Issue No. 1</u> - How should the Commission address the impact of the reduction in the federal corporate income tax rate outlined in the Tax Act for North Carolina public utilities (specifically, the expense piece in base rates and the provisionally collected revenues)?
>
> <u>Issue No. 2</u> - How should the Commission address the EDIT generated due to the reduction in the federal corporate income tax rate outlined in the Tax Act for North Carolina public utilities?
>
> <u>Issue No. 3</u> - How should the Commission proceed in recognition of the fact that CIAC for water and wastewater companies is now subject to federal income taxes based on the Tax Act?
>
> <u>Issue No. 4</u> - How should the Commission address the change in the federal corporate income tax rate in the various riders in effect?

The Commission will now address and resolve each issue separately below.

Issue No. 1 – How should the Commission address the impact of the reduction in the federal corporate income tax rate outlined in the Tax Act for North Carolina public utilities (specifically, the expense piece in base rates and the provisionally collected revenues)?

After reviewing all of the comments, reply comments, and supplemental filings filed and the entire record of evidence, the Commission notes that all of the parties are in agreement that, based on the Nantahala case, the Commission has the authority to adjust base rates in the context of this rulemaking proceeding to reflect the decrease in the federal corporate income tax rate from 35% to 21%. However, the parties disagree on how and when the Commission should address the reduction in the federal corporate income tax rate for North Carolina public utilities.

The following parties recommended that the Commission adjust base rates for the applicable North Carolina public utilities as soon as possible to reflect the reduced federal corporate income tax rate: the Attorney General, CIGFUR, CUCA, the Low-Income Advocates (adjust other rates or use money for other purposes), Nucor (only specifically for DENC), PSNC (although not directly), and the Public Staff. These parties provided the specific recommendations outlined below.

As outlined in greater detail hereinabove, the Attorney General recommended that the Commission exercise its rulemaking authority in this proceeding to order the utilities to flow through these major federal tax reductions to consumers as soon as possible in the form of rate decreases and argued that to the extent that the cost of service effect associated with the lower corporate income tax rate is not flowed through in rates, utilities will continue to over-collect revenues, and customers will continue to be forced to pay excessive rates to build up utility accounts that essentially lend cost-free capital for utility operations.

CIGFUR maintained that the Commission should, as quickly as practicable, pass the substantial and material benefits of the Tax Act onto ratepayers through the most efficient means available, be that through this rulemaking proceeding or through pending general rate cases.

CUCA requested that the Commission, among other things, order the creation of a deferred account to capture all of the changes related to the difference between revenues billed under rates now in effect relative to the attendant cost of service based on the decrease in the federal corporate income tax component from 35% to 21% and an immediate reduction of rates paid by consumers to account for the change in the federal corporate income tax rate from 35% to 21%.

The Low-Income Advocates asserted that excess revenues due to the reduction in the public utilities' cost of service should not accrue to the Companies' shareholders. The Low-Income Advocates also stated that although the Commission has the authority to reduce rates to account for the impact of the tax cut on the public utilities' cost of service, the Commission should not simply order utilities to reduce their rates to account for the entire impact of the tax cut, or to flow all of the over-collections due to the tax cut to their customers in the form of rebates or decrement riders. The Low-Income Advocates maintained that the utilities should be required to invest some portion of the tax savings for the residential class in measures that reduce customer bills such as energy efficient programs for low-income customers. The Low-Income Advocates also argued that the Commission should examine whether it is appropriate to require greater reductions in fixed, monthly charges than in the volumetric rate.

Nucor noted that DENC indicated that it will comprehensively address all impacts from the Tax Act as part of its updated cost of service filed in the Company's next general rate case. Nucor asserted that DENC's proposed approach is inadequate and objectionable. Nucor argued that DENC makes no commitment as to when it will file its next general rate case application[1]. Nucor asserted that the inherent delay in flowing through the federal tax reductions to DENC's customers via a speculative and lengthy general rate case proceeding is unwarranted and would be unfair to DENC's customers. Nucor maintained that the Commission has the authority to address the tax reduction resulting from the Tax Act outside of a general rate case and should do so with respect to DENC. Nucor asserted that the Commission should require that DENC pass through the benefits of the federal tax changes to DENC's ratepayers in a timely manner.

Although PSNC did not make a clear statement that public utility base rates should be adjusted now to reflect the decrease in the federal corporate income tax rate, the Company did propose to adjust its rates by allocating the annual revenue requirement impact of the Tax Act changes to the various rate schedules based on the volumes determined in PSNC's most recent general rate case, Docket No. G-5, Sub 565. PSNC stated that the change in rates applicable to each rate schedule would be used to determine the appropriate level of deferred revenue to record per ordering paragraph two of the January 3, 2018 Order. PSNC asserted that due to the administrative burden of implementing a refund by recalculating previously issued bills, PSNC would propose to refund provisionally collected amounts by moving the balance in the regulatory liability account to the Company's All Customers Deferred Account. PSNC noted that this is the same treatment that PSNC used to refund provisionally collected amounts in Docket No. M-100, Sub 138 (the State corporate income tax change generic proceeding).

The Public Staff stated that it believes it is permissible for the Commission to address the effects of the Tax Act through this docket. The Public Staff maintained that the Tax Act will result in a significant reduction in the federal corporate income taxes paid by most, if not all, utilities regulated by the Commission. The Public Staff further noted that this reduction will, in turn, result in a reduction in the cost of providing public utility services to North Carolina customers, which the Public Staff believes is sufficiently substantial and material to justify an exception to the doctrine against single-issue ratemaking. The Public Staff recommended that the Commission direct the subject utilities to reduce their rates to reflect any and all cost savings resulting from the reduction in the federal income tax expense component of the cost of providing utility service as soon as practicable.

The Public Staff also recommended that the Commission direct the subject utilities to refund the amount collected in the deferred account established by the Commission in this proceeding that represents the difference between revenues billed under the prior federal income tax rate and the federal income tax rate resulting from the Tax Act starting January 1, 2018.

---

[1] In its reply comments, DENC committed to filing a single-issue adjustment to its base rate cost of service on or before June 30, 2019 if the Company has not filed a general rate case as of that date.

The Public Staff stated that arguments raised by the subject utilities related to cost of capital and cash flow should not be addressed in this docket. The Public Staff argued that absent compelling evidence of financial harm to the utilities, the ratepayers should receive the benefit of the tax reductions from the Tax Act as soon as possible. The Public Staff asserted that cost of capital is appropriately addressed in a general rate case. The Public Staff maintained that if a subject utility believes its cost of capital has changed and earnings are insufficient to achieve the new cost of capital, it should file a general rate case to address this issue.

Finally, the Public Staff stated that to implement the recommendations outlined in its reply comments, the Public Staff requested that the Commission direct the subject utilities to file with the Commission and the Public Staff rate reductions to address the changes by March 30, 2018. The Public Staff stated that the subject utilities should also be required to file workpapers with the Commission and the Public Staff to support the rate reduction calculations. The Public Staff maintained that once rates are established, the subject utilities should continue to file quarterly reports on the status of their EDIT deferred account, and the deferral account established under this proceeding that represents the difference between revenues billed under the prior federal income tax rate and the federal income tax rate resulting from the Tax Act starting January 1, 2018.

CWSNC, DEC/DEP, DENC, and Piedmont recommended that base rates not be reduced as soon as possible to reflect the reduced federal corporate income tax rate. The Companies made the following specific recommendations as outlined below.

CWSNC noted that its current utility rates were set based upon rate base and operating expense levels, along with the federal corporate income tax rate of 35%, which were in place at the time of the Company's last rate case in 2017[1]. CWSNC stated that the impact upon utility rates cannot be analyzed by only looking at the impact due to the change in just one component of the Company's revenue requirement. CWSNC stated that if the true impact is going to be analyzed for the change in the federal corporate income tax rate, then all other components of the Company's revenue requirement calculation need to be taken into consideration because it is likely that those other components have changed since the rates were last set by the Commission.

DEC/DEP asserted that implementation of the Tax Act has the potential to adversely affect the Companies' cash flows needed to fund ongoing operations and new infrastructure investments, and makes having a strong equity to debt capital structure even more important post-Tax Act reform. DEC/DEP stated that an unmitigated cash flow shortfall could force the Companies to rely excessively on third-party capital to fund DEP and DEC, to the ultimate detriment of their financial condition.

DEC/DEP noted that with respect to DEC, the Company proposes to address federal tax reform impacts in its pending rate case in Docket No. E-7, Sub 1146, for which the evidentiary hearing is currently scheduled to begin on February 27, 2018[2]. DEC/DEP noted that with respect

[1] The Commission notes that CWSNC filed a 30-day notice of intent to file a general rate case application on March 23, 2018, in Docket No. W-354, Sub 360. CWSNC filed its general rate case application on April 27, 2018.

[2] The evidentiary hearing was subsequently changed to begin on March 5, 2018. The Commission issued its Order in DEC's rate case proceeding on June 22, 2018.

to DEP, the Company also has a pending rate case in Docket No. E-2, Sub 1142, however the record in that case has closed, and DEP anticipates that the Commission will issue a final order in the near term[1]. DEC/DEP stated that once the Commission order in that rate case proceeding is received, DEP will be able to calculate the impacts of the Tax Act on tax expense based on a compliance cost of service with the Commission's order. DEP proposed to defer the resulting estimated impacts to a regulatory liability, until DEP's next rate case. DEC/DEP maintained that as an alternative, the Commission could approve a rider in Docket No. M-100, Sub 148 to reduce DEP customer rates including any potential offsets.

DEC/DEP noted that in DEP's rate case proceeding, DEP proposed to apply the decrement to North Carolina retail services beginning January 1, 2018, and defer the resulting amount into a regulatory liability until new rates can be established in its next general rate case, or in the alternative to reduce rates in a rider to be established by the Commission in this generic docket. DEC/DEP proposed options to help mitigate future rate increases by applying the federal income tax expense savings to offset items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets such as the existing AMR meters or coal plants. DEC/DEP asserted that nothing in the intervenors' initial comments changes the Companies' recommendation that the Commission should implement a balanced solution to ensure that customers receive the benefits of tax reform.

DENC maintained that for purposes of the Company's base non-fuel rates and Rider EDIT, the Company intends to address the cost of service impacts and disposition of deferred amounts due to the Tax Act through the Commission's general ratemaking procedure set forth in N.C. Gen. Stat. § 62-130 and N.C. Gen. Stat. § 62-133. DENC stated that this approach ensures that the Company has sufficient time to comprehensively evaluate the direct and indirect impacts of this complex new tax legislation in determining the Company's updated cost of service. DENC asserted that the differences between rates in effect at January 1, 2018, including provisional components, and revenues that would have been billed incorporating the IRC as now amended by the Tax Act, will be held in a deferred account. DENC argued that this approach is reasonable and fair to customers and the Company, as the Company is now collecting these amounts on a provisional basis.

DENC maintained that it recognizes the Public Staff's and other parties' objective of ensuring that provisionally-collected amounts are expeditiously recognized in the Company's utility rates. However, DENC asserted that efficiencies would be achieved by comprehensively addressing all federal income tax issues in the Company's next general rate case. DENC stated that to balance these interests, the Company commits to filing a single-issue adjustment to its base rate cost of service on or before June 30, 2019, if the Company has not filed a general rate case as of that date.

DENC opined that provisional recovery and deferral accounting combined with its commitment to file a single-issue proceeding to address these impacts by June 30, 2019, if it has not yet filed a base rate case, appropriately balances the desire to expeditiously pass the benefits of the Tax Act to ratepayers with the Company's approach to efficiently adjusting its rates and

[1] The Commission issued its Order in DEP's rate case proceeding on February 23, 2018.

charges to comprehensively address all base rate cost of service impacts resulting from the Tax Act. DENC maintained that if the Commission determines that it is appropriate to reduce utility rates through a rulemaking procedure on a more accelerated schedule, the Company recommends that the Commission only order DENC to adjust the income tax expense portion of operating income in the Company's cost of service and leave the other elements of the tax changes enacted in the Tax Act for review in the Company's next general rate case. DENC stated that, in any case, it stands ready to work with the Public Staff and to take whatever action the Commission directs to provide the benefits of the Tax Act to the Company's customers.

Piedmont stated that it is proposing to reduce customer bills through the flow-through of tax rate reductions under its Integrity Management Rider mechanism while deferring tax rate reductions on its base rates until the next general rate case proceeding where such deferral can be amortized and used to offset any requested base rate increase in that docket.

Piedmont asserted that while some intervenors request that the Commission reduce customer rates and the utilities' revenues immediately to account for 100% of the impacts of the Tax Act, Piedmont submits that its proposals represent a more balanced approach. Piedmont maintained that customers receive an immediate benefit in the form of savings under the Tax Act through rate reductions commencing with its upcoming June 1, 2018 IMR rate adjustment, but that tax rate reductions on its base rates be deferred until its next general rate case proceeding.

The Commission, having thoroughly reviewed and considered all of the filings made in this proceeding, concludes that it is appropriate to require an immediate reduction in the base rates (for the expense piece) of affected utilities to reflect the 21% federal corporate income tax rate mandated by the Tax Act, effective January 1, 2018. The Commission finds that the federal corporate income tax rate reduction mandated by the Tax Act is material and substantial, a fact that no party disputes, and that ratepayers should not be forced to continue paying base rates that were set to recover a 35% federal corporate income tax rate that has been reduced to 21% until the utility's next general rate case proceeding.

The Commission also agrees with all of the parties that based on the Nantahala decision from the 1986 federal Tax Act, the Commission does have the authority to require this flow-through in this rulemaking proceeding. The Commission does not find the comments made by most of the utilities recommending that flow-throughs for the expense adjustment be delayed until the next general rate case proceeding of each utility to be convincing or persuasive. The Commission concludes that the ratepayers should receive the benefit of the tax reductions from the Tax Act as a reduction to expense and therefore a base rate decrease as soon as possible. Although an immediate flow through of the expense piece will decrease the cash flow of utilities, the Commission finds that its decision herein on the EDIT generated due to the Tax Act (See Issue No. 2 below) will mitigate any adverse effects from this cash flow decrease.

As further discussed below, the Commission will address this issue in the context of Aqua's and CWSNC's pending rate case proceedings. The Commission did require DEC to flow through the 21% federal income tax rate in expenses in DEC's most recent rate case proceeding (Docket No. E-7, Sub 1146) in the Commission's June 22, 2018 Order.

Finally, the Commission notes that Cardinal filed a notice of intervention in this docket, and its intervention was granted by the Commission. However, Cardinal did not file initial and/or reply comments, and no other party specifically mentioned Cardinal in its initial or reply comments. The Commission notes that Cardinal was required to flow through the decrease in the State corporate income tax rate under HB 998 in the context of Docket No. M-100, Sub 138. Further, the Commission notes that in Cardinal's last general rate case proceeding, Docket No. G-39, Sub 38, the Commission issued an Order Decreasing Rates on July 27, 2017. Finding of Fact No. 13 of that Order stated that the federal corporate income tax rate of 35% was reasonable and appropriate for use in determining Cardinal's federal income taxes in the docket. Therefore, the Commission concludes that in the context of this docket Cardinal shall also be required to flow through the decrease in the federal corporate income tax rate in its rates.

The Commission also concludes that it is appropriate to find that the Companies shall continue to hold in a deferred regulatory liability account the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018 as previously ordered in the Commission's January 3, 2018 Order and the disposition of such regulatory liability will be considered in each utility's next general rate case proceeding or in three years, whichever is sooner. DEC is included in this decision because the issue of how to handle the provisional amounts collected since January 1, 2018 based on rates reflecting the 35% federal corporate income tax rate was not addressed in DEC's recent rate case proceeding. These amounts will ultimately be returned to customers with interest reflected at the overall weighted cost of capital approved in each Company's last general rate case proceeding.

Based on the foregoing conclusions, Cardinal, DENC, DEP, Piedmont and PSNC[1] should file rate reduction proposals to reflect the change in the federal corporate income tax rate by Thursday, October 25, 2018. The rate reduction proposals should include all workpapers that support the proposed rate reduction calculations. The Public Staff is specifically requested to file comments on the proposals by no later than Wednesday, November 14, 2018. Other parties also may file comments on the proposals by no later than Wednesday, November 14, 2018.

The Commission is opening new Company-specific dockets that will be used for all filings related to the implementation of this Order, as follows:

[1] On February 1, 2018, in Docket Nos. M-100, Sub 138 and G-5, Sub 565, PSNC filed an Application to Refund Overcollection. PSNC noted that in the course of preparing the Commission requested comments in this docket, PSNC determined that the previously submitted revenue requirement reduction associated with the decrease in the state corporate income tax rate from 4% to 3% was calculated incorrectly. PSNC maintained that incremental amounts currently being collected in rates due to the error in determining the revenue requirement decrease associated with the State corporate income tax rate reduction to 3% will be incorporated into the determination of provisional amounts being collected as a result of the federal corporate income tax rate reduction from 35% to 21%. On February 8, 2018, PSNC filed a letter noting that it had determined the additional amounts collected from customers that need to be refunded. On March 28, 2018, the Public Staff filed a letter stating that it has reviewed PSNC's filings and recommended that the Company file to reduce its margin rates to reflect this additional reduction in its revenue requirement. The Commission finds that PSNC's rate reduction proposal filed as requested herein should also include the required correction to rates to reflect the 3% State corporate income tax rate.

DEC	Docket No. E-7, Sub 1184
DEP	Docket No. E-2, Sub 1188
DENC	Docket No. E-22, Sub 560
Piedmont	Docket No. G-9, Sub 731
PSNC	Docket No. G-5, Sub 595
Cardinal	Docket No. G-39, Sub 42

Further, once rates are established, the subject utilities should file quarterly reports in the appropriate newly-created, Company-specific docket, due no later than 30 days after the end of a quarter, on the status of their EDIT deferred account, and the deferral account established under this proceeding that represents the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018. DEC shall also be required within the context of this Order in this proceeding to file the quarterly reports.

<u>Public Utilities with Unique Circumstances</u>

<u>Aqua</u> filed an application for a general rate case on March 7, 2018 in Docket No. W- 218, Sub 497. Aqua proposes that the Commission address the Tax Act in Aqua's currently pending rate case docket, and the Public Staff has agreed with that recommendation. Therefore, the Commission finds it appropriate to address the impact of the Tax Act on Aqua in Docket No. W-218, Sub 497. Consequently, the Commission will not address Aqua further in this generic rulemaking proceeding.

<u>CWSNC</u> filed a 30-day notice of intent to file an application for a general rate case on March 23, 2018 in Docket No. W- 354, Sub 360. CWSNC filed its general rate case application on April 27, 2018.

On April 6, 2018, CWSNC filed a Procedural Request. CWSNC noted that it intends to file a general rate case application on April 23, 2018, and now proposes that the impact of the Tax Act on the Company's rates be addressed and resolved in that proceeding (Docket No. W-354, Sub 360). CWSNC maintained that it was authorized to state that the Public Staff supports the procedural request, subject to the proviso that the Company in fact files its general rate case application on April 23, 2018, or a date soon thereafter.

Based on the foregoing, the Commission finds it appropriate to address the impact of the Tax Act on CWSNC in Docket No. W-354, Sub 360. Consequently, the Commission will not address CWSNC further in this generic rulemaking proceeding.

<u>DEC</u> has had a recent rate case proceeding, Docket No. E-7, Sub 1146. The changes as a result of the Tax Act were addressed in that rate case proceeding by Orders dated June 22, 2018 and July 2, 2018. Therefore, the Commission will not address the expense piece for DEC further in this generic rulemaking proceeding.

<u>Frontier</u> noted that in the Commission's 2013 proceeding addressing the decrease in the State corporate income tax rate (Docket No. M-100, Sub 138), the Public Staff acknowledged that

Frontier provides gas service pursuant to rates established in connection with the granting of its certificate, not rates established in a general rate case based on specific items of cost. Frontier also noted that, therefore, the Public Staff recommended that the Commission not adjust Frontier's rates as a result of HB 998 (the State legislation decreasing the State corporate income tax rate). Frontier maintained that the Commission agreed with the Public Staff and found it appropriate to exclude Frontier from further consideration by the Commission in that docket. Frontier stated that the Commission's ruling effectively exempted Frontier from any obligation to flow-through the State corporate income tax reductions adopted in HB 998 on the grounds that its rates were not cost-based in the first instance, therefore, it made little sense to compel the adoption of a cost-based adjustment to those rates. Frontier argued that the same logic would compel a similar result in this docket.

The Public Staff stated in its reply comments, which were subsequently clarified by the Public Staff, that Frontier has been collecting funds from its ratepayers in order to pay Frontier's federal income tax obligations. The Public Staff further stated that the Tax Act reduces the federal tax obligations of Frontier and that its ratepayers should benefit from the reduction in the federal corporate income tax resulting from the Tax Act. Accordingly, the Public Staff originally recommended that Frontier be subject to the provisions of this docket.

The Public Staff maintained in its Clarification to Reply Comments that in Docket No. G-40, Sub 136, by Order dated August 1, 2017, the Commission approved a merger between Frontier and FR Bison Holdings, Inc., subject to certain regulatory conditions. The Public Staff noted that Regulatory Condition #10, provided that the Public Staff would not request a change in Frontier's margin rates unless certain exceptions apply. The Public Staff stated that the Regulatory Condition in its entirety reads:

> "**Rate Case Moratorium.** Neither Frontier nor the Public Staff will request a change in Frontier's margin rates until after December 31, 2021, except as set forth below. For purposes of this provision, the margin rate is defined as the tariff rate less the benchmark cost of gas and temporary increments and/or decrements imposed pursuant to G.S. 62-133.4 or Commission Rule R1-17(k). The exceptions to the moratorium imposed by this Condition are as follows: (a) Should Frontier or the Public Staff believe that Frontier should implement a pipeline safety rate adjustment mechanism pursuant to G.S. 62-133.7A, either party shall have the right to apply to or petition the Commission to initiate a general rate case proceeding; and (b) effective July 1, 2019, should Frontier's rolling twelve-month earned return on average rate base, based on a reasonable pro forma capital structure and reasonable regulatory adjustments, exceed 12.00% for two quarters in any consecutive four-quarter period, the Public Staff shall have the right, after notice to and consultation with Frontier's management, to petition the Commission to initiate a general rate case proceeding."

The Public Staff asserted that, consistent with the Regulatory Condition, the Public Staff seeks to clarify that in its comments submitted on February 20, 2018, the Public Staff is not requesting the Commission to change Frontier's margin rates. The Public Staff stated that it recognizes that the Commission is not bound by the Public Staff's agreement with Frontier with respect to any change in margin rates and may find in its discretion that Frontier should be directed to reduce its rates to reflect the changes in the Tax Act. The Public Staff stated that, notwithstanding the foregoing, the Public Staff does request that Frontier be subject to any reporting requirements adopted in this docket.

The Commission notes that the Public Staff did not provide any reasoning behind its differing positions in the State generic tax docket (Docket No. M-100, Sub 138) and this federal generic tax docket on how Frontier should be treated by the Commission. The Public Staff recommended, and the Commission agreed with and approved the recommendation, that the decrease in the State corporate income tax rate as a result of HB 998 should not be flowed through for Frontier because Frontier's rates were established in connection with the granting of its certificate and not in a general rate case proceeding based on specific items of cost. Further, in this proceeding, ultimately, based on Regulatory Condition #10 of the 2017 merger with FR Bison Holdings, Inc., the Public Staff recommended that the Commission not change Frontier's margin rates.

Based upon the following, the Commission concludes that it is appropriate to exclude Frontier from further consideration by the Commission in this proceeding. The Commission concludes that Frontier's rates were established in a very different manner than a rate case proceeding wherein specific items of cost are included in setting the rate to be charged by the utility. Therefore, the Commission does not believe Frontier's rates can or should be adjusted to reflect the decrease in the federal corporate income tax rate. The Commission notes that this conclusion is consistent with the Commission's conclusions in the State corporate income tax rate rulemaking proceeding, Docket No. M-100, Sub 138. The Commission urges the Public Staff to enforce Regulatory Condition #10 of the 2017 merger if Frontier's earned return exceeds 12.00% for two quarters in any consecutive four-quarter period.

<u>Toccoa</u> filed its comments noting that it is a municipally-owned natural gas system that is not subject to income or other tax obligations. Toccoa also noted that the Commission found it appropriate in Docket No. M-100, Sub 138 addressing House Bill 998 (implementing the State corporate income tax rate reduction) to exclude Toccoa. The Public Staff filed comments agreeing with Toccoa's comments in this regard.

Based upon the following, the Commission concludes that it is appropriate to exclude Toccoa from further consideration by the Commission in this proceeding because Toccoa is not subject to income or other tax obligations and, therefore, no tax allowances were included in any determination of Toccoa's revenue requirements when the Commission established its rates.

<u>Issue No. 2</u> – How should the Commission address the EDIT generated due to the reduction in the federal corporate income tax rate outlined in the Tax Act for North Carolina public utilities?

After reviewing all of the comments, reply comments, and supplemental filings filed and the entire record of evidence, the Commission notes that all of the parties that provided specific comments on the issue of EDIT agreed that there is protected and unprotected EDIT based on the Tax Act. Protected EDIT requires flow-back based on IRS normalization rules while unprotected EDIT is not constrained by IRS normalization rules.

The following parties recommend that the Commission require some or all of the EDIT to be flowed back or returned to customers as soon as possible: Attorney General; CIGFUR (using a two or three year decrement rider); Low-Income Advocates (with at least 25% applied toward low-income efficiency programs); and the Public Staff (protected EDIT flowed back as soon as possible with normalization rules; unprotected EDIT flowed back in each utility's next general rate case unless there is a currently-pending rate case). These parties provided the specific recommendations outlined below.

The Attorney General noted that DEC/DEP do not identify how much the Companies hold in accounts for ADIT, do not report the EDIT amount that they have accrued based on the reduction in federal income taxes, and do not propose to return any of the EDIT amounts to ratepayers until they file future general rate cases. The Attorney General maintained that instead, DEC/DEP propose to hold onto those excess funds, apparently for several years, as cost-free capital.

The Attorney General observed that other utilities also suggest limiting or deferring the benefit of income tax reform rather than flowing it through to ratepayers promptly. The Attorney General noted that DENC proposed to hold onto the excess amount that has accrued in deferred income taxes for consideration in its next general rate case. The Attorney General noted that CWSNC made a similar proposal, and that Piedmont proposed to defer the benefits of tax reform for consideration in a future general rate case. The Attorney General specified that, like DEC/DEP, Piedmont did not reveal the current balances of ADIT and EDIT deferred tax accounts.

The Attorney General argued that allowing utilities to hold onto the excess is particularly unreasonable if the utility has a pending general rate case or if rates were recently established. The Attorney General stated that DEC has acknowledged that it is appropriate to address the effect of tax reform in the pending DEC general rate case, but suggests that it is not appropriate to address tax reform in the pending DEP case because the evidentiary hearing has already been held in that case. The Attorney General asserted, however, that the fact that the evidentiary hearing has already occurred in the DEP case should not postpone action until another rate case is filed years from now.

The Attorney General maintained that as a result of the scant information provided by the utilities in their initial comments, the public and the Commission do not know how much EDIT have been accrued. The Attorney General argued that, however, this information is known to the utilities because publicly-traded utilities must report this data in their annual reports to shareholders, and the information should be reported and considered in this docket as well. The Attorney General maintained that the amount of EDIT may be very large. The Attorney General further noted that according to an estimate provided in comments filed by CUCA, based on FERC Form 1 filings, Duke Carolinas has over $1.6 billion of excess accrued deferred income taxes allocated to North Carolina retail customers, and Duke Progress has approximately $875 million.

The Attorney General stated that, similarly, if the utilities' proposals are accepted and they are allowed to retain the funds they are currently holding in EDIT accounts, i.e., excess deferred income taxes that were collected in earlier years when the federal income tax rate was higher than it is following the Tax Act, then the utilities would continue to maintain these excess funds as cost-free capital. The Attorney General argued that not returning dollars to consumers who struggle to pay their bills, or to consumers who would use their money for different purposes if given the opportunity, results in an undue burden on ratepayers and communities in North Carolina.

The Attorney General requested that the Commission take prompt action to require the utilities to provide a full accounting of the past and present extent of over-collection of taxes and then to order immediate utility rate reductions that return excess deferred income taxes that have accrued as soon as allowed under federal tax law.

CIGFUR maintained that EDIT should be refunded to ratepayers through a decrement rider as soon as practicable. CIGFUR asserted that due to the Tax Act, DENC's, DEP's, and DEC's future tax liabilities will not be as high as anticipated when rates were originally designed. CIGFUR stated that the amount by which DENC's, DEP's, and DEC's current ADIT balances exceeds their future income tax liability as a result of the Tax Act are the EDIT at issue. CIGFUR noted that further, until the Commission adjusts utility rates to reflect the new lower tax rate, the utilities will continue to collect excess income tax from ratepayers at the 35% tax rate, which the Commission approved for DENC, DEP, and DEC in Docket Nos. E-22, Sub 532, E-2, Sub 1023, and E-7, Sub 1026, respectively.

CIGFUR asserted that these EDIT should be promptly flowed back to ratepayers; however, DENC, DEP, and DEC argue against returning EDIT to ratepayers in a timely manner and instead propose to defer their EDIT as regulatory liabilities until their next general rate cases. CIGFUR stated that it opposes long-term deferral of EDIT and proposes that, concurrent with the immediate rate reductions discussed in its reply comments, the Commission establish a decrement rider for each utility to refund EDIT to ratepayers over a two or three year period.

The Low-Income Advocates recommended that the Commission order a portion of the previously over-collected taxes, or EDIT, to flow back to ratepayers in the form of investments in low-income efficiency programs. The Low-Income Advocates asserted that the accumulated deferred income taxes have already been collected from customers, and given the change in the federal corporate income tax rate enacted by Congress, have been over-collected. The Low-Income Advocates stated that this excess is now a regulatory liability that should be returned to customers. The Low-Income Advocates noted that consistent with the requirements for the normalization method of accounting for deferred taxes for regulated public utilities, the public utilities in this docket should return the difference between the deferred income taxes accounted for under the higher federal corporate income tax rate under prior law and the lower rate that was recently established in the Tax Act. The Low-Income Advocates asserted that a portion of the EDIT should be returned to ratepayers in the form of direct investments in low-income energy efficiency. The Low-Income Advocates noted that based on the initial comments filed it is not clear what the total change in the EDIT will be over the next several years, or how fast the utilities can return the over-collected deferred income taxes to ratepayers under normalization rules. The Low-Income Advocates stated that at a minimum, it would be reasonable for the public utilities to invest at least 25% of EDIT for low-income efficiency.

The Public Staff maintained that, as in Docket Nos. M-100, Sub 113 and M-100, Sub 138, the Commission should require that the EDIT resulting from the decrease in the federal corporate income tax rate established in the Tax Act be flowed back to the ratepayers. The Public Staff asserted that the treatment of EDIT in those dockets should provide a framework for the treatment of EDIT created by the Tax Act.

The Public Staff stated that the Tax Act provides that certain EDIT should be flowed back to the ratepayers subject to certain limitations. The Public Staff specified that the EDIT subject to these limitations is generally referred to as the "protected EDIT." The Public Staff noted that the EDIT that is not subject to limitations in the timing of flow back is generally referred to as the "unprotected EDIT."

The Public Staff asserted that the protected EDIT should be flowed back as soon as practicable in accordance with federal tax normalization rules. The Public Staff stated that compliance with federal tax normalization rules slows the return of the protected EDIT to ratepayers as compared to what regulators might otherwise desire. The Public Staff stated that it does not recommend delaying the return of the protected EDIT or in any way further slowing the return of the protected EDIT to ratepayers, other than the delay required under federal law.

The Public Staff further recommended that the flow back of the unprotected EDIT should be addressed in the next general rate case filed by each of the subject utilities, except for those with currently pending general rate cases.

Finally, the Public Staff recommended that the Commission direct the subject utilities to file with the Commission and the Public Staff rate reductions to address the changes by March 30, 2018. The Public Staff maintained that once rates are established, the subject utilities should continue to file quarterly reports on the status of their EDIT deferred account, and the deferral account established under this proceeding that represents the difference between revenues billed under the prior federal income tax rate and the federal income tax rate resulting from the Tax Act starting January 1, 2018.

The following parties recommend that the Commission address EDIT in each utility's next general rate case: Aqua (and a rate case was filed on March 7, 2018); CUCA (for current DEP and DEC rate cases; otherwise create regulatory liability to address change in EDIT); CWSNC, DENC; DEP (since the current rate case docket is now closed); Piedmont; and PSNC. These parties provided the specific recommendations outlined below.

Aqua proposed to account for the federal EDIT by reducing the deferred taxes ratably over the regulatory life of the underlying property. Aqua stated that it intends to defer the process of amortizing these EDIT until they are addressed in the upcoming rate case filing (that was subsequently filed on March 7, 2018, in Docket No. W-218, Sub 497).

CUCA noted that it recognizes that the Commission has previously addressed the issue of EDIT in Docket No. M-100, Sub 138. CUCA stated that the Commission, in that docket, required the establishment of a regulatory liability account for the EDIT that would be addressed in the next rate case for each of the Companies. CUCA stated that it has estimated the issue of EDIT to be approximately $875 million for DEP and over $1.6 billion for DEC. CUCA stated that it estimated these amounts based upon values found in the FERC Form 1 reports of DEP and DEC allocated to the North Carolina retail consumer and from Form E-1, item 45A of the ongoing DEP and DEC rate cases. CUCA stated that given the fact that DEC and DEP have pending rate cases before the

Commission, CUCA requested that the Commission address the issue of EDIT in these ongoing cases.

CWSNC stated that with respect to EDIT, although exact figures will not be available to the Company for at least 60 days, CWSNC has been collaborating with external tax professionals to assess the impact of the excess ADIT due to the change in the federal corporate income tax rate. CWSNC noted that its proposed accounting treatment of the issue is described in Exhibit 2 attached to its initial comments. CWSNC stated that the protected and non-protected EDIT computed will remain in a regulatory liability account and will not be amortized until the Company is further instructed by the Commission during the next general rate case proceeding[1].

DEC made specific proposals for the treatment of EDIT in its current rate case proceeding. DEP proposed that EDIT be placed in a regulatory liability account and addressed in its next general rate case proceeding. Both DEC and DEP noted that, in addition, all EDIT amounts are by necessity estimated, pending completion of the Companies' federal corporate income tax returns in 2019 for tax year 2018.

DENC maintained that it reduced the balance of ADIT in its financial records to reflect an estimated amount of EDIT for the Virginia Electric and Power Company system effective December 31, 2017. DENC stated that, however, such estimate and the portion allocable to the North Carolina retail operations will be further refined throughout the coming year as a more detailed analysis is completed and needed guidance from the IRS is forthcoming.

DENC asserted that in accordance with Generally Accepted Accounting Principles (GAAP), the Company recorded in its financial records a reduction in the balance of EDIT effective December 31, 2017, to reflect an estimate of the impact of the Tax Act. DENC stated that the reductions in ADIT associated with the Company's regulated operations and recognized for ratemaking purposes were reclassified to regulatory liability accounts. DENC stated that the predominant portion of EDIT is subject to the IRC's normalization rules. DENC maintained that certain tax technical issues have yet to be resolved and additional guidance from the IRS is expected. DENC argued that addressing the ratemaking treatment of EDIT in the Company's next general rate case rather than through rulemaking allows for additional time to resolve these issues to ensure that the Company's rates and charges are maintained in accordance with the IRC's normalization rules.

Piedmont argued that the flow back of EDIT should not be automatic, rather the Commission should consider all matters that could affect rates. Piedmont stated that the Tax Act represents a unique opportunity to deliver savings to customers, but as with all ratemaking actions, the long term and short term interests of customers must be balanced.

Piedmont maintained that for EDIT, the Company will establish a regulatory liability and, similar to the Commission's treatment of EDIT in Docket No. M-100, Sub 138, would propose that those liabilities be addressed in the Company's next general rate case proceeding. Piedmont

---

[1] The Commission notes that CWSNC filed a 30-day notice of intent to file a general rate case application on March 23, 2018, in Docket No. W-354, Sub 360. CWSNC filed its general rate case application on April 27, 2018.

also noted that a significant portion of the EDIT resulting from the federal income tax rate change will be subject to normalization restrictions.

PSNC stated that the reduction in the federal corporate income tax rate from 35% to 21% will result in EDIT. PSNC stated that it proposes, and requests Commission approval, to record the adjustment to deferred taxes as a regulatory liability that will result in no net change in rate base until amortization of the liability begins. PSNC maintained that in accordance with Financial Accounting Standards Board requirements, the adjustments to deferred taxes will be grossed up to a pre-tax amount when recorded in a regulatory liability. PSNC noted that it proposes that the amortization of the regulatory liability be addressed in PSNC's next general rate case.

The Commission notes that in the generic rulemaking proceeding established by the Commission to address the recent changes in the State corporate income tax rate (Docket No. M-100, Sub 138), the Commission concluded that EDIT for all utilities, as appropriate, were to be held in a deferred tax regulatory liability account until they could be amortized as reductions to income tax expense for ratemaking purposes in each utility's next general rate case proceeding. The Commission stated that it agreed with PSNC Energy's comments in that docket that recognizing the amortization of the EDIT in the next general rate case of a utility would provide for certainty as to the amount to be amortized instead of having to base the flow-back calculation on an estimate. In that proceeding, no party objected to that option of handling the EDIT. And the Commission notes that that process has worked well and customers received or are receiving EDIT related to the State corporate income tax rate changes.

Further, the Commission notes that in the Commission's 1986 federal corporate income tax law change generic rulemaking proceeding (Docket No. M-100, Sub 113), the Commission concluded in its October 20, 1987 Order to Require Filing of Tariffs to Reduce Rates and Refund Plans to Effect Flow Through of Tax Savings for Those Regulated Companies not covered by Specific Orders on This Matter, as follows: "[t]hat the appropriate amortization of accumulated excess deferred income taxes will be considered in each company's next general rate case or such other proceeding as the Commission may determine to be appropriate. Any additional amounts relating to the adjustment that should have been made by the company for the flow back of excess deferred income taxes shall be placed in a deferred account and should ultimately be refunded to ratepayers with interest."

In this current proceeding, DEC and DEP noted that all EDIT amounts are by necessity estimated, pending completion of each Company's federal income tax return in 2019 for tax year 2018, and DENC stated that its EDIT estimated amount would be further refined throughout 2018 as more detailed analysis is completed and needed guidance from the IRS is forthcoming.

In addition, the Commission finds, based on the comments filed, that it is appropriate to minimize the rate volatility that could occur with implementing all of the impacts of the Tax Act immediately. Therefore, the Commission concludes that the appropriate balancing includes a base rate adjustment now for the expense piece as discussed above in Issue No. 1 and a reasonable delay, with interest, in the adjustments required to reflect the EDIT generated due to the Tax Act.

Further, the Commission concludes, based on the concerns expressed by DEC, DEP, and Piedmont, that a reasonable delay in the return of the EDIT will help minimize any potential unfavorable credit quality impacts of the Tax Act on the utilities.

Therefore, based on the precedent set in both Docket No. M-100, Sub 113, which precedent includes a review and opinion by the North Carolina Supreme Court in Nantahala, and Docket No. M-100, Sub 138, and the current uncertainty of the ultimate EDIT balances due to the Tax Act, and in an effort to minimize rate volatility and potential adverse credit quality impacts, the Commission finds that it is reasonable and appropriate to address the ratemaking treatment of EDIT in each utility's next general rate case proceeding or three years from the date of this Order, whichever is sooner. The Commission further finds that the EDIT shall be returned to customers with interest reflected at the overall weighted cost of capital approved in each Company's last general rate case proceeding. Thus, EDIT for Cardinal, DENC, DEP, Piedmont, and PSNC shall continue to be held in a regulatory liability account until each Company's next general rate case proceeding or for three years, whichever is sooner, and should ultimately be refunded to ratepayers with interest. Based on this decision, the utilities do not maintain EDIT as cost-free capital as asserted by the Attorney General. Further, EDIT for Aqua and CWSNC will be addressed in each Company's currently pending rate case proceeding (Docket No. W-218, Sub 497 for Aqua and Docket No. W-354, Sub 360 for CWSNC). EDIT for DEC was addressed by the Commission's June 22, 2018 and July 2, 2018 Orders in DEC's rate case proceeding (Docket No. E-7, Sub 1146).

Finally, the Commission finds it appropriate, once rates are established, to require the affected utilities to file quarterly reports in the appropriate newly-established, Company-specific docket, due no later than 30 days after the end of a quarter, on the status of their EDIT deferred account, and the deferral account established under this proceeding that represents the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018. DEC shall also be required within the context of this Order in this docket to file the quarterly reports.

Issue No. 3 – How should the Commission proceed in recognition of the fact that CIAC for water and wastewater companies is now subject to federal income taxes based on the Tax Act?

CWSNC recommended that the Commission consider the impact of the Tax Act upon CIAC. CWSNC noted that the Tax Act removes the tax exemption for CIAC and thus, effective January 1, 2018, water and wastewater utilities like CWSNC will have to begin paying income taxes on cash and property CIAC they receive. CWSNC argued that this change will negatively affect CWSNC's opportunity to earn a reasonable return on its property used and useful in public service if the Company is not allowed to collect the appropriate tax on the CIAC received. CWSNC noted that it will immediately seek to collect from developers (and others) who transfer property and cash to the Company as CIAC based upon the new treatment under the Tax Act; however, there may be some amounts that are not collected as a result of the timing of the tax reform change. CWSNC also noted that it does not believe that collection of this tax resulting from a change in the federal tax law requires any modification to its tariff; however, if the Commission believes state law mandates such a change, CWSNC requested clarification and immediate authorization to collect the taxes in the interim.

The Public Staff stated in its reply comments that the change in the taxable status of CIAC under the Tax Act could have a significant impact on water and wastewater companies in that contributed plant is a significant portion of the plant additions by these companies. The Public Staff recommended that the Commission open a new docket to address the implications of the inclusion of CIAC in taxable income for water and wastewater companies.

The Public Staff further recommended that the treatment of CIAC should follow the precedent established in Docket No. M-100, Sub 113, and that water and wastewater companies should seek to collect the income tax on CIAC from the contributor using the full gross-up method. The Public Staff recommended that the Commission allow individual companies seeking to use the present value method to do so with prior approval by the Commission. The Public Staff recommended that in opening a new docket, the Commission should provide notice of this change to all water and wastewater companies, not just the utilities subject to this docket[1], and direct those companies to seek to collect the income tax on CIAC from contributors of plant for new contributions contracted for on or after the date of the opening of that new docket.

The Commission concludes based on the comments filed that it is appropriate to open a generic water docket, Docket No. W-100, Sub 57, to consider the new tax status of CIAC under the Tax Act. The Commission is issuing an Order contemporaneously with this Order to open the new generic water docket. Therefore, any further consideration of this issue will be addressed in Docket No. W-100, Sub 57.

<u>Issue No. 4</u> – How should the Commission address the change in the federal corporate income tax rate in the various riders in effect?

DEC/DEP stated that they expect there may be additional benefits for customers through reduced rider rates, which will be handled in the respective annual rider filings and experience modification factors.

DENC noted that in addition to the Company's base non-fuel rate cost of service, the Tax Act impacts the Company's Rider EDIT, as approved in the Company's 2016 Base Rate Case Order. DENC noted that Rider EDIT is a decrement rider that refunds to customers over a two-year period, commencing on November 1, 2016 through October 31, 2018, a regulatory liability for EDIT associated with recent reductions in the North Carolina corporate income tax rate. DENC noted that the regulatory liability approved by the Commission was calculated using a tax gross-up factor that included a 35% federal income tax rate in effect prior to the enactment of the Tax Act. DENC maintained that beginning January 1, 2018, the federal corporate income tax component of the tax gross-up factor will be reduced from 35% to 21% pursuant to the Tax Act. DENC provided as Attachment 1 to its initial comments a schedule showing the reduction in the regulatory liability and the associated reduction to the Rider EDIT credit of $1.4 million for the period January 1, 2018 through October 31, 2018 due to the change in the tax gross-up factor.

[1] In its January 3, 2018 Order in this docket, the Commission excluded water and wastewater companies with $250,000 or less in annual operating revenues from participation in this proceeding.

DENC further noted that for the Company's rates and charges with approved deferral accounting and experience modification factors (i.e., fuel factor, DSM/EE, and REPS riders), the Company proposes to defer any differences between rates in effect at January 1, 2018, including any provisional components, and revenues that would have been billed incorporating the IRC as now amended by the Tax Act, through the ordinary deferral accounting process. DENC noted that any such differences will be addressed in future annual rider proceedings where applicable.

The Public Staff asserted that the rates for riders should be reduced in each subject utility's respective annual rider filings to reflect the reduction in the federal corporate income tax rate.

The Commission notes that all of the parties that commented on this issue agree that the Commission should address the reduction in the federal corporate income tax rate in the various riders for the utilities in each Company's next annual rider proceedings. Further, as noted by DENC, its State tax Rider EDIT established in its last general rate case was calculated using a 35% federal corporate income tax rate. The Commission finds it appropriate to request the Public Staff to work with DENC to determine the impact, if any, to DENC's State Tax Rider EDIT and file a recommendation with the Commission on how the Commission should address the decrease in the federal corporate income tax rate on DENC's State Tax Rider EDIT.

IT IS, THEREFORE, ORDERED as follows:

1. That, for the specific reasons outlined in this Order, it is not appropriate to adjust the base rates of Aqua, CWSNC, DEC, Frontier, or Toccoa in this generic rulemaking proceeding due to the reduction in the federal corporate income tax rate to 21% as enacted in the Tax Act.

2. That Cardinal, DENC, DEP, Piedmont, and PSNC are hereby required to adjust their base rates to reflect the reduction in the federal corporate income tax rate to 21% for taxable years beginning after December 31, 2017, as outlined in the Tax Act. PSNC's adjusted base rates should also include the necessary correction to appropriately reflect the 3% State corporate income tax rate.

3. That the following dockets are hereby created to accept Company-specific filings made pursuant to this Order:

DEC	Docket No. E-7, Sub 1184
DEP	Docket No. E-2, Sub 1188
DENC	Docket No. E-22, Sub 560
Piedmont	Docket No. G-9, Sub 731
PSNC	Docket No. G-5, Sub 595
Cardinal	Docket No. G-39, Sub 42

4. That Cardinal, DENC, DEP, Piedmont, and PSNC shall file proposals in the appropriate newly-created, Company-specific docket, including all supporting workpapers, to adjust their rates to reflect the reduction in the federal corporate income tax rate to 21% for taxable years beginning after December 31, 2017, as outlined in the Tax Act by no later than Thursday, October 25, 2018. The Public Staff is requested to file comments on the proposals by no later than

Wednesday, November 14, 2018. Other parties also may file comments on the proposals by no later than Wednesday, November 14, 2018.

5. That Cardinal, DENC, DEC, DEP, Piedmont, and PSNC shall continue to hold in a deferred regulatory liability account the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018 as previously ordered in the Commission's January 3, 2018 Order and the disposition of such regulatory liability will be considered in each utility's next general rate case proceeding or in three years, whichever is sooner. Therefore, the Commission concludes that if Cardinal, DENC, DEC, DEP, Piedmont or PSNC have not filed an application for a general rate case proceeding by October 5, 2021, each Company shall file its proposal by that date to flow back to its ratepayers the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018 as previously ordered in the Commission's January 3, 2018 Order. The proposal should include all workpapers that support the proposed calculations. The Public Staff is specifically requested to file comments on the proposal by no later than October 25, 2021. Other parties also may file comments on the proposal by no later than October 25, 2021. DEC is included in this decision because the issue of how to handle the provisional amounts collected since January 1, 2018 based on rates reflecting the 35% federal corporate income tax rate was not addressed in DEC's most recent rate case proceeding. These amounts will ultimately be returned to customers with interest reflected at the overall weighted cost of capital approved in each Company's last general rate case proceeding.

6. That excess deferred income taxes related to the decrease in the federal corporate income tax rate to 21% under the Tax Act for Cardinal, DENC, DEP, Piedmont, and PSNC, as appropriate, shall be held in a deferred tax regulatory liability account until they can be addressed for ratemaking purposes in each utility's next general rate case proceeding or in three years, whichever is sooner. These amounts will ultimately be returned to customers with interest reflected at the overall weighted cost of capital approved in each Company's last general rate case proceeding. Therefore, the Commission concludes that if Cardinal, DENC, DEP, Piedmont or PSNC have not filed an application for a general rate case proceeding by October 5, 2021, each Company shall file its proposal by that date to flow back to its ratepayers both the protected and the unprotected EDIT generated due to the Tax Act. The federal EDIT flow back proposal should include all workpapers that support the proposed calculations. The Public Staff is specifically requested to file comments on the proposal by no later than October 25, 2021. Other parties also may file comments on the proposal by no later than October 25, 2021. These utilities are hereby required to maintain the deferred tax regulatory liability account previously established and shall not begin amortization of amounts recorded in such accounts pending further order of the Commission.

7. That excess deferred income taxes related to the decrease in the federal corporate income tax rate to 21% under the Tax Act for Aqua, CWSNC, and DEC will be or have been addressed in each Company's pending/recent general rate case proceeding.

8. That, once rates are established, the affected utilities (including DEC) shall file quarterly reports in the appropriate newly-created, Company specific docket, due no later than 30 days after the end of a quarter, on the status of their EDIT deferred account, and the deferral

account established under this proceeding that represents the difference between revenues billed under the prior federal corporate income tax rate and the federal corporate income tax rate resulting from the Tax Act starting January 1, 2018.

9. That the issue of the change in tax status of CIAC for water and wastewater public utilities under the Tax Act will be addressed in a separate proceeding, Docket No. W-100, Sub 57.

10. That the reduction in the federal corporate income tax rate reflected in the various riders for the utilities shall be addressed in each Company's next annual rider proceedings.

11. That the Public Staff is requested to work with DENC to determine the impact, if any, to DENC's State Tax Rider EDIT due to the Tax Act and to file a recommendation with the Commission on how the Commission should address the decrease in the federal corporate income tax rate on DENC's State Tax Rider EDIT by no later than Friday, November 2, 2018.

ISSUED BY ORDER OF THE COMMISSION.
This the 5th day of October, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. M-100, SUB 148

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of
The Federal Tax Cuts and Jobs Act) CLARIFICATION ORDER
)

BY THE COMMISSION: On October 5, 2018, the Commission issued an Order Addressing the Impacts of the Federal Tax Cuts and Jobs Act on Public Utilities. The Commission ordered, among other things, that "excess deferred income taxes related to the decrease in the federal corporate income tax rate to 21% under the Tax Act for Cardinal, DENC, DEP, Piedmont, and PSNC, as appropriate, shall be held in a deferred tax regulatory liability account until they can be addressed for ratemaking purposes in each utility's next general rate case proceeding or in three years, whichever is sooner. These amounts will ultimately be returned to customers with interest reflected at the overall weighted cost of capital approved in each Company's last general rate case proceeding."

On October 25, 2018, Cardinal Pipeline Company, LLC (Cardinal) indicated in its compliance filing in Docket No. G-39, Sub 42, that Cardinal's rate base continues to be reduced by the excess deferred income taxes (EDIT) creating a benefit to customers; therefore, interest on the regulatory account is not necessary.

The Commission finds it appropriate to clarify its October 5, 2018 Order to state that for all of the impacted utilities if the EDIT remains a reduction to rate base, then no additional interest at the overall weighted cost of capital is required on the EDIT regulatory account.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 9th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-100, SUB 147

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Smart Grid Technology Plans Pursuant to Commission Rule R8-60.1(c)	))))))))	ORDER ACCEPTING DENC'S AND DEC'S SGTP UPDATES, REQUIRING ADDITIONAL INFORMATION FROM DEP, AND DIRECTING DEC AND DEP TO CONVENE A MEETING REGARDING ACCESS TO CUSTOMER USAGE DATA

BY THE COMMISSION: On September 30, 2016, Dominion Energy North Carolina (DENC) filed its smart grid technology plan (SGTP) in the above-captioned docket. On October 3, 2016, Duke Energy Progress, LLC (DEP) and Duke Energy Carolinas, LLC (DEC) filed their SGTPs in this docket. After several requests for extensions of time to file comments were granted by the Commission, comments were filed on December 19, 2016, by the Public Staff and North Carolina Sustainable Energy Association (NCSEA). Environmental Defense Fund (EDF) filed comments on December 20, 2016. On January 13, 2017, reply comments were filed by DENC, and jointly by DEP and DEC (collectively, Duke).

On March 29, 2017, the Commission issued an Order Accepting Smart Grid Technology Plans (2016 SGTP Order) in this docket. In the 2016 SGTP Order, the Commission found good cause to request that the electric utilities, the Public Staff, and all interested parties continue discussing potential rule changes related to access to customer usage data and that Duke include a report on those discussions in its 2017 SGTPs. Further, the Commission's Order cited several requirements of Commission Rule R8-60.1 with respect to the information to be provided by the electric public utilities for smart grid technologies currently being deployed or scheduled for implementation within the next five years, and stated:

> Neither DEC, DEP nor DNCP included the above information in their 2016 SGTPs with regard to any future plans for deployment of AMI meters. The Commission interprets this to mean that DEC, DEP and DNCP currently have no plans to replace existing meters with AMI meters, either incrementally or on full scale, during the next five years. As a result, the Commission expects DEC, DEP and DNCP to provide the Commission with the above information, as well as any other required information, in their SGTP filings prior to implementing an incremental or full scale effort to replace existing meters with AMI meters.

2016 SGTP Order, at p. 17.

On May 5, 2017, DEC and DEP filed supplemental information regarding DEC's and DEP's 2016 SGTPs. In summary, DEC advised the Commission that in late 2016 it decided to begin a full scale deployment of AMI in North Carolina, that it began implementing that decision in early 2017, and that it expects to complete its AMI deployment in North Carolina in 2019. DEC attached a cost-benefit analysis and other information regarding its decision to deploy AMI. With regard to DEP, the supplemental filing stated that DEP had not made a decision to deploy AMI.

On August 21, 2017, the Commission issued an Order Requiring Smart Meter Plan Presentation by Duke Energy Carolinas, LLC (SGTP Presentation Order). The Order scheduled a presentation on AMI by DEC, and included several questions to be answered by DEC regarding its decision to deploy AMI.

On August 25, 2017, DEC filed an application in Docket No. E-7, Sub 1146 requesting an increase in its retail rates. The request includes the costs associated with AMI deployment.

On October 2, 2017, in compliance with Commission Rule R8-60.1, DEP and DEC filed Smart Grid Technology Plan Updates (SGTP Updates). DENC filed a letter stating that there are no changes to its previous SGTP report.

On October 6, 2017, DEC filed its responses to the questions included in the Commission's SGTP Presentation Order (DEC's First Responses).

On October 10, 2017, DEC made its AMI presentation to the Commission.

On November 1, 2017, the Public Staff filed a letter stating that it reviewed DEC's and DEP's SGTP Updates and believes that they comply with the requirements of Commission Rule R8-60.1, and, therefore, recommends that the Commission find that the SGTP Updates comply with the requirements of the Rule. Further, the Public Staff states that because the SGTP Updates are intended to be informational the Public Staff does not take a position on the smart grid technologies being considered by the utilities.

On November 20, 2017, the Commission issued an Order Requiring Additional Information (Additional Information Order) requesting that DEC respond to several questions.

On December 15, 2017, DEC filed its responses to the questions included in the Commission's Additional Information Order (DEC's Second Responses).

On February 5, 2018, the Commission held a public witness hearing in this docket. No public witnesses attended the hearing.

On February 23, 2018, the Commission issued an Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase to DEP in Docket Nos. E-2, Subs 1131, 1142, 1103, and 1153). In that Order, the Commission determined, among other things, that it would not open a separate docket for grid modernization planning and/or revisions to existing Commission rules at this time. Rather, the Commission decided that it will reconsider such proposals pending the effectiveness of the planned Power/Forward technical workshop, SGTPs, integrated resource planning process, and the outcome of this issue in DEC's general rate case in Docket No. E-7, Sub 1146.

Background

By Orders dated April 11, 2012 and May 6, 2013, in Docket No. E-100, Sub 126, the Commission amended its rules requiring electric utilities that file integrated resource plans (IRPs) to include in their IRPs information on how planned "smart grid" deployment would impact the utilities' resource needs. Commission Rule R8-60.1 requires the electric utilities to file SGTPs every two years with updates in the intervening years. The initial SGTPs were filed by the electric utilities on October 1, 2014. The Commission, in its Order dated November 5, 2015, approved these 2014 SGTPs. In addition to approving the SGTPs, the Commission ordered (1) DEC, DEP, and DENC to address in their 2016 SGTPs whether the Commission's rules require updating to address customer and third party access to usage data and (2) DEC to address the issue of AMI opt-outs relative to its current and planned AMI deployments by December 1, 2015.

The Commission stated in the November 5, 2015 Order that smart grid proceedings are intended to be informative, and that the Commission does not anticipate using them to order utilities to make specific smart grid investments, nor are they a means by which utilities should seek to secure advance prudency reviews of smart grid investments.[1]

By Order dated June 13, 2016, in Docket No. E-100, Sub 126, the Commission amended Rules R8-60(i)(10) and R8-60.1 stating that the amended rules will better focus the SGTP proceedings as an informative effort to assist the Commission and parties in anticipating the potential impact of new technologies on customers.

Rule R8-60.1(c) states that

> For purposes of this Rule, smart grid technologies are as set forth in Rule R8-60(i)(10) and shall also include those that provide real-time, automated, interactive technologies that enable the optimization and/or operation of consumer devices and appliances, including metering of customer usage and providing customers with options to control their energy consumption.

Rule R8-60.1(c) lists the information to be included in each utility's SGTP. In summary, the Rule requires a description of the technologies, goals, and objectives of each technology, the status and timeframe for completion of the project, and cost information. In addition, Rule R8-60.1(c)(7) requires additional details about plans and ongoing deployments of AMI.

Summary of Smart Grid Technology Plans

Duke Smart Grid Technology Strategy

In 2017, Duke outlined its plans over the next decade to modernize the North Carolina grid by means of its Power/Forward Carolinas initiative. In summary, Duke maintains that Power/Forward is comprised of strategic programs that will each play a part in building a smarter energy future for customers. According to Duke, these strategic programs represent the means to deliver the road ahead strategies of modernizing the power grid and transforming the customer experience, as outlined in the 2016 SGTPs. Moreover, Duke asserts that the early years of

[1] It should be noted, however, that G.S. 62-42 grants the Commission authority to order an investor-owned utility to make equipment improvements if necessary to assure that customers receive adequate and sufficient electric service.

Power/Forward will establish the foundational and enabling infrastructure and technologies to achieve Duke's long-term objectives of a more reliable, resilient grid to better serve customers.

According to Duke, certain programs included in the Power/Forward initiative are technologies that fall under the definition of "smart grid technologies" outlined in Commission Rule R8-60.1(c), while others are not. All of the programs have similar objectives in the long term, improving reliability and resiliency of the grid; however, certain programs, like Targeted Undergrounding, are not deemed smart grid technologies. Duke has determined that the Self-Optimizing Grid, and certain portions of the Enterprise Systems Upgrades, Communications Network Upgrades, and Transmission Improvements programs meet the criteria for the SGTP and will be outlined within its SGTPs each year as applicable. The Enterprise Systems Upgrades primarily consists of the Distribution Management System (DMS) Consolidation projects as outlined in the 2016 SGTPs. According to Duke, applicable projects or initiatives are included in the 2017 SGTP Updates or will be included in future SGTPs as appropriate.

Duke states that the initial planning for the 10-year Grid Improvement Plan was completed in early 2017. Given this is a 10-year plan, Duke will utilize a "progressive elaboration" process, pursuant to Project Management Institute best practices, to govern the plan throughout the lifecycle. In this process, the initial overall 10-year plan concepts are approved first, then a more detailed version of each year's plan is submitted and approved annually.

Following are smart grid technologies identified in Duke's updated plans:

<u>DEC Current and Scheduled Technology Deployments – R8-60.1(c)(3)</u>

- AMI Deployment
- Self-Optimizing Grid
- Usage Alerts
- Pick Your Own Due Date

<u>DEC Technologies Actively Under Consideration – R8-60.1(c)(4)</u>

- Enterprise Transmission Health & Risk Management Project
- Enterprise Communications Network Upgrades Program

<u>DEP Current and Scheduled Technology Deployments – R8-60.1(c)(3)</u>

- AMI Deployment
- Self-Optimizing Grid

<u>DEP Technologies Actively Under Consideration – R8-60.1(c)(4)</u>

- Capacitor Bank Controls Upgrade
- Enterprise Transmission Health & Risk Management Project
- Western Carolinas Energy Storage Analysis and Deployment Plan
- Enterprise Communications Network Upgrades Program

DENC Smart Grid Technology Strategy

DENC states that it continually evaluates technologies to provide value-added services to customers and improve operations. Smart grid technologies are evaluated using standard DENC processes. DENC's strategy for evaluating and developing smart grid technologies includes assessing existing capabilities and evaluating new capabilities required to achieve the Company's targeted business objectives. After evaluating the new capabilities required for a targeted objective, a cross functional leadership team reviews the new capabilities to determine how they fit into the Company's overall corporate strategy. During this review, the team identifies high priority capabilities with consideration to business needs and budgetary constraints.

At the completion of the cross functional leadership team review, DENC focuses significant effort on developing the high priority capabilities necessary to achieve the targeted objective. The development includes researching available technologies, reviewing industry trends, and evaluating technologies from a technical, financial, and policy perspective.

DENC Current and Scheduled Technology Deployments – R8-60.1(c)(3)

All technologies included in the SGTP are in the pilot phase. DENC does not have capital allocated for deployment of additional smart grid technologies.

Discussion of SGTP Updates

AMI Deployment

Commission Rule R8-60.1(c)(3), subsections (ii), (iii) and (vii), require that SGTPs include the following information, among other things, for technologies currently being deployed or scheduled for implementation within the next five years:

(ii) The status and timeframe for completion.

(iii) A description of any existing equipment to be rendered obsolete by the new technology, its anticipated book value at the time of retirement, alternative uses of the existing equipment, and the expected salvage value of the existing equipment.

(vii) Analyses relied upon by the utility for installations, including an explanation of the methodology and inputs used to perform the analyses.

DEC - AMI

In the AMI cost-benefit analysis filed by DEC as a part of its supplemental information filing on May 5, 2017, DEC concluded that its AMI deployment would result in net benefits having a present value of $117.1 million (Supplemental Filing, Exhibit A). The largest category of benefits included in the analysis is entitled "Non-technical line loss reduction - power theft, equipment failures and installation errors." It is the last column of benefits shown on Exhibit A, and totals $634.8 million. In comparison, the next largest category of benefits is "Reduced meter operations costs – consumer order workers for meter orders," a total of $175.4 million. In response to question number 2 included in the Commission's SGTP Presentation Order, DEC stated, in pertinent part:

> According to a 2008 EPRI report, industry experts project that a reasonable percentage for non-technical losses is 2% of gross revenue. This assumption was utilized in calculating the DEC AMI benefits.

DEC's First Responses, at p. 5.

During DEC's SGTP presentation, DEC witness Donald Schneider, Jr. was asked whether EPRI or any other entity did a physical real world study to verify the 2% non-technical losses figure. Witness Schneider responded:

> Not to my knowledge. I think they went on data. Again, this was a report, not necessarily a study but it was a report, and they were going off of other reports and studies going back years and years that came up with this on average 2 percent of gross revenues so they did not.

Transcript, at p. 40.

Witness Schneider also stated that DEC has not performed a study that confirms the 2% amount reported by EPRI. In addition, witness Schneider stated that based on DEC's cost-benefit analysis the costs of the AMI deployment would outweigh the benefits until 2025 (Transcript, at p. 44).

In the Commission's Additional Information Order, the Commission requested that DEC provide the following information:

> 8. Using the actual historical kilowatt-hour and lost revenue data for energy theft that DEC has experienced and is discovering in North Carolina, including during its AMI deployment, develop an independent estimate of the percent of additional revenues DEC will collect via that deployment that would otherwise be lost due to theft and other non-technical losses.
>
> 9. Provide a revised 20-year AMI cost-benefit analysis that includes: (a) the costs of replacing AMI meters at the end of their 15-year lives, (b) the most recent estimate of the costs of cellular direct connect meters, (c) the cost of replacing other components and software at reasonable intervals, and (d) the non-technical revenue loss estimate (rather than the EPRI 2% estimate) developed pursuant to question 8.

DEC's revised AMI cost-benefit analysis was attached to DEC's Second Responses as Exhibit No. 2. The largest category of benefits included in the analysis continues to be "Non-technical line loss reduction - power theft, equipment failures and installation errors." However, the amount of this benefit went down from $634.8 million to $448.8 million. In addition, the revised cost-benefit analysis shows that AMI deployment would result in net costs having a present value of $49.9 million (DEC's Second Responses, Exhibit No. 2).

In DEC's SGTP Update, on pages 6-8, DEC provides the information regarding its AMI deployment. In summary, DEC states that through August 2017 it has installed approximately 850,000 AMI meters in North Carolina, and plans to install an additional 1.1 million AMI meters through 2019. Further, DEC states that it will remove and replace approximately 1.32 million automatic meter reading (AMR) meters from 2017 through 2019. DEC states that the AMR meters have an estimated salvage value of $1.37 million, and an estimated remaining net book value of $127.66 million as of March 31, 2017. In Exhibit A, Appendix C, DEC provides its AMI cost-benefit analysis, which is the same analysis that DEC filed as a part of its supplemental information filing on May 5, 2017.

In DEC's general rate case application, Docket No. E-7, Sub 1146, DEC seeks the recovery of $102.1 million in actual and estimated costs for AMI deployment from January through November 2017. In addition, DEC requests authority to establish a regulatory asset account to defer for later recovery the cost of meters that are being replaced by AMI. (Pre-filed Direct Testimony of Jane McManeus, at pp. 18-19)

DEP - AMI

In DEP's SGTP Update, on pages 6-8 and 17-18, DEP provides information regarding its plans for AMI deployment. In summary, DEP states that it has installed 56,819 AMI meters as of August 2017, and that it has installed approximately 182 AMI meters since the count provided in its 2016 SGTP. DEP states that its Board of Directors has endorsed the AMI deployment project, but "the outcome of regulatory considerations in the DEP rate case (Docket No. E-2, Sub 1142) could affect the Company's timing to advance the project." Further, DEP states that its existing AMR meters will have an estimated net book value of approximately $77.2 million as of December 31, 2017. In Exhibits A-G, Appendix C, DEP provides its AMI cost-benefit analysis. Similar to the initial cost-benefit analysis filed by DEC, DEP's analysis uses the EPRI 2% of revenues as a proxy for "Non-technical loss reduction."

Conclusions Regarding AMI

Commission Rule R8-60.1(c)(3) requires the electric utilities to provide the Commission with a cost-benefit analysis and other detailed information about smart grid technologies currently being deployed by the utilities or scheduled for implementation within the next five years. One purpose of the rule is to allow the Commission, the Public Staff, and other interested parties to review information about proposed smart grid programs, request additional information when needed, and have input regarding the implementation of smart grid programs well in advance of their implementation. Smart grid technologies are relatively new and evolving projects that require substantial capital investments. Therefore, the public interest is best served by the Commission and parties having sufficient time to study and understand the details of a smart grid project before it is launched.

As noted previously, DEC did not provide a cost-benefit analysis and other required information in its 2016 SGTP to support an AMI deployment. Consequently, the Commission directed DEC "[t]o provide the Commission with the above information, as well as any other required information, in their SGTP filings prior to implementing an incremental or full scale effort to replace existing meters with AMI meters." SGTP Order, at p. 17 [emphasis added] Nevertheless, DEC, as it reported in its May 5, 2017 supplemental filing, began deploying AMI meters "in early 2017."

Public utilities are required to provide cost effective services. G.S. 62-2. DEC's revised AMI-cost-benefit analysis, filed in response to the Commission's Additional Information Order, shows that on a present value basis the costs of DEC's AMI deployment are $49.9 million more than the benefits. The Commission acknowledges that an economic analysis is but one of the tools necessary to inform decisions such as the deployment of AMI. However, concerns are raised by a cost-benefit analysis that shows significant negative costs. The Commission notes that the question of AMI deployment by DEC is presented for decision in DEC's pending general rate case in Docket No. E-7, Sub 1146.

Based on the foregoing and the record in these dockets, the Commission finds good cause to accept DENC's SGTP Update, and to accept DEC's SGTP Update on the condition that DEC shall comply with the Commission's directive regarding discussions on access to customer usage data, as set forth below.

With regard to the AMI portion of DEP's Update, the Commission finds good cause to require that DEP file a revised AMI cost-benefit analysis using the same guidelines as requested of DEC in the Commission's Additional Information Order, to wit:

> 8. Using the actual historical kilowatt-hour and lost revenue data for energy theft that DEP has experienced and is discovering in North Carolina, including during its AMI deployment, develop an independent estimate of the percent of additional revenues DEP will collect via that deployment that would otherwise be lost due to theft and other non-technical losses.
>
> 9. Provide a revised 20-year AMI cost-benefit analysis that includes: (a) the costs of replacing AMI meters at the end of their 15-year lives, (b) the most recent estimate of the costs of cellular direct connect meters, (c) the cost of replacing other components and software at reasonable intervals, and (d) the non-technical revenue loss estimate (rather than the EPRI 2% estimate) developed pursuant to question 8.

Access to Customer Usage Data

In the Commission's 2016 SGTP Order, the Commission declined to consider a usage data access rule proposed by North Carolina Sustainable Energy Association (NCSEA), and, instead, requested that the parties continue their discussions on the subject and report back to the Commission.

> The Commission encourages the electric utilities, the Public Staff, and all interested parties to continue meeting and discussing rule changes related to customer usage data and third party access. The Commission recognizes there are many factors the stakeholders must consider when proposing rule changes to provide easy access to granular energy consumption data. These include, but are not limited to, customer privacy, liability, authorizations, Codes of Conduct, and affiliate transactions which should be appropriately addressed in the parties'

> discussions. Therefore, rather than initiating a formal rulemaking docket at this time, the Commission requests that Duke include a report on the discussions regarding potential rule changes in Duke's 2017 SGTPs.
>
> The Commission appreciates NCSEA's efforts to develop and propose a new Commission Rule R8-51.1 addressing data access.[1] However, the Commission chooses not to offer discussion, findings or conclusions on the proposed rule pending the above referenced rulemaking discussions and report.

2016 SGTP Order, at 23.

In their SGTP Updates, DEC and DEP (collectively, Duke) provide their report regarding discussions on potential changes to the rules governing access to customer usage data. Duke states, in pertinent part:

> Since the issuance of the Commission's March 29, 2017 SGTP Order, DEC and DEP have not had any formal discussions with NCSEA and the Public Staff regarding potential rule changes to address data access issues. DEC and DEP had some discussions related to data access issues with NCSEA and the Public Staff in the context of a legislative stakeholder process, but no such legislation was ultimately enacted. The Companies remain willing to have further discussions should the Commission decide to engage in such rulemaking.

SGTP Updates, at p. 19.

<u>Conclusion (Access to Customer Usage Data)</u>

The Commission is aware of the stakeholder discussions surrounding the proposed legislation referenced by Duke. The stakeholder discussions, like the proposed legislation, were wide ranging, and perhaps did not present an optimal opportunity for the parties to focus on the question of guidelines for access to customer usage information. During the DEP general rate case proceeding (Docket No. E-2, Sub 1142), Mr. Somers stated that "If NCSEA or the Public Staff or any other party is interested in talking about data access, the Company is more than willing to do so at any reasonable time." (Tr. Vol. 12, p. 256) Therefore, the Commission finds good cause to direct that Duke convene and facilitate discussions with NCSEA, the Public Staff, and other interested parties on this topic, with the goal of reaching agreement on all aspects, or as many aspects as possible, of the rule proposed by NCSEA. The first meeting shall be convened on or before June 4, 2018. In addition, the Commission requests that the discussions include the Green Button Connect My Data system for data access. The Commission further directs that Duke provide the Commission a report detailing the discussions, agreements reached on particular points, points on which agreement has not been reached, and the barriers to agreement on remaining points, as well as the parties' plans for further discussions. The report shall be filed in Docket E-100, Sub 147 no later than 30 days after the first meeting of the stakeholder group. Further, the Commission directs Duke to reflect the results of these discussions in its 2018 SGTP reports.

---

[1] NCSEA Comments, Exhibit C, Docket No. E-100, Sub 147 (December 19, 2016).

IT IS, THEREFORE, ORDERED as follows:

1. That DENC's letter identifying no changes to its previous SGTP report is accepted.

2. That DEC's SGTP Update is accepted, with the condition that DEC shall comply with the Commission's directive regarding discussions on access to customer usage data, as set forth herein.

3. That DEP shall within three months of the date of this Order file a revised AMI cost-benefit analysis as described in the body of this Order.

4. That Duke shall convene meetings with NCSEA, the Public Staff, and other interested parties to discuss guidelines for access to customer usage data, as specified in the body of this Order. The first meeting shall be convened on or before June 4, 2018. Duke shall file a report with the Commission, no later than 30 days after the first meeting, providing the Commission with the details of the discussions, and the parties' plans for further discussions. Duke shall reflect the results of these stakeholder discussions in its 2018 SGTP reports.

ISSUED BY ORDER OF THE COMMISSION.
This the 7th day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-100, SUB 151

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Proceeding to Select the Independent	)	ORDER APPROVING THE
Administrator of the CPRE Program	)	INDEPENDENT ADMINISTRATOR
	)	OF THE CPRE PROGRAM

BY THE COMMISSION: On November 21, 2017, pursuant to Commission Rule R8-71(d)(1), the Commission issued an Order establishing this proceeding to select the Independent Administrator of the Competitive Procurement of Renewable Energy (CPRE) Program, which was created by the enactment of G.S. 62-110.8. That Order allowed the parties of record in Docket No. E-100, Sub 150 to participate in this proceeding without the need to file petitions to intervene, including the North Carolina Clean Energy Business Alliance (NCCEBA), the North Carolina Sustainable Energy Association (NCSEA), and the North Carolina Utilities Commission-Public Staff (Public Staff).

On December 8, 2017, pursuant to Ordering Paragraph One of the Commission's November 21 Order, Duke Energy Carolinas, LLC (DEC) and Duke Energy Progress, LLC (DEP) (together, Duke), filed their initial comments and recommendation that the Commission select Accion Group, LLC (Accion), as the Independent Administrator of the CPRE Program. Duke's filing included background on the CPRE Program and details on Duke's due diligence efforts to identify candidates to serve as Independent Administrator of the CPRE Program. Duke states that this process included developing a scope of work, interviewing Accion and three other candidate firms, and seeking performance feedback and reviews from Duke's peer utilities, among other reference sources. Duke further states that due to the truncated timeframe of required filings, after the initial interviews, Duke focused on Accion as the lead candidate and did not solicit proposals from the other candidate firms that were initially interviewed; however, Accion was not informed that it was the only candidate firm invited to make a formal proposal, which was included as an attachment to Duke's filing.

In support of its recommendation, Duke states that Accion maintains a nationwide practice conducting utility solicitations, having participated in over 94 solicitations during the past 13 years involving a wide variety of technologies, fuel sources, and terms. Duke further states that Accion has served as independent evaluator, independent monitor, or independent observer to a number of state commissions and utilities in jurisdictions that include Georgia, Colorado, and California. Duke also described Accion's background and experience in evaluating capacity and energy supply options in these other states, including providing independent expertise in the evaluation of bids and the design and development of sophisticated competitive procurement websites that provide the equal access to information and the transparency required by Commission Rule R8-71. Duke further states that Accion's proposed budgets are reasonable inasmuch as they are in line with the charges for similar work in other states and Duke's previous experience for similar services. Finally, Duke states that Accion made the disclosures required by Commission Rule R8-71(d)(2), and that no conflict of interest exists that would affect Accion's independence or ability to perform the Independent Administrator role in an unbiased manner. Therefore, Duke requests that the Commission approve Accion as the third-party Independent Administrator of the CPRE Program.

On December 19, 2017, NCCEBA filed reply comments, stating that NCCEBA has no objection to Duke's recommendation of Accion as the Independent Administrator of the CPRE Program.

On December 21, 2017, the Public Staff filed reply comments, stating that the Public Staff reviewed Duke's initial comments and recommendation and does not take exception with the process followed by Duke in identifying and evaluating candidate firms with experience monitoring and supporting competitive procurement programs for electric utilities. The Public Staff further states that it is satisfied with Duke's due diligence in evaluating Accion's qualifications and experience. The Public Staff also summarized its own "high-level survey" of firms that provide the type of services sought in the Independent Administrator, which included contacting the staff of the Georgia Public Service Commission and two meetings with Accion to discuss its qualifications and experience. Based upon this effort, the Public Staff states that Accion has the experience and resources to meet the requirements of the Independent Administrator of the CPRE Program and that the Public Staff does not object to Duke's recommendation. Finally, the Public Staff states that it believes that the Commission has sufficient information to select an

Independent Administrator, but a presentation of Accion's skills and qualifications may be informative for the Commission and other parties and useful for the Commission's consideration.

On December 22, 2017, NCSEA filed a letter in lieu of reply comments, informing the Commission that NCSEA has no objection to Duke's recommendation that Accion serve as the Independent Administrator of the CPRE Program.

No other party filed comments, and no additional interested persons have sought to intervene in this proceeding.

The Commission has carefully considered Duke's initial comments and recommendation, including Duke's Solicitation Scope of Work and Accion's proposal, which were attached to Duke's initial comments and recommendation, and the comments of the parties filed in this proceeding. Based upon the foregoing, and pursuant to G.S. 62-110.8(d), the Commission finds good cause to approve Accion as the Independent Administrator of the CPRE Program.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 9th day of January, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-100, SUB 158

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Biennial Determination of Avoided Cost	)	ORDER ESTABLISHING BIENNIAL
Rates for Electric Utility Purchases from	)	PROCEEDING, REQUIRING DATA,
Qualifying Facilities – 2018	)	AND SCHEDULING PUBLIC HEARING

BY THE COMMISSION: These are the 2018 biennial proceedings held by this Commission pursuant to the provisions of Section 210 of the Public Utility Regulatory Policies Act of 1978 (PURPA) and the Federal Energy Regulatory Commission (FERC) regulations implementing those provisions, which delegated to this Commission certain responsibilities for determining each utility's avoided costs with respect to rates for purchases from qualifying cogenerators and small power production facilities. These proceedings are also being held pursuant to G.S. 62-156 which requires this Commission to determine the rates to be paid by electric utilities for power purchased from small power producers as defined in G.S. 62-3(27a).

In order to facilitate the determination of avoided cost rates, the Commission finds good cause to issue this order establishing a schedule for the 2018 biennial determination of such rates in this docket. The Commission further finds that Duke Energy Carolinas, LLC (DEC), Duke

Energy Progress, LLC (DEP), Virginia Electric and Power Company d/b/a Dominion Energy North Carolina (Dominion), Western Carolina University (WCU), and Appalachian State University, d/b/a, New River Light and Power Company (New River) should be made parties to these proceedings.

In Ordering Paragraph No. 16 of its October 11, 2017 Order issued in Docket No. E-100, Sub 148 (the 2016 biennial avoided cost proceedings), the Commission directed DEC, DEP, and Dominion to address the following issues in their initial filings in this proceeding, consistent with the discussion and conclusions reached in that Order: (1) a continued evaluation of capacity benefits of QF generation, (2) whether the utilization of a 2.0 PAF as approved in the Hydro Stipulation should continue as provided in that agreement, (3) the effect of distributed generation on power flows on each utility's distribution system and the extent of power backflows at substations, (4) hourly CT operational data and marginal cost data on a season-specific basis, and (5) consideration of a rate design that considers factors relevant to the characteristics of QF-supplied power that is intermittent and non-dispatchable. With regard to a rate design that considers the characteristics of the power supplied by the QF, and consistent with the testimony of the parties' witnesses in the 2016 biennial avoided cost proceedings, the Commission expects DEC, DEP, and Dominion to file proposed rate schedules that reflect each utility's highest production cost hours, as well as summer and non-summer periods, with more granularity than the current Option A and Option B rate schedules. Further, in its discussion of the other issues addressed by the witnesses in the 2016 biennial avoided cost proceedings, the Commission determined that a number of issues merit further consideration in this proceeding. Therefore, the Commission will require DEC, DEP, and Dominion to address those issues as directed in Ordering Paragraph No. 16 of the Commission's October 11, 2017 Order in Docket No. E-100, Sub 148, through their respective filings in this proceeding. In addition, the Commission invites all parties to address those issues which the Commission determined in its October 11, 2017 Order in Docket No. E-100, Sub 148, merit further discussion, but were not specifically mentioned in Ordering Paragraph No. 16.

The Commission has determined that it will attempt to resolve all issues arising in this docket based on a record developed through public witness testimony, statements, exhibits and avoided cost schedules verified by persons who would otherwise be qualified to present expert testimony in a formal hearing, and written comments on the statements, exhibits and schedules, rather than a full evidentiary hearing for the purpose of receiving expert testimony. The Commission believes this procedure is appropriate given the recurring nature of the issues and decisions which have traditionally arisen in these proceedings.

IT IS, THEREFORE, ORDERED as follows:

1. That DEC, DEP, Dominion, WCU, and New River are hereby made parties to these proceedings;

2. That DEC, DEP, Dominion, WCU, and New River shall file the statements and exhibits specified in decretal paragraph 3 below on or before Thursday, November 1, 2018;

3. That DEC, DEP, Dominion, WCU, and New River's filings shall include the following:

a. A set of proposed rates for purchases from qualifying facilities, showing all calculations for deriving said proposed rates, including inflation rates and discount rates used,

b. Proposed standard form(s) of contract between qualifying facilities and the utility, describing any differences between said proposed standard form(s) of contract and the currently approved standard contract, including the reasons for such differences; and

c. Statements and exhibits addressing those issues listed in Ordering Paragraph No. 16 of the Commission's October 11, 2017 Order issued in Docket No. E-100, Sub 148.

4. That other persons desiring to become formal parties to this proceeding may petition the Commission for leave to intervene on or before Monday, January 7, 2019;

5. That all parties, other than the five electric utilities herein, shall file with the Commission the comments and exhibits that they wish to present in this proceeding on or before Monday, January 7, 2019;

6. That all parties may file reply comments on or before Friday, February 15, 2019;

7. That all parties may file proposed orders on or before Friday, March 8, 2019;

8. That a public hearing solely for the purpose of taking nonexpert public witness testimony is hereby scheduled to begin on Tuesday, February 19, 2019, at 9:30 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina; and

9. That DEC, DEP, Dominion, WCU, and New River shall publish, at their own expense, in newspapers having general circulation in their respective North Carolina service areas, the "Notice of Public Hearing" attached hereto as Appendix A once a week for two successive weeks, beginning with the week of December 3, 2018, and shall submit Affidavits of Publication to the Commission no later than the date of the hearing.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

APPENDIX A
PAGE 1 OF 2

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. E-100, SUB 158

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Biennial Determination of Avoided Cost	)	
Rates for Electric Utility Purchases from	)	NOTICE OF PUBLIC HEARING
Qualifying Facilities – 2018	)	

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) has scheduled a public hearing in this docket which will commence on Tuesday, February 19, 2019, at 9:30 a.m., in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina, for the purpose of taking nonexpert public witness testimony as a part of its 2018 biennial determination of avoided cost rates for purchases of electricity by the electric utilities who are parties to this docket from qualifying cogeneration and small power production facilities. The electric utilities who are parties to this docket are Duke Energy Carolinas, LLC (DEC), Duke Energy Progress, LLC (DEP), Virginia Electric and Power Company d/b/a Dominion Energy North Carolina (Dominion), Western Carolina University (WCU), and Appalachian State University, d/b/a, New River Light and Power Company (New River).

The Public Utility Regulatory Policies Act of 1978 (PURPA) requires electric utilities to offer to purchase electric energy from cogeneration and small power production facilities which obtain qualifying facility status under PURPA. The rates for such purchases shall be set by the state regulatory authority, shall be just and reasonable to the ratepayers of the electric utility and in the public interest, shall not discriminate against qualifying cogenerators or qualifying small power producers, and shall not exceed the incremental cost to the electric utility of acquiring alternative electric energy. As a part of its responsibility in these matters, the Commission determines on a biennial basis the avoided cost rates and conditions for the purchase of electricity by electric utilities from qualifying cogeneration and small power production facilities in North Carolina.

In addition to the requirements of PURPA, G.S. 62-156 requires the Commission to determine the rates and contract terms to be observed by electric utilities in purchasing power from small power producers as defined in G.S. 62-3(27a). The rates established pursuant to G.S. 62-156 shall not exceed, over the term of the purchase power contract, the incremental cost to the electric utility of the electric energy which, but for the purchase from a small power producer, the utility would generate or purchase from another source.

APPENDIX A
PAGE 2 OF 2

The purpose of the hearing cited in this Notice is to consider revision of the avoided cost rates and contract terms previously set by the Commission for the purchase of electricity by the electric utilities who are parties to this proceeding from qualifying cogeneration and small power production facilities in North Carolina.

The Public Staff is required by statute to represent the using and consuming public in proceedings before the Commission. Written statements to the Public Staff should include any information which the writer wishes to be considered by the Public Staff in its investigation of the matter, and such statements should be addressed to Mr. Christopher J. Ayers, Executive Director, Public Staff — North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300.

The Attorney General is also authorized by statute to represent consumers in proceedings before the Commission. Statements to the Attorney General should be addressed to The Honorable Josh Stein, Attorney General of North Carolina, c/o Utilities Section, 9001 Mail Service Center, Raleigh, North Carolina 27699-9001.

Written statements are not evidence unless those persons submitting such statements appear at a public hearing and testify concerning the information contained in their written statements.

Any person desiring to intervene in the matter as a formal party of record should file a motion under Commission Rules R1-5 and R1-19 no later than Monday, January 7, 2019. All such motions should be filed with the Chief Clerk of the North Carolina Utilities Commission, 4325 Mail Service Center, Raleigh, North Carolina 27699-4325. The comments and exhibits to be presented in this proceeding by formal parties other than DEC, DEP, Dominion, WCU, and New River must be filed with the Commission no later than Monday, January 7, 2019.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

NOTE TO PRINTER: Cost of Advertising will be paid by the Applicant. It is required that an Affidavit of Publication be submitted to the Commission by the Applicant.

DOCKET NO. E-100, SUB 159

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
2018 REPS Compliance Plans and	)	ORDER ESTABLISHING DATES FOR
2017 REPS Compliance Reports	)	COMMENTS ON REPS COMPLIANCE
	)	PLANS AND REPS COMPLIANCE
	)	REPORTS

BY THE CHAIRMAN: Between August 20 and September 4, 2018, the following municipal electric power suppliers, electric membership corporations, and REPS compliance aggregators filed their 2018 Renewable Energy and Energy Efficiency Portfolio Standard (REPS) compliance plans and 2017 REPS compliance reports: EnergyUnited Electric Membership Corporation, North Carolina Eastern Municipal Power Agency, North Carolina Municipal Power Agency Number 1, North Carolina Electric Membership Corporation, the Town of Waynesville, the Tennessee Valley Authority, Public Works Commission of the City of Fayetteville, and Halifax Electric Membership Corporation. In addition, NTE Carolinas, LLC (NTE), filed a letter stating that the Towns of Black Creek, Lucama, Sharpsburg, Statonsburg, and Winterville are now full requirements power supply customers of NTE, and that the Cities of Kings Mountain and Concord will become NTE full become full requirements power supply customers of NTE on January 1, 2019. NTE further states that it is assisting these towns in preparing and filing their respective REPS compliance plans, but is unable to do so at this time because the towns are waiting on certain information to be provided by their current or former power suppliers.

The Chairman finds good cause to establish January 31, 2019, as the deadline for the filing of petitions to intervene and initial comments by the Public Staff and by intervening parties, and February 28, 2019, as the deadline for filing reply comments in this proceeding.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 27th day of September, 2018.

NORTH CAROLINA UTILITIES COMMISSION
A. Shonta Dunston, Acting Deputy Clerk

GENERAL ORDERS – ELECTRIC RESELLER

DOCKET NO. ER-100, SUB 4

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Rulemaking to Implement North Carolina	)	ORDER INITIATING
Session Law 2017-172 (House Bill 799)	)	RULEMAKING PROCEEDING

BY THE COMMISSION: On July 21, 2017, North Carolina Session Law 2017-172 (House Bill 799) was signed into law by the Governor, having been previously ratified by the North Carolina General Assembly. This legislation, entitled "An Act to Allow For Landlords to Charge Individual Tenants for Shared Cost of Natural Gas Service Provided to Leased Premises," among other things, modifies certain terminology used in G.S. 42-42.1, Water, Electricity, and Natural Gas Conservation, and modifies G.S. 62-110(h) to allow lessors of a single-family dwelling, and lessors of a residential building the ability to resell electric service and to remove the statutory requirement that an apartment complex that leases by the bedroom have a separate lease for each bedroom. These statutory changes became effective July 21, 2017.

In order to implement the provisions of House Bill 799, the Commission proposes certain revisions to the Rules and Regulations in Chapter 22 Provision of Electric Service By Landlords as presented in Appendix A attached hereto and certain revisions to the application and transfer forms as presented in Appendices B and C.

WHEREUPON, the Commission finds good cause to initiate a rulemaking proceeding to implement the statutory changes to G.S. 42-42.1 and G.S. 62-110(h) required by Senate Bill 799. Interested parties are requested to file initial comments and reply comments on the Commission's proposed changes to the Rules and Regulations in Chapter 22 and the proposed changes to Forms ER-1 and ER-2 to assist the Commission in adopting final rules and applicable Commission forms. After careful consideration of the initial comments and reply comments the Commission will issue final rules and forms.

IT IS, THEREFORE, ORDERED as follows:

1. That the proposed revisions to Commission Rules and Regulations contained in Chapter 22, attached as Appendix A (a clean copy and a version reflecting the proposed revisions[1]); Form ER-1, attached as Appendix B; Form ER-2, attached as Appendix C; are hereby adopted on an interim basis effective as of the date of this Order and continuing in effect until final rules shall be adopted and issued by further order of the Commission.

[1] Deletions from the current wording of the rules are shown by strikethrough and additions are shown by underlining.

2. That the Chief Clerk shall serve a copy of this Order on all providers charging for electric service pursuant to certificates of authority granted by the Commission pursuant to G.S. 62-110(h) and Chapter 22 of the Commission's Rules and Regulations, all providers with pending applications seeking such certificates of authority, the Public Staff – North Carolina Utilities Commission, and the Attorney General.

3. That any person having an interest in this proceeding may file a petition to intervene and initial comments on the proposed rules and proposed forms under the circumstances described herein on or before Friday, March 9, 2018, and may file reply comments on or before Friday, March 16, 2018.

4. That, after receiving comments and reply comments from interested parties the Commission shall issue a further order of the Commission concerning the applicable changes to Chapter 22 of the Commission's Rule and Regulations.

ISSUED BY ORDER OF THE COMMISSION.
This the 1st day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Tonola D. Brown-Bland did not participate in this decision.
Commissioner Charlotte A. Mitchell did not participate in this decision.

APPENDIX A

CHAPTER 22.

PROVISION OF ELECTRIC SERVICE BY LESSORS.

Rule R22-1. APPLICATION.

Pursuant to G.S. 62-110(h), this Chapter governs the resale of electricity by a lessor of a single-family dwelling, residential building or multiunit apartment complex that has individually metered units for electric service in the lessor's name, where the lessor charges the actual costs of providing electric service to each lessee.

Rule R22-2. DEFINITIONS.

(a) *Lessee.* A person who purchases electric service from a provider.

(b) *Lessor.* A person, entity, corporation, or agency who owns a residential building, single-family dwelling or multiunit apartment complex which are available for lease. The lessor is also known as the landlord.

(c) *Multiunit apartment complex.* Premises where one or more buildings containing multiple residential dwelling units under common ownership are available for rental to lessees.

(d) *Provider.* A lessor who purchases electric utility service from a supplier and charges for the costs of providing the service to lessees. A provider must be the owner of the premises served.

(e) *Residential building.* A townhouse, row house, condominium, mobile home, building, or other structure used for residential purposes.

(f) *Single-family dwelling.* An individual, freestanding, unattached dwelling unit, typically built on a lot larger than the structure itself, resulting in an area surrounding the house known as a yard, which is rented or available for rental as a residence.

(g) *Supplier.* A public utility or an agency or organization exempted from regulation from which a provider purchases electric service.

(h) *Supplier's Unit Electric Service Bill.* The actual amount charged by the supplier for the unit as a whole less any amount charged by the supplier that is not recoverable from the lessees such as connection or disconnection charges, provider late fees or amounts attributed to excess usage as provided in Rule R22-7(f).

Rule R22-3. UTILITY STATUS; CERTIFICATE.

(a) Every provider is a public utility as defined by G.S. 62-3(23)a.1. and shall comply with, and shall be subject to all applicable provisions of the Public Utilities Act and all applicable rules and regulations of the Commission, except as hereinafter provided.

(b) A provider who charges for electric service under this Rule:

- (1) is solely responsible for the prompt payment of all bills rendered by the supplier and is the retail customer of the supplier subject to all rules, regulations, tariffs, riders and service regulations associated with the provision of residential electric service to retail customers of the supplier;
- (2) is not considered a wholesale customer of the supplier; and
- (3) is not subject to the requirements of G.S. 62-133.8, 62-133.9, or Rules R8-67 through R8-69.

APPENDIX A

(c) No provider shall begin charging for the costs of providing electric service prior to applying for and receiving a certificate of authority from the Commission.

Rule R22-4. APPLICATION FOR AUTHORITY.

(a) Every application for authority to charge for the costs of providing electric service shall be in such form and detail as the Commission may prescribe and shall include:

(1) a description of the lessor, who is the applicant, including legal name and type of business entity, and a description of the property to be served, including business or marketing name if any, street address, and number of units;
(2) a description of the proposed billing method and billing statements;
(3) the proposed method of allocating the supplier's charges to the lessees;
(4) the administrative fee per lessee, returned check charge, and late payment charge, if any, proposed to be charged by the applicant, and the number of days after the bill is mailed or otherwise delivered when the late payment fee would begin to be applied;
(5) the applicant's plans for retention and availability of records;
(6) the name of and contact information for the applicant and its agents, including mailing address, email address, and telephone number;
(7) the name of and contact information for the supplier of electric service to the applicant's rental property;
(8) the current schedule of charges from the supplier;
(9) a copy of the lease forms to be used by the applicant for lessees who are billed for electric service pursuant to this Chapter;
(10) a statement indicating the particular provisions of the lease forms pertaining to billing for electric service;
(11) the verified signature of the applicant or applicant's authorized representative;
(12) the required filing fee;
(13) one (1) original and seven (7) collated copies of the application; and
(14) any additional information that the Commission may require.

(b) An applicant may submit for authority to charge for electric service for more than one property in a single application. Information relating to all properties covered by the application need only be provided once in the application.

(c) The Commission shall approve or disapprove an application within 60 days of the filing of a completed application with the Commission. If the Commission has not issued an Order disapproving a completed application within 60 days, the application shall be deemed approved; provided, however, no person or entity may charge for electric utility service in a manner inconsistent with Chapter 62 of the North Carolina General Statutes.

(d) An approved certificate of authority from the Commission to charge for the costs of providing electric service under these rules shall be delivered to the supplier from which the provider purchases electric service and include information in R22-4(a)(1) and (6).

Rule R22-5. BILLS OF THE PROVIDER.

(a) Bills for electric service sent by the provider to the lessee shall contain all of the following information:

(1) the Supplier's Unit Electric Service Bill for the unit and the amount of charges allocated to the lessee during the billing period;

(2) the name of the supplier;

(3) the beginning and ending dates for the usage period and, if provided by the supplier, the date the meter for the unit was read for that usage period;

(4) the past-due date, which shall not be less than 25 days after the bill is mailed or otherwise delivered to the lessee;

(5) the name of the provider and a local or toll-free telephone number and address of the provider that the lessees can use to obtain more information about the bill;

(6) the amount of administrative fee, returned check charge, and the late payment charge approved by the Commission and included in the bill, if any; and

(7) a statement of the lessee's right to address questions about the bill to the provider and the lessee's right to file a complaint with, or otherwise seek recourse from, the Commission if the lessee cannot resolve an electric service billing dispute with the provider.

(b) The provider or the provider's billing agent shall equally divide the actual amount of the Supplier's Unit Electric Service Bill for a unit among all the lessees in the unit and shall send one bill to each lessee.

(c) The amount charged shall be prorated when a lessee has not leased the unit for the same number of days as the other lessees in the unit during the billing period.

(d) Each bill may include an administrative fee no greater than the amount authorized in Rule R18-6 for water service and, when applicable, a late payment charge no greater than the amount authorized in Rule R12-9(d) and a returned check charge no greater than the amount authorized in G.S. 25-3-506.

(e) A late payment charge may be applied to the balance in arrears after the past-due date.

(f) The provider may impose a returned check charge, not to exceed the maximum authorized by G.S. 25-3-506, for a check on which payment has been refused by the payor bank because of insufficient funds or because the lessee did not have an account at that bank.

(g) The provider shall not charge the cost of electricity from any other unit or common area in a lessee's bill. "Common area" means parts of the rental property outside the individually metered unit where the lessee dwells.

(h) No provider shall charge or collect any greater compensation for the costs of providing electric service than the rates approved by the Commission.

(i) The provider may, at the provider's option, pay any portion of any bill sent to a lessee, in accordance with the provisions of the lease; provided, however, that (i) the provider must still send each lessee bills in accordance with the other provisions in Rule R22-5; the provider must credit lessee bills or otherwise refund to lessees the amount, if any, by which the amount specified in the lease exceeds the amount actually owed by the lessee for electricity usage in the immediately preceding month; and (ii) the provider must comply with G.S. 62-140 regarding non-discrimination in billing for utility service.

Rule R22-6. RECORDS, REPORTS AND FEES.

(a) The provider shall maintain for a minimum of 36 months records that demonstrate how each lessee's allocated costs were calculated for electric service, as well as any other electric utility service-related fees charged to each lessee.

(b) All records required to be maintained by the provider pursuant to section (a), shall be kept at an office at the residential building or apartment complex or some other designated local address and shall be made available during regular business hours for inspection by a lessee, the Commission, or the

Public Staff. The lessee may obtain a copy of those records at a reasonable cost, which shall not exceed twenty-five cents (25¢) per page.

(c) Providers shall not be required to file an annual report to the Commission as required by Rule R1-32.

(d) Providers shall pay a regulatory fee and file a regulatory fee report as required by Rule R15-1.

(e) Special reports shall also be made concerning any particular matter upon request by the Commission.

Rule R22-7. DISCONNECTION; BILLING PROCEDURE.

(a) Any payment to the provider shall be applied first to the rent owed and then to charges for utility service, unless otherwise designated by the lessee.

(b) No charge for connection or disconnection or late fee or deposit paid by the provider to the supplier shall be allowed, and no provider may terminate a lease for nonpayment of electric service.

(c) No provider may disconnect or request the supplier to disconnect electric service for the lessee's nonpayment of a bill.

(d) Bills shall be rendered at least monthly.

(e) The date after which a bill for electric utility service is due (the past due date) shall be disclosed on the bill and shall not be less than twenty-five (25) days after the bill is mailed or otherwise delivered to the lessee.

(f) A provider shall not bill for or attempt to collect for excess usage resulting from a meter malfunction or other electrical condition in appliances such as water heaters, HVAC systems, or ranges furnished by the provider to the lessee, when the malfunction is not known to the lessee or when the malfunction has been reported to the provider.

(g) Every provider shall provide to each lessee at the time the lease agreement is signed, and shall maintain in its business office, in public view, near the place where payments are received, the following:

(1) A copy of the rates, rules and regulations of the provider applicable to the premises served from that office, with respect to electric utility service;

(2) A copy of these rules and regulations (Chapter 22);

(3) A statement advising lessees that they should first contact the provider's office with any questions they may have regarding bills or complaints about service, and that in cases of dispute, they may contact the Commission either by calling the Public Staff - North Carolina Utilities Commission, Consumer Services Division, at (866) 380-9816 (in-state calls only) or (919) 733-9277 or by appearing in person or writing the Public Staff - North Carolina Utilities Commission, Consumer Services Division, 4326 Mail Service Center, Raleigh, North Carolina 27699-4326.

(h) Each provider shall adopt a means of informing its lessees initially and on an annual basis as to the provider's method of allocating bills to the individual lessees and its administrative fee, returned check charge, and late fee, if any. A copy of the supplier's current schedule of charges shall also be included in these disclosures.

(i) Every provider shall promptly notify the Commission in writing of any change in the information required in Rule R22-4(a), except for changes in the rates and charges of the supplier (Rule R22-4(a)(8)).

APPENDIX A

(j) If a provider anticipates that it will not pay a supplier's bill on time, or if the provider receives notice from the supplier of pending disconnection, whichever comes first, the provider must within 24 hours provide written notice to the Commission and all of the provider's affected lessees of the anticipated nonpayment or disconnection notice. A provider may not abandon or cease providing electric service to its lessees without advance permission from the Commission.

OTHER PROVISIONS

20. Applicant must notify the Commission in writing within 30 days if any information supplied on this form changes in the future.

21. Applicant must also file quarterly Regulatory Fee Reports and make regulatory fee payments. Details are set out in NCUC Rule R15-1.

REQUIRED EXHIBITS

22. If the Applicant is a corporation, LLC, LP, or other legal business entity, enclose a copy of the certification from the North Carolina Secretary of State (Articles of Incorporation or Application for Certificate of Authority for Limited Liability Company, etc.). **(Must match name on Line 1 of application.)**

23. If the Applicant is a partnership, enclose a copy of the partnership agreement. **(Must match name on Line 1 of application.)**

24. Enclose a copy of a Warranty Deed showing that the Applicant has ownership of all the property necessary to operate the utility. **(Must match name on Line 1 of application.)**

25. Enclose a vicinity map showing the location of the leased premises in sufficient detail for someone not familiar with the county to locate the leased premises. (A county roadmap with the leased premises outlined is suggested.)

26. Enclose a copy of the supplier's schedule of rates that will be charged to the Applicant for purchased power.

27. Enclose a copy of any agreements or contracts that the Applicant has entered into covering the provision of billing and collections services to the leased premises.

28. Indicate the number of apartment buildings or residential buildings to be served, the number of units in each apartment building or residential building and the number of bedrooms in each unit.

29. Enclose a copy of the template or form used for billing statements.

30. Enclose a copy(ies) of the form(s) used for leases to tenants, including a statement of which parts of the lease relate to billing for electric service.

FILING INSTRUCTIONS

31. Submit one (1) original application with required exhibits and **original notarized signature**, plus seven (7) additional collated copies to: [USPS address] **Chief Clerk's Office, North Carolina Utilities Commission, 4325 Mail Service Center, Raleigh, North Carolina 27699-4325**, or [overnight delivery or hand delivery at street address] **Chief Clerk's Office, North Carolina Utilities Commission, 430 North Salisbury Street, Raleigh, North Carolina 27603.** Provide a self-addressed stamped envelope, plus an additional copy, if a file-stamped copy is requested by the Applicant.

32. Enclose a filing fee as required by G.S. 62-300. A Class A utility (annual electricity reseller revenues of $1,000,000 or more) requires a $250 filing fee. A Class B utility (annual electricity reseller revenues between $200,000 and $1,000,000) requires a $100 filing fee. A Class C utility (annual electricity reseller revenues less than $200,000) requires a $25 filing fee. **MAKE CHECK PAYABLE TO N.C. DEPARTMENT OF COMMERCE/UTILITIES COMMISSION.**

DOCKET NO. G-100, SUB 93

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Petition for a Rulemaking Proceeding or the Implementation of a Cost Recovery Mechanism for Natural Gas Economic Development Infrastructure Pursuant to G.S. 62-133.15	)))))	ORDER ADOPTING FINAL RULE R6-96

BY THE COMMISSION: On October 6, 2017, the Public Staff filed a Petition for Rulemaking in the above-captioned docket. In summary, the Public Staff requested that the Commission adopt the Public Staff's proposed rule for implementation of the cost recovery mechanism authorized in G.S. 62-133.15.

On October 17, 2017, the Commission issued an Order Adopting Interim Commission Rule and Requesting Comments. The Order adopted the Public Staff's proposed Rule R6-96 on an interim basis, set a schedule for receipt of petitions to intervene, initial comments, and reply comments, and made Piedmont Natural Gas Company, Inc. (PNG), Public Service Company of North Carolina (PSNC), Frontier Natural Gas Company, LLC, Toccoa Natural Gas (Toccoa), and the North Carolina Attorney General's Office parties to this proceeding.

On October 25, 2017, the Carolina Utility Customers Association, Inc. (CUCA) filed a petition to intervene. On October 27, 2017, the Commission issued an Order granting the requested intervention by CUCA. On November 8, 2017, CUCA filed initial comments.

On November 9, 2017, Toccoa filed a response to the Commission's Order Requesting Comments.

On November 15, 2017, the Public Staff filed reply comments in response to CUCA's proposals in this docket.

SUMMARY OF COMMENTS

In its response, Toccoa advised the Commission that it is in agreement with the Public Staff's proposed rule.

In its comments, CUCA states that it supports economic development and the recruitment of new industry to North Carolina. In addition, CUCA requests that the Commission consider the interests of existing businesses across North Carolina.

CUCA states that if the revenue retention factor used in the calculation of the proposed rate adjustment surcharge (RAS) is equivalent to a margin decoupling mechanism, then industrial customers should be excluded from such a factor. In its reply comments, the Public Staff explains that CUCA conflated the revenue retention factor used in calculating the RAS with the margin decoupling mechanism. The Public Staff states that the revenue retention factor is used to gross up the expenses and return on investment and is specifically listed in G.S. 62-133.15(d)(4) as one of the costs recoverable in the mechanism.

In addition, CUCA opines that a strict reading of G.S. 62-133.15 does not indicate that the Commission is required to impose the RAS on all customer classes and, therefore, that the Commission should exempt industrial customers from paying the RAS. In its reply comments, the Public Staff explains that G.S. 62-133.15 does not provide that any particular class of ratepayers should be excluded from paying the RAS. Further, the Public Staff states that exempting a class of ratepayers from the RAS would be inconsistent with prior Commission orders.

CUCA also questions whether cost recovery would be allowed for new manufacturers that tap directly onto interstate pipelines, bypassing the natural gas local distribution company (LDC). In its reply comments, the Public Staff points out that G.S. 62-133.15 authorizes cost recovery only for LDCs that construct natural gas economic development infrastructure, not new manufacturers that tap directly into an interstate gas pipeline, and, therefore, the payment of a manufacturer's bypass costs will not occur under the statute.

Further, CUCA recommends that the Commission require the LDCs to list the RAS as a separate line item on customers' gas bills. CUCA contends that this will allow customers to know how much they are paying each month in higher gas bills to support economic development.

Finally, CUCA recommends that because the RAS will recover the costs of capacity related assets it should be in the form of a demand charge rather than a volumetric charge. However, the Public Staff notes that each of the LDC's interstate pipeline and storage capacity charges are recovered through volumetric rates and, therefore, RAS should be administered through a volumetric rate for all customer classes consistent with other approved riders in North Carolina.

The Public Staff states that it shared its reply comments with PNG and PSNC and they agree with its comments.

DISCUSSION AND CONCLUSIONS

G.S. 62-133.15 addresses the implementation of a cost recovery mechanism for an LDC that constructs natural gas economic development infrastructure to serve a project the North Carolina Department of Commerce determines is an eligible project under G.S. 143B-437.021. Pursuant to G.S. 62-133.15(a), the Commission is required to adopt rules implementing the statute. The Commission's interim Rule R6-96, adopted by Order issued October 17, 2017, established guidelines for applications by LDCs seeking cost recovery for the construction of natural gas development infrastructure under G.S. 62-133.15. After careful consideration of the comments filed in this proceeding, the Commission finds and concludes that its interim Rule R6-96 should be made permanent.

In response to the first issue raised by CUCA in its comments, the Commission agrees with the Public Staff that the revenue retention factor is specifically listed in G.S. 62-133.15(d)(4), and the revenue retention factor is different than the margin decoupling mechanism. The revenue retention factor is used to gross up the expenses and return on plant investment to cover such items as uncollectibles, regulatory fees, and taxes. In contrast, the margin decoupling mechanism is designed to allow the Company to track and true-up changes in its margins due to variations in average customer usage from levels approved in a general rate case.

The Commission also agrees with the Public Staff that G.S. 62-133.15 authorizes cost recovery for LDCs that construct natural gas economic development infrastructure, and does not address cost recovery for a manufacturer that chooses to bypass an LDC by connecting directly to an interstate pipeline. Therefore, CUCA's concern need not be addressed by the new rule.

Further, the Commission agrees with the Public Staff that G.S. 62-133.15 does not provide that any particular class of ratepayers should be excluded from payment of the RAS. If a class of ratepayers was exempted from the RAS, it would shift the costs of the infrastructure improvements between rate classes in a manner inconsistent with prior Commission Orders. Therefore, all LDCs should allocate the RAS to the rates of all customer classes, consistent with the intent of G.S. 62-133.15.

With regard to CUCA's recommendation that the Commission require the LDCs to list the RAS as a separate line item on customers' gas bills, the Commission declines to require this addition to the LDCs' bills. The RAS will be a relatively temporary rider compared to the integrity management riders (IMR) and customer usage tracker (CUT). The Commission previously has decided not to require separate line items for the IMR and CUT, in part due to a concern about information overload and bill clutter. Based on these same concerns, the Commission is not persuaded that it should require the LDCs to create a separate line item for the RAS.

The Commission also agrees with the Public Staff that the RAS should be administered through a volumetric rate for all customer classes consistent with other approved LDC riders in North Carolina.

Based upon the foregoing and the entire record in this proceeding, the Commission finds good cause to adopt interim Rule R6-96 as the final Rule, as set forth in Appendix A attached hereto.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 27th day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

APPENDIX A

Article 15. Economic Development Infrastructure Cost Recovery

R6-96 NATURAL GAS ECONOMIC DEVELOPMENT INFRASTRUCTURE COST RECOVERY

(a) Purpose. – The purpose of this rule is to establish guidelines for applications of an LDC seeking cost recovery for the construction of natural gas development infrastructure under G.S. 62-133.15.

(b) Definitions. – As used in this section:

1. "Commission" means the North Carolina Utilities Commission.
2. "Economic development infrastructure" is the natural gas infrastructure placed in service to serve an eligible project.
3. "Economically infeasible" refers to that portion of investment in economic development infrastructure that has a negative net present value.
4. "Eligible economic development infrastructure costs" are the economically infeasible portion of an economic development infrastructure project investment.
5. "Eligible project" means a project that the Department of Commerce has designated as eligible under G.S. 143B-437.021.
6. "LDC" means a natural gas local distribution company.
7. "Net cash inflows" are the expected margin revenues, exclusive of gas costs recovered under G.S. 62-133.4, generated from the provision of natural gas service to Eligible Projects.
8. "Net cash outflows" are reasonable and prudent economic development infrastructure costs. Such costs include, but are not limited to, the following: (a) planning costs; (b) development costs; (c) construction costs and an allowance for funds used during construction and a return on investment once the project is completed, calculated using the pretax overall rate of return approved by the Commission in the LDC's most recent general rate case; (d) a revenue retention factor; (e) depreciation; and (f) property taxes.
9. "Net present value (NPV)" means the present value of expected future net cash inflows over the useful life of economic development infrastructure, minus the present value of net cash outflows.
10. "Rate adjustment surcharge (RAS)" is a yearly surcharge that allows an LDC to charge a Commission approved rate to recover the eligible economic development infrastructure costs.

(c) Application. – An application to recover eligible economic development infrastructure costs under this section shall contain all of the following information:

(1) Documentation showing the infrastructure is designed to serve an eligible project.

(2) A precise geographic description, a map or maps of the area proposed to be served, a detailed description of the proposed physical facilities, including their projected operating parameters and characteristics, and the arrangements that have been or are proposed to be made to obtain rights of-way.

(3) Documentation of a binding commitment from the prospective customer or the occupant of the eligible project to the LDC regarding the need to take natural gas service for a period of at least 10 years from the date the gas is made available.

(4) A market study, including an analysis of any potential customers and volumes, probable conversions from other fuels, and projected growth and economic development resulting from the infrastructure.

(5) An engineering study that includes the proposed design of the system (including a pipe network flow analysis), routing (including a review of planned or proposed state highway improvements), and construction cost estimates.

(6) An NPV analysis conducted in a generally accepted manner that provides support for the eligible economic development infrastructure costs.

(7) The estimated beginning and ending dates of the proposed construction of the infrastructure, including the date service to the eligible project is proposed to begin, and specific itemized construction budgets.

(8) Proposed rates to be charged under the RAS mechanism.

(d) Approval of Cost Recovery. – Once an eligible project has been approved by the Department of Commerce, the LDC may file an application with the Commission for authority to recover the estimated eligible economic development infrastructure costs.

(1) The Commission shall provide for notice of each request for approval filed under this Rule and shall afford an opportunity for review and comment by interested parties. The Commission shall set the request for hearing if it deems it appropriate.

(2) The Commission shall enter an order approving or denying the eligible economic development infrastructure costs on a project-specific basis. The order shall include a finding of the negative net present value of economic development infrastructure costs for each eligible project. The negative NPV is the maximum amount to be recovered through the RAS for an eligible project.

(3) The LDC may request modifications to eligible economic development infrastructure costs approved by the Commission. If the Commission finds the requested change is material, the Commission shall provide for appropriate notice and shall afford an opportunity for review and comment by interested parties. The Commission shall set the proposal for hearing if it deems it appropriate.

(e) Cost Recovery. – Once economic development infrastructure is placed in service, the LDC may recover the economic development infrastructure costs approved by the Commission in an annual RAS. The RAS will terminate upon the earlier of the full recovery of the approved economic development infrastructure costs, or the effective date of rates in the LDC's next general rate case, provided that the underlying infrastructure investment is included in calculating such rates.

(f) Computation of the economic development infrastructure revenue requirement. – The LDC shall file information for each year showing the computation of the Economic Development Infrastructure revenue requirement. The total annual revenue requirement will be calculated for each year, as follows:

Economic Development Infrastructure Costs	$X,XXX,XXX
Less: Accumulated depreciation	XXX,XXX
Less: Accumulated deferred income taxes	XXX,XXX
Net Economic Development Infrastructure Costs	$X,XXX,XXX
Pre-tax rate of return set forth in the relevant rate order	X.XX%
Allowed pre-tax return	$X,XXX,XXX
Plus: Depreciation expense	XXX,XXX
Total	$X,XXX,XXX

(g) Computation of the RAS. – The LDC will file for Commission approval each year information showing the computation of the RAS for each rate schedule and the revised tariffs that it proposes to charge customers during the 12-month period. To compute the RAS, the Economic Development Infrastructure revenue requirement shall first be apportioned to each customer class based on margin apportionment established in the LDC's most recent general rate case.

The amount of the economic development infrastructure revenue requirement apportioned to each rate schedule shall then be divided by the annual therms established in the LDC's most recent general rate case proceeding for each rate schedule to determine the RAS to the nearest one-thousandth cent per therm.

(h) RAS Deferred Account. – The LDC shall maintain an RAS Deferred Account for the purpose of recording (1) the economic development infrastructure revenue requirement for the year (2) the monthly RAS collected from customers, and (3) the interest on the RAS Deferred Account. Interest will be applied to the RAS Account at the LDC's authorized net-of-tax overall rate of return.

Each month the LDC shall credit the RAS Deferred Account for the amount of the RAS collected from customers. The amount of the RAS collected from customers shall be computed by multiplying the RAS for each rate schedule by the corresponding actual therms of usage billed customers for the month.

(i) Reports. – Each LDC with an approved RAS shall provide the following reports to the Commission:

1. Monthly RAS Deferred Account reports reflecting the activity recorded for the month.

2. Annual RAS Deferred Account report to recover the balance in the account and an annual computation of the Economic Development Infrastructure revenue requirement supporting the RAS for the next 12-month period.
3. Annual reports by March 1 of each year the Eligible Project is under construction summarizing the total infrastructure costs for the preceding calendar year, the remaining balance to be spent on total infrastructure costs, and the estimated completion date of the infrastructure.
4. Annual reports by March 1 of each year for completed Eligible Projects, providing the total amounts recovered from the RAS for each project, the amount of gas consumed each year for each project, and all customer additions and the respective natural gas load for each project. Annual reports on completed eligible projects are required until the LDC's next general rate case.

GENERAL ORDERS – NATURAL GAS RESELLER

DOCKET NO. GR-100, SUB 0

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Rulemaking to Implement North Carolina	)	ORDER ADOPTING
Session Law 2017-172 (House Bill 799)	)	FINAL RULES AND FORMS

BY THE COMMISSION: On July 21, 2017, House Bill 799 (S.L. 2017-172) was enacted into law. This legislation, entitled "An Act to Allow for Landlords to Charge Individual Tenants for Shared Cost of Natural Gas Service Provided to Leased Premises," authorizes in G.S. 62-110(i) for lessors of a single-family dwelling, residential building, or multiunit apartment complex that has individually metered units for natural gas service in the lessor's name to charge for the actual costs of providing natural gas service to each lessee. House Bill 799 outlines the provisions that apply to the natural gas service charges so authorized and requires the Commission to adopt rules to implement the legislation and to develop an application that lessors must submit for Commission approval to obtain a certificate to resell natural gas service. In addition, House Bill 799 modified certain terminology used in G.S. 42-42.1, Water, Electricity, and Natural Gas Conservation.

On November 7, 2018, the Commission issued an Order Initiating Rulemaking Proceeding to adopt rules to regulate the reselling of natural gas service consistent with the General Assembly's directive. In that Order, the Commission adopted on an interim basis: (1) the Rules and Regulations in Chapter 24 – Provision of Natural Gas Service by Lessors, (2) Form GR-1: Application for Certificate of Authority to Resell Natural Gas Service, and Form GR-2: Application for Transfer of Authority to Resell Natural Gas Service. That Order also set a schedule for receipt of petitions to intervene, initial comments, and reply comments. Finally, that Order made Piedmont Natural Gas Company, Inc. (PNG), Public Service Company of North Carolina (PSNC), Frontier Natural Gas Company, LLC, and Toccoa Natural Gas, parties to this proceeding. A copy of that Order was served upon the North Carolina Attorney General's Office, the North Carolina Justice Center, and the Apartment Association of North Carolina.

On November 29, 2017, PSNC and PNG filed initial comments. No other filings were submitted in this proceeding.

SUMMARY OF COMMENTS

In its comments, PSNC states that it does not have any objections to the interim Rules and Regulations of Chapter 24, Form GR-1, or Form GR-2.

In its comments, PNG requests that the Commission affirm that the adoption of Chapter 24 "will not in any material way, change, disrupt or impact the metering and billing practices of [PNG] with respect to natural gas distribution service provided to individually metered 'units' within a provider's multiunit apartment complex, residential building, or single-family home – except to the extent that bills for such service shall be aggregated and transmitted to the provider for payment in lieu of delivery to individual customers within such units." Such affirmation, according to PNG, is necessary to ensure that PNG and its customers are held harmless by the implementation of flow-through billing, as contemplated by House Bill 799 and the Rules and Regulations of Chapter 24.

In addition, PNG states that revisions to its existing tariffs and rate schedules are needed as a result of the legalization of the reselling of natural gas service by lessors. For example, PNG's current tariffs and rate schedules expressly prohibit the resale of natural gas service. As a result, PNG requests that the Commission "acknowledge the need for such conforming tariff filings to be made and approved before the flow-through billing regimen anticipated by Chapter 24 is fully implemented."

Finally, PNG provides several suggested modifications to the Commission's interim Rules and Regulations of Chapter 24, including that: (1) the term "unit" should be defined, although PNG did not propose a definition for the same; (2) a consolidated definition for the term "provider," which could subsume other defined terms, including "landlord" and "lessor," is needed; and (3) the term "leased premises" should be defined, although PNG also did not propose a definition for this term.

DISCUSSION AND CONCLUSIONS

After initiating this rulemaking proceeding, issuing on an interim basis the Rules and Regulations of Chapter 24, Form GR-1, and Form GR-2 and receiving comments from interested parties, the Commission finds good cause to issue this Order adopting final rules and forms. In so doing, the Commission endeavored to give full effect to the intent of the Legislature as evidenced through the plain language of House Bill 799. The Commission also attempted, where possible, to ensure consistency between the regulatory processes for the reselling of electric service and natural gas service. The Commission carefully considered the few comments received in this proceeding and responds accordingly below. The Commission also raises a few issues not addressed by any party to this proceeding.

Issues Raised by PNG

The Commission notes that PNG is correct in its assessment that the Rules and Regulations of Chapter 24 provide for a flow-through billing mechanism, through which a non-wholesale customer of the gas public utility may resell natural gas service in a manner consistent with applicable law and Commission Rules.

The Commission also recognizes that PNG, as well as other gas public utility companies, as necessary, may need to revise their current tariff and rate schedule language to ensure consistency with newly enacted laws and Commission Rules. The Commission does not, however, agree with PNG that the implementation of the Rules and Regulations of Chapter 24 should be delayed until such time as a tariff revision may be applied for and approved by the Commission. The Rules and Regulations of Chapter 24 were adopted on an interim basis on November 8, 2017 and already have been in effect since that date. As such, the Commission does not deem it necessary or appropriate to delay the final adoption of the Rules and Regulations of Chapter 24 to allow for any proposed tariff revisions, as necessary, to be reviewed by the Commission and implemented. Instead, the Commission directs any gas public utility that must, as a result of the adoption of the Rules and Regulations of Chapter 24, apply for revisions to its existing tariffs or rate schedules to do so by filing such requests both in this proceeding and in a separate company-specific proceeding.

With regard to PNG's suggested revisions to the interim Rules and Regulations of Chapter 24, the Commission notes that PNG's suggestions largely were not substantive in nature. In response to PNG's concern that the term "leased premises" is used throughout Chapter 24 without a corresponding definition in the rules, the Commission agrees and has modified accordingly its definitions of "multiunit apartment complex," "residential building," and "single-family dwelling" to clarify that a "leased premises" is synonymous and may be used interchangeably to refer to one or more multiunit apartment complex, residential building, or single-family dwelling.

In response to PNG's suggestion that a definition for the term "unit" is needed, the Commission notes that PNG did not explain its rationale for this suggestion. After reviewing the statutory changes effectuated by the passage of House Bill 799 in the context of the interim definitions adopted, the Commission disagrees with PNG that a definition for the term "unit" would make the Rules and Regulations of Chapter 24 any more precise or clearer. The Commission likewise disagrees with PNG's suggestion to subsume into the definition of "provider" the terms "landlord" and "lessor." The Commission notes that, while a provider must also be a lessor pursuant to Chapter 24, a lessor is not necessarily or automatically considered to be a provider. The Commission, therefore, declines to adopt this recommendation. In addition, the Commission similarly declines to refer to a "lessor" as a "landlord," on the grounds that it would be inconsistent with legislative intent, as evidenced in House Bill 799 through the replacement in multiple places of the term "landlord" in favor of the term "lessor."

Issues Not Raised by the Parties in the Instant Proceeding

The Commission notes that the Public Staff, in Docket No. WR-100, Sub 10, suggested in its comments to include in the rules governing water and/or sewer service resellers appropriate language to ensure that lessees do not have to travel unreasonable distances to examine the records pertaining to their accounts. In that proceeding, the Public Staff opined that an organization in the business of leasing single-family dwellings on a nationwide basis may have only a single business office in North Carolina; nonetheless, a lessee renting a residence in Murphy should not be required to travel to the lessor's business office in Raleigh or Charlotte to view his or her water and/or sewer service account records. Though the Public Staff did not file comments in the instant proceeding, the Commission finds that the concern expressed by the Public Staff in Docket No. WR-100, Sub 10 is similarly applicable to the instant proceeding. Therefore, the Commission finds good cause to modify substantively interim Rule 24-6(b), as reflected in the final Rules attached to this Order, consistent with the changes recently adopted in Rule R18-5(a).[1]

The Commission also notes that the Public Staff, in Docket No. ER-100, Sub 4, suggested in its comments to amend the rules governing electric service resellers by adding the following underlined sentence to Rule 22-4(b):

[1] See Order Adopting Final Rules and Forms, Docket No. WR-100, Sub 10 (April 4, 2018).

(b) An applicant may submit for authority to charge for electric service for more than one property in a single application. Information relating to all properties covered by the application need only be provided once in the application. <u>However, if any of the information required by the application differs for different properties, the differences must be clearly explained.</u>

The Public Staff recommended the modification to Rule R22-4(b) "so that it can be discerned if all the properties listed in the application comply with the rules and regulations." Because the natural gas reseller rules also provide for the option to submit a single application for more than one property, the Commission finds that the suggestion expressed by the Public Staff in the context of electric service reseller rules is similarly applicable to the instant proceeding. Therefore, the Commission finds good cause to modify substantively interim Rule 24-4(b), as reflected in the final Rules attached to this Order, consistent with the Public Staff's recommendation in Docket No. ER-100, Sub 4.

While in the process of reviewing and modifying the interim Rules and Forms, the Commission notes that a number of formatting, typographical, and other minor corrections are necessary to ensure that accurate information about the resale of natural gas service is provided to both lessors and lessees. For example, the Commission corrected the telephone number information in Rule 24-7(g)(3) to reflect that the Public Staff's Consumer Services Division's toll-free number may be utilized by both out-of-state and in-state callers. The Commission, therefore, finds good cause to make these and other such changes, as reflected in the final Rules and Forms attached to this Order.

Finally, while in the process of reviewing and modifying existing rules governing the electric resellers, the Commission notes that a number of changes are necessary to ensure consistency, where possible, between the rules and forms governing electric resellers and those governing natural gas resellers. The Commission, therefore, finds good cause to make such revisions, as reflected in the final Rules and Forms attached to this Order.

Based upon the foregoing and the entire record in this proceeding, the Commission adopts as final the Rules and Regulations of Chapter 24, as set forth in Appendix A to this Order; Form GR-1, as set forth in Appendix B to this Order; and Form GR-2, as set forth in Appendix C to this Order.

IT IS, THEREFORE, ORDERED as follows:

1. That the Rules and Regulations of Chapter 24 – Provision of Natural Gas Service by Lessors, attached to this Order as Appendix A; Form GR-1: Application for Certificate of Authority to Resell Natural Gas Service, attached to this Order as Appendix B; and Form GR-2: Application for Transfer of Authority to Resell Natural Gas Service, attached to this Order as Appendix C are hereby promulgated and supersede the existing Interim Rules and Forms adopted by the Commission in its November 8, 2017 Order;

2. That any natural gas public utility which must propose revisions to its existing tariffs or rate schedules as a result of the adoption of the Rules and Regulations of Chapter 24 shall

do so by filing the requested revisions both in this proceeding and in a separate company-specific proceeding; and

3. That the Chief Clerk shall serve a copy of this Order on every party to this proceeding, the Public Staff, and the Attorney General's Office.

ISSUED BY ORDER OF THE COMMISSION.
This the 6th day of April, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

APPENDIX A

CHAPTER 24.
PROVISION OF NATURAL GAS SERVICE BY LESSORS.

Rule R24-1. APPLICATION.

Pursuant to G.S. 62-110(i), this Chapter governs the resale of natural gas by a lessor of a single-family dwelling, residential building, or multiunit apartment complex that has individually metered units for natural gas service in the lessor's name, where the lessor charges the actual costs of providing natural gas service to each lessee.

Rule R24-2. DEFINITIONS.

(a) *Lessee.* A person who purchases natural gas service from a provider.

(b) *Lessor.* A person, entity, corporation, or agency who owns a residential building, single-family dwelling, or multiunit apartment complex which is available for lease.

(c) *Multiunit apartment complex.* Premises where one or more buildings containing multiple residential dwelling units under common ownership are available for rent to lessees. One or more multiunit apartment complexes may be known as the leased premises.

(d) *Provider.* A lessor who purchases natural gas service from a supplier and charges for the costs of providing the service to lessees. A provider must be the owner of the premises served.

(e) *Residential building.* A townhouse, row house, condominium, mobile home, building, or other structure used for residential purposes. One or more residential buildings may be known as the leased premises.

(f) *Single-family dwelling.* An individual, freestanding, unattached dwelling unit, typically built on a lot larger than the structure itself, resulting in an area surrounding the house known as a yard, which is rented or available for rental as a residence. One or more single-family dwellings may be known as the leased premises.

(g) *Supplier.* A public utility or an agency or organization exempted from regulation from which a provider purchases natural gas service.

APPENDIX A

(h) *Supplier's Unit Natural Gas Service Bill.* The actual amount charged by the supplier for the unit as a whole less any amount charged by the supplier that is not recoverable from the lessees, such as connection or disconnection charges, provider late fees, or amounts attributed to excess usage as provided in Rule R24-7(f).

(i) *Common Area.* The parts of the rental property that are not otherwise leased to tenants and that are available to or otherwise accessible to all tenants.

Rule R24-3. UTILITY STATUS; CERTIFICATE.

(a) Every provider is a public utility as defined by G.S. 62-3(23)a.1. and shall comply with and be subject to all applicable provisions of the Public Utilities Act and all applicable rules and regulations of the Commission, except as hereinafter provided.

(b) A provider who charges for natural gas service under this Rule:
- (1) is solely responsible for the prompt payment of all bills rendered by the supplier and is the retail customer of the supplier subject to all rules, regulations, tariffs, riders, and service regulations associated with the provision of residential natural gas service to retail customers of the supplier; and
- (2) is not considered a wholesale customer of the supplier.

(c) No provider shall begin charging for the costs of providing natural gas service prior to applying for and receiving a certificate of authority from the Commission.

Rule R24-4. APPLICATION FOR AUTHORITY.

(a) Every application for authority to charge for the costs of providing natural gas service shall be in such form and detail as the Commission may prescribe and shall include:

(1) a description of the lessor, who is the applicant, including legal name and type of business entity, and a description of the property to be served, including business or marketing name, if any, street address, and number of units;
(2) a description of the proposed billing method and billing statements;
(3) the proposed method of allocating the supplier's charges to the lessees;
(4) the administrative fee per lessee, returned check charge, and late payment charge, if any, proposed to be charged by the applicant, and the number of days after the bill is mailed or otherwise delivered when the late payment fee would begin to be applied;
(5) the applicant's plans for retention and availability of records;
(6) the name of and contact information for the applicant and its agents, including mailing address, email address, and telephone number;

APPENDIX A

(7) the name of and contact information for the supplier of natural gas service to the applicant's rental property;
(8) the current schedule of charges from the supplier;
(9) a copy of the lease forms to be used by the applicant for lessees who are billed for natural gas service pursuant to this Chapter;
(10) a statement indicating the particular provisions of the lease forms pertaining to billing for natural gas service;
(11) the verified signature of the applicant or applicant's authorized representative;
(12) the required filing fee;
(13) one (1) original and seven (7) collated copies of the application; and
(14) any additional information that the Commission may require.

(b) An applicant may submit for authority to charge for natural gas service for more than one property in a single application. Information relating to all properties covered by the application need only be provided once in the application. However, if any of the information required by the application differs for different properties, the differences must be clearly explained.

(c) The Commission shall approve or disapprove an application within 60 days of the filing of a completed application with the Commission. If the Commission has not issued an Order disapproving a completed application within 60 days, the application shall be deemed approved; provided, however, no person or entity may charge for natural gas service in a manner inconsistent with Chapter 62 of the North Carolina General Statutes.

(d) An approved certificate of authority from the Commission to charge for the costs of providing natural gas service under these rules shall be delivered to the supplier from which the provider purchases natural gas service and include information in Rule R24-4(a)(1) and (6).

Rule R24-5. BILLS OF THE PROVIDER.

(a) Bills for natural gas service sent by the provider to the lessee shall contain all of the following information:

(1) the Supplier's Unit Natural Gas Service Bill for the unit as a whole and the amount of charges allocated to the lessee during the billing period;
(2) the name of the supplier;
(3) the beginning and ending dates for the usage period and, if provided by the supplier, the date the meter for the unit was read for that usage period;
(4) the past-due date, which shall not be less than 25 days after the bill is mailed or otherwise delivered to the lessee;

(5) the name of the provider and a local or toll-free telephone number and address of the provider that the lessees can use to obtain more information about the bill;
(6) the amount of administrative fee, returned check charge, and the late payment charge approved by the Commission and included in the bill, if any; and
(7) a statement of the lessee's right to address questions about the bill to the provider and the lessee's right to file a complaint with, or otherwise seek recourse from, the Commission if the lessee cannot resolve a natural gas service billing dispute with the provider.

(b) The provider or the provider's billing agent shall equally divide the actual amount of the Supplier's Unit Natural Gas Service Bill for a unit among all the lessees in the unit and shall send one bill to each lessee.

(c) The amount charged shall be prorated when a lessee has not leased the unit for the same number of days as the other lessees in the unit during the billing period.

(d) Each bill may include an administrative fee no greater than the amount authorized in Rule R18-6 for water service and, when applicable, a late payment charge no greater than the amount authorized in Rule R12-9(d) and a returned check charge no greater than the amount authorized in G.S. 25-3-506.

(e) A late payment charge may be applied to the balance in arrears after the past-due date.

(f) The provider may impose a returned check charge, not to exceed the maximum authorized by G.S. 25-3-506, for a check on which payment has been refused by the payor bank because of insufficient funds or because the lessee did not have an account at that bank.

(g) The provider shall not charge the cost of natural gas from any other unit or common area in a lessee's bill.

(h) No provider shall charge or collect any greater compensation for the costs of providing natural gas service than the rates approved by the Commission.

(i) The provider may, at the provider's option, pay any portion of any bill sent to a lessee, in accordance with the provisions of the lease; provided, however, that (1) the provider must still send each lessee bills in accordance with the other provisions in Rule R24-5; (2) the provider must credit lessee bills or otherwise refund to lessees the amount, if any, by which the amount specified in the lease exceeds the amount actually owed by the lessee for natural gas usage in the immediately preceding month; and (3) the provider must comply with G.S. 62-140 regarding non-discrimination in billing for utility service.

APPENDIX A

Rule R24-6. RECORDS, REPORTS AND FEES.

(a) The provider shall maintain for a minimum of 36 months records that demonstrate how each lessee's allocated costs were calculated for natural gas service, as well as any other natural gas service-related fees charged to each lessee.

(b) All records required to be maintained by the provider pursuant to section (a) shall be kept at the onsite management office or office(s) of the provider in North Carolina, or shall be made available at its onsite management office in North Carolina upon request, and shall be available during regular business hours for examination by the Commission or Public Staff or their duly authorized representatives. Within three business days after a written request to the provider, a lessee may examine the records pertaining to the lessee's account during regular business hours and may obtain a copy of those records at a reasonable cost, which shall not exceed 25¢ per page. However, if a provider does not have an onsite management office at the multi-unit complex or in close proximity to the leased single-family dwelling, then the provider shall in good faith, upon written request, establish with the lessee a mutually-acceptable arrangement for the lessee to examine the records pertaining to the natural gas service for the leased dwelling unit occupied or previously occupied by the lessee. In the event that a provider and lessee are unable to reach agreement within 10 business days, the lessee may contact the Public Staff – North Carolina Utilities Commission, Consumer Service Division, at (866) 380-9816 (toll-free) or (919) 733-9277, or may write to the Public Staff – North Carolina Utilities Commission, Consumer Services Division, at 4326 Mail Service Center, Raleigh, North Carolina 27699-4300 for assistance in resolving the dispute. If the Public Staff determines that it cannot reasonably resolve the disagreement, the matter shall be referred to the Commission.

(c) Providers shall not be required to file an annual report to the Commission as required by Rule R1-32.

(d) Providers shall pay a regulatory fee and file a regulatory fee report as required by Rule R15-1.

(e) Special reports shall also be made concerning any particular matter upon request by the Commission.

Rule R24-7. DISCONNECTION; BILLING PROCEDURE.

(a) Any payment to the provider shall be applied first to the rent owed and then to charges for natural gas service, unless otherwise designated by the lessee.

(b) No charge for connection or disconnection or late fee or deposit paid by the provider to the supplier shall be allowed, and no provider may terminate a lease for nonpayment of natural gas service.

APPENDIX A

(c) No provider may disconnect or request the supplier to disconnect natural gas service for the lessee's nonpayment of a bill.

(d) Bills shall be rendered at least monthly.

(e) The date after which a bill for natural gas service is due (the past-due date) shall be disclosed on the bill and shall not be less than twenty-five (25) days after the bill is mailed or otherwise delivered to the lessee.

(f) A provider shall not bill for or attempt to collect for excess usage resulting from a meter malfunction or other natural gas condition in appliances such as water heaters, HVAC systems, or ranges furnished by the provider to the lessee, when the malfunction is not known to the lessee or when the malfunction has been reported to the provider.

(g) Every provider shall provide to each lessee at the time the lease agreement is signed, and shall maintain in its business office, in public view, near the place where payments are received, the following:

(1) A copy of the rates, rules, and regulations of the provider applicable to the premises served from that office, with respect to natural gas service;
(2) A copy of these rules and regulations (Chapter 24); and
(3) A statement advising lessees that they should first contact the provider's office with any questions they may have regarding bills or complaints about service, and that in cases of dispute, they may contact the Commission either by calling the Public Staff - North Carolina Utilities Commission, Consumer Services Division, at (866) 380-9816 (toll-free) or (919) 733-9277, or by appearing in person or writing to the Public Staff - North Carolina Utilities Commission, Consumer Services Division, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300.

(h) Each provider shall adopt a means of informing its lessees initially and on an annual basis as to the provider's method of allocating bills to the individual lessees and its administrative fee, returned check charge, and late fee, if any. A copy of the supplier's current schedule of charges shall also be included in these disclosures.

(i) Every provider shall promptly notify the Commission in writing of any change in the information required in Rule R24-4(a), except for changes in the rates and charges of the supplier (Rule R24-4(a)(8)).

(j) If a provider anticipates that it will not pay a supplier's bill on time, or if the provider receives notice from the supplier of pending disconnection, whichever comes first, the provider must within 24 hours provide written notice to the Commission and all of the provider's affected lessees of the anticipated nonpayment or disconnection notice. A provider may not abandon or cease providing natural gas service to its lessees without advance permission from the Commission.

DOCKET NO. P-100, SUB 110

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Telecommunications Relay Service (TRS), Relay North Carolina	)))	ORDER DECREASING THE TELECOMMUNICATIONS RELAY SERVICE SURCHARGE

BY THE COMMISSION: On March 8, 2018, the North Carolina Department of Health and Human Services (DHHS) filed a petition requesting that the Commission approve a decrease in the monthly Telecommunications Relay Service (TRS) surcharge pursuant to G.S. 62-157(b) and (c) from $0.10 to $0.08. TRS enables an individual with a hearing or speech disability to communicate by telephone with a person without such a disability. G.S. 62-157(b) and (c) direct the Commission to require local service providers to impose a monthly surcharge (set by the Commission) on qualified access lines to fund the implementation and operation of a relay service and an equipment distribution program, including a "reasonable margin for reserve."[1] G.S. 62-157(i) authorizes wireless providers to impose the same monthly surcharge on each wireless connection. The relay service and equipment distribution service comprise the Telecommunications Resources Program (TRP), which is administered by the Division of Services for the Deaf and Hard of Hearing, a division of DHHS. G.S. 62-157 provides that the funds from the surcharge on access lines are available to DHHS to operate and promote the service.

The Commission set the current surcharge by Order dated September 21, 2015, in which the Commission approved a decrease in the surcharge to the current rate of $0.10 per access line.

DHHS stated in its petition that the reserve margin, as of the date of its filing, is approximately $10.8 million above the $6.5 million set by the Commission, due to actual expenditures being less than had been projected. In addition, DHHS projects that, under the current surcharge, TRP will continue to experience an increase of revenues versus expenditures, thus resulting in the continuing increase in the reserve over the authorized margin. DHHS requested that the surcharge be decreased to $0.08 to allow continued operations and reduce the reserve to the required amount.

On March 15, 2018, the Commission issued an Order Seeking Comments Regarding Surcharge Decrease in which it requested interested parties to file comments regarding the proposed reduction in the TRS surcharge as requested by DHHS. No comments were filed.

The Public Staff presented this matter at the Commission's Regular Staff Conference on April 30, 2018. The Public Staff stated that it had reviewed the petition and, based on an analysis of current and projected expenditures and of projected access line and wireless line growth, it believed that the $0.10 will result in continued growth of the excess over the $6.5 million reserve

[1] The current reserve margin of $6.5 million was approved by the Commission on July 7, 2010.

margin set by the Commission. Based upon its review, the Public Staff recommended approval of the decrease to $0.08, as requested by DHHS.

The Public Staff recommended that the effective date be set for July 1, 2018, to ensure carriers have sufficient time to implement the rate change.

Based on the foregoing, and entire record in this matter, the Commission is of the opinion that the TRS surcharge should be decreased as requested by DHHS effective July 1, 2018, and that notice should be given to customers of this decrease.

IT IS, THEREFORE, ORDERED as follows:

1. That the monthly TRS surcharge shall be decreased from $0.10 per access line to $0.08 per access line effective for bills issued on or after July 1, 2018. The decrease shall be reflected on customers' bills issued on or after July 1, 2018.

2. That the bill message/insert as set forth in Appendix A shall be provided to all customers.

3. That DHHS shall revise the TRS surcharge remittance form to reflect the decrease in the surcharge and shall post the revised form on the Telecommunications Resource Program website so as to make it available for downloading.

ISSUED BY ORDER OF THE COMMISSION.
This the 1st day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

Commissioner James G. Patterson did not participate in this decision.

APPENDIX A

NOTICE OF TELECOMMUNICATIONS RELAY SERVICE (TRS)
SURCHARGE DECREASE

Effective with telephone bills issued on or after July 1, 2018, the Telecommunications Relay Service (TRS) surcharge is $0.08 per access line, per month. On May 1, 2018, the North Carolina Utilities Commission authorized a decrease in the monthly TRS surcharge amount from $0.10 to $0.08 to maintain adequate funding for Division of Services for the Deaf and Hard of Hearing (DSDHH), including the Telecommunications Resource Program (TRP) and the Regional Resource Centers within DSDHH. TRP is a program within the North Carolina Department of Health and Human Services consisting of a telecommunications relay service that enables persons with hearing, speech, and vision impairments to communicate with others by telephone and an equipment distribution program. Regional Resource Centers provide a wide spectrum of services, including: (1) advocacy, consultation, workshops and training on a wide variety of topics pertaining to hearing loss; (2) communication support; (3) information and referral services; (4) assistance with selection, application for and set-up of equipment, training, and technical assistance as part of the equipment distribution service; and (5) outreach regarding available resources.

DOCKET NO. P-100, SUB 170

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Tariff Filings Made by Local Exchange	)	ORDER GRANTING THE PUBLIC
Carriers in Compliance with the Federal	)	STAFF'S MOTION WITH AN
Communications Commission's Connect	)	EFFECTIVE DATE OF JULY 3, 2018
America Fund Order	)	FOR RATE CHANGES

BY THE COMMISSION: On May 24, 2018, the Public Staff filed a Motion for Order Requiring Filing of Information Regarding July 1, 2018, Access Rate Changes.

In its Motion, the Public Staff requested that the Commission issue an order requiring filings from certain carriers showing their compliance with the sixth set of intrastate access rate changes mandated by the Federal Communications Commission's (FCC's) November 18, 2011, Universal Service Fund (USF)/ Intercarrier Compensation (ICC) Transformation Order as soon as practicable, but no later than June 18, 2018.

The Public Staff further noted that it has reviewed last year's responses and compiled a list of carriers as reflected in Appendix A to its Motion that the Public Staff proposes should make an appropriate filing regarding their 2018 switched access rate changes. The Public Staff stated that, additionally, any carrier that is not listed in Appendix A, but whose status has changed from last year should also be required to make an appropriate filing.

On May 25, 2018, the Commission issued an Order Requesting Comments on the Public Staff's Motion.

The Commission notes that on April 5, 2018, the FCC issued an Order establishing procedures for the 2018 filing of annual access charge tariffs. The FCC's Order sets a modified effective date of July 3, 2018, for the July 2018 annual access charge tariff filings made on both 15 and 7 days' notice.

The Public Staff filed a letter on May 31, 2018 requesting that, if the Commission grants the Public Staff's Motion, the Commission's Order reflect an effective date of July 3, 2018, consistent with the FCC's April 5, 2018 Order. No other party filed initial comments on the Public Staff's Motion.

The Commission, therefore, finds it appropriate for the effective date of the intrastate rate changes required due to the USF/ICC Transformation Order to mirror the effective date of the interstate rate changes (i.e., July 3, 2018).

Based on the record, the Commission finds it appropriate to grant the Public Staff's Motion. Therefore, impacted carriers must make the required filings as soon as practicable, but no later than Monday, June 18, 2018 with an effective date of July 3, 2018, as appropriate.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 5th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. T-100, SUB 49

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Petition of the North Carolina Movers Association, Inc., For Amendment of the Maximum Rate Tariff Rule 11 To Allow For Credit Card Transactions and For Flat Screen Television Packing Rates	) ORDER GRANTING PETITION) ALLOWING PROCESSING FEE) FOR CREDIT/DEBIT CARDS TO) BE PASSED ON TO SHIPPER) AND ADOPTING FLAT SCREEN) TELEVISION PACKING RATES

BY THE COMMISSION: On December 14, 2017, the North Carolina Movers Association, Inc., (NCMA) filed a petition with the North Carolina Utilities Commission (Commission) requesting an amendment to the current Commission-approved Maximum Rate Tariff No. 1 (MRT) to include credit card transactions and flat screen television packing rates.

Presently, as written, Section I, Rule 11 of the MRT lists the payment options that a carrier may receive from the shipper for services rendered as: cash, money order, certified check, and traveler's check. Although Rule 11 of the MRT does not prohibit the use of credit and debit cards as a form of payment, it does not address the recovery of the processing fee for credit and debit cards. Additionally, the current MRT does not list any rates to account for the special packing that flat screen televisions require to prevent damages during a move.

In its petition, the NCMA requested that the Commission modify the MRT as follows: (1) Section I, Rule 11 to allow carriers to recoup the costs of processing credit and debit card transactions by having the ability to pass through the processing charge to the shipper; and (2) modify Section IV, Item 1, Item 2, and Item 3, to establish rates and overtime rates for packing and unpacking flat screen televisions and packing container charges for flat screen televisions.

In support of its petition, the NCMA submitted that most shippers now prefer to pay by credit or debit card and that processing charges vary for each carrier. The NCMA requested that carriers be permitted to pass through the processing charge to the shipper. The NCMA proposed that the following language be added to Section I of Rule 11 of the MRT:

> (E) Carriers may accept credit or debit cards. The processing fee for these transactions may be passed on to the shipper. Carriers may only charge the amount their credit card processing company charges the carrier for the individual transaction. The credit card processing fee will be listed on the bill of lading.

Additionally, in its petition, the NCMA stated that flat screen televisions (TVs) have become common place, and while not as heavy as traditional televisions, they need protection by special packing containers. The NCMA, based upon its averaging of the flat screen pricing for packing large and small televisions gathered from two of the largest container companies in North

Carolina, and the addition of a labor charge, proposed the following flat screen television rates to be added to Section IV, Items 1, 2, and 3:

Item 1 –Packing and Unpacking	Flat Screen TVs (small) $115.00
	Flat Screen TVs (large) $125.00
Item 2 –Overtime Packing and Unpacking	Flat Screen TVs (small) $130.00
	Flat Screen TVs (large) $150.00
Item 3 –Packing Container Charges	Flat Screen TVs (small) $ 50.00
	Flat Screen TVs (large) $ 62.00

On January 11, 2018, the NCMA filed a Supplement to its petition that included the pricing information gathered from two container companies as referenced in its December 14, 2017 petition.

On January 11, 2018, the Commission issued an Order Requesting Comments on Petition.

On January 16, 2018, Bruce Gold of Mather Brothers Moving Company, John E. Thomas of J.E. Thomas and Sons Moving, Jamie B. Currie of A+ Moving and Storage, and Chris Barringer of Barringer Moving & Storage, LLC, filed comments in support of the NCMA's petition.

On January 22, 2018, John Diamond of Hilldrup Moving and Storage, d/b/a Hilldrup Companies, Inc., Kathy Cox of Home Moving Systems, Inc., Steven Roper of College Hunks Hauling Junk and Moving, and F. Todd Lamar and Donna Williams of Armstrong Relocation, filed comments in support of the NCMA's petition.

On January 24, 2018, Todd Cummings of Todds Easy Moves, Ronald and Donald Taylor of ABC Moving & Storage, and Dean Barrett of Steele & Vaughn Moving and Storage filed comments in support of the NCMA's petition.

On February 5, 2018, Lucky Anneheim of Make A Move, and Jimmy D. Fortson of Salisbury Moving and Storage filed comments in support of the NCMA's petition.

On February 7, 2018, Dru Sells Burgin and Josephine C. Sells of Sells Service, Inc., filed comments in support of the NCMA's petition.

On February 9, 2018, the Public Staff filed comments.

On February 19, 2018, David Rushing of All American Relocation and Office Solutions filed comments supporting the recommendations of the Public Staff in its February 9, 2018 comments.

On February 23, 2018, the NCMA filed reply comments.

INITIAL COMMENTS

The Commission received 15 initial comments from 14[1] Commission-certified household goods carriers all in support of the NCMA's petition and also received comments from the Public Staff.

Katherine Cox of Horne Moving Systems, Inc. (Horne) commented that Horne supports the recovery of credit and debit card processing fees and the ability to charge for packing/containers of flat screen televisions. Ms. Cox noted that in 2017, Horne paid an average of 2.4% in credit and debit card processing costs resulting in the Company paying in excess of $6,000 in credit and debit card transaction fees that year. Additionally, Ms. Cox argued that flat screen televisions are the norm now and to ensure safe delivery of them, it is imperative that movers put flat screen televisions in proper containers. Ms. Cox maintained that if flat screen televisions are damaged, they cannot be repaired, thus requiring movers to buy new ones. She stated that her company has been using special boxes for flat screen televisions for years to keep claims costs down, and being able to recoup this expense would also be nice.

F. Todd Lamar of Armstrong Relocation supported the proposal of allowing carriers to pass through credit and debit card processing fees to the consumer. Mr. Lamar opined that credit card processing fees have become an expensive plague on the moving industry. Mr. Lamar observed that credit card companies that offer 2% cash and give high rewards can have processing fees over 6%. Mr. Lamar contended that Armstrong Relocation, an agent for United Van Lines, the largest household goods carrier in the industry and with the buying power of a two billion-dollar Company behind it, incurs an average credit card processing fee of 3.4%. Further, Mr. Lamar argued that if you process $3 million of revenue billed at 3.4% in credit card and debit card processing fees, you would incur $102,000 in credit and debit card transaction fees that his Company would have to make up. He opined that this is not an unreasonable request; for example, Wake County, North Carolina charges a 3.5% processing fee when Wake County real estate taxes are paid via credit card.

Todd Cummings of Todds Easy Moves stated that moving companies should have the right to pass credit and debit card processing fees to customers to cover the costs that moving companies incur for the convenience of allowing customers to pay with credit and debit cards. Mr. Cummings commented that now about 90% of his customers pay by credit card. Mr. Cummings discussed that his Company tried to get customers to use a palm pad for a check card, but within a two-year period, only two people used it. Mr. Cummings further suggested that the bank warns customers not to use their pin numbers, therefore everyone runs their cards as credit resulting in transaction fees.

Dean Barrett of Steele and Vaughn Moving and Storage noted that proper packing prices for flat screen TVs have been a long time coming; flat screen TVs require special packaging due to their size and value to the customer. Mr. Barrett stated that flat screen TVs are getting larger and more expensive, therefore, compensating movers for properly packaging flat screen TVs allows movers to provide the quality service that customers deserve. Mr. Barrett maintained that

[1] Donna Williams and Todd Lamar, both of Armstrong Relocation, filed separate, individual comments.

packaging suppliers are working hard to accommodate these needs at an affordable cost, unfortunately there is a cost that comes with proper packing materials for flat screen TVs.

Justin Barringer of **Barringer Moving & Storage** stated that it is common sense for movers to charge packing fees for the labor and materials to protect flat screen TVs just like movers do for any other item that they pack. Mr. Barringer supported the NCMA's petition for flat screen television rates. Mr. Barringer surmised that his Company has to order flat screen TV boxes just like they have to order other packing boxes such as: 1.5's, 3.1's, 4.5's, dish packs, etc., that they are able to charge for, therefore it would be a loss to not charge for flat screen TV boxes and packing labor. He stated that the Company is spending money and time on materials for packing flat screen TVs that it cannot charge to the customer.

Nine other Commission-certified household goods carriers filed basic comments expressing their agreement with the NCMA's petition.

The **Public Staff** stated that in regard to the request for recovery of credit and debit card processing fees, that it agreed with the NCMA's position that the MRT should be updated to expressly provide for the payment by shippers with credit and debit cards, and to allow the carrier to pass through the actual amount of the credit or debit card processing fee to the shipper.

The Public Staff noted that the proposed language submitted by the NCMA for inclusion of credit and debit fees in Section I, Rule 11 (Payments) of the MRT should include the following alteration:

> (E) Carriers may accept credit or debit cards. The processing fee for these transactions may be passed on to the shipper. Carriers may only charge up to the amount their credit card processing company charges the carrier for the individual transaction. The credit card processing fee will be listed on the bill of lading.

The Public Staff maintained that the addition of the words "up to" are in keeping with the MRT, which sets a maximum, but not a minimum, rate and allows the carrier discretion as to how much of the processing fee it will pass through to the shipper.

The Public Staff argued that flat screen televisions have become ubiquitous and require special containers and handling. The Public Staff stated that it does not oppose the addition of specific rates for packing and unpacking, and containers for flat screen televisions. However, the Public Staff argued that the rates proposed by the NCMA should be calculated differently.

The Public Staff maintained that the rates proposed by the NCMA differentiate between small and large flat screen televisions. However, there is no definition of "small" or "large." The Public Staff recommended that the Commission define what constitutes a "small" and "large" flat screen television so that customers and carriers are clear as to what charges are applicable. Additionally, the Public Staff stated that one option the Commission might consider would be to define "small" flat screen televisions as those with screens less than 40 inches (measured diagonally), and "large" flat screen televisions as those with screens of 40 inches or more (measured diagonally).

The Public Staff stated that while the NCMA's use of two workers in calculating its proposed rates appears reasonable, the use of a full hour of labor does not appear to be necessary, especially when carriers bill in 15-minute increments. The Public Staff noted that it surveyed several well-known carriers to determine the average labor time associated with the packing of a flat screen television, which includes disconnection and reconnection of cables and associated hardware. Based on this survey, the Public Staff maintained that it would be more reasonable to use a maximum of 30 minutes of labor time for packing and unpacking in calculating the appropriate rate. The Public Staff further argued that the use of 30 minutes is also consistent with its research regarding industry guidelines for packing flat screen televisions.

The Public Staff noted Section IV, Items 1, 2, and 3 of the MRT should be modified to establish rates for packing and unpacking flat screen televisions and charges for packing containers for flat screen televisions. The Public Staff proposed the use of a maximum of 30 minutes of labor for packing and unpacking for the following rates for flat screen televisions:

Item 1 –Packing and Unpacking	Flat Screen TVs (small) $82.40
	Flat Screen TVs (large) $94.40
Item 2 –Overtime Packing and Unpacking	Flat Screen TVs (small) $89.70
	Flat Screen TVs (large) $101.70
Item 3 –Packing Container Charges	Flat Screen TVs (small) $ 50.00
	Flat Screen TVs (large) $ 62.00

Further, the Public Staff noted that these rates would be subject to the automatic annual increase allowed for all MRT rates.

REPLY COMMENTS

David Rushing of <u>All American Relocation and Office Solutions</u> filed comments expressing its agreement with the recommendations of the Public Staff.

The <u>NCMA</u> stated that the Public Staff supported the language proposed by the NCMA for inclusion in Section I, Rule 11 of the MRT with the addition of the words "up to" included in the proposed language. The NCMA agreed with the Public Staff's suggestion in this regard.

The NCMA also noted that it concurred with the Public Staff's recommended definitions for "small" and "large" flat screen televisions wherein a small TV would be defined as less than 40 inches (measured diagonally) and a large TV would be 40 inches or more (measured diagonally).

Further, the NCMA maintained that it does not have any issues with the Public Staff's recommendation to reduce the amount of labor to two men for 30 minutes for packing and unpacking flat screen TVs for both Item 1 and Item 2, and therefore, supports the Public Staff's proposals in this regard.

WHEREUPON, the Commission now reaches the following

CONCLUSIONS

Based upon the record of evidence in this proceeding, including the NCMA's petition, and the initial and reply comments filed thereafter, the Commission finds it appropriate to grant the NCMA's petition to amend the MRT to allow movers the ability to pass on the costs of processing debit and credit card transactions to the shipper, and establish rates for packing and unpacking flat screen televisions and charges for flat screen television container charges, but adopting the Public Staff's recommended changes.

The Commission recognizes that all of the parties that filed comments agreed that modifying the MRT for these purposes is appropriate and warranted. The Commission understands that more and more people are using credit and debit cards as their preferred form of payment. The Commission acknowledges that moving companies are incurring significant credit and debit card processing fees, which they have to absorb as a business expense. The Commission is of the opinion that Commission-certified household goods movers should be granted the ability to pass on credit and debit card processing fees to their clients to offset this additional business expense.

The Commission concurs with the Public Staff's recommendation to allow movers to pass on the credit and debit card processing fees on to the shipper, with the caveat that the mover may bill the shipper "up to" the amount of the processing fee that its credit or debit card company bills per individual transaction. Accordingly, the Commission is of the opinion that the MRT should be amended to reflect the Commission's authorization for the allowance of passing credit and debit card processing fees on to the consumer. Therefore, the Commission finds it appropriate to adopt a new section (E) for Section I, Rule 11 of the MRT as proposed by the Public Staff including the requirement that the credit card processing fee will be listed on the bill of lading.

The NCMA, in its December 14, 2017 petition, recommended that the Commission modify the MRT to establish rates for packing and unpacking flat screen televisions and charges for packing containers. The NCMA proposed to calculate packing container charges for flat screen televisions based on the average cost of container boxes quoted by the two largest container companies in North Carolina and a labor charge of two workers for one hour.

The Public Staff argued that the NCMA's use of two workers in calculating its proposed rate appeared reasonable, however the use of a full hour of labor does not appear necessary, especially when carriers can bill in 15-minute increments. The Public Staff also noted that the NCMA did not define what size constituted a large or small television. The Public Staff stated that a flat screen television with a screen size of less than 40 inches (measured diagonally) should be defined as small and a flat screen television with a screen size 40 inches or greater (measured diagonally) should be defined as a large television.

In its reply comments, the NCMA agreed with the Public Staff's recommended rates for packing and unpacking flat screen televisions.

Based upon the foregoing, the Commission finds that it is appropriate to adopt the Public Staff's proposed modifications to Section IV, Items 1, 2, and 3 of the MRT to establish rates for packing and unpacking flat screen televisions and container charges. Further, the Commission notes that the MRT provides the maximum rates that movers may charge, however shippers may negotiate rates for their move that are below the MRT rates.

IT IS, THEREFORE, ORDERED as follows:

1. That the NCMA's petition for the modification of the MRT to allow movers to pass through credit card and debit card processing fees to the shipper, and establish flat screen television packing and unpacking rates and container charges is hereby granted with the clarifications as set forth in this Order.

2. That a new Section (E) shall be added to Section I, Rule 11 of the MRT as specified by the Public Staff to allow Commission-certified household goods movers to accept credit and debit cards and to charge the shipper up to the amount the credit card processing company charges the carrier for the individual transaction.

3. That Section IV, Items 1, 2, and 3 of the MRT shall be amended as specified by the Public Staff to include rates for packing and unpacking flat screen televisions, and container charges.

4. That the current Commission-approved paper bill of lading shall be modified to include a section for credit and debit card processing fees. Any Commission-certified household goods mover as of the date of this Order is allowed to use its current supply of the Commission-approved paper bill of ladings through December 31, 2018. However, after December 31, 2018, all Commission-certified household goods movers shall no longer use the current Commission-approved bill of lading and instead shall use the newest revision (June 2018) of the Commission-approved bill of lading.

5. That any Commission-certified household goods mover as of the date of this Order that opts to use electronic bill of lading as an alternative to the revised (June 2018) Commission-approved paper bill of lading shall modify its electronic bill of lading to include a line item for credit and debit card processing fees, if the mover chooses to bill shippers for credit and debit card processing fees.

6. That copies of this Order shall be served by the Chief Clerk's Office to all Commission-certified household goods movers, the Public Staff, the Office of the North Carolina State Highway Patrol, the Office of the Attorney General, all applicants with pending applications seeking certificates of exemption, and the North Carolina Movers Association, Inc.

ISSUED BY ORDER OF THE COMMISSION.

BY THE COMMISSION: On May 2, 2017, pursuant to Commission Rule R1-17(a), Duke Energy Progress, LLC (DEP or the Company) filed notice of its intent to file a general rate case application. On June 1, 2017, the Company filed its Application to Adjust Retail Rates and Request for Accounting Order (Application), along with a Rate Case Information Report Commission Form E-1 (Form E-1), and the direct testimony and exhibits of David B. Fountain, President, DEP; Laura A. Bateman, Director of Rates and Regulatory Planning, DEP; T. Preston Gillespie, Jr., Senior Vice President and Nuclear Chief Operating Officer, Duke Energy Corporation (Duke Energy);[1] Stephen G. De May, Senior Vice President of Tax and Treasurer, Duke Energy Business Services, LLC (DEBS);[2] David L. Doss, Jr., Director of Electric Utilities and Infrastructure Accounting, DEBS; Christopher M. Fallon, Vice President of Duke Energy Renewables and Commercial Portfolio, Duke Energy; Janice Hager, President, Janice Hager Consulting; Robert B. Hevert, Partner, ScottMadden, Inc.; Retha Hunsicker, Vice President of Customer Information Systems - Customer Operations, DEBS; Jon F. Kerin, Vice President of Governance and Operations Support – Coal Combustion Products, DEBS; Julius A. Wright, Managing Partner, J.A. Wright & Associates, LLC; Kimberly D. McGee, Rates and Regulatory Strategy Manager, DEP and Duke Energy Carolinas, LLC (DEC); Joseph A. Miller, Jr., Vice President of Central Services, DEBS; Robert M. Simpson, III, Director of Grid Improvement Plan Integration for Duke Energy's Regulated Utilities Operations, DEP; and Steven B. Wheeler, Director, Pricing and Regulatory Solutions Director, DEBS.

Petitions to intervene were filed by CUCA on May 9, 2017; CIGFUR and NC WARN on May 12, 2017; NCSEA on May 23, 2017; Fayetteville PWC on June 6, 2017; Commercial Group on June 23, 2017; Charah, LLC, on June 27, 2017, which was withdrawn on July 28, 2017, NCEMC on July 5, 2017; EDF on July 6, 2017; Kroger on July 17, 2017; Piedmont Electric Membership Corporation (Piedmont EMC) on July 18, 2017; Haywood EMC on July 27, 2017; the Sierra Club on July 31, 2017; DoD/FEA on August 11, 2017; Rate-Paying Neighbors on August 23, 2017; NCFB on September 6, 2017; the Towns of Sharpsburg, Stantonsburg, Lucama, and Black Creek (QuadTowns) on September 7, 2017; NC Justice Center on September 15, 2017; NCLM on October 3, 2017; and John Everett on December 7, 2017. Notice of Intervention was filed by the Attorney General on June 6, 2017.

---

[1] DEP is a wholly-owned subsidiary of Duke Energy Corporation. (Tr. Vol. 6, p. 27.)

[2] DEBS provides various administrative and other services to DEP and other affiliated companies of Duke Energy. (Tr. Vol. 8, p. 17.)

The Commission entered Orders granting the petitions to intervene of CUCA on May 11, 2017; CIGFUR and NC WARN on May 22, 2017; NCSEA on May 25, 2017; Fayetteville PWC on June 7, 2017; Commercial Group on June 26, 2017; NCEMC on July 6, 2017; EDF on July 13, 2017; Kroger on July 20, 2017; Sierra Club and Haywood EMC on August 7, 2017; DoD/FEA on August 15, 2017; Rate-Paying Neighbors on September 1, 2017; NCFB on September 14, 2017; NC Justice Center on September 26, 2017; and NCLM on October 4, 2017.

On August 10, 2017, and October 5, 2017, the Commission entered Orders denying the petitions to intervene of Piedmont EMC and the Quad Towns, respectively, but allowing each to participate as an amicus curiae on the issue of DEP's coal combustion residual (CCR) costs.[1] By Order dated December 20, 2017, the Commission denied John Everett's Motion to Intervene as being untimely.

The Public Staff's intervention is recognized pursuant to G.S. 62-15(d) and Commission Rule R1-19. The intervention of the Attorney General's Office (AGO) is recognized pursuant to G.S. 62-20.

On June 20, 2017, the Commission issued its Order Establishing General Rate Case and Suspending Rates. On June 22, 2017, the Commission issued its Order Scheduling Investigation and Hearings, Establishing Intervention and Testimony Due Dates and Discovery Guidelines, and Requiring Public Notice.

On July 10, 2017, the Commission issued an Order consolidating Docket No. E-2, Sub 1142 with Docket No. E-2, Sub 1131 (DEP's request to defer incremental storm damage expenses) and Docket Nos. E-2, Sub 1103 and E-7, Sub 1110 (DEP and DEC's requests to defer environmental compliance costs regarding CCRs), allowing those persons who had been granted intervention in those dockets to fully participate in this proceeding. In addition, on August 29, 2017, the Commission issued an Order consolidating DEP's request to implement a job retention rider filed in Docket No. E-2, Sub 1153 with this general rate proceeding.

On July 12, 2017, the Commission issued its Order Revising Procedural Schedule and Requiring Public Notice, revising the dates for the filing of intervenor and rebuttal testimony and exhibits, as well as the date for the beginning of the hearing to take expert testimony.

On September 15, 2017, the Company filed the supplemental direct testimony and exhibits of Company witness Bateman.

On September 22, 2017, Kroger filed the direct testimony and exhibits of Justin Beiber, Senior Consultant, Energy Strategies, LLC. On October 18, 2017, EDF filed the direct testimony of Paul J. Alvarez, President, Wired Group. On October 19, 2017, DoD/FEA filed the direct testimony and exhibits of Constance T. Cannady, Executive Consultant, NewGen Strategies and Solutions, LLC, and Joseph A. Mancinelli, General Manager, NewGen Strategies and Solutions, LLC. On October 20, 2017, the Public Staff filed the direct testimony and exhibits of Jack L. Floyd, Utilities Engineer, Public Staff Electric Division, Jay B. Lucas, Utilities Engineer, Public Staff

[1] The terms "CCR" and "coal ash" are used interchangeably in this Order.

Electric Division, JamesS. McLawhorn, Director, Public Staff Electric Division, Dustin R. Metz, Utilities Engineer, Public Staff Electric Division, Tommy C. Williamson, Jr., Utilities Engineer, Public Staff Electric Division, Scott J. Saillor, Utilities Engineer, Public Staff Electric Division, Michael Maness, Director, Public Staff Accounting Division, Darlene P. Peedin, Manager, Electric Section, Public Staff Accounting Division, David C. Parcell, Principal and Senior Economist, Technical Associates, Inc., Roxie McCullar, Consultant, William Dunkel and Associates, Vance F. Moore, President, Garrett and Moore, Inc., and L. Bernard Garrett, Secretary/Treasurer, Garrett and Moore, Inc.; CUCA filed the direct testimony and exhibits of Kevin W. O'Donnell, President, Nova Energy Consultants, Inc.; Fayetteville PWC filed the direct testimony and exhibits of Nancy Heller Hughes, Director, NewGen Strategies and Solutions, LLC; CIGFUR filed the direct testimony and exhibits of Nicholas Phillips, Jr., public utility regulation consultant and a Managing Principal of Brubaker & Associates, Inc.; NC Justice Center filed the direct testimony and exhibits of Jonathan Wallach, Vice President, Resource Insight, Inc., and Satana Deberry, Executive Director, NC Housing Coalition; NCSEA filed the direct testimony and exhibits of Michael Murray, President, Mission:data Coalition, Justin R. Barnes, Director of Research, EQ Research, LLC, and Carolina Golin, Southeast Regulatory Director, Vote Solar; Sierra Club filed the direct testimony and exhibits of Ezra D. Hausman, consultant, Ezra Hausman Consulting, and Mark Quarles, principle scientist and owner, Global Environmental, LLC; NCLM filed the direct testimony of Bill Saffo, Mayor of Wilmington, North Carolina; the Attorney General filed the direct testimony and exhibits of Richard A. Polich and Dan J. Wittliff, Managing Directors, GDS Associates, Inc.; and Commercial Group filed the direct testimony and exhibits of Steve W. Chriss, Director, Energy and Strategy Analysis, Wal-Mart Stores, Inc., and Wayne Rosa, Energy and Maintenance Manager, Food Lion, LLC. On October 20, 2017, the Commission issued an Order granting the motion of NC Justice Center to extend to October 23, 2017, the deadline to file the direct testimony of witness, John Howat. On October 23, 2017, NC Justice Center filed the direct testimony and exhibits of John Howat, Senior Policy Analyst, National Consumer Law Center.

On October 24, 2017, DEP noticed the depositions of AGO witness Dan J. Wittliff and Public Staff witness Jay B. Lucas.

On October 25, 2017, the Public Staff filed Appendix A to the direct testimony and exhibits of Roxie McCullar.

On October 27, 2017, DEP filed a Motion to Strike Direct Testimony of Michael Murray, President of Mission:data Coalition, filed on behalf of NCSEA. NCSEA filed a response in opposition to DEP's Motion to Strike on October 30, 2017. On November 3, 2017, the Commission issued an Order Granting in Part and Denying in Part DEP's Motion to Strike parts of witness Murray's direct testimony.

On November 6, 2017, DEP filed the rebuttal testimony and exhibits of Company witnesses Fountain; Bateman; De May; Doss; Fallon; Gillespie; Hager; Hevert; Hunsicker; Kerin; McGee; Miller; Simpson; Wright; Donald L. Schneider, Jr., General Manager of Advanced Metering Infrastructure Program Management, DEBS; Michael Delowery, Vice President of Project Management and Construction, DEBS; Thomas Silinski, Vice President of Total Rewards and Human Resource Operations, DEBS; and James Wells, Vice President of Environmental Health and Safety - Coal Combustion Products, DEBS. On the same day, DEP filed the rebuttal testimony and exhibits of external expert witnesses John J. Spanos, Senior Vice President, Gannet Fleming Valuation and Rate Consultants, LLC; and Jeffrey T. Kopp, Manager of Business Consulting Department – Business and Technology Services Division, Burns and McDonnell Engineering Company, Inc. On November 8, 2017, DEP filed the supplemental rebuttal testimony of Company witness Hunsicker.

On November 15, 2017, the Public Staff filed the supplemental testimony of Jay B. Lucas. Also on November 15, 2017, NCLM filed a Motion to excuse its witness, Mayor Bill Saffo, and to accept his pre-filed testimony.

On November 16, 2017, the Commission issued its Order on Hearing Procedure and Availability of Witnesses.

On November 17, 2017, the Commission issued an Order granting the motion of DEP and the Public Staff' to reschedule the expert witness hearing that was scheduled to begin Monday, November 20, 2017, to Monday, November 27, 2017, at 1:30 p.m.

On the same date, the Commission issued an Order granting NCLM's motion to excuse witness Saffo from attending the expert witness hearing.

On November 17, 2017, DEP filed the second supplemental rebuttal testimony and exhibits of Company witness Bateman.

On November 20, 2017, DEP and the Public Staff filed a Preliminary Notice of Partial Settlement, notifying the Commission that they had reached a preliminary partial settlement in principle as to certain issues in this docket.

Also on November 20, 2017, the Public Staff filed the supplemental testimony and exhibits of witnesses Garrett and Moore.

On November 21, 2017, the Commission issued an Order directing that the Intervenors would be permitted to supplement their pre-filed direct testimony with testimony in response to the proposed settlement of DEP and the Public Staff, that the intervenors' witnesses would be subject to cross-examination on their settlement testimony, and that DEP would be allowed to offer rebuttal testimony in response to the intervenors' settlement testimony.

On November 22, 2017, DEP and the Public Staff filed an Agreement and Stipulation of Partial Settlement (Stipulation) that resolved all issues between DEP and the Public Staff, with the exception of: (1) cost recovery of DEP's CCR costs, recovery amortization period and return during the amortization period, allocation issues associated with CCR costs, ongoing costs to be included in rates, and whether certain CCR costs are recoverable under G.S. 62-133.2; (2) the amount of DEP's requested deferred storm costs to be recovered, and the amortization period of any such recovery; and (3) with respect to DEP's proposed Job Retention Rider (JRR), whether companies involved in the transportation or preservation of raw material or a finished product should qualify, and how, or if, the JRR should be funded after the expiration of the initial year's \$3.5 million shareholder contribution.

In support of the Stipulation, on November 22, 2017, the Public Staff filed the settlement testimony and exhibits of witnesses Peedin, McLawhorn, Maness, and Parcell. DEP filed the settlement testimony and exhibits of Company witnesses Fountain, Bateman, Hevert, De May, and Wheeler on November 27, 2017.

On November 27, 2017, DEP and Commercial Group filed a Settlement Agreement resolving all issues between them in this docket. On the same date, DEP and Kroger filed a Settlement Agreement resolving all issues between them in this docket.

On November 28, 2017, the Public Staff filed Revised Settlement Exhibit 1 and Peedin Revised Exhibit 1.

On December 4, 2017, the Public Staff filed the corrected supplemental testimony and exhibits of witnesses Garrett and Moore. On the same date, the Public Staff filed Second Revised Peedin Exhibit 1, Schedules 1, 1-1, 3-1, and 3-1(n), and Second Revised Settlement Exhibit 1.

The public hearings were held as scheduled. The following public witnesses appeared and testified:

Rockingham: Tom Clark, Lois Jones, Keely Wood, Debbie Hall, Tavares Bostic, Kent McGill, Margaret Wolfe-Roberts, Karen Tucker, Kim McCall, Emily Zucchino, Cary Rodgers, John Merrell.

Raleigh: Robert Finch, Sr., Karen Mallam, Tom Clark, Dewey Botts, Harvey Richmond, Patricia M. Walker, Linda Lyons Bakalyan, Robert Gilbert, Ann Busche on behalf of Rama H. Darbha, Martha Girolami, Amanda Robertson, Margaret Toman, Robert Rodriguez, Karen Bearden, Mac Legerton, Dave Carlson, Helen Tart, John Wagner, Irene Cygan, Meredith Bain, Sharon C. Goodson, Jim Seabolt, Lisabeth Svendsgaard, Lynn Marie Sullivan, Laura Michelle Gaines, Elizabeth Adams, Sharon Paterson, Morgan Malone, Fran Lynch, Sharon Jones, Margaux Escutin, Walter Von Schonfeld, Bill Garrity, Deborah Graham, Mark Daughtridge, Rachel Karasik, Kelly Garvy, Jocelyn Tsai, Beth Henry, Suzanne MacDonough, Allison Keenan.

Asheville: Bill Whalen, Dave Hollister, Dan Gilbert, Cathi Culver, Judy Mattox, Kelly Williams, Stephanie Biziewski, Brad Rouse, Xavier Boatright on behalf of Jeri Cruz-Segarra, Ken Brame, Hartwell Carson, Kendall Hall, Marston Blow, Samantha Wilds, Cathy Scott, Judith Kaufman, Steve Carter, Cathy Holt, Jim McGlinn, James Smith, Michael Kohnle, Jamie Friedrick, Lissa Pedersen, Michael Whitmire, Matthew Livsey, Michael Huttman on behalf of Dee Williams, Benjamin Brill, Beth Jezek, Viola Williams, Cari Watson, Sam Mac Arthur, Anne Craig, Carolyn Anderson, Richard Fireman, Sandra Rountree, Carol Stangler, Jeffrey Secrest, Gabrielle White, Elizabeth Laubach, Steven Norris, Audrey Yatras, Xavier Boatright, Patrick Taylor, Katherine Houghton.

Snow Hill: Kristiann Herring, Michael Thomas Carroway, Hope Taylor, Michael Schachter, John Hinnant, Linda Wilkins-Daniels, Bobby Jones, Barbara Dantonio, Johnnie Gurley, Joe Poland, Marvin Winstead, Jr., Edgar R. Bain, Mindy Hodgin, Joan Gallimore, Charles Wright, Willie Battle, Michael Emerson, Dennis Liles, Bill Garrity, Mary Maness, Edith Fail, Nicholas Wood, Wesley Garner, Jr., Sara Mullens, Anne Harrington, Keith Copeland.

Wilmington: Susan A. Bondurant, Peter Gillman-Bryan, Mal Maynard, Alina Szmant, Deborah Dicks Maxwell, Samantha Worrell, Rebecca Louise Stutts, Donald Thackston, Feris Herbert Harkin, Wanda Wooten, Suzanne LaFollette-Black, Daniel Nofziger, Patricia Leonard, Kevin Blackburn, Caylan McKay, Linda Susan Porter, Connette Bradley, Roberta Buckles, Elizabeth Murray, Esther Murphy, Isabelle Sheppard, Bill Garrity, Paul Greiner, Pauline Richardson.

This matter came on for the expert witness hearing on November 27, 2017. DEP presented the testimony of Company witnesses Fountain, Bateman, Hevert, De May, Simpson, Hunsicker, Miller, McGee, Doss, Wheeler, Hager, Fallon, Spanos, Kopp, Schneider, Wright, Wells, and Kerin. The Public Staff presented the testimony of witnesses McLawhorn, Peedin, Moore, Garrett, Maness, Lucas, and Floyd. The Attorney General presented the testimony of witnesses Polich and Wittliff. Sierra Club presented the testimony of witness Quarles. NC Justice Center presented the testimony of witnesses Deberry, Howat, and Wallach. NCSEA presented the testimony of witnesses Murray and Barnes. CUCA presented the testimony of witness O'Donnell. Parties waived cross-examination of Company witnesses Gillespie, DeLowery, and Silinski; Kroger witness Beiber; EDF witness Alvarez; DoD/FEA witnesses Cannady and Mancinelli; Public Staff witnesses Metz, Williamson, Saillor, Parcell, and McCullar; Fayetteville PWC witness Hughes; CIGFUR witness Phillips; NCSEA witness Golin; Sierra Club witness Hausman; NCLM witness Saffo; Commercial Group witnesses Chriss and Rosa; and NC Justice Center witness Howat. The pre-filed testimony of each of these witnesses was copied into the record as if given orally from the stand and their exhibits entered into evidence.

On December 6, 2017, the Public Staff filed Late-Filed Exhibit 1 of witness Floyd in response to the Commission's request during the expert witness hearing. On the same date, DEP filed Late-Filed Exhibits 1 - 5 in response to Commission questions or requests made during the expert witness hearing.

On December 21, 2017, NC Justice Center witness John Howat filed Late-Filed Exhibit JH-9 in response to a request by Chairman Finley during the expert witness hearing.

On December 22, 2017, the Public Staff filed a Motion to Add Maness Late-Filed Exhibit: Difference Between Public Staff and DEP on Coal Ash – After Other Issues (Maness Late-Filed Exhibit) to the Record regarding updates to testimony dealing with DEP's request to recover its costs for coal ash remediation and resulting changes to the Public Staff's and DEP's positions on coal ash costs as a result of the Stipulation. The Commission issued an Order Accepting Maness Late-Filed Exhibit on January 2, 2018. On the same day, the Commission issued an Order to Strike certain portions of NCSEA witness Murray's summary of his pre-filed direct testimony.

On January 4, 2018, DEP filed Late-Filed Exhibit 6 in response to the Commission's questions during the expert witness hearing.

On January 11, 2018, the AGO filed a Late-Filed Exhibit in response to the Commission's request during the expert witness hearing.

On January 12, 2018, proposed orders were filed by DEP and the Public Staff. Partial proposed orders were filed by NCSEA and NCLM. Post-hearing briefs were filed by DEP, AGO, NCSEA, DoD/FEA, Sierra Club, CIGFUR, CUCA, EDF, Fayetteville PWC, NC Justice Center, Commercial Group, Kroger, NCLM, Quad Towns, and NC WARN.

On January 22, 2018, DEP and the NC Justice Center filed a Partial Settlement Agreement.

On January 23, 2018, DEP filed a supplement to its Late-Filed Exhibit 6.

On January 26, 2018, the Commission issued an Order Requesting Additional Information.

On January 29, 2018, DEP filed its Late-Filed Exhibit 7 in response to the Commission's Order Requesting Additional Information.

Based upon consideration of the pleadings, testimony, and exhibits received into evidence at the hearings, the Stipulation, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

Jurisdiction

1. DEP is duly organized as a public utility operating under the laws of the State of North Carolina and is subject to the jurisdiction of the Commission. The Company is engaged in the business of generating, transmitting, distributing, and selling electric power to the public in a broad area in eastern North Carolina and an area in western North Carolina in and around the City of Asheville. DEP is a wholly-owned subsidiary of Duke Energy Corporation, and its office and principal place of business are located in Raleigh, North Carolina.

2. The Commission has jurisdiction over the rates and charges, rate schedules, classifications, and practices of public utilities operating in North Carolina, including DEP, under Chapter 62 of the General Statutes of North Carolina.

3. DEP is lawfully before the Commission based upon its Application for a general increase in its retail rates pursuant to G.S. 62-133 and 62-134 and Commission Rule R1-17.

4. The appropriate test period for use in this proceeding is the 12 months ended December 31, 2016, adjusted for certain known changes in revenue, expenses, and rate base through October 31, 2017.

The Application

5. By its Application and initial direct testimony and exhibits, DEP originally sought a net increase of approximately $477.5 million, or 14.9%, in its annual electric sales revenues from its North Carolina retail electric operations, including a rate of return on common equity of 10.75%. On September 15, 2017, DEP filed supplemental testimony and exhibits that detailed a $57.958 million reduction in its original request, thereby reducing the total Company proposed increase to approximately $419.5 million. On November 17, 2017, DEP filed further supplemental testimony and exhibits detailing additional adjustments to its Application that changed its proposed annual revenue increase to $425.6 million.

6. DEP submitted evidence in this case with respect to revenue, expenses, and rate base using a test period consisting of the 12 months ended December 31, 2016, adjusted for certain known changes in revenue, expenses, and rate base.

The Stipulation

7. On November 20, 2017, DEP and the Public Staff (Stipulating Parties) jointly filed a Preliminary Notice of Partial Settlement. On November 22, 2017, the Stipulating Parties filed the Stipulation. On November 27, 2017, DEP entered into settlement agreements with Kroger and Commercial Group that are consistent with the language of the Stipulation. On January 22, 2018, DEP and NC Justice Center entered into a Partial Settlement Agreement. As used herein, "Stipulation" includes the agreements entered into by and between DEP and the Public Staff, DEP and Kroger, DEP and Commercial Group, and DEP and NC Justice Center.

8. The Stipulation is the product of the "give-and-take" in settlement negotiations between the Stipulating Parties, as well as between DEP and Kroger, DEP and Commercial Group, and DEP and NC Justice Center. Further, the Stipulation is material evidence, and is entitled to be given appropriate weight by the Commission, along with all competent and material evidence in the record.

9. The Stipulation resolves only some of the disputed issues between the Stipulating Parties. The Stipulating Parties did not reach an agreement regarding cost recovery of the Company's CCR costs, the recovery amortization period and return during the amortization period, allocation issues associated with CCR costs, the amount of ongoing CCR costs to be included in rates, or whether certain CCR costs are recoverable under G.S. 62-133.2. They also did not agree on the amount of the Company's requested deferred storm costs to be recovered, the amortization period of any such recovery, or the amount of the adjustment to normalize storm expenses on an ongoing basis. Although the Stipulating Parties agreed that the Company's proposed JRR generally complies with the Commission's guidelines adopted in Docket No. E-100, Sub 73, they disagreed on (a) whether companies involved in the transportation or preservation of a raw material or a finished product (e.g., pipeline customers) should qualify; and (b) how, or if, the JRR should be funded after the expiration of the initial year's $3.5 million shareholder contribution. These issues were left for resolution by the Commission and are addressed later in this Order.

ELECTRIC – ACCOUNTING

Adjustments to Cost of Service

10. The Stipulation provides for certain accounting adjustments which are set out in detail in Exhibit 1 to the Stipulation. The Stipulating Parties agreed that settlement on those issues will not be used as a rationale for future arguments on contested issues brought before the Commission. For the present case the accounting adjustments outlined in Exhibit 1 to the Stipulation are just and reasonable to all parties in light of all the evidence presented.

11. The Stipulation provides that the Company will amortize the Harris Nuclear Power Plant Combined Construction and Operating License Application (COLA) costs over an eight-year period. This provision of the Stipulation is just and reasonable to all parties in light of all the evidence presented.

12. The Stipulating Parties have agreed that the Company's depreciation rates will be set based on the rates set forth in the Company's most recent depreciation study, subject to the following inputs: (1) a 10% contingency; (2) a 10-year remaining life for the meters that are being retired pursuant to the Company's Advanced Metering Infrastructure (AMI) program; (3) a 70-year R2 curve for Account 356; (4) a negative 10% net salvage for Account 366; (5) a 17-year life for new AMI meters; and (6) a 20-year amortization period for Accounts 391 and 397. This provision of the Stipulation is just and reasonable to all parties in light of all the evidence presented.

13. As set forth in Section III.T. of the Stipulation, the Company agreed to the Public Staff's adjustment to end-of-life nuclear materials and supplies reserve expense, reduced as described in the rebuttal testimony of Company witness Gillespie. The Company also agreed to take appropriate action to manage materials and supplies (nuclear and non-nuclear) to the current practices and procedures utilized by DEC. This provision of the Stipulation is just and reasonable to all parties considering all the evidence presented.

14. The Company's request to establish a regulatory asset at the time of the Asheville plant's retirement for the remaining net book value, and to defer to this regulatory asset any costs related to obsolete inventory, net of salvage, at the time of retirement is just and reasonable to all parties in light of the evidence presented.

15. The Stipulation provides that the appropriate level of excess deferred income taxes (EDIT) to be refunded to customers is $42.577 million annually for the four years following the effective date of the rates approved herein.

Capital Structure, Cost of Capital, and Overall Rate of Return

16. The Stipulating Parties agree that the revenue increase approved in this Order is intended to provide DEP, through sound management, the opportunity to earn an overall rate of return of 7.09%. This overall rate of return is derived from applying an embedded cost of debt of 4.05% and a rate of return on equity of 9.9% to a capital structure consisting of 48% long-term debt and 52% members' equity. The Stipulation is material evidence entitled to appropriate

weight in determining DEP's overall rate of return, cost of debt, rate of return on equity, and capital structure.

17. A 9.9% rate of return on equity for DEP is just and reasonable in this general rate case.

18. A 52% equity and 48% debt ratio is a reasonable capital structure for DEP in this case.

19. A 4.05% cost of debt for DEP is reasonable for the purposes of this case.

20. The rate increase approved in this case, which includes the approved rate of return on equity and capital structure, will be difficult for some of DEP's customers to pay, in particular the Company's low-income customers.

21. Continuous safe, adequate, and reliable electric service by DEP is essential to the support of businesses, jobs, hospitals, government services, and the maintenance of a healthy environment.

22. The rate of return on equity and capital structure approved by the Commission appropriately balances the benefits received by DEP's customers from DEP's provision of safe, adequate, and reliable electric service in support of businesses, jobs, hospitals, government services, and the maintenance of a healthy environment with the difficulties that some of DEP's customers will experience in paying the Company's increased rates.

23. The 9.9% rate of return on equity and the 52% equity financing approved by the Commission in this case result in a cost of capital that is as low as reasonably possible. They appropriately balance DEP's need to obtain equity financing and maintain a strong credit rating with its customers' need to pay the lowest possible rates.

24. The authorized levels of overall rate of return and rate of return on equity set forth above are supported by competent, material, and substantial record evidence, are consistent with the requirements of G.S. 62-133, and are fair to DEP's customers generally and in light of the impact of changing economic conditions.

Base Fuel Factor and Coal Inventory

25. The North Carolina retail base fuel expense for this proceeding is $807,561,119, and the following base fuel and fuel-related cost factors are just and reasonable to all parties in light of all the evidence presented for purposes of this proceeding (amounts are cents per kilowatt-hour (kWh), excluding regulatory fee): 1.993 for residential customers; 2.088 for SGS customers; 2.431 for MGS customers; 2.253 for LGS customers; and 0.596 for Lighting customers. Billed fuel rates shall be adjusted to reflect changes to DEP's fuel rates approved by the Commission in Docket No. E-2, Sub 1146 that were effective on December 1, 2017.

26. As set forth in Paragraph III.R. of the Stipulation, DEP shall reduce the amount of coal inventory included in working capital. An increment rider shall be established, effective on the same date as the new base rates approved in this Order and continuing until inventory levels reach a 35-day supply, to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $76.11 per ton). This rider shall terminate the earlier of: (a) January 30, 2020, or (b) the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply on a sustained basis, as defined in the Stipulation. The reduction to coal inventory included in working capital and the establishment of the increment rider, as set forth in the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

Quality of Service, Vegetation Management, and Service Regulations

27. Paragraph IV.I. of the Stipulation provides that the overall quality of electric service provided by the Company is adequate. This provision of the Stipulation is just and reasonable.

28. The proposed amendments to DEP's vegetation management plan and Service Regulations are reasonable and serve the public interest, and should be approved.

Power/Forward Workshop

29. Paragraph IV.A. of the Stipulation provides for a technical workshop hosted by DEP during the second quarter of 2018 regarding the Company's NC Power/Forward grid investments. This provision of the Stipulation is just and reasonable.

Lead-Lag Study

30. The Stipulation provides that DEP shall prepare and file a new lead-lag study in its next general rate case. This provision of the Stipulation is just and reasonable.

Cost of Service Allocation Methodology

31. The Stipulation provides for use of the Summer Coincident Peak (SCP) methodology for cost allocation between jurisdictions and among customer classes in this case. For purposes of this proceeding, the Company may continue to use the SCP methodology for allocation between jurisdictions and among customer classes under the provisions of the Stipulation. The provisions of the Stipulation regarding cost of service allocation methodology are just and reasonable to all parties in light of all the evidence presented.

32. The Company shall file annual cost of service studies based on both the SCP and summer/winter coincident peak and average (SWPA) methodologies.

Rate Design

33. For purposes of apportioning and assigning the approved increase in base non-fuel and base fuel revenues between the North Carolina customer classes in this proceeding, the apportionment and rate design principles presented by DEP witness Wheeler in his direct testimony, subject to the modification set out in Paragraph IV.F. of the Stipulation, are just, reasonable, appropriate, and nondiscriminatory.

34. The Company shall implement the rate design proposed by witness Wheeler, as well as the specific modifications set out in Paragraph IV.F. of the Stipulation.

Acceptance of Stipulation

35. The Stipulation will provide DEP and its retail ratepayers just and reasonable rates when combined with the rate effects of the Commission's decisions regarding the contested issues in this proceeding.

36. The provisions of the Stipulation are just and reasonable to all parties to this proceeding and serve the public interest. Therefore, the Stipulation should be approved in its entirety.

Storm Costs

37. In Docket No. E-2, Sub 1131 (Sub 1131), DEP filed a petition to establish a regulatory asset and defer until its next general rate case its 2016 incremental storm expenses, which included costs for Winter Storm Jonas, February 2016 Ice Event, Winter Storm Petros, June and July 2016 thunderstorms, Tropical Storm Hermine, and Hurricane Matthew. The Company sought to defer only those storm costs in excess of the $12.7 million approved in the Company's last general rate proceeding. The Company requested total O&M expenses of $80.152 million.

38. In this proceeding, DEP included a pro forma adjustment to the test year to normalize for storm costs to an average level of costs the Company has experienced over the last ten years. This pro forma adjustment also removed any storm costs from the 10-year average calculation that were included in the Company's 2016 deferral request, and instead included an amortization of the deferred costs over a 3-year period.

39. The Company should not recover the costs of the June and July 2016 thunderstorms as a part of its 2016 incremental storm expenses deferral. The June and July 2016 thunderstorms amounted to $1.720 million in O&M expenses.

40. The normal range of variation of storm costs experienced by the Company in recent years encompasses $27.4 million, and this amount should be deducted from the 2016 incremental storm costs requested by the Company.

41. It is appropriate for the Company to defer and amortize $51.032 million ($80.152 million total requested O&M expense minus $1.720 million for the June and July

thunderstorms minus $27.4 million normal storm expense) of its North Carolina retail storm costs incurred in the test year. The $51.032 million deferral should be amortized over a period of five years, beginning in October 2016.

42. It is not appropriate for the Company to defer and amortize the depreciation expense, return on capital expenditures, and carrying costs on deferred costs that it has incurred as a result of storm damage in 2016.

43. The appropriate North Carolina retail normalized annual level of storm costs to be included in the Company's rates in this case is $11.018 million.

Job Retention Rider

44. The Company's proposed JRR is intended to allow the Company to prevent the loss of North Carolina jobs and the customer's related load.

45. Because gas pipelines are fixed investments that are not easily relocated, extending the benefits of a JRR to gas pipeline companies would not prevent the loss of North Carolina jobs. Companies involved in the "transportation or preservation of a raw material of a finished product" should not be eligible to participate in a JRR.

46. The Job Retention Tariff (JRT) Guidelines state that this tariff is intended to be temporary and establish a maximum effective time of five years or a cap of five years. However, under the current economic circumstances, a shorter period of time, possibly one or two years, may achieve the intended result. Thus, a one-year pilot with the option of a renewal for a second year is a preferable time frame for the current JRR.

47. The JRR proposed by the Company, as modified by the Stipulation and this Order, is not unduly discriminatory and is in the public interest.

48. Ratepayers, the Company, and its shareholders all benefit from the retention of North Carolina jobs and the load related to those jobs.

49. The Company's recovery of the JRR revenue credits should be reduced by $3.5 million each year the JRR is in effect, if more than one year, to recognize the benefit to shareholders of the JRR.

Coal Combustion Residual Cost Deferral

50. In Docket Nos. E-2, Sub 1103 and E-7, Sub 1110, DEP and DEC jointly filed a request that the Commission issue an order authorizing them to defer in a regulatory asset account certain costs incurred in connection with compliance with federal and state environmental requirements regarding coal combustion residuals (CCRs). By Order dated July 10, 2017, the Commission consolidated the DEP request with the present general rate case. DEP and the Public Staff supported the deferral in their testimony in this docket. The deferral request is reasonable and appropriate.

51. DEP expects to incur substantial costs related to CCRs in future years. It is just and reasonable to allow deferral of those costs, with a return at the overall cost of capital approved in this Order during the deferral period. Ratemaking treatment of such costs will be addressed in future rate cases.

52. It is reasonable and appropriate to use a mid-month cash flow convention for calculation of the return on the principal amount of deferred CCR expenditures through January 2018.

Recovery of CCR Costs

53. Since its last rate case, DEP has become subject to new legal requirements relating to its management of coal ash. These new legal requirements mandate the closure of the 19 coal ash basins at the Company's coal-fired power plants. Since its last rate case, DEP has incurred significant costs to comply with these new legal requirements.

54. On a North Carolina retail jurisdiction basis, the actual coal ash basin closure costs DEP has incurred (netted against the amount already included in the Company's rates following its last rate case) during the period from January 1, 2015, through August 31, 2017, amount to $241,890,000. DEP is entitled to recover these coal ash basin closure costs, less a disallowance of $9.5 million, for a total amount of $232,390,000.[1] The actual coal ash basin closure costs incurred by DEP, less the $9.5 million, are known and measurable, reasonable and prudent, and used and useful in the provision of service to the Company's customers. DEP is entitled to recover these costs through rates. Further, DEP proposes that these costs be amortized over a five-year period and that it earn a return on the unamortized balance. Under normal circumstances, the five-year amortization period proposed by the Company is appropriate and reasonable, and absent any management penalty should be approved, and under normal circumstances the Company is entitled to earn a return on the unamortized balance.

55. Under the present facts, a mismanagement penalty in the approximate sum of $30 million is appropriate with respect to DEP's CCR remediation expenses accounted for in the earlier established asset retirement obligation (ARO) with respect to costs incurred through the end of the test year, as adjusted. Through its use of available ratemaking mechanisms, the Commission is effectively implementing an estimated $30 million penalty by amortizing the $232,390,000 over five years with a return on the unamortized balance and then reducing the resulting annual revenue requirement by $6 million for each of the five years.

56. DEP further proposes that it recover on an ongoing basis $129,115,000 in annual coal ash basin closure costs, subject to true-up in future rate cases. The amount sought by the Company is based upon its actual test year (2016) spend. The Company's proposal to recover these ongoing costs as a portion of the rates approved in this Order is not approved. Rather, DEP is authorized to record its September 1, 2017, and future CCR costs in a deferral account until its next general rate case.

[1] This amount is used in this Order as a placeholder and is subject to a final adjustment using the energy allocation factor adopted by the Commission and to be provided by DEP and the Public Staff.

ELECTRIC – ACCOUNTING

Requested CCR Fuel Costs

57. G.S. 62-133.2(a1)(9) allows electric public utilities to recover the net gains or losses resulting from the sales by the electric public utility of by-products produced in the generation process to be recovered through the fuel adjustment clause.

58. The beneficial reuse of CCRs, in and of itself and absent an actual sale, does not constitute the sale of a by-product under G.S. 62-133.2(a1)(9).

59. The contract between DEBS on behalf of DEP and Charah, Inc., for the excavation, transportation, and placement of ash from the Sutton Plant to the Brickhaven facility is a contract for services and not for the sale of a by-product under G.S. 62-133.2(a1)(9).

Provisional CCR Cost Recovery

60. DEP's recovery of the CCR costs approved in this proceeding should not be through provisional rates.

CCR Allocation Guidelines

61. It is reasonable and appropriate to allocate all system-level CCR costs using a comprehensive allocation factor that allocates the costs to the entire DEP system.

62. It is reasonable and appropriate to allocate all CCR expenditures by an energy allocation factor, rather than a demand-related production plant allocation factor.

Insurance Litigation

63. It is appropriate to require that DEP, within 10 days of the resolution by settlement, dismissal, judgment or otherwise of the litigation entitled Duke Energy Carolinas, LLC, et al. v. AG Insurance SA/NV, et al., Case No. 17 CVS 5594, Superior Court (Business Court), Mecklenburg County, North Carolina (Insurance Case), file a report with the Commission explaining the result and stating the amount of insurance proceeds to be received or recovered by DEP. This reporting requirement shall apply even if the case is appealed to a higher court.

64. It is appropriate to require DEP to place all insurance proceeds received or recovered by DEP in the Insurance Case in a regulatory liability account and to hold such proceeds until the Commission enters an order directing DEP regarding the appropriate disbursement of the proceeds. The regulatory liability account should accrue a carrying charge at the overall rate of return authorized for DEP in this Order.

65. If meritorious concerns are raised by any party to this docket, or by the Commission, regarding the reasonableness of DEP's efforts to obtain an appropriate amount of recovery in the Insurance Case, it is appropriate to require DEP to bear the burden of proving that it exercised reasonable care and made reasonable efforts to obtain the maximum recovery in the Insurance Case.

ELECTRIC – ACCOUNTING

Advanced Metering Infrastructure

66. DEP's request to defer to a regulatory asset account the cost of existing AMR meters replaced by AMI meters should be approved.

Accounting for Deferred Costs

67. The Company is authorized to receive a specific amount of revenue for each of the several deferred costs approved by this Order. If DEP receives revenue for any deferred cost for a longer period of time than the amortization period approved by the Commission for that deferred cost, the Company should continue to record all revenue received for that deferred cost in the specific regulatory asset account established for that deferred cost until the Company's next general rate case.

Federal Income Tax Changes

68. The effects of the Federal Tax Cuts and Jobs Act of 2017 should be addressed in the separate proceeding that the Commission has initiated for that purpose, Docket No. M-100, Sub 148.

Revenue Requirement

69. After giving effect to the approved Stipulation and the Commission's decision on contested issues, the annual revenue requirement for DEP will allow the Company a reasonable opportunity to earn the rate of return on its rate base that the Commission has found just and reasonable.

70. DEP should recalculate and file the annual revenue requirement with the Commission within 10 days of the issuance of this Order, consistent with the findings and conclusions of this Order. The Company should work with the Public Staff to verify the accuracy of the filing. DEP should file schedules summarizing the gross revenue and the rate of return that the Company should have the opportunity to achieve based on the Commission's findings and determinations in this proceeding.

71. The appropriate revenue requirement for the first four years should be reduced by the EDIT Rider decrement of $42.577 million.

Just and Reasonable Rates

72. The base non-fuel and base fuel revenues approved herein are just and reasonable to the customers of DEP, to DEP, and to all parties to this proceeding, and serve the public interest.

ELECTRIC – ACCOUNTING

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-4

The evidence supporting these findings of fact and conclusions is contained in DEP's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding. These findings and conclusions are informational, procedural, and jurisdictional in nature and are not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-6

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, DEP's verified Application and Form E-1, the testimony of DEP witness Fountain, and the entire record in this proceeding.

On June 1, 2017, DEP filed its Application and initial direct testimony and exhibits, seeking a net increase of approximately $477.5 million, or 14.9%, in its annual electric sales revenues from its North Carolina retail electric operations. In its rebuttal testimony filed on November 6, 2017, DEP reduced its requested increase to $419.5 million. In its Second Supplemental Testimony filed on November 17, 2017, the Company modified its requested increase to $425.6 million (a base rate increase of $461.1 million reduced by a five-year annual Excess Deferred Income Taxes Rider of $(35.5 million)). The Company's requested increase was reduced in the Stipulation filed on November 22, 2017, to a requested increase of $306.0 million (a base rate increase of $348.5 million reduced by a four-year annual Excess Deferred Income Taxes Rider of $(42.5 million)). DEP submitted evidence in this case with respect to revenue, expenses, and rate base, using a test period consisting of the 12 months ended June 30, 2016, updated for certain known and actual changes.

Company witness Fountain testified that major generating plant additions and plant-related expenses account for the majority of the total additional requested annual revenue requirement. (Tr. Vol. 6, p. 33.) The remainder of the requested rate adjustment is to recover costs related to environmental requirements associated with the mandated closure of ash basins, expenses to respond to significant storms, costs for renewable purchased power investment, deferred nuclear development costs, and investments necessary for computer information systems and other ongoing operational costs. (Id.)

Witness Fountain detailed the Company's recent investments to build and purchase additional generating facilities, as well as its updates to improve existing facilities. (Id. at 33-34, 37-39.) He described numerous nuclear, fossil, hydro, and solar projects that DEP has completed since its last rate case. (Id.) For example, the Company has invested heavily in new gas-fueled generation, replacing half of its older, less-efficient coal-fired generation units with state-of-the-art, cleaner burning natural gas-fueled plants. (Id. at 34.) According to witness Fountain, these new plants emit carbon dioxide at about half the rate, and nitrogen and sulfur oxide emissions at a fraction of the rate of the units they replaced. (Id.) In addition to the $416 million invested in gas-fueled plants discussed above, the Company has also invested $184 million in new solar energy installations, the first solar additions to the DEP fleet. (Id.) These additions to the DEP fleet have occurred during a time when the Company has also been making other significant necessary investments in its existing generating plants, such as new pollution controls like the Zero Liquid

Discharge flue desulfurization systems for existing coal plants, including a $141 million system at the Mayo Unit 1 facility that provides operational flexibility and reduces environmental impact. (Id.)

Witness Fountain also provided an overview of the CCR basin closure costs the Company is seeking to recover in this case, as well as the Company's proposed recovery of severe storm costs. (Id. at 39-44.) The Company's base rate request also includes development costs for the nuclear development work completed for the Harris nuclear site. (Id. at 40.) Additionally, DEP is seeking to include costs to implement a new Customer Information System (CIS). (Id. at 40, 44-45.) These annual costs are partially offset by the return of a deferred tax liability to customers. (Id.)

Witness Fountain explained that under DEP's proposed rate adjustment customers would still be paying lower rates today than they were in 1991 on an inflation-adjusted basis, and customers will continue to pay rates below the national average and competitive with other utilities in the region. (Id. at 46.) He pointed out that customers' bills have also declined from those approved in 2013 due, in part, to the Company prudently managing fuel costs and jointly dispatching the generation fleet to save $183 million. (Id. at 45.)

Witness Fountain also described the Company's ongoing efforts to mitigate customers' rate impacts. (Id. at 48-54.) He stated that to help customers reduce bills, the Company is continuing to expand and enhance its portfolio of demand-side management (DSM) and energy efficiency (EE) programs. (Id. at 49.) According to witness Fountain, the Company offers customers more than a dozen energy-saving programs for every type of energy user and budget, and EE programs currently save its customers in the Carolinas over 1.7 billion kWh annually, or over $170 million, which is about four percent of total retail sales. (Id. at 50.) Combined, its DSM and EE programs offset capacity requirements by the equivalent of over four power plants. (Id.) Witness Fountain also described how the Company's Energy Neighbor Fund helps low-income individuals and families cover home energy bills. (Id. at 51.) Over the life of the program it has provided approximately $32 million to customers. (Id.) He explained that the Company also allows customers to spread out the impacts of seasonal fluctuations into 12 equal monthly payments. Payments can also be made in many different ways to minimize missed payments. (Id. at 51-52.)

Witness Fountain indicated that the Company's most important objective is to continue providing safe, reliable, affordable, and increasingly clean electricity to its customers with high quality customer service, both today and in the future. (Id. at 63.) He concluded that the request for a rate increase is made to support investments that benefit DEP's customers, and the Company strives to ensure that those investments are made in a cost-effective manner that retains the Company's level of service and competitive rates. (Id. at 64.)

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 7-9

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the testimony of DEP witnesses Fountain, Bateman, Hevert, De May, and Wheeler, and the testimony of Public Staff witnesses McLawhorn, Peedin, Maness, and Parcell.

ELECTRIC – ACCOUNTING

The Public Staff and DEC filed a Preliminary Notice of Partial Settlement on November 20, 2017, and on November 22, 2017, they filed the Stipulation. The Stipulation was based on the same test period used by the Company in its Application, with updates.

Witness Fountain explained that the Stipulation resolves all revenue requirement issues between the Company and the Public Staff, except issues related to CCR cost recovery and issues related to recovery of the costs the Company incurred in restoring service and rebuilding the grid following numerous storms in 2016, including winter storm Jonas and Hurricane Matthew. (Tr. Vol. 6, pp. 88, 94-95.) In addition, although the Stipulating Parties reached agreement on most of the issues involving the Company's proposed JRR, there are remaining issues regarding the JRR that the Public Staff and DEP were unable to resolve. (Id. at 95.)

Witness Fountain outlined the key aspects of the Stipulation as follows:

1. Capital Cost and Structure - The Stipulating Parties have agreed to a rate of return on equity of 9.90%, based upon a capital structure containing 52% equity and 48% debt, as described by witnesses Hevert and De May, and a cost of debt of 4.05%. The resulting weighted average rate of return is 7.09%.

2. Updated Plant and Accumulated Depreciation – Plant and accumulated depreciation shall be calculated through October 31, 2017.

3. Updated revenues – Revenues shall be annualized through October 31, 2017.

4. Asheville CWIP - The Company shall update its post-test year additions to include Asheville construction work in progress through October 31, 2017.

5. Inflation – The effects of inflation shall be updated, except the effects of inflation on vegetation management shall be removed.

6. Update labor – The Company's annualized labor costs through September 30, 2017 shall be included.

7. Depreciation Rates – The Company's depreciation rates shall be set based on the rates set forth in the Company's filed Depreciation Study, with exceptions described in the Stipulation.

8. Distribution Vegetation Management – The Public Staff and the Company have agreed to the Company's filed position on distribution vegetation management costs.

9. Harris Combined Construction and Operating License Application (COLA) cost amortization – The Company agrees with the Public Staff's recommendation to amortize such costs over an eight-year period.

10. Customer Connect Expenses – The Company accepts the Public Staff's adjustment, but shall be authorized to establish a regulatory asset to defer and amortize expenses associated with its Customer Connect project. The Company shall be allowed to accrue a return on the regulatory asset in the same manner that Construction Work in Progress (CWIP) balances accrue Allowance for Funds Used During Construction (AFUDC). AFUDC shall end and a 15-year amortization shall begin on the date the DEP Core Meter-to- Cash release (Releases 5-8) of the project goes into service or January 1, 2022, whichever is sooner.

11. Revenue Requirement Reductions – The Stipulating Parties agreed to revenue requirement reductions for Aviation, Lost Industrial Revenues Due to Hurricane Matthew, Executive Compensation, Board of Directors, Lobbying, Sponsorships and Donations for the U.S. Chamber of Commerce, Incentive Compensation, and Outside Services.

12. Coal Inventory – The Stipulating Parties agree that for purposes of settlement, the Company may set carrying costs included in base rates assuming a 35-day coal inventory at 100% capacity factor (full load burn), and that a Coal Inventory rider should be allowed to manage the transition, and that the rider will terminate upon the sooner of the Company reaching a 35-day coal inventory on a sustained basis or two years from approval by the Commission. The Company will conduct an analysis in consultation with the Public Staff demonstrating the appropriate coal inventory level given market and generation changes since the Company's last rate case. The analysis shall be completed by December 31, 2018.

13. Mayo Zero Liquid Discharge and Sutton combustion turbine projects – The Company will make an adjustment to rate base with depreciation expense and other cost of capital effects to reflect the resolution reached in the Stipulation. The adjustment will be permanent for ratemaking and regulatory accounting purposes, and will result in a decrease to the revenue requirement from the Company's filed request. The Company agrees to these adjustments in an effort to reach a settlement on all non-CCR and storm related issues and does not admit and explicitly rejects any imprudence on behalf of the Company regarding the management of the two projects.

14. Nuclear Materials and Supplies - The Company accepts the Public Staff's adjustment to end-of-life nuclear materials and supplies reserve expense, as refined in the testimony of Company witness Gillespie, and agrees that it will take appropriate action to conform its practices and procedures to manage its Materials and Supplies inventory (nuclear and non-nuclear) to the current practices and procedures utilized by Duke Energy Carolinas, LLC, with the goal to ensure that proper levels of inventory are on hand. DEP shall complete this action within 24 months after the entry of the Commission rate case order.

15. Duke-Piedmont Merger Costs - The Company accepts the Public Staff's recommended adjustment to remove the Duke-Piedmont merger costs to achieve.

16. Power/Forward Carolinas Initiative – To address concerns raised in this docket by multiple parties, the Company will host a technical workshop during the second quarter of 2018 regarding the Company's NC Power/Forward grid investments to explain the need for and ongoing benefits of grid investments, and to hear feedback from stakeholders in attendance. The Company will report the results of the workshop to the Public Staff and the Commission. Participation by or attendance of the Public Staff at the NC Power/Forward workshop shall not estop the Public Staff from investigating or making recommendations regarding any element of the Company's NC Power/Forward program in a future rate case or pursuant to applicable statutes or Commission Rules.

17. Other Cost of Service and Rate Design Matters -- The Stipulating Parties have also agreed upon rate design and cost of service study parameters as proposed by Company witnesses Wheeler and Hager and Public Staff witness Floyd.

18. Excess Deferred Tax Liability – The Stipulating Parties have agreed to the return of an excess deferred tax liability to customers over the next four years through a rider.

19. Basic Customer Charge - The Company and Public Staff have agreed upon a Basic Customer Charge for Schedule RES of $14.00 per month, and further agree upon a Basic Customer Charge for Schedules R-TOUD and R-TOU of $16.85 per month.

Id. at 88-92.

Witness Fountain testified that the Stipulation was reached after extensive discovery conducted by the Public Staff and other intervenors. He testified that the Stipulation represents a balanced settlement by the parties, and is in the public interest.

DEP witnesses Bateman, Hevert, De May, and Wheeler also testified in support of the Stipulation. Witness De May testified that the Stipulation will support the Company's ability to achieve its financial objectives. Witness Hevert stated that the stipulated rate of return on equity, although lower than he had recommended, was nevertheless reasonable, particularly in light of the Company's low cost of debt. Witness Wheeler testified concerning the effects of the partial settlement on DEP's proposed JRR, and witness Bateman presented exhibits showing the monetary effect of the various issues addressed in the Stipulation.

Public Staff witnesses McLawhorn, Peedin, Maness, and Parcell also supported the Stipulation. Witness McLawhorn stated that the principal benefits of the Stipulation are a significant reduction in the Company's proposed revenue increase in this proceeding and the avoidance of protracted litigation by the Stipulating Parties before the Commission and, possibly, the appellate courts. Witness Peedin presented schedules showing the financial impact of each concession made by the Company or the Public Staff, as well as the amount of the rate increase that would result if the Commission agrees with the Company on all the unresolved items, or, alternatively, agrees with the Public Staff on all of these items. Witness Maness testified on the impact of the Stipulation on the unresolved CCR issues, and witness Parcell stated that the

Stipulation reflects the result of good faith "give-and-take" and compromise-related negotiations among the parties.

On January 22, 2018, DEP and NC Justice Center filed a Partial Settlement Agreement. In summary, the Partial Settlement Agreement states that DEP will contribute $2.5 million to the Helping Home Fund for low-income energy assistance, and NC Justice Center will withdraw its claim that the Commission should order DEP to fund energy assistance for low-income ratepayers.

As the Stipulation has not been adopted by all of the parties to this docket, its acceptance by the Commission is governed by the standards set out by the North Carolina Supreme Court in State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 348 N.C. 452, 500 S.E.2d 693 (1998) (CUCA I), and State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 351 N.C. 223, 524 S.E.2d 10 (2000) (CUCA II). In CUCA I, the Supreme Court held that

> [A] stipulation entered into by less than all of the parties as to any facts or issues in a contested case proceeding under Chapter 62 should be accorded full consideration and weighed by the Commission with all other evidence presented by any of the parties in the proceeding. The Commission must consider the nonunanimous stipulation along with all the evidence presented and any other facts the Commission finds relevant to the fair and just determination of the proceeding. The Commission may even adopt the recommendations or provisions of the nonunanimous stipulation as long as the Commission sets forth its reasoning and makes "its own independent conclusion" supported by substantial evidence on the record that the proposal is just and reasonable to all parties in light of all the evidence presented.

348 N.C. at 466, 500 S.E.2d at 703.

However, as the Court made clear in CUCA II, the fact that fewer than all of the parties have adopted a settlement does not permit a court to subject the Commission's Order adopting the provisions of a non-unanimous stipulation to a "heightened standard" of review. CUCA II, 351 N.C. at 231, 524 S.E.2d at 16. Rather, the Court held that Commission approval of the provisions of a non-unanimous stipulation "requires only that the Commission ma[k]e an independent determination supported by substantial evidence on the record [and] satisf[y] the requirements of chapter 62 by independently considering and analyzing all the evidence and any other facts relevant to a determination that the proposal is just and reasonable to all parties." Id. at 231-32, 524 S.E.2d at 16. The Commission gives substantial weight to the testimony of the Company and Public Staff witnesses regarding the Stipulation, and finds and concludes that the Stipulation is the product of the "give-and-take" of the settlement negotiations between DEP and the Public Staff, as well as between DEP and Kroger, DEP and Commercial Group, and DEP and NC Justice Center, in an effort to appropriately balance the Company's need for rate relief with the impact of such rate relief on customers.

Based on the foregoing, the Commission finds and concludes that the Stipulation is material evidence to be given appropriate weight in this proceeding.

ELECTRIC – ACCOUNTING

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 10-15

The evidence supporting these findings of fact is found in the verified Application and Form E-1 of DEP, the testimony and exhibits of the Company witnesses, the testimony and exhibits of the Public Staff witnesses, the testimony and exhibits of the intervenors, the Stipulation, and the entire record in this proceeding.

The Stipulation resolved many, but not all, of the issues in dispute between the parties. Among other matters, the parties agreed on many accounting adjustments, including: (1) amortization of the costs of the Harris COLA over an eight-year period; (2) the establishment of a regulatory asset to defer and amortize expenses associated with the Company's Customer Connect project; (3) disallowance of certain costs related to the Mayo Zero Liquid Discharge and Sutton combustion turbine projects; and (4) basing the Company's depreciation rates on the rates set forth in the Company's most recent depreciation study, subject to application of certain inputs. DEP witness Bateman presented exhibits showing the monetary effect of the various issues (accounting adjustments and otherwise) addressed in the Stipulation. Public Staff witness Peedin presented schedules showing the financial impact of each concession made by the Company or the Public Staff, as well as the amount of the rate increase that would result if the Commission agrees with the Company on all the unresolved items, or, alternatively, agrees with the Public Staff on all these items. The accounting adjustments that are not specifically addressed in other findings and conclusions of this Order are discussed in more detail below.

Update plant and accumulated depreciation to October 31, 2017

DEP witness Bateman testified that as part of settlement, the Stipulating Parties agreed to update both plant additions and accumulated depreciation through October 31, 2017. As part of this adjustment, for purposes of settlement, DEP and the Public Staff agreed to remove the Company's adjustments to accumulated depreciation that were contained in its adjustments NC-0800 and NC-1100. The Company also agreed to update its post-test year additions to plant to include Asheville CWIP through October 31, 2017.

Update revenues to October 31, 2017

DEP witness Bateman testified that as part of the settlement, the Stipulating Parties agreed to update revenues to reflect changes in number of customers and, for the residential class, changes in weather-normalized usage per customer through October 31, 2017. The Stipulation also provides that the Company shall annualize revenues and include the effects of inflation through October 31, 2017.

Update labor costs through September 30, 2017

The Stipulation requires the Company to update its labor costs through September 30, 2017.

ELECTRIC – ACCOUNTING

Adjust for lost industrial revenues due to Hurricane Matthew

As discussed by Company witness Bateman, DEP made an adjustment to increase revenues to reflect the estimated net lost revenues from residential and commercial customers as a result of Hurricane Matthew. Public Staff witnesses Peedin and Williamson testified that because industrial customers were also affected by the hurricane, the Public Staff recommends modifying this adjustment to include the net lost revenues from the industrial class.

In her rebuttal testimony, witness Bateman testified that the Company does not oppose Public Staff' witness Williamson's recommendation to include the impact of lost industrial revenue due to Hurricane Matthew. However, the Company does oppose the calculation proposed by witness Williamson. In its initial adjustment regarding lost revenue due to Hurricane Matthew, the Company stated that it did not include industrial class customers in the estimate because "using customer averages would not be reliable due to significant usage differences among customers" for this class. Witness Williamson used average daily usage for the industrial class in his calculation. Because of the impact that a handful of extremely high usage customers can have on this average calculation, the Company looked at the detailed hourly customer data for industrial customers on the Real Time Pricing rate schedule. Using this approach, the Company was able to determine that 21 of these high usage customers did not lose power as a result of the storm. Therefore, as she explained in her rebuttal testimony, witness Bateman recalculated witness Williamson's adjustment to exclude these customers from the average daily usage calculation. As part of settlement, the parties agreed to accept the Public Staff's adjustment with the modification proposed in witness Bateman's rebuttal testimony.

Adjust aviation expenses

In its initial filing, the Company removed 40.24% of the corporate aviation costs. In its adjustment, the Public Staff removed 75.55% of the costs. For the purposes of settlement, the parties agreed to an adjustment that removes 50% of the costs.

Adjust executive and incentive compensation

In its Application, the Company removed 50% of the compensation of the four Duke Energy executives with the highest level of compensation allocated to DEP in the Test Period. Witness Bateman explained that while the Company believes these costs are reasonable, prudent, and appropriate to recover from customers, DEP has, for purposes of this case, made an adjustment to this item.

Public Staff witness Peedin recommended removal of 50% of the compensation for a fifth executive, as well as 50% of the benefits associated with the top five executives. (Tr. Vol.18, pp. 67-70.) Witness Peedin recommended disallowance of incentive compensation related to earnings per share (EPS) and total shareholder return (TSR). (Id.) Witness Peedin asserts that incentive compensation tied to EPS and TRS metrics should be excluded because it provides a direct benefit to shareholders only, rather than to customers. (Id. at 70.) Witness Peedin also asserts that executive compensation and benefits should be excluded because these executives' duties are closely linked to shareholder interests. (Id.) DoD/FEA witness Cannady also recommended removal of non-qualified pension expense. (Tr. Vol. 17, p. 183.) Witness Cannady, while acknowledging that the Commission has historically allowed non-qualified pension expense, advocates its exclusion in this case because of her belief that customers should not be responsible for benefits available only to management and executive employees at the higher end of the pay scale. (Id. at 183-84.)

In his rebuttal testimony, Company witness Silinski testified that these proposed adjustments are inappropriate and should be rejected by the Commission. Witness Silinski explains that witnesses Peedin and Cannady erroneously assume a divergence of interests between shareholders and customers that does not, in fact, exist. (Tr. Vol. 13, p. 56.) To the contrary, employee compensation and incentives tied to metrics such as EPS and TSR directly benefit customers, because those metrics reflect how employees' contributions translate into overall financial performance. (Id.) EPS, for example, is a direct measure of the Company's performance, and that performance is reflective of how certain goals – safety, individual performance, team performance, and customer satisfaction (all of which are components of incentive pay) – are met in a cost-effective way. (Id.) Divorcing employee performance from such an important measure of a rate-regulated company's overall health is unreasonable and counterproductive. (Id.) Additionally, witness Silinski explained that witness Peedin's proposed adjustment to disallow incentive recovery would wipe out recovery of compensation for employees who are directly focused on and responsible for vital customer service functions, such as engineers, distribution instrument and control technicians, transmission substation technicians, distribution line technicians, customer care associates, system operators, and nuclear plant control operators. (Id. at 59-63.) Disallowing a portion of the compensation for these employees sends a signal to the Company that these costs provide no value to the customer and should, therefore, be eliminated. (Id. at 64.) Finally, in order to attract a well-qualified and well-led workforce, the Company must compete in the marketplace to obtain the services of these employees. (Id. at 57.) The recommended adjustments would render the Company's compensation uncompetitive with the market, which would result in the inability to attract and retain the talent the Company needs to run a safe and reliable electric system. (Id.) Witness Silinski pointed out that no witness in this proceeding challenges the reasonableness of the level of compensation expenses reflected in the rate-making test period for the Company. (Id.) Nor has anyone challenged that the compensation and benefit programs are necessary and critical in their entirety for attracting, engaging, retaining, and directing the efforts of employees with the skills and experience necessary to safely, efficiently, and effectively provide electric services to DEP customers. (Id.) Accordingly, for the Commission to abrogate these incentives and benefits would be a severe detriment to customers and would result in disallowance of a prudently incurred cost. (Id.)

The Stipulation provides that "[t]he Company accepts the Public Staff's proposed adjustment to executive compensation to remove 50% of the compensation for the five Duke Energy executives with the highest amounts of compensation, and to remove 50% of the benefits associated with those five executives." (Stipulation Paragraph III.F.)

As part of settlement, the parties agreed to accept the Public Staff's adjustment with a modification to limit the incentives removed. This agreement is reflected in Section III.Q. of the Stipulation, which provides that the Company's employee incentives should be adjusted to remove the cost of the STIP Plan based on the Company's EPS for employees who qualify for the Company's LTIP.

Adjust Sutton CT Blackstart plant cost

In its Application, the Company requested that its capital investment in the Sutton Blackstart CT combustion turbine project, approximately $120 million, be included in rate base. In his direct testimony, Public Staff witness Metz recommended that approximately $6.4 million of the project be excluded from rate base, which represents the costs associated with sending the combustion turbines (CTs) to a General Electric (GE) service facility in Houston, Texas for disassembly and cleaning after debris was discovered in one of the CTs. (Tr. Vol. 7, p. 315.)

In his rebuttal testimony, Company witness Delowery testified that the Company believes that it appropriately and prudently managed the construction and associated costs of the project and notes that the project was delivered on time and below the estimated budget. (Id. at 363-364.) Witness Delowery further stated that Company believes it was prudent in its actions to return the equipment to GE when it discovered the issues and, therefore, should not be penalized for safety/operational decisions. Additionally, witness Delowery testified that the actual cost of the removal of the equipment, disassembly, inspection, leasing of replacement engines, and reassembly totaled $4.6 million, not $6.4 million. (Id. at 363.)

As part of Stipulation, the parties agreed to reduce rate base by $2.788 million (NC retail), along with other depreciation expense and cost of capital effects. Witness Bateman explained that while DEP believes these costs were prudently incurred, for the purposes of settlement, the Company has agreed to the adjustment. The Stipulation provides that this adjustment shall be permanent for ratemaking and regulatory accounting purposes.

Adjust Mayo Zero Liquid Discharge plant cost

In its Application, the Company requested that its approximately $147 million capital investment in the Mayo Unit 1 Zero Liquid Discharge (ZLD) treatment system for flue gas desulfurization wastewater for environmental compliance and operational flexibility be included in rate base. In his testimony, Public Staff witness Lucas testified that the project experienced construction delays and cost overruns and, therefore, $34.3 million, the difference between the final project costs and DEP's estimate at the outset of the project, should be excluded from rate base. (Tr. Vol. 18, p. 229.)

In his rebuttal testimony, Company witness Delowery testified that the Company appropriately managed the construction of the project, that all costs for the project were prudently incurred, and, therefore, that the Public Staff's recommendation should be rejected by the Commission. (Tr. Vol. 7, p. 348-350.) In support, witness Delowery testified that the Company followed its extensive bidding processes and evaluation criteria to procure the selected contractors and a contracting strategy that appropriately managed risks and costs, based on what the Company knew or should have known at the time, which were prudent actions. (Id. at 348-49.) He further stated that, excluding the power agency share, the final project costs was only 4% higher than the Company's cost estimate range at project approval. (Id. at 355.)

As part of settlement, the parties agreed to reduce rate base by $10.393 million (NC retail), along with depreciation expense and other cost of capital effects. Witness Bateman explained that while DEP believes these costs were prudently incurred, for the purposes of settlement, the Company has agreed to the adjustment. The Stipulation provides that this adjustment shall be permanent for ratemaking and regulatory accounting purposes.

Vegetation Management

In its Application, the Company did not include any adjustment to its test period vegetation management expenses. Company witness Simpson testified that "[v]egetation management is a critical component of the Company's power delivery operations and the continued effort to drive performance for customers' benefit." (Tr. Vol. 9, pp. 29-30.) Witness Simpson explained that in addition to routine circuit maintenance, the Company's vegetation management program includes herbicide spraying, removal of hazard trees outside the area normally maintained on a distribution line, certain unplanned work due to recommendation by reliability engineers or customer requests, and a formal review process following vegetation-related outages. (Id. at 30.)

In response to the Company's request, Public Staff witness Peedin recommended adjusting the Company's target vegetation management cycle from 6 years to 7 years. (Tr. Vol. 18, p. 76.) Based on such an adjustment, witness Peedin recommended reducing the Company's test period vegetation management expenses by $4.06 million. (Id.)

In response, Company witness Simpson testified that witness Peedin's adjustment does not take into account the contract rate increase of 4.18% which the Company expects for future vegetation management contracts, driven by a tightening labor market and increased safety standards. (Tr. Vol. 9, pp. 49-50.) Witness Simpson further testified that the Company is considering a shift to a 7-year cycle for vegetation management, but that plan has not yet been approved. (Id. at 50.)

The Company thereafter modified its request to increase test period vegetation management expense by $1.48 million. (Updated Bateman Exhibit 1 – Hearing, p. 3, line 37.) This adjustment included the impact of the cycle change recommended by witness Peedin and the increase in contract rates supported by witness Simpson.

The Stipulation provides that the Public Staff withdraws its recommended adjustment to the Company's test period vegetation management expenses. The Company also withdraws its recommended adjustment to the test period vegetation management expenses included in the second supplemental testimony of witness Bateman filed November 17, 2017. The effect of this is that the Stipulating Parties agree with the Company's original position filed in this case.

Outside Services

Witness Peedin testified that during 2016, the test year in this case, the Public Staff reviewed costs for outside services associated with expenses that were indirectly charged to DEP by Duke Energy Business Services (DEBS) as well as those incurred by the Company directly. Witness Peedin stated that the Public Staff's investigation revealed charges that were related to legal services for coal ash and groundwater issues related to coal ash. She recommended removing these expenses from O&M in the test period. Witness Peedin noted that the Public Staff also found certain expenses that were allocated to DEP that should have been directly assigned to other jurisdictions that she recommended be removed. In the Stipulation, the Company agreed that $80,000 of costs associated with outside services should be removed, as recommended by the Public Staff and reflected on Settlement Exhibit 1. This amount does not include costs incurred for certain legal services related to coal ash, which are included in the Unresolved Issues, as described in the Stipulation.

Removal of costs to achieve Duke Energy-Piedmont merger

On September 29, 2016, in Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682, the Commission issued its Order Approving Merger Subject to Regulatory Conditions and Code of Conduct (Merger Order), which approved the merger between Duke Energy and Piedmont Natural Gas Company (Piedmont).

During the test year in this case, DEP has included in operating expenses approximately $3.8 million on a North Carolina retail basis that it identified as systems and transition costs to achieve merger savings. DEP has not requested recovery of these costs in rate base, but instead has chosen to include them in O&M expenses. Witness Peedin explained that the Public Staff believes that the Company is not permitted to recover these costs in this manner by the Merger Order. (Tr. Vol. 18, p. 74.)

In her rebuttal testimony, witness Bateman explained that the Company opposed this adjustment. (Tr. Vol. 6, p. 162.) She noted that the costs that witness Peedin has removed are operating expenses, not capital costs. (Id. at 162-63.) According to witness Bateman, the Merger Order does not specifically address cost recovery for operating expenses associated with achieving merger savings. (Id. at 163.) Witness Bateman explained that operating expenses are different from capital costs, and the Company cannot simply capitalize and depreciate operating expenses like witness Peedin suggests. (Id.)

Notwithstanding their differing positions on the costs to achieve the Duke Energy/ Piedmont merger, in the spirit of settlement and in the context of the Stipulation as a whole, the Company and the Public Staff have resolved these issues. Accordingly, the Stipulation provides that the Company accepts the Public Staff's proposed adjustment to remove costs to achieve the Duke Energy/Piedmont merger

ELECTRIC – ACCOUNTING

Adjust Allocations by DEBS to DEP

DEBS is the company that provides services to various affiliated entities of Duke Energy Corporation. (Tr. Vol. 18, p. 74.) As discussed above, during the test year Duke Energy acquired Piedmont, and the Commission approved the merger on September 29, 2016. (Id.) According to Public Staff witness Peedin, this change, along with updates related to other affiliated entities, has caused the DEP allocation factors to decrease. (Id.) As part of settlement, the parties agreed to accept the Public Staff's adjustment with a modification to include an annualized amount of DEBS costs related to Piedmont in the calculation. (Id.)

Lobbying and Board of Director expenses

Witness Peedin made an adjustment to remove 50% of the expenses associated with the Board of Directors of Duke Energy that have been allocated to DEP. (Tr. Vol. 18, 69.) She explained that the rationale for this adjustment is closely linked to the premise of the adjustment made by the Public Staff related to executive compensation. (Id.)

With respect to lobbying expenses, witness Peedin noted that the Company made an adjustment to remove some lobbying expenses from the test year. (Id. at 75.) She further adjusted O&M expenses to remove what she characterized as additional lobbying costs, including O&M expenses that she believed were associated with stakeholder engagement, state government affairs, and federal affairs that were recorded above the line. (Id.) In her rebuttal testimony, witness Bateman explained why the Company opposed this adjustment and disagreed with witness Peedin's characterization of these expenses. (Tr. Vol. 6, p. 166.) Witness Bateman testified that in 2016, the Company engaged a third-party consulting company to perform a detailed time study for the purpose of determining the percentage of time certain individuals spent on lobbying activities per the federal definition in Title 29, Section 367.4264 of the Code of Federal Regulations. (Id.) A report with the results of the study was delivered to the Company in August 2016, and the Company booked journal entries to ensure that the 2016 labor costs were aligned with the results of the independent study. (Id. at 167.) The results are that in the test period, the company booked below the line 66% of the expenses for federal affairs, 75% of the expenses state government affairs, and 10% of the expenses for stakeholder engagement. Witness Bateman concluded that no further adjustments were necessary or justified. (Id.)

Nevertheless, in the spirit of settlement and in the context of the Stipulation as a whole, the Company and the Public Staff have resolved these issues, and in Section III.W. of the Stipulation, the Company agreed to accept the Public Staff's recommended adjustments to lobbying and Board of Directors' expenses. Both parties presented evidence to support their respective positions in direct and rebuttal testimony; however, no party provided clarity regarding the settled position. As previously discussed, the Stipulation is recognized as a series of give-and-take positions by the party.

Sponsorship Expenses

The Stipulation provides that the Company's sponsorships and donations expense should be reduced by the amount paid to the U.S. Chamber of Commerce.

Harris COLA

In 2006, DEP selected a site at the Shearon Harris Nuclear Power Plant in Wake County, North Carolina to evaluate the possibility of nuclear expansion to serve North Carolina and South Carolina customers. As Company witness Fallon explained, new nuclear generation has a long lead time to license and construct. (Tr. Vol. 12, p. 39.) As such, actions must be taken in advance of construction to ensure a nuclear option is available when needed by customers. From 2005 through early 2013, the Company undertook the activities necessary to develop a COLA for the Harris Nuclear Project (HNP).

In 2013, the Company determined that additional nuclear units were no longer needed within the planning horizon of the IRP. As witness Fallon explained, the Company determined that proceeding with the HNP was no longer necessary and no longer in the best interest of customers. (Id.) As a result, the Company filed, and the Commission approved in Docket No. E-2, Sub 1035, a petition seeking an accounting order to defer and amortize the capital costs incurred relating to the HNP. DEP incurred approximately $70.3 million in HNP costs. (Tr. Vol. 12, p. 25.) Company witness Fallon explained that the North Carolina allocable share of the development costs is approximately $45.3 million.

The Company proposed a five-year amortization period in this rate case to recover the cost expended on the HNP. Public Staff witness Peedin recommended modifying the amortization period from five years to eight years. The Stipulating Parties have agreed to the recovery of the HNP costs over an eight-year amortization period as recommended by Public Staff witness Peedin.

DoD/FEA witness Cannady recommended that the Commission disallow all HNP costs that the Company incurred after 2011 as being imprudent. (Tr. Vol. 17, p. 175.) Witness Cannady based her conclusion on: (1) a reduction in spending on internal labor and other direct costs from 2011 to 2013, (2) a statement of then CEO Jim Rogers that the decision to build new nuclear depended on gas prices, carbon assumptions, and growing demand, which she then attempted to demonstrate were not supportive of new nuclear at the time, and (3) the results of a third-party IRP analysis performed for DEP in 2012 that supports a conclusion that DEP should have stopped the project in 2011.

According to witness Cannady, the Company reduced internal labor costs and overall COLA-related activity after 2011. Witness Cannady argued that this evidenced that the Company no longer viewed pursuit of the COLA after 2011 as prudent. (Tr. Vol. 17, p. 178.) Based on the DEP response to DoD/FEA Data Request No. 1, Item 1-16, the internal labor and other direct costs averaged $4 million annually from March 2008 through December 2011, and only $1.1 million from January 2012 through May 2013. (Id.) Witness Cannady contends that if the Company remained convinced that continued pursuit of the COLA after 2011 was prudent, it would have addressed issues surrounding the AP1000, emergency preparedness, outstanding Nuclear Regulatory Commission (NRC) requests for information, and other environmental concerns expressed by the U.S. Army Corps of Engineers. (Id.)

In response, witness Fallon explained in his rebuttal that direct cost and labor cost and/or the varying spending levels are not indicators of how aggressively DEP is pursuing the project. Instead, these costs are driven by a variety of factors, including nuclear review schedule. Witness Fallon highlighted that DEP pursued the COLA in a deliberate and methodical fashion, with appropriate cost levels for labor and direct costs throughout the project. (Tr. Vol. 12, p. 52.) In regard to the NRC schedule, witness Fallon explained that DEP expended significant effort responding to the Requests for Additional Information (RAIs) over the 2008-2011-time period. (Id. at 53.) Over time, as DEP answered the RAIs, the workload and spending decreased. By the end of 2011 and the start of 2012, DEP had very few outstanding RAIs, and the NRC's primary focus was on approving the AP1000 DCD and issuing Combined Licenses (COLs) to the Vogtle and V.C. Summer projects. (Id.) During that same time, other factors, such as the review of the Waste Confidence Rule, also impacted the level of activity. Witness Fallon further pointed out that witness Cannady's analysis distorts the average by comparing full year spend for the period against less than five months of spend in 2013 when the Harris COLA was suspended. (Id. at 54.) He went on further to explain that the data request response relied upon by witness Cannady for her analysis demonstrates that there have been significant swings in labor cost and direct cost throughout the course of the HNP. (Id.) In addition, where labor cost declined from 2011 to 2012, overall spending on the project was almost the same in 2011 and 2012. (Id. at 54-55.)

Witness Cannady also argued that a 2012 statement of Duke Energy CEO Rogers further established the imprudence of moving forward with the Harris COLA. (Id. at 179.) The statement refers to decisions on nuclear being strongly related to a price on carbon and the cost of natural gas. Witness Cannady contends that the Company should have reevaluated nuclear energy based upon changes to natural gas and carbon. (Id. at 179- 80.) Witness Cannady argued further that DEP'S IRP showed in 2012 that there would not be enough additional demand to justify a nuclear plant until at least the 2030-35 timeframe. (Id. at 180-81.)

As it relates to the resource planning statement made by Jim Rogers, witness Fallon explained that witness Cannady's near-term focus on current gas assumptions and demand growth failed to understand that DEP appropriately considers these factors through the Company's IRP process, and builds its generation system to meet customer needs in the future and over a long-term planning horizon. (Tr. Vol. 12, p. 58.) Although witness Cannady utilized historical natural gas prices to justify her conclusions, the Company does not make future resource decisions based on near-term historical natural gas prices. (Id. at 58.) The Company appropriately relied upon the IRP. In addition, potential carbon legislation, regulation, and litigation were major concerns for the industry in the 2012-2013 timeframe, with many coal-fired plants being shut down across the country to comply with environmental regulations. The Clean Power Plan was not proposed until June 2014, well after the HNP was suspended. Finally, DEP witness Fallon testified that the Company's decision to hire an independent consultant to perform a long- term needs assessment, which was not completed until February 2013, was a prudent and reasonable decision to ensure that DEP was appropriately planning its system for future customer needs and that suspending the Harris COLA review would not harm customers based on the current projected needs.

Based on the discussion above and the evidence in the record, the Commission disagrees with DoD/FEA's position that the Commission should disallow all costs associated with the Harris COLA that the Company incurred after 2011 as being imprudent. The Commission agrees with Company witness Fallon that the Company appropriately relied on its IRP conclusions to make the determinations of what types of resources were needed and when. The Commission further agrees with DEP witness Fallon that major changes and concerns (specifically environmental regulations) were being contemplated in the utility industry in the 2012-2013 timeframe that would affect future decisions. Further, the Commission finds that DEP was prudent and reasonable with its decision to hire an independent consultant to perform a long-term needs assessment to review the ramifications of the Harris COLA review and future system planning needs. For the reasons discussed above, the Commission finds and concludes that DOD/FEA's recommendation to disallow the Harris COLA costs should be rejected.

With respect to other intervenors, NC WARN contends in its post-hearing Brief that DEP should be limited on recovering costs associated with the HNP. NC WARN states that the Commission should find that none of the costs associated with the predevelopment and COLA preparation for the HNP should be borne by ratepayers. NC WARN notes that recovery of the costs associated with the Harris COLA was included in the Stipulation between the Company and the Public Staff, with amortization of the costs over eight years. NC WARN states in its Brief that the final determination as to what is just and reasonable to be included in rates is up to the Commission, not the settling parties. NC WARN further discusses the setting or "fixing" of rates by the Commission. NC WARN stated that G.S. 62-133(b) states that the Commission must:

> Ascertain the reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period, in providing the service rendered to the public within the State, less that portion of the cost that has been consumed by previous use recovered by depreciation expense. In addition, construction work in progress may be included in the cost of the public utility's property under any of the following circumstances:
>
> a. To the extent the Commission considers inclusion in the public interest and necessary to the financial stability of the utility in question, reasonable and prudent expenditures for construction work in progress may be included, subject to the provisions of subdivision (4a) of this subsection.

NC WARN recounts the history of DEP's filings with the NRC and the Commission, beginning in 2008 and including DEP's petition filed on August 15, 2013, for an accounting order to defer in a regulatory asset account certain costs incurred with regard to the Harris COLA. NC WARN states that in the period between 2008 and 2013, DEP incurred costs of approximately $69 million on the project, and that the North Carolina jurisdictional allocation of this amount is approximately $45 million. (Tr. Vol. 12, page 48) NC WARN notes that DEP seeks recovery of the entire amount of funds spent on the licensing of the HNP.

Further, NC WARN opines that prior to Senate Bill 3, Session Law 2007-397, it could be argued that development costs for any project should be borne by the utility, and not the ratepayers, unless the plant comes online and is used and useful. Additionally, NC WARN states that in Senate Bill 3 the General Assembly made an exception to the general rule, and specifically for nuclear plants, as the costs of development and construction are disproportionate to those of other generating facilities and the timeline for development and construction, including NRC review of the COLA, is measured in decades rather than years. According to NC WARN, Section 7 of Senate Bill 3, G.S. 62-110.7, allows recovery for the project development costs for a nuclear facility under certain conditions. Moreover, NC WARN states that G.S. 62-110.7 did not become effective until January 1, 2008, pursuant to Section 16 of the bill, and that no costs incurred for nuclear plant construction prior that date should be recoverable under any legal theory. NC WARN states that DEP witness Fallon testified that by the end of 2007 DEP had spent $13 million on the HNP, and he confirmed that this amount is the North Carolina jurisdictional share. (Tr. Vol. 12, p. 67).

NC WARN states that DEP did not apply to the Commission for a certificate of public convenience and necessity (CPCN) pursuant to G.S. 62-110.1 and opines that this step is crucial for cost recovery under G.S. 62.110(b). Without the CPCN, none of the costs spent are reasonable, according to NC WARN. Finally, NC WARN states that even when a CPCN is issued and construction has begun, and subsequently a plant is cancelled, the Commission is required to make a finding as to whether the plant is no longer in the public interest. NC WARN cites G.S. 62-1109(e), which states that:

> [o]nce the Commission grants a certificate, no public utility shall cancel construction of a generating unit or facility without approval from the Commission based upon a finding that the construction is no longer in the public interest.

NC WARN states that the prudency of the costs incurred was the principal issue in the 1988 Harris Order discussed by DEP witness Wright. (Tr. Vol. 21, p. 32) NC WARN states that the Commission conducted a prudency audit of costs associated with major equipment purchases and construction for the multiple cancelled units, and that unlike the present case, the first round of Harris construction was made pursuant to a CPCN, and that the one unit currently operating was credibly found to be used and useful. State ex rel. Utilities Commission v. Thornburg, 325 N.C. 484, 385 S.E.2d 463 (1989) (Thornburg II).

In conclusion, NC WARN asserts that the Commission should find that none of the costs associated with the predevelopment and COLA preparation for the Harris nuclear expansion project should be borne by ratepayers.

The Commission disagrees with NC WARN on this issue as it does not believe that the utility should have to bear the entire amount of costs associated with predevelopment and COLA preparation for the HNP since the facility was originally planned to be for the benefit of DEP's customers and subsequently was cancelled due to the HNP no longer being the best option. The Commission is of the opinion that just and reasonable rates result by the utilization of the eight-year amortization period agreed to in the Stipulation. By amortizing, or spreading the costs, over eight years, the ratepayers are not bearing the entire cost in rates today. The Commission further concludes that the costs of development of a generation plant for the use of a utility's customers should be recoverable if deemed prudent by the Commission. The Commission deems the costs related to the Harris COLA prudent, given the facts and circumstances discussed in the record. Therefore, NC WARN's position is not accepted.

For all of the reasons cited above and considering all of the evidence presented, the Commission finds that the costs of the Harris Site Development should be recovered consistent with the Stipulation, as the Commission concludes that this provision of the Stipulation is just and reasonable.

Customer Connect Program

DEP witness Fountain testified that DEP has extracted all of the value it can obtain from its current customer information system (CIS), which is over 30 years old. He stated that customers expect more and quicker access to information about their account and that replacing the present CIS will be more cost-effective than attempting to upgrade it.

DEP witness Hunsicker testified that the CIS manages DEP's billing, accounts receivable, and rates, and that it is the central repository for customer information. She explained that the current CIS was designed to communicate with the meter located at the premise, and not as a customer information storage or retrieval tool. Thus, the current CIS has limitations in accessing customer account history and other information, and in opening, closing, or transferring customer accounts, especially between DEP and DEC. Another limitation is that the current CIS does not record a bill credit. Thus, bill credits for net metering customers must be manually recorded. Witness Hunsicker further testified that investments to modify and upgrade the current CIS would not be practical or sustainable. She stated that a new CIS will provide numerous benefits, including quicker and simplified procedures for accessing customer information and serving customer's needs; improvements in bill formats; easier integration of new rate structures; and flexibility in implementing Advanced Metering Infrastructure (AMI) meters.

Witness Hunsicker testified that DEP will begin analysis and design of the new CIS, called Customer Connect Program (CCP), in January 2018, and that it plans to have the new CCP in service in 2021. The total cost will be approximately $155 million. DEP is requesting that the anticipated costs to be incurred from 2018 through 2020, $10.6 million per year, be included in its new rates.

In supplemental testimony filed on September 15, 2017, DEP witness Laura Bateman adjusted the annual revenue requirement for the CCP to reflect a reduction of $146,000.

Public Staff witness Floyd testified that the Public Staff does not agree that the costs of analysis and design of DEP's new CCP should be included in DEP's current rates. He stated that such costs do not meet the "used and useful" utility plant test in G.S. 62-133(b)(1), and, therefore, the Commission should disallow the costs.

DoD/FEA witness Cannady testified that the CCP costs should not be recovered by DEP in this rate case because: (1) they are not known and measurable, and (2) the CCP is a component of smart grid and should be evaluated for reasonableness and prudency at the same time as AMI and other smart grid projects.

In rebuttal testimony, witness Hunsicker responded to the Public Staff's position that the costs of the CCP should be disallowed because it will not be used and useful until it is fully operational in the summer of 2021. She testified that DEP is requesting rate recovery of the O&M needed to build the CCP, or, in the alternative, a deferral of the O&M so that it can be recovered in a future rate case. She further testified that DEP will employ a phased approach that will result in some of the CCP functions being available and beneficial to customers in 2018. These include the "360 degree view" feature that will use customer contacts with DEP over social media, voice mail, and web sites to improve DEP's ability to communicate with its customers.

In addition, witness Hunsicker disagreed with DoD/FEA witness Cannaday's position that the costs of the CCP are not known or measureable at this stage. She stated that DEP has entered into fixed price contracts for a significant portion of the CCP, including software, system integrator professional services, and training.

In its post-hearing Brief, EDF contends that the Commission should not grant DEP's request to recover costs for its CCP because: (1) the CCP will not be used and useful within a reasonable time after the test period, (2) even if some portion of the CCP were available within a reasonable time after the test period, the limited functionality is not worth the amount DEP seeks to recover, and (3) DEP has failed to manage the CCP project efficiently to maximize customer benefits arising from access to energy usage data.

With regard to whether the CCP will be used and useful, EDF states that DEP's planned in-service date of 2021 is merely a target date and DEP can offer no assurances that the CCP will actually be in service in 2021.

With respect to limited functionality, EDF contends that DEP offered no evidence regarding the precise new services customers would receive from the CCP, how much customers would benefit from these new services, or whether the same services could be provided manually. Moreover, EDF maintains that DEP has the burden of proof to identify and establish the precise new services the CCP will perform, when the new services will be available, and how the new services will benefit customers, and that DEP failed to meet its burden of proof on these issues.

With regard to EDF's assertion that DEP has failed to manage the CCP project efficiently, EDF states that DEP has failed to efficiently manage the project by failing to analyze how Green Button Connect could be used to maximize the benefits customers would receive from enhanced access to energy usage data.

In the Stipulation, DEP and the Public Staff agreed that the CCP will be removed from DEP's revenue requirement. However, DEP will be authorized to establish a regulatory asset to defer and amortize the CCP costs. The regulatory asset account will accrue AFUDC until the DEP Core Meter-to-Cash release (Releases 5-8) of the CCP project goes into service or January 1, 2022, whichever is sooner. At that point, the costs will be amortized over 15 years. In addition, DEP will be required to file reports regarding the development of the CCP each year on December 31 for the next five years or until the CCP is fully implemented, whichever is later.

The Commission finds and concludes that the Stipulating Parties' agreement with regard to the CCP is a just and reasonable path forward to allow DEP to develop its CCP, and to defer the costs of the program until there is a used and useful component of the CCP implemented, that being the Core Meter-to-Cash component. This resolves the most substantial concern expressed regarding the CCP. In addition, the other substantial concern – that the costs of the CCP are not known or measurable at this stage – is resolved by placing the costs in a deferred account, thereby making the costs subject to review in a subsequent proceeding. As a result, the Stipulating Parties' agreement with regard to the CCP should be accepted.

Customer Usage Data

In his direct testimony, NC Justice Center witness Howat testified that questions regarding the effectiveness of existing regulatory consumer protections and credit and collection practices can only be answered through data-driven analysis of trends in customer arrearages, service disconnections, and related indicators of the magnitude of utility payment troubles. Witness Howat further testified that monthly reporting of such data is crucial for ongoing assessments of the state of home energy security among DEP's residential customers and for evaluating the effectiveness of programs and policies intended to protect that security. (Tr. Vol. 13, pp. 258-59.) Witness Howat recommended that DEP collect and make publicly available, on a monthly basis and in readily accessible spreadsheet format, numerous data points by zip code. Further, he contended that many utilities in the United States regularly report such information, including those in Ohio, Illinois, Pennsylvania, and Iowa. (Tr. Vol. 13, pp. 260-64.)

In her rebuttal testimony, DEP witness Hunsicker responded to witness Howat's recommendation that DEP be required to collect, report by zip code, and make publicly available data regarding residential customer billings, receipts, arrearages, notices of disconnection, uncollectibles, and similar information that is specific to low-income residential customers. Witness Hunsicker testified that DEP disagrees with this recommendation for three reasons: (1) DEP presently complies with all of the Commission's requirements for customer data collection and retention, (2) DEP would be required to collect more customer information than it presently collects and stores, and (3) witness Howat's recommendation would create privacy concerns regarding sharing of customer data. She further noted that DEP does not currently obtain data, such as income level, that would enable it to distinguish between low-income and middle- or upper-income customers.

In its post-hearing Brief, NC Justice Center states that according to DEP the Company's existing CIS "does not enable ready access to account histories that can be important in non-pay situations" (Tr. Vol. 9, pp. 191-92), but that DEP's new CCP will be fully integrated into DEP's other systems and will include the ability to interface with new smart meters and automate complex billing functions. (Tr. Vol. 9, pp. 144-45.) NC Justice Center urges the Commission to require that DEP, upon installation of its new CCP, develop and implement a data collection and reporting protocol to regularly collect and report data related to customer energy usage and demographics, consistent with the recommendations of witness Howat, and that the Commission Staff should conduct a public technical session with DEP and interested stakeholders during the design phase of the data collection and reporting protocol in order to ensure that resulting reports are of benefit to all parties.

NC Justice Center further states that the National Association of Regulatory Utility Commissioners (NARUC) and the National Association of State Utility Commission Advocates (NASUCA) have adopted resolutions calling for the collection and reporting of precisely the types of information recommended by witness Howat, and notes that DEP witness Hunsicker stated that DEP does not disagree with the goals cited by NARUC and NASUCA. (Tr. Vol. 9, pp. 209-10, 212-13.)

The Commission appreciates the recommendation of NC Justice Center that DEP be required to regularly collect and report data related to customer energy usage and demographics once DEP's CCP is operational. However, the Commission is not persuaded that this is the time or the proceeding in which to impose such requirements on DEP. The Commission is addressing issues regarding access to customer usage data in Docket No. E-100, Sub 147. In addition, DEP has not initiated a full deployment of AMI, which could be another resource for collection and reporting of the data that NC Justice Center seeks to require DEP to collect and report. The parties and Commission will know more about the availability of such data, and the cost of collecting and reporting it, once the CCP and AMI are implemented. As a result, the Commission declines to adopt NC Justice Center's proposal at this time.

Deprecation Rates

Company witness Doss introduced Doss Exhibit 4, the Depreciation Study which was prepared by Gannett Fleming Valuation and Rate Consultants, LLC. (Tr. Vol. 10, p. 3.) As explained by witness Doss, the Depreciation Study included updates to estimates of final plant decommissioning costs for steam, hydraulic, and other production plants, as well as updated forecasted generation plant retirement dates. (Id. at 17.) In addition, witness Doss introduced Doss Exhibit 5, the Decommissioning Cost Estimate Study prepared by Burns and McDonnell, an external engineering firm. This report included estimates for final decommissioning costs at steam, hydraulic, and other production plants.

As witness Doss explained, the depreciation rates for various fossil and hydro plants were also updated due to changes in the probable retirement dates. The probable retirement dates were updated primarily to align dates with current licenses, industry standards, or operational plans due to aging technology, assumptions for future environmental regulations, or new planned generation. (Tr. Vol. 7, p. 72.) The Depreciation Study also incorporates generation assets placed in service since the last study. Finally, the average service life and net salvage assumptions were updated for various distribution, transmission, and general plant assets. (Tr. Vol. 10, p. 88.)

The Stipulating Parties have agreed that the Company's depreciation rates will be set based on the rates set forth in the Company's most recent depreciation study, subject to the following inputs: (1) a 10% contingency; (2) a 10-year remaining life for the meters that are being retired pursuant to the Company's AMI program; (3) a 70-year R2 curve (70-R2) for Account 356; (4) a negative 10% net salvage for Account 366; (5) a 17-year life for new AMI meters; and (6) a 20-year amortization period for Accounts 391 and 397. The record in this case supports the utilization of the Company's most recent Depreciation Study as the basis for setting depreciation rates as amended by the Stipulation. A discussion of the specific issues related to depreciation, as addressed by the various witnesses, is presented below.

Contingency

The Company's Decommissioning Cost Estimate Study prepared by Burns and McDonnell included a 20% contingency to cover unknowns. Witness Kopp explained that a contingency cost is included in the Company's Decommissioning Study to account for unspecified, but reasonably expected additional costs to be incurred by the Company during the execution of decommissioning and demolition activities. (Tr. Vol. 12, p. 169.) Indeed, witness Kopp explained that costs incurred by the Company for the decommissioning and demolition of Cape Fear, H.F. Lee, Sutton, Robinson, and Weatherspoon plants were actually 11% higher than forecasted by the Burns and

McDowell Decommissioning Study completed in 2012 for DEP. (Id. at 11.) Public Staff witness McCullar recommended a 0% contingency, expressing concerns that the contingency factor is an uncertain cost in the future that DEP has not specifically identified. (Tr. Vol. 7, pp. 266-67.) Witness Kopp expressed concern over witness McCullar's position because it "misrepresents the purpose of inclusion of contingency in the estimates . . . . [C]ontingency represents costs that are reasonably expected to be incurred, [and] these costs were actually incurred by the Company on projects that have been commissioned to date." (Tr. Vol. 12, p. 176.)

Witness McCullar also expressed concern that "inclusion of contingency costs inappropriately puts all the risk of the future unknown, unidentified costs on the current ratepayers." (Tr. Vol. 12, p. 179.) Witness Kopp disagreed due to the fact that the costs are anticipated to be incurred costs, and that recent experience by the Company has shown that it is reasonable to expect to incur these costs. (Tr. Vol. 12, p. 179.) Although DEP and the Public Staff held opposing views on this issue, both parties have stipulated regarding this issue. Similarly, Fayetteville PWC witness Hughes argued for a 10% contingency factor to be applied to direct costs to cover unknowns. (Tr. Vol. 7, pp. 206-07.) Witness Hughes' recommendation is based on the fact that the 10% contingency factor is equal to the contingency factor used in the 2010 Depreciation Study to develop rates in DEP's last rate case. (Tr. Vol. 7, pp. 207-08; Tr. Vol. 12, p. 179.) As explained by witness Kopp, the prior Decommissioning Study also included a 20% contingency. (Tr. Vol. 12, p. 180.)

As the result of a settlement in the last case, the contingency was reduced. (Id.) However, witness Kopp explained that a 20% contingency is reasonable and appropriate for the decommissioning cost estimates, stating, "[T]he Company's experience with actual demolition costs in total on five recent projects has exceeded the BMcD estimate in total for these five projects." (Id.) Although witness Kopp cautioned that a 10% contingency could put risk on future ratepayers, the issue was stipulated utilizing a 10% contingency. (Id.)

In light of all of the evidence, the Commission finds and concludes that the contingency factor agreed to by the Stipulating Parties is reasonable and appropriate for use in this case.

70-R2 for Account 356

DEP proposed a 65-year R2.5 curve for Account 356, Overhead Conductors and Devices. (Tr. Vol. 7, p. 285.) Company witness Spanos explained that most estimates in the industry for Account 356 have service lives of 65 years or less, as opposed to Fayetteville PWC and Public Staff estimates of 70 years or longer. (Tr. Vol. 12, pp. 146- 47.) Public Staff witness McCullar recommended an R2-70 curve for Account 356. (Tr. Vol. 7, pp. 281-82.) Witness McCullar based this view on more recent life experience bands of 1977-2016. (Id. at 285.) Public Staff witness McCullar stated that DEP proposed an increase in life from 60 years to 70 years in its June 28, 2013 Depreciation Study. (Tr. Vol. 7, p. 286.) Witness McCullar also stated that "[t]he Public Staff proposed 70-year R2 curve shape is a better fit to the actual observed life data" upon which DEP based its proposal for this account. (Tr. Vol. 7, pp. 286-87.) The Public Staff and the Company have agreed as Stipulating Parties to a 70-R2 curve for Account 356.

The only other witness making a recommendation on Account 356 was Fayetteville PWC witness Hughes. Witness Hughes recommended an R2-72 survivor curve for Account 356.

(Tr. Vol. 7, p. 201.) Witness Hughes asserted that the R2-72 survivor curve provides a better fit to the actuarial data than DEP's R2.5-65 curve. (Id.) According to witness Hughes, "[t]he SSD for the R2-72 curve is equal to 0.68, which is much lower (better) than the 2.76 SSD for DEP's proposed R2.5-65 survivor curve." (Tr. Vol. 7, p. 201.)

Witness Spanos, however, explained that witness Hughes' analysis of mass property service lives is over-simplistic and lacks reasonable judgment. As explained by witness Spanos, service lives are estimated for mass property accounts using established survivor curves, which provide an estimate of both an average service life and a dispersion of lives around the average. (Tr. Vol. 12, p. 137.) The process for estimating service lives is based on informed judgment that incorporates a number of factors, including statistical analysis of historical data. (Tr. Vol. 12, p. 145.) Witness Spanos also testified that other factors considered should include the mortality characteristic of the property studied and Company-specific information. (Tr. Vol. 12, p. 145.) Witness Spanos testified that these factors support his estimate over that of witness Hughes, as his estimate forecasts that the overall level of retirements for accounts will tend to increase with age:

> This is a reasonable expectation for substation equipment. Retirements of assets in this account, such as transformers and circuit breakers, tend to increase with age as older assets are more subject to failure and to needing to be replaced for capacity reasons. In contrast, the expectation inherent to witness Hughes' estimate that retirements will not tend to increase with age is less reasonable for this account.

(Tr. Vol. 12, p. 145.)

All three experts in this proceeding utilized the retirement rate method for their statistical analyses. According to witness Spanos, witness Hughes incorrectly overemphasized the tail of the data by putting unnecessary emphasis on the final 20% of the life of the asset. (Tr. Vol. 12, pp. 142-43, 192-97.) As witness Spanos explained, witness Hughes' analysis lacked the judgment that is also required in properly determining the appropriate survivor curve. (Tr. Vol. 12, p. 194.) Witness Spanos testified that it is not appropriate to focus on the tail of the curve because the data points for these older ages can also be erratic and not indicative of the mortality characteristics for the account, and that the overreliance on mathematical matching without the accompanying judgment was pervasive throughout witness Hughes' analysis of mass property accounts. As witness Spanos went on to explain, there are authoritative texts that support the concept that information in the middle years of the curve is where the emphasis should be placed. (Tr. Vol. 12, p. 142-43.) This analysis is based on the probable error involved in fitting a smooth survivor curve to an observed life table with varying percentages surviving:

> When survivor curves are to be classified according to the 18 types and the probable average life to be determined, it is recommended that more weight be given to the middle portion of the survivor curve, say that between 80 and 20% surviving, than to the forepart or extreme lower end of the curve. This inner section is the result of greater numbers of retirements and also it covers the period of most likely the normal operation of the property.

(Id.)

As discussed previously, both witness McCullar and witness Spanos utilized the same statistical method and came to different conclusions than did witness Hughes for Account 356.

In light of all of the evidence, the Commission finds and concludes that utilization of the R2-70 curve proposed by the Stipulating Parties is reasonable.

Negative 10% net salvage for Account 366

Public Staff witness McCullar quoted as follows from the NARUC publication Public Utilities Depreciation Practices, p. 18 (1996):

> Positive net salvage occurs when gross salvage exceeds cost of retirement, and negative net salvage occurs when cost of retirement exceeds gross salvage.

(Tr. Vol. 7, p. 275.) Further, witness McCullar testified that:

> The estimated future net salvage is part of the annual depreciation accrual, which is credited to the reserve to cover the estimated future net salvage costs the Company may incur associated with plant asset's retirement.

(Id.)

The Depreciation Study filed by DEP in this case supported a future net salvage value of negative 15% for the Mass Property Distribution Account 366, Underground Conduit. As explained by witness Spanos, the DEP's Depreciation Study utilized the traditional method of calculating net salvage which is relied upon by the vast majority of regulatory commissions in the United States. (Tr. Vol. 12, pp. 98-99, 111.) The traditional method meets the requirements of FERC Uniform System of Accounts and has been used for several decades in North Carolina. (Id.). The Company method is also endorsed widely by authoritative depreciation texts and is accepted in the industry. (Id.; Tr. Vol. 12, p. 124.)

Witness Spanos explained the traditional method of calculating net salvage as follows: "When using the traditional method, net salvage is estimated as a percentage of the original cost of plant. The statistical analysis used in estimating net salvage is based on comparing historical, not just recent, net salvage expenditures to historical retirements." (Tr. Vol. 12, pp. 98-99.)

Witness Spanos stated that DEP considered multiple factors in estimating the future net salvage percent:

> The estimates of net salvage by account were based in part on historical data compiled through 2016. Cost of removal and salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

(Tr. Vol. 7, p. 279.)

In addition, witness Spanos testified that the traditional methodology "provides a reasonable basis for net salvage estimation because the amount of net salvage expended in a given year is a function of the number of assets retired in that year." (Id.)

Public Staff witness McCullar proposed a negative 5% net salvage value for Account 366. Witness McCullar testified that for some accounts the annual accrual amount that would be accrued for estimated net salvage is several times the annual amount the DEP actually incurs for net salvage. (Tr. Vol. 7, p. 278.) Witness McCullar also considered historical net salvage data included in the 2016 Depreciation Study as well as the inflation rate included in DEP's proposed net salvage values. (Tr. Vol. 7, pp. 279-80.) Company witness Spanos testified the Public Staff's method does not allocate the service value of depreciable property in a systematic and rational manner.

Moreover, DEP witness Spanos expressed concerns that the Public Staff's proposal is effectively to allocate only an amount equal to the net salvage costs that have been incurred in the past. "It does not incorporate the future net salvage costs for assets that are currently in service and, therefore, does not allocate the service value of depreciable property over its service life." (Tr. Vol. 12, p. 110.) Witness McCullar's approach is also not supported by various authoritative texts on depreciation, addressing the issue of whether net salvage should be accrued during the life of the related plant. (Tr. Vol. 12, pp. 121-23.)

Ultimately, the Public Staff and the Company agreed to a negative 10% net salvage value for Account 366, which is consistent with the currently approved net salvage value for Account 366. In light of all of the evidence, the Commission finds and concludes that a negative 10% net salvage value proposed by the Stipulating Parties is reasonable based on the evidence presented in this case.

<u>20-year amortization period for Accounts 391 and 397</u>

DEP proposed in this case to move several general plant accounts to amortization accounting. (Tr. Vol. 7, p. 288.) General plant amortization accounting is used for general plant accounts that include a large number of units with relatively low unit cost. Amortization accounting is used because the cost of tracking retirements for every single asset typically exceeds the benefit of doing so. (Tr. Vol. 12, p. 152.) Witness McCullar also noted that "[t]he use of amortization accounting for these smaller value general plant accounts is used to minimize the accounting expense involved in keeping the detailed records used in depreciation accounting." (Tr. Vol. 7, pp. 288-89.) No party presented testimony opposing the Company's move to amortization accounting. (Tr. Vol. 12, p. 153.) Opposing testimony was only presented regarding the appropriate amortization periods for certain accounts, as well as the reserve adjustment for amortization accounting. (See, e.g., Tr. Vol. 7, p. 289; Tr. Vol. 12, p. 153.)

DEP determined the amortization periods to be used as follows:

> The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during

> which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

(Tr. Vol. 7, pp. 289-90.)

For Account 397, the Company is proposing a 10-year life for amortization accounting. Public Staff witness McCullar argued that the amortization period proposed by the Company for Account 397, Communication Equipment, among others, is not based on the service life estimates previously used for the asset under depreciation accounting. (Tr. Vol. 7, p. 290.) Witness McCullar further argues that there is no historical data to back up the Company's recommendation. (Id. at 291.) Witness McCullar recommended a 20-year life for Account 397 based on the 15- to 20-year range and the actual DEP experience that indicates a 25- to 29-year life. (Id.) In addition, witness McCullar recommended a 20-year life for Account 391, Office Furniture and Equipment, as opposed to the Company's 15-year recommended amortization period. (Id. at 292.)

In response, Company witness Spanos testified that relying on the historical analysis for amortization accounts is often unreliable due to the nature of the assets in these accounts, in where there are many units with small dollar values that are difficult to track. (Tr. Vol. 12, pp. 152-53.) Furthermore, statistical life analyses often produce indications of too long of lives because retirements are not always recorded. (Id.). Second, witness Spanos notes that witness McCullar's proposal fails to take all equipment depreciation into account, which would result in a lower overall average. (Id.) Witness Spanos stated that the Commission has approved a 10-year life for DEC for this account, and opined that the same is reasonable for DEP. (Tr. Vol. 12, pp. 152-53.)

Fayetteville PWC witness Hughes did not oppose the use of amortization accounting, nor challenge the amortization periods requested by the Company, but instead challenged the Company's proposal to use a 5-year amortization period to recover the cost of assets that are retired because they are older than the amortization period for each account. (Tr. Vol. 7, pp. 214-16.) Witness Hughes recommended a 10-year amortization period for these items. (Tr. Vol. 12, pp. 154, 214-16.)

In response to witness Hughes, witness Spanos explains that the 5-year period to amortize the unrecovered reserve is appropriate. (Tr. Vol. 12, p. 154.) Because the unrecovered reserve is associated with existing assets, it is more reasonable to align the recovery of these costs with the remaining lives of the assets currently in service, rather than the proposed amortization periods as witness Hughes suggested. (Id.) The remaining lives of Accounts 391 (which has two subaccounts) and 397 are 6.8, 4.8 and years. (Tr. Vol. 12, p. 154.) Therefore, the remaining lives for these accounts are closer to the Company's 5-year amortization period than the 10-year period proposed by witness Hughes. (Id.)

The Stipulating Parties have agreed as part of the settlement to the 20-year amortization period for Accounts 391 and 397. In light of all of the evidence, the Commission finds and concludes that a 20-year amortization period for Accounts 391 and 397 proposed by the Stipulating Parties is reasonable in this case. The Commission further finds that witness Hughes' proposal to adjust the unrecovered reserve is not appropriate and should not be adopted.

Other Depreciation Recommendations

1. Generation Retirement Dates

In addition to the specific areas of the Stipulation discussed previously, Fayetteville PWC witness Hughes also recommended adjustments to generation plant and interim net salvage for Account 343, Prime Movers. Witness Hughes recommended adjusting the life span of Roxboro Units 1-4 and Blewett combustion turbines so that the life spans would match the Integrated Resource Plan Study filed with the Commission on September 1, 2016. (Tr. Vol. 7, pp. 188-89.) Witness Hughes expressed the belief that the estimated retirement years for generation plant used in the Depreciation Study should be consistent with the lives the Company uses for its generation resource planning. (Id.)

In rebuttal, Company witness Miller explained that witness Hughes' adjustment was not appropriate. The difference between the retirement dates in the Company's recently completed Depreciation Study and the retirement dates in the Company's 2016 and 2017 IRPs is simply due to timing. (Tr. Vol. 10, pp. 36, 49). The retirement dates in the Company's IRPs are based on the most recently approved depreciation study. (Id. at 49.) The retirement dates for Roxboro and Blewett that witness Hughes relies upon were taken from the last approved depreciation study performed in 2010. (Id.) The Company completed the current Depreciation Study in 2017 and included it for Commission approval in this rate case. (Id. at 53.) Once the current Depreciation Study is approved, the next IRP will reflect the approved dates. (Id. at 49.) "Further," stated witness Miller, "depreciation study dates do not signify a commitment to retire." (Id.) Although witness Hughes argued that DEP's power plant engineers, power supply planners, and management should be responsible for determining the estimated retirement years for generation units and not the depreciation analyst (Tr. Vol. 7, p. 190), her testimony fails to acknowledge that witness Spanos and his team from Gannett Fleming visited several plant locations, including Blewett and Roxboro. (Dep. Study, p. III-2.) Gannett Fleming also conducted interviews with management to go over current Company policies and outlook for the plants. As witness Miller explained, Central services/engineering group specifically provided input to Gannet Fleming on generating retirement dates.

Fayetteville PWC witness Hughes testified that she believed DEP's proposal to divide Account 343 into subaccounts and impose an interim net salvage for a non-rotable parts subaccount of negative five percent (-5%), DEP's proposed survivor curves for Accounts 352 through 356, and DEP's practice of allowing the remaining useful lives of its generating units to be set in its depreciation rate studies rather than in its integrated resource planning are all inherently unreasonable and should be rejected in favor of the recommendations set forth in her testimony. The Commission disagrees with the recommendation by Fayetteville PWC witness Hughes, as deprecation studies delve into the details of the accounts and are the proper forum for useful lives to be set or reset. The Commission agrees, however, that the IRP is a tool that should be reviewed and utilized when performing the deprecation study and determining useful lives of assets. Based on the foregoing discussion, Fayetteville PWC's position is not accepted. Rather, the record supports a determination that the 2017 Depreciation Study performed by Gannet Fleming contains the most up-to-date and accurate estimated life spans for the Company's plants and should be relied upon in this case for setting depreciation rates.

2. Account 343, Prime Movers

DEP proposed negative five percent (-5%) interim net salvage value for Account 343, Prime Movers. (Tr. Vol. 7, p. 209.) DEP proposed to segregate Account 343 into two subaccounts for combined cycle plants in this case. (Id.) One of the segregated accounts will include "rotable parts," which have a relatively short service life and a high positive salvage. This is because these components, such as turbine blades and transition components of combustion turbines, are replaced at regular intervals and refurbished. (Id.)

Fayetteville PWC witness Hughes testified that she characterizes the division as experimental because (i) there is no such division in the Code of Federal Regulation's Account 343 for rotable and non-rotable parts, and (ii) DEP's proposal deviates from DEP's existing Commission-approved accounting practice of recording Account 343 items on a consolidated basis. Witness Hughes stated her concern that DEP has no actual data to support its proposed negative five percent (-5%) interim net salvage for the proposed non-rotable parts subaccount. Company witness Spanos testified to as much stating that "At this time, there is not. One of the reasons for the new subaccounts is so that net salvage can be tracked separately for the two subaccounts." (Tr. Vol. 12, p. 135)

In addition, witness Hughes testified that she does not recommend any changes to the proposed net salvage rate for Account 343.1, Prime Movers – Rotable Parts. (Tr. Vol. 7, p. 211.) However, she proposed interim net salvage of zero percent for non-rotable parts as compared to the Company's negative 5% "until there is sufficient data to track the net salvage for the subaccounts separately." (Tr. Vol. 7, p. 209.) In witness Hughes' opinion, there is insufficient data to track the net salvage for the subaccounts separately. (Tr. Vol. 7, pp. 211-12.) Although witness Spanos acknowledged that no historical data exists that can be used to estimate the net salvage specific to non-rotable parts (Tr. Vol. 7, p. 212; Tr. Vol. 12, p. 135), his testimony made clear that assigning a value of 0% to this subaccount is also inappropriate.

The overall historical data, which is shown on page VII-39 of the Depreciation Study, indicates an overall positive level of net salvage, but that is only part of the analysis. (Tr. Vol. 12, pp. 135-36.) The data also consistently shows a cost of removal associated with the retirements in the past ten years. As witness Spanos explained, almost all of the gross salvage is associated with the rotable parts, and, therefore, there should be a negative net salvage estimate for non-rotable parts. (Id.) He stated that witness Hughes' recommendation does not make sense: "[T]here is typically a cost to remove components from a power plant, and for this reason there should be some negative net salvage." (Id.) In addition, witness Spanos presented a utility example that supported assigning a negative value to non-rotable parts. (Id. at 136.)

The Commission finds that witness Hughes' proposal to assign a interim net salvage value of zero percent for non-rotable parts for Account 343, Prime Movers, should not be adopted at this time. The Commission finds Company witness Spanos' argument has merit in that there is typically some cost associated with the removal of power plants. Additionally, the Commission finds Company witness Spanos' utility example supportive of assigning a negative value to non-rotable parts. Furthermore, the record supports assigning a negative value to this subaccount, and the amount proposed by witness Spanos is reasonable in light of the evidence presented and should be approved.

3. Requirement of Workpapers

Witness Hughes states that the Company "should be required in future rate cases to develop and provide workpapers to support the calculation of the projected total interim retirements." (Tr. Vol. 7, p. 205.) Witness Spanos disagrees:

> [T]here are no specific workpapers that can be provided related to these calculations. The projected interim retirements are calculated by iteratively applying the retirement ratios from each recommended interim survivor curve to the plant balance for each year from the current date to the retirement of the Company's power plants. Because there are numerous calculations involved in this projection, the calculations cannot be performed in a spreadsheet or any other worksheet, and instead are performed with depreciation software. As a result, there are no workpapers available. Instead, the resulting calculated amounts are used in workpapers that have already been provided through discovery.

(Tr. Vol. 12, pp. 136-37.)

The Commission agrees that if the calculations are indeed iterative, as stated by the Company's deprecation witness Spanos, there would be no real workpapers to provide. Iterative calculations are numerous and cannot be produced effectively on spreadsheets, as they are calculations that are performed by the computer behind the scenes. Based on the aforementioned reasons and all of the evidence in the record, the Commission, therefore, finds and concludes that witness Hughes' recommendation to develop and provide workpapers to support the calculation of the projected total interim retirements in future rate cases should be rejected.

4. CIGFUR Recommendation

CIGFUR witness Phillips recommended that any approved changes to depreciation rates net to a zero-dollar impact on the level of depreciation expense included in rates. (Tr. Vol. 7, p. 73.) He further recommended that that customers not be burdened at this time by the impact of shortening service lives of generating lives based upon assumptions about changing and evolving environmental regulations. (Id.)

As witness Spanos correctly asserted, witness Phillips provided no support or justification for his net zero proposal other than a desire that depreciation rates not increase. (Tr. Vol. 12, p. 155.) He offered no credible critique of the Company's filed Depreciation Study and provided no alternative analysis. The current Depreciation Study as modified by the Stipulating Parties demonstrates that current depreciation rates are insufficient and that adjustments are necessary to ensure recovery of the full cost of the Company's assets providing service to DEP customers. (Tr. Vol. 12, p. 155.)

CIGFUR witness Phillips also incorrectly asserts that depreciation rates have changed due to changes to life spans as a result of environmental regulation. As witness Spanos points out, that is incorrect as there are a variety of reasons that depreciation rates change over time as evidenced by the comprehensive Depreciation Study filed in this case. The depreciation study includes all of the Company's assets, and changes in depreciation rates occur for many reasons, including updated historical data, updated service life and net salvage estimates, and additions to generating facilities. The current depreciation study is based on the available information regarding the Company's assets, and the depreciation rates therefore need to be updated to reflect current circumstances. (Tr. Vol. 12, p. 156.)

For the foregoing reasons, CIGFUR witness Phillips' blanket recommendation regarding depreciation rates is rejected.

In the Stipulation the parties agreed that the Company's depreciation rates should be based on the rates set forth in the Company's most recent Depreciation Study, subject to application of the following inputs: (1) a 10% contingency; (2) a 10-year remaining life for the meters that are being retired pursuant to the Company's AMI program; (3) 70-R2 for Account 356; (4) a negative 10% future net salvage for Account 366; (5) a 17-year life for new AMI meters; and (6) a 20-year amortization period for Accounts 391 and 397. The Commission finds and concludes that in light of all of the evidence presented in this case, that the agreed upon methods and procedures are appropriate for use in this proceeding.

End of Life Nuclear Materials and Supplies Reserve

DEP requested that the Commission adjust the reserve and annual amortization expense based on a review of current reserve requirements. The original Company proposal included an accrual and uses the 20% factor which was used in the 2013 Rate Case. (Tr. Vol. 6, p. 121.) Witness Bateman provided initial testimony in support of the adjustment. (Id.) Materials and supplies (M&S) inventory are often unique and specific to individual plants and have minimal value, if any, to other plants. The accrual amount was determined by dividing the projected inventory balance at the end-of-life (EOL) of each unit by the number of years remaining in the unit's life.

The Company has accepted the Public Staff's adjustment to the end-of-life nuclear M&S reserve expense, reduced as described in the rebuttal testimony of Company witness Gillespie. Per the Stipulation, the Company agreed to take appropriate action to manage its M&S inventory to the current practices and procedures utilized by DEC, with the goal to ensure that proper levels of inventory are on hand within 24-months after the entry of the Commission's rate case order.

Public Staff witness Metz testified that the Commission should adopt a $12.4 million adjustment to DEP's M&S inventory at its nuclear generation sites. (Tr. Vol. 7, pp. 308-13.) Witness Metz reviewed DEP's recorded nuclear plant M&S inventory and performed a field audit of the Harris Nuclear Plant. Witness Metz discovered categories of inventory items that existed in a "hold" status for over four years, which results in excess or unusable inventory. The "hold" categories include: Repair Hold, QA Hold, and Engineering Change Hold. The QA Hold category includes two subcategories: Quality Hold and Quality Pending. Witness Metz described these "hold" categories as reasonable and commonly used in the industry. Witness Metz recommended that the Commission exclude QA and Repair Hold that has been held for greater than four years (total $12.4 million). According to witness Metz, hold times exceeding four years indicates that the Company may never resolve the issues, which results in the Company never using the associated inventory. (Id. at 313.) Witness Metz did not include the Engineering Change Hold category costs in the adjustment, explaining that delays may occur for certain projects due to the need to balance and minimize the overall outage schedule. (Id.)

Witness Cannady testified that the Commission should not increase the Company's annual accrual for EOL nuclear M&S inventory. (Tr. Vol. 17, p. 163.) Witness Cannady argues that DEP failed to demonstrate that the M&S inventory levels are necessary to provide service up to the EOL of each nuclear facility: the Company provided no documentation supporting that (1) the test year EOL levels are reasonable or (2) that the levels must be met through annual accruals to an EOL reserve. (Tr. Vol. 17, p. 176.) Witness Cannady also questions the 20% transferability and salvage value factor used in the DEP accrual calculation. (Tr. Vol. 17, p. 136.) Accordingly, witness Cannady recommends that the Commission not grant additional accrual of $7.435 million, resulting in a $4.7 million increase in operating income.

Witness Gillespie filed rebuttal testimony in response to witnesses Metz and Cannady. (Tr. Vol. 7, pp. 44-52.) Witness Gillespie testified that it is appropriate to include Repair Hold and QA Hold for more than four years. Such items are stored and maintained in a manner that would support the eventual repair and reuse of the item. (Tr. Vol. 7, pp. 47-48.) Categories of inventory on Repair Hold include those that can be repaired on-site or at other DEP facilities and items sent to external vendors for repair. (Id. at 48.) Generally, items on QA Hold for greater than four years indicate that efforts to resolve the deficiency with the vendor have concluded and additional engineering analysis by the Company is required. As with Repair Hold, the Company deploys its limited engineering resources to resolve the items on hold status based on overall priorities. The Company must use some resources for repair under both circumstances: internal labor or financial, in the case of off-site repairs. (Id. at 47.) Furthermore, the QA Hold and Repair Hold inventory levels as of December 31, 2016, are lower than the levels represented in witness Metz's testimony. (Id. at 49.)

In response to witness Cannady, witness Gillespie testified in support of the annual accrual for EOL nuclear M&S. Until removed from service, nuclear plants must be fully maintained for safety purposes, and inventory must be available to support that objective. Therefore, witness Gillespie explained, inventory currently necessary to support plant operations will be required until plant operations cease. (Id. at 50.) In the 2013 Rate Case, the Public Staff and DEP agreed that nuclear M&S inventory would be given a 20% value. Company witness Gillespie testified that the 20% salvage value estimate remains reasonable and appropriate. (Id. at 50-51.) The Company had no reason to believe that 20% transferability and salvage value established in the prior case would have increased.

As set forth in Section III.T. of the Stipulation, the Stipulating Parties agreed to include an adjustment to the nuclear M&S reserve and annual amortization expense. The Company agreed to take appropriate action to manage M&S (nuclear and non-nuclear) to the current practices and procedures utilized by the Company. The Company stated it will update the Commission within 24-months after the entry of the Commission's rate case order regarding the updated procedures and practices. Accordingly, the Commission finds and concludes that the recommended adjustment is just and reasonable to all parties considering all the evidence presented.

Asheville Plant

The Company requested that the Commission allow it to establish a regulatory asset at the time of the Asheville coal plant's retirement for the remaining net book value, and permission to defer to this regulatory asset any costs related to obsolete inventory, net of salvage, at the time of retirement. (Application at 11.)

DEP witness Bateman explained that originally the Company's depreciation consultant had proposed new depreciation rates that would fully depreciatethe Asheville coal plant by its expected retirement date in 2020. (Tr. Vol. 6, p. 117.) In order to mitigate the impact on customers in this case, DEP asked the consultant to adjust the rates to reflect a recovery of the remaining net book value of the Asheville coal plant over a 10-year period, similar to the treatment of other coal plants that were retired early in DEP's prior depreciation study. (Id. at 117-18.) Since under this approach the net book value of the plant will not be fully recovered at the time of retirement, witness Bateman explained that the Company is requesting permission to establish a regulatory asset at the time of the plant's retirement for the remaining net book value and the ability to continue amortizing the costs over the remaining portion of the ten-year period at that time. (Id. at 118.) The Company also requests permission to defer to this regulatory asset any costs related to obsolete inventory, net of salvage, at the time of retirement. (Id.)

The Company's request was not contested by any of the intervenors. Therefore, the Commission finds and concludes that the Company's request to establish a regulatory asset related to the retirement of the Asheville coal plant is just and reasonable to all parties in light of the evidence presented. The Commission finds that the Company's request is appropriate and will mitigate the impact on customers. The Commission further concludes that the Company may establish a regulatory asset at the time of the Asheville coal plant's retirement for the remaining net book value and may defer to this regulatory asset any costs related to obsolete inventory, net of salvage, at the time ofretirement.

EDIT Refund

In this proceeding the Company included an adjustment to amortize the excess deferred income tax (EDIT) that it deferred pursuant to the Commission's May 13, 2014 order in Docket No. M-100, Sub 138. In its Application, the Company proposed that the EDIT liability included in this case be returned to customers over a five-year period. Witness Peedin testified that the Public Staff believes that it would be beneficial to return the EDIT to customers through a rider that will expire at the end of a two-year period. (Tr. Vol. 18, pp. 79-80.)

In the Stipulation, the parties agreed that the EDIT liability should be returned to customers through a levelized rider that will expire at the end of a four-year period.

After careful consideration of all of the evidence in this proceeding, including the Stipulation, the Commission finds and concludes that the stipulated adjustment related to EDIT, as discussed above, is just and reasonable to all parties. The Commission further concludes that that appropriate level of EDIT to be refunded to customers is $42.577 million annually for the four years following the effective date of the rates approved in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 16-24

The evidence supporting these findings of fact and conclusions is contained in the verified Application and Form E-1 of the Company, the testimony and exhibits of the public witnesses, the testimony and exhibits of the expert witnesses, and the entire record of this proceeding.

In its Application the Company requested approval for its rates to be set using a rate of return on equity of 10.75%. The Stipulation provides for a rate of return on equity of 9.9%, which is a decrease from the 10.2% level authorized by the Commission in the Company's last rate case. For the reasons set forth herein, the Commission finds that a rate of return on equity of 9.9% is just and reasonable.

Rate of return on equity, also referred to as the cost of equity capital, is often one of the most contentious issues to be addressed in a rate case, even in a case such as this one in which a Stipulation between the utility and the consumer advocate has been reached. In the absence of a settlement agreed to by all parties, the Commission must still exercise its independent judgment and arrive at its own independent conclusion as to all matters at issue, including the rate of return on equity. See, e.g., CUCA I, 348 N.C. at 466, 500 S.E.2d at 707. In order to reach an appropriate independent conclusion regarding the rate of return on equity, the Commission should evaluate the available evidence, particularly that presented by conflicting expert witnesses. State ex rel. Utils. Comm'n v. Attorney Gen. Roy Cooper, 366 N.C. 484, 739 S.E.2d 541, 546-47 (2013) (Cooper I). In this case, the evidence relating to the Company's cost of equity capital was presented by Company witness Hevert, Public Staff witness Parcell, Commercial Group witnesses Chriss and Rosa, AGO witness Polich, CIGFUR witness Phillips, and CUCA witness O'Donnell. No rate of return on equity expert evidence was presented by any other party.

In addition to its evaluation of the expert evidence, the Commission must also make findings of fact regarding the impact of changing economic conditions on customers when determining the proper rate of return on equity for a public utility. Cooper I, 366 N.C. 484, 739 S.E.2d at 548. This was a factor newly announced by the Supreme Court in its Cooper I decision and not previously required by the Commission, the Court of Appeals, or the Supreme Court as an element to be considered in connection with the Commission's determination of an appropriate rate of return on equity. The Commission's discussion of the evidence with respect to the findings required by Cooper I is set out in detail in this Order.

Cooper I was the result of the Supreme Court's reversal and remand of the Commission's approval of the agreement regarding the rate of return on equity in a stipulation between the Public Staff and DEC in DEC's 2011 Rate Case. The Commission has had occasion to apply both prongs of Cooper I in subsequent orders, specifically the following:

- Order Granting General Rate Increase in the Company's previous Rate Case, Docket No. E-2, Sub 1023 (May 30, 2013) (2013 DEP Rate Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 444, 761 S.E.2d 640 (2014) (Cooper III);[1]

- Order on Remand resulting from the Supreme Court's Cooper I decision, in Docket No. E-7, Sub 989 (October 23, 2013) (DEC Remand Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 644, 766 S.E.2d 827 (2014) (Cooper IV);
- Order Granting General Rate Increase in DEC's 2013 Rate Case, Docket No. E-7, Sub 1026 (September 24, 2013) (2013 DEC Rate Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 741, 767 S.E.2d 305 (2015) (Cooper V); and
- Order on Remand resulting from the Supreme Court's Cooper II decision, in Docket No. E-22, Sub 479 (July 23, 2015) (DNCP Remand Order), which was not appealed to the Supreme Court.

In order to give full context to the Commission's decision herein and to elucidate its view of the requirements of the General Statutes as they relate to rate of return on equity, as interpreted by the Supreme Court in Cooper I, the Commission deems it important to provide in this Order an overview of the general principles governing this subject.

A. Governing Principles in Setting the Rate of Return on Equity

First, there are, as the Commission noted in the 2013 DEP Rate Order, constitutional constraints upon the Commission's rate of return on equity decisions established by the United States Supreme Court decisions in Bluefield Waterworks & Improvement Co., v. Pub. Serv. Comm'n of W. Va., 262 U.S. 679 (1923) (Bluefield), and Fed. Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944) (Hope):

> To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting an ROE, the Commission must still provide the public utility with the opportunity, by sound management, to produce a fair profit for its shareholders, in view of current economic conditions, maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utilities Commission v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S.E.2d 705, 757 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return declared" in Bluefield and Hope. Id.

2013 DEP Rate Order, at 29.

Second, the rate of return on equity is, in fact, a cost. The return that equity investors require represents the cost to the utility of equity capital. In his dissenting opinion in Missouri ex rel.

[1] An intervening Cooper case, State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 430, 758 S.E.2d 635 (2014) (Cooper II), arose from the 2012 Rate Case by Dominion North Carolina Power (DNCP) and resulted in a remand to the Commission, inasmuch as the Commission's Order in that case predated Cooper I.

ELECTRIC – ACCOUNTING

Southwestern Bell Tel. Co. v. Missouri Pub. Serv. Comm'n, 262 U.S. 276 (1923), Justice Brandeis remarked upon the lack of any functional distinction between the rate of return on equity (which he referred to as a "capital charge") and other items ordinarily viewed as business costs, including operating expenses, depreciation, and taxes:

> Each is a part of the current cost of supplying the service; and each should be met from current income. When the capital charges are for interest on the floating debt paid at the current rate, this is readily seen. But it is no less true of a legal obligation to pay interest on long-term bonds ... and it is also true of the economic obligation to pay dividends on stock, preferred or common.

Id. at 306 (Brandeis, J. dissenting) (emphasis added). Similarly, the United States Supreme Court observed in Hope, "From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business ... [which] include service on the debt and dividends on the stock." Hope, 320 U.S. 591, 603.

Leading academic commentators also define rate of return on equity as the cost of equity capital. Professor Charles Phillips, for example, states that "the term 'cost of capital' may be defined as the annual percentage that a utility must receive to maintain its credit, to pay a return to the owners of the enterprise, and to ensure the attraction of capital in amounts adequate to meet future needs." Phillips, Charles F., Jr., The Regulation of Public Utilities (Public Utilities Reports, Inc. 1993), at 388. Professor Roger Morin approaches the matter from the economist's viewpoint:

> While utilities enjoy varying degrees of monopoly in the sale of public utility services, they must compete with everyone else in the free open market for the input factors of production, whether it be labor, materials, machines, or capital. The prices of these inputs are set in the competitive marketplace by supply and demand, and it is these input prices which are incorporated in the cost of service computation. This is just as true for capital as for any other factor of production. Since utilities must go to the open capital market and sell their securities in competition with every other issuer, there is obviously a market price to pay for the capital they require, for example, the interest on capital debt, or the expected return on equity.
>
> * * *
>
> *[T]he cost of capital to the utility is synonymous with the investor's return, and the cost of capital is the earnings which must be generated by the investment of that capital in order to pay its price, that is, in order to meet the investor's required rate of return.*

Morin, Roger A., Utilities' Cost of Capital (Public Utilities Reports, Inc. 1984), at 19-21 (emphasis added). Professor Morin adds: "The important point is that the prices of debt capital and equity capital are set by supply and demand, and both are influenced by the relationship between the risk and return expected for those securities and the risks expected from the overall menu of available securities." Id. at 20 (emphasis added).

Changing economic circumstances as they impact DEP's customers may affect those customers' ability to afford rate increases. For this reason, customer impact weighs heavily in the overall rate setting process, including, as set out in detail elsewhere in this Order, the Commission's own decision of an appropriate authorized rate of return on equity. In addition, in the event of a settlement, customer impact no doubt influences the process by which the parties to a rate case decide to settle contested matters and the level of rates achieved by any such settlement.

However, a customer's ability to afford a rate increase has absolutely no impact upon the supply of or the demand for capital. The economic forces at work in the competitive capital market determine the cost of capital – and, therefore, the utility's required rate of return on equity. The cost of capital does not go down because some customers may find it more difficult to pay for an increase in electricity prices as a result of prevailing adverse economic conditions, any more than the cost of capital goes up because some customers may be prospering in better times.

Third, the Commission is and must always be mindful of the North Carolina Supreme Court's command that the Commission's task is to set rates as low as possible consistent with the dictates of the United States and North Carolina Constitutions. State ex rel. Utils. Comm'n v. Pub. Staff-N. Carolina Utils. Comm'n, 323 N.C. 481, 490, 374 S.E.2d 361, 370 (1988). Further, and echoing the discussion above concerning the fact that rate of return on equity represents the cost of equity capital, the Commission must execute the Supreme Court's command "irrespective of economic conditions in which ratepayers find themselves." (2013 DEP Rate Order, at 37.) The Commission noted in that order:

> The Commission always places primary emphasis on consumers' ability to pay where economic conditions are difficult. By the same token, it places the same emphasis on consumers' ability to pay when economic conditions are favorable as when the unemployment rate is low. Always there are customers facing difficulty in paying utility bills. The Commission does not grant higher rates of return on equity when the general body of ratepayers is in a better position to pay than at other times, which would seem to be a logical but misguided corollary to the position the Attorney General advocates on this issue.

Id. Indeed, in Cooper I the Supreme Court emphasized "changing economic conditions" and their impact upon customers. 366 N.C. 484, 739 S.E.2d at 548.

Fourth, while there is no specific and discrete numerical basis for quantifying the impact of economic conditions on customers, the impact on customers of changing economic conditions is embedded in the rate of return on equity expert witnesses' analyses. The Commission noted this in the 2013 DEP Rate Order: "This impact is essentially inherent in the ranges presented by the return on equity expert witnesses, whose testimony plainly recognized economic conditions – through the use of econometric models – as a factor to be considered in setting rates of return." 2013 DEP Rate Order, at 38.

Fifth, under long-standing decisions of the North Carolina Supreme Court, the Commission's subjective judgment is a necessary part of determining the authorized rate of return on equity. State ex rel. Utils. Comm'n v. Pub. Staff, 323 NC 481, 490, 374 S.E.2d 361, 369. As the Commission also noted in the 2013 DEP Rate Order:

> Indeed, of all the components of a utility's cost of service that must be determined in the ratemaking process, the appropriate ROE [rate of return on equity] the one requiring the greatest degree of subjective judgment by the Commission. Setting an ROE [rate of return on equity] for regulatory purposes is not simply a mathematical exercise, despite the quantitative models used by the expert witnesses. As explained in one prominent treatise,
>
> > Throughout all of its decisions, the [United States] Supreme Court has formulated no specific rules for determining a fair rate of return, but it has enumerated a number of guidelines. The Court has made it clear that confiscation of property must be avoided, that no one rate can be considered fair at all times and that regulation does not guarantee a fair return. The Court also has consistently stated that a necessary prerequisite for profitable operations is efficient and economical management. Beyond this is a list of several factors the commissions are supposed to consider in making their decisions, but no weights have been assigned.
> >
> > The relevant economic criteria enunciated by the Court are three: financial integrity, capital attraction and comparable earnings. Stated another way, the rate of return allowed a public utility should be high enough: (1) to maintain the financial integrity of the enterprise, (2) to enable the utility to attract the new capital it needs to serve the public, and (3) to provide a return on common equity that is commensurate with returns on investments in other enterprises of corresponding risk. These three economic criteria are interrelated and have been used widely for many years by regulatory commissions throughout the country in determining the rate of return allowed public utilities.
> >
> > In reality, the concept of a fair rate of return represents a "zone of reasonableness." As explained by the Pennsylvania commission:
> >
> > > There is a range of reasonableness within which earnings may properly fluctuate and still be deemed just and reasonable and not excessive or extortionate. It is bounded at one level by investor interest against confiscation and the need for averting any threat to the security for the capital embarked upon the enterprise. At the other level it is bounded by consumer interest against excessive and unreasonable charges for service.

> As long as the allowed return falls within this zone, therefore, it is just and reasonable. . . . It is the task of the commissions to translate these generalizations into quantitative terms.

Charles F. Phillips, Jr., The Regulation of Public Utilities, 3d ed. 1993, pp. 381-82. (notes omitted)

2013 DEP Rate Order, pp. 35-36.

Thus, the Commission must exercise its subjective judgment so as to balance two competing rate of return on equity-related factors – the economic conditions facing the Company's customers and the Company's need to attract equity financing in order to continue providing safe and reliable service.

The Supreme Court in Cooper V affirmed the 2013 DEC Rate Order, in which this framework was fully articulated. But to the framework we can add additional factors based upon the Supreme Court's decisions in Cooper III, Cooper IV, and Cooper V. Specifically, the Supreme Court held that nothing in Cooper I requires the Commission to "quantify" the influence of changing economic conditions upon customers (see, e.g., Cooper V, 367 N.C. at 745-46; Cooper IV, 367 N.C. at 650; Cooper III, 367 N.C. at 450), and, indeed, the Supreme Court reiterated that setting the rate of return on equity is a function of the Commission's subjective judgment: "Given th[e] subjectivity ordinarily inherent in the determination of a proper rate of return on common equity, there are inevitably pertinent factors which are properly taken into account but which cannot be quantified with the kind of specificity here demanded by [the appellant]." Cooper III, 367 N.C. at 450, quoting State ex rel. Utils. Comm'n v. Pub. Staff-North Carolina Utils. Comm'n, 323 NC 481, 490 (1988).

Finally, the Supreme Court discussed with approval the Commission's reference to and reliance upon expert witness testimony that used econometric models that the Commission had noted "inherently" contained the effects of changing economic circumstances upon customers, and also discussed with approval the Commission's reference to and reliance upon expert witness testimony correlating the North Carolina economy with the national economy. See, e.g., Cooper V, 367 N.C. at 747; Cooper III, 367 N.C. at 451.

It is against this backdrop of overarching principles that the Commission turns to the evidence presented in this case.

B. Application of the Governing Principles to the Rate of Return Decision

1. Evidence from expert witnesses on cost of equity capital

Company witness Hevert recommended in his direct testimony a rate of return on equity of 10.75%, which was slightly above the midpoint of his recommended range of 10.25% to 11.00%. Witness Hevert's direct testimony explained the importance of a utility being allowed to earn a rate of return on equity that is adequate to attract capital at reasonable terms, under varying market conditions, and that will enable the utility to provide safe, reliable electric service while maintaining its financial integrity. Witness Hevert explained that unlike the cost of debt, the cost of equity is not observable and must be estimated based on market data. Witness Hevert used the Constant Growth Discounted Cash Flow (DCF) model, the multi-stage DCF Gordon method, the multi- stage DCF Terminal Price/Earnings, the Capital Asset Pricing Model (CAPM), and the Bond Yield Risk Premium. He testified that his recommendation also takes into consideration factors such as DEP's risks associated with environmental regulations, flotation costs, and the increasing uncertainty in the capital markets. Witness Hevert also focused upon capital market conditions as they affect the Company's customers in North Carolina.

For his DCF calculation dividend yield, witness Hevert used the average daily closing prices for the 30-trading days, 90-trading days, and 180-trading days as of March 31, 2017. He then calculated the DCF results using each of the following growth terms:

- The Zack's consensus long-term earnings growth estimates;

- The First Call consensus long-term earnings growth estimates; and

- The Value Line earnings growth estimates.

Witness Hevert testified that for each proxy company he calculated the mean, mean high, and mean low results. For the mean result, he combined the average of the EPS growth rate estimates reported by Value Line, Zacks, and First Call with the subject company's dividend yield for each proxy company and then calculated the average result for those estimates. His constant growth DCF results ranged from 8.07% to 9.82%.[1]

He testified with regard to his constant growth DCF that regardless of the method employed, an authorized rate of return on equity that is well below returns authorized for other utilities (1) runs counter to the Hope and Bluefield "comparable risk" standard, would place DEP at a competitive disadvantage, and (3) makes it difficult for DEP to compete for capital at reasonable terms.

DEP witness Hevert testified that the Multi-Stage DCF model, which is an extension of the constant growth form, enables the analyst to specify growth rates over three distinct stages (i.e., time periods). As with the constant growth form of the DCF model, the Multi-Stage form defines the cost of equity as the discount rate that sets the current price equal to the discounted value of future cash flows. He testified in the first two stages, "cash flows" are defined as projected dividends. In the third stage, "cash flows" equal both dividends and the expected price at which the stock will be sold at the end of the period (i.e., the "terminal price"). He calculated the terminal price based on the Gordon model, which defines the price as the expected dividend divided by the difference between the cost of equity (i.e., the discount rate) and the long-term expected growth rate.

---

[1] Table 13 in the rebuttal testimony of witness Hevert contains updated analytical results for his DCF, CAPM, and Bond Yield Risk Premium analyses. However, in summarizing his rebuttal testimony, witness Hevert testified that "[n]one of their [opposing witnesses] arguments caused me to revise my conclusions or recommendations."

Witness Hevert testified that his Multi-Stage DCF long-term growth rate was 5.50% based on the real GDP growth rate of 3.22% from 1929 through 2016 and an inflation rate of 2.21%. He testified that the GDP growth rate is calculated as the compound growth rate in companies. Witness Hevert testified that his Multi-Stage DCF analysis produces a range of results from 8.72% to 9.28%.

Witness Hevert testified that for his CAPM analysis risk free rate, he used the current 30-day average yield on 30-year Treasury bonds of 3.06% and the near-term projected 30-year Treasury yield of 3.52%. For the market risk premium, he calculated the market capitalization weighted average total return based on the constant growth DCF model for each of the S&P 500 companies using data from Bloomberg and Value Line. He then subtracted the current 30-year Treasury yield from that amount to arrive at the market DCF-derived forward looking market risk premium estimate. Witness Hevert used the beta coefficients reported by Bloomberg and Value Line. He testified that his CAPM analysis suggested a rate of return on equity range of 9.15% to 11.49%.

Witness Hevert testified that for his risk premium analysis, he estimated the cost of equity as the sum of the equity risk premium and the yield on a particular class of bonds. He testified that the equity risk premium is typically estimated using a variety of approaches, some of which incorporate ex-ante, or forward-looking, estimates of the cost of equity, and others that consider historical, or ex-post, estimates. An alternative approach is to use actual authorized returns for electric utilities to estimate the equity risk premium.

Witness Hevert testified that he first defined the risk premium as the difference between the authorized rate of return on equity and the then-prevailing level of long-term 30-year Treasury yield. He then gathered data for 1,508 electric utility rate proceedings between January 1980 and March 31, 2017. In addition to the authorized rate of return on equity, he also calculated the average period between the filing of the case and the date of the final order (the "lag period"). In order to reflect the prevailing level of interest rates during the pendency of the proceedings, he calculated the average 30-year Treasury yield over the average lag period of approximately 200 days. He testified that to analyze the relationship between interest rates and the equity risk premium, he used regression analyses. Witness Hevert testified that based upon the regression coefficients, the implied rate of return on equity in his risk premium analysis is between 10.00% and 10.32%.

Witness Hevert testified that the regional economic conditions in North Carolina were substantially similar to the United States, such that there is no direct effect of those conditions on the Company's cost of equity.

Public Staff witness Parcell performed three rate of return on equity analyses using the constant growth discounted cash flow (DCF), the capital asset pricing model (CAPM), and comparable earnings (CE).

Witness Parcell considered five indicators of growth in his DCF analyses:

- Years 2012-2016 (5-year average) earnings retention, or fundamental growth;

- Five-year average of historic growth in earnings per share (EPS), dividends per share (DPS), and book value per share (BVPS);

- Years 2017, 2018, and 2020-2022 projections of earnings retention growth (per Value Line);

- Years 2014-2016 to 2020-2022 projections of EPS, DPS, and BVPS (per Value Line); and,

- Five-year projections of EPS growth (per First Call).

Witness Parcell testified that investors do not always use one single indicator of growth. Witness Parcell's analysis using these five dividend growth indicators materially differed from DEP witness Hevert's sole use of analysts' predictions of earnings per share growth to determine DCF dividend growth.

Witness Parcell performed his DCF analysis on his proxy group of 11 companies, where using only the high mean growth rate the cost of capital was 8.4%, and the Hevert proxy group of 18 companies, where using only the highest mean growth rate the cost of capital was 9.3%. He recommended a DCF rate of return on equity of 8.85% for DEP as the mid-point of the two highest mean growth rates.

Witness Parcell testified that the constant growth DCF model currently produced cost of equity results that are lower than has been the case in recent years. This is, in part, a reflection of the decline in capital costs (e.g., in terms of interest rates). He believed that the constant growth DCF model remains relevant and informative. It was also his personal experience that of all available cost equity models, this model is used the most by cost of capital witnesses. Nevertheless, in order to be conservative, he focused only on the highest of the DCF results in making his recommendations.

Witness Parcell testified that he did not perform a multi-stage DCF, as he did not believe that the results of a properly-constructed multi-stage DCF would materially differ from the results of his constant-growth DCF.

Public Staff witness Parcell performed a CAPM analysis, which describes the relationship between a security's investment risk and its market rate of return. For his risk- free rate, he used the three-month average yield for 20-year Treasury bonds. For the beta, which indicates the security's variability of return relative to the return variability of the over-all capital market, he used the most recent Value Line beta for each company in his proxy group. He calculated the risk premium by comparing the annual returns on equity of the S&P 500 with the actual yields of the 20-year Treasury bonds, by comparing the total returns (i.e., dividends/interest plus gains/losses) for the S&P 500 group as well as long-term government bonds, using both the arithmetic and geometric means. These analyses revealed the average expected risk premium to be 5.8%. His CAPM results collectively indicated a rate of return on equity of 6.1% to 6.7% for the Parcell and Hevert proxy groups.

However, witness Parcell did not directly consider his CAPM results. He testified that he has conducted CAPM studies in his cost of equity analyses for many years. He stated that it is apparent that the CAPM results are currently significantly less than the DCF and comparable earnings result. There are two reasons for the lower CAPM results. First, risk premiums are lower currently than was the case in prior years. This is the result of lower equity returns that have been experienced beginning with the Great Recession and continuing over the past several years. This is also reflective of a decline in investor expectations of equity returns and risk premiums. Second, the level of interest rates on Treasury bonds (i.e., the risk free rate) has been lower in recent years. This is partially the result of the actions of the Federal Reserve System to stimulate the economy. This also impacts investor expectation of returns in a negative fashion.

Witness Parcell testified that, initially, investors may have believed that the decline in Treasury yields was a temporary factor that would soon be replaced by a rise in interest rates. However, this has not been the case, as interest rates have remained low and continue to decline for the past six-plus years. As a result, he believes that it cannot be maintained that low interest rates (and low CAPM results) are temporary and do not reflect investor expectations.

Consequently, the CAPM results should be considered as one factor in determining the cost of equity for DEP. Even though witness Parcell did not factor the CAPM results directly into his cost of equity recommendation, he believed these lower results are indicative of the recent and continuing decline in utility costs of capital, including cost of equity.

Witness Parcell explained his comparable earnings analysis. He testified that the cost of capital is an opportunity cost: the prospective return available to investors from alternative investments of similar risk. He testified that the established legal standards are consistent with the opportunity cost principle. The two Supreme Court cases most frequently cited (Bluefield and Hope) hold that the return to the equity owners must be sufficient:

1. To maintain the credit of the enterprise and confidence in its financial integrity;

2. To permit the enterprise to attract required additional capital on reasonable terms; and

3. To provide the enterprise and its investors with an earnings opportunity commensurate with the returns available on investments in other enterprises having corresponding risks.

Witness Parcell further testified that the comparable earnings method normally examines the experienced and/or projected return on book common equity. The logic for examining returns on book equity follows from the use of original cost rate base regulation for public utilities, which uses a utility's book common equity to determine the cost of capital. This cost of capital is, in turn, used as the fair rate of return, which is then applied (multiplied) to the book value of rate base to establish the dollar level of capital costs to be recovered by the utility. This technique is thus consistent with the rate base rate of return methodology used to set utility rates. Witness Parcel applied the comparable earnings methodology by examining realized rate of returns on equity for the Hevert and Parcell groups of proxy companies, as well as unregulated companies, and evaluated investor acceptance of these returns by reference to the resulting market-to-book ratios. Witness Parcell used the experienced rates of return on equity of the two proxy groups of utilities for the years 2002–2008 (the most recent business cycle) and 2009-2016 (the current business cycle) and projected ROE's for 2017, 2018, and 2020–2022 (the time periods estimated by Value Line). He testified that his results indicate that historic rates of return on equity of 9.4% to 11.0% have been adequate to produce market to book ratios of 141% to 159% for the groups of utilities. Furthermore, projected rates of return on equity for 2017, 2018, and 2020–2022 are within a range of 9.8% to 10.6% for the utility groups. These relate to market to book ratios of 176% or greater. He also noted that the rates of return on equity and market to book ratios of his proxy group, which all range over $20 billion in market value exceed those of witness Hevert's proxy group, which are not selected based upon size.

Witness Parcell also conducted a comparable earnings analysis examining the S&P's 500 Composite group. Over the same two business cycles the group's average rates of return on equity ranged from 12.4% to 13.3%, with average market to books ranging between 233% and 275%. In order to apply the S&P 500 Composite rates of return on equity to the cost of equity for the proxy utilities, he compared the risk levels of the electric utilities and the competitive companies comparing the respective Value Line Safety Ranks, Value Line Betas, Value Line Financial Strengths, and S&P Stock Rankings as show on witness Parcell's direct testimony Exhibit DCP – 1, Schedule 12. Witness Parcell testified that based upon recent and prospective rates of return on equity and market to book analyses, his comparable earnings analysis indicates that the rateof return on equity for the proxy utilities is in the range of 9.0% to 10.0%.

Witness Parcell testified in support of the 9.9% rate of return on equity in the Stipulation. Witness Parcell explained that the Stipulation allows an overall rate of return of 7.09% based on a 9.9% rate of return on equity and a capital structure of 52% equity and 48% long-term debt. Witness Parcell explained that the stipulated rate of return on equity is identical to the Commission's recent decisions in Dominion North Carolina Power's (DNCP) rate case, Docket No. E-22, Sub 532 (DNCP Rate Order). The overall rate of return in the Stipulation is lower than the Company requested. Witness Parcell also explained that the 9.9% rate of return on equity falls within the range of his comparable earnings analysis.

Public Staff witness Parcell testified that in his experience, settlements are generally the result of good faith "give-and-take" and compromise-related negotiations among the parties of utility rate proceedings, involving the utility and other parties. He testified that it was also his understanding that settlements, as well as the individual components of the settlements, are often achieved by the respective parties' agreements to accept otherwise unacceptable individual aspects of individual issues in order to focus on other issues. He testified it was his understanding that the proposed Stipulation is "global," except to the "Coal Ash" and storm cost issues in this proceeding.

Witness Parcell testified that it remains his position that should this be a fully litigated proceeding, he would continue to recommend a capital structure with 50% common equity and 50% long-term debt, a rate of return on equity of 9.20% (approximate mid-point of his range of 8.85% to 9.50%), and a cost of debt of 4.05%. However, given the benefits associated with entering a settlement, it was his view that the cost of capital components of the Stipulation are a reasonable resolution of otherwise contentious issues.

Witness Parcell testified that each of the three cost of capital components - capital structure, rate of return on equity, and debt cost - can be considered as reasonable within the context of the Stipulation. He testified that DEP and the Public Staff, in their respective testimonies, proposed fundamentally different views on a number of issues, such as current market conditions and related current costs of common equity, as well as the appropriate capital structure. The Stipulation represents a compromise, or middle ground between their respective positions. He also testified that the cost of capital components of the Stipulation are reasonable within a broad negotiation and resolution of most of the issues in this proceeding.

With respect to the rate of return on equity component of the Stipulation, witness Parcell testified that DEP requested a rate of return on equity of 10.75%, which witness Parcell stated in his direct testimony was well above industry norms in recent years. He proposed a 9.2% rate of return on equity (i.e., approximate mid-point of a rate of return on equity range of 8.85% to 9.50%, which was derived from his DCF model results of 8.85% and his comparable earnings results of 9.50%). Public Staff witness Parcell testified that while he continues to believe his specific 9.2% rate of return on equity recommendation is appropriate at this time, the upper end of his comparable earnings range of 9.0% to 10.0% contains the 9.9% Stipulation rate of return on equity level. He also stated that a 9.9% rate of return on equity is 0.70% above his 9.2% recommendation and is 0.85% below DEP's 10.75% rate of return on equity request. As a result, the 9.9% rate of return on equity in the Stipulation is a "compromise" between DEP's and the Public Staff's respective proposals. The 9.9% rate of return on equity also reflects a reduction from the 10.2% authorized in DEP's last rate proceeding.

Witness Parcell testified that he had employed the comparable earnings method in virtually all of his cost of capital analyses going back to 1972. He testified the comparable earnings analysis is based on the opportunity cost principal and is consistent with and derived from the Bluefield and Hope decisions of the U.S. Supreme Court, which are recognized as the primary standards for the establishment of a fair rate of return for a regulated public utility. The comparable earnings method is also consistent with the concept of rate base regulation for utilities, which employs the book value of both rate base and the capital financing rate base. He testified that his comparable earnings analyses considers the recent historic and prospective rates of return on equity for the groups of proxy utilities companies utilized by himself and DEP witness Hevert. He testified that his conclusion of 9.0% to 10.0% reflects the actual rates of return on equity of the proxy companies, as well as the market-to-book ratios of these companies. Witness Parcell further testified that in the recent DNCP rate proceeding, Docket No. E-22, Sub 532, Order dated December 22, 2016, DNCP and the Public Staff agreed to a settlement with a common equity ratio of 51.75% (versus the requested actual common equity ratio of 53.92%) and a rate of return on equity of 9.9% (versus the 10.5% requested). The Commission approved the cost of capital components of that proposed settlement. Witness Parcell testified that the equity ratio and rate of return on equity in the proposed Stipulation in the current DEP proceeding are consistent with those of the DNCP proceeding.

DEP witness Hevert also testified in support of the Stipulation on the agreed-upon rate of return on equity, capital structure, and overall rate of return contained in the Stipulation. Witness Hevert testified that although the stipulated rate of return on equity is below the lower bound of his recommended range of 10.25%, he recognized the Stipulation represents negotiations among DEP and the Public Staff regarding otherwise contested issues. He testified that the Company has determined that the terms of the Stipulation, in particular the stipulated rate of return on equity and equity ratio, would be viewed by the rating agencies as constructive and equitable, and that he understands and respects that determination.

Witness Hevert testified that although the stipulated rate of return on equity falls below his recommended range, the low end of which is 10.25%, it is within the range of the analytical results presented in his direct and rebuttal testimonies. He testified that capital market conditions continue to evolve and as a consequence, the models used to estimate the cost of equity produce a wide range of estimates. Witness Hevert testified that he recognizes the benefits associated with DEP's decision to enter into the Stipulation and as such, it is his view that the 9.90% stipulated rate of return on equity is a reasonable resolution of an otherwise contentious issue.

Witness Hevert testified that he considered the stipulated rate of return on equity in the context of authorized returns for other vertically integrated electric utilities. He testified that from January 2014 through November 2017, the average authorized rate of return on equity for vertically-integrated electric utilities was 9.85%, only five basis points from the stipulated rate of return on equity. Of the 75 cases decided during that period, 31 included authorized returns of 9.90% or higher.

Witness Hevert testified that given DEP's need to access external capital and the weight rating agencies place on the nature of the regulatory environment, he believes it is important to consider the extent to which the jurisdictions that recently have authorized rates of return on equity for electric utilities are viewed as having constructive regulatory environments. Witness Hevert testified North Carolina generally is considered to have a constructive regulatory environment. He testified that Regulatory Research Associates (RRA), which is a widely referenced source of rate case data, provides an assessment of the extent to which regulatory jurisdictions are constructive from investors' perspectives, or not. As RRA explains, less constructive environments are associated with higher levels of risk:

> RRA maintains three principal rating categories, Above Average, Average, and Below Average, with Above Average indicating a relatively more constructive, lower-risk regulatory environment from an investor viewpoint, and Below Average indicating a less constructive, higher-risk regulatory climate from an investor viewpoint, Within the three principal rating categories, the numbers 1, 2, and 3 indicate relative position. The designation 1 indicates a strong (more constructive) rating; 2, a mid-range rating; and 3, a weaker (less constructive) rating. We endeavor to maintain an approximate equal number of ratings above the average and below the average.[1]

Within RRA's ranking system, North Carolina is rated "Average/1," which witness Hevert testified falls in the top one-third of the 53 regulatory commissions ranked by RRA. Witness Hevert testified that the stipulated rate of return on equity falls 13 to 14 basis points below the mean and median authorized rate of return on equity, respectively, for jurisdictions that are comparable to North Carolina's constructive regulatory environment, and 37 basis points above the median return authorized in less supportive jurisdictions. Taken from that perspective, the stipulated rate of return on equity is a reasonable, if not somewhat conservative measure of DEP's cost of equity.

---

[1] Source: Regulatory Research Associates, accessed November 20, 2017.

Witness Hevert further testified that since January 2014, there have been 65 cases reported by RRA for vertically-integrated electric utilities in which an overall rate of return was specified. Over those 65 cases, the median rate of return was 7.45%, 36 basis points above the 7.09% rate of return contained in the Stipulation. He testified that from a slightly different perspective, 50 of the 65 cases had overall rates of return greater than 7.09%. He testified that the low overall rate of return contained in the Stipulation is brought about by DEP's rather low cost of debt.

AGO witness Polich testified that capital costs for utilities have been declining, not increasing, since DEP's last rate case order dated May 30, 2013, where the Commission approved an rate of return on equity of 10.2%. He testified that market data indicates a substantially lower rate of return on equity is sufficient. He cited DEP's most recent long- term debt issuance, which had an interest rate of 3.608%, adding that his recommended specific rate of return on equity of 8.48% would provide an implied 488 basis point premium over the coupon rate in DEP's September 2017 first mortgage bonds. He performed a two-step DCF and CAPM to reach his rate of return on equity recommendations.

Witness Polich's two-step DCF utilized the weighted average of two-thirds for short-term analysts five-year forecasted growth rate and one-third for the long-term growth rate of projected long-term US economic growth rate in gross domestic product published by the Energy Information Administration (EIA), the Social Security Administration, and IHS Global Insights. The results of his two-step DCF were the mean of the ROEs for the proxy group of 8.25%, and the median rate of return on equity of 8.48%. He testified he used the same proxy group as witness Hevert.

Witness Polich testified that one of the reasons that his analysis is so different than witness Hevert's multi-stage DCF is because witness Hevert uses a long-term growth rate of 5.5%, which is significantly higher than the projected economic long-term growth in U.S. Gross Domestic Product (GDP) from multiple reliable resources. For example, the EIA projects GDP to only grow at 4.14% through 2050. The Congressional Budget Office (CBO) projects Nominal GDP to grow at 3.97% through 2047 and a real GDP growth of 1.93%. He testified that the appropriate long-term GDP growth rate should be 4.22%, which is 128 basis points less than witness Hevert's figure. Witness Polich testified that witness Hevert's reliance on the exaggerated five-year growth rate significantly inflates his growth estimate and rate of return on equity calculations and does not reasonably reflect the need to use a longer-term growth rate in the two-step DCF model. Witness Polich testified that it is not reasonable to expect the regulated proxy group utilities to experience very long-term average dividend growth rates of 5.5% when the overall U.S. economy is only expected to grow at 4.22% over the same term.

For witness Polich's CAPM risk-free rate, he used the last ten-year average yield on 30-year Treasury bonds of 3.15% and the average last twenty-year average yield of 4.32%. For the risk premium, witness Polich used the forward-looking market risk premium of 5.75% recommended by KPMG Advisory N.V., Equity Risk Premium – Research Summary, July 13, 2017, and the 6.16% average risk premium over the last ten years calculated by Dr. Aswarth Damordaran, Professor of Corporate Finance and Valuation at the Stern School of Business at New York University.

Witness Polich used the same proxy group for his CAPM as his two-step DCF. For the proxy group beta, he used the mean of 0.708 and median of 0.675. His CAPM rate of return on equity analysis results were low mean rate of return on equity of 7.22%, weighted median rate of return on equity of 7.56%, and high mean rate of return on equity of 8.68%.

CUCA witness O'Donnell testified that the most useful methodology to produce realistic rate of return on equity results relative to prevailing capital markets, when applied appropriately, is the DCF. To check the reasonableness of his DCF analysis and to gauge the proper rate of return on equity to recommend within the DCF range, he also performed a Comparable Earnings analysis and the CAPM. Witness O'Donnell utilized a proxy group similar to DEP witness Hevert's except witness O'Donnell eliminated Avista Corp due to the pending takeover and SCANA Corp due to the controversy regarding thetermination of construction at the Summer Nuclear Plant.

Witness O'Donnell calculated his DCF dividend growth rate using the historical retention of earnings, the historical 10-year and 5-year compound annual earnings per share, dividends per share, and book value per share as reported by Value Line, the Value Line forecasted compound annual rate of change for earnings share, dividends per share, and book value per share, and the forecasted rate of change for earnings per share that industry analysts supplied to Charles Schwab and Company. Witness O'Donnell's DCF growth rate was 4.75% to 5.75%, and his calculated DCF range was 7.75% to 8.75%

CUCA witness O'Donnell in his comparable earnings analysis included the earned returns on equity for his proxy group and Duke Energy Corporation over the period 2015 through 2022, balancing historical and forecasted returns. The past and forecasted earned returns for the proxy group were 9.25% to 10.25%, and the past and forecasted earned returns for Duke Energy Corporation were 7.5% to 8.5%. His recommended rate of return on equity based upon his comparable earnings analysis was the range of 8.75% to 9.75%.

Witness O'Donnell testified that for his CAPM, he used for the risk-free rate and the current 30-year Treasury bond yields of 2.9%. He expected the current interest rate environment to remain relatively stable for many years to come, citing statements by Federal Reserve Chairperson Janice Yellen. "Yellen Says Forces Holding Down Rates May Be Long Lasting," Barrons, June 16, 2016. The beta he used was his proxy group was 0.72 and the beta for Duke Energy Corporation was 0.60.

For his risk premium analysis, witness O'Donnell used the long-term geometric and arithmetic returns for both large company equities and fixed income Long-Term Government Bonds with the resulting risk premium ranging from 4.60% to 6.20%. He also evaluated the predicted total market returns by a group of market experts, which ranged from 4.5% to 8%. He concluded that his equity risk premium was in the range of 4% to 6% and his CAPM resulted in an ROE range of 4.6% to 7.5%.

Commercial Group witnesses Chriss and Rosa testified that the average of 111 reported electric utility rate case rates of return on equity authorized by commissions to investor-owned utilities in 2014, 2015, 2016 and year-to-date 2017 was 9.65%. Witnesses Chriss and Rosa further testified that for the group reported by SNL Financial in Commercial Group Exhibit CR-3, the average rate of return on equity for vertically integrated utilities authorized from 2014 through present is 9.79%. They further testified that there is a continuing declining trend in authorized rates of return on equity for vertically integrated utilities over this time period. The average rate of return on equity authorized for vertically integrated utilities in 2014 was 9.92%; in 2015, 9.75%; in 2016, 9.77%; and so far in 2017, 9.70%.

Witnesses Chriss and Rosa testified that they know the rate of return on equity decisions of other state regulatory commissions are not binding on the Commission. They testified that each commission considers the specific circumstances in each case in its determination of the proper rate of return on equity. Commercial Group provided the information in its testimony to illustrate a national customer perspective on industry trends in authorized rates of return on equity. Its witnesses testified that in addition to using recent authorized rates of return on equity as a general gauge of reasonableness for the various cost-of-equity analyses presented in this case, the Commission should consider how its authorized rate of return on equity impacts North Carolina customers relative to other jurisdictions.

CIGFUR witness Phillips did not perform cost of capital analyses. He testified that DEP's requested rate of return on equity of 10.75% is excessive and should be rejected. He stated that DEP's current authorized rate of return on equity is 10.2%, which was authorized in the Commission's 2013 DEP Rate Order issued on May 30, 2013. Witness Phillips testified that costs of capital have declined since DEP's last rate case. Every quarter, Regulatory Research Associates, an affiliate of SNL Financial, updates its Major Rate Case Decisions report that covers electric and natural gas utility rate case outcomes. Specifically, this report tracks the authorized rates of return on equity resulting from utility rate cases. The most recent report, updated through June 30, 2017, shows that the national average authorized rate of return on equity for electric utilities in the first six months of this year is 9.61%, nearly 60 basis points below DEP's currently authorized rate of return on equity. Witness Phillips concluded that DEP's current approved rate of return on equity, and definitely its requested rate of return on equity, are significantly above the current market cost of equity. He recommended that the Commission authorize a rate of return on equity that does not exceed the national average of9.61%.

2. Discussion of Rate of Return Evidence and Conclusions

In a fully contested rate case such as, for example, the 2012 DNCP rate case, there will almost inevitably be conflicting rate of return on equity expert testimony. Even in a partially settled case, the Commission may be faced with conflicting rate of return on equity expert witnesses whose testimony, in accordance with CUCA I and Cooper I, requires detailed consideration and, as necessary, evaluation by the Commission of competing methodologies, opinions, and recommendations. These were the circumstances in DEC's 2011 rate case, Docket No. E-7, Sub 989, which resulted in the Cooper I decision, as well as the DEP Sub 1023 Rate Case. In both of those cases rate of return on equity expert testimony from CUCA witness O'Donnell provided an alternate rate of return on equity analysis that pegged the utility's cost of capital at an amount lower than the settled rate of return on equity. The Supreme Court in Cooper I faulted the Commission for not making explicit its evaluation of this testimony, and, thus, the Commission in the 2013 DEP Rate Order made an express evaluation of witness O'Donnell's testimony in accordance with the Cooper I decision.

The Commission determines the appropriate rate of return on equity based upon the evidence and particular circumstances of each case. However, the Commission believes that the rate of return on equity trends and decisions by other regulatory authorities deserve some weight, as (1) they provide a check or additional perspective on the case-specific circumstances, and (2) the Company must compete with other regulated utilities in the capital markets, meaning that a rate of return on equity significantly lower than that approved for other utilities of comparable risk would undermine the Company's ability to raise necessary capital, while a rate of return on equity significantly higher than other utilities of comparable risk would result in customers paying more than necessary. In this connection, the analysis performed by Commercial Group witnesses Chriss and Rosa, as modified by witness Hevert, is instructive. Witnesses Chriss and Rosa noted that according to data from SNL Financial for 2014 through the 2017 hearing date, authorized rates of return on equity across the country for vertically-integrated electric utilities have been in the range of 9.20% to 10.55%. Witnesses Chriss and Rosa calculated the mean authorized rate of return on equity for vertically-integrated utilities like DEP to be 9.79%. Witness Hevert, in commenting upon and evaluating their testimony in his Rebuttal Testimony, refined their analysis and presented his findings in Exhibit RBH-R21 to add in jurisdictional rankings. Doing so results in a rate of return on equity range from 9.70% to 10.55%, with a median of 10.14%. (Tr. Vol. 8, pp. 158-59.) The Settlement rate of return on equity is, of course, within that range, and actually below the median of that range. As witness Hevert's settlement testimony notes, "since 2014, the average authorized Return on Equity for vertically integrated electric utilities has been 9.85%, only five basis points from the Settlement rate of return on equity. Among jurisdictions that, like North Carolina, are seen as having constructive regulatory environments, the average authorized ROE [rate of return on equity] was 10.03%, 13 basis points above the 9.90% Settlement ROE [rate of return on equity]." (Id. at 330.) Accordingly, the evidence presented concerning other authorized rates of return on equity, when put into proper context, lends substantial support to the stipulated 9.9% rate of return on equity level.

Finally, as the Supreme Court made clear in CUCA I and CUCA II, the Commission should give consideration to the non-unanimous Stipulation as relevant evidence, along with all evidence presented by other parties, in determining whether the Stipulation's provisions should be accepted. In this case, insofar as expert rate of return on equity testimony is concerned, no expert witness presented credible or substantial evidence that the stipulated 9.9% rate of return on equity is not just or reasonable to all parties. Both witnesses Hevert and Parcell supported DEP's required rate of return on equity at that level, in the context of the Stipulation as a whole, and witness Hevert was subjected to extensive cross-examination. Thus, the Commission finds and concludes that the Stipulation, along with the expert testimony of witnesses Hevert (risk premium analysis), O'Donnell (comparable earnings), and Parcell (comparable earnings), are credible and substantial evidence of the appropriate rate of return on equity and are entitled to substantial weight in the Commission's determination of this issue.

3. Evidence of Impact of Changing Economic Conditions on Customers

As noted above, utility rates must be set within the constitutional constraints made clear by the United States Supreme Court in Bluefield and Hope. To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting a return on equity, the Commission must nonetheless provide the public utility with the opportunity, by sound management, to (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utils. Comm'n v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189

S.E.2d 705 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return declared" in Bluefield and Hope. Id.

a. Discussion and Conclusions Regarding Evidence Introduced During the Evidentiary Hearing

In this case, all parties had the opportunity to present the Commission with evidence concerning changing economic conditions as they affect customers. The testimony of witnesses Hevert and Parcell, which the Commission finds entitled to substantial weight, addresses changing economic conditions at some length. Witness Hevert provided detailed data concerning changing economic conditions in North Carolina as well as nationally, and concluded that the North Carolina-specific conditions are "highly correlated" with conditions in the broader nationwide economy. As such, witness Hevert testified that changing economic conditions, both nationally and specific to North Carolina, are reflected in his rate of return on equity estimates.

DEP witness Hevert testified extensively on economic conditions in North Carolina. He testified that unemployment has fallen substantially in North Carolina and the U.S. since late 2009 and early 2010, when the rates peaked at 10.00% and 11.30%, respectively. By February 2017, the unemployment rate had fallen to one-half of those peak levels: 4.70% nationally, and 5.10% in North Carolina. Since DEP's last rate filing in 2012, the unemployment rate in North Carolina has fallen from 9.00% to 5.10%.

Witness Hevert testified that with respect to GDP there also has been a relatively strong correlation between North Carolina and the national economy (approximately 67.00%). Since the financial crisis, the national rate of growth at times (during portions of 2010 and 2012) outpaced North Carolina. Since the third quarter of 2015, however, North Carolina has consistently exceeded the national growth rate. He testified that as to median household income, the correlation between North Carolina and the U.S. is relatively strong (nearly 86.00% from 2005 through 2015). Since 2009 (that is, the years subsequent to the financial crisis), median household income in North Carolina has grown at a faster annual rate than the national median income.

Witness Hevert testified as to the seasonally unadjusted unemployment rates in the counties served by DEP. At the unemployment peak, which occurred in late 2009 into early 2010, the unemployment rate in those counties reached 12.65% (1.65 percentage points higher than the State-wide average); by February 2017 it had fallen to approximately 5.60% (0.60 percentage points higher than the State-wide average). Since DEP's last rate filing in 2012, these counties' unemployment rates have fallen by over 4.00 percentage points.

Witness Hevert testified that it was his opinion that, based on the indicators discussed above, North Carolina and the counties contained within DEP's service area continue to steadily emerge from the economic downturn that prevailed during DEP's previous rate case, and that they have experienced significant economic improvement during the last several years. He testified that this improvement is projected to continue.

Public Staff witness Parcell testified that he is aware of no clear numerical basis for quantifying the impact of changing economic conditions on customers in determining an appropriate rate of return on equity in setting rates for a public utility. He testified that the impact of changing economic conditions nationwide is inherent in the methods and data used in his study to determine the cost of equity for utilities that are comparable in risk to DEP.

Witness Parcell testified that DEP provides service in 51 counties, and that the 18 North Carolina Department of Commerce classified Tier 1 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 5.8%, with a combined total of 17,317 persons unemployed, and a combined total labor force of 298,459 persons. The 20 Tier 2 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 5.6%, with a combined total of 43,789 persons unemployed and a combined total labor force of 781,690 persons. The 13 Tier 3 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 4.0%, with a combined total of 56,743 persons unemployed, each with a combined total labor force of 1.431 million persons. The August 2017 not-seasonally-adjusted North Carolina unemployment rate was 4.5%. He testified that all 51 counties experienced a drop in their not-seasonally-adjusted unemployment rates between August 2016 and August 2017, averaging a 0.9% decrease compared to the statewide decrease of 0.8%. Witness Parcell further testified the North Carolina Department of Commerce in its September 2017 NC Today stated that North Carolina industry employment had an increase of 70,500 over the year, an increase in real taxable retail sales of $643.9 million over the year, an increase in residential building permits of 3.4% over the year, and an increase in job postings of 8.3% over the year. Witness Parcell testified that there are reasons to believe that the economic conditions in the nation and in North Carolina will continue to improve, which should provide a benefit for many DEP customers. He concluded by stating that the Commission's duty to set rates as low as reasonably possible consistent with constitutional requirements without jeopardizing adequate and reliable service is the same regardless of the customer's ability to pay.

b. Evidence Introduced During Public Hearings and Further Conclusions

The Commission's review also includes consideration of the evidence presented during the public hearings by public witnesses, almost all of whom presently are customers of DEP. The hearings provided over 140 witnesses the opportunity to be heard regarding their respective positions on DEP's application to increase rates. The Commission held five evening hearings throughout DEP's North Carolina service territory to receive public testimony. The testimony presented at the hearings illustrates in detail the difficult economic conditions facing numerous North Carolina citizens. A representative sample of the public witness testimony received on the topic is summarized below.

At the public hearing in Rockingham, witnesses Wood, Hall, Bostic, McCall, Zucchino, Merrell, and Tucker testified that those living on a fixed or limited income cannot afford, and would be disparately impacted by, DEP's proposed rate increase. Some of the same witnesses testified that any increase to the basic customer charge would be particularly problematic because it would discourage energy conservation and preclude customers from reducing electric usage as a means of offsetting increased rates.

At the public hearing in Raleigh, witnesses Finch, Mallam, Richmond, Girolami, Toman, Rodriguez, Bearden, Cygan, Goodson, Seabolt, Adams, Malone, Von Schonfeld, Garrity, Karasik, and Henry testified that those with a fixed or limited income cannot afford, and would be disparately affected by, DEP's proposed rate increase. Some of the same witnesses testified that any increase to the basic customer charge would be particularly problematic because it would discourage energy conservation, preclude customers from reducing electric usage as a means of offsetting increased rates, and reduce customers' ability to invest in their own energy efficiency and renewable energy measures. Witnesses Mallam, Rodriguez, Seabolt, and Garrity testified that costs related to power plants never used or useful to the consuming public or abandoned prior to completion reflect poor management decisions by DEP, and, therefore, should be excluded from recovery through the rate base. Witness Tart testified that initiatives such as community solar could reduce costs of energy generation and, thus, reduce the need for DEP to apply for future rate increases.

At the public hearing in Asheville, witnesses Whalen, Maddox, Biziewski, Rouse, and McGlinn testified that DEP's proposed increase to the basic customer charge should be denied because it would discourage energy conservation, preclude customers from reducing electric usage as a means of offsetting the increased rates, and benefit, at the expense of low-income and renewable energy residential customers, industrial or business customers who consume the most energy. Witnesses Whalen, Culver, Williams, Biziewski, Rouse, Boatright on behalf of Cruz-Segarra, Wilds, McGlinn, Kohnle, Huttman on behalf of Williams, Brill, V. Williams, Mac Arthur, and Rountree testified that those with a fixed or limited income cannot afford, and would be disparately affected by, DEP's proposed rate increase. Witnesses Hollister, Biziewski, Blow, Laubach, Rouse, Brame, Hale, Boatright, Carson, Carter, Holt, Smith, Kohnle, Friedrich, Whitmire, Brill, Craig, Anderson, Fireman, White, Norris, Houghton, Livsey, Mac Arthur, and Stangler testified that DEP is spending too much money on gas-fired plants, and instead should invest more on energy efficiency and renewable energy initiatives. Witness Huttman on behalf of Williams testified that DEP's requested rate increase would be bad for small businesses and local economies.

At the public hearing in Snow Hill, witnesses Herring, Harroway, Taylor, Schachter, Hinnant, Dantonio, Gurley, Poland, Gallimore, Wright, Battle, Liles, and Mullens testified that those with a fixed or limited income cannot afford, and would be disparately affected by DEP's proposed rate increase. Witnesses Taylor, Shachter, and Battle testified that DEP's proposed increase to the basic customer charge should be denied because it would discourage energy conservation, preclude customers from reducing electric usage as a means of offsetting the increased rates, and disproportionately affect the customers who use the least amount of energy. Witnesses Winstead, Wood, and Emerson testified that DEP's application for a rate increase is unjustified because current infrastructure can support the mostly flat demand for energy for years to come, non-public utility rates have decreased, and the price of fuel to generate electricity has decreased. Witness Bain testified that costs related to power plants never used or useful to the consuming public or abandoned prior to completion reflect DEP's poor management practices, and, therefore, should be excluded from recovery through the rate base.

At the public hearing in Wilmington, witnesses Bondurant and Gillman-Bryan testified that, while a partial rate increase would be acceptable, the full amount requested by DEP is excessive. Witnesses Bondurant, Maxwell, Stutts, Herbert-Harkin, Wooten, Lafollette-Black, Nofziger, Leonard, Blackburn, McKay, Porter, Bradley, Buckles, Murray, Murphy, Sheppard, Greiner, and Richardson testified that those with a fixed or limited income cannot afford, and would be disparately affected by, DEP's proposed rate increase. Witneses Gillman-Bryan, Szmant, Feris-Harkin, Porter, Richardson, Maynard, Bradley, and Thackston testified that DEP's stock consistently has performed well and its shareholders consistently have profited, and, therefore, DEP should seek from shareholders and investors whatever funds are needed for DEP to operate.

The Commission accepts as credible, probative, and entitled to substantial weight the testimony of the public witnesses.

c. Commission's Decision Setting Rate of Return and Approving Rate Increase Takes Into Account and Ameliorates the Impact of Current Economic Conditions on Customers

As noted above, the Commission's duty under G.S. 62-133 is to set rates as low as reasonably possible without impairing the Company's ability to raise the capital needed to provide reliable electric service and recover its cost of providing service. The Commission is especially mindful of this duty in light of the evidence in this case concerning the impact of current economic conditions on customers.

Chapter 62 in general, and G.S. 62-133 in particular, set forth an elaborate formula the Commission must employ in establishing rates.The rate of return on cost of property element of the formula in G.S. 62-133(b)(4) is a significant, but not independent one. Each element of the formula must be analyzed to determine the utility's cost of service and revenue requirement. The Commission must make many subjective decisions with respect to each element in the formula in establishing the rates it approves in a general rate case. The Commission must approve accounting and pro forma adjustments to comply with G.S.62-133(b)(3). The Commission must approve depreciation rates pursuant to G.S.62-133(b)(1). The decisions the Commission makes in each of these subjective areas have multiple and varied impacts on the decisions it makes elsewhere in establishing rates, such as its decision on rate of return on equity.

Economic conditions existing during the test year, at the time of the public hearings, and at the date of this Commission Order affect not only the ability of DEP's consumers to pay electric rates, but also the ability of DEP to earn the authorized rate of return during the period rates will be in effect. Pursuant to G.S. 62-133, rates in North Carolina are set based on a modified historic test period.[1] A component of cost of service as important as return on investment is test year revenues.[2] The higher the level of test year revenues the lower the need for a rate increase, all else remaining equal. Historically, and in this case, test year revenues are established through resort to regression analysis, using historic rates of revenue growth or decline to determine end of test year revenues.

DEP is in a significant construction mode – adding new gas-fired plants, retrofitting nuclear units, and investing in transmission and distribution facilities. Much of this investment is responsive to environmental regulatory requirements. New gas units will replace older, less efficient, higher polluting coal units. These units do little to meet new growth.

When costs and expenses grow at a faster pace than revenues during the period when rates will be in effect, the utility will experience a decline in its realized rate of return on investment to a level below its authorized rate of return. Differences exist between the authorized return and the earned, or realized, return. Components of the cost of service must be paid from the rates the utility charges before the equity investors are paid their return on equity. Operating and administrative

[1] G.S. 62-133(c).

[2] G.S. 62-133(b)(3).

expenses must be paid, depreciation must be funded, taxes must be paid, and the utility must pay interest on the debt it incurs. To the extent revenues are insufficient to cover the entire cost of service, the shortfall reduces the return to the equity investor, last in line to be paid. When this occurs, the utility's realized, or earned, return is less than the authorized return.

This phenomenon, caused by incurrence of higher costs prior to the implementation of new rates to recover those higher costs, is commonly referred to as regulatory lag. Just as the Commission confronts constitutional and statutory restrictions in making discrete decrements to rate of return on equity to mitigate the impact of rates on consumers, it also confronts statutory constraints on its ability to adjust test year revenues to mitigate for regulatory lag. The Commission, in its expert experience and judgment and based on evidence in the record, is aware of the effects of regulatory lag in the existing economic environment. However, just as the Commission is constrained to address difficult economic times on customers' ability to pay for service by establishing a lower rate of return on equity in isolation from the many subjective determinations that must be made in a general rate case, it likewise does not address the effect of regulatory lag on the Company by establishing a higher rate of return on equity. Instead, in setting the rate of return, the Commission considers both of these negative impacts in its ultimate decision fixing DEP's rates. The Commission keeps all factors affected by current economic conditions in mind in the many subjective decisions it makes in establishing rates. In doing so in the case at hand, the Commission has accepted the stipulated 9.9% rate of return on equity in the context of weighing and balancing numerous factors and making many subjective decisions. When these decisions are viewed as a whole, including the decision to establish the rate of return on equity at 9.9%, the Commission's overall decision fixing rates in this general rate case results in lower rates to consumers in the existing economic environment.

Consumers pay rates, a charge in cents per kWh or per kW for the electricity they consume. Investors are compensated by earning a return on the capital they invest in the business. Consumers do not pay a rate of return on equity. Investors are paid in dollars. In this case DEP filed rate schedules that would have produced annual revenues of $3,560,767,000. This is the amount ratepayers would pay. These revenues, pursuant to the Application, would have produced $625,570,000 in return on investment. Of this amount $463,224,000 was the return that would have been paid to equity investors, the "return on equity." Pursuant to the Application the "rate of return on equity" financed portion of the investment (as distinguished from the "return on equity") would have been 10.75%.

All of the scores of adjustments the Commission approves reduce the revenues to be recovered from ratepayers and the return to be paid to equity investors. Some adjustments reduce the authorized rate of return on investment financed by equity investors. The noted adjustments are made solely to reduce rates and provide rate stability to consumers (and return to equity investors) to recognize the difficulty for consumers to pay in the current economic environment. While the equity investor's cost was calculated by resort to a rate of return on equity of 9.9% instead of 10.75%, this is only one approved adjustment that reduced ratepayer responsibility and equity investor reward. Many other adjustments reduced the dollars the investors actually have the opportunity to receive. Therefore, nearly all of these other adjustments reduce ratepayer responsibility and equity investor returns in compliance with the Commission's responsibility to establish rates as low as reasonably permissible without transgressing constitutional constraints.

For example, to the extent the Commission makes downward adjustments to rate base, or disallows test year expenses, or increases test year revenues, or reduces the equity capital structure component, the Commission reduces the rates consumers pay during the future period when rates will be in effect. Because the utility's investors' compensation for the provision of service to consumers takes the form of return on investment, downward adjustments to rate base or disallowances of test year expenses or increases to test year revenues, or reduction in the equity capital structure component, reduce investors' return on investment irrespective of its determination of rate of return on equity.

The rate base, expenses, and revenue examples listed above are instances where the Commission makes decisions in each general rate case, including the present case, that influence the Commission's determination on rate of return on equity and cost of service and the revenue requirement. The Commission always endeavors to comply with the North Carolina Supreme Court's requirements that it "fix rates as low as may be reasonably consistent" with U.S. Constitutional requirements irrespective of economic conditions in which ratepayers find themselves. While compliance with these requirements may have been implicit and, the Commission reasonably assumed, self- evident as shown above, the Commission makes them explicit in this case to comply with the Supreme Court requirements of Cooper I.

Based on the changing economic conditions and their effects on DEP's customers, the Commission recognizes the financial difficulty that the increase in DEP's rates will create for some of DEP's customers, especially low-income customers. As shown by the evidence, relatively small changes in the rate of return on equity have a substantial impact on a utility's base rates. Therefore, the Commission has carefully considered the changing economic conditions and their effects on DEP's customers in reaching its decision regarding DEP's approved rate of return on equity. The Commission also recognizes that the Company is investing significant sums in generation, transmission and distribution improvements to serve its customers, thus requiring the Company to maintain its creditworthiness in order to compete for large sums of capital on reasonable terms. The Commission must weigh the impact of changing economic conditions on DEP's customers against the benefits that those customers derive from the Company's ability to provide safe, adequate and reliable electric service. Safe, adequate and reliable electric service is essential to the well-being of the people, businesses, institutions, and economy of North Carolina.

The Commission finds and concludes that these investments by the Company provide significant benefits to all of DEP's customers. The Commission concludes that the return on equity approved by the Commission in this proceeding appropriately balances the benefits received by DEP's customers from DEP's provision of safe, adequate, and reliable electric service in support of the well-being of the people, businesses, institutions, and economy of North Carolina with the difficulties that some of DEP's customers will experience in paying DEP's increased rates.

Finally, the Commission gives significant weight to the Stipulation and the benefits that it provides to DEP's customers, which the Commission is obliged to consider as an independent piece of evidence under the Supreme Court's holdings in CUCA I and CUCA II.

The Commission in every case seeks to comply with the N.C. Supreme Court mandate that the Commission establish rates as low as possible within Constitutional limits. The scores of adjustments the Commission approves in this case comply with that mandate. Nearly all of them reduced the requested return on equity and benefit consumers' ability to pay their bills in this economic environment.

In this case DEP originally requested a retail revenue increase of $477 million, or a 14.9% increase in annual revenues. The Commission has examined the Company's application and supporting testimony and exhibits and Form E-1 filings seeking to justify this increase. The Public Staff and DEP reached a Stipulation that resulted in reducing the retail revenue increase sought by the Company by approximately $73 million. The Public Staff represents the using and consuming public, including those having difficulty paying their bills. The Public Staff representatives attended all of the hearings held across the state to receive customers' testimony. The Public Staff has a staff of expert engineers, economists, and accountants who investigate and audit the Company's filings. The Public Staff must recommend rates consumers should pay and the return on investment equity investors should receive. The Public Staff considers all factors included in cost of service. In recent years, the Public Staff and the utilities have entered into settlements resolving the issues so as to avoid at least part of the substantial rate case expense customers otherwise would pay. This process is favored by financial analysts and rating agencies because it reduces delay and enhances predictability, thereby creating a constructive, credit supportive, regulatory environment ultimately reflected favorably in investors' required cost of capital. Intervenors who generally represent narrow segments or classes of ratepayers seldom enter into these settlements, though often times they do not oppose them.

As with all settlement agreements, each party to the Stipulation gained some benefits that it deemed important and gave some concessions for those benefits. Based on DEP's Application and pre-filed testimony, it is apparent that the Stipulation ties the 9.9% rate of return on equity to substantial concessions the Company made.

<u>Summary and Conclusions on the Rate of Return on Equity</u>

The Commission has carefully evaluated the return on equity testimonies of DEP witness Hevert, Public Staff witness Parcell, AGO witness Polich, CUCA witness O'Donnell, Commercial Group witnesses Chriss and Rosa, and CIGFUR witness Phillips. The Commission finds that the comparable earning analysis testimony of Public Staff witness Parcell, the risk premium analysis testimony of DEP witness Parcell, the comparable earnings testimony of CUCA witness O'Donnell, and the Stipulation are credible, probative, and are entitled to substantial weight.

Public Staff witness Parcell conducted a comparable earnings analysis using both his and witness Hevert's proxy groups of electric utilities. His comparable earning recommended rate of return on equity range was 9.0% to 10.0%. The Commission approved rate of return on equity of 9.9% is in the upper portion of his range. As testified by witness Parcell, the comparable earnings analysis is based on the opportunity cost principal and is consistent with and derived from the <u>Bluefield</u> and <u>Hope</u> decisions of the Supreme Court, which are recognized as the primary standards for the establishment of a fair rate of return for a regulated public utility. The comparable earnings method is also consistent with the concept of rate base regulation for utilities, which employs the book value of both rate base and the capital financing rate base. Witness Parcell testified that his comparable earnings analyses considers the recent historic and prospective rates of return on equity for the groups of proxy utilities companies utilized by himself and DEP witness Hevert. He testified that his comparable earnings analyses reflect the actual rates of return on equity of the proxy companies, as well as the market- to-book ratios of these companies.

DEP competes against the Hevert and Parcell electric proxy group electric companies and other electric utilities for investments in equity capital. Investors have choices as to which electric utilities, or other companies, in which to invest. A Commission approved rate of return on equity for DEP below the earned rates of return on equity of other electric utilities could provide one basis for investors to invest in the equity of electric utilities other than DEP.

DEP witness Hevert's risk premium analysis is credible, probative, and entitled to substantial weight. His risk premium was calculated as the difference between the authorized rate of return on equity and the then-prevailing level of long-term 30-year Treasury yield. He then gathered data for 1,508 electric utility rate proceedings between January 1980 and March 31, 2017. The Commission approved rate of return on equity of 9.9% is 10 basis points below witness Hevert's risk premium's implied rate of return on equity range of 10.0% to 10.32%.

The Commission also concludes that the comparable earnings analysis by CUCA witness O'Donnell is credible, probative and entitled to substantial weight. Witness O'Donnell testified that the comparable earnings for his and witness Hevert's proxy group of electric utilities produced earned returns of 9.25% to 10.25% over the period 2015 through 2022, balancing historical and forecasted returns. The Commission approved 9.9% rate of return on equity is well within that range.

In its post-hearing Brief, CUCA contends that DEP's testimony directly contradicts the testimony of its rate of return witness Hevert. CUCA states that witness Hevert's cost of equity recommendation is significantly higher than what DEP contends is its "market return" for its decommissioning expenses and its pension costs. According to CUCA, if DEP's "market returns" matched Hevert's 10.75% recommendation, then no additional rate increase would be needed for these costs, and the Commission should not reward DEP for inconsistent testimony.

In its post-hearing brief, the AGO contends that establishing an 8.48% rate of return on equity is supported by stock market data showing what investors require under current economic conditions, fairly balances the interests of investors and consumers, reduces the revenue requirement by another $96.1 million per year, and is supported by the results of the DCF analyses performed by the expert witnesses. (Tr., Vol. 13, p. 126.) In addition, the AGO submits that DEP has not met its burden of proof that the9.9% rate of return on equity proposed in the Stipulation fixes a reasonable return given the low cost of equity capital in current markets.

The AGO summarizes the DCF analyses of witnesses Polich, Hevert, O'Donnell and Parcell. The AGO contends that witness Hevert's analyses are generally flawed by the use of methods and inputs that are "systematically biased upward in a manner that significantly inflates his cost of equity conclusions" (Parcell Tr. Vol. 14, p. 79), and submits that the reason that his DCF results are so much higher than those produced by the other witnesses is that he used much higher long-term growth factors in his multi-stage DCF models. (Tr. Vol. 13, p. 95.) The AGO states that the utilities commission in Missouri came to a similar conclusion that witness Hevert's analyses overstated growth factors in 2015 when it examined similar analyses that he performed for Ameren Missouri (Tr. Vol. 8, pp. 386-87), finding that his multi-stage DCF analysis was based on a nominal long-term GDP growth rate outlook that was overly optimistic, and that by adjusting his DCF analysis to reflect the level of consensus economists' forward-looking real GDP growth outlooks, his DCF study would have produced an 8.8% rate of return on equity estimate instead of a 10.02% rate of return on equity. (Tr. Vol. 8, pp. 386-87.) Further, the AGO states that the Missouri commission also found that witness Hevert's CAPM analysis used an unreasonably high estimate of projected market returns. (Tr. Vol. 8, p. 387.)

According to the AGO, witness Hevert gave little weight to the market data in his DCF analysis because he contends that it would reduce the rate of return on equity in this case too much from the rate of return on equity approved in DEP's last rate case. (Tr. Vol. 8, p. 171.) However, the AGO contends that the fact that the rate of return on equity would drop considerably is not an appropriate consideration and relies incorrectly on the assumption that the rate of return on equity in DEP's existing rates is a starting point for measuring how much the cost of capital has changed.

The AGO states that witnesses Polich, Parcell, and O'Donnell performed rate of return on equity estimates using the CAPM and that their CAPM results are significantly lower than the results of the DCF studies they performed. On the other hand, according to the AGO witness Hevert's CAPM produced even higher results at the top of his CAPM range. The AGO witness states that the main factor that caused witness Hevert's high CAPM results is his over-estimate of the projected returns associated with equity capital as compared to risk-free investments (i.e., the risk premium), and that he relies on problematic DCF analyses to estimate projected equity returns. (Tr. Vo. 14, pp. 89-90.) The AGO states that the flawed effect of his over-estimated projection of the risk premium was also observed by the Missouri commission in its 2015 Order. (Tr. Vol. 8, p. 387.)

The AGO notes that another model used by witness Hevert is the Risk Bond Yield Premium, using data about the rates of return on equity authorized by regulators in other rate proceedings to estimate a rate of return on equity. The AGO states that the authorized rates of return reflect policies and underlying data estimates of market conditions that are not provided in the record in this case, and contends that it is not appropriate for the Commission to determine DEP's rate of return on equity based on such evidence, citing Cooper II, 367 N.C. at 443, 758 S.E.2d at 643; State ex rel. Utilities Comm'n v. Public Staff, 331 N.C. 215, 225, 415 S.E.2d 354, 361 (1992).

Moreover, the AGO states that witness Parcell also used a Comparable Earnings (CE) study that compares the actual return expected on the original cost book value of enterprises with similar risk, and evaluates investor acceptance of the returns as indicated by the resulting market-to-book ratios. (Tr. Vol. 14, p. 74.) From his analysis he posits that a 9.5% CE result (the midpoint of his range) is well above the actual earned rate of return on equity for the regulated companies, (Id.), and is more than sufficient for the company to attract new equity capital without dilution. (Tr. Vol. 14, p. 75.)

The AGO maintains that a thoughtful review of the rate of return on equity is important because even a seemingly small change to DEP's authorized rate of return on equity makes a difference of millions of dollars in DEP's revenue requirement. Further, the AGO states that North Carolina law requires the Commission to fix a rate of return that is fair to the utility's investors and its customers, citing G.S. 62-133(a), 62-133(b)(4); Cooper I, 366 N.C. at 495, 739 S.E.2d at 548; Bluefield, and Hope. The AGO further notes that the burden of proof in this case is upon DEP to show that its proposed rates are just and reasonable, pursuant to G.S. 62-75 and 62-134(a), and that the Commission must conduct an independent analysis of the evidence and reach its own conclusion when it fixes the rate of return on equity. Cooper I, 366 N.C. at 494, 739 S.E.2d at 547.

Further, the AGO states that the Commission may consider the multiple items addressed in the Stipulation, but that it is beyond the Commission's authority to fix an excessive rate of return on equity negotiated in exchange for other factors addressed in the Stipulation. According to the AGO, North Carolina's ratemaking statute requires the Commission to "fix" the rate of return, taking into account specific considerations. See G.S. 62-133(b)(4); Thornburg II, 325 N.C. at 490, 385 S.E.2d at 466 ("Section 62-133 provides a step-by-step procedure for the Commission to follow in fixing these rates.").

Finally, the AGO posits that although North Carolina is doing well as a state in terms of growth, North Carolina households have less ability on average to absorb increases in the cost of living – such as utility rate hikes – because per capita income is considerably lower than in other states, while the cost of living is not. (Tr. Vol. 13, p. 115.) The AGO notes that North Carolina has recently enjoyed a stronger GDP growth rate than the national average and that the cost of living index for North Carolina is slightly lower (1.1%) than the national average, but that per capita income is well below the national average (13.8% lower) and income has grown at a slower pace than the nation as a whole. (Tr. Vol. 13, p. 113.) In addition, the AGO summarizes the testimony of public witnesses regarding the impact of the proposed rate increase and their concerns.

Commercial Group, in its post-hearing Brief, notes that the Commission approved a rate of return on equity of 10.2% for DEP in its last rate case in 2013 and that since then average returns for electric utilities across the country have dropped to 9.63% as of 2017. Commercial Group opines that although the Stipulation rate of return on equity would result in DEP receiving an above-average rate of return on equity, the reduction in the proposed rate of return on equity from 10.2% to 9.9% is a reasonable step in the right direction, particularly when combined with a slight decrease in the equity ratio and cost of debt that are provided in the Stipulation. Nevertheless, Commercial Group submits that based on the rate of return on equity testimony of witnesses Chriss and Rosa the Stipulation rate of return on equity of 9.90% should serve as an upper limit on rate of return on equity with respect to a gradual approach of moving DEP's rate of return on equity more in line with that of utilities across the country. In conclusion, Commercial Group recommends adoption of the Stipulation rate of return on equity of 9.90% and the overall weighted cost of capital of 7.09%.

The Commission has carefully evaluated the DCF analysis recommendations of witnesses Parcell, Hevert, Polich, and O'Donnell, and the Commission gives minimal weight to these analyses. As shown on Commercial Group's Exhibit CR-3, the lowest Commission approved rate of return on equity for a vertically integrated electric company for the period of 2014 through the hearing in 2017 was 9.2%. Witness Parcell's specific DCF result was 8.85%, witness Polich's was 8.48%, and the mid-point of witness O'Donnell's was 8.25%. The average of Hevert's constant growth DCF means was 8.92%, and the mid-point of the range of witness Hevert's Multi-Stage DCF analysis was 9.0%. The Commission considers all of these DCF results to be outliers, being well below the lowest vertically-integrated rate of return on equity of 9.2%. The Commission determines that all of these DCF analyses in the current market produce unrealistic low results.

The Commission gives no weight to any of the witnesses' CAPM analyses. The analyses of witness Parcell with a mid-point of 6.4% is unrealistically low, and witness Parcell agreed as much in his testimony. The CAPM analysis of witness O'Donnell resulted in a CAPM rate of return on equity mid-point of 6.05%, which is an outlier well below the 9.2% previously discussed. Witness Polich's CAPM weighted median rate of return on equity of 7.56% is also an outlier and unrealistically low. DEP WitnessHevert's CAPM range of 9.15% to 11.49% is also an outlier and upwardly biased due to his use of the near-term projected 30-year Treasury interest rate of 3.52%, which witness Parcell testified greatly exceeds the current level of long-term Treasury of about 2.8%. Witness Hevert's risk premium component of this CAPM uses a constant growth DCF for the S&P 500 companies using analysts projected earnings per share forecasts as the growth component. Witness Hevert's DCF dividend growth, component based solely on analysts' earnings per share growth projections, without consideration of any historical results, is upwardly biased and unreliable.

The rate of return on equity testimonies of Commercial Group witnesses Chriss and Rosa focused on the commission-approved rates of return on equity authorized for vertically-integrated electric utilities in 2014, 2015, 2016, and year-to-date 2017 listed in Commercial Group Exhibit CR-3. The Commission gives weight to this testimony only as a check on the Commission's approved 9.9% rate of return on equity and to evaluate outlier rate of return on equity recommendations. CIGFUR witness Phillips' testimony focused on the RRA report Major Rate Case Decisions. The 9.61% average authorized rate of return on equity for electric utilities included both vertically-integrated electric utilities and distribution-only electric utilities. Since DEP is a vertically-integrated electric utility, the Commission gives witness Phillips' rate of return on equity testimony limited weight regarding authorized rates of return on equity for distribution-only electric utilities. Rather, as noted above, recently authorized rates of return on equity for vertically-integrated electric utilities since 2014 average 9.85%, and in jurisdictions with constructive regulatory environments average 10.03%, and serve as a better check.

The 9.9% rate of return on equity approved in this proceeding for DEP is also consistent with the 9.9% rate of return on equity the Commission approved for DNCP in the Order dated December 22, 2016, in Docket No. E-22, Sub 532.

The Commission notes further that its approval of a rate of return on equity at the level of 9.9% – or for that matter, at any level – is not a guarantee to the Company that it will earn a rate of return on equity at that level. Rather, as North Carolina law requires, setting the rate of return on equity at this level merely affords DEP the opportunity to achieve such a return. The Commission finds and concludes, based upon all the evidence presented, that the rate of return on equity provided for herein will indeed afford the Company the opportunity to earn a reasonable and sufficient return for its shareholders while at the same time producing rates that are just and reasonable to its customers.

Capital Structure

DEP originally proposed using a capital structure of 53% members' equity and 47% long-term debt. (Tr. Vol. 8, p. 24.) The Stipulation provides for a capital structure of 52% equity and 48% long-term debt. For the reasons set forth herein, the Commission finds that a 52/48 capital structure as set out in the Stipulation is just and reasonable.

Witness De May testified that the Company's "specific debt/equity ratio will vary over time, depending on the timing and size of debt issuances, seasonality of earnings, and dividend payments to the parent company." (Tr. Vol. 8, p. 29.) As of the end of the test year, the actual regulatory capital structure[1] was 52.5% equity and 47.5% debt (Id. at 44), and the 13-month average equity ratio was 53.5%. (Id.) This average equity ratio was maintained by DEP through June 2017. (Id.) The 52/48 capital structure agreed to in the Stipulation represents a compromise between the Company's 53/47 position and the Public Staff's recommendation of a 50/50 capital structure. Both witness Parcell, for the Public Staff, and witness De May, for the Company, supported the agreed upon 52/48 ratio. (Tr. Vol. 14, pp. 109-10 (Parcell) (52/48 ratio reflects a reasonable compromise, and also "incorporate[s] a reduction" from the Company's currently authorized 53/47 ratio); Tr. Vol. 8, p. 54 (De May).) De May indicates that the "stipulated capital structure is reasonable when viewed in the context of the overall Partial Settlement," and it would be positively viewed by the ratings agencies that set the Company's credit ratings. (Id.) Witness Hevert's settlement testimony also supported the stipulated 52/48 capital structure. (Id. at 330-31.)

CUCA witness O'Donnell and AGO witness Polich recommend that the Commission reject the Company's capital structure proposal and instead advocate a 50/50 hypothetical structure. Witness Polich provided no analysis to support his recommendation. He merely asserts, without any cited evidence, that "[i]n the utility industry, it is common to target the percentage of debt and equity at 50% each." (Tr. Vol. 13, p. 117.) As witnesses De May and Hevert demonstrate in their rebuttal testimony, this assertion is simply wrong. (Tr. Vol. 8, p. 41 (De May); id. at 242; Ex. RBH-R19 (Hevert).) Further, witness Polich states that the reason the Commission should move to an artificial 50/50 capital structure is "to lower rates." (Tr. Vol. 13, p. 118.) But as witness De May indicates, "[s]etting an artificial capital structure simply for the purpose of lowering rates presents great risk." (Tr. Vol. 8, p. 48.) In the 2013 DEC Rate Case, for example, the AGO argued that a 50/50 capital structure should be implemented for utility, but, like witness Polich in this case, provided "no probative or persuasive evidence suggesting that a 50/50 capital structure is in fact appropriate." (2013 DEC Rate Order, at 52.) The Commission rejected the AGO's argument because that argument did not "recognize the pitfalls were the Commission to order in this case a capital structure at odds with the structure supported by the testimony of the expert witnesses and in line with the Company's actual capital structure in recent years." (Id. at 53.)

Those pitfalls are readily apparent. First, as witness De May stated, "a 50/50 capital structure would place pressure on ... [the Company's "A" level credit rating] by affecting DEP's credit metrics. It would also likely negatively impact the ratings agencies' assessment of qualitative factors, in that movement away from the optimum 53/47 capital structure will likely be viewed as a step away from a credit supportive regulatory environment." (Tr. Vol. 8, p. 47.)[2] Second, as the Commission has already held in this case in connection with its ROE discussion, the ratings

---

[1] Regulatory capital structure excludes short-term debt and losses on unregulated subsidiaries.

[2] Witness De May indicated in his Settlement Testimony that the slight move away from the 53/27 proposed capital structure represented by the Stipulation would likely still be viewed as credit supportive by the ratings agencies. (Tr. Vol. 8, p. 54.) In any event, a 50/50 structure is a far cry from a 52/48 structure – each percentage point of reduction in equity represents a $10 million reduction in revenue requirement, which is certainly significant in evaluating the effect of further reduction on the Company's credit metrics.

agencies' "assessment of qualitative factors" is vitally important to the maintenance of the Company's credit quality and to the cost of capital:

> The utilities the Commission regulates compete in a market to raise capital. Financial analysts, rating agencies, and investors themselves scrutinize with great care the regulatory environment and decisions in which these utilities operate. The regulatory environment includes the utilities commissions, consumer advocates, the state legislature, the executive branch and the appellate courts. When regulatory risk is high, the cost of capital goes up.

2013 DEP Rate Order, at 37 (emphasis added).

Unlike witness Polich, witness O'Donnell provided an analysis purporting to support his 50/50 capital structure recommendation, but that analysis is seriously flawed. The principal rationale for witness O'Donnell's 50/50 recommendation is his comparison of capital structures of publicly-traded holding companies, not operating utility companies. (Tr. Vol. 15, pp. 196-97.) This Commission has previously commented on and rejected the use of parent company structures as opposed to operating company structures in determining the operating utility's appropriate equity/debt ratio. See Order Granting General Rate Increase and Approving Amended Stipulation, Docket No. E-7, Sub 909 (December 7, 2009) (2009 DEC Rate Order), at 27-28. Parent and operating companies simply do not necessarily have the same capital structures, because, as witness Hevert points out, financing at each level is driven by "the specific risks and funding requirements associated with their individual operations." (Tr. Vol. 8, p. 239.) In addition, witness Hevert notes, the use of the operating subsidiary's actual capital structure – that is, the capital actually funding the utility operations that provide service to customers – is entirely consistent with precedent of the Federal Energy Regulatory Commission (FERC), so long as three criteria are met: the operating subsidiary (1) issues its own debt without guarantees, (2) has its own bond rating, and (3) has a capital structure within the range of capital structures for comparable utilities. (Id.) Here all three criteria are met. DEP does issue its own debt and is rated separately from its parent company, and the evidence presented by witnesses De May and Hevert shows that its capital structure is generally consistent with that of other operating companies, especially vertically-integrated companies. (Id. at 41 (De May); Id. at 316 (Hevert).)

Witness Hevert testified that he believes the stipulated capital structure is reasonable, as the stipulated equity ratio is nearly equal to the 2017 RRA reported median authorized equity ratio (i.e., 51.90%) of vertically-integrated electric utilities for commissions in regulatory environments considered above average, and it is within the range of equity ratios authorized in those jurisdictions (40.25% to 58.96%). He testified that the stipulated equity ratio falls within the range of authorized equity ratios, and within ten basis points of the median, for above average jurisdictions. In his view, that finding provides additional support for its acceptance.

In its post-hearing Brief, the AGO states that over $100 million is added to DEP's annual revenue requirement unnecessarily under the rate of return on equity and capital structure factors agreed to in the Stipulation. The AGO submits that DEP has not met its burden of proof that the 52% equity/48% debt capital structure is required, or that a 50/50 equity/debt structure uses too much debt leverage. The AGO contends that establishing a 50% equity/50% debt capital structure is sufficiently conservative, fairly balances the interests of investors and consumers, and reduces the revenue requirement by over $10.5 million per year. Further, the AGO states that DEP has not shown that a 50/50 equity/debt capital structure is overly-leveraged for a utility, or that it would harm DEP's financial integrity or its ability to access capital markets as needed. The AGO contends that DEP's high credit rating indicates that a 50/50 capital structure can be adopted without compromising DEP's financial integrity and that the proposed 52% equity capital structure exceeds the actual test period capital structure, which was 51.2% equity (including the current maturities of debt and refinancing). (Tr. Vol. 8, p. 48.) Moreover, according to the AGO and a table that it presents, a 50/50 capital structure is similar to the capital structures used for comparable investments and exceeds the average equity ratio for the other electric utilities that were used in the proxy groups to show comparable investments. In addition, the AGO lists the average equity ratios authorized in regulatory commission determinations over the past five years and states that the proposed 52% equity capital component exceeds those averages. The AGO also notes that the proposed 50/50 ratio maintains considerably more equity in the ratio than is presently maintained by DEP's parent company, Duke Energy, and that Duke Energy previously maintained an equity ratio comparable to the subsidiary, but more recently its equity ratio has declined to 46.1% at the end of 2016 and 45.3% as of June 3, 2017. (Tr. Vol. 8, pp. 394-96; Tr. Vol. 14, p 48.)

In conclusion, the AGO states that taking these factors into consideration, a 50% equity ratio is sufficiently conservative for DEP to access credit markets at reasonable rates and is fairer to consumers because it reduces the revenue requirement substantially.

In addition to its analysis of the witnesses' testimony as set out above, the Commission also gives weight to the Stipulation and the benefits that it provides to DEP's customers, which the Commission is required to consider as an independent piece of evidence under the Supreme Court's holdings in CUCA I and CUCA II. As with all settlement agreements, each party to the Stipulation gained some benefits that it deemed important and gave some concessions for those benefits. Based on DEP's application and pre-filed testimony, it is apparent that the Stipulation ties the 52%/48% capital structure to concessions the Company made to reduce its revenue requirement and alleviate the impact of the rate increase on customers.

Finally, the Commission has also carefully considered changing economic conditions in connection with its capital structure determination, including their effect upon the Company's customers. As discussed in the rate of return on equity section above, which is incorporated herein, the public witnesses in this case provided extensive testimony concerning economic stress they are currently experiencing and have experienced for the last several years. The Commission accepts as credible and probative this testimony. Likewise, the Commission gives significant weight to the testimony of witness De May regarding the Company's need to raise capital at this time to finance the improvements needed for safe, adequate, and reliable electric service.

As in the case of rate of return on equity, the Commission recognizes the financial difficulty that the increase in DEP's rates will create for some of DEP's customers, especially low-income customers. The Commission must weigh this impact against the benefits that DEP's customers derive from DEP's ability to provide safe, adequate, and reliable electric service. Safe, adequate, and reliable electric service is essential to support the well-being of the people, businesses, institutions, and economy of North Carolina. The improvements to the Company's system are expensive, but provide tangible benefits to all of the Company's customers. The Commission concludes thatthe 52/48 capital structure approved by the Commission in this case appropriately balances the benefits received by customers with the costs to be borne by customers, including higher rates which some customers will find difficult to pay.

Accordingly, the Commission finds and concludes that the recommended capital structure of 52% common equity and 48% long-term debt is just and reasonable to all parties in light of all the evidence presented.

Cost of Debt

In its Application, the Company proposed a long-term debt cost of 4.17%. The Stipulation provides for a 4.05% cost of debt. The Commission finds for the reasons set forth herein that a 4.05% cost of debt is just and reasonable.

In her pre-filed direct testimony, Company witness Bateman testified that the Company's revenue requirement was determined using an embedded cost of long-term debt of 4.17%.

Public Staff witness Parcell in his direct testimony supported the embedded cost of debt of 4.05%, as included in the Stipulation. He testified that the recent decline in interest rates was considered in the Stipulation, including the long-term debt First Mortgage Bonds Taxable issued by DEP on September 8, 2017. Witness Parcell explained that the 4.05% debt rate is low by historic standards and lower than the embedded cost of debt as of the end of the test year. The Stipulation's 4.05% debt cost gives customers the benefit of reductions in DEP's lower cost of debt after the end of the test year.

No intervenor offered any evidence for a debt cost below 4.05%. The Commission, therefore, finds and concludes that the use of a debt cost of 4.05% is just and reasonable to all parties in light of all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 25

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the verified Application and Form E-1 of DEP, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

In her direct testimony, Company witness McGee provides support for the fuel component of proposed base rates for all customer classes and the fuel pro forma adjustments to the test year operating expenses contained in Bateman Exhibit 1. (Tr. Vol. 10, p. 101.) Witness McGee testified that the Company proposes to use the following base fuel factors by customer class (excluding gross receipts tax and regulatory fees):

- Residential 1.933 cents per kWh
- Small General Service 2.088 cents per kWh

- Medium General Service 2.431 cents per kWh
- Large General Service 2.253 cents per kWh
- Lighting 0.596 cents per kWh

(Id.) She explained that these proposed factors are equal to the total prospective fuel and fuel-related cost factors approved in Docket No. E-2, Sub 1107 and implemented December 1, 2016. (Id.) These factors represent the fuel-related amounts that DEP was collecting from its North Carolina retail customers through its approved rates at the time of preparation of the Company's Application in this docket. (Id.) Witness McGee stated that DEP's intent in using the fuel-related factors that were in effect at the time that the Company's Application was prepared as a component of its proposed new rates was to make it clear that the Company is requesting a rate increase that relates to non-fuel revenues only. (Id.) She clarified that there will be no change in customers' bills as a result of including these fuel cost factors in the proposed base rates. (Id. at 103.) The Company will continue to bill customers the fuel rates authorized by the Commission in its annual fuel proceedings. (Id.)

As shown on McGee Exhibit 1, the Company's North Carolina retail adjusted fuel and fuel-related costs expense for the test period was $807,561,119. (Id. at 102.) According to witness McGee, this amount was calculated using the base fuel cost factors identified above and North Carolina retail test period actual sales by customer class as adjusted for weather and customer growth. (Id.) She testified that these amounts were used in the Company's pro forma adjustment calculations and are incorporated in the operating expenses shown on Bateman Exhibit 1. (Id.)

DoD/FEA witness Mancinelli is the only intervenor witness to challenge witness McGee's testimony on issues other than beneficial reuse of coal ash. Witness Mancinelli contended that the Company has distorted cost of service results by class as a result of improperly aligning allocated fuel expense with fuel clause revenues from base fuel factors approved in Docket No. E-2, Sub 1107. (Tr. Vol. 17, pp. 147-51.) Witness Mancinelli maintains that class rate adjustments should be based on cost of service results without added subsidizations associated with base fuel factors. (Id.)

In her rebuttal testimony, Company witness McGee testified that the Company does not agree with witness Mancinelli's position that the Company's reported net income and return on rate base on a customer basis are skewed due to subsidies associated with fuel revenues. (Tr. Vol. 10, p. 155.) The Company assigned fuel revenue to each customer class based on the fuel rates approved in the annual fuel adjustment proceeding, Docket No. E-2, Sub 1107. (Id.) She explained that to negate the fuel impact in this case, the pro forma adjustment to fuel expense was based on the same customer class allocation methodology approved in that docket. (Id. at pp. 155-56.) Witness McGee demonstrated that as a result, the net income impact for each rate class is zero. (Id. at 156.) She added that if witness Mancinelli disagrees with the use of the equal percentage methodology approved in the Company's annual fuel proceeding, the more appropriate forum to raise this issue is in the annual fuel adjustment docket. (Id.)

Section IV.C. of the Stipulation sets forth the Stipulating Parties' agreed upon total of the approved base fuel and fuel related cost factors, by customer class, as set forth in the following table (amounts are ¢/kWh excluding, regulatory fee):

	Res	SGS	MGS	LGS	Lighting
Total Base Fuel (matches approved fuel rate effective December 1, 2016, in Sub 1107)	1.993	2.088	2.431	2.253	0.596

These values are consistent with those recommended by witness McGee and approved in Docket No. E-2, Sub 1107. The Stipulation also notes that billed fuel rates shall be adjusted to reflect changes to fuel rates approved by the Commission in Docket No. E-2, Sub 1146, effective December 1, 2017.

Aside from the DoD/FEA, no intervenor contested these provisions of the Stipulation or the testimony of Company witness McGee that supports the base fuel and fuel-related cost factors therein. The Commission agrees with the Company that the concerns raised by witness Mancinelli are better addressed in the Company's annual fuel proceeding. Accordingly, the Commission finds and concludes that the base fuel and fuel- related cost factors as set forth in Section IV.C. of the Stipulation, as well as the adjustments to this factor agreed to therein, are just and reasonable to all parties in light of all the evidence presented for purposes of this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 26

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

The Company's proposed adjustment for coal inventory, as reflected in its Form E-1, Item 10, Adjustment NC-1600, set the inventory balance to 40 days of 100% full load burn, resulting in a reduction to the materials and supplies component of cash working capital in this case. (Tr. Vol. 7, p. 298.) This is the level of coal inventory that was utilized in DEP's last general rate case for the materials and supplies component of cash working capital, and was stipulated by the Public Staff and the Company in the settlement agreement approved by the Commission in that case. (Id.)

In his pre-filed testimony, Public Staff witness Metz recommended adjustment to the materials and supplies component of cash working capital to reflect a 30-day coal inventory based on a 70% full load burn. (Id. at 304.) He testified that a 70% capacity factor represents a reasonable estimate of the Company's coal fleet performance during peak conditions, though he would expect that the Company would adjust its inventory based on anticipated seasonal needs. (Id. at 304-05.) Witness Metz based his recommendation of 30 days on the fact that the Company has operated with 40 days or less of inventory in the past, as well as his belief that the Company "is fully capable of operating its plants with 30 days or less of coal inventory." (Id. at 306.)

In his rebuttal testimony, Company witness Miller explained that the Company actually contemplated requesting an increase in the full load burn inventory target to enable the Company to respond to un-forecasted increases in coal generation demand, given the increased volatility in coal generation due to factors such as fluctuating natural gas prices and weather-driven demand. (Tr. Vol. 10, p. 37.) However, the Company determined that it was prudent to continue to operate under the current 40-day full load burn inventory target and made a pro forma adjustment reducing its actual coal inventory at the end of the Test Period to reflect a targeted 40-day, 100% full load burn. (Id.)

Witness Miller testified that adopting witness Metz's recommendation of 30-day coal inventory based on a 70% full load burn could lead to negative supply, delivery, and operational impacts. (Id. at 36.) He testified further that this recommendation fails to contemplate the factors that impact a reliable fuel supply, including volatility in coal generation demand, delivery and/or supply risks, and generation performance. (Id. at 38.) In particular, he noted that witness Metz's recommendation assumes there will be ample amounts of coal available during higher demand periods and does not contemplate the increased demand from other utilities during the same period of increased demand being experienced by the Company. (Id.) According to witness Miller, if DEP is unable to dispatch cost-competitive coal generation during peak demand due to unreliable inventory levels, it will have to seek alternatives such as dispatching higher cost generation, paying higher prices for fuel, or purchase power. (Id. at 45.) As such, having unreliable coal inventory levels could result in unfavorable impacts on customers. (Id.)

Witness Miller stated that while the Company acknowledges that it does not consistently achieve and maintain a 40-day full load burn inventory level, as a number of factors cause actual inventory to fluctuate over time, DEP does not agree that it has demonstrated it is "fully capable of operating its plants with 30 days or less of coal inventory" as witness Metz suggests. (Id. at 44.) Witness Miller explained that a 30-day, 70% capacity factor equates to a 21-day full load burn at 100% during periods of peak demand. (Id. at 40-41.) Given typical transit time from mine to plant during times of increased demand, inventory could be depleted to unreliable levels for coal generation. (Id. at 41.) Witness Miller concluded that the Company does not believe that the proposed 30-day, 70% capacity factor inventory target is prudent and would negatively impact the Company's ability to continue providing reliable, cost-effective generation for its customers. (Id. at 45.)

In the Stipulation, the Public Staff and DEP agreed that for purposes of settlement, the Company may set carrying costs included in base rates assuming a 35-day coal inventory at 100% capacity factor (full load burn), and that a coal inventory rider should be allowed to manage the transition. More specifically, the Stipulating Parties propose that this increment rider shall be effective on the same date as new base rates approved in this proceeding and continuing until inventory levels reach a 35-day supply to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $76.11 per ton). The rider will terminate the earlier of (a) January 30, 2020 or (b) the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply on a sustained basis.[1] The Stipulation provides that for this purpose, three consecutive months of total coal inventory of 37 days or below will constitute a sustained basis. The Company will adjust this rider annually, concurrently with DEP's DSM/EE Rider, REPS Rider, JAAR Rider, and Fuel Adjustment Rider, and any over- or under-collection of costs experienced as a result of this rider shall be trued up in

[1] The Stipulation provides that the Company reserves the right to request an extension of the January 30, 2020 date.

that annual rider filing. For purposes of the coal inventory rider, the Stipulating Parties agree that interest on any under- or over-collection shall be set at the Company's net-of-tax overall rate of return, as approved by the Commission in this proceeding. Finally, the Company agreed to conduct an analysis in consultation with the Public Staff demonstrating the appropriate coal inventory level given market and generation changes since the Company's last rate case (Docket No. E-2, Sub 1023), with such analysis to be completed by December 31, 2018.

No intervenor took issue with this provision of the Stipulation. The Commission finds and concludes that the reduction to coal inventory included in working capital and the establishment of the increment rider to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply, as provided in the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NO. 27-28

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, DEP's verified Application and Form E-1, the testimony of DEP witnesses Fountain and Simpson, and the testimony of Public Staff witness Williamson.

Company witness Fountain testified that a key area of focus for the Company is customer satisfaction, which the Company measures via a proprietary relationship study. He stated that this study shows that North Carolina residential customer satisfaction scores have risen 10 points since 2013. Witness Fountain also testified that the Company conducts a transaction study to measure satisfaction with how the Company responds to customer service requests. As part of this study, a third-party research supplier conducts interviews with customers. The analysis of these interviews and surveys are used by the Company to implement improvements. Witness Fountain also outlined the efforts of the Company to address language, cultural, and disability barriers in its customer service centers.

Company witness Simpson described metrics the Company uses to measure the effectiveness of its transmission and distribution operations. He provided an overview of the transmission and distribution metrics used to measure the Company's reliability and reduce customer outages. The Company uses the System Average Interruption Duration Index (SAIDI), which indicates how often the average customer has a sustained outage, and the System Average Interruption Frequency Index (SAIFI), which indicates the total duration of an outage for the average customer. Witness Simpson stated that the Company's SAIFI performance is showing a modest improvement, while the Company's SAIDI performance is worsening.

Public Staff witness Williamson noted that the Consumer Services Division of the Public Staff had engaged in approximately 4,854 direct contacts with Company customers during the test year, with the majority of contacts related to payment arrangements and only 3% related to service quality issues. Witness Williamson also addressed the service quality issues related to the SAIDI and SAIFI metrics, noting that the metrics show that while the Company's outages are decreasing in frequency, the outages that do occur are longer in duration.

The Company and Public Staff agreed in the Stipulation that the overall quality of electric service provided by the Company is adequate.

The Commission gives substantial weight to the testimony of Company witnesses Fountain and Simpson that the Company has performed satisfactorily in areas of customer satisfaction and reliability during the test period. The Commission reminds the Company that it is expected to promptly follow up and resolve any service-related customer complaints raised at the public hearings. The Commission also gives substantial weight to the testimony of Public Staff witness Williamson that based on DEP's statistics on outages and restoration times and on customer complaints, he concluded that DEP's quality of service is adequate. As a result, the Commission finds and concludes that the overall quality of electric service provided by DEP is adequate.

DEP proposed several changes to its Service Regulations. Most of the revisions involve relatively small increases or decreases in charges imposed by DEP for various services, such as disconnections and reconnections. Public Staff witness Williamson testified that the Public Staff does not oppose these changes to the Service Regulations.

Witness Williamson further testified that DEP has implemented three changes to its vegetation management plan (VMP): (1) a new flyer on "Hazard Tree Assessment" that allows customers to identify hazard trees, (2) a "Customer Communication Log" that requires contractors to document their communications with customers, and (3) an extension of its non-urban distribution management cycle from six to seven years. With regard to the third point, witness Williamson noted that the Public Staff recommended a $4 million reduction in DEP's revenue requirement due to this lengthened management cycle. He further stated that DEP proposes to continue its urban distribution maintenance cycle at three years, and its transmission maintenance cycle at six years.

In the Stipulation, Sec. III.F., the Public Staff agreed to withdraw its recommended $4 million reduction in DEP's revenue requirement due to the lengthened vegetation management cycle for non-urban distribution.

The Commission gives significant weight to the testimony of Public Staff witness Williamson with regard to the amendments to DEP's Service Regulations and vegetation management plan. Moreover, no other parties filed testimony regarding these matters. Therefore, the Commission finds and concludes that the amendments to DEP's Service Regulations and vegetation management plan are reasonable, serve the public interest, and should be approved.

EVIDENCE AND CONCLUSION FOR FINDING OF FACT NO. 29

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the testimony of DEP witnesses Fountain and Simpson, Public Staff witness Floyd, CUCA witness O'Donnell, EDF witness Alvarez, and NCSEA witness Golin, and the entire record in this proceeding.

Company witness Fountain testified regarding the $13 billion grid modernization plan for DEP and DEC over the next decade in North Carolina, which has been named Power/Forward Carolinas (Power/Forward). He testified that the purpose of this plan is to improve the performance and capacity of the grid, making it smarter and more resilient and providing customers greater benefit.

Company witness Simpson testified that DEP provides service to over a million customers in North Carolina, where the Company has more than 56,000 miles of lines and nearly 500 substations. (Tr. Vol. 9, p. 21.) He indicated that in the last four years, the Company has spent $1.7 billion dollars maintaining and upgrading that system: $1.2 billion has gone to investments in distribution, while $500 million has been invested in its transmission system. (Id.) Distribution investments include connecting new customers, lighting installations, capacity additions, and infrastructure maintenance and upgrades, while the Company's transmission investments include addressing capacity and compliance projects, as well as replacement of wood poles, obsolete substations, and line equipment. (Id.) Witness Simpson also discussed the need for the Company's customary rate of spend in calendar years 2017 through 2021 to invest in maintenance of the grid and to ready it for new customers. (Id. at 22.)

Witness Simpson explained that despite these investments, DEP's system has been challenged by more severe weather and equipment failures that have manifested themselves in worsening reliability across DEP's grid. (Id. at 21.) Reliability metrics show that the frequency of outages has increased from 1.2 average interruptions in 2014 to approximately 1.3 in 2016. (Id.) The average duration of interruptions has increased approximately 45% since 2013. (Id.) Witness Simpson also noted that the number of events "has gone up 25% in the past four years." (Id. at 103-04.) He projected that in the next ten years, the grid will be challenged by more frequent and severe weather events. At the same time, the grid is aging, with approximately 30% of the Company's infrastructure passing the end of its design life in the next ten years. (Id. at 22.) Witness Simpson indicated that this older equipment, despite being well-maintained, is one of the top drivers for the worsening reliability metrics, as it is more likely to fail when stressed by inclement weather and is more time-consuming to repair. (Id. at 22.)

To address these issues, the Company is beginning to execute its Power/Forward modernization plan to improve the performance and capacity of the grid. (Tr. Vol. 6, pp. 59-60.) While not included in the revenue requirements for this case, as part of the Company's Power/Forward initiative, DEP targets spending $1.6 billion in capital and $62.4 million in O&M over the next five years for North Carolina, from 2017 through 2021, on grid improvements to increase system reliability and hardiness, add customer-focused features, comply with federal standards for security and reliability, replace aging assets, and integrate intermittent distributed renewables. (Id.; Tr. Vol. 9, p. 22.) Witness Simpson testified that these expenditures are necessary to fulfill the Company's mission of providing safe and reliable service for DEP customers. (Id. at 40-41.)

Witness Simpson testified that the Power/Forward initiative will transform the Company's 20th century grid to a state-of-the-art, more reliable and resilient 21st century grid which will benefit customers and the state as a whole. It is a holistic, ten-year program, consisting of targeted undergrounding, hardening and resiliency investments, installation of self-optimizing grid, advanced metering infrastructure, communication network upgrades, and deployment of advanced enterprise systems. (Id. at 109-10.)

Public Staff witness Floyd reiterated that the Power/Forward initiative is not a part of this rate case. (Tr. Vol. 19, pp. 124-25.) However, he further states that should the Company seek recovery of the $18.2 million it has already spent on Power/Forward, it should only be permitted to recover the costs if DEP can demonstrate that the investment was cost-beneficial to customers.

(Id. at 126.) Witness Floyd also believes additional reporting is needed to allow the Commission to better understand Power/Forward and to quantify its benefits. Witness Floyd recommended that the Commission require DEP to include in its smart grid technology plan filings, required by Commission Rule R8-60.1, more detailed information. (Id. at 126-27.)

CUCA witness O'Donnell testified that in his opinion, witness Simpson's testimony is lacking a financial cost/benefit study analysis providing evidence demonstrating that the system improvements contemplated as part of the Power/Forward initiative are worthwhile investments. (Tr. Vol. 15, p. 134.) He argued that if DEP cannot provide evidence that service is improving and its grid investment plan is cost-effective, the Commission should question the Company's plan to increase rates to pay for the proposed grid investments. (Id.) O'Donnell requested that the Commission open a docket to investigate the need for DEP's proposed grid investments and examine whether the plan is needed for reliability purposes; whether it is cost-effective; how are other states handling grid modernization; and how will the rate increases expected under DEP's plan affect the state's economy. (Id. at 140.) EDF witness Alvarez also recommended that the Commission establish a distinct proceeding to address and resolve the issues presented by the Company's grid modernization investment proposal. (Tr. Vol. 7, p. 173.) Witness Alvarez noted that, unlike many other states, the Commission has not yet used a rigorous review and stakeholder participation process in its current Smart Grid Technology Plan cases to ensure that utilities get the full "bang for the buck" by maximizing all the available benefits of grid modernization spending. (Tr. Vol. 7, p. 139).

NCSEA witness Golin also recommended a formal and separate process, either through legislative investigation or through Commission docket, to appraise the Power/Forward proposal and include input of all relevant stakeholders to ensure that investments are in the best interest of ratepayers. (Tr. Vol. 13, p. 49.) She also claims that the plan has been developed without engaging any of the best practices of grid modernization, including clear and measurable goals, robust cost/benefit analyses, involving stakeholders, or integrated distribution planning. (Id.)

In response, witness Simpson disagreed with the contention that the Company has not demonstrated that Power/Forward investments will benefit North Carolina customers. He explained that the Company, through experts, quantified the benefits of Power/Forward to the economy of North Carolina and the businesses in its service area, and the study anticipates lower operational costs to the Company over time as a result of the core reliability improvements. (Tr. Vol. 9, p. 62.) In this study by Ernst & Young, included as Simpson Rebuttal Exhibit 1, it is estimated that by 2028 North Carolina businesses will benefit by $1.7 to $2.8 billion per year from reduced outage-related costs and increased profit opportunities. (Id.) Net economic benefits from direct capital investments in the state total between $240 million and $1.4 billion. (Id.) In total, this economic analysis shows that approximately 19,000 jobs will be supported or created statewide through higher levels of economic activity associated with improved reliability and the spending associated with the plan. (Id.) In addition, DEP anticipates ongoing annual cost savings over time resulting from reduced spend on vegetation management, outage restoration activity, and major storm event restoration. (Id. at 62-63.)

An Executive Technical Overview of Power/Forward developed by the Company, which was introduced during the hearing as Duke Progress Simpson Redirect Exhibit 1, also quantifies the benefits of the program, including customer control, choice and convenience; core reliability improvements; statewide economic benefits; and jobs and community growth. (Simpson Redirect Ex. 1, p. 13.)

Regarding intervenor recommendations for a separate proceeding, witness Simpson stated that he is not aware of any pre-approval process for grid investments in North Carolina like utilities have for generation investments. (Id. at 63.) From witness Simpson's perspective, this is no different from the grid planning that the Company has done for years; it is just that timing and the age of the grid require more investment than the Company has historically had to make. (Id.) While the Company is intentionally being transparent in its plans relating to Power/Forward, both in customer communications as well as in discussions and discovery in this case, the Company does not believe that a separate proceeding is required or advisable. (Id.)

In its post-hearing Brief, the AGO notes that DEP witness Simpson provided a break-down of the planned $13 billion expenditure on grid modernization, as follows:

Targeted underground transmission lines	$4.9 billion
Distribution H&R	$3.5 billion
Transmission	$2.2 billion
Self-optimizing grid	$1.2 billion
Advanced Metering Infrastructure	$ 549 million
Enterprise systems upgrades	$103 million

(Tr. Vol. 9, p. 69.)

The AGO states that it fully supports and applauds DEP's commitment to planning for efficient and effective utility service for its customers, but that the issue is whether DEP has done the necessary work to determine whether this particular approach is a reasonable and prudent way to attack the problem of reliability and security of the grid. The AGO cites the testimony of Public Staff witness Floyd that "additional reporting is needed to allow the Commission to better understand Power/Forward Carolinas and to quantify its benefits. The extent of the planned investment and the potential impact on customer rates requires additional reporting, in order to assist the Commission and Public Staff in understanding Power/Forward Carolinas and evaluating its cost-effectiveness." (Tr. Vol. 19, p. 127.)

Further, the AGO states that NCSEA witness Golin raised similar concerns, noting that DEP has not performed a cost-benefit or business case analysis. (Tr. Vol. 13, pp. 27, 40; DEP Response to NCSEA DR 5-14/ Golin Direct Exhibit CG-3/Off. Exh. 13, p. 15.) The AGO submits that prior to spending billions of dollars on grid modernization efforts, DEP should be required to demonstrate to the Commission that the money will be spent on appropriate programs. Without taking a position on whether the Commission should open a separate docket, the AGO urges the Commission to enter an order requiring DEP to provide the Commission and the public the information outlined in the testimony of witnesses Floyd and Golin.

In its post-hearing Brief, EDF submits that the Commission should initiate a separate docket for stakeholder input and Commission consideration of DEP's and other utilities' grid modernization plans. EDF states that a review process would allow the Commission to optimize grid modernization investments and maximize the benefits customers receive. Further, EDF states that customers pay for 100% of the utilities' grid modernization spending, so the customers should have a say in the investments/capabilities and receive 100% of the available benefits. In addition, EDF states that DEP ultimately provided a cost-benefit analysis for its Power/Forward proposal, but that the analysis was not provided in sufficient time to allow the parties to study and discuss it. Moreover, EDF opines that DEP's analysis included only operational benefits and did not include benefits from integrating renewable resources or increased opportunities for energy efficiency and peak demand reductions. EDF states that the testimony of witness Alvarez, which EDF summarized in its Brief, supports EDF's recommendations.

Paragraph IV.A. of the Stipulation provides that DEP will host a technical workshop during the second quarter of 2018 regarding the Company's Power/Forward planned grid investments. The Stipulation further provides that Public Staff involvement in the workshop in any capacity does not preclude it from investigating or making recommendations regarding any element of the Company's Power/Forward program in a future rate case or pursuant to any applicable statutes or Commission rules. Further, the Commission is not precluded from considering or reviewing any aspect of the Power/Forward program in separate dockets as it determines appropriate, nor does it preclude the Public Staff's participation in such dockets. The Commission notes that the Company is not seeking recovery of investments relating to Power/Forward in this rate case. Ultimately, the burden of proof is on the Company to support the prudence of investments in grid modernization if and when it seeks cost recovery of such investment. That burden of proof is not required in the current proceeding. Based on the full record in this docket, the Commission concludes, however, that the Company has not yet provided compelling evidence that the proposed grid investment plan will result in meaningful benefits to ratepayers despite its cost. The Commission acknowledges the potential rate impacts of implementing Power/Forward. CUCA witness O'Donnell testified that he calculated the impact on rates to range from an 8.94% increase for the Company's industrial customers to a 48.74% increase for the Company's residential customers. (Tr. Vol. 15, p. 131.) Existing dockets (such as Integrated Resource Planning and Smart Grid Technology Plans) as well as future general rate case proceedings provide opportunities for the Commission to consider evidence evaluating the prudency and reasonableness of Power/Forward costs.

No parties objected to the technical workshop, its timing, or the conditions regarding the Public Staff or Commission. The Commission finds this provision of the Stipulation to be just and reasonable.

In its post-hearing Brief, EDF submitted that the Commission should initiate a separate docket for stakeholder input and Commission consideration of DEP's and other utilities' grid modernization plans. The Commission will not open a separate docket for grid modernization planning and/or revisions to existing Commission rules at this time. Rather, the Commission will reconsider such proposals pending the effectiveness of the technical workshop, the outcome on this issue in DEC's general rate case proceeding (Docket No. E-7, Sub 1146), Integrated Resource Planning, and Smart Grid Technology Plans to evaluate grid investment plans.

EVIDENCE AND CONCLUSION FOR FINDING OF FACT NO. 30

The evidence supporting this finding of fact and conclusions is contained in DEP's Form E-1, the testimony of Public Staff witness Peedin, the rebuttal testimony of Company witness Doss, and the Stipulation.

As part of its filing in this case, the Company submitted a lead-lag study that was performed in 2011 using fiscal year 2010 data. (Tr. Vol. 10, p. 91; Doss Ex. 3.) Public Staff witness Peedin commented that the Public Staff believes that a fully updated lead-lag study should have been completed for this case and recommended that the Commission direct the Company to prepare and file a lead-lag study in its next rate case. (Tr. Vol. 18, p. 81.) In his rebuttal testimony, DEP witness Doss stated that the Company agrees with Public Staff witness Peedin's recommendation and testified that DEP will prepare and file an updated lead-lag study as part of its next rate case application. (Tr. Vol. 10, p. 91.)

The Stipulation incorporates the Company's agreement to file an updated lead-lag study in its next rate case. No other party filed testimony on this issue. Accordingly, the Commission finds and concludes that, consistent with Section IV.E. of the Stipulation and in light of all the evidence presented, DEP shall prepare and file a lead-lag study in its next general rate case.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 31-32

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, DEP's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Company witness Hager's direct testimony describes and supports the Company's Summer Coincident Peak (SCP) cost of service study. Witness Hager recommended the use of the SCP as a fair allocation of the costs to the appropriate jurisdiction and customer class. As articulated by witness Hager, the cost responsibility of each jurisdiction and customer class should be determined on its respective demand in relation to the total demand placed on the system.

The Company's summer peak occurred on Tuesday, July 26, 2016, at the hour ending at 5:00 p.m. The Company's system peak occurred on Tuesday, January 19, 2016 in the hour ending at 8:00 a.m. Witness Hager noted that although in 16 of the last 25 years the coincident peak for the system occurred in June through August, the majority of peaks in the past eight years has occurred in the winter. Even though the Company's peak occurred in the winter and the majority of the recent peaks have occurred in the winter, witness Hager asserted that the production and transmission demand-related costs allocated in this case were incurred on the basis of integrated resource planning that was based on a summer peak and that they should be allocated based on the summer peak.

The Public Staff historically has supported the use of the Summer/Winter Peak and Average (SWPA) cost of service allocation methodology. As noted in witness Floyd's testimony, the SWPA methodology recognizes that a portion of plant costs is incurred to meet the energy costs throughout the year, and not just at the time of the peak. However, under the particular circumstances of this case, Public Staff witness Floyd did not object to the Company's use of the SCP methodology for determining the cost of service due to the small difference in the per books calculation between SCP and SWPA. Based on the testimony of witness O'Donnell, CUCA also supports use of the SCP methodology.

CIGFUR witness Phillips and DoD/FEA witness Mancinelli testified in opposition to the Company's use of the SCP methodology. Witness Phillips testified that because DEP has transitioned from a summer peaking to a winter peaking utility over the last several years, he recommends that the Winter Coincident Peak (WCP) methodology be used in this case. (Tr. Vol. 7, p. 65.)

DoD/FEA witness Mancinelli asserted that DEP's proposal to utilize a SCP method to allocate production and transmission demand costs to its customer classes is a flawed method since it does not recognize DEP as a dual peaking system. (Tr. Vol. 17, pp. 136-37.) He argued that the Company should use the average of the SCP and WCP to create a 2-CP methodology. (Id. at 134.) He explained that a review of DEP's historical summer and winter peaks confirms that the summer peaks and winter peaks have been very close. (Id. at 138-39.) He argues that this fact, in conjunction with the fact that the difference between summer and winter peaks is projected to remain small through 2030, demonstrates that DEP's system is dual peaking. (Id. at 134.) Therefore, witness Mancinelli argued that the 2-CP methodology is the fairest and most sustainable allocation method because it recognizes the benefit to customer classes that contribute to the summer and winter peaks. (Id. at 137.)

Witness Hager specifically responded to the 2-CP approach advocated by the DoD/FEA, noting that witness Mancinelli confuses duel peaking with dual planning. (Tr. Vol. 10, p. 283.) Witness Hager testified that "[t]he NARUC COS Manual states on page 45 that 2 CP is appropriate if 'the summer and winter peaks are close in value, and if both significantly affect the utility's expansion planning.'" (Id. at 283 (emphasis added).) While witness Hager acknowledged that in 2016 DEP's integrated resource planning transitioned to winter capacity planning, the first identified new resource in the DEP 2017 Integrated Resource Plan that would be added due to this transition is in the 2021/2022 timeframe. (Id. at 284.) Therefore, none of the resources for which the Company is seeking recovery of and on in this proceeding were secured on the basis of a WCP. (Id.)

In the Stipulation, the Public Staff agreed not to oppose the Company's use of SCP for the purpose of settlement in this case only, with the exception of the allocation of coal ash costs. In its settlement agreement with the Company in this proceeding, Kroger stated that it did not oppose the settlement between the Company and the Public Staff on cost of service allocation methodology. Paragraph V.B. of the Stipulation provides that neither the Stipulation nor any of its terms shall be admissible in any court or Commission except to implement its terms and that the Stipulation shall not be cited as precedent by any Stipulating Party with regard to any issue, including cost of service allocation methodology, in any other proceeding or docket. Paragraph V.C. of the Stipulation provides that no Stipulating Party has waived any right to assert any position in any future proceeding or docket.

CUCA, in its post-hearing Brief, states that DEP's use of the SCP allocation methodology is appropriate for use in DEP's cost of service study in the present case because DEP has historically been a summer peaking system.

In its post-hearing Brief, CIGFUR states that it supports the Company's proposal to use a single coincident peak demand allocation methodology for its cost of service study, but rather than the Company's proposed SCP, CIGFUR supports the use of the WCP, which, according to CIFGUR, more appropriately reflects the Company's actual planning peak in accordance with accepted cost allocation principles. CIGFUR states that DEP bears the burden of showing that the use of the SCP is the most appropriate cost allocation method "[b]ased on the evidence in this proceeding." See Order Granting General Rate Increase, Docket No. E-22, Sub 479, at p. 23 (Dec. 21, 2012). CIGFUR contends that while historically DEP based its projected need for resources on the need to meet summer afternoon peak demand projections, the significant growth of solar facilities, which assist with meeting summer afternoon peak demands on the system, but do little to accommodate demand on cold winter mornings, and the associated impact on summer versus winter reserves, have led DEP to experience a dominant winter peak for six out of the last eight years. CIGFUR notes that the Company now uses the winter peak for system planning, including calculation of reserve margin, and determining its need for additional generation facilities. (Tr. Vol. 7, p. 65.) Further, according to CIGFUR, DEP is forecasted to remain winter-peaking through 2032, which marks the end of the planning horizon.

CIGFUR contends that even though it is undisputed that the Company is winter- peaking and plans its generating capacity accordingly, the Company, through witness Hager, proposes to allocate production and transmission demand-related costs on the SCP on the premise that the costs being allocated in this case were incurred on the basis of summer planning (Tr. Vol. 10, p. 292; Tr. Vol 11, p. 137), and that for the following reasons the Company's argument is without merit:

(1) The Company's use of the SCP method is inconsistent with the NARUC Cost of Service manual. (Tr. Vol. 17, p. 137.)

(2) The Company does not cite any precedent within this State for its novel proposal to employ a 1 CP cost of service study based on its historical peak rather than its current planning peak.

(3) The Company's cost of service study choice has significant negative impacts on the LGS class. (Tr. Vol. 11, pp. 135-36.) CIGFUR includes a table that it contends demonstrates that the LGS class's rate of return is below North Carolina retail under the SCP methodology, but at or above North Carolina retail under the WCP and 2 CP methodologies.

(4) After rate design, the Company's choice to allocate production and transmission demand-related costs on the SCP results in lower rates for residential consumers, but at the expense of large load customers.

(5) Although the Company has been winter peaking since 2013 and will be winter-peaking for the foreseeable future, it has not identified when it will shift its cost of service study to recognize the winter peak. (Tr. Vol 11, pp. 20-21.)

(6) The winter peak is the capacity planning basis of DEP's system and therefore the cost causation for its production plant.

CIGFUR states that if the Commission is reluctant to approve the WCP cost study because of the recentness of the transition from summer to winter planning, a second option is the use of the 2 CP cost of service study, which is discussed by witnesses Phillips (Tr. Vol. 7, p. 66), and Mancinelli. As witness Mancinelli noted, "[a]lthough the actual system peak hour occurs during the winter, the magnitude of the winter peak is very close to the magnitude of the summer peak." (Tr. Vol. 17, p. 138.)

The Commission recognizes that cost causation is the primary driver and support for choosing an appropriate cost allocation methodology. The Commission also understands that there is an element of subjectivity in this choice. The Commission finds and concludes that the SCP is the appropriate cost allocation methodology, for the purposes of this proceeding, subject to the provisions of the Stipulation. The Commission gives substantial weight to the testimony of Company witness Hager's assertion that the production and transmission demand-related costs allocated in this case were incurred on the basis of integrated resource planning that was based on a summer peak and that they should be allocated based on the summer peak. The Commission notes that the difference between the SCP and WCP in the test year was minimal (1%) and that the Company has committed to monitoring the system peak information for consideration in future cost of service studies. Further, the Commission finds that the recent convergence of SCP and WCP experienced by the Company is adequately accounted for in the stipulated rate design.

Although the Public Staff has traditionally supported SWPA cost allocation, it is not unreasonable for the Stipulating Parties to have agreed to the use of SCP for this proceeding. Based on DEP's Late-Filed Exhibit 5 and the Public Staff's Late-Filed Exhibit 1, the Commission determines that the difference in retail revenue requirements for the SCP methodology compared to the SWPA methodology is insignificant. The Commission acknowledges the Public Staff's position on cost allocation, but views its position relative to the Stipulation as just and reasonable to the using and consuming public that the Public Staff represents. Therefore, based upon consideration of the Stipulation in its entirety, the Commission gives the Stipulation substantial weight in resolving the cost allocation issue. However, the Commission's acceptance of the SCP methodology in this proceeding shall not be precedent for and may not be cited as such in future proceedings.

Although the Commission has approved the use of the SCP cost of service allocation methodology for the purposes of this case, the Company shall continue to file annual cost of service studies based on both the SCP and SWPA cost of service allocation methodologies.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 33-34

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, DEP's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Company witness Wheeler provided testimony regarding the Company's proposed changes to rate design. He developed the Company's proposed rates by first determining the target total proposed change in revenue requirement for each class, then designing the rate schedules and riders in each rate class to total the proposed change in the revenue target for that rate class. Witness Wheeler's proposed rate design did not propose any substantial changes to the structure of any of its rate schedules in this proceeding. He explained in his direct testimony that the Company plans to implement rate design changes once it has deployed AMI and has updated its billing structure to better support peak time pricing rate design.

Witness Wheeler recommended adjusting seasonal and time-of-use (TOU) price relationships by reducing the emphasis on on-peak energy rates due to the narrowing of the difference between on-peak and off-peak marginal energy costs and by reducing the emphasis on summer pricing in the energy rates. As a result, the rates designed by witness Wheeler narrow the difference between on-peak and off-peak charges for TOU rates.

Witness Wheeler also recommended increasing the basic customer charges (BCCs) for various rate classes. For the Residential Rate Class, he recommended increasing the BCC to $19.50 for schedule RES and increasing the BCC to $22.35 for Schedules R-TOUD and R-TOU. Witness Wheeler also recommended increasing the BCC for SGS schedules to $22.50.

In Section IV.F.3 of the Stipulation, the Stipulating Parties agreed to implement the rate design proposed by Company witness Wheeler, subject to the following modifications:

a. The Stipulating Parties agree that the Company may increase its Basic Customer Charge for Schedule RES to $14.00 per month. The Stipulating Parties further agree that the Company may increase its Basic Customer Charges for Schedules R-TOUD and R-TOU to $16.85 per month.

b. The Stipulating Parties agree that the Company will maintain the current differential between the on- and off-peak energy rates in all of its time-of-use rate schedules when assigning the revenue requirement approved in this proceeding.

c. The Stipulating Parties agree that the rates set forth in the minimum bill provisions of the MGS class schedules shall be set at the class approved unit energy and demand cost as proposed by the Company, but shall also be adjusted to reflect all riders applicable to service under the schedule.

d. To ensure a more equitable impact on the MGS class, the Stipulating Parties agree that the revenue increase applicable under Schedules MGS and SGS-TOU should strive to achieve approximately the same percentage increase in revenues under each schedule.

Additionally, the Company entered into settlement agreements with Commercial Group and Kroger regarding rate design issues. Commercial Group and Kroger agreed to settle all issues with the Company, provided that, inter alia, the Stipulation between the Company and the Public Staff state that "the revenue increase applicable under Schedules MGS and SGS-TOU should strive to achieve approximately the same percentage increase in revenues under each schedule." (Kroger

Settlement 1; Commercial Group Settlement 2; Stipulation IV.F.3.d.) Moreover, as part of the Commercial Group Settlement, "DE Progress agrees that it shall work with interested commercial and industrial customers to investigate the issues with Rider SS that were raised in the direct testimony filed by the Commercial Group." (Commercial Group Settlement 2-3.)

Several intervenors provided testimony on various rate design issues in this proceeding, as discussed below. Having considered the testimony and exhibits of all of the witnesses and the entire record in this proceeding, the Commission makes its findings and conclusions on each of these issues as set forth below.

Basic Customer Charge

As explained above, DEP has requested that the BCC for all of its rate classesbe increased to varying degrees to better recover customer-related costs identified in the unit cost study. (Tr. Vol. 10, pp. 199-211.) Specifically, the Company proposed changing the BCC for Schedule RES from $11.13 to $19.50 to reflect approximately 50% of the difference between the current rate of $11.13 and the customer-related cost of $27.82 identified in the unit cost study. (Id. at 220.) The Stipulation provides for a BCC of $14.00 for Schedule RES and $16.85 for Schedules R-TOUD and R-TOU. (Stipulation IV.F.3.a.) The Stipulating Parties also agreed to the increases in the BCCs requested by the Company for the remaining rate classes.

Several intervenors provided testimony regarding the Company's proposed increases to the BCCs. Public Staff witness Floyd testified that the residential BCC should only increase 25%, or to approximately $15.00 for Schedule RES. (Tr. Vol. 19, p. 105.) While the Public Staff generally agrees with the Company's proposal to move the BCC toward its calculated unit cost, witness Floyd explains that the increase should be smaller to moderate the impact on low usage customers. (Id.) Witness Floyd believes that DEP's requested increase is unreasonably large given the fact that the Company received an increase in the BCC in its last rate case in Docket E-2, Sub 1023, which accounted for 74% of the total revenue increase the Company was allowed to derive from the residential class, and the BCC increase requested by the Company in the current rate case would account for approximately 45% of the revenue increase from residential customers. (Id. at 104.)

NCSEA witness Barnes testified that the Company's proposed fixed customer charge increases are "extreme" and recommended that the current customer charges be maintained, or, alternatively, that the customer charges only be increased by the percentage increase in the overall revenue requirements adopted for each class. (Tr. Vol. 16, p. 49.) Specifically, NCSEA witness Barnes testified that the increased Residential BCC proposed by the Company was higher than other utilities and is, therefore, inappropriate. (Id. at 49-52.) Witness Barnes also argues that the proposed increases are inconsistent with the ratemaking principle of gradualism. (Id. at 52-53.)

Witness Barnes, as well as NC Justice Center witness Wallach, also assert that an increase in the customer charge dilutes customer incentives for distributed generation and energy efficiency. (Tr. Vol. 16, pp. 53-55; Tr. Vol. 17, p. 206.) The Commission gives significant weight to witness Wheeler's rebuttal testimony in response to this argument. Witness Wheeler explained that "[f]ailing to properly recover customer-related cost via a fixed monthly charge provides an inappropriate price signal to customers and fails to adequately reflect cost causation." (Tr. Vol. 10, p. 222.) In addition, he testified that shifting fixed customer-related cost to the volumetric energy rate exacerbates this concern and over-compensates energy efficiency and distributed generation for the cost avoided by their actions. (Id.) Further, the Commission determines that existing energy efficiency programs are effective, and it is not persuaded that it needs to further support energy efficiency by refusing to approve an appropriate increase in the BCC.

Witness Wallach explained the intent behind basic customer charges as follows: basic customer charges are intended to recognize that each customer contributes equally to certain distribution costs regardless of that customer's energy usage. The fixed customer charge should, therefore, be set to recover the cost to connect the customer to the distribution system – more or less. These customer-related connection costs are limited to plant and maintenance costs for a service drop and meter, along with meter reading, billing, and other customer-service expenses. (Tr. Vol. 17, pp. 213-14.) In response to a NC Justice Center et al. data request, DEP re-ran its cost-of-service study without the minimum system analysis, excluding pole, conduit, conductor, and line transformer costs as demand-related rather than customer-related. As a result of excluding those costs attributable to the minimum system analysis, the Company's estimate of customer-related costs was only $8.54. (Tr. Vol. 11, pp. 58-59, Hager; Tr. Vol. 17, pp. 203, 215, Wallach); NCJC Hager/Wheeler Cross Ex. 1 (Ex. Vol. 20, p. 123.)) Witness Wallach testified that DEP's modified cost-of-service study shows that a sizeable portion of demand-related distribution plant costs are inappropriately being recovered through the current basic customer charge. The amount in excess of $8.54 represents usage-driven costs that should be recovered in the volumetric energy rate, so that each residential customer contributes to recovery of these costs in direct proportion to his usage. (Tr. Vol. 17, pp. 215-16.)

Although a utility's cost-of-service study serves as the foundation for its rate design, this Commission has recognized that the two are distinct. See, e.g., Order Granting Partial Increase In Rates and Charges, Docket No. E-2, Sub 526, at pp. 29-30 (Aug. 27, 1987) (approving use of minimum system for cost allocation, but not for rate design); Order Granting General Rate Increase, Docket No. E-2, Sub 1023 (May 30, 2013), at p. 32 (Sub 1023 Order) ("the Commission regards any increase in the BCC as a rate design issue, not an ROE [rate of return on equity] issue.") DEP witnesses Hager and Wheeler, although at times conflating cost-of-service study issues with rate design issues, alsoacknowledged that rate design requires consideration of issues beyond cost of service. According to witness Wheeler, "[the] cost of service [study] provides [the rate designer] customer-related, demand-related, and energy-related costs. In efficient rate design, we try to separately distinguish those costs . . . and try to have rates that would recover those costs appropriately based on cost causation." (Tr. Vol. 11, p. 62.) Witness Hager acknowledged that there is "not always a pure translation from cost of service studies to rates." (Tr. Vol. 10, p. 328.) Witness Floyd also recognized that rate design, and specifically, setting the BCC, requires consideration of other factors besides cost of service: "It is up to the rate designer to take into account all these other issues that are outside of cost of service in coming up with where that basic customer charge should land." (Tr. Vol. 19, p. 160.)

Witness Wallach agreed that rates should be based on principles of cost causation; however, he testified that DEP's use of the minimum system technique in its cost of service study inappropriately classifies a portion of distribution plant costs as customer- related. (Tr. Vol. 17, p. 201.) As witness Wallach explained, "it is not appropriate to rely on the results of minimum system analyses to estimate per customer minimum plant costs, since such analyses typically overstate the true minimum cost per customer for distribution plant." (Tr. Vol. 17, p. 200.) This is because some portion of distribution plant costs are driven by usage, yet the minimum system technique incorrectly classifies those demand-related costs as customer-related costs, resulting in an inflated estimate of the per-customer minimum plant cost. (Tr. Vol. 17, p. 214.)

The Commission rejected in prior orders use of the minimum system technique to design the basic customer charge for the very reasons cited by witnesses Barnes and Wallach in this case. In Docket No. E-2, Sub 526, a general rate case filed by DEP's predecessor utility Carolina Power & Light (CP&L), the Commission approved the use of the minimum system technique for purposes of allocating costs to the various customer classes, but explicitly rejected its use for purposes of setting the BCC. The Commission explained its decision as follows:

> The minimum system technique derives the cost of distribution plant as if all components of such plant are "minimum" size (i.e., the minimum size needed to connect each customer to the system regardless of the amount of kWh used). The cost of the "minimum" distribution plant is then allocated between customer classes on a per customer basis, while the remainder of the distribution plant cost is allocated between customers on the basis of distribution level kW demand. The Company contended that the allocation of a portion of distribution plant on a per customer basis should result in such distribution cost per customer being reflected in the basic customer charge in order to be consistent with the allocation methodology. However, such reflection of minimum distribution plant costs in the basic customer charges would result in residential customer charges at least double the current $6.65 per month, and the Commission has never approved residential customer charges approaching the levels indicated by the minimum system technique.

Order Granting Partial Increase In Rates and Charges, Docket No. E-2, Sub 526, at pp. 29-30 (Aug. 27, 1987) (emphasis added).

Witness Deberry also opposed the increased residential BCC, testifying that it will affect already cost-burdened residents who struggle to afford housing costs. (Tr. Vol. 13, p. 214.) Witness Deberry explained that over half of all cost-burdened households are renters without the ability to make investments in energy efficiency. (Id. at 216.) She further explained that the increased BCC would reduce incentives from bill savings for landlords to include utility programs in their property management, and, thus, the costs of an increased BCC would be passed on to customers least able to afford it. (Id. at 219.) Similarly, witness Howat testified that increasing fixed customer charges causes disproportionate impacts to low-volume, low-income customers and discourages energy efficiency. (Tr. Vol. 13, p. 239.) Witness Howat testified that low-income households, and particularly low-income households of color, are at a heightened risk of loss of home energy service, and the increased threat of disconnection posed by the Company's rate increase proposes a threat to the health and safety of these customers and the larger community. (Id. at 247-49.)

In his rebuttal testimony, Company witness Wheeler responded to the arguments raised by these intervenors regarding the proposed increases to the BCCs. (Tr. Vol. 10, pp. 220-24.) First, he explained that "[i]t is important that the Company's rates reflect cost causation to minimize subsidization of customers within the rate class." (Id. at 220.) Witness Wheeler explained that "customer-related costs are unaffected by changes in customer consumption and therefore should be paid by each participant, regardless of their consumption." (Id.) He further explained that any customer-related revenue not recovered in the BCC is shifted to energy rates, which contrary to witness Wallach's assertion, actually results in high-usage customers subsidizing the rates of lower-usage customers. (Id.)

Witness Wheeler also notes that the Company has carefully examined its costs and identified customer-related costs in order to determine the proposed BCCs, and that other utilities' costs and rates are not relevant to the determination of DEP's rates. (Tr. Vol. 10, p. 222.) Witness Wheeler rebutted witnesses Barnes' and Wallach's argument that the BCC discourages distributed generation and energy efficiency. (Id.) Witness Wheeler stated that failing to properly recover customer-related cost via a fixed monthly charge provides an inappropriate price signal to customers and fails to adequately reflect cost causation. Further, he noted that the current residential "energy-only" rate design is already less efficient than ideal because it recovers demand-related cost via a volumetric charge. Shifting customer-related cost to the kWh energy rate further exacerbates this concern and over-compensates energy efficiency and distributed generation for the cost avoided by their actions. (Id.) DEP witness Wheeler also testified that the Company is mindful of the impact of the rate increase on its low-income customers, and that it has not requested a residential BCC that reflects the fully justified customer-related cost for that reason. (Tr. Vol. 10, pp. 221-23.) Witness Wheeler makes clear, however, that contrary to the assertions of witnesses Howat and Deberry, he believes that biasing rate design is not the most effective way to address the financial needs of these customers, and that rate design must be based on cost causation principles. (Id. at 223.) Instead, there are Company, state, and federal programs which are designed to aid low-income customers. (Id.) For example, the Company offers the Neighborhood Energy Saver Program and various payment plans to assist low-income customers. (Id.) DEP also promotes the Energy Neighbor Fund, which raises funds for local aid agencies to assist low-income customers. (Id.)

At the hearing, witness Wheeler testified on redirect that the BCC increase that the Company has requested, through the Stipulation, would equate to 9 cents per day. (Tr. Vol. 11, p. 149.) He also testified on redirect that even though some of DEP's customers cannot afford an extra dime a day for their BCC, it is still appropriate to increase the BCC because it sends the appropriate price signal to customers about the true cost of electricity. (Id. at 150.) He explained that understating the customer charge shifts to other customers the costs they have to pay, inflates the energy price, and overcompensates customers for energy efficiency and distributed generation resource installation. (Id.)

Additionally, Commissioner Brown-Bland asked how the Company determines whether the increase in BCC would be "rate shock," particularly to a low-usage customer or net metering customer. (Tr. Vol. 12, pp. 20-21.) In response, witness Wheeler explained that the Company designs rates to send the appropriate price signal and that underpricing the customer charge is a disservice to customers because someone else is paying their fair cost of service. (Id. at 21.) On redirect, witness Wheeler further stated that the Company has requested to increase the BCC by $2.87 per month, as agreed in the Stipulation, and that he does not believe that an increase of that amount would constitute "rate shock." (Id. at 31.)

NC Justice Center, in its post-hearing Brief, reviews the statutes and case law underlying the requirement of just and reasonable rates. NC Justice Center submits that the $14.00 BCC agreed upon in the Stipulation is unjust and unreasonable. It maintains that the $14.00 BCC would exceed the minimum cost to connect a customer to DEP's distribution system and would be a disincentive to energy efficiency. NC Justice Center cites the testimony of witness Wallach explaining the intent behind the BCC, and states that DEP did not present sufficient evidence to support an increase to $14.00, noting that DEP relied on the minimum system technique, a technique that NC Justice Center contends the Commission has rejected at least twice as the basis for setting the BCC. It notes that DEP witnesses Hager and Wheeler, as well as Public Staff witness Floyd, acknowledged that rate design requires consideration of issues beyond cost of service.

NC Justice Center states that witness Wallach testified that DEP's use of the minimum system technique in its cost of service study inappropriately classifies a portion of distribution plant costs as customer-related. (Tr. Vol. 17, p. 201.) Further, it cites the Commission's 1987 Order in a general rate case filed by DEP's predecessor, CP&L, and states that the Commission explicitly rejected use of the minimum system technique for purposes of setting the BCC. (Order Granting Partial Increase In Rates and Charges, Docket No. E-2, Sub 526, at pp. 29-30 (Aug. 27, 1987)).

In addition, NC Justice Center states that in CP&L's next general rate case the Commission again explicitly rejected the minimum system technique for setting the BCC. Order Granting Partial Increase In Rates and Charges, Docket No. E-2, Sub 537, at pp. 130-31 (Aug. 5, 1988)

Moreover, NC Justice Center contends that DEP's own analysis demonstrates the flaws inherent in using the minimum system technique to establish the BCC, and that it demonstrates that the BCC should not only not be increased, but that it should actually be reduced from its current level. In response to an NC Justice Center data request, DEP re-ran its cost-of-service study without the minimum system analysis, excluding pole, conduit, conductor, and line transformer costs as demand-related rather than customer- related. As a result of excluding those costs attributable to the minimum system analysis, the Company's estimate of customer-related costs was only $8.54, not $27.82. (Tr. Vol. 11, p. 58-59 (Hager); Tr. Vol. 17, pp. 203, 215 (Wallach.) NCJC Hager/Wheeler Cross Ex. 1, (Ex. Vol. 20, p. 123.) NC Justice Center argued, as witness Wallach testified, that DEP's modified cost-of-service study shows that a sizeable portion of demand-related distribution plant costs are being inappropriately recovered through the current BCC. The amount in excess of $8.54 represents usage-driven costs that should be recovered in the volumetric energy rate, so that each residential customer contributes to recovery of these costs in direct proportion to his usage.

NC Justice Center also contends that increasing the BCC to $14.00, as proposed in the Stipulation, would likewise be unjust and unreasonable. Summarizing DEP's and the Public Staff's testimony in support of the Stipulation, NC Justice Center maintains that there was no attempt to explain why a $14.00 BCC is just and reasonable. On the other hand, according to NC Justice Center, witness Wallach testified that the reduced increase in the BCC under the Stipulation does not address his concerns.

Further, NC Justice Center submits that any increase in the residential BCC would disproportionately impact low-usage customers, discourage the efficient use of electricity, in contravention of state law and policy, and shift costs away from higher-volume electricity users within the residential class to lower-volume users in the class. (Tr. Vol. 13, pp. 278-89.) It states that some cross-subsidization is inherent and unavoidable in average-cost ratemaking, as recognized by witnesses for various parties, e.g., DEP witness Wheeler (Tr. Vol. 12, pp. 21-22), but that rates should be designed to minimize cross-subsidization to the extent possible, as a matter of sound public policy, and also consistent with the prohibition on undue discrimination in ratemaking.

NC Justice Center further points to witness Deberry's testimony about the difficulty low-income North Carolinians have in securing affordable housing, and to witness Howat's testimony that the proposed increase in the BCC would be unfair to low-volume customers in DEP's service territory. Also, witness Howat testified that the bestavailable data demonstrates that on average, low-volume users - those who would be most hurt by increases in the basic customer charge - are disproportionately households headed by low-income, African-American, and senior-citizen residents. (Tr. Vol. 13, pp. 241-45.) In addition, NC Justice Center summarizes the public witness testimony regarding the hardship of increases in fixed charges to low-income households, fixed-income households, and senior citizens. NC Justice Center states that these are considerations that the Commission must take into account in this case, citing the statement that "[i]n establishing fair rates to consumers the Commission takes into account the economic conditions in which the consumers find themselves." Order on Remand, Docket No. E-7, Sub 989, at p. 23 (Oct. 23, 2013); and G.S.62-133(a). It also opines that it is in large part because of the disproportionate harm to those subsisting on low- and fixed-incomes that the National Association of State Utility Customer Advocates (NASUCA) is opposed to increases in mandatory, fixed charges, and cites NASUCA Resolution 2015-1 (NC Justice Center Floyd Cross Exhibit 1, Ex. Vol. 19, p. 286), which states that imposing a "high customer charge ... unjustly shifts costs and disproportionately harms low-income, elderly, and minority ratepayers, in addition to low-users of gas and electric utility service in general."

NC Justice Center cites three decisions in which it submits that the public utility commissions in Maryland, New Mexico, and Michigan, employing the just and reasonable standard, take into consideration how increases in fixed customer charges would affect low-income customers. It asserts that DEP presented no evidence about the effect of an increase in fixed charges on the ability of its most vulnerable customers to maintain essential electrical service. Further, NC Justice Center contends that DEP has not done anything to mitigate its proposed increase in the BCC with additional investments in low- income energy efficiency. It states that after reviewing the amount of DEP's current budget for low-income energy efficiency programs, witness Howat recommended that the Company increase its budget for programs targeted to low-income households from $1.9 million to $11.5 million, an amount more commensurate with the revenue received by DEP from income-eligible households in its service territory (Tr. Vol. 13, pp. 254-58), or follow the recommendation of public witness Goodson that DEP make an annual shareholder contribution to the Helping Home Fund.

In its post-hearing Brief, the AGO contends that DEP's proposal to increase the monthly basic customer charge for residential customers by 26%, from $11.16 per month to $14.00 per month, should be denied because it will discourage consumers from making investments in energy efficient products and home improvements, and from taking other careful measures to budget their consumption, contrary to statutory public policy goals favoring energy efficiency and energy conservation. Moreover, according to the AGO, the increased BCC will shift costs to small users such as low-income and elderly consumers who live in small apartments, as they are charged the same unavoidable BCC as other residential consumers who live in spacious high-consumption residences.

In addition, the AGO contends that energy efficiency and energy conservation are encouraged by a rate design that sets the unavoidable BCC as low as possible and recovers most of the cost of service in the usage charge, and that the effect of the Company's proposal runs contrary to several statutorily declared North Carolina public policies relating to public utilities regulation that favor the encouragement of energy efficiency, energy conservation, and well-planned utility resource development, including:

> (3a) To assure that resources necessary to meet future growth through the provision of adequate, reliable utility service include use of the entire spectrum of demand-side options, including but not limited to conservation, load management and efficiency programs, as additional sources of energy supply and/or energy demand reductions. To that end, to require energy planning and fixing of rates in a manner to result in the least cost mix of generation and demand-reduction measures which is achievable, including consideration of appropriate rewards to utilities for efficiency and conservation which decrease utility bills;
>
> (4) To provide just and reasonable rates and charges for public utility services without unjust discrimination, undue preferences or advantages, or unfair or destructive competitive practices and consistent with long-term management and conservation of energy resources by avoiding wasteful, uneconomic and inefficient uses of energy;
>
> ***
>
> [6) To foster the continued service of public utilities on a well-planned and coordinated basis that is consistent with the level of energy needed for the protection of public health and safety and for the promotion of the general welfare as expressed in the State energy policy;
>
> ***
>
> (10) To promote the development of renewable energy and energy efficiency through the implementation of a Renewable Energy and Energy Efficiency Portfolio Standard (REPS) that will do all of the following:
>
> a. Diversify the resources used to reliably meet the energy needs of consumers in the State.
>
> b. Provide greater energy security through the use of indigenous energy resources available within the State.

c. Encourage private investment in renewable energy and energy efficiency.

d. Provide improved air quality and other benefits to energy consumers and citizens of the State.

G.S. 62-2(a) (emphasis added).

Further, the AGO states that witness Wallach, an expert who has consulted on electric utility industry matters for over 30 years, estimated that consumption would increase by 2% over the next several years if DEP's initial proposal to charge $19.50 per month is allowed. (Tr. Vol. 17, pp. 209-10, 216.) The AGO states that the smaller increase proposed in the Stipulation is not as discouraging, but still reduces the incentive to conserve and lengthens the time for recoupment of investments by consumers in more energy-efficient home improvements and appliances – particularly given that the 26% increase in the charge is proposed so soon after a 65% increase to the BCC took effect in 2013. (Tr. Vol. 17, pp. 209-210.) In addition, the AGO states that witness Wallach evaluated the cost studies used by DEP and recommended decreasing the BCC to $8.54. (Tr. Vol. 17, p. 215.)

The AGO stated that questions posed by the Commission during the expert witness hearing raised several additional considerations. First, the cost studies that are used to allocate costs among different customer classes are not well suited to determine rate design issues (Tr. Vol. 17, pp. 221-222), and data used to allocate costs over many customers may distort results when applied on a per-customer basis. (Id.) Furthermore, the design of rates carries important ramifications for policies such as the incentives that encourage energy efficiency, conservation, load shifting, etc.

The Commission concludes that the stipulated BCC increases, including a BCC of $14.00 for Schedule RES and $16.85 for Schedules R-TOUD and R-TOU, are just and reasonable and strike an appropriate balance that provides rates that more clearly reflect actual cost causation and, thus, minimize subsidization and provide proper price signals to customers in the rate class, while also moderating the impact of such increase on low- usage customers.

AMI Enabled Rates

NCSEA witness Barnes testified that it is impossible to say that customers will benefit from the Company's proposed AMI deployment because the Company has not provided any detail regarding the rate options that will be offered. (Tr. Vol. 16, pp. 75-78.) Similarly, EDF witness Alvarez also criticized the lack of detail in the Company's Application regarding time varying rate offerings that the Company plans to implement in conjunction with AMI. (Tr. Vol. 7, p. 161.) Company witness Wheeler responded that "[i]t would be premature to offer a specific rate design before the infrastructure to support the design is available." (Tr. Vol. 10, p. 227.) Public Staff witness Floyd agreed that the Company's proposal to develop new rate designs after AMI deployment was a "reasonable approach" and testified that the Public Staff is willing to work with the Company to develop these future rate designs. (Tr. Vol. 19, pp. 103-04.)

Additionally, EDF witness Alvarez testified about various AMI-enabled services that he argues offer significant customer and environmental benefit potential. (Tr. Vol. 7, pp. 152-54.) Company witness Wheeler responded that the Company is considering all of the initiatives suggested by witness Alvarez. (Tr. Vol. 10, p. 225.) Specifically, the Company already offers some time varying rates, is evaluating introduction of various usage alerts as part of its Enhanced Basic Services initiative, and has explored residential prepayment options through two different pilot programs. (Id. at 226.) Witness Wheeler also responded to witness Alvarez's suggestion that a collaborative would be beneficial in developing time-varying rate designs by reiterating that the Company highly values customer input in evaluating both current and future rate designs. (Id. at 227.) He explained that the Company routinely discusses its rate design with members of the Public Staff and customers, and that it is preferable that such input be received on an on- going basis rather than awaiting a group meeting to be certain this guidance is considered in the decision-making process with respect to future rate designs and requirements for supporting infrastructures. (Id. at 227-28.)

Witness Wheeler further explained why it would be premature to offer a specific AMI-enabled rate design in this proceeding. (Tr. Vol. 10, p. 227.) In addition to the fact that the AMI technology and new billing system infrastructure has not been implemented yet, he testified that it is important to evaluate each rate design in conjunction with other demand response options that seek to shift customer consumption. (Id.) For example, witness Wheeler explained that residential appliance control is an effective tool to reduce air conditioning load during system peak conditions which would potentially be the same load shifted by a residential critical peak pricing or peak time rebate program. (Id.) He explained that all customer options need to be evaluated to achieve the most dependable load response at the lowest cost to ratepayers. (Id.)

The Commission agrees that it is premature to offer specific AMI-enabled rate designs in this proceeding since the infrastructure underlying such rate design is not yet available. The Commission concludes that if and when DEP's AMI technology and new billing systems are implemented, the Company will be able to evaluate all customer options in order to achieve a rate design that provides the most cost-effective and dependable service to ratepayers.

TOU

In its Application, the Company also proposed adjusting TOU rates to reduce the difference between on-peak and off-peak rates. (Tr. Vol. 10, p. 228.) Witness Wheeler explained that this change reflects the ongoing trend of a declining differential between on-peak and off-peak marginal energy cost. (Id.) Public Staff witness Floyd recommended deferring this change and maintaining the current differentials between on-peak, shoulder, and off-peak energy rates. (Tr. Vol. 19, p. 107.) Witness Floyd argues that narrowing the difference diminishes the price signal and thereby discourages switching of consumption away from the peak periods. (Id. at 106.) Additionally, he believes it may cause confusion when new and enhanced rate designs are introduced after AMI deployment. (Id.)

NCLM notes that in the Stipulation it is agreed that DEP will host a workshop on Power/Forward during the second quarter of 2018 and will report the results of the workshop to the Public Staff and the Commission. NCLM states that it appreciates DEP's plan to host an initial workshop, but notes that the Stipulation does not address when the Power/Forward grid investments and AMI technology will provide additional means for customers who actively manage their use of electricity to save on their power bills. NCLM recommends that the Commission require DEP not only to hold a technical workshop on its Power/Forward grid investments, but also to include customers and the Public Staff in a series of meetings about customer benefits of Power/Forward and AMI, and order DEP to develop proposals for the new and innovative time-of-use rate designs and prepayment options, and provide that information to customers as expeditiously as possible.

The Company agreed with the Public Staff in the Stipulation to maintain the current differential between on- and off- peak energy rates in all TOU rate schedules. (Stipulation IV.F.3.b.) The Commission hereby finds that maintaining the existing differentials among on-peak, shoulder, and off-peak energy rates is just and reasonable in light of the evidence provided. The Commission concludes that changing the differential between on-and off- peak rates should be deferred until significant rate design changes associated with the Company's AMI deployment are made.

SGS-TOU

Kroger witness Bieber testified regarding the Company's adjustments to rate schedule SGS-TOU. Witness Bieber asserts that the proposed SGS-TOU rate design understates demand charges while overstating energy charges relative to costs, which results in a greater misalignment of the costs and charges for the schedule. (Tr. Vol. 7, 224.) According to witness Bieber, the proposed rate design increases energy costs 17.19%, while only increasing demand costs 6.15%, resulting in customers with relatively higher load factors being required to subsidize the costs of the lower-load-factor customers within the rate class. (Id. at 225.) Accordingly, witness Bieber recommended that the Commission accept the Company's proposed BCC and recover the remainder of the revenue requirement increase for the SGS-TOU rate class through an increase in the demand charge component, while maintaining the current off-peak energy charge. (Id. at 228; Bieber Ex. 2.)

In his rebuttal testimony, witness Wheeler asserts that witness Bieber's SGS-TOU rate design should be rejected because it fails to properly consider marginal cost, has a disparate impact on customers served under the schedule, and encourages migration away from a TOU design thereby discouraging load shifting. (Tr. Vol. 10, p. 233.) The current SGS-TOU demand rates exceed marginal cost. (Id. at 231.) Therefore, significantly increasing these rates close to embedded unit cost is inappropriate. (Id.) Instead, DEP increased both demand and energy rates by the same percentage to better recognize both the rate class embedded unit cost and marginal cost. (Id.) Moreover, witness Wheeler explained that by increasing revenues under Schedule SGS-TOU by 10% more than the MGS Class under the proposed rates that the schedules will move toward rate parity for the two primary MGS class tariff options, without causing an economic hardship for SGS-TOU participants. (Id. at 233.) Additionally, witness Wheeler testified that little rate migration is anticipated under the Company's current rate design, but that witness Bieber's proposal changes the load factor where SGS-TOU would be beneficial from 30% to 36%, thereby encouraging customers to switch to Schedule MGS to realize a lower bill. (Id. at 232.) If witness Bieber's design is accepted, a migration adjustment would be required to give the Company an opportunity to realize its full revenue requirement. (Id.)

In its post-hearing Brief, Commercial Group contends that the various class cost of service studies (CCOSS) show that the Medium General Service (MGS) class provides above-average returns to DEP, as it did under the different CCOSS methods following the 2013 rate case

(Tr. Vol. 11 p. 33), and, thus, the MGS class is subsidizing other ratepayer classes. DEP proposed to allocate any revenue increase to rate classes on the basis of rate base, and then adjust the increase each class receives in order to produce a 25% reduction in each class's variance from the overall average rate of return. (Tr. Vol. 7, p. 98 (Chriss/Rosa, citing Bateman Direct at 10.)) Commercial Group states that it does not take issue with this gradual approach to class revenue allocation, except if the Commission grants the proposed JRR. In such event, the Commission should set LGS rates at cost in order to avoid a double subsidy by MGS customers. (Tr. Vol. 7, p.100 (Chriss/Rosa)) Otherwise, according to Commercial Group, MGS ratepayers would be forced to pay one subsidy to the LGS and other ratepayer classes and another subsidy to LGS industrial customers under the JRR, which would be both unjust and unreasonable. Commercial Group also notes that in the Stipulation and in its settlement with DEP the MGS class subsidy burden was recognized by providing that the SGS-TOU rate schedule (which falls within the MGS class) should receive the same overall revenue increase percentage as does the MGS rate schedule. Further, to ensure a more equitable impact for the MGS class, Commercial Group and DEP agreed that the revenue increase applicable under Schedules MGS and SGS-TOU should strive to achieve approximately the same percentage increase in revenues under each schedule. Commercial Group maintains that the Commission should adopt this reasonable resolution.

In its post-hearing Brief, Kroger notes that on November 27, 2017, Kroger and DEP agreed to a partial Settlement Agreement in which Kroger and DEP agreed that the revenue increase applicable under Schedules MGS and SGS-TOU should strive to achieve approximately the same percentage increase in revenues under each schedule, and that an identical provision is also contained in the Settlement Agreement signed by DEP and Commercial Group. Kroger states that witness Bieber explained that there is no evidence in the record to support a rate spread in which SGS-TOU receives a higher rate increase than the MGS class in general, and, therefore, the Settlement Agreement signed by Kroger and DEP will result in rates for MGS and SGS-TOU that are fair, just and reasonable.

Pursuant to the Stipulation, the Kroger Settlement, and the Commercial Group Settlement, the Stipulating Parties, Kroger, and the Commercial Group agreed to the Company's proposed SGS-TOU rate design, with the condition that "[t]o ensure a more equitable impact on the MGS class, the revenue increase applicable under Schedules MGS and SGS-TOU should strive to achieve approximately the same percentage increase in revenues under each schedule." (Stipulation IV.F.3.d.)

In light of the parties' testimony and the Kroger Settlement, which the Commission accepts in its entirety and upon which the Commission places great weight, the Commission finds and concludes that the Company's proposed SGS-TOU rate schedule, as modified by the Stipulation, is just and reasonable. The Commission finds that DEP's proposed SGS-TOU rate schedule recognizes marginal costs and will provide parity between the two primary MGS rate schedules. Accordingly, the Commission approves the Company's proposed SGS-TOU rate schedule, as agreed by Kroger.

LGS-TOU

Similar to witness Bieber's arguments related to SGS-TOU, CUCA witness O'Donnell and CIGFUR witness Phillips testified that the Company's proposed LGS-TOU demand rates should be increased to reduce the impact on higher load factor customers and better reflect the LGS class demand-related unit costs. (Tr. Vol. 15, p. 216; Tr. Vol. 17, pp. 67-70.) According to witness O'Donnell, customers with a higher usage per a given level of kW demand have rate increases of approximately 13%, while lower-usage customers have rate increases of approximately 11%. (Tr. Vol. 15, p. 216.) He instead recommends that the Commission approve a more gradual change in load factor variance among the LGS-TOU rate class because it will help higher load factor large manufacturers absorb this proposed rate increase and may, in some cases, be the difference in retaining jobs in the DEP service territory. (Id.) Witness Phillips specifically recommends that no increase be applied to the energy component and that the Company recover the revenue requirement increase for the SGS-TOU rate class through increases in the customer and demand charges. (Tr. Vol. 7, p. 70.)

Witness Wheeler explained that the Company's proposed LGS-TOU rate recovers the requested revenue requirement in a manner that is equitable to current customers, minimizes disparity in the percent impact on customer bills, and doesn't unduly incent customers to migrate to an alternative schedule to gain a lower bill. (Tr. Vol. 10, p. 234.) Witness Wheeler explained that witness O'Donnell's criticism of LGS-TOU ignores the fact that nearly all customers served under the schedule already have higher than average load factors. (Id. at 235.) He further explained that Wheeler Exhibit No. 3 includes lower load factor customers for illustrative purposes, but that such customers rarely receive service under Schedule LGS-TOU since Schedule LGS offers a lower bill. (Id.) Thus, if the lower load factor calculations are excluded, the increase on all LGS-TOU customers at a given demand is roughly the same. (Id.) Witness Wheeler also testified that witness Phillips' recommendation should be rejected because it fails to properly consider marginal cost, has a disparate impact on customers served under the schedule, and encourages migration away from a TOU design thereby discouraging load shifting. (Id. at 238.)

The Commission finds and concludes the Company's proposed LGS-TOU rate design is just and reasonable in light of the evidence presented. The Commission, therefore, rejects the recommendation of witness Phillips on the grounds that his proposal is unmerited given the fact that the increase for all LGS-TOU customers will be roughly the same, and that his proposal is likely to result in rate migration away from a TOU design that would result in discouraging load shifting.

Standby Service Rider

Commercial Group witnesses Chriss and Rosa argue that under the Standby Service (SS) Rider, the Standby Service Contract Demand should be set as the maximum increased demand the Company is requested to serve whenever the customer's generation is not operating, which may be less than the generator nameplate rating. (Tr. Vol. 7, p. 106.) For Rider SS customers with less than 60% planning capacity factor, the Contract Demand is the nameplate capacity of the self-generator. (Tr. Vol. 10, p. 238.) For greater than 60% planning capacity factor, the contract demand is the maximum increased demand of the SS customer when the generation is not operating. (Id. at 238-39.)

Witnesses Chriss and Rosa testify that the manner in which the Standby Service Contract Demand is determined under the SS Rider is inequitable because it allows one group of customer generators to determine their standby needs, which may be less than the nameplate capacity of the generator, and request that amount of service from the Company, while the other group of customer generators must pay for standby service for the nameplate capacity of their generator regardless of whether that service is actually needed. (Tr. Vol. 7, p. 105.) Witnesses Chriss and Rosa argue that this is unfair to customers who use solar and wind generation, and it creates a barrier to renewable energy opportunities. (Id.)

Witness Wheeler explained that renewable generation customers with planning capacity factors below 60% are different from those with planning capacity factors greater than 60% as they have little ability to influence the hours when their generation is operative and are totally dependent upon the availability of their energy resource. (Tr. Vol. 10, p. 239.) Unlike cogeneration and base load generation resources with capacity planning factors greater than 60%, when the under-60% renewable generation fails there is often little offsetting reduction in the participant's load requirements, and the load required of the utility instantly increases by the full output of the failed self-generator. (Id.) This will occur when there is an equipment failure or when the energy resource is disrupted. Because these customer generator's monthly operations and hourly demands are difficult to predict, DEP's facilities must be constructed assuming the customer's self- generation is unavailable. (Id.) Therefore, it is appropriate to charge customers with planning capacity factors below 60% a reservation charge based on the nameplate rating of their generation systems. (Id. at 240.) For example, if a cloud passes a solar generator customer's site, DEP generation must instantaneously be available to replace the customer's source. (Id.) Moreover, during night-time hours or when the customer's generation fails to operate, DEP generation must be available to replace 100% of the customer's generation. (Id.) Witnesses Chriss and Rosa are requesting that customers receive this back-up power service at a greatly reduced or no cost because their retail demand might not be reduced due to the coincidence of their load with their generation. (Id.) Witness Wheeler explains that contrary to Commercial Group's assertions, the generation reserve charges under the SS Rider should be set based on "availability" cost and not "usage" cost. (Id. at 241.) For customers operating generation with less than a 60% planning capacity factor, DEP must stand ready to instantly provide full replacement power whenever the self-generator is inoperative, which may or may not coincide with the customer's peak billing demand. (Id.)

Commercial Group states that witness Chriss demonstrated that a significant portion of the Generation Reservation Charge assessed to Rider SS customers with solar or wind generators would recover generation reservation capacity cost that the customers already pay for in their underlying tariff demand charges, and that this duplicative overcharge billing constitutes a significant barrier to on-site installation of solar or wind generation. (Tr. Vol. 7, pp. 102-05.) In addition, Commercial Grouppoints out that recent legislation, N.C. Session Law 2017-192, would require DEP and other electric utilities to file new net metering rates that are set such that customer generators pay their full fixed cost of service. (Id. at 24.) In this context, DEP and Commercial Group reached the following agreement: DEP agrees that it shall work with interested commercial and industrial customers to investigate the issues concerning Rider SS that were raised in the direct testimony Commercial Group filed in the docket. (DEP/CG Settlement, Para. 3) Commercial Group urges the Commission to approve this agreement in order to givethe parties more time to work on this complicated rate design issue.

The Company and Commercial Group settled this issue and all other issues between them, and agreed that DEP "shall work with interested commercial and industrial customers to investigate the issues concerning Rider SS that were raised in the direct testimony the Commercial Group filed in the Docket." (Id.)

In light of the parties' testimony and the Commercial Group Settlement, which the Commission accepts in its entirety and upon which the Commission places great weight, the Commission finds and concludes that the Company's proposal for maintaining the currently approved approach of setting the Standby Service Contract Demand under the SS Rider is just and reasonable to all parties and should therefore be continued. Because the Company must be ready at any time to instantly provide 100% of the energy needs of customers operating generation with less than a 60% planning capacity factor, it is appropriate to set a generation reserve charge based on the nameplate capacity of these customers' generators. Accordingly, the Commission approves the Company's proposed SS Rider, as agreed by Commercial Group.

Street Lighting

NCLM witness Saffo testified regarding a potential convergence of factors that will create a "perfect storm" that will dramatically and adversely affect municipal budgets in the near future. The factors cited by witness Saffo include: (1) continued rapid growth of cities as more people seeking jobs move to them from rural areas and from other parts of the country, (2) increased demands for infrastructure and municipal services for this growing population, and (3) the substantial increase in rates for electricity that DEP is requesting. As a result, witness Saffo encouraged the Commission to require DEP to deploy technological capabilities and new time-of-use rate designs as expeditiously as possible to incentivize customers to alter their energy usage so that they may more efficiently consume electricity by shifting consumption to off-peak hours. Further, he stated that based on the mutual benefits to municipal customers, public authority customers and to DEP from technological innovation, DEP and the municipal and authority customers should collaborate to facilitate such innovation.

Further, NCLM witness Saffo testified that the City of Wilmington has benefited from LED technology. However, he testified that despite the fact that LED street lighting systems are becoming more economically feasible, many municipalities cannot take advantage of the benefits of LED lighting due to the cost of converting to LED fixtures. (Pre-Filed Direct Testimony of Bill Saffo, p. 15.) Witness Saffo recommended that DEP provide financial incentives to municipalities to utilize LED lighting. (Id.)

DEP witness Wheeler, during cross-examination, noted that DEP had done quite a bit to help street lighting and bring the rates down to the extent DEP could within the context of a revenue requirement. For example, the area lighting and street lighting schedules were merged into a common lighting group as a way to minimize the impact on street lighting in this case. Further, witness Wheeler noted that the proposed increase is roughly half of what it would have been if the classes had not been merged.

Witness Wheeler explained that the Company collaborates with NCLM. He noted that the Company meets every six months with the municipalities to discuss their needs relative to lighting issues. When asked if there are any plans to implement some innovative LED lighting incentives or other ways of looking at rates in the future, witness Wheeler responded that the Company had made some changes since the last rate case. He stated that additional LED streetlights as well as LED floodlights were added. According to witness Wheeler, the Company is continuing to advance its portfolio of LED products. He stated, "The main thing I work with is pricing of those new products and features you're interested in. I've got to be able to offer you the product you want for the price you want. Right now, that's somewhat difficult with some technologies we have out there. But we are working to try to drive the prices down." (Tr. Vol. 10, p. 302.) Witness Wheeler noted that the Company hopes to offer additional products that would be of interest to the municipalities next year.

NCLM states in its Brief and partial proposed order that there are numerous public benefits associated with LED technology, including increased energy efficiency, lower maintenance costs, and improved lighting. Further, NCLM stated that many municipalities in North Carolina have begun to transition to LED technology in order to realize these public benefits. NCLM further noted that Commission Rule R8-47 (Requirements of Minimum Standard Offerings of Lighting Luminaries) explicitly recognizes these benefits and provides that "[u]tilities are urged to investigate new, more efficient lighting systems as they are developed and, where such systems are efficient and economical to the customer, request approval of newer systems as standard tariff items." NCLM requested that the Commission order DEP to provide greater incentives for LED street lighting conversions consistent with Commission Rule R8-47.

In addition, NCLM states that many municipalities are not able to take advantage of the benefits of LED lighting due to the cost of converting their own lighting to LED fixtures. NCLM states that municipalities could achieve large cost savings through LED lighting, and DEP should provide financial incentives to municipalities that utilize LED lighting. Thus, NCLM requests that the Commission order DEP to provide greater incentives for LED street lighting conversions consistent with Commission Rule R8-47.

Further, NCLM states that in DEP's proposed rates and the Stipulation, the proposed rate of return for the ALS and SLS customer class exceeds the rate of return for all other classes. (Settlement Support Testimony of Laura A. Bateman, Tr. Vol. 6, Updated Bateman Exhibit 2 – Partial Settlement, p. 1, Spread of Proposed Increases to Customer Classes.) NCLM notes that Public Staff witness Floyd testified that the Public Staff seeks to "maintain a +/- 10% 'band of reasonableness' for RORs, relative to the overall jurisdictional ROR such that to the extent possible, the class ROR stays within this band of reasonableness following assignment of the proposed revenue increase and move each customer class toward parity with the overall jurisdictional rate of return and avoid the potential for rate shock." (Tr. Vol. 19, p. 99.) While the overall rate of return in the partial settlement is 7.09%, the rate of return for the street lighting class in the proposed settlement is 13.92% (13.82% with the EDIT Rider). (Agreement and Stipulation of Partial Settlement, Docket No. E-2, Subs 1142, 1131, 1103, 1153, November 22, 2017, at p. 5)

NCLM states that street lighting is typically the greatest portion of a municipality's budget for electricity, and that municipalities and the municipal taxpayers should not suffer disproportionately in this rate case because DEP has proposed a disproportionately high rate of return for street lighting. The NCLM respectfully requests that the Commission order DEP to adjust its street lighting rates to bring the rate of return for this customer class into the band of reasonableness and move this customer class toward parity with the overall jurisdictional rate of return. The NCLM submits that the overall rate of return for the ALS, SLS customer class should be about 7.09%.

Based on the testimony of witness Wheeler, and specifically the Company's emphasis on LED lighting and continuing efforts to address the interests of the municipalities, the Commission is not persuaded that it should order DEP at this time to provide additional incentives for LED street lighting conversions, as requested by NCLM.

Summary with Respect to Rate Design

Based on the testimony of witness Wheeler, with consideration of the testimony of witnesses Wallach, Deberry, Barnes, Howat, Alvarez, Bieber, Phillips, O'Donnell, Chriss, Rosa, Saffo, and Floyd, as well as the Stipulation, the Commission finds and concludes that the rate design provisions in Section IV.F.3 of the Stipulation are just and reasonable to all parties in light of the all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 35-36

The evidence supporting these findings of fact and conclusions is contained in the Application and Form E-1 of DEP, the testimony and exhibits of the DEP and Public Staff witnesses, the Stipulation, and the entire record in this proceeding.

As fully discussed above, the provisions of the Stipulation are the product of the give-and-take of settlement negotiations between DEP and the Public Staff. Comparing the Stipulation to DEP's Application, and considering the direct testimony of the Public Staff's witnesses, the Commission notes that the Stipulation results in numerous downward adjustments to the costs sought to be recovered by DEP. Further, the Commission observes that there are provisions of the Stipulation that are more important to DEP, and, likewise, there are provisions that are more important to the Public Staff. For example, the Public Staff was intent on reducing the cost recovery for DEP's Zero Liquid Discharge project at the Mayo plant and for the Sutton combustion turbine project. Further, the Public Staff was resistant to the substantial increase in the residential basic customer charge proposed by DEP. Likewise, DEP was intent on maintaining the depreciation rates set in its Depreciation Study. Nonetheless, working from different starting points and different perspectives, the Stipulating Parties were able to find common ground and achieve a balanced settlement.

In addition, the Commission notes that the Partial Settlement Agreement between DEP and NC Justice Center provides customer benefits that are beyond what the Commission has the authority to require of DEP. The Partial Settlement Agreement provides that DEP will contribute $2.5 million to the Helping Home Fund for low-income energy assistance.

The result is that the Stipulation strikes a fair balance between the interests of DEP and its customers. As discussed above, the Commission has fully evaluated the provisions of the Stipulation and concludes, in the exercise of its independent judgment, that the provisions of the Stipulation are just and reasonable to all parties to this proceeding in light of the evidence presented, and serve the public interest. The provisions of the Stipulation strike the appropriate balance between the interests of DEP's customers in receiving safe, adequate, and reliable electric service at the lowest reasonably possible rates, and the interests of DEP in maintaining the Company's financial strength at a level that enables the Company to attract sufficient capital. Further, the Commission finds and concludes that the revenue requirement, rate design, and the rates that will result from the Stipulation, subject to the Commission's decisions set out below on the contested issues, will provide just and reasonable rates for DEP and its retail customers.

Therefore, the Commission approves the Stipulation in its entirety. In addition, the Commission finds and concludes that the Stipulation is entitled to substantial weight and consideration in the Commission's decision in this docket. Further, the Commission concludes that the three settlement agreements entered into by DEP with Commercial Group, Kroger, and NC Justice Center are in the public interest and should be approved in their entirety.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 37-43

The evidence supporting these findings of fact and conclusions is contained in the record of Docket No. E-2, Sub 1131, in the testimony of Company witness Bateman, and Public Staff witnesses Maness and Peedin, and the Stipulation.

In the Company's last rate case, Docket No. E-2, Sub 1023 (Sub 1023), the Commission approved $12.7 million as the reasonable annual storm costs included in rates. During 2016, DEP incurred extraordinary incremental expenses in connection with restoration and rebuilding efforts due to Hurricane Matthew and several other major storms. DEP estimated the total incremental costs charged to operation and maintenance (O&M) expense to repair and restore its system following the storms was approximately $80.2 million. In addition, the Company stated that it had incurred approximately $49.4 million in capital investments as part of its restoration efforts.

On December 16, 2016, in Docket No. E-2, Sub 1131, DEP filed a Petition for Accounting Order to Defer Incremental Storm Damage Expenses. In this petition the Company requested an accounting order to defer incremental storm costs incurred during 2016. In its petition, DEP requested that the Commission issue an Order allowing DEP to establish, net of the $12.7million[1] of storm cost expense already included in DEP's base rates, a regulatory asset and defer until its next rate case the incremental O&M storm expenses, the depreciation expense and carrying costs at DEP's weighted average cost of capital on the incremental capital cost, as well as the carrying costs on the deferred costs incurred in connection with these storms.

In its request, DEP discussed each of the storms, many of them named storms, that plagued its system in 2016. DEP provided such details as the number of customers affected, length of time service was interrupted, and staffing requirements by the Company. With the exception of the June and July thunderstorms, DEP characterized each of these storms as major, or significant. The June and July thunderstorms were stated by DEP to be unusual for the Carolinas. Further, DEP discussed

[1] The $12.7 million figure was derived from an average of the Company's annual storm expenses over the 10-year period prior to DEP's last rate case in 2012. This is the amount of normalized storm costs allowed by the Commission in DEP's last general rate case in Docket No. E-2, Sub 1023.

its work alongside many city, county, and state government agencies during a number of these storms.

The Commission issued requests for comments in the Sub 1131 docket. In the Public Staff's initial comments, filed on March 15, 2017, it recommended:

1. That the Company only be allowed to defer storm expenses in excess of an amount of $27.4 million[1];
2. That no deferral of depreciation expense or return on undepreciated capital costs be allowed;
3. That no return on the deferred asset be allowed during the deferral period;
4. That DEP be required to start amortization of the deferred costs in October 2016; and
5. That the amortization period be extended from the three years proposed by the Company to 10 years.

In its reply comments, the Company contended that the limitations the Public Staff seeks to impose would deny the Company the ability to recover the costs incurred in excess of the amount of storm-related expense found by the Commission to be normal in the Company's last general rate case. The Company noted that it had established (and the Public Staff did not disagree) that, absent an approval of its request, it is expected to earn below the return last authorized by the Commission. DEP argued that the limits imposed by the Public Staff would force the Company to face earnings degradation arising from these incremental storm costs, and these effects could impair the Company's financial stability and ability to attract capital on reasonable terms for the benefit of customers.

Additionally, in its reply comments, DEP suggests that the Commission authorize the Company to amortize the deferral over a shorter-time horizon and offered three years as a suggested period of time. DEP further stated in its comments that while the Company agrees with the Public Staff that the requested deferral is a large amount when compared to other storm deferrals, the deferral's overall effect on rates does not warrant a 10-year amortization period. DEP commented that despite the size of the recommended deferral, the increase in rates paid by customers is not so burdensome as to require an amortization period over the longest span of time used by the Commission.

In an Order issued on July 20, 2017, the Commission consolidated Sub 1131 with the current pending rate case proceeding. As noted in the Stipulation, the Stipulating Parties were unable to agree on the amount of the Company's requested deferred storm costs to be recovered and the amortization period of any such recovery.

DEP witness Bateman stated in her testimony that DEP had made a pro forma adjustment to normalize storm costs to an average level of costs that DEP has experienced over the last 10 years. She testified that the pro forma removed any storm costs from the 10-year average

[1] The $27.4 million figure is derived from an average of the Company's annual storm expenses over the 10-year period prior to the present rate case.

calculation that were included in the Company's 2016 storm deferral request and instead includes an amortization of the deferred costs over a three-year period.

Company witness Bateman testified that DEP's 2016 storm costs amounted to $80 million of incremental operating expense and $49 million of capital expenditures, on a North Carolina retail basis. (Tr. Vol. 6, pp. 124-25, 203-04.) She stated that the Company proposed to recover all of the incremental operating expenses (except for the $12.7 million that had already been included in rates), depreciation and return on the capital expenditures, and a return on the deferred costs, through amortization over a three-year period. (Id.)

On cross-examination, witness Bateman acknowledged that the Commission has never approved, nor had the Company ever before requested, deferral of capital costs resulting from a storm, or a return on the unamortized balance of deferred storm costs. (Tr. Vol. 7, pp. 447-48.) She also acknowledged that many of the ratepayers who are being asked to reimburse the Company for its storm costs have themselves suffered severe losses in Hurricane Matthew and other storms. (Tr. Vol. 7, p. 452.)

Public Staff witness Maness testified that a utility should not be entitled to defer and amortize all its storm costs above the average figure approved in its previous general rate case. (Tr. Vol. 18, pp. 321-22.) Recovery of storm costs after the fact, through deferral and amortization, should be limited to costs that are extraordinary. Witness Maness noted that storm costs naturally fluctuate from year to year, and the costs incurred in a given year should not be considered extraordinary unless they are outside the normal range of variation. In this case, he pointed out, the evidence showed that over the period from 2002 to 2015, DEP's storm costs had varied "from one annual amount as low as $1.8 million to one as high as $27.2 million." Moreover, during five different years within this fourteen-year period, DEP had incurred storm costs ranging between $22.9 million and $27.4 million. Consequently, witness Maness testified that the normal range of storm cost variation in DEP's service area extends at least as high as $27.4 million, and only costs in excess of this level should be considered extraordinary and eligible for deferral.

Witness Maness further testified that "[h]istorically, the Commission has amortized storm damage expenses over spans of time ranging from 40 months to ten years." (Tr. Vol. 18, p. 322.) Because the Company's storm losses in this case were so unusually large, he contended, the Commission should consider an amortization period at the longest end of the range – that is, a 10-year period.

In addition, witness Maness noted that in cases involving single-storm deferrals, the Commission has generally begun the amortization period in the month when the storm occurred. (Tr. Vol. 18, p. 322.) In this case DEP's deferral request includes numerous storms, but the majority of the costs were incurred during the latter part of the year. In particular, Hurricane Matthew, by far the most costly and damaging of the 2016 storms, occurred in October. Because of this, witness Maness recommended the amortization period for the deferral should begin in October 2016. Finally, he noted that although operating and maintenance costs resulting from major storms have often been deferred, there appears to be no precedent supporting deferral of the depreciation expense and associated carrying costs resulting from storm damage.

As shown in Public Staff Peedin's Revised Exhibit No. 2-1(b), Line 3, witness Peedin calculated a total deferral amount of $52,752,000 for 2016 storm costs, with an amortization period of ten years beginning in October 2016, using the procedure recommended by witness Maness.

Witness Peedin further testified that the amount of North Carolina retail normalized annual level of storm costs to be included in the Company's rates is $11.018 million. The calculation is provided on Peedin Revised Exhibit No. 3-1(o). In her testimony, she stated that she adjusted the Company's level of storm expenses (which had been included as a pro forma adjustment) by reflecting a normalized level of storm expense based on the average annual storm expense (excluding base labor costs) incurred by DEP over a ten- year period, adjusted for inflation. (Tr. Vol. 18, pp. 77-78.)

The Commission agrees with the Public Staff that DEP is seeking to defer and amortize a larger proportion of its storm costs than the Commission has historically allowed. The Commission's precedents do not require that ratepayers bear the entire cost of repairing the damage to a utility's system resulting from a major storm. Instead, deferrals of storm costs are limited to those costs that are beyond the normal range of fluctuation of storm costs from year (in this case, costs in excess of $27.4 million). In recent general rate cases, the Commission has also included in the utility's rates a storm cost allowance based on the average amount the company has incurred over a period of years (the storm cost allowance approved in Sub 1023 was $12.7 million per year). Costs may exceed an average, or normal, amount used to set rates in a general rate case; however, as long as those excess costs are within a normal range of variation, they should be presumed to be recovered through the utility's rates in effect at that time (given the fact that many expenses fluctuate from year to year).

The Commission is concerned about the asymmetry of risk that would exist if the Company were allowed to defer all costs in excess of the $12.7 million used to set storm expenses in the most recent general rate case. Evidence presented in this case showed that in several recent years there were few major storms, and the Company's total storm costs were below $12.7 million; however, ratepayers received no credit for the difference between actual costs and the $12.7 million. In contrast, in those years when extremely severe storms such as Hurricane Matthew occur, there is no upper limit to the costs that may be placed upon ratepayers.

The Commission is concerned that the Company's proposed treatment of storm costs in this case may set a dangerous precedent for other categories of costs in the future. Witness Bateman testified that the $12.7 million of storm costs included in the Company's last general rate case should be considered ordinary, and all storm costs in excess of this amount should be considered extraordinary and recovered on a deferred basis. (Tr. Vol. 7, pp. 427-28.) Under this approach, the Company would be assured of recovery of all its storm costs on almost a "true-up" basis, either through the presumed annual allowance in rates or through deferral and amortization. In effect, DEP's proposal would amount to a "tracker" system for storm cost recovery, similar to the riders established by the General Assembly in G.S. 62-133.2, 62-133.8 and 62-133.9 for fuel, REPS, and DSM/EE cost recovery. If DEP is allowed to implement such a system for recovery of its storm costs, other utilities may well seek to adopt a similar approach for any of various other expense items. In light of this concern, and the attendant shifting of more risk to customers, the Commission has generally been reluctant to approve cost tracker systems, except when they are required by statute.

The Commission is further concerned that a dangerous precedent would also be set should it allow all of the storms DEP requested in the deferral – namely the Juneand July thunderstorms. DEP stated in its request that these thunderstorms that occurred in June and July were "unusual." The Commission determines that these thunderstorms do not rise to the level to receive deferral treatment by the Commission. The Commission concludes that it is not at all uncommon, or unusual, in the Carolinas to have thunderstorms, sometimes severe. For these reasons, DEP's request to include $1.720 million in O&M expenses related to the June and July 2016 thunderstorms is hereby denied.

For all these reasons, the Commission finds and concludes that approval of the full amount of the Company's proposed storm cost deferral would be unjustified. The appropriate amount to be allowed deferral treatment is $51.032 million, which is the Company's requested amount of $80.152 million, minus the June and July thunderstorm disallowance of $1.720, minus the $24.7 million normal storm range expense. With regard to the amortization period, however, the Commission agrees with DEP that the deferral in question does not warrant amortization over the longest period of time, 10 years, which has historically been utilized by the Commission. The Commission, however, believes that the deferral warrants more than a three-year amortization period as suggested by DEP. The Commission takes judicial notice that the amortization of five years (60 months) has been the prevailing amortization period for storm deferrals. Hurricane Isabel storm costs were authorized to be amortized over five years in Docket No. E-2, Sub 843, and Hurricane Hugo storm costs were amortized over a five year period in Docket No. E-7, Sub 460. The Commission takes particular note of the Hurricane Hugo deferral, as this deferral was quite large at $62.4 million. Therefore, the Commission finds and concludes that there is good cause to require that DEP amortize the deferred storm damages O&M expenses over a five-year period. Further, the Commission concludes that since the most severe storm affecting the Company's service area in 2016 by far was Hurricane Matthew, which occurred in October, the amortization period should commence in October 2016. This follows the Commission's historic precedent of beginning amortization at the time when the costs, or bulk of the costs, are incurred. Further, the Commission concludes that if DEP continues to recover the deferred costs for a longer period of time than the amortization period approved by the Commission that does not mean that DEP is then entitled to convert those deferred costs into deferred revenue. Rather, the Company should continue to record all amounts recovered as deferred costs in the specific regulatory asset account established for those deferred costs until the Company's next general rate case.

Regarding the capital costs, the Commission views storm capital costs as significantly different from incremental O&M storm costs. Unlike the incremental O&M costs, DEP's capital costs will become a part of DEP's rate base, and will become a part of DEP's future depreciation expenses. Based on these factors; and recognizing that cost deferral is an exception to the traditional ratemaking principles applied by the Commission, the Commission finds and concludes that there is not good cause to allow DEP to defer the incremental capital costs of Hurricane Matthew. Therefore, the Commission believes that it is appropriate and reasonable to continue its historical practice of not allowing deferral and amortization of capital costs or carrying costs on the deferral. Finally, the Commission finds and concludes that the appropriate North Carolina retail normalized annual level of storm costs to be included in the DEP's rates in this case is $11.018 million, as the Commission finds it to be just and reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 44-49

The evidence supporting these findings of fact and conclusions is found in DEP's verified Application, DEP's Petition for an Order Approving a Job Retention Rider (JRR), filed on August 14, 2017, in Docket No. E-2, Sub 1153 (Petition), the testimony of Company witness Wheeler, the testimony of Public Staff witness McLawhorn, the testimony of other witnesses, the exhibits of witness Wheeler, and the entire record in this proceeding. The Commission takes judicial notice of the Company's Initial and Reply Comments filed in Docket No. E-100, Sub 73 where the Company outlined the conditions that led to the loss of industrial jobs and where the Commission issued establishing guidelines on December 8, 2015. (JRT Order)

In its Petition, DEP requests approval of its JRR, a five-year pilot program for industrial customers that is designed to curtail further loss of industrial jobs in DEP's service territory. (Petition, at 1.)

Company witness Fountain testified that "[t]he Company's proposed JRR is designed to stem further loss of industry, industrial production and industrial jobs in DEP's service territory, which the Commission acknowledged as an important policy goal for North Carolina when it adopted the Guidelines for JRRs." (Tr. Vol. 6, p. 83.) DEP witness Fountain stated the goal of retaining industrial jobs in the state is important to not only the customers of the state, but to DEP. (Tr. Vol. 6, p. 19) Company witness Wheeler provided more detailed testimony in support of the Company's proposed JRR. Witness Wheeler explained that the JRR will benefit ratepayers by retaining North Carolina jobs and strengthening local economies thereby aiding the commercial and residential markets. (Tr. Vol. 10, p. 250.) Since 2014, 53 manufacturing facilities served by Duke Energy have ceased operation in North Carolina. (See Wheeler Rebuttal Ex. No. 2.) Witness Wheeler stated that the Company's Integrated Resource Plan Update, filed on September 1, 2017, in Docket No. E-100, Sub 147, demonstrates the continuing struggles of manufacturing in North Carolina. (Tr. Vol. 10, p. 245.) He testified that "[t]he Plan shows a steady decline in the number of industrial customers receiving electric service and our expectation [is] that even by 2023 industrial sales will still be below actual pre-recession sales realized in 2007." (Id.)

Witness Wheeler also explained the eligibility requirements for the proposed JRR. In order to be eligible for the proposed JRR, the customer must do all of the following: (1) use electric power as a principal motive power for the manufacture of a finished product, the extraction, fabrication or processing of a raw material, or the transportation or preservation of a raw material or a finished product; (2) perform an energy audit within six months, or verify an energy audit has been performed within the past 36 months; (3) verify the customer is considering the ability to shift production from its facility, is considering a need to reduce employment at its facility due in part to the cost of electricity, intends to reduce production due in part to the impact of the cost of electricity, or the customer's load is otherwise at risk. (Id. at 245–46.) Furthermore, in order to qualify for JRR, industrial customers must show that they (i) have or are considering the ability to shift production from their facilities to facilities in other states or countries; (ii) are considering a need to reduce the employment level at their facilities due in whole or in part to the impact of electricity cost; (iii) intend to reduce or are presently evaluating reduction of production levels or load due in whole or in part to the impact of electricity cost; or (iv) have load that is otherwise at risk of loss. (Petition at 5.) Additionally, eligible customers must have an aggregate electrical load of 3,000 kW or greater, in addition to other conditions described in the Petition and proposed JRR. (Id. at 246.)

In its Petition, the Company did not seek recovery of the revenue reduction resulting from implementation of the JRR at this time, but instead requested deferral accounting with interest on the amount in excess of the $3.5 million that the Company will absorb on a one-time basis. (Petition, at 3.) The Company stated the annual revenue impact of the JRR would be $24.8 million.

CUCA witness O'Donnell testified in support of the Company's proposed JRR. Witness O'Donnell testified that if DEP continues to lose industrial load, the fixed costs of operating the DEP system will be shifted to the remaining customers in an amount even greater than the average 0.74% cited in DEP's Petition. (Tr. Vol. 15, pp. 142–43.) For example, witness O'Donnell calculated that residential rates would increase by 13.03% (including the current requested rate increase and proposed GRIM rate increases) if the Company's manufacturing load completely eroded. (Id. at 143.) He concluded that it would be much less harmful to residential customers to pay a 0.67% increase for five years than to have a permanent 13.03% increase. (Id.) At the hearing, witness O'Donnell testified that the JRR "is an incentive to hopefully help manufacturers to continue to be competitive in North Carolina because the alternative is a lot worse." (Id. at 242.) He continued, "And since the last rate case we had here for DEP, DAK Americas did close their Navassa plant; 600 jobs gone right there. And that was a big load for DEP. That loss of load has to be absorbed by every other customer. That's what we're trying to avoid." (Id. at 242–43.)

CIGFUR witness Phillips also testified in support of the Company's proposed JRR. Witness Phillips testified that the Company's proposed JRR follows the Guidelines for Job Retention Tariffs issued by this Commission on December 8, 2015 in Docket E-100, Sub 73, that the proposed JRR is in the public interest, and recommended that the Commission approve it. (Tr. Vol. 7, p. 74.) In CIGFUR's Post-Hearing Brief, CIGFUR proposed one adjustment to the proposed JRR to exempt rider participants from funding cost recovery. (Br. pp. 4-5)

While the Public Staff is supportive of the JRR and believes that it is in the public interest, witness McLawhorn expressed several concerns regarding the proposed rider. (Tr. Vol. 18, p. 29.) He argues that there are no specific criteria designated for use by the Public Staff to evaluate customer employment and financial records to aid in evaluating an applicant's justification for seeking the JRR thus depriving the Public Staff of the ability to verify the truthfulness of the information. (Id. at 34.) He also opposed the Company's request for deferral accounting of the revenue loss and the Company's proposal for sharing the discount between the Company's shareholders and ratepayers. (Id. at 36.)

Additionally, witness McLawhorn expressed concern with the inclusion of customers involved in the "transportation or preservation of a raw material of a finished product." (Id. at 31.) The Public Staff understood this phrase to refer to pipelines including natural gas pipelines. Witness McLawhorn noted that gas pipelines are different from other manufacturing facilities in that pipelines are fixed investments that are not easily relocated, and unlike other industrial manufacturers, pipelines do not produce a finished product. He recommended this disputed phrase be eliminated from the eligibility criteria of the JRR.

Lastly, Public Staff witness McLawhorn testified that not only customers, but shareholders, benefit from the retention of industrial jobs and the load associated with the jobs. Therefore, a fair sharing of the revenue impact of the JRR would require the Company to contribute $3.5 million on an annual rather than one-time basis. In response to Commissioner Clodfelter's question, Public Staff witness McLawhorn stated the Public Staff did not calculate its proposed annual shareholder contribution amount of $3.5 million, but rather used the amount proposed by the Company on a one-time basis. (Tr. Vol. 18, p. 121.) Witness McLawhorn also testified that the Commission has the authority to set the amount recovered in the JRR, and can set the recovery at an amount composed of the revenue impact less the $3.5 million shareholder contribution. (Tr. Vol. 18, p. 125.)

Despite these concerns, the Public Staff generally supports the Company's proposed JRR, concluding that the rate reduction it provides for industrial customers would "assist them in maintaining jobs and load in North Carolina." (Tr. Vol. 18, p. 30.) Witness McLawhorn also testified that the proposed JRR is not unduly discriminatory because it is designed to reach the largest industrial customers, who impact other commercial and residential customer classes. (Id. at 29.) He further states that the proposed JRR "provides for a balancing of benefits and costs between those customers eligible for [JRR] and those that will bear the reduction in revenue that result from implementation of the rider." (Id.) Lastly, he recommended that the impact of the rate discount be recovered from all ratepayers, including the customers eligible for the rate discount.

Commercial Group witnesses Chriss and Rosa testified in opposition to the DEP's proposed JRR. Witnesses Chriss and Rosa state that the proposed JRR fails to comply with Commission guidelines by limiting applicability to a subset of industrial customers and the rigor of verifying customer attestations is unclear. (Tr. Vol. 7, p. 108.) They further request that if the JRR is approved that it be extended to non-industrials that also provide jobs and have aggregate loads of 3,000 kW or greater. (Id. at 109.)

In its post-hearing Brief, Commercial Group notes that after DEP and the Public Staff entered into a Stipulation, Commercial Group negotiated and reached a settlement with DEP that resolved additional issues, but left outstanding and unresolved the Commercial Group's concerns regarding the JRR. Commercial Group submits that the JRR would violate G.S. 62-140(a) because it would unjustly discriminate among customers having an aggregate load of at least 3 MW based solely on whether the customer is an industrial customer. Commercial Group contends that this is a return to the Standard Industrial Classification (SIC) code distinctions that the Commission found discriminatory and rejected in prior proceedings. Commercial Group states that the Commission stated its concern in its final Order in DEC's 2011 rate case, Docket E-7 Sub 989, regarding the reasonableness and fairness of maintaining a rate differential based largely on labels such as the SIC codes. Commercial Group quotes G.S. 62-140(a), and states that the legal standard is not whether a public utility can subject a customer to an unreasonable prejudice or disadvantage if doing so would be an advantage to other customers or the utility. Rather, the legal standard is that the public utility cannot grant any unreasonable preference or subject any person to any unreasonable prejudice or disadvantage. Further, Commercial Group contends that industrial customers are not a separate class of service because both industrial and commercial customers are members of the same MGS and LGS classes, and that many non-industrial ratepayers in these classes have an aggregate load of at least 3 MW. (Tr. Vol. 7, p. 108.) According to Commercial

Group, where the JRR's only distinguishing characteristic is industrial status, the JRR remains as unlawful and unduly discriminatory as the preference for OPT industrial customers in the last two DEC rate cases, and the proposed Industrial Economic Recovery rider that the Commission previously rejected, and, therefore, the JRR as proposed should be rejected as well.

In addition, Commercial Group states that the proposed JRR definitions and parameters that DEP selected provide only an illusion of being reasonable criteria for determining which customers should receive a rate subsidy. As an example, Commercial Group contends that the applicant could simply state that it has at some time in the past thought about obtaining the ability to move a portion of its operations out of state, but the applicant need not presently have such ability, presently plan to move operations out of state, nor be in such financial condition that jobs would be lost but for a JRR subsidy. Commercial Group further notes that the applicant does not need to maintain existing levels of employment, but instead chooses a level of employment that it states it will maintain, even if the level is lower than its present level. Moreover, Commercial Group submits that the JRR eligibility criteria are so broad that they include gas pipelines, even though DEP states that it has no current pipeline customers. (Tr., Vol. 11, at p. 33)

Commercial Group notes that DEP witness Hevert gave convincing testimony that economic conditions in North Carolina have improved substantially since DEP's last rate case in 2013, and since the Commission adopted job retention guidelines in 2015. The unemployment rate in North Carolina and DEP's service territory has fallen substantially during these periods. (Tr. Vol. 8, pp. 123-32.) Further, the correlation between the drop in unemployment in North Carolina and more broadly across the United States has been very high. (Id. at 64) Moreover, DEP industrial customers already receive competitive rates that are below the national average and below the average in the Atlantic South region. (Wheeler, Tr. Vol. 11, p. 42) In addition, according to Commercial Group, the CCOSS DEP offered shows that LGS industrial customers already receive a 3% discount from not currently paying the full cost DEP incurs to serve those customers. (Tr. Vol. 7, p. 99; and Exh. CR-5, row 5)

Commercial Group also questions whether there will be a means to assess the effectiveness of the JRR. Commercial Group cites the testimony of Public Staff witness McLawhorn regarding the report that DEP will be required to file, and states that the report will not provide any reliable, independently verifiable information to determine the success or failure of the JRR. Based on the uncertainty of verifiable results from the JRR, Commercial Groups recommends that the Commission require DEP to bear 50% of the JRR costs, with any remaining cost to be recovered from ratepayers on a percentage of bill basis.

Finally, Commercial Group contends that there is a third subsidy paid by high load factor MGS ratepayers because JRR costs would be imposed on a per-kwh basis instead of on a percentage of bill basis. Commercial Group states that this pancaking of subsidies one upon the other is patently unfair, and that the only rationale DEP provided for billing JRR cost on a per-kwh basis is that it seems to be easier for DEP to charge it that way. (Tr. Vol. 11, at 47:8-12).

DoD/FEA witness Mancinelli also testified in opposition to the Company's proposed JRR. Witness Mancinelli states that a subsidy is not necessary for industrial customers in North Carolina because the North Carolina economy is improving and DEP's industrial load is projected to increase without JRR. (Tr. Vol. 17, p. 153.) Similar to witnesses Chriss and Rosa, he states, however, that if the JRR is approved that it should be expanded to include major employers such as the DoD/FEA. (Id. at 155.) In its post-hearing Brief, in addition to reiterating the above-stated arguments, the DoD/FEA argues that if the JRR is adopted as proposed, in years beyond the first year with DEP's $3.5million contribution, the JRR will cost Fort Bragg and Camp Lejeune approximately $900,000 per year. (Br p. 2) The DoD/FEA further states that there are non-discriminatory methods to provide rate relief to the LGS industrial customers such as recognizing DEP as a winter peaking utility and using a winter 1CP cost of service model. (Br. Pp. 6-7)

Company witness Wheeler's rebuttal testimony responded to the concerns raised by other witnesses related the Company's proposed JRR. Witness Wheeler agreed with the Public Staff's concern regarding difficulty evaluating customer financial and employment records. (Tr. Vol. 10, p. 247.) To address this concern, witness Wheeler explained that DEP will impose a requirement that an officer of the customer sign the application. (Id.) Witness Wheeler also noted that the guidelines do not require a demonstration of financial distress, but the discounted revenue must contribute to job retention in North Carolina. (Id. at 247-48.) When questioned about this issue on cross- examination by counsel for Commercial Group, witness Wheeler stated that a customer applying for the JRR, "has to attest in the application that he has a competitive threat that would reduce employment in North Carolina, and the rider will help retain those jobs in North Carolina. If [the customer] doesn't retain the employment level he agrees to, the rider is removed from those accounts." (Tr. Vol. 11, pp. 38-39.) Moreover, Public Staff witness McLawhorn testified at the hearing that the verification process for the JRR is similar to the verification process for an industrial customer to opt-out of a utility's DSM/EE rates, which was incorporated in law by Senate Bill 3. (Tr. Vol. 18, p. 119.)

Witness Wheeler further testified that deferral accounting was requested because the timing and magnitude of the revenue reduction is unclear. (Tr. Vol. 10, p. 249.) "The use of deferral accounting allows the Company to assess the true impact of the rider and seek recovery at a later date when revenues are more certain." (Id.) Witness Wheeler also explained that the Public Staff's recommendation that the Company's shareholders absorb $3.5 million not only once, but in every year of the JRR should be rejected because it would deprive the Company of a reasonable opportunity to recover its just and reasonable costs. (Id. at 250.)

Additionally, witness Wheeler testified regarding the inclusion of customers involved in the "transportation or preservation of a raw material of a finished product," explaining that this language was included to allow the JRR to apply primarily to gas pipeline customers. (Id. at 247.) He stated that pipeline customers have expressed concerns with electricity costs and have requested rate relief to aid in their North Carolina operations. (Id.) DEP believes that it is reasonable to include this type of customer with manufacturing facilities when applying the JRR. (Id.) When questioned by counsel for NC Justice Center regarding whether an interstate gas pipeline could pick up and move to another state, witness Wheeler replied that "I don't believe [it] could pick up and relocate. It could cease to operate. It could reduce the amount of gas flowing into the state." (Tr. Vol. 11, p. 70.) Witness Wheeler also clarified that DEP had not designed its proposed JRR so that its Atlantic Coast Pipeline would qualify, stating that the guidelines in Docket E-100, Sub 73 were approved well before "the Atlantic Coast Pipeline [was] even . . . a consideration." (Tr. Vol. 11, p. 141.) In response to a question from the Chairman, he noted that DEP does not currently have any pipeline customers that would meet the proposed definition eligible under the JRR.

Lastly, witness Wheeler responded to the other witnesses' testimony that JRR should be expanded to customer classes other than just industrials. Witness Wheeler testified that sales to the industrial class in North Carolina have continued to be "flat to declining." (Tr. Vol. 10, p. 244; Wheeler Rebuttal Ex. 1.) In contrast, during this same period, sales to the commercial and public authority/military customer classes have continued to show growth. (Tr. Vol. 10, p. 252; Wheeler Rebuttal Ex. 1.) Therefore, witness Wheeler testified that DEP does not believe that it would be appropriate to expand JRR to other customer groups at this time. (Tr. Vol. 10, p. 252.) Witness Wheeler explained that the "JRR will assist in retaining jobs in industrial businesses in North Carolina and will help to minimize the transfer of cost from the industrial class to other rate classes due to plant closures." (Id. at 253.)

In the Stipulation, the Company and the Public Staff agreed that "the Company's proposed Job Retention Rider generally complies with the Commission's guidelines adopted in Docket No. E-100, Sub 73, but two issues remain to be decided upon by the Commission: (1) whether companies involved in the transportation or preservation of a raw material or a finished product (e.g., pipeline customers) should qualify; and (2) how or if the Job Retention Rider should be funded after the expiration of the initial year's $3.5 million shareholder contribution." (Stipulation p. 4 - Paragraph II(c).)

Except for the two unresolved issues stated above, the Stipulating Parties have agreed to the proposed JRR as described by witness Wheeler in his rebuttal testimony, and further agreed that JRR revenue credits shall be recovered through a JRR Recovery Rider (JRRR) from all retail customers concurrent with JRR implementation, which is anticipated to occur approximately six months following the Commission's decision. (Stipulation p. 15.) The Stipulation provides that JRR and JRRR revenues shall be reported to the Commission annually and the JRRR shall be reviewed and will be subject to adjustment annually coincident with the December fuel adjustment to match anticipated recovery revenues and true-up any past over-or under-recovery. (Stipulation pp. 15-16.) Additionally, due to the uncertain date of implementation, compliance tariffs shall be filed prior to implementation of the JRR Recovery Rider and customers shall be notified by bill insert or message upon implementation. (Id. at 16.)

Company witness Wheeler filed testimony and exhibits in support of the Stipulation. In his settlement supporting testimony, he explains that the recovery rate under the JRRR is set at $0.00051 per kWh to recover the first year of impact, less the $3.5 million absorbed by the Company, reduced by 10% for application lag. (Tr. Vol. 10, p. 258.) Witness Wheeler further testified that JRRR is intended to keep the Company revenue neutral with respect to the JRR, other than the one-time $3.5 million contribution from shareholders, over the 5-year pilot period, and, if needed, a final true-up shall be applicable upon termination of JRR. (Id.)

Commercial Group, in its post-hearing Brief, submits that the JRR would violate 62-140(a) because it would unjustly discriminate among customers having an aggregate load of at least 3 MW based solely on whether the customer is an industrial customer. Commercial Group contends that this is a return to the SIC code distinctions that the Commission found discriminatory and rejected in prior proceedings.

The Commission finds and concludes that the Company's proposed JRR as modified by this Order is just and reasonable to all parties based on all of the evidence presented. The Commission finds that the continued loss of industrial jobs in DEP's service area would have a detrimental effect on the State. The Commission views the Company's proposed JRR as an effort to retain industrial jobs in North Carolina and concludes that implementation of the rider is in the public interest. As with other economic development tariffs previously approved by this Commission, approval of the JRR is based in part on an evaluation of the expected economic benefits resulting from the tariff. The Commission has considered the economic impact of the continuing decline of the North Carolina industrial base as well as the impact of the recovery rider on non- participating ratepayers, and concludes that the JRR strikes the appropriate balance between the two. The Commission concludes that by limiting the availability of the JRR to industrial customers, the Company has minimized the effect on non-participants while assisting the group of customers that are most in need of assistance. To further minimize the impact to non-participants and to achieve the goal of the JRR in the most cost- effective manner, the Commission shall limit the JRR to a one-year pilot, with the option of renewal for one additional year upon a showing that the JRR is achieving the intended objectives. Requiring the Company to show the Commission the effectiveness of the JRR in the rider proceeding removes many, if not all, concerns expressed by the Commercial Group and the Department of Defense regarding measurement and verification. This reduction in the number of years for the pilot to one-year with the opportunity for a second year allows the Commission and the parties to assess the health of industrial sector as a whole after one year on the JRR and if an additional year would be in the public interest. In addition to the reduction of the pilot to one year, with the opportunity for a second year, the Commission determines that additional changes to the JRR are necessary for proper measurement and verification. First, the Company shall require the Customer to maintain an employment level of 90 percent of the its employees, with the number of employees determined by an average of its employment level over the twelve months prior to the filing of the Application and Agreement for the Job Retention Rider. The application shall state the specific number of employees and verify that this number represents 90 percent of the monthly average over the past twelve months. Second, the Customer shall submit in writing to DEP no later than March 1, and quarterly thereafter, a report verifying the employment level at the Customer's facility(s) receiving the Job Retention Rider credits. Third, if the Customer does not maintain the stated employee level, the Customer shall be removed from the tariff pursuant to the language in the proposed application and shall be required to refund the amount of benefits received under the JRR. DEP shall change the application language accordingly. The Commission has considered the arguments for expanding the JRR made by DoD/FEA witness Mancinelli and Commercial Group witnesses Chriss and Rosa, and concludes that expanding the JRR to other customer classes would place too large a burden on non-participants and would be unreasonable.

Furthermore, the Commission concludes that limiting the availability of the JRR to only industrial customers is not unreasonably discriminatory. Rather, it is based on a reasonable difference between customer classes, and the discount offered to participants under the JRR as compared to the amount of rider recovery on non-participants bears a reasonable proportion to the difference between the customer classes. <u>See State ex rel. Utils. Comm'n v. Carolina Util.</u>

Customers Ass'n, 348 N.C. 452, 468, 500 S.E.2d 693, 704 (1998). Based on the evidence presented, the Commission finds that industrial customers' sales have been flat or declining since the recession, while residential and commercial sales are growing. Furthermore, a $0.00323 per kWh reduction in rates for participating industrials as compared to an increase in rates for the average retail customer of approximately $0.00051 per kWh per month under the JRR is proportionate to differences between these customer classes and reasonable given the economic and rate benefits of retaining industrial customers on DEP's system.

The Commission concludes that the JRR, with the modifications established in this Order, is in accordance with the requirements and guidelines the Commission previously established. In the JRT Order, the Commission directed utilities to "craft eligibility requirements that are narrowly tailored to meet the intended goals of maintaining jobs in the most economically efficient manner." Although the disputed phrase that allows for the eligibility for pipeline companies was included in the JRT Order as a possible example of eligibility criteria, the Commission is not persuaded that the eligibility criteria proposed by the Company is sufficiently narrow to ensure that the JRR will maintain jobs in the most efficient manner. Pipelines, which cannot relocate, are sufficiently different from other industrial customers and should be excluded from eligibility in the JRR. The disputed phrase "or the transportation or preservation of a raw material of a finished product" should be removed from the eligibility criteria. Further, due to the fact that DEP indicated that no pipeline customer is currently eligible for the JRR and that the Commission is limiting the JRR to one year with a possible extension of one year, it is unlikely that any pipeline customer would be affected by this decision.

The Commission further concludes that the customer attestations regarding certain eligibility requirements for the JRR, as modified by this order, are reasonable and adequate. Based upon the practical considerations of managing eligibility and how eligibility for certain rates is verified in other contexts, such as the opt-out process for DSM/EE rates, the Commission concludes that the Company's proposed method for verifying eligibility for the JRR is reasonable.

Commercial Group states that it does not take issue with the Commission's gradual approach to class revenue allocation, except if the Commission grants the proposed JRR. In that event, according to Commercial Group, the Commission should set LGS rates at cost in order to avoid a double subsidy by MGS customers. The Commission does not agree with Commercial Group's position. The approval of the JRR does not eviscerate the principle of gradualism in reaching rate of return equilibrium among the customer classes. Further, the rate designs approved herein and the approval of the JRR will result in just and reasonable rates.

Finally, the Commission notes the proposed JRR is a limited-term pilot, which will allow the Commission and the Company to follow the customers on the tariff and to consider whether the tariff meets its objectives of job retention and the related economic benefits. If it does not, then the JRR will not be continued beyond its one-year term. Except as modified by this order, the Commission finds that it is reasonable for DEP to implement JRR and JRRR as proposed in the Stipulation and Wheeler Settlement Exhibit 1.

The Company, as well as ratepayers, benefit from the retention of industrial jobs, and the load related to the retention of the industrial jobs. In addition to the testimony in this case, this fact is further justified by the Company's indication in Docket No. E-100, Sub 73 that it was considering funding all or a portion of a JRT and provided comments on the necessary requirements for measurement and verification under the scenario of a fully Company-funded JRT. To achieve just and reasonable rates, if the pilot program is extended to a second year, it is appropriate for the Company to contribute to the JRR at the same level as year one. Therefore, the Company's recovery should be reduced by the amount of $3.5 million if the Commission determines in the rider proceeding that the JRR pilot program should be extended to a second year.

The Commission, therefore, concludes that the proposed JRR, as modified by this Order, is in the public interest, is not discriminatory and is consistent with the Commission's holding that "approval of a JRT is a matter of sound ratemaking policy to address the undisputed decline in industrial sales in North Carolina." (See Order Adopting Guidelines for Job Retention Tariffs in Docket No. E-100, Sub 73, at 22.) If the JRR is extended an additional year and at the end of the second year the Company determines there is still a need for the JRR, nothing in this order prevents the Company for filing for a new JRR based upon the economic circumstances at that time.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 50-52

The evidence supporting these findings of fact and conclusions is contained in the Application, Form E-1, the record in Docket No. E-2, Sub 1103, the testimony and exhibits of DEP witness Bateman, and Public Staff witness Maness.

In Docket No. E-2, Sub 1103, DEP requested to defer its costs of complying with the Coal Ash Management Act (CAMA) and the EPA's Coal Combustion Residual Rule (CCR Rule, collectively CAMA), and notified the Commission that it had established an Asset Retirement Obligation (ARO) in the amount of approximately $2.5 billion to reflect its estimated costs of CAMA compliance.

Company witness Bateman testified that based on estimated closure costs included in the 2012 dismantlement studies prepared for the Company by Burns & McDonnell, a third-party engineering firm, DEP is currently collecting costs associated with the closure of CCR basins in the cost of removal portion of its depreciation rates. However, those cost estimates were prepared prior to the enactment of CAMA, and were based on the industry standards and best practices recommended by the engineering consultants at the time. Witness Bateman testified that since that time CAMA has significantly increased the estimated closure costs for the Company's CCR basins, and changed the required accounting treatment, triggering asset retirement obligation accounting.

In its March 15, 2017 comments in Docket No. E-2, Sub 1103, the Public Staff supported the deferral request, provided that ratemaking treatment for the deferred amount would be determined in the next base rate case:

> In this particular case, the Public Staff believes that the non-capital costs and depreciation expense related to compliance with state and federal requirements cited in the Companies' petition generally satisfy the criteria for deferral for regulatory accounting (but not necessarily ratemaking) purposes. First, they are adequately extraordinary in both type of expenditure and in magnitude to justify

> consideration for deferral. Second, the effect of not deferring the expenses on the Companies' respective earned returns on common equity would be significant.

Initial Comments of the Public Staff, at p. 6.

Comments were also filed by CUCA, the AGO, Appalachian State University, the Cities of Concord and Kings Mountain, and Sierra Club.

In the present docket, Public Staff witness Maness testified that based on the magnitude and unique nature of the CCR costs, as well as other reasons stated in the Public Staff's comments filed in Docket No. E-2, Sub 1103, the Public Staff continues to believe that prudently incurred CCR expenditures should be allowed to be deferred for regulatory accounting purposes.

In its post-hearing Brief, the AGO contends that DEP's request to recover its deferred CCR costs involves single-issue ratemaking because DEP seeks to recover coal ash costs going back to the beginning of 2015, without a review of the other rate elements that were in effect that might offset the need for the cost recovery. Citing State ex rel. Utilities Commission v. Edmisten, 291 N.C. 451, 470, 232 S.E.2d 184, 195 (1977), the AGO contends that the North Carolina Supreme Court has long recognized the inequities of single-issue ratemaking: "Such rate making throws the burden of such past expense upon different customers who use the service for different purposes than did the customers for whose service the expense was incurred." Moreover, the AGO asserts that utility rates are established under statutory authority to recover the utility's cost of service and reflect a fair return, and the rates are presumed to be sufficient for the utility to recover all costs of serving its customers, and that a utility does not have a vested right to collect its unanticipated expenses, and that to "cast upon subsequent users the expense of serving prior users is discrimination forbidden by G.S. 62-140." Id., 291 N.C. at 470-71, 232 S.E.2d at 196.

Further, the AGO maintains that the Commission's discretion to defer costs for later recovery should be prospective from the time of the request, or at least close in time to the deferral request, not retroactive back two or three years, as DEP seeks in this case. The AGO contends that Commission Rule R7-27(a)(2)c [sic Rule R8-27(a)(2)c] requires electric utilities to apply to the Commission in order to use deferral accounting, and that, similarly, FERC Account 182.3, referenced in Rule R7-27(a)(2)c, provides for deferral accounting by the creation of a regulatory asset based on the ratemaking action of a regulatory agency, not based on unilateral action taken by the utility. In addition, the AGO contends that DEP failed to request authorization to defer the coal ash costs before they were incurred – delaying the filing of its petition for deferral until December 30, 2016, while seeking deferral of costs incurred back two years to January 1, 2015, so that they would be recoverable in a rate case expected to be filed in 2017. See Duke Energy Progress, LLC and Duke Energy Carolinas, LLC Petition for An Accounting Order, In the Matter of Joint Petition of DEP Energy Progress, LLC and DEP Energy Carolinas, LLC for an Accounting Order to Defer Environmental Compliance Costs, filed December 30, 2016, in Docket Nos. E-2, Sub 1103, and E-7, Sub 1110 (Petition to Defer Coal Ash Costs)

The AGO cites the Commission's Order Granting Motion for Reconsideration and Allowing Deferral of Costs issued August 12, 2003 in Docket No. E-2 Sub 826 (2003 ARO Order), and states that the Commission authorized DEP's predecessor, CP&L, to place certain ARO costs in a deferred account, but gave the following cautionary instruction relating to the creation of and accounting for new AROs:

> the Commission is of the opinion, and so concludes, that the Company should be, and hereby is, explicitly placed on notice that any proposed changes in the cost of removal for long-lived assets and/or in the accounting for such costs must be submitted to the Commission for its approval in the context of a general rate case or other appropriate proceeding prior to implementation.

2003 ARO Order, at 11-12.

Thus, according to the AGO, the Commission has directed that prior approval should be obtained in a general rate case for deferred accounting authorization under the circumstances presented in this case, and that DEP's unilateral decision to change how it accounts for CCR costs violated Commission rules and specific directions expressed in prior orders concerning AROs.

Having reviewed the comments filed in Docket No. E-2, Sub 1103, and the evidence regarding the ratemaking treatment for coal ash costs in the present rate case, the Commission determines that the deferral request is reasonable and appropriate. Company witness Bateman indicated that CAMA increased the estimated closure costs for the CCR basins which triggered asset retirement obligation accounting as stated elsewhere in more detail in this Order. As noted by Public Staff witness Maness, the costs for which DEP sought deferral meet the Commission's criteria for deferral for regulatory accounting purposes. Witness Maness further testified that the unique nature of the costs and the complexity of the issues justified a limited delay in determining the beginning date of any amortization of deferred expenses. Approval of deferral accounting does not prevent any party from taking issue with the merits or mechanisms for recovery of the deferred costs in the present rate case.

Among several cost of service adjustments recommended by witness Maness was the calculation of a return on deferred coal ash expenditures between January 1, 2015, and January 31, 2018, using a mid-month cash flow convention, rather than the beginning-of-month convention used by the Company. Witness Maness testified that the Company had used a return calculation methodology that accrued a return for each month assuming that all cash flows during the month occurred at the very beginning of the month. Because he felt this assumption to be unrealistic, he made an adjustment to instead use a mid-month cash flow assumption, which essentially treats the cash flows in each month as being experienced throughout the month. (Tr. Vol. 18, p. 308)

Additionally, witness Maness added a return on deferred coal ash expenditures from September 2017 through January 2018, to bring the total balance up to the expected effective date of the rates approved in this proceeding. He testified that the Company had updated its proposed balance of deferred coal ash management costs, with an accrued return, through August 2017. The return would be the Company's net of tax rate of return, net of associated accumulated deferred income taxes. However, the rates in this proceeding are not expected to go into effect until February 1, 2018. Therefore, in order to capture all of the costs, including return, related to the January 2015 - August 2017 underlying coal ash costs, he added the return accumulated on the principal amount through January 2018. (Tr. Vol. 18, p. 307)

Several intervenors made the same contention that the AGO made in its post- hearing Brief that the Commission should not approve a return on DEP's deferred CCR costs. One basis cited by the AGO for denying a return is the AGO's contention that DEP's CCR expenditures do not result in used and useful utility plant. The Commission fully addresses the issue later in this Order, and concludes that DEP's CCR expenditures do result in property that is used and useful.

The AGO argues that DEP's request to recover the deferred coal ash costs going back to the beginning of 2015 involves single-issue ratemaking because the costs are being reviewed without review of other rate elements that were in effect that might offset the need for cost recovery. The AGO further argues that DEP's request for recovery of "coal ash costs from the past two and a half years seeks impermissible prospective ratemaking (also called retroactive ratemaking in some cases)." (AGO Br. p. 41) The Commission finds that the AGO's arguments are misplaced. The Company requested deferral accounting and specifically requested the Commission determine the costs within a rate case to avoid the issues of single-issue ratemaking and retroactive ratemaking. Single-issue ratemaking is not an issue in the present case because the costs are not being determined outside of a rate case, but rather are being determined in a rate case, a proceeding in which other rate elements are reviewed. As for the retroactive ratemaking argument, the Public Staff has determined that deferral is appropriate in the present case and the Commission agrees. A cost deferral is a recognized practice that allows recovery of expenditures that might otherwise constitute impermissible retroactive ratemaking. The AGO cites to a 2003 Commission Order to support its contention that DEP should have received prior approval in a rate case; however, the language cited states a general rate case or "other appropriate proceeding," such as a request for deferral. The Commission agrees with the Public Staff that DEP properly made the deferral request, which the Commission consolidated into the general rate case. The AGO argues that DEP began incurring costs in early 2015 and that the Commission should deny the deferral because DEP should have requested the deferral earlier. The Commission is not persuaded. The Commission does not find that the timing of the request for deferral warrants denial of the request. See Order Granting General Rate Increase, In the Matter of Petition of Virginia Electric and Power Company d/b/a Dominion North Carolina Power for an Adjustment of Rates, Docket No. E-22, Sub 479 (Dec. 21, 2012). The Commission finds that the AGO's intergenerational equity argument is unpersuasive. The Commission takes judicial notice that DEP's electricity rates are low compared to the national average. This result is due to DEP's historic use of coal generation. The regulations requiring action to clean up the CCRs were not in effect ten or fifteen years ago. Rather, DEP's obligation has arisen in 2014 and 2015 and DEP is taking appropriate actions to comply.

The Commission gives significant weight to the testimony of witnesses Bateman and Maness. As a result, the Commission approves DEP's request to establish a deferral account for the deferral of prudently incurred CCR costs, a return on that deferred account at the Company's authorized overall cost of capital approved in this Order, and application of the mid-month cash flow convention recommended by the Public Staff.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 53-56

The evidence supporting these findings of fact and conclusions is contained in the Application, Form E-1, the testimony of the public witnesses, and the testimony and exhibits of the following expert witnesses: DEP witnesses Fountain, Bateman, Kerin, Wells and Wright;

Public Staff witnesses Lucas, Garrett and Moore, Peedin and Maness; AGO witness Wittliff; CUCA witness O'Donnell; and Sierra Club witness Quarles.

The public witness testimony and expert witness testimony and exhibitsregarding DEP's coal combustion residuals (CCR) costs is voluminous. The Commission has carefully considered all of the evidence, and the record as a whole. However, the Commission has not attempted to recount every statement of every witnesses. Rather, the following is a complete summary of the evidence.

Likewise, the Commission has read and fully considered the parties' post-hearing briefs. However, the Commission has not in this Order expressly addressed every contention advanced or authority cited in the briefs.

Based upon the evidence addressed below and in the exercise of its expert judgment and discretion, the Commission determines that a management penalty of approximately $30 million should be assessed for DEP's mismanagement of its CCR activities undertaken through the end of the test year as extended for reasons set forth hereafter.

DEP has relied upon coal-fired power plants throughout its history, and depends upon coal-fired generation today. Coal ash, also known as coal combustion residuals, or CCRs, is a by-product of coal-fired generation. Since the 1950s, standard industry practice at least in the Southeast, has been to deposit coal ash in coal ash basins, and such basins were constructed and were and are used at all of the Company's coal-fired generating units.

The United States Environmental Protection Agency (EPA) has studied CCRs and their proper management and handling since the 1980s and began moving forward on comprehensive regulation of CCRs approximately ten years ago. In 2010, the EPA issued proposed rules regarding CCRs. EPA's final rule – the Coal Combustion Residuals Rule (CCR Rule) – was promulgated on April 17, 2015. North Carolina also enacted specific statutory requirements for coal ash management in its Coal Ash Management Act (CAMA), which became effective in 2014 and was amended in 2016. The CCR Rule and CAMA introduced new requirements for the management of coal ash. DEP must comply with these new requirements, which mandate closure of the Company's coal ash basins. Mandated closure triggers Generally Accepted Accounting Principles (GAAP) provisions relating to the retirement of long- lived tangible assets, and specifically triggers the requirement that the Company account for compliance costs through Asset Retirement Obligation (ARO) accounting. The Company, as required by GAAP, established an ARO with respect to its coal ash basins, and, in accordance with the Commission's Orders in Docket No. E-2, Sub 826, deferred the impacts of its GAAP-mandated ARO accounting. The Company seeks recovery of the coal ash basin closure costs incurred to date in connection with CCR Rule and/or CAMA compliance, along with such costs it anticipates will be incurred annually on an ongoing basis. The Company's proposal has three component parts:

- First, DEP seeks recovery of the actual coal ash basin closure costs it incurred from January 1, 2015 through August 31, 2017. On a North Carolina retail jurisdiction basis, these costs (netted against the amount already included in the Company's rates following its last rate case) amount to $241.9 million.[1] The Company proposes further that, rather than recovering 100% of these already incurred costs immediately, it recover them over a five-year amortization period, and it seeks a return on the unamortized balance.

- Second, DEP seeks to recover on an ongoing basis $129.1 million per year in annual coal ash basin closure spend. This amount is based upon DEP's calculation of the NC retail jurisdiction portion of the test year (2016) coal ash basin closure expense incurred by the Company.

- Third, DEP seeks permission to establish a regulatory asset/liability and defer to this account the NC retail portion of annual costs that are over or under the costs established in connection with the Company's request that it be permitted to recover in rates on an ongoing basis its actual test year coal ash basin closure costs – i.e., the amount over or under $129.1 million, if the Company's proposal as detailed above is approved by the Commission. In addition, the costs incurred from September 1, 2017 through the date new rates set in this proceeding are effective would also be deferred to this account. The deferred amounts (including a return) would be brought into rates and recovered through future rate cases.

For cost recovery, a utility must show that the costs it seeks to recover are (1) "known and measurable"; (2) "reasonable and prudent"; and (3) "used and useful" in the provision of service to customers. Once shown, and, assuming no penalty for mismanagement, the utility is entitled to recover the costs so incurred.

The arguments raised by Intervenors in this docket challenge the inclusion of the Company's coal ash basin closure costs in rates because the costs are not "reasonable and prudent" and "used and useful," or on a theory that cost recovery should be shared by both the shareholders and ratepayers.

Summary of the Evidence

1. Company Direct Case Overview and Costs Sought for Recovery

In his direct testimony, Company witness Fountain testified that the Company is requesting recovery of coal ash basin closure compliance costs incurred in the period from January 1, 2015 through August 31, 2017. He stated that the Company is seeking recovery of these costs over a five-year period in order to mitigate the associated customer rate impacts. (Tr. Vol. 6, p. 41.) Witness Fountain clarified that this case excludes any fines or penalties incurred by DEP related to coal ash basin closure or management. (Id. at 40 n.2, 224.) Witness Fountain also testified on direct that, based on actual coal ash expenses incurred during the 2016 test year, DEP is seeking recovery of ongoing coal ash basin closure compliance spend of $129.1 million per year, with any difference from future spend being deferred until a future base rate case. He stated

[1] This amount excludes any fines, penalties and other unrecoverable costs incurred by the Company. (Tr. Vol. 6, p. 122.)

that including this revenue requirement will provide a measure of predictability to customers of future coal ash expense rate drivers. (Id. at 41-42.)

Company witness Bateman testified that the Company is currently collecting costs associated with the closure of coal ash ponds in the cost of removal portion of its depreciation rates. These cost of removal rates were based on estimated closure costs included in the 2012 dismantlement studies prepared for the Company by Burns & McDonnell, a third-party engineering firm. These cost estimates were prepared priorto CAMA's enactment and the EPA's CCR Rule, and were based on the industry standards and best practices recommended by the engineering consultants at the time. Since that time, CAMA and the CCR Rule have increased the estimated closure costs for the Company's coal ash ponds, and changed the required accounting treatment, triggering asset retirement obligation accounting. For these reasons, she explained that the coal ash pond closure costs have been removed from the depreciation rates, and are instead being requested as proposed in her Adjustment Nos. 18 and 19. (Tr. Vol. 6, pp. 117- 19.)

Adjustment No. 18, as updated, is the actual coal ash basin closure costs incurred by the Company from January 1, 2015 through August 31, 2017. On a North Carolina retail jurisdiction basis, these costs (netted against the amount already included in the Company's rates following its last rate case) amount to $241.9 million. (See Maness Late-Filed Ex. submitted by the Public Staff on December 22, 2017 and accepted by the Commission on January 2, 2018.) Witness Bateman explained that her adjustment No. 18 amortizes the deferred coal ash costs over a 5-year period, and includes a return on the unamortized balance.

Adjustment 19 represents the amount in ongoing annual coal ash basin closure expense (sometimes referred to in this Order as "run rate" or "ongoing compliance costs"). The number is based upon actual test year (2016) spend, and witness Bateman testified that the Company expects to incur actual ongoing compliance costs that exceed this level. (Tr. Vol. 6, pp. 144-45.) As set out in Maness Late-Filed Exhibit, the final and updated amount requested by the Company is $129.1 million.

2. Company Direct Case: Coal Ash Overview

Company witness Kerin provided a discussion of DEP's coal ash management history and practices and the new obligations imposed on the Company by the CCR Rule and CAMA. He explained that CCRs are by-products produced from the electricity production process lifecycle – the burning of coal – at coal-fired generation plants in coal-fired power generation plants and include fly ash, bottom ash, boiler slag, and flue gas desulfurization (FGD) material. He stated that environmental regulations related to CCR management have evolved over time, affecting how the Company has operated its coal-fired plants in compliance with those obligations. He described the steps in the environmental regulatory evolution process. He testified that, in his opinion, DEP was in line with industry standards and has reasonably and prudently managed CCRs and its coal ash basins. He explained that since its last rate case, DEP has become subject to both federal and state regulations that require it to take significant action to close its coal ash basins. (Tr. Vol. 16, pp. 103-05, 107-09.)

Witness Kerin testified that since the 1920s, DEP has disposed of CCRs in compliance with then current regulations and industry practices. Until the 1950s, CCRs were either emitted through, in the case of fly ash, smokestacks or, in the case of bottom ash, manually removed from boilers and stored in landfills. Since that time, the industry transitioned to a water sluice to remove coal ash from boilers, and to clean the electrostatic precipitators, preventing coal ash from being emitted through the smokestacks. This effluent, as well as FGD blowdown, was then diverted to coal ash basins, of which DEP has 19 in the Carolinas. In other words, in many cases, coal ash basins were actually created or relied upon to effectuate prior environmental regulations. In the mid-1970s, the enactment of the Clean Air Act and its subsequent amendment in the 1990s required electric utilities to capture more CCRs through the use of electrostatic precipitators (ESP) or bag houses and FGD blowdown. (Tr. Vol. 16, 108-09.)

Witness Kerin provided a detailed history of coal ash regulation. He testified that the Clean Water Act of 1972 and the subsequent creation of the National Pollutant Discharge Elimination System (NPDES) permitting system, made wet coal ash handling and coal ash basins the primary lawful and effective way to meet CCR needs and environmental requirements from 1974 until 2015.

Witness Kerin testified that the Company has begun the process of closing, or submitting plans to close, its coal ash basins in accordance with the program with the most limiting requirements. Witness Kerin also testified that coal-powered electric generation has since ceased at five of the eight coal-fired DEP generating facilities with coal ash basins, including the Cape Fear, H.F. Lee, Robinson, Sutton, and Weatherspoon plants. (Id. at 107-08.)

Witness Kerin testified that in addition to the CCR Rule and CAMA, DEP is also subject to other CCR-related obligations that result from state environmental regulatory oversight under existing rules and regulations. For DEP, in South Carolina, there is one Consent Agreement with the South Carolina Department of Health and Environment (DHEC) applicable to ash management at the Robinson plant. The Robinson Consent Agreement, DHEC 15-23-HW, between Duke Energy Progress, Inc. (now Duke Energy Progress, LLC) and DHEC, requires coal ash excavation of a 1960 lay-of-land coal ash storage area located south of the coal ash basin. This Consent Agreement also includes provisions to initiate permitting of an on-site lined CCR landfill to store the excavated coal ash. (Tr. Vol. 16, p. 133.)

Witness Kerin noted that there is duplication and interaction between federal rule, state law and agency action and that many of the actions Duke Energy will take will serve multiple compliance purposes. He explained that actions and draft rules applicable to many utilities, not just Duke Energy, were being developed prior to 2014, and that the Company now confronts another wave in the evolution of environmental regulation pertaining to coal ash. He stated that in response to these new requirements addressing CCR disposal activities, the Company is adding dry fly ash, bottom ash, and FGD blowdown handling systems to operating coal-fired plants that are not already so equipped. He also stated that the Company is modifying all active and decommissioned plants to divert storm water and low-volume wastewater away from the basins. He testified that, accordingly, the Company is requesting recovery of the incremental compliance costs related to coal ash pond closures incurred starting in 2015 through August 31, 2017, and recovery of ongoing compliance costs. He testified that both these incurred and ongoing compliance costs are reasonable, prudent, and cost effective given the individual facts and circumstances at each power plant and coal ash basin site at issue. He testified further that each of the Company's historical and ongoing CCR compliance costs are reasonable, prudent, and cost effective given the individual facts and circumstances at each power plant and coal ash basin site at issue. (Id. at 106.)

Witness Kerin explained that the requirements under CAMA, as amended, the CCR Rule, and the consent agreements (the "CCR Compliance Requirements") affect how the coal-fired power plants operate, and that they effectively require the coal ash basins to be retired. He stated that in regard to coal ash basin operation, modifications to the power plants are required to direct storm water flow away from the coal ash basins, and to cease bottom ash and fly ash sluice flow to the basins. As the coal ash basins are closed, other process streams, such as low-volume wastewater, coal pile run-off, and FGD blowdown flows, as examples, must also be directed away from the coal ash basins to facilitate dewatering and closure. (Id. at 136.)

Witness Kerin stated that coal ash removal has been initiated at several DEP stations, including the Asheville Plant, and the Sutton Plant. He stated that excavation plans were developed to systematically prepare for executing this work, including the identification of any necessary permits and approvals. These excavation plans were submitted to the applicable state regulatory body, DHEC or DEQ, prior to beginning coal ash excavations. As the CCR Rule and CAMA lead to coal ash basin closure, preparations are required to transition the coal-fired generating sites for this outcome. Operating coal-fired power plants in the Carolinas requires plant modifications to fully transition to dry ash handling in order to cease sluice flow to the coal ash basins. All coal-fired power plants, even those retired, require some level of modification to cease all flows to the basins, such as storm water or low volume waste water, and may require construction of a new retention pond. These modification activities are planned and are now being executed. (Id. at 136-37.)

Witness Kerin described the closure plans and site analysis and removal plans developed by DEP to physically close the coal ash basins, noting that these plans are technically informed by the structural stability of the impoundments, the potential for adverse impacts from external events such as 100-year floods, the groundwater and/or surface water impacts identified in the Comprehensive Site Assessments, and the groundwater corrective actions required in the Corrective Action Plans. Coal ash basins can be closed by excavation, with the coal ash permanently stored in a CCR landfill or used in a beneficial way such as a structural fill or for cementitious purposes. Coal ash basins can also be closed by capping the CCRs in place. (Id. at 137.)

Witness Kerin also stated that the Company's CAMA closure plans will meet the national standards set forth by the CCR Rule as well as the more specific requirements determined by DEQ under the CAMA regulatory process. He explained that the state- mandated closure plans are reviewed and approved by DHEC in South Carolina and DEQ in North Carolina. During this review and approval process, these state regulatory agencies could impose additional restrictions, limitations, requirements, and/or actions to close the coal ash basins. Other specific compliance plans will be developed and implemented to meet the various requirements and timelines of CAMA and the CCR Rule, such as the fugitive dust control plans which were required under Section 257.80 of the CCR Rule by October 19, 2015. As a second example, run-on and run-off control system plans were developed and implemented by October 19, 2016, for CCR landfills pursuant to Section 257.81 of the CCR Rule. Compliance plans will continue to be developed and implemented as required by the CCR Rule and CAMA. (Id. at 137-38.)

Company witness Kerin testified that in Exhibits 10 and 11 to his testimony, he broke the coal ash pond closure costs already incurred or expected to be incurred prior to August 31, 2017, down into their core components and have described the plants to which these costs apply. In detailing these costs, he also provided narrative summaries as to why, in his opinion, these costs were incurred and why the compliance actions which led to those costs were the most reasonable and cost-effective options given the applicable facts and circumstances. He testified that these exhibits, coupled with the balance of his testimony and exhibits, demonstrate that these costs are reasonable and prudent. (Id. at 140.)

Company witness Kerin explained that, in his opinion, DEP's historical handling of CCRs was reasonable, prudent, and consistent with industry standards over time. He stated that, in his opinion, this demonstrates that nothing that DEP has done historically is causing the Company to incur any unjustified costs today to comply with post-2015 CCR regulations. (Id. at 143.) Company witness Kerin explained that, in the preamble to the CCR Rule, EPA details that in 2012 alone, over 470 coal- fired electric generating facilities burned over 800 million tons of coal, generating approximately 110 million tons of CCRs in 47 states and Puerto Rico. In 2012, approximately 40% of the CCRs generated were beneficially used, with the remaining 60% disposed in CCR surface impoundments; of that 60 percent, approximately 80% was stored in on-site basins and landfills. Across the United States, CCR disposal currently occurs at over 310 active on-site landfills, averaging over 120 acres in size with an average depth of 40 feet, and at over 375 active on-site surface impoundments. Witness Kerin testified that the Company is re-using (selling) and storing CCRs in the same manner and at approximately the same percentages as the coal-fired utility industry's national averages.

He maintained that Duke Energy's practices have been and continue to be consistent with those of the industry. Similar to the industry, according to witness Kerin, DEP has on-site CCR landfills that are actively receiving production fly ash, and some bottom ash, at specific coal-fired generating sites, including the Mayo and Roxboro Plants in the Carolinas. Also, similar to the industry, he testified that DEP has active coal ash basins still receiving bottom ash, and some fly ash, at specific coal-fired generating sites, including the Asheville Plant, Mayo Plant, and the Roxboro Plant in the Carolinas. The coal ash handling practices for ash basins and ash landfills in the Carolinas are, in his opinion, consistent with the applicable regulatory requirements that were in effect during the history of these CCR units. (Tr. Vol. 16, pp. 118-19.)

Witness Kerin also maintained that DEP'S CCR storage and handling practices are consistent with the practices of other Duke Energy affiliates and Duke Energy peer utilities. He explained that the Company's CCR storage and handling practices are consistent across the Duke Energy fleet, including coal generation located in Florida and in the Midwest. Duke Energy, as it currently exists today, has been formed over the years through the mergers of several utilities with independently operated coal fired generation. He testified that the historical and current CCR handling and use of CCR basins is consistent across these legacy companies that make up Duke Energy Corporation today, and consistent with the industry. (Tr. Vol. 16, p. 119.)

Company witness Wright noted that coal ash use and disposal have been studied by the EPA since the mid-1980s. After several studies and some limited regulatory standards, on May 22, 2000, the EPA determined the need to regulate coal combustion wastes under Subtitle D of the Resource Conservation and Recovery Act (RCRA). He noted that these types of expenses have been routinely recovered as a cost of service and included in rate cases, including the reasonable costs associated with operating, maintaining and upgrading environmental equipment. The cost recovery for these rate-based environmental costs also usually included a return. (Tr. Vol. 13, 361-62.)

3. Company Direct: Cost Recovery Overview

Witness Wright also testified that, in part, as a response to an accident at a surface impoundment at Tennessee Valley Authority's ("TVA") Kingston Fossil Plant in Harriman, Tennessee, the EPA published in the Federal Register proposed new coal ash disposal regulations for CCRs. The proposed regulations specifically referenced the TVA incident as a major reason for the proposed rule, and EPA discussed several other coal ash incidents that led to the promulgation of the rule. Witness Wright noted that, because the EPA's proposed rule's publication date precedes the February 2, 2014 coal ash release accident at the Dan River Steam Station ("Dan River"), the Dan River accident was not mentioned in the EPA's proposed rule as a reason for establishing the rule. He also noted that EPA's finalized CCR Rule, signed on December 19, 2014, and published in the Federal Register (FR) on April 17, 2015, referenced the Dan River accident, without indicating that the accident modified the proposed rule. (Tr. Vol. 13, pp. 362-63.)

He further explained that in August 2014, after the EPA's proposed coal ash regulations were published but prior to their finalization, the State of North Carolina adopted CAMA. He noted that while the EPA's and the CAMA rules are "largely duplicative," the Company must ensure that its coal ash disposal methods meet the standards established in both regulations as well as any other state agency requirements. (Tr. Vol. 13, pp. 363-64.)

Witness Wright testified that, in his opinion, recoverable costs, as they relate to electric utility expenditures in North Carolina, are costs that are reasonable and that are prudently incurred in the provision of safe, reliable electric service to a utility's customers. He stated that G.S. 62-133(b) embodies this principle. He stated that because environmental compliance costs are a necessary cost of providing electric service, these types of costs – and a return on those costs if deferred over time – are recoverable in rates. He also stated that environmental compliance costs are similar to other costs that a utility might spend in producing and delivering power. He explained that the Company incurs costs in compliance with environmental laws and regulations, similar to other costs necessary for the generation of electric power, and that these coal ash disposal costs are like nuclear decommissioning costs or coal plant retirement costs that have long been deemed recoverable for utilities across the country, including DEP. (Id. at 354.)

Witness Wright noted that the Commission has allowed the recovery of costs related to environmental expenditures. Citing to witness Kerin's lengthy discussion of the numerous investments the Company has made over time in compliance with historical coal ash and other environmental regulations, he stated that in his experience these types of costs, including the reasonable costs associated with operating, maintaining and upgrading environmental equipment, plus a return, have been routinely recovered as a cost of service through general rate cases, whether as capital or ongoing operation and maintenance expense or some combination thereof. (Id. at 358- 60.)

Witness Wright testified further that utilities are not allowed to recover environmental fines or penalties, or costs incurred from the actions causing such penalties. He stated his understanding that none have been requested in this case. However, according to witness Wright, it is important to make sure that the costs underlying or directly causing such fines or penalties be separated from prudently incurred, ongoing costs. For example, if a generating plant received a fine, then by no means should that fine be recoverable. But the fact that a fine was given does not mean that the ongoing, prudently- incurred costs necessary to produce generation should be disallowed. (Id. at 361.)

He further explained why, in his view, the new federal coal ash standards did not result from the Dan River spill. He noted that the final rule only mentions the Dan River accident, and that there is no evidence in the final rule that the Dan River accident changed or modified the EPA's proposed rule. He testified that both the proposed rule and the final rule addressed the need for imposing corrective action at inactive facilities, and stated that in promulgating the CCR Rule, the EPA cited hundreds of potential risks or incidents with ash ponds similar to Dan River that, in part, led to the adoption of the Rule. Based on this analysis along with the timing of the CCR Rule, he opined that the Dan River accident did not change the CCR regulations, although it probably added support for the EPA's proposals. (Id. at 363-65.)

Witness Wright also testified that, in terms of timing, the new state CAMA coal ash standards did result from the Dan River spill, but, in his view, in terms of the substance of the standards adopted, there is not necessarily a connection. He opined that the Dan River spill helped prompt the North Carolina General Assembly to examine the North Carolina and national coal ash disposal policies and regulations, and that out of that legislative investigation came CAMA. He noted that some four years prior to Dan River, the EPA had proposed and was close to finalizing its new CCR regulations, which, in his opinion, helped inform the state's legislative leaders regarding the language contained in CAMA. He noted that the proposed CCR regulation also strongly encouraged the states to adopt at least the federal minimum criteria in their solid waste management plans. Therefore, he concluded, the North Carolina Legislature and/or the State's DEQ would likely have taken steps to adopt some coal ash regulations shortly after the CCR Rule was finalized in 2015 simply because of the CCR Rule's encouragement to do so. He concluded that the timing of CAMA was certainly influenced by the Dan River accident, but also stated his belief that, even without the Dan River accident, the state would likely have adopted some new coal ash disposal standards in the 2015 timeframe simply in response to the CCR rules, as it did just a few years prior to adopting CAMA, when it adopted coal-fired generating facility environmental standards in the Clean Smokestacks Act that were stricter than the federal standards at the time. He stated that, regardless, the Company must comply with both the federal and state coal ash disposal standards. (Id. at 366-67.)

In his direct testimony, Company witness Wright testified that in his opinion the coal ash disposal costs that DEP seeks to recover in this case are "used and useful" utility cost. (Tr. Vol. 13,

p. 375.) He explained that DEP's coal ash disposal sites have always been used and useful as part of the coal-fired generation production process. He noted that G.S. 62-133(b)(1) provides that, in setting utility rates, the Commission must "ascertain the reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period, in providing the service rendered to the public within the state, minus accumulated depreciation, and plus the reasonable cost of the investment in construction work in progress." (Id.) He testified that, therefore, to be included in rate base, the cost must be both reasonable and incurred for property that is used and useful in providing service to customers. He stated that the Company has historically spent dollars in order to comply with the coal ash disposal regulations in effect at the time, and these dollars were a necessary expenditure related to used and useful utility costs made in the provision of electric service at the time. (Id. at 375-76.) The Company was, and continues to be, in his view, obligated to meet the needs of its customers. This obligation to serve requires the disposal of coal ash subject to the disposal standards at the time, thereby rendering the disposal sites for this coal ash, for which costs DEP seeks recovery in this case, "used and useful" in providing electric service. (Id. at 376.) He stated that this conclusion is supported by the Commission's conclusions in the 2016 Dominion rate case, where the Commission determined that because current CCR repositories are and have served their purpose of storing CCRs for many years, they have been used and useful for ratepayers, and that such storage facilities will continue to be used and useful until the CCRs are moved to a permanent repository, or they are capped and closed. (Id. at 376-78.)

Company witness Wright also noted that the Commission addressed this exact coal ash disposal cost issue in its December 22, 2016 Order in Dominion's recent rate case, Docket No. E-22, Sub 532. He noted that in that order the Commission and Public Staff concluded that Dominion's historical response to coal ash disposal was consistent with industry practice at the time and that these costs were reasonable and prudent. Second, they found that Dominion's test year coal ash disposal expenses incurred in compliance with the newer coal ash disposal regulations were likewise reasonable and prudent. A third important point decided by the Commission in the Dominion case, he maintained, was that the prior coal ash disposal assets were used and useful. Finally, similar to what DEP is requesting in this rate case, the Dominion order also allows Dominion to establish an ARO to defer additional coal ash disposal cost and for the recovery of those costs to be adjudicated in a future proceeding. (Id. at 378-79.)

4. The Positions of Intervenor Parties other than the Public Staff

AGO witness Wittliff testified that DEP's actions and inactions were largely responsible for the stringent conditions of CAMA, which he said accelerated remediation and closures and narrowed the field of removal and closure options. (Tr. Vol. 15, p. 24.) He claimed that the Company's actions also led to inadequate operations and a failure to meet industry standards in how its coal ash basins complied with permits, which he argued resulted in CCR remediation and closure costs that exceeded what would have occurred absent the Company's actions. He also contended that if DEP had prudently managed its CCRs and associated impoundments, it would have been allowed to implement less expensive remediation and closure options over a longer period of time under the CCR Rule. He opined that DEP imprudently managed its facilities and that such mismanagement is causally linked to costs that should be disallowed in this case. He asserted that due to CAMA's identification of Sutton and Asheville as high priority sites, and the resulting acceleration of closure at those sites, approximately 72%, or about $224 million of the total ARO expenditures by DEP in 2015 and 2016 were for these two sites, part of which was for the transportation by rail and by truck of a significant portion of those sites' CCRs offsite. (Id. at 24-58, 60-62.)

CUCA witness O'Donnell purported to compare the DEP coal ash ARO to what he termed similar coal ash AROs of utilities across the United States. He concluded that the Company's ARO coal ash costs are the highest in the nation, and contended that the only discernable difference between DEP and the other utilities in his comparison was CAMA, which he asserted was prompted by the Dan River spill. He stated that DEP did not provide a similar financial analysis for this case. (Tr. Vol. 15, pp. 230-31.) Witness O'Donnell opined that DEP should only recover costs to comply with the CCR Rule, not any costs under CAMA that exceed CCR Rule compliance costs, based on his contention that Duke Energy caused CAMA. (Tr. Vol. 16, p. 18.)

Sierra Club witness Quarles evaluated the methods DEP has proposed to close existing coal ash ponds at the Mayo and Roxboro plants and opined as to environmental conditions that may be associated with capping those ponds in place. He asserted that continued storage of coal ash at Roxboro and Mayo poses significant environmental risks. He stated that the unlined basins at these plants were constructed over natural bodies of water, between 60 and 90 feet of the coal ash stored in the basins there is submerged in groundwater, and groundwater flows into those basins from topographically higher elevations and will come into contact with submerged coal ash. He also stated that there are documented impacts to groundwater at these basins and that a cap will not prevent lateral inflow of groundwater from adjacent areas. He concluded that closure in place at these basins would allow continued contamination of downgradient groundwater and violate the technical standards of the CCR Rule, and that removal of coal ash from the Company's coal ash basins would reduce the concentrations and extent of this contamination. (Tr. Vol. 13, pp. 132-73, 175- 77.) On cross-examination, witness Quarles conceded that excavation and moving the coal ash at Mayo and Roxboro to lined landfills would increase the cost for closure. (Id. at 180.) Also, he agreed that with learning, advancement, and improved capability, changes and advancements can follow. (Id. at 190.) He admitted that his evaluation was conducted from a distance rather than by interaction with the Company. (Id. at 193-94.) He agreed that boron is a naturally occurring element in the soils in locations like Mayo and Roxboro. (Id. at 194.) Witness Quarles agreed that the CCR Rule was not the first time that the EPA discovered that utilities nationwide were using unlined wet coal ash basins, and that while the EPA was studying the issue at least as early as the 1980s, it took action to regulate coal ash basins only a few years ago. (Id. at 200-01.) He also recognized that utilities have been permitted to dispose of coal ash in unlined basins. (Id. at 190-99, 204.)

In its post-hearing Brief, the AGO contends that ratepayers should not be forced to cover costs caused by DEP's years of failure in managing coal ash basins. The AGO argues that Commission needs to consider whether the costs incurred are reasonable and prudent. When making this determination, the AGO states that the Commission must ask whether the utility acted prudently over time as coal ash was generated and stored or if prior mismanagement or negligence by the utility has impacted the work that needs to be done now. The Commission must also determine whether DEP's current actions to cleanup are reasonable and prudent.

The AGO states that coal has been utilized for many decades and beginning in approximately 1950, DEP, like many utilities, used unlined earthen impoundments to deposit its CCRs. The AGO indicates that the use of coal grew significantly over the years with over 60 million tons of coal ash produced annually in the United States in the 1970's and by 1988, it was predicted that in 2000, the annual coal waste could reach 120 million tons of coal ash. The AGO cites to the 1988 EPA report to Congress which pointed out that in North Carolina, solid waste regulations exclude surface impoundments and defer to state water laws for regulatory authority. Therefore, DEP was bound by the regulatory requirements of its NPDES permits. The AGO points to the 1988 report to posit that the lining of the surface impoundments was becoming a more common practice and indicated that DEP still onlyhas one lined impoundment to date.

The AGO states that DEP failed to keep pace with industry standards. First, the AGO argues that DEP had a lackadaisical response to 2L standards, passed in 1979. In testimony, DEP indicated that there was no obligation to monitor groundwater quality under the 2L regulations; the obligation to take corrective action arises after exceedances have been identified. The AGO identified that the groundwater monitoring requirements were not immediately added to all of the Company's NPDES permits by DEQ, and the Company indicated that it was under no obligation to monitor for groundwater impacts and only voluntarily did so as required by site specific conditions. The AGO argues that the Company, except at a few sites, did not voluntarily monitor groundwater until the requirement was put into the NPDES permit.

Second, the AGO cites to the failure at the Roxboro plant from 1966 to 1990 at the Hyco Reservoir, which the EPA cited as a proven damage case used in support 2015 CCR rule. Third, the AGO states that in 1996 DEP entered into standstill agreements with two insurance carriers recognizing potential legal exposure from its CCR ponds. Fourth, the AGO outlines the seeps that DEP allowed to occur at its basins, including the seeps to which DEP pled guilty to in federal court, the 200 seeps that were identified in permit modification applications filed in 2014, and seeps found in dam safety inspections in the late 1990's and early 2000's. Fifth, the AGO cites to a November 2004 Sutton Report that was prepared because the 1984 lined coal ash pond was running out of capacity. The report indicated that the 1984 pond is currently estimated to be non-operational due to reaching capacity limits by June 2006. The AGO argues that DEP knew that the ponds were creating an environmental hazard and chose to ignore them. Next, the AGO states that after the TVA coal ash dam [dike] failure, EPA came and inspected DEP's ponds with negative findings, specifically finding that 75% of DEP's ponds were rated as poor. Duke, upon questioning at the time, indicated that poor also applies to further critical studies or investigation that are needed to identify safety deficiencies. The AGO identifies that DEP pled guilty in federal court and even though DEP is not to receive any NOVs as part of the criminal plea, DEP has received three NOVs at its Asheville plant.

Next, the AGO argues that these failures by DEP led to the passage of CAMA and the CCR rule, which in turn led to increased costs. Specifically, Kerin's testimony suggests that approximately 72% of the current expenditures are for the accelerated schedules, and Garrett and Moore testified to specific disallowances of Sutton and Asheville.

The AGO reiterates that DEP has not met its burden of showing costs are reasonable and prudent, but rather these new costs are attributable to unlawful and imprudent behavior. Lastly, the AGO argues that the Clean Smokestacks Act dealt with operating plants and here most plants are retired so no supports exist under that Act.

The AGO contends that DEP is not entitled to special cost recovery. DEP was recovering these costs in depreciation expense through amortization for retired plants. The AGO cites to the Burns & McDonnell 2012 dismantlement studies indicating lower estimated closure costs, based upon dewatering and capping in place. The AGO states that now that recovery for closure costs is much greater, DEP seeks a special accounting method. The AGO argues that imposing these coal ash costs on current ratepayers raises intergenerational fairness given DEP's failure to take action earlier. The AGO highlights that the Commission has previously dealt with the intergenerational issue when it considered whether to allow the recovery of manufactured gas plant clean-up costs based upon new environmental requirements. The AGO states that the Commission allowed recovery of the clean-up costs; however, the amount was amortized over a period of years, and no carrying costs were allowed on the unamortized balance.

In addition, the AGO submits that DEP should not receive "carrying costs" during amortization of the deferred CCR costs by placing the unamortized balance in rate base because the deferred CCR costs are special operating expenses. According to the AGO, operating expenses are recoverable without return pursuant to G.S. 62-133(b)(3) and State ex rel. Utilities Commission v. Thornburg (Thornburg I), 325 N.C. 463, 475, 385 S.E.2d 451, 458. Further, the AGO submits that the unamortized balance of the CCR deferred costs are similar to those considered in State ex rel. Utilities Comm. v. Carolina Water, 335 N.C. 493, 507, 439 S.E.2d 127, 135 (1994) (Carolina Water), where the Supreme Court considered whether the Commission erred when it treated utility plant that was not in service at the end of the test year – and would not be returned to service – as "an extraordinary property retirement," allowed amortization of the unrecoverable costs over ten years, and included the unamortized portion in rate base. The Court concluded that the costs were for plant that was not used or useful and, thus, the unamortized costs should not have been included in rate base. As the Supreme Court explained: "Including [these] costs in rate base allows the company to earn a return on its investment at the expense of the ratepayers." Id. at 508, 439 S.E.2d at 135 (citations omitted).

Finally, the AGO notes that a similar issue was considered by the Commission in the 2016 DNCP general rate case relating to rate base treatment of the unamortized balance during CCR cost recovery, wherein the Commission distinguished the circumstances in Carolina Water. The AGO contends that the Commission's decision in the DNCP case should not set the standard for the present case because the determination was allowed under the circumstances presented in that case without precedential effect regarding the treatment of CCR costs in future proceedings.

In its post-hearing Brief, CUCA contends that DEP's request for 100% CAMA compliance cost recovery is not appropriate. CUCA submits that DEP's costs are overstated and that many are the result of DEP's negligence, which is most clearly highlighted in DEP's guilty plea in the federal criminal environmental proceeding. CUCA supports an equitable sharing of the CCR cleanup costs due to the fact that CAMA costs are much higher than the CCR Rule compliance costs. CUCA states that a 25% recovery is equitable. CUCA argues that this case is different than the DNCP rate case. DEP is different than Dominion in the used and useful analysis in that Dominion never had a coal ash spill, did not plead guilty to Clean Water Act violations, did not pay $102 million for mismanagement, and did not admit that CAMA was passed due to the Dan River spill. Further, CUCA contends that the CCR Rule is a self-implementing rule which has not been triggered by any citizen suits, and that in the absence of a regulatory directive to do so, DEP should not have pursued regulatory closure of operating sites.

Sierra Club, in its post-hearing Brief, argues that closure of DEP's coal ash ponds is necessary to address unlawful discharges to surface waters and therefore closure costs are not recoverable, citing G.S. 62-133.13. Further, Sierra Club contends that all of the CCR basins are unlawfully discharging pollutants into surface waters and the only way to stop these unlawful discharges is to close the pond and eliminate the source, the coal ash. Therefore, the costs of pond closure results from the unlawful discharges and are not recoverable.

In addition, Sierra Club submits that DEP has failed to meet its burden of demonstrating that its proposed rates are just and reasonable in that no evidence exists to prove that storage of coal ash in unlined, leaking ponds for decades was a reasonable and prudent way for DEP to manage its CCRs. According to Sierra Club, the only evidence provided was Kerin's bold assertion that historical handling of CCRs was reasonable, prudent and consistent with industry standards over time. Sierra Club cites to the Commission's ratemaking decision regarding MGP clean-up asserting that when determining ratepayer responsibility, the prudency of the Company's initial operation of each site should be considered. In that case, the Commission found prudent operation. In contrast, the Sierra Club states that the record shows a history of mismanagement with respect to coal ash basins, citing seeps at almost all of its ash ponds as being unlawful discharges that violate the federal Clean Water Act and Section 143-215.1 of the North Carolina General Statutes, and the terms of DEP's NPDES permits. Sierra Club maintains that the operation of a system meant to treat wastewater in a manner that allows the release of untreated wastewater and repeated violations of the law cannot be considered prudent, and that DEP provided no evidence on whether its prior CCR management practices have resulted in unjustified costs.

Moreover, Sierra Club argues that DEP's closure plans for its Mayo and Roxboro ash basins do not comply with the CCR Rule or protect against continued discharges, and, therefore, DEP's proposed run rate should be rejected.

Sierra Club also contends that capping in place the Mayo and Roxboro CCR basins will not protect against continued leaching of coal ash constituents into groundwater or into surface waters through migration. Therefore, it submits that DEP's closure plans violate the CCR Rule. Sierra Club notes that there are two federal lawsuits pending on this issue, and that a closure plan that does not protect against future contamination cannot be considered prudent. DEP's run rate is based upon the assumption that ash ponds at Mayo and Roxboro will be capped in place. Therefore it is not reasonable to approve an ongoing run rate for future cleanup when the full scope of those costs is not understood. Therefore, according to Sierra Club DEP's request for a run rate based upon the assumption that the ash ponds at Mayo and Roxboro will be capped in place should be rejected.

In its post-hearing Brief, NC WARN contends that DEP should be severely limited on coal ash cost recovery. NC WARN asserts that none of the costs associated with coal ash mitigation and cleanup should be borne by ratepayers, and that DEP should not make profits on selling coal ash from its existing coal ash basins as part of a permanent disposal scheme.

In its post-hearing Brief, Fayetteville PWC suggests that the Commission impose a provisional deferral of costs in an amount equal to DEP's insurance coverage for such remediation liabilities, which costs may not be recovered from ratepayers unless or until DEP either recovers offsetting insurance proceeds or demonstrates that DEP's own actions or omissions did not result in a denial of insurance coverage or a reduced settlement for its coal ash remediation costs. Fayetteville PWC also requests that the Commission adopt the coal ash remediation costs disallowances and deferral recommended by the Public Staff and order the sharing of coal ash remediation costs between DEP's shareholders and ratepayers in the manner recommended by Public Staff.

In its post-hearing Brief, CIGFUR argues that DEP should not be allowed an equity component in the calculation of its deferred coal ash remediation carrying costs and that the appropriate amortization period is ten to fifteen years as opposed to five. CIGFUR states that the total cost to defer is $260.3 million and that the carrying charges associated with the incurred coal ash costs since 2015 are $9.4 million, $1.9 million is associated with the cost of debt and $7.5 million is associated with the cost of equity. CIGFUR further states that amortizing over 5 years results in annual amortization expense of $52.1 million, plus a $14.4 million net tax return, for a total requested revenue requirement of $66.5 million for deferred coal ash pond closure costs. CIGFUR argues that the carrying costs should not include the equity component and that the deferral should be financed at the lowest option, which is the cost of debt. Allowing the equity component increases the amount charged to DEP's ratepayers and is inappropriate for such a significant expense that fails to enhance reliable service. CIGFUR submits that the CCR costs were incurred over many decades and the stored coal ash is no longer used and useful in the provision of electric service.

With respect to the run rate, CIGFUR argues that DEP should not recover the run rate of $129.1 million and that DEP should defer ongoing costs for future recovery in its next rate case. CIGFUR opposes any carrying costs on the deferred amounts because the deferred amounts are not capital costs and that it is more appropriate to allow a $1 for $1 recovery and no more.

In its post-hearing Brief, Quad Towns states that the Commission must determine whether the initial operation of each site was prudent, as discussed in the Commission's MGP case. Quad Towns contends that most intervenors argued that DEP's demonstrated and criminally negligent failure to prudently and reasonably manage its CCR impoundments was the driving force for the enactment of CAMA, which increased the costs. Thus, these costs were not prudently incurred because if DEP had prudently managed its sites, these costs would have been avoided.

Further, Quad Towns notes that DEP argues that additional safeguarding in the past would have been deemed gold-plating and any such costs would have been deemed imprudently incurred. According to Quad Towns, given the fact that DEP had 485 NPDES permit violations, over 200 documented seeps and 2,857 2L violations, it is hard to assume that additional safeguards would have been gold-plating.

In addition, Quad Towns argues that costs arising out of mismanagement of a long- lived asset are not appropriate for deferral accounting, and notes that Section A13 of FASB states that obligations resulting from improper operations do not represent costs that are an integral part of the asset. The section goes on to state some spillage is acceptable, but the obligation to clean up after a catastrophic accident does not result from the normal operation of the facility. Because such costs are not appropriate for deferral, the costs should be borne by shareholders. Quad Towns states that it interprets the section language broader than the given example of a catastrophic accident.

Quad Towns also argues that the Commission cannot police the utilities' day to day operations to ensure that it is prudently managing its facilities in a safe and environmentally appropriate manner, and that the only way that the Commission can protect ratepayers from exorbitant rate increases due to mismanagement of utility operations is to disallow those costs that are attributable to the mismanagement.

Quad Towns supports a 75% disallowance of the historic costs based upon CUCA witness O'Donnell's testimony, and the same result but different analysis of AGO witness Witliff. It notes that witness Witliff testified that specifically looking at the Sutton and Asheville sites designated as high priority by CAMA, DEP spent approximately 72% more due solely to the accelerated timeline and DEP choosing to move the coal ash offsite. As further support, DEP's 2012 dismantlement study, after the 2010 CCR Rule was proposed, concluded that a $10 million depreciation expense would suffice to address end-of-life costs. Therefore, costs above $10 million earmarked in 2012 are attributable to the more costly CAMA closure requirements. Further, Quad Towns supports the specific Garrett and Moore disallowances.

For future costs, Quad Towns supports the Public Staff's 50/50 sharing proposal, and states that cost sharing is appropriate because: (1) DEP failed to prevent environmental contamination from its impoundments in violation of state and federal law, and (2) there is a history of approval for sharing extremely large costs that do not result in new generation of electricity for customers, such as the MGP case.

Moreover, Quad Towns argues that DEP saying its actions were in accordance with industry practice is incompatible with DEP's admissions in federal court to criminal actions that DEP "failed to exercise the degree of care that someone with ordinary prudence would have exercised in the same circumstance with respect to..." management of various aspects of its coal ash impoundments, and acted negligently in failing to prevent unauthorized discharges and to follow the conditions of its permits.

Further, Quad Towns argues that the Commission should disallow any recovery of CCR costs through the fuel adjustment clause, based on the fact that no cost was assigned to coal ash in the Charah contract with DEP. Rather the contract supports payment for coal ash remediation. Further, according to Quad Towns the evidence tends to show that Charah purchased the Brickhaven mine for the singular purpose of disposing of CCRs. Therefore, there was not an independent need for fill dirt.

Lastly, Quad Towns requests that the Commission specify the amount of disallowance. For example, if the Commission chooses to disallow a certain amount of CCR costs through amortization, if the Commission can clearly specify the amount of disallowance first and then explain that the disallowance is being achieved by the extended amortization, it will assist in avoiding future litigation over language in Quad Towns' wholesale purchase power agreements. Quad Towns states that if the Commission disallows 50% of DEP's request, Quad Town's customers will save approximately $309,902.50.

5. The Position of Public Staff Witnesses Garrett and Moore

Public Staff witnesses Garrett and Moore testified that they investigated the prudence and reasonableness of costs incurred by DEP with respect to its coal ash management. In addition, they reviewed the approach taken by DEP to determine the least cost method of achieving compliance with the laws and regulations governing coal ash management. In conducting their investigation, witnesses Garrett and Moore reviewed the closure plans and coal ash-related costs incurred for all of DEP's coal-fired facilities, conducted extensive discovery, participated in numerous meetings, and visited several of the DEP facilities in question. (Tr. Vol. 18, pp. 133-34.)

Witnesses Garrett and Moore did not take exception with DEP witness Kerin's general characterization of the applicable federal and state regulations addressing the management and closure of coal ash basins in North Carolina and South Carolina. They did, however, identify several decisions made by DEP that were not required by law or where lower-cost compliance options were available. Witnesses Garrett and Moore did not take exception with DEP's selected closure method for the coal ash basins at the Robinson Plant in South Carolina, which is subject to a consent agreement entered into between DEP and the South Carolina Department of Health and Environmental Control (DHEC). (Tr. Vol. 18, p 139.)

With regard to DEP's Mayo and Roxboro plants, witnesses Garrett and Moore noted that DEQ issued final classifications for these facilities as Intermediate Risk in May 2016, and that DEP is in the process of establishing the permanent replacement water supplies required under G.S. 130A-309.211(c)(1) and performing the applicable dam safety repair work at these sites. Upon completion of these tasks within the timeframe provided, the impoundments at these facilities will be reclassified as low-risk pursuant to G.S. 130A-309.213(d)(1). They explained that CAMA requires, at a minimum, that the impoundment be dewatered and closed either by excavation or by placement of a cap system that is designed to minimize infiltration and erosion. Witnesses Garrett and Moore noted that this approach is generally the most cost- effective means for closure of a CCR unit. They also testified that CAMA (S.L. 2016-95) does not require the submission of proposed closure plans for low- and intermediate risk impoundments until December 31, 2019, so DEP has not submitted a Site Analysis and Removal Plan (SARP) to DEQ for any facilities other than Sutton and Asheville at this time. Therefore, a prudence review of the Mayo and Roxboro closure plans would be premature, so witnesses Garrett and Moore took no exception in the present case to DEP's current proposed closure method for the coal ash basins located at Mayo and Roxboro. (Tr. Vol. 18, pp. 139-41.)

In addition, Public Staff witnesses Garrett and Moore did not take exception to DEP's closure method for the CCR units located at Cape Fear and H. F. Lee. DEP has selected the Cape Fear and H. F. Lee Stations as two of the three beneficiation sites pursuant to G.S. 130A-309.216, which required Duke Energy to identify three sites located within the state with coal ash stored in the impoundments suitable for processing for cementitious purposes. Upon selection of the sites, Duke Energy was required to enter into a binding agreement for the installation and operation of coal ash beneficiation projects at each site capable of annually processing 300,000 tons of coal ash to specifications appropriate for cementitious products, with all processed coal ash to be removed from the impoundments located at the sites. (Tr. Vol. 18, pp. 141-43) Witnesses Garrett and Moore also noted that the timeframe proposed by DEP for beneficiation of the Intermediate Risk sites extends beyond the closure timeframe called for in Section 3.(a) of S.L. 2016- 95 for sites deemed Intermediate Risk, and that G.S. 130A-309.215 provides a variance option for closure deadlines that are found to be in the public interest. (Id.)

Public Staff witnesses Garrett and Moore testified that they did not take exception to DEP's closure method for the CCR units located at Weatherspoon, where DEP has selected the excavation of CCR and beneficial use option, with contracts in place for the delivery of the coal ash material to facilities in South Carolina for use in the concrete industry. They noted that this option appears to offer a lower cost than other closure options for the site, and believe that DEP should have sought to establish Weatherspoon as one of the three beneficiation sites as required by G.S. 130A-309.216. This would have allowed the DEC Buck Station, which was instead selected as the third beneficiation site, to utilize significantly lower cost closure options instead of cementitious beneficiation. Witnesses Garrett and Moore testified that DEP indicated in response to data requests that it could only obtain guaranteed commitments for 230,000 tons of coal ash per year, as opposed to the 300,000 required by statute. They indicated that the potential cost savings associated with selecting Buck for closure options other than beneficiation would have justified making additional efforts to identify additional sites for beneficial reuse of coal ash of the additional 70,000 tonsof coal ash from Weatherspoon. (Tr. Vol. 18, pp. 143-44.)

With regard to DEP's selected closure actions at the Sutton Plant, witnesses Garrett and Moore took exception with DEP's decision to excavate and transport coal ash off-site to the Brickhaven structural fill facility in Chatham County. They contended that had DEP expeditiously pursued an on-site industrial landfill at the time it began working on the structural fill facility, it could have disposed of all of the coal ash on-site without incurring the added expense associated with the off-site transfer and disposal. (Tr. Vol. 18, pp. 153-55.)

Witnesses Garrett and Moore disputed DEP's position that the moratorium on CCR landfills, which was enacted on September 20, 2014, in Section 5.(a) of S.L. 2014- 122, and expired on August 1, 2015, had any impact on DEP's ability to construct an on-site greenfield landfill at Sutton in a timely fashion. They evaluated the timeframe for which DEP would have had to construct the landfill and determined that based on DEP's assumptions regarding landfill permitting and construction timeframes, along with the excavation and placement rates estimated by DEP in its analysis of the facility, DEP could have handled all of the coal ash on-site without having to incur the significant costs associated with off-site transportation costs and construction of rail handling equipment. (Tr. Vol. 18, pp. 145-48.)

Witnesses Garrett and Moore also took exception with DEP's inclusion of costs associated with two specific liner components, called the "Secondary Geocomposite Layer" and "Secondary 60-mil HDPE 9 Textured Geomembrane Material" that were included in DEP's current on-site landfill construction contract. They testified that these secondary layers exceed what is required under federal and state regulations. Therefore, witnesses Garrett and Moore recommended that the costs associated with these secondary liner layers be disallowed. (Tr. Vol. 18, p. 154.)

As a result of DEP's unnecessary actions to transport coal ash off-site from the Sutton facility and to install landfill liner components that exceeded regulatory requirements, witnesses Garrett and Moore recommended a total disallowance at the Sutton facility of $80.5 million from DEP's coal ash expenditures during this recovery period. (Public Staff Garrett and Moore Exhibit 7)

Witnesses Garrett and Moore summarized the coal ash closure approach taken by DEP at its Asheville facility. They testified that DEP had been excavating coal ash from the 1982 Ash Basin since 2007 in order to provide structural fill material for the Asheville Regional Airport, transporting this material by truck. Following passage of CAMA in 2014, which deemed Asheville a High-Priority site subject to an August 2019 closure date, DEP continued to excavate coal ash and transport it off-site while the potential for an on-site landfill was evaluated. However, passage of the Mountain Energy Act of 2015 (S.L. 2015-110, hereinafter the "MEA") amended the required completion date for closing the two coal ash basins to August 1, 2022, to allow time for the construction of a combined cycle plant on the site, and retirement of the existing coal-fired generating station. (Tr. Vol. 18, pp. 155-56.)

In their direct testimony, witnesses Garrett and Moore took exception with DEP's decision not to pursue an on-site industrial landfill at the Asheville site, on the basis that DEP could have avoided incurring significant off-site transportation costs. Witnesses Garrett and Moore noted that while the design and construction of an on-site industrial landfill at the Asheville facility would have been technically challenging, they believed that it could be done at a lower cost than transporting the remaining coal ash materials off- site. Witnesses Garrett and Moore also testified that the coal ash processing costs expended at the Asheville facility relative to the amount of coal ash that had been removed off-site were unreasonable. (Tr. Vol. 18, pp. 156-60.)

Following the filing of rebuttal testimony by DEP witness Kerin and updated discovery responses from DEP, witnesses Garrett and Moore revised their testimony to indicate that while they no longer took exception with the quantities of coal ash that had been removed from the 1982 Basin at Asheville to accommodate construction of the combined cycle facility, they took exception to (a) the schedule on which DEP removed the coal ash, which resulted in the unnecessary double-handling of some coal ash on site; (b) DEP's decision to transport excavated coal ash to the Waste Management landfill in Homer, Georgia, rather than transporting all of the excavated coal ash to a DEP- or DEC-owned facility, such as the DEC-owned Cliffside landfill; and (c) the per- ton/mile rates paid by DEP to Charah to transport the material from the Asheville site to Cliffside. Witnesses Garrett and Moore instead contended that a reasonable calculation for coal ash transporting costs should be based on the per-ton/mile rates calculated from the Waste Management Contract, but utilizing the shorter transporting distance and lower tipping or placement fee associated with the Cliffside landfill. In total, their proposed disallowance related to the Asheville facility totaled $29.3 million. (Tr. Vol. 18, pp. 173-76.)

Public Staff witnesses Lucas, Garrett, and Moore recommended disallowances of particular coal ash costs. In addition, witnesses Lucas and Maness proposed an "equitable sharing" of the remaining coal ash costs.

6. Public Staff Witnesses Lucas' and Maness' Equitable Sharing And Coal Ash Adjustments Testimony

Witness Lucas listed three conceptual options for regulatory treatment of coal ash costs. The first option is to allow full recovery of coal-ash related costs on the grounds that the costs have been reasonably incurred to comply with CAMA and the CCR Rule. This is essentially the approach recommended by DEP, minus costs listed in its federal criminal plea agreement as being non-recoverable in rate proceedings. The second option is to disallow recovery of costs to comply with CAMA on the grounds that CAMA is the direct consequence of imprudent Duke Energy environmental violations. This is essentially the approach recommended by CUCA and the Attorney General witnesses. The third option is to disallow the costs incurred to defend and remedy environmental violations, except to the extent that CAMA requirements increased the cost of remediation. Under this approach, which the Public Staff advocates, disallowances would be based on the costs to remediate environmental violations rather than the costs flowing from CAMA compliance. (Tr. Vol. 18, pp. 270- 71)

However, witness Lucas encountered "complicating factors" that led him to modify his preferred regulatory treatment. (Tr. Vol. 18, pp. 271-73) He observed that while some environmental violations are clearly due to Company negligence, others fall into a gray zone where they are neither plainly imprudent nor plainly reasonable. For instance, decisions to place coal ash in unlined impoundments could have been reasonable based on what DEP knew or should have known at the time the basins were constructed some decades in the past. At the same time, it can be unreasonable to impose on ratepayers the costs incurred because those impoundments leaked coal ash constituents and contaminated groundwater outside the compliance boundaries, in violation of state environmental laws and regulations. He also stated that the costs of many environmental violations would be too speculative to determine, as they involve estimations based on scenarios that did not occur (preventing violations through basin construction or modification some decades earlier, or remedying violations if there had been no CAMA).

Due to the complicating factors, witness Lucas offered what he classified as a more practical approach, proposing to exclude the following coal ash costs from recovery in rates:

(1) DEP litigation costs and settlement payments in cases where there are environmental violations;
(2) costs to remedy environmental violations where the costs exceed what CAMA would have required in the absence of environmental violations;
(3) costs required to be excluded under the probation conditions of the federal plea agreement;
(4) the recommended disallowances from Garrett and Moore to the extent there is no double disallowance for the same item; and

(5) an equitable sharing of the remaining allowed costs of coal ash management through the deferral and amortization approach recommended by Public Staff witness Maness.

(Tr. Vol. 18, pp. 274-75.)

According to witness Lucas, DEP had stated that it had excluded all costs required to be excluded under the probation conditions of the federal plea agreement. (Tr. Vol. 18, p. 281) Thus, the regulatory treatment of those costs is not in dispute. The remaining areas listed by witness Lucas include litigation and settlement payments in cases of environmental violations. In this category, he recommended exclusion of $88,000 (total system, not just NC retail as shown in Peedin Exhibit 1, Schedule 3-1(n), line 1, $53,328-North Carolina retail) of test year outside legal fees for litigation of a penalty assessment brought by the North Carolina DEQ and a Clean Water Act lawsuit brought by citizen clients (environmental organizations) of SELC, both in connection with coal ash contamination from DEP's Sutton plant. (Tr. Vol. 18, p. 277)

For the category of costs to remedy environmental violations where the costs exceed what CAMA would have required in the absence of environmental violations, witness Lucas identified, to date, $6,693,390 (NC retail) incurred from January 1, 2015, to August 31, 2017, for extraction wells and treatment of groundwater pursuant to the settlement agreement between DEQ and DEP in the Sutton penalty assessment case. He took the position that these costs would not have been incurred but for unlawful contamination of groundwater by DEP coal ash basins, and that these costs are over and above the lowest reasonable costs of CAMA compliance in the absence of violations. He noted that there could be additional costs in this category in the future. (Tr. Vol. 18, pp. 278-80)

The final category for disallowance is based on an "equitable sharing" of all coal ash-related costs not otherwise disallowed. Witness Lucas referred to witness Maness' testimony for a description of how the equitable sharing should be implemented and the reasons for it. Witness Lucas further opined that "[a]n equitable sharing is particularly appropriate in light of the extent of the Company's failure to prevent environmental contamination from its coal ash impoundments, in violation of state and federal laws." In this regard, he noted the nature and extent of coal ash environmental problems addressed in the federal criminal plea agreement, violations of NPDES permits, dam safety deficiencies, and numerous groundwater exceedances. He added that the sheer number of legal actions against DEP for coal ash environmental violations is suggestive of the extent of the problem. Witness Lucas asserted that DEP non-compliance with NPDES permits and state groundwater rules would in probability have led to environmental cleanup costs even if CAMA and the CCR Rule had not been adopted, and that the costs of impoundment closures under CAMA and the CCR Rule overlap what would otherwise have been coal ash cleanup costs under existing state and federal environmental laws and regulations. Based on DEP's culpability for environmental violations, witness Lucas testified that an equitable sharing would be appropriate, whereas it would be unreasonable and unjust to burden ratepayers with all the coal ash- related costs when ratepayers were not culpable for the environmental violations. (Tr. Vol. 18, pp. 282-85)

In supplemental testimony, witness Lucas made some corrections to his initial testimony, and submitted Revised Lucas Exhibits 5 and 6. The revisions to Exhibit 5 corrected - and lowered - the number of NPDES permit violations he found, and further noted that the number of NPDES violations did not include unauthorized discharges (i.e., seeps) that are violations of G.S. 143-215.1. The revisions to Exhibit 6 identify which groundwater exceedances are violations of environmental regulations, and which have yet to be determined as violations versus natural background levels. (Tr. Vol. 18, pp. 289-90)

Public Staff Witness Maness proposed seven adjustments with respect to coal ash costs. (Tr. Vol. 18, pp. 298-99.) His adjustments for implementing witnesses Garrett and Moore's recommendations, allocation factors, addition of return on deferred coal ash expenditures from September 2017 through January 2018, and use of a mid-month cash flow convention are covered elsewhere in this Order. Witness Maness noted that the Public Staff did not oppose the Company's request in Docket No. E-2, Sub 1103, to defer coal ash costs that had been recorded as AROs into a regulatory asset for regulatory accounting purposes. He recommended that coal ash costs incurred from January 2015 through August 2017 be allowed as a deferral and that the costs be amortized over a 28-year period. He revised the amortization period to 26 years in his supplemental testimony, based on the cost of capital in the Stipulation between DEP and the Public Staff. (Tr. 18, pp. 336) He also proposed that there be no return allowed on the unamortized balance of the deferred costs. The purpose of the 26-year amortization period in conjunction with no return on the unamortized balance is to create a 50%-50% sharing of the deferred coal ash costs between ratepayers and shareholders.

Among the adjustments recommended by witness Maness was the calculation of a return on deferred coal ash expenditures between January 1, 2015, and January 31, 2018, using a mid-month cash flow convention, rather than the beginning-of-month convention used by the Company. Witness Maness testified that the Company had used a return calculation methodology that accrued a return for each month assuming that all cash flows during the month occurred at the very beginning of the month. Because he felt this assumption to be unrealistic, he made an adjustment to instead use a mid-month cash flow assumption, which essentially treats the cash flows in each month as being experienced throughout the month. (Tr. Vol. 18, p. 308)

Additionally, witness Maness added a return on deferred coal ash expenditures from September 2017 through January 2018, to bring the total balance up to the expected effective date of the rates approved in this proceeding. He testified that the Company had updated its proposed balance of deferred coal ash management costs, with an accrued return, through August 2017. However, the rates in this proceeding are not expected to go into effect until February 1, 2018. Therefore, in order to capture all of the costs, including return, related to the January 2015 - August 2017 underlying coal ash costs, he added the return accumulated on the principal amount through January 2018. (Tr. Vol. 18, p. 307)

Witness Maness recommended three major[1] adjustments to the amount of coal ash management costs subject to deferral. (Tr. 18, pp. 304-05) First is the removal of $80.5 million on a system basis, pursuant to witnesses Garrett and Moore's recommendation related to unnecessary costs for removal of coal ash from the Sutton plant to the Brickhaven site. Second is the removal of $45.6 million on a system basis, pursuant to witnesses Garrett and Moore's

---

[1] This amount excludes any fines, penalties and other unrecoverable costs incurred by the Company. (Tr. Vol. 6, p. 122.)

recommendation related to unreasonable costs for coal ash processing at the Asheville plant. This amount was reduced to approximately $29 million in Public Staff supplemental testimony. (Tr. 18, p 335) Third is the removal of $6.7 million on a system basis, pursuant to the Lucas recommendation related to costs for extraction wells and treatment of contaminated groundwater. In addition, witness Maness noted that recovery of certain expenditures incurred in the 2015 and 2016 timeframe should be provisional because, as noted in the testimony of witness Lucas, the reasonableness of those expenditures is subject to pending legal determinations. (Tr. Vol. 18, p. 303) For all the foregoing adjustments, witness Maness was implementing, for accounting purposes, the recommendations sponsored by other Public Staff witnesses.

For the "equitable sharing" adjustment, witness Maness provided the substantive support for the recommendation, in addition to the support provided by witness Lucas. (Tr. Vol. 18, pp. 308-16) He testified that the five-year amortization period proposed by DEP was too short for the magnitude and nature of the Company's coal ash costs. (Tr. Vol. 18, p. 308) He advocated a 26-year amortization period, with no return on the unamortized balance, because the result would create an equal sharing of responsibility for coal ash costs between ratepayers and shareholders. He recommended the 50%- 50% equitable sharing for all the January 2015 through August 2017 coal ash costs deferred by the Company, except for costs that were the subject of disallowance recommendations as noted in the preceding paragraph.

Witness Maness provided two reasons for his equitable sharing recommendation. (Tr. Vol. 18, p. 309) First, as addressed in more detail by witness Lucas, "the extent of the Company's failure to prevent environmental contamination from its coal ash impoundments, in violation of state and federal laws, supports ratemaking that leaves a large share of the costs for DEP shareholders to pay." Second, there is ample support in prior Commission orders and case law for equitable sharing: past cases involving costs of abandoned nuclear construction and for environmental cleanup of manufactured gas plant facilities resulted in costs being shared between ratepayers and shareholders.

In terms of legal support for his recommendation, witness Maness noted that in State ex rel. Utilities Com. v. Thornburg, 325 N.C. 463, 385 S.E.2d 451 (1989), the North Carolina Supreme Court upheld the equitable sharing of nuclear abandonment costs through an amortization over a period of years with no return on the unamortized balance. A similar result was ordered for environmental costs incurred by Public Service Company of North Carolina, in connection with cleanup of manufactured gas plants, in Docket No. G-5, Sub 327 (1984). (Tr. Vol. 18, pp.310-13)

Witness Maness sought to distinguish the 2016 DNCP rate case, where the Public Staff did not propose an equitable sharing of coal ash costs and reached a settlement with that utility. (Tr. Vol. 18, pp. 315-16) He stated that the magnitude of costs is one reason for the different recommendation, and the paid to date system costs for coal ash in the DNCP case were only about 19% of the paid-to-date system costs for DEP. He further pointed out that the stipulation in the DNCP case made clear that the amortization of future CCR expenditures would be decided on a case-by-case basis.

Finally, witness Maness recommended that DEP be allowed to defer coal ash management costs incurred after August 31, 2017, into an ongoing regulatory asset/liability. He recommended that DEP be allowed to accrue a return on coal ash costs accumulated in the regulatory asset post-August 2017. The return would be the Company's net of tax rate of return, net of associated accumulated deferred income taxes. Any disallowances, and any equitable sharing through amortization with no return, would be determined in the next DEP general rate case for the coal ash costs deferred to the regulatory asset. Witness Maness opposed the Company's proposal of a "run rate" of approximately $129 million for ongoing rate recovery of estimated future coal ash costs. He testified that the run rate could make future equitable sharing of the costs of coal ash much harder to achieve. He conveyed advice of counsel that any attempt to achieve equitable sharing in the run rate by reducing it to recover only part of the coal ash expenses would be open to legal challenge. (Tr. Vol. 18, pp.316-18)

7. <u>Company Witnesses – Rebuttal Testimony</u>

<u>Kerin</u>

Company witness Kerin's rebuttal testimony responded to the direct testimony of Public Staff witnesses Garrett and Moore and CUCA witness O'Donnell. Witness Kerin noted that witnesses Garrett and Moore conducted a thorough and principled analysis of the costs that DEP incurred to comply with the CCR Rule and CAMA, and he agreed with the majority of their conclusions. He testified further, however, that based on a complete review of the applicable facts, including several overlooked key facts and sets of information, he opposed witnesses Garrett and Moore's suggested disallowances of the Company's coal ash disposal costs. (Tr. Vol. 20, pp. 30-32, 56.)

First, he disagreed with their conclusion that DEP could have built an on-site landfill at the Sutton site in place of the arrangement that DEP has with Charah, Inc., to transport CCRs to the Brickhaven Mine when DEP first started moving coal ash from the site, and with the associated $80.5 million suggested disallowance. Witness Kerin explained that DEP would have been unable practically and in compliance with CAMA to build an onsite landfill at Sutton under the timeframes witnesses Garrett and Moore suggested. He also maintained that, in his view, the lack of any limitation on the moratorium with regard to the Asheville and Sutton existing basins in the statute indicated the General Assembly's intent that DEP was prohibited from constructing a CCR landfill within the areas formerly used for storage coal ash. He also discussed additional regulatory limitations that existed in 2014 and 2015 regarding the construction of CCR landfills in the footprint of existing CCR surface water impoundments. Witness Kerin also explained how witnesses Garrett and Moore made incorrect assumptions concerning the Company's ability to permit and construct a CCR landfill using a "perfect world" scenario without considering the inherent uncertainty of any type of landfill, especially a CCR landfill, particularly during the regulatory and political environment that existed in 2014. He identified reasons DEP should not have started permitting the design for an on-site landfill at Sutton in June of 2014 as witnesses Garrett and Moore suggest. (Tr. Vol. 20, pp. 32-41, 56.)

Finally, with regard to Sutton, witness Kerin explained why the two landfill liner components that witnesses Garrett and Moore excluded from their hypothetical cost calculation are required for this location and were prudent to include in the new landfill design. (<u>Id.</u> at 50-51.) Witness Kerin testified that the unique location of the newly constructed Sutton landfill, being immediately adjacent to the existing coal ash surface impoundments, required use of the liners to effectively monitor the new landfill. The additional liners are necessary for the new CCR landfill design to be able to distinctly monitor the landfill's performance separate and apart from any influence that the adjacent older coal ash basins may be having, both now and in the future. Otherwise, it would be difficult to discern if the new landfill liner system was operating properly (or leaking), or whether groundwater monitoring wells around the landfill were actually detecting an effect from the adjacent coal ash basins.

Witness Kerin also disagreed with Garrett and Moore's conclusion that DEP could have built an on-site landfill at Asheville site rather than contract with Waste Management, Inc. to transport CCRs to an off-site location and the associated $45.6 million suggested disallowance. He testified that the issues that affected the Company's decisions with regard to Sutton, discussed above, also applied to the Asheville site and would similarly have made an on-site landfill option infeasible. He explained that in addition, while the Company had previously—as early as 2007— researched CCR landfill construction at Asheville, CAMA and the Mountain Energy Act of 2015 changed the technical feasibility of an on-site CCR landfill, giving the short time period to replace the coal-fired generation by 2020, and close both coal ash basins by 2022. (Tr. Vol. 20, pp. 33, 42-44, 56-57.) He also disagreed with the quantity of coal ash excavated and transported off site that Garrett and Moore used in its analysis of Asheville, which does not account for over 500,000 tons of coal ash. He testified that the price per ton for coal ash disposal that DEP paid at the Asheville site, reflected in the all-in blended contract rate DEP had for the initial scope of work, was reasonable, and that with the benefit of experience the Company was able to negotiate a more favorable all-in rate in December 2016. Witness Kerin therefore recommended that, if the Commission does find the initial all-in rate to be excessive, a disallowance of approximately $9.5 million could be justified in lieu of the O&M disallowance of approximately $14 million (which witness Kerin calculated after adjusting for the proper coal ash amount). Witness Kerin noted that witnesses Garrett and Moore received information from DEP in response to multiple questions that asked for coal ash quantities at different times and in different ways. He explained each of the variations in coal ash amounts contained in witnesses Garrett and Moore's Exhibit 5. (Tr. Vol. 20, pp. 44-46, 57.)

Witness Kerin addressed the concerns that Garrett and Moore raised with respect to potential for costs to be imprudent in the future if these certain conditions arise. First, witness Kerin testified that potential fulfillment costs related to the Brickhaven and Colon mines are common practice for contracts that require a contractor to develop some large infrastructure to perform a needed service, and that the fulfillment fee was negotiated to fairly and reasonably in acknowledgement of Charah's risk exposure. Second, witness Kerin noted with regard to future water treatment costs that DEP has increasingly accurate cost estimates for each site as its plans develop, on balance water treatment costs are decreasing, and DEP does not object to the Commission and interested stakeholders tracking these costs as they develop. Third, witness Kerin stated that DEP will seek variances to any deadlines, as applicable, where doing so would be in the best interest of customers, and noted that he reads G.S. 130A-309.215 to mean that DEQ's variance authority applies equally to the closure provisions for H.F. Lee, Cape Fear, and Weatherspoon as to other sites. Finally, witness Kerin noted that DEP is in the later stages of contract negotiation for the sale of processed coal ash and expects to have an executed agreement by March 2018, and the first beneficiation unit that witnesses Garrett and Moore are concerned about will come online in late 2019. (Tr. Vol. 20, pp. 33, 47-50, 57.) Also with regard to beneficiation, he explained that DEP identified the Buck, H.F. Lee, and Cape Fear sites for beneficiation as providing the best economic value for customers while complying with CAMA, and that the Company entered into an agreement for Weatherspoon as well but the cement companies could not take enough coal ash to qualify that site under CAMA. (Id. at 51-52.)

Witness Kerin also testified that CUCA witness O'Donnell's analysis and recommendation of a 75% disallowance of the Company's coal ash costs relies on multiple analytical flaws that are fatal to his conclusion. Specifically, witness Kerin disagreed with witness O'Donnell's conclusion that the national comparison of CCR assets retirement obligation, or ARO, amounts shows that the Company's ARO is overstated by 75%, and enumerated 22 factors that he states witness O'Donnell does not appear to have considered, which witness Kerin explained must be accounted for in order to seriously attempt this type of analysis. Witness Kerin recommended that the Commission consider the reasonableness of the Company's ARO amount on its own merits, based on the facts of this case, and without regard to witness O'Donnell's proposal. (Tr. Vol. 20, pp. 52-55, 58.)

Wright

On rebuttal, Company witness Wright testified to several issues related to the recovery of costs associated with coal ash remediation expenses raised in the testimonies of Public Staff witnesses Lucas and Maness, AGO witness Wittliff, and CUCA witness O'Donnell. He stated that, overall, the theories underlying these witnesses' recommended disallowances of these costs are unfounded, do not justify disallowance, and should be rejected by the Commission. (Tr. Vol. 20, pp. 127-28, 170.)

Witness Wright first disagreed with Public Staff witness Lucas' recommendation to disallow 50% of the Company's remaining coal ash costs after accounting for certain other disallowances that he and Public Staff witnesses Garrett and Moore recommend. Witness Wright stated that this recommendation does not align with the appropriate regulatory standard for denial of cost recovery, including recovery of environmental compliance costs, which he explained is a finding that specifically identified costs are imprudent or unreasonable. He noted that witness Lucas did not find the Company imprudent for most of the coal ash-related cost, nor did witness Lucas find the Company's costs to be unreasonable. Instead, witness Wright explained, witness Lucas asked the Commission to disallow these costs apparently based on the theory that the Company acted poorly in its historical coal ash disposal methods and on speculation of past or future environmental compliance issues. Witness Wright stated that it is not proper for the Commission to deny cost recovery based on speculation of future findings of violation, or to impose a sharing of costs based upon an undefined culpability standard. (Tr. Vol. 20, pp. 128-29, 131-35, 170-71.)

Witness Wright also explained that the proposed sharing of cost is also inconsistent with Commission precedent and with the Public Staff's own position on the recovery of coal ash disposal cost in Dominion's 2016 base rate case. In that case, he recalled, Dominion requested a recovery of CCR Rule compliance costs up to and through 2016. He explained that those expenditures included closure and related costs for the Chesapeake Energy Center, even though a court found past violations of the Clean Water Act at this location. He stated that the Commission concluded that the recovery of these costs, as provided in the stipulation entered into in that case by the Public Staff and Dominion, was just and reasonable. He stated his opinion that the CCR cost recovery methodology applied in the Dominion case was correct and should be applied in the same way for DEP. (Tr. Vol. 20, pp. 135-37, 141-42, 171-72.)

Witness Wright also testified that the Public Staff's suggestion that the Commission's treatment of abandoned nuclear plants supports its proposed cost sharing proposal is not appropriate, because abandoned nuclear plant costs are not comparable to CCR costs. He explained that the Commission has found abandoned nuclear cost not to be used and useful, and thus not eligible for rate-based treatment. In contrast, he noted, the coal plants associated with these costs and the related coal ash disposal facilities have been used and useful in providing low-cost, reliable power to North Carolina customers for more than 70 years, and will continue to be used and useful. He stated that this is consistent with the recent Dominion case, where the Commission found that CCR repositories were and continue to be used and useful, were therefore not abandoned, and were therefore eligible for recovery through amortization and a return on the unamortized balance, similar to other types of used and useful property. (Tr. Vol. 20, pp. 137-38, 142-44, 172.)

Witness Wright went on to state that the Commission's treatment of environmental cleanup of manufactured gas plants also does not support the Public Staff's proposed cost sharing, and referred to his direct testimony that MNG plant costs differ from coal ash disposal costs, both in terms of the time that elapsed between the actual usage of the facility and the environmental-related cost recovery, and in terms of ownership. In addition, he noted that MNG facilities, like abandoned nuclear plants, were found not to be used and useful. He noted further that there is no need to rely on a 23- year-old cost recovery example from a different industry, dealing with assets last used more than 70 years ago, when the best example of the Commission's treatment of coal ash disposal costs can be found in the Dominion case that was decided one year ago. (Tr. Vol. 20, pp. 138-40, 173.)

Witness Wright also testified that the 28 (26)-year amortization period proposed by the Public Staff is not justified either by their cost sharing theory, or by defining these costs as being extremely large. He explained that adoption of this proposal would undermine the basic cost of recovery principles embodied in North Carolina utility regulation and would subject utilities to an unknowable and ill-defined cost recovery standard. He explained further that it could also result in a perception of the state's utilities as riskier, leading to higher cost of capital and cost of service. (Tr. Vol. 20, pp. 140-41, 144-45, 173-74.)

Witness Wright disagreed with witnesses that claimed that Duke Energy substantially caused the CCR Rule and CAMA and that, therefore, all costs incurred to comply with these requirements should be disallowed. He referenced his direct testimony that while the timing of CAMA may have been influenced by the Dan River accident, he cannot conclude that the North Carolina legislature would have adopted a different substantive law without Dan River. He noted in addition that there are numerous examples of North Carolina lawmakers and regulators adopting environmental policies, not only specific to this state, but stricter than national or neighboring states' policies. He also noted that state-specific actions to address CCRs have been adopted in a number of jurisdictions. Based on all these factors, he opined that North Carolina likely would have adopted a state-specific CCR regulation regardless of the Dan River accident. (Tr. Vol. 20, pp. 145-50, 174.)

Witness Wright also expressed his opinion that CAMA was not intended to be a punitive law. He noted that CAMA does not contain any punitive limitation on cost recovery except for the provision for certain spills to surface water. He also noted that attempts to further restrict coal ash disposal cost recovery under this law have been tried three times, but in all three cases, amendments or laws to disallow cost recovery were defeated. He stated that the General Assembly has shown that it will, when it wants to, adopt specific cost recovery restrictions with other state environmental laws, as exemplified by the Clean Smokestacks Act. In contrast, he explained, the legislature's affirmative decision not to disallow prudently-incurred costs related to CAMA, and not to adopt subsequent proposals to disallow such costs, indicates that CAMA was not meant to be punitive with regard to cost recovery, but rather intended to leave cost recovery determinations to this Commission's oversight and sound regulatory policy. (Tr. Vol. 20, pp. 151-53, 174 -75.)

With regard to coal ash litigation costs, witness Wright reiterated that DEP has excluded from its recovery request all fines, penalties, and fees related to the Dan River accident. (Tr. Vol. 20, 164-65.) He also opined, however, that witness Luças' apparent position that all of the Company's costs to defend lawsuits should be disallowed recovery, regardless of whether the Company is ultimately found liable or not, is not supported by precedent or sound regulatory policy. First, the Glendale Water case does not support this theory. In addition, he noted that the Commission has recognized that settlements and litigation defense costs, when reasonable and prudent, are recoverable costs, and that the Commission and the Public Staff have also recognized that settlements are beneficial. He concluded that the Public Staff's apparent position in this case, that, if DEP did not commit violations, it should not settle, is inconsistent, not only with public policy but also with the positions it has previously taken with regard to settlements. With respect to potential settlements of coal ash disposal methods at the Mayo and Roxboro facilities, he noted that this position also leaves the Company in an untenable position, since witness Lucas testifies both that DEP should spend whatever amount is required in order to never have a groundwater issue, and that, if in the course of any settlement as to Mayo and Roxboro, DEP agreed to a coal ash remediation methodology and costs beyond the minimum required by law, those costs should be disallowed, even if that methodology would be more likely to prevent future groundwater issues. (Tr. Vol. 20, pp. 153-61, 175-77.)

Witness Wright also addressed witness Lucas' argument that North Carolina's 2L rule imposes strict liability, such that the Company must take any action, regardless of either cost or industry practices, to avoid or cure a violation of this rule, and his contention that, because water extraction and treatment required under the CCR Rule and CAMA have a curative effect on past alleged 2L violations, the cost of those activities, \$6.7 million in this case, are not recoverable. Witness Wright testified that there is no evidence that the 2L rule was intended as strict liability and that, regardless, the standard for cost recovery is reasonableness and prudency, not strict liability. He stated that adoption of the Public Staff's position would effectively require that, with any alleged or potential violation, the utility would be expected to immediately undertake remediation, regardless of the expense, and potentially even nonstandard, experimental environmental compliance projects that could not only be costly, but ineffective. (Tr. Vol. 20, pp. 161-62, 177.)

While witness Wright agreed with witness Lucas that DEP could, in theory, have undertaken coal ash disposal projects above and beyond any legal requirements or industry standards, he noted that those costs would have been subject to high scrutiny, and the Company likely would have been accused of gold-plating. More generally, he explained that it is not appropriate to apply the benefit of hindsight to judge whether expenditures that DEP made under the circumstances known at the time were reasonable. (Tr. Vol. 20, pp. 163-64, 177-78.)

For similar reasons, witness Wright also disagreed with the Public Staff's recommendation of provisional cost recovery for coal ash expenditures prudently incurred from January 2015 through August 2017, based on the argument that the appropriateness of such recovery may depend on the outcome of legal determinations. He noted first that this would appear to be retroactive ratemaking. He also stated that the standard is that the utility makes the best possible decisions on expenditures based on the information available at the time, and determinations of the reasonableness and prudency of these costs should not depend on future outcomes of legal proceedings but what was known or knowable at the time. (Tr. Vol. 20, pp. 165-66, 178.)

Witness Wright testified further that the Commission should reject AGO witness Wittliff's recommendation that DEP only be allowed to recover costs required to comply with the CCR Rule, and not any costs related to CAMA. He noted that witness Wittliff neither quantified the disallowance he recommends, nor offered any regulatory policy or logical support for his position, and stated that his proposals are unsupported by good regulatory policy, precedent, or logic. (Tr. Vol. 20, pp. 167-68, 178-79.)

Finally, witness Wright opined that the Commission should reject CUCA witness O'Donnell's recommendation that 75% of the Company's environmental compliance costs should be disallowed based on a comparison of the alleged national asset retirement obligations, or ARO, amounts relating to CCRs. He stated further that the Commission should reject any disallowance, especially one as substantial as the amount witness O'Donnell recommends, that is not based on facts and evidence that have been proven and verified as mathematically correct and substantially significant, and that to do otherwise would constitute poor regulatory policy and would bearbitrary. (Id. at 168-69, 179.)

At the hearing, witness Wright explained during cross-examination by counsel for the Sierra Club the decision tree that the Commission uses to determine whether costs are recoverable and how that recovery will occur. He explained that the first question is whether the costs were reasonable and prudent in providing service to ratepayers, and, if so, the next question is whether they were used and useful, and, if used and useful, the last stage is to consider what outcome would be fair and equitable. He explained further that it is at the last stage where the Commission has leeway to consider different rate designs to achieve a fair and equitable result. He stated that the Public Staff's equitable sharing proposal does not follow this decision tree, but attempts to impose a splitting of costs with no consideration for reasonableness and prudence, etc. He noted that that is a cost recovery approach that he has not seen in his experience. (Tr. Vol. 20, pp. 186-88.)

Witness Wright testified in response to questions by counsel for the Public Staff that the fact that DEP has an exceedance or even a violation is not indicative or necessarily tied to the recoverability of costs DEP is seeking in this case. He explained that if DEP has a violation and admitted wrongdoing, or an adjudicated proceeding determined there was wrongdoing, then those costs or fines should not be recovered. He testified that that is different from DEP's having to now comply with new standards; in terms of costs associated with new obligations, he considers those long-term compliance costs. (Id. at 209-11.) In response to cross-examination regarding this case as compared to the 2016 Dominion case, witness Wright clarified that he believes the run rate that DEP has proposed in this case is reasonable. (Id. at 212-13.) Witness Wright also clarified that references to the Dan River spill in the final CCR Rule indicate that the EPA cited that event as evidence that the rule was needed, not as a factor that changed the substance of the rule itself. He testified further that references to Dan River in the initial version of CAMA support his position that Dan River influenced the timing but not the substance of that law. (Tr. Vol. 21, pp. 14-17.) He also noted that, while the CCR Rule does not require mandatory excavation, based on his discussions with witness Kerin, witness Wright believes that site studies and engineering analysis that would have been done in support of CCR led to the same closure methodologies that CAMA requires. (Id. at 18-19.) Finally, witness Wright clarified that the Public Staff's position, that DEP should have spent any amount required to prevent any groundwater contamination years ago and risk disallowance of those costs, but also that DEP should not be able to recover the costs it has now prudently incurred to comply with new laws and regulations, is inconsistent. (Id. at 33-35.)

Wells

Company witness Wells testified that DEP's compliance record with respect to NPDES permits has been exemplary. He stated that the Company has consistently complied with the terms of its NPDES permits over the years, and that, of well over 70,000 data points, it has had fewer than 200 permit violations, which is less than one half of 1% at all seven of its facilities in the last 10 years. Specifically with regard to Asheville, Cape Fear, H.F. Lee, Sutton, Roxboro, and Weatherspoon plants, witness Wells noted that DEP has had no more than 20 NPDES permit exceedances during this time frame. He stated that, when compliance issues have arisen at individual plants, DEP has addressed those issues with regulators. (Id. at 62-63, 88-89.)

Witness Wells continued that, in his direct testimony and original Exhibit 5, witness Lucas asserted that DEP has 2,172 NPDES permit violations over the past 10 years. He noted that witness Lucas included in that total groundwater data associated with reported monitored exceedances of groundwater quality standards. Witness Wells emphasized, however, that groundwater data are not permit violations. Rather, he explained, these permits require the Company to monitor groundwater in compliance with a monitoring plan and report the data to the DEQ. He explained that a monitored exceedance of a groundwater standard is not a permit violation, and DEQ has never issued DEP a notice of violation identifying groundwater data as the basis of a permit exceedance. He concluded that the Public Staff has conflated these two concepts. (Id. at 64-66, 74-76, 89.)

Witness Wells explained further that exceedances of groundwater standards and the existence of seeps in the vicinity of the Company's coal ash basins do not indicate mismanagement or poor compliance programs. He stated that the existence of groundwater exceedances at or beyond the compliance boundaries at DEP sites is rather a function of where these sites are on the timeline of groundwater assessment and corrective action under modern laws that have changed the way unlined basins are viewed. He testified that the Company's decision to use unlined basins to treat coal ash transport water was reasonable and consistent with the approach employed across the power industry at the time that the basins were built. He noted that each DEP site had been properly and legally operating an unlined basin for at least a decade before the adoption of any regulatory requirements related to groundwater corrective action. He noted further that as requirements changed over time, DEP has taken every action required by DEQ's groundwater rules, and later by the CAMA and the CCR Rule, to address groundwater impacts as they have been identified. (Id. at 66, 76-77, 91-92.)

For similar reasons, witness Wells also disagreed with the Public Staff's suggestion that any exceedance or violation of water quality regulations, no matter how minor or how long ago, leads to the denial of cost recovery for any activity that acts to "cure" the impacts of the violation. In addition to reiterating that not all exceedances of the 2L standards amount to a violation that requires corrective action under the 2L rules, witness Wells stated that even when an exceedance requires corrective action, the groundwater rules do not treat the exceedance the same way as, for example, the Clean Water Act treats an exceedance of an NPDES permit limit. When the latter is violated, he explained, the permittee is immediately subject to an NOV and penalty, and must ensure the next discharge complies with the permit limit or risks a new NOV and escalating penalty. He stated that in those circumstances, it would be reasonable to say that allowing the violation to continue without addressing it is mismanagement. He contrasted this with groundwater standards, under which an exceedance does not immediately result in an NOV and penalty. Instead, he explained the owner/operator must report the exceedance and work with the DEQ to determine whether it was due to permitted activity, assess the extent of the exceedance, and undertake corrective action. Any newly measured exceedances do not require a further site assessment and do not result in additional or escalating penalties, but are actually expected as additional assessment prior to corrective action is conducted. He testified that the 2L rules' correction action provisions are deliberately designed around the idea that older facilities, built before liners were a regulatory obligation, were likely to have associated groundwater impacts, that such impacts were not the result of regulatory noncompliance, and that they should be addressed in a measured process. He concluded that compliance with this process is not mismanagement and should not be held against DEP with respect to cost recovery. (Tr. Vol. 21, pp. 79-80.)

Witness Wells noted at the hearing that, after he filed his rebuttal testimony, witness Lucas filed supplemental testimony that acknowledged the distinction between exceedances and violations. Witness Wells noted that, in his supplemental testimony, witness Lucas admitted that most of the instances of what he had called NPDES permit violations in his original Exhibit 5 are not NPDES permit violations, and submitted a Revised Exhibit 5 that removes groundwater exceedances from the total number of NPDES permit violations. Witness Wells stated that this change reduced the total number of witness Lucas' alleged permit violations to 458, a reduction of about 79%. (Id. at 89-90.)

Witness Wells continued that, of the remaining 458 allegations, 199 are listed as occurring at the Mayo plant, which the Company acted quickly to address by installing the Zero Liquid Discharge system. He noted that the other 255 alleged violations listed in witness Lucas' revised Exhibit 5 are new alleged failure to monitor events. As with the original Lucas Exhibit 5, he explained, this number of failure to monitor violations is inaccurate and significantly overstated. He stated that the vast majority of these alleged violations were reviewed by DEQ staff at the time of the events and determined not to be violations. He also stated that the documents relied on by witness Lucas clearly indicate where DEQ made that determination that no action was warranted, but that witness Lucas did not fully incorporate that information into his evaluation. He concluded that removing the Mayo specific events from witness Lucas' corrected 458 number leaves only four permit exceedance violations for the other six DEP sites in the last 10 years, according to witness Lucas' revised exhibit. (Id. at 90.)

Witness Wells noted further that after he filed his rebuttal testimony, witness Lucas revised his Exhibit 6 to also distinguish between groundwater exceedances and groundwater violations. Witness Wells explained that only exceedances beyond the compliance boundary and above background concentrations required further action, and that DEQ is currently in the process of finalizing background levels for the DEP basins. Witness Wells pointed out that witness Lucas appeared to have removed background wells and invalid samples from his original Exhibit 6, and that the Revised Exhibit 6 reduced the number of alleged violations for 12 of the 23 parameters, reducing the total approximately 65%. He pointed out also, however, that these changes still do not take into account consideration of the fact that CAMA requires comprehensive site assessments of groundwater, which increased the number of monitoring wells and the number of samples to accurately characterize the site. (Id. at 21.)

In his rebuttal, witness Wells disagreed with witness Lucas' apparent contention that DEP should have moved well ahead of accepted science, regulatory requirements, and industry practice and should have begun taking measures to prevent any and all groundwater quality issues without regard to the cost of those measures or whether sufficient and proven technology existed at the time to address the conditions at the site. He opposed the suggestion that DEP only engaged in comprehensive groundwater monitoring and remediation when forced to do so by CAMA and other developments. He explained that the Company began monitoring groundwater at Sutton in 1984, Roxboro in 1987, Weatherspoon in 1990, and the remaining sites in or around 2006. He noted that, in 2011, DEQ prescribed a process to be undertaken by DEQ and utilities upon the identification of a groundwater exceedance near a coal ash pond, which included performance of an assessment to determine the cause of the exceedance and, as necessary, develop a Corrective Action Plan consistent with North Carolina groundwater rules. He stated that under that process, only after a utility failed to undertake corrective action when directed to do so would DEQ consider pursuing enforcement. He stated that at all times DEP has cooperated with the department in this corrective action process and continues to do so to this day. (Tr. Vol. 21, pp. 67-73, 92- 93.)

Witness Wells also testified that North Carolina's groundwater laws were not intended, as witness Lucas contends, to be punitive. He explained that, for historical sites such as those at issue in this case, this state's groundwater regulations and the DEQ's practices and policies are focused on environmental protection rather than culpability, that the required corrective action is based upon science and not an assessment of wrongdoing. He stated that, in evaluating Corrective Action Plans, DEQ considers numerous factors, including the extent of any threat to human health, impact on the environment, available technology, potential for natural degradation of the contaminants, and cost and benefits of restoration. He cited the example that the groundwater exceedances at the Sutton site were not the result of mismanagement. He stated that the extraction and treatment costs witness Lucas recommends for disallowance relate to work that DEP agreed to accelerate and would be required in the normal course as a part of the groundwater corrective action under the CCR Rule and CAMA. (Id. at 73-74, 93-94.)

At the hearing, in response to questions from counsel for the Sierra Club, witness Wells characterized the 2L rule as a process that is set up to establish groundwater standards around the basins, that recognizes that there is potential for impact to groundwater beneath the basins, and that established compliance boundaries 500 feet from the waste boundaries. He explained that the 2L rule structure is that upon detection of a contaminant above a standard or above background at the compliance boundary, one proceeds to the next step, assessment and, depending on the assessment, proceed to corrective action. He noted that the rule is not, particularly with historical, lawfully designed sites, intended to be punitive. He stated that noncompliance arises if the company fails to take action upon detection, fails to follow the process set forth in 2L. He testified that the policy statement contained at Section 2L.0103 is consistent with that purpose. (Tr. Vol. 21, pp. 102-04.) In response to further questioning, witness Wells clarified that groundwater corrective action plans are conducted in parallel with basin closures, and that the groundwater corrective action plans will consider the various methods of closure to understand those impacts to groundwater. He also noted that, regardless of the closure method that DEP selects, groundwater can always be addressed separately from the closure method. (Id. at 110.)

In his rebuttal, witness Wells also disagreed with witness Lucas that the amount of litigation regarding the Company's coal ash basins suggests that the Company was imprudent in managing coal ash. He opined that the amount of litigation has been driven by nongovernmental organizations that have been pressing for complete excavation of coal ash from all basins across the Southeast. He stated that DEP has appropriately been opposed to this, arguing instead that final closure methods should be dictated by site-specific characteristics based upon science, regulatory policy, and the best interest of our customers. He noted that DEP has resolved such litigation where CAMA made the suit moot and where science and engineering supported closure by excavation, and that the Company continues to vigorously litigate cases where other closure methods are more or equally protective of the environment at less cost. (Id. at 77-78, 94.)

Witness Wells' rebuttal also addressed seeps. He explained that all earthen impoundments seep, and that DEQ's dam safety regulations acknowledge this. He stated that EPA first directed permitting authorities to address seeps in 2010, and at that time, the Company engaged DEQ to determine the appropriate approach to address seeps and began including them in permit applications. He noted that DEQ did not consider seeps to have a significant environmental impact. He also noted that EPA and DEQ did not appear to agree on the appropriate approach to address seeps. He stated that, absent the CCR Rule or CAMA, the existence of seeps in a basin would not on its own automatically trigger basin closure and should not, therefore, impact the Company's ability to recover its CCR environmental compliance costs. He testified that, although closing basins would be one way to address seeps, it would be the most drastic of several possible remedies, and both EPA and DEQ have stated that seeps can be addressed by permitting or rerouting, among other options. (Id. at 81-85, 95.)

Finally, witness Wells disagreed with witness Lucas' suggestion that DEP caused the creation and adoption of the CCR Rule. He testified that the environmental regulatory regime is an ever-evolving body of law, and the EPA engaged in more than two decades of studies before it finally issued a proposed CCR Rule in 2010. Through this process, he noted, the EPA identified 150 cases in over 20 states involving over 25 utilities and government facilities that involved groundwater damage with at least a potential link to coal ash, but determined that immediately closing basins, which would require shutting down operating coal plants, would be more harmful than taking a measured approach. (Id. at 85-87, 95-96.)

At the hearing, in response to questioning by counsel for the AGO and Public Staff, witness Wells explained that previous reports, analyses, and communications regarding how the Company's coal ash basins will be managed indicate that prior to CAMA and CCR Rule the regulatory approach and understanding of groundwater associated with coal ash basins was maturing. For example, he stated that a 2004 report analyzing long term coal ash strategy for the Sutton plant specifically appeared to have been evaluating alternatives for that location given the evolving regulatory scrutiny of coal ash basins and how the Company would manage that and any environmental impacts going forward. Similarly with respect to a 2014 executive order from the governor of North Carolina, which stated that the issue of coal ash storage had not been adequately addressed in the state for decades, he testified to his belief that this statement was not a reflect of any mismanagement or acts or omissions on Duke's part, but of an understanding of the maturity and evolving views of coal ash management throughout the country, and of a recognition that historical designs and management practices needed updating. He also testified that the Company's guilty plea in the federal criminal action was not a reflection of mismanagement of coal ash by the Company as a whole. He acknowledged that the Company took responsibility for the allegations, cooperated with government, and based on the facts at that time at those sites, agreed the Company did not meet its own standards. (See Tr. Vol. 21, pp. 123-25, 145-46.) Witness Wells also noted that the full context of the depositions with DEQ personnel demonstrates the normal cooperative process between the agency and the Company, in which DEQ has final authority. (Id. at 136-39.) In response to questioning from the Commission, witness Wells confirmed that DEP began voluntary monitoring of groundwater in 2006 at facilities where monitoring was not already required. He explained further that the Company was a member of the industry group (Utility Solid Waste Advisory Group) that worked with EPA to address emerging issues, and that as part of that group it agreed to implement groundwater monitoring at these sites and share the results with the EPA. He agreed that the Company considered it reasonable to begin the monitoring at that time even though it was not required, as part of the continued evolution and maturation of the understanding in the industry of environmental impacts of the basins. (Tr. Vol. 22, pp. 30-32.)

In response to questions by the Chairman, witness Wells testified that the testimony and evidence he observed during the hearing confirmed and strengthened his support for the positions contained in his pre-filed testimony. He explained that permit compliance in particular is a very complex, challenging issue, and that the Company's compliance record and his experience with respect to NPDES permit compliance has been outstanding. He noted that out of 70,000 data points on this subject, the evidence shows approximately 20 violations. He noted further to put that number in context that one of those violations was, out of 10 years of sampling at Asheville, one sample exceed the oil and grease limits, at 15.7 ppm vs. 15.0. And that a duplicate sample showed a level of less than 5, but could not be used due to its timing expiring. He explained that this example puts into perspective the violations that have been framed inaccurately during the proceeding. He also noted the response to his rebuttal that suggested that the Company missed sampling, and clarified that all of the 117 missed sampling events at H. F. Lee contained in witness Lucas' revised exhibits were incorrect, that in fact there were no missed sampling events. He explained that, for example, there was a flood event where the plant was in shutdown and there was no flow, and that he could provide similar explanations for each variance event. He noted that the record had so far not been clear on these points. (Tr. Vol. 22, pp. 43-45.)

Commission Determinations

The Commission has reviewed with care the evidence on the issue of CCR remediation cost recovery and the arguments and contentions of the parties. The Commission cannot agree with the ultimate positions of any party. The Commission rejects full recovery advocated by DEP, extensive disallowances advocated by others and the "equitable sharing" concept advocated by the Public Staff.

The Public Staff's Specific Cost Disallowance Proposals

The Commission must undertake a detailed analysis before any costs can be disallowed on the basis of findings of imprudence alone. 1988 DEP Rate Order at 15. The Public Staff undertook such an analysis of the Company's coal ash costs, and came up with three discrete and specific proposed disallowances. Two were presented through witness Lucas: first, $88,000 of legal expense associated with two litigation matters regarding alleged environmental violations, one brought by private parties and one brought by NC DEQ, and, second, approximately $6.7 million in groundwater extraction and treatment costs resulting from a settlement in the DEQ case, which witness Lucas attributes to past violations by the Company of North Carolina's groundwater standards (the "2L Standards"). Third, Public Staff witnesses Garrett and Moore recommended a disallowance totaling $109.8 million relating to the cost of off- site transportation and disposal of coal ash from the Sutton and Asheville Plants, on the grounds that prudence dictated that the coal ash be disposed of in on-site facilities to be constructed rather than being hauled off-site.

Lucas: Alleged Environmental "Violations"

The Public Staff, through witness Lucas, asserts that the rationale for disallowance of the litigation expense and groundwater costs is that these costs flow from "violations" of the law. (Tr. Vol. 18, p. 275.) Witness Lucas cites the Glendale Water case (State ex rel. Utils. Comm'n v. Public Staff, 317 N.C. 26, 343 S.E.2d 898 (1986)) for the proposition that the legal expense should be excluded. (Id.) In that case, the North Carolina Supreme Court held that legal expense associated with a penalty proceeding in which the utility had been found to have violated the law should be excluded. (Id.) Although he does not say so explicitly, the same rationale would apply to witness Lucas's exclusion of the groundwater extraction and treatment costs incurred in a settlement context.

The distinction between the Public Staff recommended adjustment and Glendale Water is that there is no finding in the litigation brought against the Company, or admission by the Company in that litigation, that any "violation" actually occurred. Witness Lucas's testimony that the legal expense and the groundwater treatment cost resulted from any "violation" is based on the "size of the settlements." (Tr. Vol. 18, p. 386.) The settlements referenced by witness Lucas amount in total to $7.25 million – $1.25 million to settle the private litigation, and $6 million to settle the

DEQ litigation.[1] Witness Lucas elaborated: "I made my [disallowance] decision on just the large amount – the millions of dollars of settlements [that] were paid by the Company, and I don't believe that the Company would have made those large settlement sums unless it believed it did have some fault." (Id. at 386-37.)

The Commission determines that the facts in this case and Glendale Water are distinguishable. Disputed matters are settled frequently, for many reasons other than settling parties' underlying view of the merits of the dispute. In this case, for example, the Company and the Public Staff have entered into a Partial Settlement which includes an ROE of 9.9% (versus the Public Staff's recommendation of 9.2%), and a capital structure of 52% equity and 48% debt (versus the Public Staff's recommendation of 50/50). This proposed settlement results in millions of dollars paid by customers over and above the Public Staff's pre-settlement position, but that does not mean that the Public Staff has disavowed its pre-settlement position.

The Commission determines that entering into a settlement does not equate to an admission of guilt or wrongdoing. The North Carolina Rules of Evidence prohibit parties from using the existence of a settlement as evidence of liability.[2] The Public Staff has defended as good regulatory policy the encouraging of reasonable and prudent settlements. In 2016, NC WARN filed a Petition for Rulemaking seeking to require settlements between the Public Staff and utilities to be made open to the public. (Tr. Vol. 20, p. 157); See also In the Matter of Rulemaking Proceeding to Consider Proposed Rule Establishing Procedures for Settlements and Stipulated Agreements, Order Declining to Adopt Proposed Settlement Rules, Docket No. M-100, Sub 145 (Mar.1, 2017) ("Settlements Order"). The Public Staff opposed NC WARN's petition, arguing that public policy favors settlements:

> [T]he Public Staff submits that settlements promote the informal exchange of ideas and information among the parties, the elimination of insignificant or noncontroversial issues ahead of an evidentiary hearing, informed decision making and the efficient administration of justice, especially in the complex matters that are typically before the Commission. Moreover, settlements result in savings to consumers by reducing litigation expenses that would otherwise be recoverable by utilities as a component of the cost of providing utility service.

(Tr. Vol. 20, pp. 157-158; Settlements Order at 3.)

Further, the Public Staff cited to North Carolina case law "touting the benefits of settlements" in business litigation. (Tr. Vol. 20, p. 158; Settlements Order at 3 (citing Knight Pub. Co., Inc. v. Chase Manhattan Bank, N.A., 131 N.C. App. 257, 262 (1998) (Knight)). The Public Staff relied on the principle articulated in Knight that North Carolina "law favors the avoidance of litigation," and a compromise made in good faith "will be sustained as not only based upon

[1] Witness Lucas acknowledges that the settlement amount is not included in the Company's cost of service, and that the Company is not seeking to recover it in rates. (Tr. Vol. 18, p. 277.)

[2] N.C. R. Evid. 408 ("Evidence of (1) furnishing or offering or promising to furnish, or (2) accepting or offering or promising to accept, a valuable consideration in compromising or attempting to compromise a claim which was disputed as to either validity or amount, is not admissible to prove liability for or invalidity of the claim or its amount. Evidence of conduct or evidence of statements made in compromise negotiations is likewise not admissible.").

sufficient consideration but upon the highest consideration of public policy as well." (Tr. Vol. 20, p. 158 (quoting Knight, 131 N.C. App. at 262 (emphasis added) (internal quotations omitted)). The Commission determines that it should not approve a disincentive to settle pending or future lawsuits.

These considerations likewise apply to the groundwater treatment costs witness Lucas seeks to disallow, which are the subject of the settlement agreement between DEQ and the Company (DEQ Settlement Agreement). (See Public Staff Wright Rebuttal Cross- Examination Ex. 7.)[1] The DEQ Settlement Agreement references in its recitals a DEQ "Policy for Compliance Evaluations" promulgated in 2011. It appears from the recitals and their description of that Policy that questions as to whether violations of the state's groundwater standards have occurred. (See DEQ Settlement Agreement, at 3, 4-5.) The recitals also indicate, with the passage of CAMA, that the Company would be required to close its coal ash basins, and that CAMA "dictate[d], in detail a procedure for assessing, monitoring and, where appropriate, remediating groundwater quality in areas around coal ash impoundments in North Carolina ...." (Id. at 3-4.) Further, in the recitals the DEQ acknowledged that the CAMA requirements were "designed to address, and will address, the assessment and corrective action" associated with alleged groundwater contamination. Because CAMA would require the Company to implement certain action, the Commission determines that it was reasonable for the parties to settle irrespective of whether the Company had committed violations of 2L Standards. Had the Company continued to litigate the matter in this circumstance, its actions may have been deemed by the Public Staff and this Commission to be imprudent, with a disallowance of the legal costs incurred in connection with continued litigation disallowed.

Here, the testimony of Company witness Wells is instructive. Witness Wells successfully countered witness Lucas's notion that the Company had experienced 2,172 NPDES permit violations over the past 10 years (See original Lucas Exhibit 5). Witness Lucas reduced the number of the alleged violations in his Supplemental Testimony to merely 458 violations. (Tr. Vol. 16, p. 369). Witness Wells testified that witness Lucas included in that total groundwater violations data associated with reported monitored exceedances of groundwater quality standards. Witness Wells testified that groundwater data are not permit violations. Rather, he explained, thesepermits require the Company to monitor groundwater in compliance with a monitoring plan and report the data to the DEQ. He explained that a monitored exceedance of a groundwater standard is not a permit violation, and that DEQ has never issued DEP a notice of violation identifying groundwater data as the basis of a permit exceedance. He concluded that the Public Staff has conflated these two concepts. (Tr. Vol. 21, pp. 64- 66, 74-76, 89.) The Commission notes however that witness Wells' testimony here appears inconsistent with the Company's guilty pleas in federal criminal court.

Witness Wells argued that DEP's compliance record with respect to NPDES permits has been exemplary. He stated that the Company has consistently complied with the terms of its NPDES permits over the years, and that, of well over 70,000 data points, it has had fewer than 200 permit violations, which is less than one half of 1% at all seven of its facilities in the last 10 years. Specifically with regard to Asheville, Cape Fear, H.F. Lee, Sutton, Roxboro, and Weatherspoon plants, witness Wells noted that DEP has had no more than 20 NPDES permit

[1] However, they do not apply to DEP's representations in the federal district criminal court proceeding where no settlement and where admissions of liability were made.

exceedances during this time frame.[1] He stated that, when compliance issues have arisen at individual plants, DEP has addressed those issues with regulators. (Id. at 62-63, 88-89.) Witness Wells argued further that impacts to the groundwater surrounding coal ash basins are an expected result of using unlined basins and are not the result of any mismanagement. At the time they were built – between 1956 and 1985 – unlined basins were consistent with the industry standard and considered by the EPA to be the best available control technology. (Tr. Vol. 21, p. 67.) In 1984, when the predecessor to DEQ promulgated the corrective action provisions of the 2L Standards, it acknowledged that the groundwater surrounding many existing permitted facilities was likely to exhibit some exceedances of the 2L Standards through no fault of the facility owner. (Id.) As stated above, the Commission deems this testimony instructive.

Witness Wells also disagreed with the Public Staff's suggestion that any exceedance or violation of water quality regulations, no matter how minor or how long ago, leads to the denial of cost recovery for any activity that acts to "cure" the impacts of the violation. In addition to reiterating that not all exceedances of the 2L standards amount to a violation that requires corrective action under the 2L rules, witness Wells stated that even when an exceedance requires corrective action, the groundwater rules do not treat the exceedance the same way as, for example, the Clean Water Act treats an exceedance of an NPDES permit limit. When the latter is violated, he explained, the permittee is immediately subject to an NOV and penalty, and must ensure the next discharge complies with the permit limit or risks a new NOV and escalating penalty. He stated that, in those circumstances, it would be reasonable to say that allowing the violation to continue without addressing it is mismanagement.

He contrasted this process with groundwater standards, under which an exceedance does not immediately result in an NOV and penalty. Instead, he explained, the owner/operator must report the exceedance and work with the DEQ to determine whether it was due to permitted activity, assess the extent of the exceedance, and undertake corrective action. Any newly measured exceedances do not require a further site assessment and do not result in additional or escalating penalties, but are actually expected as additional assessment prior to a requirement to take corrective action. He testified that the 2L rules' correction action provisions are designed around the idea that older facilities, built before liners were a regulatory obligation, were likely to have associated groundwater impacts, that such impacts were not the result of regulatory noncompliance, and that they should be addressed in a measured process. He concluded that compliance with this process is not mismanagement and should not be held against DEP with respect to cost recovery. (Tr. Vol. 21, pp. 79-80.)

Witness Wells further argued, persuasively in the Commission's view, that the groundwater extraction and treatment activity that DEP performed pursuant to the DEQ Settlement Agreement merely accelerated work that would have been required under CAMA in any event. (Id. at 76.) Although CAMA borrows heavily from the 2L Rules, including by incorporating the substance of its corrective action requirements, one key difference between the two laws is that CAMA's groundwater assessment and corrective action provisions are triggered by exceedances – not violations – of the 2L groundwater standards. In other words, unlike the 2L Rules, CAMA requires

[1] In reviewing witness Lucas' revised Exhibit 5, witness Wells concluded that if one were to remove the Mayo-specific events, Lucas' exhibit only indicates 4 permit exceedance violations for the other six DEP sites in the last 10 years.

utilities to perform groundwater assessment and corrective action for all identified exceedances of the 2L groundwater[1] standards regardless of whether the exceedance amounts to a violation of the applicable groundwater standard.

The Commission determines that there is insufficient evidence that the Company would have had to have engaged in any groundwater extraction and treatment activities absent the obligations imposed upon it by CAMA and/or the CCR Rule.

The Commission determines that the limitations of witness Lucas's approach are demonstrated by his inability to answer with any specificity on cross-examination: "From 1920 until 2014, with respect to ... [the] Company's ash basins in this state, what should we have done differently and when should ... [it] have done it?" (Tr. Vol. 19, p. 35.) His response essentially was that "Somewhere along the line the Company should have taken some kind of action to not contaminate groundwater." (Id. at 36.) But the kinds of actions he appears to have favored – such as lining ash ponds when this was contrary to standard practice, or creating dry coal ash basins when for the most part the Company's industry peers were sluicing coal ash into wet basin impoundments, would have cost money which would have been charged to customers, or (b) would have left the Company open to credible claims of "gold-plating," and therefore cost disallowance, which would have prevented the Company from moving forward with these suggested improvements in the first place. Witness Lucas and the Public Staff fault the Company for not taking steps that were not in accord with steps most of the industry was following, but at the same time disregarding responsibility of paying for that which they – in 20/20 hindsight – wish the Company had done.

No party disputes the reasonableness of the amount of groundwater assessment and treatment costs the Company seeks to recover in rates; rather the dispute relates to the fact the groundwater assessment and treatment costs were performed pursuant to a settlement agreement with DEQ. The testimony of witnesses Kerin and Wells demonstrates that these costs – amounting to $6,693,390 – were reasonably and prudently incurred to comply with the Company's obligations under CAMA and the CCR Rule. The Commission determines that they therefore would be recoverable in rates, as would be the $88,000 in legal fees that witness Lucas also proposed excluding as settlement agreement expenditures were it permissible to view them as standard allowable expenditures but for DEP's admissions in the federal criminal court action where DEP pled guilty to mismanagement and the timing with compliance with CAMA.

The AGO, Sierra Club, and other intervenors make similar arguments that DEP has failed to keep pace with industry standards and therefore DEP should not be allowed to recover current environmental compliance costs in rates. The Intervenors argue that DEP should have done more than just comply with the current environmental regulations at the time. However, AGO witness Wittliff testified that the definition of industry standards is compliance with law.[2] (Tr. Vol. 15,

---

[1] Id.; see also N.C. Gen. Stat. § 130A-309.211. When preparing a corrective action plan, CAMA does not require the utility to describe any 2L violation and instead required only a "description of all exceedances of the groundwater quality standards, including any exceedances that the owner asserts are the result of natural background conditions." N.C. Gen. Stat. § 130A-309.211(b)(1)a (emphasis added).

[2] Upon redirect, when asked how DEP's management of ash ponds were different from industry standards, AGO witness Wittliff responded, "Well, I think there were a number of companies that were doing exactly what Duke

p. 100.) Based upon the evidence presented in this case, with the exception of the federal criminal case to which DEP pled guilty, DEP has not been found liable for violations of the law. As stated above, the Commission will not use settlement agreements to find liability. The AGO asserts that this Commission should consider all of the seeps located at its ash basin sites and deny of recovery of CCR costs. However, as stated in the criminal case which covered engineered seeps, DEQ and DEP have been in long-standing negotiations as to whether seeps are a violation of law and since 2014 whether seeps should be covered by the NPDES permit. (Wittliff Ex. 5, pp.78, 95.) (Wittliff Ex. 5.2, p. 44.) According to statements made in the criminal case, DEQ has currently not made a determination on this issue.(Wittliff Ex. 5.2, p. 44.) The Commission finds witness Wells' testimony persuasive that any past violations by DEP do not give support to the amounts of cost disallowances advocated by the Intervenors and the Public Staff in this case.

Lastly, although the record is not crystal clear as to whether DEP is seeking bottled water costs, or the amount of any bottled water costs, and no party has asked for a specific disallowance for the cost of bottled water, the Commission finds that DEP shall remove from its request any costs for bottled water, if any, that it may have agreed to provide pursuant to any lawsuit.

Garrett and Moore: Off-Site Transportation and Disposal of Coal Ash and Related Costs

The Public Staff, through witnesses Garrett and Moore, asserts that the Company acted imprudently in arranging for off-site handling of CCRs from the Sutton and Asheville Plants, and contends that disposal should have occurred at to-be-constructed on-site landfills, thereby saving primarily on the cost of off-site transportation. Garrett and Moore also expressed concern with respect to the costs the Company agreed to pay with respect to Asheville Plant coal ash, contending that it was excessive. The Public Staff recommends that a $80.5 million disallowance be applied with regard to Sutton Plant coal ash (Tr. Vol. 18, p. 180), and that a $29.3 million disallowance be applied with regard to Asheville Plant coal ash (id. at 182), for a total recommended disallowance of $109.8 million. The Commission rejects these discrete adjustments but takes these allegations into account in its mismanagement adjustments. Company witness Kerin indicates that he does not disagree that an on-site landfill was the best solution for the Sutton Plant – indeed, at Sutton, the Company built an on-site landfill, which became operational in July 2017, and is placing coal ash in that landfill today. (Tr. Vol. 20, p. 65.) The issue with respect to an on-site landfill at both sites is feasibility in light of the basin closure deadlines imposed by CAMA, and in the case of the Asheville Plant, modified by the Mountain Energy Act of 2015 ("MEA"), which requires the Company to construct a new combined cycle power plant and facilitate the shut-down of the existing Asheville coal-fired plant by January 31, 2020. (Id. at 43.)

The CAMA and, in the case of the Asheville Plant, MEA, deadlines would provide the overarching framework by which prudency must be assessed, were the Commission to ignore the contributing factors leading to CAMA and were the Commission to ignore DEP's admitted mismanagement with respect to CCR activities in its criminal court pleas, because an alternative proposed action would have to be feasible in order to truly be an alternative. 1988 DEP Rate Order, at 15. Witness Kerin's rebuttal testimony shows that Garrett and Moore's proposed alternative –

did." (Tr. Vol. 15, pp.112-13.) When asked as to whether there were any other ways besides compliance that DEP did not comply with industry standards, he responded, "I don't know ... do you have a specific thing in mind that you're wanting?" (Tr. Vol. 15, 114.) He went on to testify that the "standard, is compliance." (Tr. Vol. 15, 114.)

on-site disposal – was not feasible in the time frames available to the Company, particularly, as Kerin testified, "missing the required CAMA date was not an option . . . ." (Id. at 39.)

The Commission finds merit in DEP's assertions that the Garrett and Moore timeline for Sutton "was a 'perfect world' scenario without due consideration of the inherent uncertainty of permitting any type of landfill, especially a CCR landfill, particularly during the regulatory and political environment of 2014." (Id. at 37.) Perfection is not the standard. As an example of imperfection, Kerin points to the unexpected "environmental justice" review imposed by DEQ (Id. at 65-67), that caused a six-month delay in the issuance of the Sutton on-site landfill permit. Also, within weeks of the permit's final issuance, Hurricane Matthew blew through the area, impacting landfill construction. The Commission, however, agrees with Garrett and Moore and disagrees with witness Kerin that the moratorium prevented DEP from constructing a new CCR repository in the footprint of a preexisting repository once it had been excavated. DEP's reading of the provisions of the statute is strained and out of accord with a common sense interpretation. (Id. at 67-68.) However, DEP may have acted in response to its erroneous and overly cautious interpretation in light of the compressed time frame under which it operated.

DEP also confronted two limitations dealing with NCDEQ standards addressing dewatering and closure by removal of CCRs from surface impoundments. The standards address remediation of discharges or releases of contaminants into soil and groundwater to cleanup levels to meet the State's 2L groundwater standards.

To fully excavate CCRs for repurposing, bulk dewatering is necessary as well as interstitial dewatering from submerged ash. DEQ completed applicable regulatory requirements in 2015. For Sutton, the requirements were specifically detailed in the amended and approved NPDES permit in December 2015. As these dewatering requirements were not defined by DEQ in 2014 or 2015, a viable option for converting the existing CCR impoundment at Sutton to a new landfill did not exist then.

DEQ's cleanliness requirements set forth in its "Coal Combustion Residuals Surface Impoundment Closure Guidelines for Protection of Groundwater" were not completed until November 2016. DEP could not convert the Sutton impoundment to a new CCR landfill in 2014 or 2015 until the guidelines had been established. Therefore, compliance with CAMA deadlines through reliance solely on an on-site landfill was not possible. (Tr. Vol. 20, pp. 35-37.)

In addition, while "perfect world" scenarios may appear appropriate in an after- the-fact analysis, once CAMA became law, prudent planning required the Company to meet "real world" difficulties as and when they arose, to ensure that the legislatively fixed August 1, 2019 deadline would be met. To do so, the Company devised for Sutton a two-part plan that included both the construction of an on-site landfill and off-site disposal of some portion of the coal ash – approximately two million tons, of the 6.6 million tons of coal ash in the Sutton coal ash basins. (Id. at 39.) Had the Company not arranged for off-site disposal, it would have been required to transport the 6.6 million tons of coal ash from the coal ash basins to the new on-site landfill in the 25-month period from the issuance of the landfill's operating permit (July 7, 2017) to CAMA's August 1, 2019 closure deadline. In the Commission's view, this was an unreasonable task. (Id. at 40.) The Company's Sutton plan, therefore, in light of the CAMA deadlines and the delays in obtaining permits, does not rise to the level of imprudency the standard the Commission deems required. Therefore, discrete cost disallowances are not approved.

The Commission determines that similar considerations come into play when assessing the prudence of the Company's decision to transport Asheville Plant CCRs offsite once CAMA became law. (Id. at 42.) The MEA, while extending the closure deadline to August 1, 2022, required construction of a new combined cycle plant. (Id. at 43.) The new plant must be built on the site of one of the Asheville Plant's basins. This meant that that basin had to be emptied of coal ash. That, along with the need for an extensive construction laydown area necessary to allow efficient construction of the new plant, left no space at the Asheville Plant site in which to build an on-site landfill. As witness Kerin put it, the MEA "effectively made construction of a new on-site CCR landfill technically infeasible given the short time period to replace the coal-fired generation by 2020, and close the coal ash basins by 2022." (Id. at 43.)

In the 1988 DEP Rate Order, this Commission stressed the importance of carefully examining the Company's explanations of the decisions it made, as of the time they were made, and emphasized that the credibility of the decision-makers, particularly in juxtaposition to after-the-fact analyses, presented by Intervenor-retained consultants. See, e.g., 1988 DEP Rate Order, at 29. The Commission does not question the bona fides or expertise of Garrett and Moore; indeed, witness Kerin notes (and appreciates) that they "conducted a thorough and principled analysis" of the Company's CAMA/CCR Rule compliance costs, and that he agreed with "the majority of their conclusions." (Tr. Vol. 20, p. 56.) The Commission determines, however, that witness Kerin has "lived" this project since its inception (Id. at 32), and relies upon his testimony regarding the decisions made, and determines that the Garret and Moore adjustments, other than to the extent addressed indirectly in the Commission's management penalty, will not be adopted.

Witnesses Garrett and Moore also asserted that that DEP exclusively should have utilized the Cliffside landfill in lieu of the Homer, Georgia landfill due to closer proximity and the lower cost of the Cliffside landfill. (Tr. Vol. 18, pp. 182-83.) However, in live testimony at the hearing, witnesses Garrett and Moore accepted that moving the required coal ash from Asheville to Cliffside, as they testified should have been done, would have amounted to 30,162 truckloads, 3,619,440 miles of driving, equal to about 145 trips around the earth. (Id. at 198-99.) They also agreed that for a six-month period of time this would require moving 4,292 tons of coal ash per day, by 232 trucks per day, which means one truck leaving the site every two minutes. (Id. at 199.)

Witness Kerin, noting that Garrett and Moore had not accounted for over 500,000 tons of coal in their analysis, demonstrated the infeasibility of their approach. He indicated on cross-examination by counsel for the Public Staff that the Company was already sending 195,000 tons of coal ash to Cliffside at that time, and that the additional 558,000 tons proposed by witnesses Garrett and Moore would have resulted in about 40,000 loads, "or loading a truck every minute and a half, loading, moving, scales, washing, getting it through the site and getting it on the highway. Virtually impossibleat that site, if you have ever been to the Asheville site where the '82 basin is, to move that many trucks through that site and out of that basin in a minute and half per truck." (Tr. Vol. 20, p. 113.) The Commission agrees with DEP that infeasible options do not support a finding of discrete adjustments for imprudence. 1988 DEP Rate Order, at 15. The Commission determines that witness Kerin's testimony demonstrates that the Company's actions and real-time decisions regarding the Ashville site were in fact reasonable and prudent in the context of the requirement of CAMA and the MEA, and that the costs, in the context of analysis the witnesses undertook, were in fact prudently incurred. As such, no discrete disallowance is approved with the exception of the increased contracted disposal costs with Waste Management, Inc. of $9.5 million. The Company essentially agreed that this adjustment for contractual coal ash moving expense was appropriate and the Commission agrees.

Conclusion with respect to January 1, 2015 – August 31, 2017 Costs

The Commission finds that the costs are known and measurable, when viewed in isolation and without regard to the broader context of DEP's admission of criminal negligence in the management of its CCR activities, and the cost increases arising from the CAMA schedule, the costs, with noted exceptions, were reasonably and prudently incurred, and are used and useful in the provision of service to customers. But for the Company's admissions of mismanagement and the extent such conceded mismanagement was a contributing factor resulting in the enactment of CAMA, they should be recoverable from customers.

But for the management penalty discussed below, the Commission deems the Company's proposal, which submits that the amortization period should be five years, would be reasonable and appropriate. The five-year period suggested by theCompany is identical to the period over which Dominion's already-incurred coal ash basin closure costs were amortized in the 2016 DNCP Rate Case. It further had the virtue, when originally proposed, of being identical to the five-year period over which the Company proposed to return to customers excess deferred taxes resulting from the change in North Carolina's income tax rate (*see* Tr. Vol. 6, p. 129), although that time period was later reduced as part of the Partial Settlement with the Public Staff to four years. While the amount of the excess deferred tax regulatory liability (approximately $150 million; *see* Peedin Revised Exhibit 2, Schedule 1, Line 1) is less than the coal ash basin closure cost deferred balance that the Company seeks recovery of in this case (approximately $242 million), both are substantial. It would be reasonable to use similar amortization periods for both the deferred tax regulatory liability returned to customers (with a return) and the coal ash basin closure regulatory asset collected from customers (also with a return).

In summary, the Commission determines that but for admitted mismanagement and its being a contributing factor to CAMA, its coal ash basin closure costs actually incurred over the period from January 1, 2015 through August 31, 2017 are (a) known and measurable, (b) reasonable and prudent, and (c) used and useful, and, as such, that it is entitled to recover those costs in rates. DEP has further shown that its proposal that these costs be amortized over five years, with a return on the unamortized balance, would have been reasonable.

The Public Staff's 50/50 "Equitable Sharing" Concept

Witnesses Lucas and Maness, for the Public Staff, propose a 50% disallowance of the Company's already-incurred coal ash basin closure costs through what Maness terms a 50/50 "equitable sharing" arrangement between shareholders and customers. (Tr. Vol. 18, p. 309.) He implements this sharing concept with two steps. First, he removes the unamortized coal ash basin closure costs from rate base, thereby eliminating any return on that unamortized balance. (Id.) The second step is to choose an amortization period that will result in the desired level of "sharing." (Id. at 10.) As the Public Staff's desired level is 50/50, mathematically that results in a 26-year amortization period at the rate of return the Company and the Public Staff agreed, subject to the Commission's approval, was appropriate in this case. (Id. at 344-45.) As witness Maness acknowledged, with a different rate of return, "the number of years might be different to reach the 50 percent mark." (Tr. Vol. 19, p. 59.)

The Commission agrees with DEP that this adjustment is not based on an applicable standard. The Public Staff chose this number, then adjusted the mechanism to achieve that level of disallowance. The Public Staff provides insufficient justification for the 50/50 as opposed to a 60/40, or 80/20. Witness Mannes indicates merely that it "was the judgment of the Public Staff ... that 50 percent was a reasonable percentage." (Id.)

A "determining principle" or prudency standard is missing from the Public Staff's 50/50 "equitable sharing" proposal. See Tate Terrace Realty Investors, Inc. v. Currituck Cty., 127 N.C. App. 212, 222-23, 488 S.E.2d 845, 851-52 (1997). As such, were the Commission to adopt it, the Commission very well could be found to be acting arbitrarily and capriciously, and subject itself to reversal. An illustrative case is Sanchez v. Town of Beaufort, 211 N.C. App. 574, 710 S.E.2d 350 disc. review denied, 365 N.C. 349, 715 S.E.2d 152 (2011)

Ultimately, the Public Staff, through Witness Maness, indicates that it is "up to the Commission's discretion to determine what [the] sharing should be." (Tr. Vol. 19, p. 69.) Even if the equitable sharing mechanism were without legal impediments, the Commission chooses in the exercise of its discretion not to adopt this recommendation but instead on an alternative remedy addressed below. The Public Staff bases its proposal on two principles: first, the Company's alleged past failures, as detailed in the testimony of Public Staff witness Lucas, to prevent environmental contamination from its coal ash basins, and, second, an asserted "history of approval of sharing of extremely large costs that do not result in any new generation of electricity for customers." (Tr. Vol. 18, p. 309.)

As to the first asserted predicate, the parties dispute the existence of failures. The Commission addresses Wells' testimony, above, but whether or not the Company were guilty of some sort of violation appears not to be material to the Public Staff's 50/50 sharing proposal. Witness Maness admitted, in response to questions from the Chairman, that all of these alleged acts or failures to act occurred in the past. (Tr. Vol. 19, pp. 60-61.) Witness Maness's response to the Chairman's questions leads to the true heart of the matter – the Public Staff's position, simply stated, is that it does not matter if the Company's actions in incurring the CCR Rule and CAMA compliance costs were prudent – the Public Staff's 50/50 equitable sharing proposal would still apply. As Maness testified, "[E]ven if you left out specific acts or omissions of the Company and assumed everything was prudent, aboveboard" (Tr. Vol. 19, p. 61), the Public Staff would (at least "likely") still recommend the 50/50 equitable sharing proposal. (Id.) Accordingly, the real rationale for the Public Staff's proposal appears to be witness Maness's second predicate: the proposition that the Commission has a "history of approval of sharing of extremely large costs that do not result in any new generation of electricity for customers." (Tr. Vol. 18, p. 309.)

According to witness Wright, there is "no provision of Chapter 62 requiring different treatment for 'extremely large costs'" (Tr. Vol. 20, p. 141), and, in any event, witness Wright detailed any number of "extremely large cost" items not associated with new generation for which cost recovery is routinely allowed. (Id.) This is yet another example of the arbitrariness inherent in the Public Staff's sharing proposal. While the Commission in the past has made decisions to avoid "rate shock," that equitable principle does not apply here in the context of the recommended cost disallowances.

On another level, it appears that witness Maness is saying that this rationale for the sharing proposal is grounded in the Public Staff's view of the discretion available to the Commission. He states first that pursuant to G.S. 62-133(b)(1), and with the exception of construction work in progress under certain circumstances, "the only costs that the Commission is required to include in rate base are ... the 'reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period ....'" (Tr. Vol. 18, p. 310.) He indicates that he is advised by counsel that "beyond these requirements what is and what is not in rate base is fully within the Commission's discretion to decide, as long as the rates set thereby are fair and reasonable to both the utility and the consumers." (Id.) The Commission determines that the Public Staff's view of the Commission's discretion is overly broad, however, and not supported with the cited Supreme Court precedent. Likewise, to the extent the Public Staff is correct in its arguments that the Commission has the discretion to accept the Public Staff's equitable sharing remedy, the Commission declines to do so in favor of an alternative remedy addressed below.

As expressed through witness Maness's testimony, the Public Staff looks to the Commission's Order Granting Partial Increase in Rates and Charges in Docket No. E-2, Sub 526 (Aug. 27, 1987) (the 1987 DEP Rate Order) and its affirmance by the Supreme Court in Thornburg I, 325 N.C. 463, 385 S.E.2d 451 (1989) as precedent for its 50/50 equitable sharing concept. The Commission determines that the more compelling precedents are the 1988 DEP Rate Order and the Commission's Order Denying Motions for Reconsideration in the 1988 DEP Rate Case (Docket No. E-2, Sub 537) (1988 DEP Reconsideration Order), and the Supreme Court's reversal in part of those Orders in Thornburg II, 325 N.C. 484, 385 S.E.2d 463 (1989). The principal issue in the 1987 DEP Rate Case/Thornburg I was whether the Company could recover in rates any portion of the costs associated with the abandoned Units 2, 3, and 4 of the Shearon Harris nuclear plant. The Commission had previously decided that the Company could amortize the unrecovered costs associated with these abandoned units over a ten-year period, but that "no ratemaking treatment should be allowed which would have the effect of allowing ... [the Company] to earn a return on the unamortized balance." 1987 DEP Rate Order, at 61. Over the objections of the AGO, the Commission decided to continue to follow that process in the 1987 case – it allowed amortization of abandonment costs over a ten-year period as an operating expense under G.S. 62-133(b)(3) and 62-133(c), but no return authorized on the unamortized balance. The North Carolina Supreme Court, in a passage extensively quoted in witness Maness's testimony (see Tr. Vol. 18, pp. 311-12), affirmed the Commission's decision, holding that G.S. 62-133(b)(3) and 62-133(c) were elastic enough to include abandonment costs as utility "expense," and that G.S.. 62-133(d), which allows the Commission to factor in "all other material facts of record that will enable it to determine what are just and reasonable rates," also provided support for the Commission's decision. The Court further held that as a matter of policy a return of, but not a return on, the abandonment costs was appropriate. Thornburg I, 325 N.C. at 476-81, 385 S.E.2d at 458-61.

In Thornburg I, the Court held specifically that the Commission's recovery but no return decision was "within the Commission's discretion" and would not be disturbed. Id. at 481. That decision effected a "sharing" between the Company's shareholders, on the one hand, and its customers, on the other – shareholders received a return of the costs, but no return on the costs. It is based upon this holding that the Public Staff, through witness Maness's testimony, contends that "reasonable rates can include a sharing between ratepayers and investors with regard to plant cancellation costs" (Tr. Vol. 18, p. 311), and that the Commission possesses discretion to implement this sharing.

There are, however, significant distinctions between the 1987 DEP Rate Case/Thornburg I and the present case. First and foremost, this case does not involve "abandoned plant" or cancellation costs. Rather, it involves "reasonable and prudent" and "used and useful" expenditures by the Company, similar to the Commission's determination in the 2016 DNCP Rate Order. As such, the authority the Public Staff relies upon to support its "equitable sharing" concept does not support the exercise of discretion as the Public Staff maintains. This can be seen when examining other prior orders of this Commission and the correct Thornburg case: the 1988 DEP Rate Order, the 1988 DEP Reconsideration Order, and Thornburg II.

In the 1988 DEP Rate Case, the principal issue for decision was the reasonableness and prudence of the costs of constructing and placing into service Unit 1 of the Shearon Harris nuclear plant. The Commission found that for the most part, Harris Unit 1 costs were reasonable and prudent, and that part of the 1988 DEP Rate Order was upheld by the Supreme Court. 325 N.C. at 489, 385 S.E.2d at 465-66 (finding "no error" in that part of the Commission's Order). However, a part – $570 million- worth of the costs the Commission considered were incurred in connection with facilities to be shared with Units 2, 3, and 4, units that the Company had abandoned. The Commission found that while these costs were prudently incurred, they should be shared between the Company's customers and its shareholders. The Commission found that approximately $180 million of those costs were properly classified as "abandonment" costs and should be borne by shareholders. 1988 DEP Rate Order, at 112-14. The remaining $390 million were left in rate base.

Responding to the Public Staff's request that the Commission reconsider this decision and remove the entire $570 million from rate base on the grounds that all of it related to abandoned plant, the Commission reaffirmed its decision in the 1988 DEP Reconsideration Order and provided additional explanation for its ruling. It stated (1988 DEP Reconsideration Order, at 2-3) that the Public Staff's request that the full $570 million for the common facilities be treated as abandonment costs was based upon a "misunderstanding" of the 1988 DEP Rate Order and the Commission's objective in splitting this $570 million item into $390 million of rate base and $180 million of cancellation costs. The Commission did not (it says in the 1988 DEP Reconsideration Order) intend to treat the "excess common facilities" as abandoned plant; rather, it effected an "equitable sharing" (emphasis added) of the $570 million between customers and shareholders. The Commission reiterated that the Company's choice of the cluster design – which engendered the shared facilities – was reasonable and prudent, and that, except as specifically indicated in the 1988 DEP Rate Order, the costs of the Shearon Harris plant were "reasonable and prudently incurred." Thus, the Commission found, the $570 million at issue was also reasonably and prudently incurred.

Nevertheless, the Commission held (Id. at 4-5) that it was appropriate to share the $570 million at issue, and it indicated that it arrived at the allocation (essentially one- third to cancellation costs and two-thirds to rate base) on its own and adopted it "for reasons of fairness and equity." It held that it continued "to believe that a reasonable and equitable apportionment of the burden and risks associated with ... [the Company's] prudent investment in common facilities is appropriate." It stated further that its assignment of $180 million as the value of the Company's prudent investment in common facilities to be treated as cancellation costs for ratemaking purposes was an appropriate exercise of its "regulatory discretion."

The North Carolina Supreme Court disagreed. The Court held that the Commission did not possess the discretionary power to effectuate its "equitable sharing" decision. Rather, the facilities were either "used and useful," and therefore in rate base, or they were not. The Court looked to the Commission's finding that the facilities in question were "excess common facilities," and held that "excess" facilities were not "used and useful" as a matter of law. 325 N.C. at 495, 385 S.E.2d at 469. Accordingly, looking to the correct Commission and Supreme Court precedent, these determinations are insufficient support for the Public Staff's "equitable sharing" concept.

In addition to the costs of abandoned nuclear construction, witness Maness contended that there is precedent for approval for sharing of extremely large costs that do not result in any new generation of electricity for customers. He asserted that sharing between ratepayers and shareholders has also been approved for environmental cleanup of manufactured gas plant (MGP) facilities. (Id. at 309-10, 343-44.) In rebuttal, witness Wright testified that the Commission's treatment of environmental cleanup of manufactured gas plants does not support the Public Staff's proposed cost sharing, and referred to his direct testimony that MNG [MGP] plant costs differ from coal ash disposal costs, both in terms of the time that elapsed between the actual usage of the facility and the environmental-related cost recovery, and in terms of ownership. In addition, he noted that MNG [MGP] facilities, like abandoned nuclear plants, were found not to be used and useful. He noted further that there is no need to rely on a 23-year-old cost recovery example from a different industry, dealing with assets last used more than 70 years ago, when the best example of the Commission's treatment of coal ash disposal costs can be found in the Dominion case that was decided one year ago. (Tr. Vol. 20, pp. 138-40, 173.) The Commission also notes that the North Carolina Commission was in the minority among states on the way that it handled MGP costs, ie, the "sharing of costs." The majority of states granted full recovery of MGP costs. See Recovery by Utilities of Expenditures on Manufactured Gas Plant Claims: Recent Developments Regarding Insurance Coverage and Rate Relief, Nicholas Fels, William Skinner and Saul Goodman, p. 44 (August 1, 1996). The Commission finds that the Commission's decision in Docket No. G-5, Sub 327, Public Service Co. of North Carolina, 156 PUR 4th 384 (October 7, 1994), is distinguishable from the CCR remediation costs at issue in this case and moreover not precedent the Commission chooses to follow to provide for sharing in the present case.

The issue that remains is whether the already-incurred costs expended by the Company in connection with its CCR Rule/CAMA compliance obligations are "used and useful" and "prudent and reasonable." DEP argues that the Commission has already decided this issue, in the 2016 DNCP Rate Order, where it held that costs expended for the identical purpose were "used and useful." 2016 DNCP Rate Order, at 60-62, and that were the Commission to decide differently in this case, the Commission would be acting arbitrarily and capriciously. DEP cites Gregory v.

County of Harnett, 128 N.C. App. 161, 164-65, 493 S.E.2d 786, at 788 (1997) (County Commission, which approved a zoning application restricting mobile home development three days after rejecting an almost identical application, acted arbitrarily and capriciously). [1] The Commission disagrees. While the Commission's Order here is consistent with the logic of its DNCP Order, it disagrees with DEP that it is bound to follow it. The Commission expressly stated that its CCR determinations in the DNCP Order were non-precedential. Moreover, this is a ratemaking decision in which the Commission exercises its legislative authority.[2] Its past decisions are neither binding, res judicata[3] nor stare decisis.[4]

In its cross-examination questions (*see, e.g.*, Tr. Vol. 14, pp. 236-37), the Public Staff suggests that if the Company truly thought the coal ash basin closure costs were "used and useful" it should have put them directly into rate base as opposed to deferred into a regulatory asset via ARO accounting. Witness Maness stated such in his responses to the Chairman's questions, indicating that he had struggled with the issue but had not "found anything direct yet" in the accounting literature. (Tr. Vol. 19, p. 66.) The accounting issue, as far as witness Maness is concerned, is how the Company's coal ash basin closure costs could be classified as "plant," and therefore eligible to be included in rate base, when they are actually accounted for in an ARO, which deals with retirement costs. (Id.) witness Maness also indicates that the Company "chose[] not to propose to include these type of costs ... as utility plant and service." (Id. at 67.)

The Commission disagrees with the Public Staff's characterization. First, the Company did put coal ash basin closure costs directly into rate base. See Bateman Supplemental Ex. 1, p. 54. The costs were included in the Working Capital section of rate base (Id. at 53), and no party has taken the position that their inclusion therein was inappropriate.[5]

The AGO makes a related argument in its post-hearing Brief. The AGO argues that DEP failed to request in advance permission to create a deferred account. Contrary to witness Maness's indication that the Company had any "choice" in the matter, and the AGO's argument, upon the passage of CAMA and the promulgation of the CCR Rule, the Company was required by GAAP to establish an ARO. The accounting guidance (ASC 410-20-15-2) states that it applies to "Legal

---

[1] While certain Intervenors argue that Dominion's situation is different from the Company's in that Dominion had not committed environmental "violations," this purported distinction is of no moment. Dominion in fact has been the subject of regulatory scrutiny with respect to its Chesapeake Plant, and has been the target of lawsuits brought by environmental advocacy organizations in connection therewith. (Tr. Vol. 20, pp. 135-37, 171-72, 189.)

[2] State ex rel. Utils. Comm'n v. Edmisten, 294 N.C. 598, 242 S.E. 2d (1978) (ratemaking activities of the Utilities Commission are a legislative function).

[3] Id. (only specific questions actually heard and finally determined by the Utilities Commission in its judicial character are res judicata).

[4] State ex. Rel., Utils. Comm'n v. Carolina Utility Customers Ass'n, Inc., 348 N.C. 452, 500 S.E. 2d 693 (1998) (Utilities Commission orders in rate cases are not within the doctrine of stare decisis).

[5] While witness Maness removed the Company's coal ash basin closure costs from Working Capital section of rate base, he did so not because of any quarrel with their inclusion therein, but in order to give effect to the Public Staff's 50/50 "equitable sharing" proposal. (*See* Tr. Vol. 18, p.309.)

obligations associated with the retirement of a tangible long-lived asset," and "legal obligation" is defined (ASC 410-20-20) as an "obligation that a party is required to settle as a result of an existing or enacted law ...." (Emphasis added). Once it became clear that the new laws and regulations governing coal ash would require closure of the Company's existing coal ash basins, GAAP required that an ARO be established, and the Company had no choice in the matter. As the Public Staff and the Commission have noted previously, "Statements of the FASB are officially recognized by the Securities and Exchange Commission (SEC) as authoritative with regard to GAAP in the United States, and the requirements included in those Statements are essentially mandatory for any publicly traded entity." See Order Granting in Part and Denying in Part Request for Deferral Accounting, Docket E-2, Sub 826 (April 4, 2003), at 13. Moreover, DEP notified the Commission of its establishment of the ARO.

As a matter of law, it is not necessary that something be classified as "plant" in order to be properly included in rate base. Rather, the issue is the source of the funds. In State ex rel. Utils. Comm'n v. Virginia Elec. & Power Co., 285 N.C. 398, 206 S.E.2d 283 (1974) (VEPCO), for example, the Supreme Court held that working capital (which is not "plant") could be included in rate base, so long as it was provided by the utility:

> Like any other business, a public utility must at all times have on hand a reasonable amount of materials and supplies and a reasonable amount of funds for the payment of its expenses of operation. While Chapter 62 of the General Statutes makes no reference to working capital, as such, the utility's own funds reasonably invested in such materials and supplies and its cash funds reasonably so held for payment of operating expenses, as they become payable, fall within the meaning of the term "property used and useful in providing the service"... and are a proper addition to the rate base on which the utility must be permitted to earn a fair rate of return.
>
> Conversely, the utility is not entitled to include in its rate base funds which it has not provided but which it has been permitted to collect from its customers for the purpose of paying expenses at some future time and which it actually uses as working capital in the meantime.

285 N.C. at 414-15, 206 S.E.2d at 295-96. As the Company appropriately accounted for coal ash basin closure costs in the working capital section of rate base, and as these funds were investor-furnished, not customer- furnished, VEPCO holds that they are "used and useful" within the meaning of G.S. 62-133(b)(1) in the provision of service. As such, the Company is entitled to earn a return on those funds over the period in which the costs are amortized.[1]

---

[1] Even if for some reason some portion of the Company's already-incurred coal ash basin closure costs might not be classified as "used and useful," that does not mean that they are not recoverable or that the Company may not earn a return on them. In Dominion's 2012 Rate Case, the utility sought to recover over a three-year amortization period the unrecovered costs associated with one of early-retired coal-fired plants (North Branch), with DNCP earning a return on the unamortized balance. The Public Staff agreed that the costs of the retired plant, although not placed into rate base, should be recovered over an amortization period, and that DNCP should earn a return on the unamortized balance, but advocated for a ten-year rather than three-year, amortization period. The Public Staff argued that, as was the case in Thornburg I, the Commission had authority to treat these unrecovered costs in this fashion within the discretionary authority granted the Commission through G.S. 62-133(c) and 62-133(d). See Order Granting General Rate Increase, Docket No. E-22, Sub 479 (Dec. 21, 2012), at 36. The Commission agreed, and implemented

A concrete illustration highlights this issue more clearly. Take, for example, the new coal ash landfill that the Company constructed at the Sutton plant. The landfill "went into service in July ... [2017], and ... [the Company is] placing ash in the landfill today." (Tr. Vol. 20, p. 65.) The Public Staff, through its consultants Garrett and Moore, has no quarrel with the construction of the landfill or its cost, except for the liner chosen, and agrees that the funds expended in constructing this landfill were reasonable and prudent. The Public Staff maintains however that the landfill should have been constructed sooner and so has proposed a disallowance of the cost of off-site transportation and disposal of coal ash from the Sutton plant. The landfill is "used and useful." It consists of liners, for example, that are capital items with service lives in excess of one year. It stores coal ash which itself is a byproduct of electricity generation, and is required to be stored in a landfill by the CCR Rule and/or CAMA. Yet the Public Staff is also saying that because the costs of construction are accounted for in an ARO -- as required by GAAP, to which the Company is subject – they are somehow not "used and useful." The Commission rejects this label-driven classification.

Witness Maness testified that whether the CCR remediation costs were used and useful was not a determinative factor in justifying its equitable sharing remedy. (Tr. Vol. 19, pp. 64-67) He testified that where capital costs such as constructing lined repositories or caps over existing repositories are accounted for as an ARO, accounting conventions for ARO's control. As such, in addition to its determinations above, the Commission determines that the debate between the parties on this issue is not one the Commission is required to resolve. Costs placed in an ARO account are eligible for deferral and amortization and for earning on the unamortized balance. As such, even if the remediation costs are ARO expenditures, they are eligible for ratemaking treatment as though they are used and useful assets.

Conclusion as to Non-Cost Specific Disallowance Proposals

The disallowance methodologies proposed by the AG, CUCA, and the Public Staff discussed above fail because they fail to comply with the Commission's prudence framework, established in the 1988 DEP Rate Order and upheld by the Supreme Court in Thornburg II. They avoid the detailed analysis that an appropriate framework requires. Public Staff witness Lucas, for example, noted that the Public Staff advocates "equitable sharing" because of the difficulties and complicating factors attendant upon detailed cost analysis (Tr. Vol. 18, pp. 59-61), and he reiterated his contention on cross-examination, noting that "There is nothing wrong with a simple solution." (Tr. Vol. 19, p. 22.) However, the Commission's prudence framework requires a detailed and cost-specific analysis to the extent the Commission resolves the CCR disputes on the basis of discrete prudence assessments alone. The Company's costs are presumed reasonable and prudent unless challenged, and the challenges presented must (1) identify specific and discrete instances of imprudence; (2) demonstrate the existence of prudent alternatives; and (3) quantify the effects by

---

the Public Staff's suggestion. *Id.* at 37. Accordingly, the Commission, in the event that it is later determined that some portion of the Company's already-incurred coal ash basin closure expense is not "used and useful" within the meaning of G.S. 62-133(b)(1), may nevertheless allow that portion of those costs to be amortized in the same manner as the portion of "used and useful" costs, with the Company earning a return on the unamortized balance. For the reasons stated herein, were the "used and useful" decision the Commission has reached be found to be in error, the Commission would nevertheless approve the Company's cost recovery proposal in all respects, and would exercise its discretion to achieve that result.

calculating imprudently incurred costs. 1988 DEP Rate Order, at 15. The methodologies proposed do not do that, and the Commission determines not to accept them.

In addition, were the Commission to disallow reasonably incurred and prudent costs in the magnitude suggested by the Public Staff (50% disallowance) through adjustments advocated, much less the higher or unspecified disallowances suggested by CUCA and the AGO, the result when translated into rates would be unjust and unreasonable, while the Commission's charge is to fix rates that are, to the contrary, just and reasonable. G.S. 62-131(a).

Company witness De May, asked his view on the likely reaction of the investment community to a Commission decision accepting the Public Staff's 50/50 "equitable sharing" proposal, expressed concern. He indicated, first, that "coal ash, to the financial community, doesn't look a whole lot different ... to the other environmental regulations that have come to this industry over the many decades." (Tr. Vol. 8, p. 434.) He continued:

> Just looking at the rating agency reports and the analysts' reports, you could see that everyone is just sitting, waiting to see what the impact ... [of] coal ash recovery will be to our company. And I think there is an expectation, as one analyst from Guggenheim [put it] ... that recovering environmentally-related investments coupled with ... our track record on getting environmental cost recovery, as well as precedent in doing so by this Commission [that] gives the [financial] community some confidence that we are going to get through this just like we have gotten through the Clean Air Act and through all of the clean smokestack legislation. All of these things have come to our industry, and come to our company, and we have dealt with them. This is no different.

(Id. at 434-35.) De May concluded, however: "[I]f the Public Staff position on coal ash were to be imposed upon our company, I think you would be looking at a totally new day in the way investors look at our company ...." (Id. at 435.)

As Company witness Hevert notes, "[W]e cannot underestimate the importance to investors of a consistent and constructive regulatory environment. ... In fact, 50.00 percent of the factors that Moody's Investor Service considers in determining credit ratings are related to the nature of regulation. From that perspective, it is clear Staff's recommendation implies a level of risk that would negatively affect both debt and equity investors and would increase the cost of capital to customers." (Tr. Vol. 8, p. 167.) The Commission acknowledges the danger and repercussions of changed investor perceptions of the regulatory environment. As it stated in the Company's 2013 rate case:

> Moreover, the Commission in establishing a rate of return on equity and other cost of service determinations is mindful that should it set the rate of return on equity too low, the impact on long term rates may be harmful to ratepayers. The utilities the Commission regulates compete in a market to raise capital. Financial analysts, rating agencies, and investors themselves scrutinize with great care the regulatory environment and decisions in which these utilities operate. The regulatory environment includes the utilities commissions, consumer advocates, the state

> legislature, the executive branch and the appellate courts. When regulatory risk is high, the cost of capital goes up.

2013 DEP Rate Order at 37 (emphasis added).

While the Commission's observation regarding the regulatory environment was specifically made in the context of its discussion of return on equity, the observation is apt in the cost recovery context as well. The North Carolina Supreme Court, rejecting in Thornburg I the AGO's argument that no abandoned plant/cancellation costs be charged to customers, observed that the AGO's position:

> [T]hough initially placing the entire cost upon the shareholders, may actually in the long term be less favorable to the ratepayers .... As one commentator has noted:
>
>> [I]n the long run, consumers end up paying—and paying twice— because what they gain by "saving" cancellation costs, they lose in higher rates of return as well as in diminished utility stature in the capital markets.
>
> Olsen, Statutes Prohibiting Cost Recovery for Cancelled Nuclear Power Plants: Constitutional? Pro-Consumer?, 28 Wash.U.J.Urb. & Contemp.L. 345, 377 (1985).

325 N.C. at 480-81, 385 S.E.2d at 460-61.

The Commission has considered this evidence and these arguments when framing its resolution in this matter. The Commission has further considered the AGO's arguments regarding DEP's criminal convictions when assessing its management penalty.

Sierra Club witness Quarles testified that continued storage of coal ash at Roxboro and Mayo poses significant environmental risks, and concluded that closure in place at these basins would allow continued contamination of downgradient groundwater and violate the technical standards of the CCR Rule. Witness Quarles further testified that removal of coal ash from DEP's CCR basins would reduce the concentrations and extent of this contamination. (Tr. Vol. 13, pp. 132-73; 175-77.) However, he admitted on cross- examination by Public Staff counsel that excavation and moving the ash at Mayo and Roxboro to lined landfills would increase the cost for closure. (Id. at 180.) Further, witness Quarles made no effort to quantify the economic impact of his recommendations. The Commission is not persuaded by the evidence presented by witness Quarles that the Commission is in a position at this time to determine whether DEP's closure plans at Roxboro and Mayo are reasonable and prudent. As a result, the Commission declines at this time to direct DEP to pursue any particular closure plans at Roxboro and Mayo.

The Sierra Club further asserts that all of the coal ash closure costs are the result of unlawful discharges and are not recoverable pursuant to G.S. 62-133.13. The Commission rejects the Sierra Club's reading of G.S. 133.13. The costs being incurred are not resulting from an unlawful discharge as defined by the statute, which is a discharge that results in a violation of State or federal surface water quality standards. Rather, DEP is incurring the costs to comply with the federal CCR rule and CAMA.

NC WARN has argued that DEP should not make a profit from selling coal ash from its existing basins. There is no evidence in the record that DEP is profiting from the sale of coal ash. Rather, any sale of coal ash merely reduced the remediation costs that DEP otherwise incurred and any payments made for its beneficial reuse offset those remediation costs.

The Commission's Cost of Service Penalty

The costs DEP has incurred through the end of the test year as adjusted in coal ash remediation tasks have been substantial, and the Company will continue on an annual basis to incur a substantial level of costs through approximately 2028. The vast majority of these costs would have been incurred irrespective of management inefficiency in order to comply with EPA CCR requirements. When DEP initially constructed coal ash impoundments and transported CCRs to them many decades ago, it did so in accord with the prevailing industry practices at the time, especially in this part of the country. In part and over time this was in response to environmental regulations requiring the removal of pollutants such as CCRs from the coal plant smokestacks to reduce air pollution.

Over time, the EPA and other environmental regulators have scrutinized the impact of CCRs in unlined repositories on surface and ground water and have assessed the extent to which harmful constituents in CCRs exceed those naturally occurring in the environment and their impact on human health. One long-lasting debate before EPA addressed the extent to which CCRs should be classified as hazardous waste under RCRA, a debate only recently resolved. Had EPA classified CCRs as a hazardous waste, economic reuse in all likelihood would have become an impossibility.

Another area of scrutiny has been the appropriate need for and method of remediation with respect to closing and potentially moving CCRs from unlined impoundments.

Many of the criticisms of DEP's CCR remediation practices raised in this case, before the federal district court in the criminal proceeding and before other courts and administrative agencies, address issues such as seeps from impoundment dikes, failure to adequately maintain risers, improper maintenance of dikes, lax reporting, exceedances and NPDES violations with respect to surface water discharges. The primary and ultimate remediation however is dewatering and excavation of and transportation from existing unlined impoundments and construction of new lined impoundments or, for older discontinued impoundments that qualify, caps preventing rainwater intrusion. This is where the vast majority of the billions of dollars of CCR remediation costs must be spent. This ultimate remediation step is necessary to prevent leachate from infiltrating groundwater from the bottom of unlined basins, but would have been required irrespective of the harms that constitute other alleged mismanagement. In addition, this remediation process cures other less pervasive environmental and health threats.

Intervenors fault DEP for failure to undertake this remediation process years earlier before being required to do so.[1] Had DEP acted in compliance with these assertions, it would have

[1] The Public Staff, however, was unable to classify DEP's actions or inactions as imprudence. Public Staff witness Lucas testified:

incurred costs its consumers would have been responsible for then. So from a ratemaking perspective, this Commission's concern, the question of when the remediation should have taken place, now or in the future or twenty years ago, is not determinative of whether the costs of the remediation should be recovered through rates and to what extent. Intervenors are unable to show when DEP should have acted differently in the past or what the increased costs would have been then. [1] Indeed, whenever undertaken, the costs would have been site specific, and establishing a past cost in this case would be a near impossibility. As DEP would have been required to undertake the remediation at issue in 2015 through 2017, irrespective of other improper actions of which it has been accused and for which it pled guilty to and was sentenced for in the criminal proceeding, any disallowance in this case must be made within the context of these facts.

DEP in the past contemplated a future requirement to close unlined impoundments. While it was reasonable and appropriate to anticipate and plan for what EPA's ultimate decisions would be, the Commission determines not to penalize DEP through denial of cost recovery for its decision to wait until EPA's CCR determinations in this area were finalized. Had DEP acted prematurely in anticipation of regulations under consideration but not yet implemented, with the expenditure of substantial sums in the process, and with the ultimate EPA decisions differing from those anticipated, DEP risked unjustified expenditures. In 2015, the EPA announced the Clean Power Plan. Had electric utilities incurred costs prematurely to comply, these costs could have been called into question when the U.S. Supreme Court stayed the Clean Power Plan.

A significant example of the ambiguity and uncertainty DEP faced in the management of CCR impoundments is illustrated by reference to a November 1, 2004 Long Term Ash Strategy Study Phase Report addressing 1983 and 1984 CCR repositories at DEP's Sutton coal fired plant in New Hanover County. The 1983 impoundment was unlined and had reached capacity prior to the 2004 report. The 1984 impoundment was lined and was rapidly approaching capacity, and the report identified and classified alternatives for CCR use or disposal to prevent shutdown of the Sutton plant. In the "Problem Description" section of the report, the authoring engineer listed issues either directly or indirectly related to a contribution to the overall ash strategy for the Sutton plant. The issues were described as secondary and not a dictating factor in the solution of the best

---

> The Public Staff is not saying that DEP's environmental noncompliance problems are the result of imprudence, because my review did not examine what Duke Energy knew or should have known about coal ash contamination at the time the ash basins were constructed. (Tr. Vol. 18, p. 340)

[1] Public Staff witness Lucas was asked what DEP should have done differently and when it should have done it. He replied:

> ... I can't say exactly what year or exactly what technologies ... I can't go back and tell you exactly what would have happened - - what you should have done at a certain time. I'm not sure what good it would have done for somebody to tell you, oh, 40 years ago you should have put in a clay liner at Asheville and Sutton, put in a concrete liner at the H.F. Lee plant. I mean, you just can't go back and do that kind of assessment. (Tr. Vol. 19, pp. 35-36)

AGO witness Wittliff was asked when in his opinion DEP was imprudent with respect to leachate within the impoundment leaking through the bottom into the groundwater. He responded with respect to Sutton:

> I'd have to - - I'm not sure, but I think it was 2010 or so. I don't want to be quoted on that, but I could dig through here, if you'd like. (Tr. Vol. 15, pp. 99-100)

alternative but as a look at overall environmental structure and stewardship. The first issue addressed the 1983 unlined impoundment that for the most part had ceased to receive CCRs.

> 1983 Pond is Unlined
>
> The first issue is that the 1983 ash pond was constructed during a period when it was not required to provide a non-permeable liner, and was constructed with the native sandy soils. This pond has been functionally full since 1983, but is still permitted, and is occasionally used when there are issues requiring the 1984 ash pond to be temporarily dry. The current environmental atmosphere is that these ponds will eventually have to [sic] emptied and placed in a lined containment to eliminate the leaching of the ash products into the groundwater system. This is an issue that is not currently being pressed, but it is anticipated that with the tighter environmental conditions it will soon become an emergent issue. This issue is aggravated by the fact that a test monitoring well located 300' from [sic] edge of the 1983 ash pond has shown high levels of arsenic during the past two quarterly tests. This may or may not be related to the unlined ash pond. A recent study by an independent firm indicated this concern may be less than originally thought. It could be mitigated by adding monitoring wells to the NPDES permit, but could still pose an issue in the future. There is also a county well water source approximately 1200' from the test well that is monitored by the county.

Elsewhere in the report under the "Do Nothing" alternative, the author stated:

> It is assumed that the North Carolina Division of Water Quality (NCDWQ) will require the 1983 ash pond to be emptied and lined to comply with current ash pond regulations. For the purpose of this study it is estimated that there is a 5% chance annually of the ash pond required to be relined starting 2007, and that in 2013 there will be a 10% chance annually thereafter until 2019.

In 2018, it is less than clear as to what the author refers to as the "current environmental atmosphere" or "current ash pond regulations," but the author's speculation as to if and when unlined impoundments might have to be dewatered and excavated was off the mark. The EPA's CCR rule was passed in 2015 and the NC CAMA was passed in 2014 with deadlines a number of years beyond that. DEP did not choose the alternative recommendation in the report, creation of an industrial park, nor did it excavate the unlined 1983 impoundment. The report contains no recommendation to excavate the 1983 impoundment solely for environmental remediation. The Commission is unable today to say how in the past the 1983 impoundment would have been excavated and how the excavated CCRs would be placed in a lined impoundment, what the cost would have been and what cost recovery treatment would have been appropriate. Indeed, the 1983 impoundment today is being excavated pursuant to express EPA and DEQ guidelines, and the parties to this case vigorously contest how compliance with these requirements should be accomplished and what the cost should be.

The purpose of the report was to determine the best course based upon the fact that the 1984 lined ash pond was reaching capacity and would be non-operational by June 2006. It is important to note that the author was indicating that the 1984 ash pond would be non-operational under the NPDES permit due to capacity constraints as opposed to environmental concerns.

Intervenors are advocating substantial disallowances in this case for expenditures DEP incurred to meet CAMA deadlines, such as at Sutton, before all of the regulatory requirements had been finalized. A substantial area of contention is exceedances and environmental violations addressing harmful constituents in coal ash even though determinations with respect to naturally occurring levels of background concentrations of these constituents have not been established. Rules for regulating seeps from dikes are yet to be finalized. Even as DEP continues to remediate, state regulatory agencies must review and approve the process and may impose additional restrictions, limitations and requirements. Even subsequent to EPA CCR rules and CAMA, the General Assembly enacted the MEA, changing the requirements for the Asheville plant remediation. Closure options for each of the CCR impoundments are site specific. Even now, Intervenors criticize the liners DEP has selected, asserting DEP is spending too much. Others advocate that this Commission supersede the authority of environmental regulators and require excavation of all DEP's impoundments and prohibit cap in place. The Commission is unable to recreate the past and place a price tag on remediation costs that might have been incurred in anticipation of environmental requirements.

This Commission's responsibility is cost recovery. Environmental regulators must oversee protection of the environment and public health. The Commission's responsibility is to determine whether coal ash remediation costs as required by environmental regulators should be recoverable through rates.

Another factor the Commission must address is the imposition of requirements of CAMA in addition to those of EPA. The evidence in this case is that the level of transportation costs being contested arises from more aggressive CAMA deadlines and uncertainty over the timing of the granting of regulatory permits for replacement impoundments. Except as addressed generically elsewhere, the Commission is reluctant to second-guess, with minor exception, specific DEP decisions on its attempts to comply with these requirements in a 20/20 hindsight fashion. Likewise, the Commission is reluctant, except in limited fashion, to penalize DEP for good faith efforts to comply with state statutes irrespective of the factors motivating the General Assembly to impose them.

Conversely, the Commission is unable to find DEP faultless in the dilemma it has faced. Much testimony addresses the issue of whether DEP's mismanagement of CCRs "caused" the General Assembly to enact CAMA. DEP argues that other nearby states enacted CCR remediation statutes in addition to EPA's CCR rules, and that the Dan River spill affected the timing but not the substance of CAMA's requirements. The Commission is unable to conclude that DEP mismanagement is the primary cause of CAMA. Nevertheless, the provisions of CAMA directly address remediation of DEP CCR repositories and impose accelerated deadlines with respect to them. The Commission therefore is unable to conclude that DEP mismanagement to which it admitted in the federal criminal court proceeding was not at least a contributing factor. Even DEP witness Wright's testimony suggests as much. While DEP presents persuasive evidence that its alleged mismanagement has not been supported and was not the cause of CAMA, this evidence is difficult to reconcile with its admissions and guilty pleas before the federal district court in the criminal proceeding. DEP represented that it mismanaged its CCR activities.

The Commission's conclusions with respect to the impact of DEP's mismanagement as a contributing factor to the enactment of CAMA are significant in two ways. First, the Commission determines that this conclusion adds support to the Commission's assessment of a management penalty arising primarily from the Company's admissions of mismanagement in the federal criminal case. Secondly, it supports the Commission's determination to reject more discrete disallowances such as those addressed by the Public Staff with respect to Sutton and Asheville transportation costs. The Commission deems these costs traceable to CAMA timelines, implemented in part in response to DEP's CCR management practice, but is unpersuaded that the quantification of the costs is accurate or that the severity of the proposed disallowances is justified.[1] Consequently, the Commission takes the incurrence of these costs into account in establishing the amount of its management penalty.

DEP admits to pervasive, system-wide shortcomings such as improper communication among those responsible for oversight of coal ash management. As stated above, while the Commission cannot state that CAMA would not have been passed or that its requirements other than accelerated deadlines would have been less onerous but for DEP's mismanagement of its CCR activities, neither can it state that DEP activities were without impact on the CAMA provisions that have resulted in increased costs that are at issue in this case. More fundamentally, in its admissions and pleas of guilty before the federal district court, DEP has outlined acts of criminal negligence through management misfeasance. In so doing, the Commission determines that, irrespective of CAMA, DEP has placed its consumers at risk of inadequate or unreasonably expensive service.

The Commission must regulate DEP pursuant to the requirements of Chapter 62 to see that compatibility with environmental well-being is maintained. G.S. 62-2(a)(5) Service is to be provided on a well-planned and coordinated basis that is consistent with the level of energy needed for the protection of public health and safety for the promotion of the general welfare as expressed in the state energy policy, G.S. 62-2(a)(6). All companies are prevented from violating environmental statutes. G.S 143-215.1. DEP is required to maintain safe and reliable service. As an electric utility, safety usually means safe electric service. In the context of this case, the Commission also determines that it means assuring safe operation of its coal-burning facilities so as not to render the environment unsafe. Declining to acquire and install a relatively inexpensive camera in a decades-old storm water drainage pipe over which the large coal ash impoundment is constructed when engineers repeatedly recommend such installation does not comply with a duty to provide safe service.

Fortunately, Dan River was a plant where coal generation had been discontinued at the time of the 2014 spill. Risers in disrepair, inadequate oversight of impoundment dikes and seeps have not resulted in catastrophic failures causing plants to be taken offline or service disruptions, but DEP's irresponsible management of its impoundments over a discrete period of time placed

---

[1] Witnesses Garrett and Moore supplemented their testimony to correct the quantity of CCRs located at the Sutton plant as of January 1, 2015, and adjusted the contingency time from nine months to four months given the projected completion date of excavation of March 2019 rather than October 2015. (Tr. Vol. 18, pp. 171-72, 192.)

its customers at risk of inadequate service and has resulted in cost increases greater than those necessary to adequately maintain and operate its facilities.

Consequently, having pled guilty to management criminal negligence, DEP cannot go without sanction in the form of cost of service disallowances. At the same time, to the extent the Dan River plant spill has contributed to the CCR remediation expense that otherwise would have been lower, the Company has borne responsibility for Dan River remediation costs without ratepayer support. The Company has been penalized by the federal district court. It cannot seek cost recovery of these monetary penalties or remediation assessments. Further, the mismanagement to which DEP pled guilty was only for a fraction of the time DEP operated the impoundments. No evidence was submitted that DEP's management was imprudent from the initial date of operation. The penalties imposed by this Commission take the form of denial of recovery of a return on historic remediation costs that reduce a portion of costs that ratepayers otherwise would have borne. The Commission deems double penalization inappropriate as an unwarranted penalty that has a tendency to unduly threaten the long-term overall well- being of the Company, a situation not in the best interest of its consumers.

A major difficulty the Commission confronts in this case is the identification and quantification of the appropriate CCR remediation adjustment to incurred costs. The record does not contain evidence appropriately quantifying the cost DEP incurred with respect to discrete remediation activities.[1] The Public Staff's witnesses' encountered difficulty in quantifying and supporting the costs for the alleged Sutton and Asheville transportation disallowances and other less specific ones motivates the Commission to resist imposition of discrete cost disallowances. The Commission deems disallowance of the totality of costs, as some parties advocate, unjustified. The Commission deems full recovery, as DEP advocates, unjustified. The Commission deems the Public Staff's 50/50 equitable sharing disallowance unfairly punitive and of questionable legal sustainability. The Commission deems requirements that more costs be imposed than DEQ might require without cost recovery unjustified. Moreover, the Commission deems it inadvisable to approve or suggest future disallowances with respect to CCR remediation expenditures as far away as 2028 and beyond. In sum, the Commission cannot agree with any of the parties in this case and must fashion and quantify a remedy different from any of those advocated before it.

The Commission operates under a legislative mandate that requires it to fix rates that will allow a utility "by sound management" to pay all of its reasonable operating costs, including maintenance, depreciation, and taxes, and earn a fair return on its investment. G.S. 62-133(b)(4).

---

[1] AGO witness Wittliff was asked whether he offered any opinion on what he thought the Company's appropriate amount of recovery under the CCR rule should be. He responded:

> ... I would explain that I'd love to have been able to come up with some extremely precise numbers and explain it all to you where it all made crystal clear sense and you could hang your hat on it and that's the number, we can pin that down. The problem is, is that this is, as we've already - - everyone seems to have observed, is it's an extremely complex case with a lot of moving parts, and it's not as easy to - - to make that sort of definitive statement. (Tr. Vol. 15, pp. 77-78)

Further, AGO witness Wittliff was asked why other than for CAMA compliance he performed no dollar-for-dollar analysis. He responded: "[b]ut we just couldn't get comfortable with making a data that we would want to bring to you and say this is the number." (Tr. Vol. 15, pp. 85- 86)

State ex rel. Utils. Comm'n v. General Telephone Co., 285 N.C. 671, 208 S.E.2d 681 (1974). If the Commission finds that a utility has not been soundly managed, it may penalize a utility by authorizing less than a "fair return." Id.[1] The Commission must quantify the penalty by making a finding of what return would have been allowed if there were sound management. Id. The North Carolina Supreme Court has stated that "[t]he size of the penalty is left to the judgment of the commission, but must be based upon substantial evidence, and the penalty must not result in a confiscatory rate of return." Id. General Telephone addressed a rate of return on rate base penalty for mismanagement resulting in inadequate service. In this case, DEP's mismanagement takes the form of admitted inadequate oversight of its CCR activities that placed service to its consumers at risk and, at least indirectly, increased costs.

Consequently, the Commission in the exercise of its judgment and discretion, determines that a management penalty in the approximate sum of $30 million is appropriate with respect to DEP CCR remediation expenses accounted for in the earlier established ARO with respect to costs incurred through the end of the test year as adjusted. This penalty is based on the totality of evidence contained in the record, as recited in detail above, and does not result in confiscation. Had the Commission not imposed this penalty, the ARO costs would have been amortized over five years with a full authorized return on the unamortized balance. The penalty will be imposed by reducing the resulting annual revenue requirement by $6 million (from the return on the unamortized balance in the rate base portion) for each of the five years, resulting in an approximate $30 million management penalty. While this penalty differs in form from that in General Telephone, the Commission determines that conceptually General Telephone provides appropriate precedent. By imposing this management penalty, the Commission does not suggest that further penalty or disallowances with respect to past DEP actions or inactions will be imposed with respect to future CCR remediation expenses. The size of the penalty meets judicial requirements as it is quantified and is not confiscatory.

With respect to CCR remediation costs to be incurred during the period rates approved in this case will be in effect, the Commission determines that the "run rate" or the "ongoing compliance costs" mechanism advocated by DEP will not be approved. By requesting the creation of an ARO, in addition to the run rate, DEP concedes that treating CCR expenditures as a recurring test year expense is inadequate. Future annual costs, the evidence shows, are predicted to vary substantially from year to year. Instead, CCR remediation costs incurred by DEP during the period rates approved in this case will be in effect shall be booked to an ARO that shall accrue carrying costs at the approved overall cost of capital approved in this case (the net of tax rate of return, net of associated accumulated deferred income taxes). The Commission will address the appropriate amortization period in DEP's next general rate case, and, unless future imprudence is established, will permit earning a full return on the unamortized balance. While this ratemaking treatment will, in limited fashion, diminish the quality of DEP's earnings, over time, assuming reasonable and prudent CCR management practices, it permits appropriate recovery.

Morgan, 277 N.C. 255, 177 S.E.2d 405 (1970) (holding "that it is not reasonable to construe [the statute] to require the Commission to shut its eyes to 'poor' and 'substandard' service resulting from a company's willful, or negligent, failure to maintain its properties [] and it is obvious that consistently poor service, attributable to defective or inadequate or poorly designed equipment or construction justifies a subtraction ..."

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 57-59

The evidence supporting these findings of fact and conclusions can be found in the testimony of Company witnesses Fountain, Bateman, McGee and Kerin, and the testimony of Public Staff witness Lucas.

In his direct testimony, DEP witness Fountain stated that although costs related to beneficial reuse are included in DEP's base rate case, the Company believes that certain amounts are more appropriately recovered through the fuel clause. (Tr. Vol. 6, p. 39 n.1.)

Witness Bateman testified that of the $260.3 million expected deferred balance, $15.1 million, $13.8 million of spend and $1.3 million of return, is related to 2017 beneficial reuse projected costs. As noted by witness Fountain, witness Bateman stated that these amounts are included in the Company's request, but DEP believes that these costs are more appropriately recovered through the annual fuel rider. Witness Bateman explained that if the Commission approves the fuel rider treatment requested by the Company, DEP will remove $15.1 million from the deferred balance in this adjustment. (Tr. Vol. 6, pp. 122-23.)

In her direct testimony, Company witness McGee testified that the beneficial reuse of CCR constitutes a sale of a by-product produced in the generation process, and, therefore, associated gains or losses on the sale should be included in the fuel adjustment clause under G.S. 62-133.2 (a1)(9). (Tr. Vol. 10, p. 104.) According to witness McGee, a sale has occurred when the title to a by-product is transferred to a third party, and the by- product, having value to the third party, will be beneficially reused. (Tr. Vol. 10, pp. 104- 05.) In this particular case, the amounts for which the Company is requesting recovery represent a net loss on the sale of CCR that is to be used as structural fill, which is a beneficial reuse. She testified that the particular transaction, as further discussed in witness Kerin's testimony, involves the sale of CCR produced at DEP's Sutton coal plant, and therefore the input to the by-product is the coal that has been burned at Sutton to produce generation. Thus, she contended that such coal burned has been and continues to be a "fuel or fuel-related cost" under the fuel clause statute as described above. Witness McGee testified that a sale of a by-product is different than disposal of a by- product in that the disposal of a by-product may involve some movement of the by-product and/or transfer of title, but there is no reuse or alternative use of the by-product. According to witness McGee, for transactions that the Company considers to be a sale, the by- product's intrinsic value is recognized in the reuse of the by-product. (Tr. Vol. 10, p. 105.) Finally, witness McGee cited certain statements of the Commission in a 2016 Commission Report to the North Carolina General Assembly[1] (Commission Report) regarding incremental cost incentives related to CCRs, filed in Docket No. E-100, Sub 146, as supportive of the Company's position that beneficial reuse constitutes a sale under the fuel adjustment clause. (Tr. Vol. 10, pp. 105-06.)

Company witness Kerin testified that DEP is now selling excavated ash for reuse in the Brickhaven mine reclamation project, a large scale, fully-lined, beneficial reuse project in

[1] Report of the North Carolina Utilities Commission to the Joint Legislative Commission on Governmental Operations, the Joint Legislative Transportation Oversight Committee, and the Environmental Review Commission Regarding The Incremental Cost Incentives Related To Coal Combustion Residuals Surface Impoundments For Investor-Owned Public Utilities In North Carolina, January 15, 2016.

Moncure, North Carolina. (Tr. Vol. 16, p. 116.) He testified that he agreed with Company witness McGee that the certain beneficial reuse costs are more appropriately recovered through fuel clause proceedings. According to witness Kerin, coal has been used as the fuel to produce power at DEP's Sutton plant. A by-product of that process is CCR. As a means to handle that by-product, CCR is sold to the Brickhaven mine to be used as structural fill, which is a beneficial reuse. (Tr. Vol. 16, p. 117.)

Public Staff witness Lucas testified that the costs relating to the disposal of CCR at Brickhaven, to the extent they are reasonable and prudent, should be recovered in base rates and not through the fuel adjustment clause because the costs did not result from the sale of CCR. (T Vol. 18, p. 230.) Witness Lucas providedbackground regarding the Charah transaction at issue. He testified that Brickhaven is a former clay mine consisting of 333.55 acres located in Chatham County, North Carolina. By Special Warranty Deed recorded on November 13, 2014, Green Meadow, LLC, a wholly owned subsidiary of Charah, purchased Brickhaven from General Shale Brick, Inc. On June 5, 2015, Green Meadow, LLC, and Charah received a permit from DEQ to construct and operate Brickhaven as a "Solid Waste Management Facility, Structural Fill, Mine Reclamation". (Tr. Vol. 18, p. 231.) Charah is a Kentucky-based company, and according to its website, it "is the largest privately-held provider of coal combustion product (CCP) management for the coal-fired power generation industry in the U.S."[1] In its Limited Petition to Intervene in this case, Charah stated that it is a contractor of DEP and is engaged in the remediation of CCR from one or more DEP facilities. (Tr. Vol. 18, p. 19.)

Witness Lucas explained that in July of 2014, Duke Energy Business Services, LLC (DEBS), on behalf of DEC and DEP, issued a bidding event for the excavation, transportation, and off-site storage of the full volume of CCR at four sites: Riverbend, Dan River, and Sutton in North Carolina and W.S. Lee in South Carolina. On October 3, 2014, DEBS opened a bidding event for the Phase 1 work activity (excavate, transport, and place off-site) ash at Dan River, Sutton, and W.S. Lee. Bids were solicited from three bidders, including Charah. Bids were received on October 9, 2014 (six days later). DEBS selected Charah to provide the services at the Sutton Plant. (Tr. Vol. 18, p. 232.) The purchase of CCR at the plants was not included in the scope of activities for the bidding events; both bidding events requested fixed price proposals to excavate, transport, and store coal combustion residuals from the plants. (Tr. Vol. 18, p. 233.)

Witness Lucas described the contractual arrangement between DEBS and Charah regarding the removal of CCR from the Sutton Plant. He stated that DEBS, as agent for DEP and DEC, and Charah entered into Master Contract 8323 (Master Contract) dated November 12, 2014, for the Phase 1 Excavation Work at the Riverbend and Sutton Plants. Charah is referred to as the "Seller" or "Contractor" in the Master Contract. Charah isnot referred to as a "Buyer". The Master Contract defined the type and scope of work, terms and conditions, pricing, and invoicing. The Master Contract contemplated the issuance of subsequent Purchase Orders as written authorization to proceed with the scope of work identified in the Purchase Order. The Sutton Phase 1 Work Scope was set forth in Exhibit D-2 of the Master Contract. It included the installation of haul roads, engineering the development of a rail loading system, erosion and sedimentation control, and dewatering, ash pond excavation, transportation, unloading, and placement. The Seller's (i.e.,

[1] http://charah.com

Charah's) Pricing Schedule was set forth as Exhibit E. The Pricing Schedule included both fixed pricing and per ton pricing. Witness Lucas testified that the fixed pricing was for mobilization, site preparation, erosion, and sedimentation control work. The per ton pricing was for excavation, loading and transportation, unloading, development, placement, home and field office overhead, and profit. (Tr. Vol. 18, pp. 233-34.) DEBS and Charah entered into Purchase Orders authorizing Charah to transport CCRs from Sutton by truck to Brickhaven and then to construct and transport CCRs by rail to Brickhaven. Purchase Order 1107196 constituted the vast majority of the excavation, transportation, and disposal work for Sutton, and 20 change orders were executed for this Purchase Order. (Tr. Vol. 18, pp. 234-35.)

Witness Lucas testified that nothing in the bid documents, contracts, purchase orders, or change orders for the Sutton Plant produced in discovery assign any value to the CCR to "net" against the cost of the services provided by Charah. (Tr. Vol. 18, pp. 235-36.) When asked to provide all documents that show how the Company or Charah calculated the "net value" or discount value of CCR when setting the cost of services provided by Charah, the Company responded that it had no responsive documents. In addition, when asked how much Charah paid the Company for the Sutton CCR, the Company responded that "there is not a defined price in the operative documents for the Sutton ash." (Tr. Vol. 18, p. 236.)

Witness Lucas testified that DEP and Charah knew how to assign a value to CCR in a sale, as demonstrated by the Master By Product Marketing, Sales, and Storage Agreement (Agreement) entered into by DEC, DEP, and Charah in December of 2013, and associated Work Orders, which obligated Charah to purchase CCR from DEP or DEC, as applicable, at a price as set forth in the Work Orders. This Agreement formed the basis for the sale of CCR at the Belews Creek and Marshall plants via Work Orders entered into by DEC and Charah on January 1, 2014. (Tr. Vol.18, p. 236.)

Witness Lucas asserted that the specific provisions relating to the services and pricing in the Master Contract, Purchase Orders, and change orders for Sutton all support the conclusion that the arrangement was one for Charah to provide ash disposal services to DEP, not for a sale of DEP's CCR to Charah. Although one of the general provisions of the Master Contract stated that the services to be performed by Charah constituted payment by Charah for the CCRs, DEP has admitted that there was no defined price for the CCRs and no documentation showing that the parties assigned any value at all to the CCRs. (Tr. Vol. 18, pp 236-37.) As a result, witness Lucas concluded that the specific provisions of both the Master Contract and Purchase Orders overwhelmingly point to a contract for services, not a sale.

Witness Lucas also addressed the findings in the Commission Report cited by Company witness McGee as support for DEP's position. He testified that the findings in the Commission Report do not support DEP's conclusion that the costs of the beneficial reuse of CCR are recoverable through the fuel clause. The General Assembly in the legislation directed the Commission to specifically address in its report "possible revisions to the current policy on allowed incremental cost recoupment that would promote reprocessing and other technologies that allow the reuse of coal combustion residuals stored in surface impoundments for concrete and other beneficial end uses". The Commission's Report examined the statutory framework for cost recovery and concluded that current policies and practices are adequate to encourage reuse of CCRs for concrete and other beneficial end uses. However, as recognized by the Commission in the Report, recovery through the fuel clause presupposes that there is a sale. On page 13 of the Report, the Commission stated, "Customers' rates are adjusted annually to include profits or losses associated with efforts to sell CCRs for beneficial reuse." On page 14 of the Report, the Commission recognized that "sales of CCRs typically result in immediate net costs to ratepayers." The Commission did not conclude in its Report that the costs of processing CCRs for beneficial use, without a sale, are recoverable in the fuel clause. (Tr. Vol. 18, pp. 237-38.)

Finally, witness Lucas addressed the fact that the Commission has allowed the Company to recover net gains or losses from the sale of CCRs through the Company's annual fuel rider. Witness Lucas stated that if there is an actual sale of CCRs, cost recovery through the fuel clause may be appropriate, if the costs are reasonably and prudently incurred. Where, however, there is a contract for services not involving a sale of CCRs, costs arising from that contract should not be recoverable through the fuel clause. Witness Lucas concluded that the true purpose of moving CCRs from Sutton to Brickhaven is environmental remediation and the disposal of CCRs, and not the sale of a byproduct. (Tr. Vol. 18, pp. 238-39.)

In her rebuttal, Company witness McGee disagreed with witness Lucas' characterization of the contractual arrangement with Charah involving the movement of ash from the Sutton Plant to Brickhaven. She asserted that DEP was compensated for the value of the CCRs. She explained that under the arrangement, the compensation to DEP was expressed indirectly through the values agreed to on other terms and conditions in the contract. In other words, the cost of services provided by Charah would have been higher without the sale of the CCRs from Duke Energy to Charah. She further asserted that the CCRs had value to Charah in that it was used in a process as a substitute foran alternative material. Without the purchase of the CCRs, Charah would have needed to procure topsoil or another material to use as structural fill, an added cost that Charah was able to avoid. She concluded that the overall economics of the sales agreement therefore reflected the intrinsic value of the CCRs. (Tr. Vol. 10, p. 111.)

Witness McGee identified two provisions of the Master Contract in support of her position. First, per Section 3 of Exhibit B to the Master Contract (Exhibit B), the Company transferred title to, risk of loss of, and responsibility for the CCRs to Charah once the CCRs is loaded in to truck or railcar at Sutton for transportation to Brickhaven. According to witness McGee, this provision indicates that the CCRs had value to the parties that had to be transferred through title. Further, the fact that Charah agreed to accept the transfer of title and risk of loss at the point that the CCRs was loaded onto its trucks or rail cars for delivery is strong evidence that the CCRs had transferable value. (Tr. Vol. 10, p. 112.)

Witness McGee also cited Section 4.2 of Exhibit B in support of the Company's position, which provides in pertinent part that, "payment of the Service Fee by Duke Energy to Contractor . . . together with any Ash that is transferred by Duke Energy, to Contractor under the applicable Purchase Order, constitutes payment in full, by Duke Energy to Contractor for any and all of contractor's costs to perform the Services...." Witness McGee asserted that this section clearly acknowledges that the CCRs serve as partial consideration for the services rendered by Charah. She stated that it was therefore understood and accepted by both parties that the service fee charged by

Charah for its services was offset by the value of the CCRs to Charah, thereby constituting a sale. (Tr. Vol. 10, p. 112.)

Witness McGee also took issue with witness Lucas' characterization of the arrangement as a "disposal". She stated that the CCRs at Sutton were not thrown away or placed in a landfill, but replaced the topsoil that would have been used as structural fill in the reclamation of the Brickhaven mine. Further, she noted that the EPA definition of beneficial reuse is "the reusing of a material in a manner that makes it a valuable commodity, such as use in a manufacturing process or as a structural fill." Based on the EPA definition, witness McGee maintained that the use of the Sutton CCRs as structural fill for the Brickhaven mine indicates that the CCRs were a valuable commodity. (Tr. Vol. 10, p. 113.)

Witness McGee also cited Section 2.1 of Exhibit B, which states, "[t]he Parties desire that Contractor excavate certain quantities of Ash from the Ash Ponds or Onsite Storage, transport such Ash off the Station property for resale to Contractor for beneficial reuse in the production of construction products, as an engineered structural fill and/or for closure of a mine reclamation projects, etc. . . ." (emphasis added). She asserted that both parties clearly contemplated and agreed upon the use of the CCRs, which is expressed in the contract. Accordingly, the purpose of this transaction was the sale of CCRs produced at the Company's Sutton coal plant to Charah for beneficial reuse at Brickhaven. (Tr. Vol. 10, pp. 113-14.)

Finally, witness McGee testified that the Company has included the gain/loss of CCRs in the fuel adjustment clause in the past. Specifically, she noted that the losses on the sale of CCRs from the Asheville plant to the Asheville Airport as structural fill have been included in the fuel adjustment clause since 2008. (Tr. Vol. 10, p. 114) She noted that the Master Contract had the same language as that used for the CCRs from the Asheville Plant, and that the sale of the CCRs was implied since both parties agreed that both the value of the CCRs and the additional funds paid by Duke would constitute full payment for the work as outlined in the associated purchase order. (Tr. Vol. 10, p. 115.)

During cross-examination, Company witness McGee admitted that no particular projects or costs are presented in the Company's fuel filings and that the Commission only approves an overall number in the fuel rates. (Tr. Vol. 10, p. 130.) Further, the Commission did not specifically review or consider the Asheville CCR sale in prior fuel proceedings. (Tr. Vol. 10, p. 131.) She testified that the cost of disposing of CCRs in a landfill would not be a sale and would not be recoverable under the fuel clause. (Tr. Vol. 10, p. 133.) A series of exhibits were introduced (Public Staff [PS] McGee Cross- Examination Exhibits 1-5), which were Company responses to Public Staff data requests. (Tr. Vol. 10, pp. 134-43.) In these data requests, the Public Staff asked the Company to describe in detail and provide documentation in support of its assertion that the transaction between Charah and the Company constitutes a sale of CCRs. When asked to cite the specific language in the contracts and amendments between DEP and Charah that support the Company's assertion, the Company cited Sections 4.1 and 4.2 of Exhibit B of the Master Contract. (Tr. Vol. 10, Public Staff McGee Cross-Examination Exhibit 2.) When asked, "How much did Charah pay the Company for the Sutton coal ash?," the Company responded that "there is not a defined price in the operative documents forthe Sutton ash." Further, when asked to provide all documents that show how the Company or Charah calculated the "net value" of or discount value of coal ash when setting the cost of services provided by Charah, the Company responded that it did not have any responsive documents. (Public Staff McGee Cross-Examination Exhibit 4.)

In Public Staff McGee Cross-Examination Exhibit 5 (Company response to Public Staff Data Request No. 174-1), the Public Staff asked the Company to provide documentation supporting witness McGee's assertion in her rebuttal that "without the purchase of the coal ash, Charah would have needed to procure topsoil or another material to use as structural fill, an added cost that Charah was able to avoid". The Public Staff also asked for information and documentation that shows what Charah would be constructing at the Brickhaven site that requires the use of structural fill. In response, the Company stated that it does not have the requested documentation but is aware that Charah is using the CCRs as structural fill; further, it has no documentation related to Charah's future plans at its Brickhaven mine. (PS McGee Cross Examination Exhibit 5) On further cross-examination, witness McGee did not dispute that the deed to Brickhaven was recorded the day after the Master Contract was signed. She also admitted that managing CCRs is Charah's expertise. (Tr. Vol. 10, p. 144.) Further, witness McGee acknowledged that it was necessary for the Company to pay Chatham County millions of dollars to send the Sutton CCRs to Brickhaven, as demonstrated by portions of a Settlement Agreement between DEP, DEC, and Chatham County dated June 22, 2015, that were read into the record. (Tr. Vol. 10, pp. 145-47.) Regarding Section 3 of Exhibit B, in which the Company transferred title to, risk of loss of, and responsibility for the CCRs to Charah once the CCRs are loaded in to truck or railcar at Sutton for transportation to Brickhaven, witness McGee acknowledged that the provision could also refer to the transfer of liability for the CCRs. (Tr. Vol. 10, p. 150.)

During the confidential portion of witness McGee's cross-examination, several contracts were entered into the record. Public Staff McGee Confidential Cross- Examination Exhibit 6 is the Master Contract, dated November 12, 2014, between Charah and DEBS on behalf of DEP and DEC for the Phase 1 Excavation Work at Riverbend and Sutton and is the Master Contract discussed in witness McGee's and Public Staff witness Lucas' testimony. The costs relating to this contract are what the Company seeks to recover through the fuel clause. (Confidential Tr. Vol. 10, pp. 152-53.) In the Master Contract, Charah is listed as the "Seller". (Confidential Tr. Vol. 10, p. 152.) Exhibit E of the Master Contract contains the pricing schedule for the Master Contract, including pricing for items such as site preparation, excavation, loading and transportation, unloading, development, home or field office overhead and profit, but no pricing for Charah's purchase of the CCRs. (Confidential T 10, pp 153-54) This was the pricing applicable for sending the ash to Brickhaven, as noted in Footnote 1 on page E-2. (Confidential Tr. Vol. 10, p. 154.) The Master Contract also had alternative pricing in the event the CCRs could not be transported to Brickhaven and instead had to be transported to the Anson County Landfill. (Confidential Tr. Vol. 10, p. 154) Witness McGee testified that if this alternative had been used, the costs associated with the Master Contract would not be recoverable under the fuel adjustment clause. (Confidential Tr. Vol. 10, p. 154.)

Public Staff McGee Confidential Cross-Examination Exhibit 7 is Master Contract 8324 dated November 12, 2014, between Waste Management National Services, Inc. (Waste Management), and DEBS on behalf of DEC for the Phase 1 Excavation Work at Dan River and W.S. Lee. The Master Contract and the Waste Management Master Contract 8324 are both dated November 12, 2014. (Confidential Tr. Vol. 10, p. 159.) The Waste Management Master Contract 8324 contains pricing schedules similar to those in the Master Contract. Under the Waste

Management Master Contract 8324, the CCRs from Dan River was to be transported to the Maplewood Landfill Site, and the CCRs from W.S. Lee was to be transported to the R&B Landfill Site in Homer, Georgia. The Waste Management Master Contract 8324 includes the same language used in the Master Contract, i.e., "payment of the Service Fee by Duke Energy to Contractor . . . together with any Ash that is transferred by Duke Energy, to Contractor under the applicable Purchase Order, constitutes payment in full, by Duke Energy to Contractor for any and all of contractor's costs to perform the Services..." Witness McGee testified that the costs associated with the Waste Management Master Contract 8324 should not be recoverable under the fuel clause. (Confidential Tr. Vol. 10, pp. 159-60.)

Public Staff McGee Confidential Cross-Examination Exhibit 10 is Purchase Order 1380566 dated September 25, 2015, authorizing Waste Management to transport CCRs from the Asheville Plant for disposal at R&B Landfill in Homer, Georgia. (Confidential Vol. Tr. 10, p. 161.) On page 4 of this Purchase Order, it states that the terms and conditions of Master Contract 8324 govern the work. (Confidential Tr. Vol. 10, p. 162.) Witness McGee testified that the costs associated with the Purchase Order would not be eligible for recovery under the fuel adjustment clause. (Confidential Tr. Vol. 10, p. 163.)

Public Staff McGee Confidential Cross-Examination Exhibit 8 is a Master Contract dated December 15, 2016, between Trans Ash, Inc. and DEBS on behalf of DEP and other Duke Energy entities for "Ash Project Services." Public Staff McGee Confidential Exhibit 9 is Master Contract dated March 14, 2017, between Parsons Environment & Infrastructure Group, Inc. and DEBS on behalf of DEP and other Duke Energy entities for "Ash Project Services".

All four Master Contracts include as Exhibit B the "Duke Energy Standard Terms and Conditions for Ash Services as Agreed upon By Seller and Duke Energy", and contain the same or substantially similar language in Sections 3, 4.1, and 4.2. This is the language the Company cites in support its claim that the costs associated with the Master Contract should be recoverable under the fuel adjustment clause. (Confidential Tr. 10, pp. 164-65) In response to a request by the Commission, the contract between Charah and Progress Energy, Inc., dated June 18, 2007, for the excavation, transportation, and resale of ash from the Asheville Plant to the Asheville Regional Airport Authority (Asheville Contract) was filed by DEP as Confidential Late Filed Exhibit 3. Section 5.1 of the Asheville Contract provided that the work performed by Charah constituted payment for the CCRs.

During the cross-examination of Company witness Kerin on his direct testimony, two exhibits were introduced. Public Staff Kerin Cross-Examination Exhibit 1, an excerpt (with confidential portions removed) of an Executive Summary, summarized the process undertaken to select the vendors to excavate the CCRs at Sutton, as well as Dan River, W. S. Lee, and Riverbend. (Tr. Vol. 17, p. 40.) The document describes the bidding events that took place and the bid evaluation process. Bids were evaluated based on technical and commercial criteria, including the bidder's acceptance level of Duke Energy Terms and Conditions. (Tr. Vol. 17, p. 42.) The document also describes the key contract provisions that would apply to the work, regardless of disposal method. (Tr. Vol. 17, pp. 42-43.) Included in the key contract provisions was a requirement that the work be completed under the Duke Energy Standard Terms and Conditions for Ash Reclamation and Placement. (Tr. Vol. 17, p. 43.)

Public Staff Kerin Cross-Examination Exhibit 2 is a memorandum (Subject: Addendum Number 1) dated October 17, 2014, from Joseph Frondorf of Duke Energy Corporation to the bid teams for the bidding event summarized in Public Staff Kerin Cross- Examination 1. (Tr. Vol. 17, pp. 43-44.) Attached to the memorandum was Duke Energy's Standard Terms and Conditions for Ash Reclamation and Placement, discussed in the Executive Summary as a key contract provision and ultimately incorporated in the contracts (as Exhibit B) with Charah for Sutton and Riverbend and Waste Management for Dan River and W. S. Lee. (Tr. Vol. 17, pp.44-45.)

In its post-hearing Brief, NC WARN contends that the use of CCRs at Brickhaven is not a "beneficial use," citing the ruling of a Superior Court revoking state permits allowing CCRs to be used as mine reclamation in areas not already mined or otherwise excavated.

Discussion and Conclusion

DEP seeks to recover certain CCR costs related to the excavation and movement of CCRs from the Sutton Plant in Wilmington, North Carolina to the Brickhaven facility in Chatham County, North Carolina, through the fuel adjustment clause on the grounds that the beneficial reuse of CCRs constitutes a sale of a by-product produced in the generation process. The fuel adjustment statute, G.S. 62-133.2, allows electric public utilities to recover through an annual rider certain fuel and fuel-related costs. G.S. 62-133.2(a1)(9) provides:

> Cost of fuel and fuel-related costs shall be adjusted for any net gains or losses resulting from any sales by the electric public utility of by-products produced in the generation process to the extent the costs of the inputs leading to that by-product are costs of fuel or fuel-related costs.

It is undisputed that CCRs are a by-product produced in the generation process. The issue is whether the transaction between DEP and Charah as reflected in the Master Contract represents a sale of a by-product.

This is the first case in which the Commission has been squarely presented with this issue. The Company contends that the fact that the Commission approved recovery of costs through the fuel adjustment clause related to a similar contractual arrangement between Charah and DEP to remove CCRs from the Asheville Plant and transport it to the Asheville Airport demonstrates that the costs related to the Master Contract are also similarly recoverable. The Commission disagrees. Nothing regarding the Asheville contractual arrangement was specifically presented by the Company, the Public Staff, or any other party in the Company's relevant fuel filings, and, therefore, the present issue was not specifically considered by the Commission. Consequently, the fuel factors approved by the Commission that included the Asheville transaction costs do not constitute specific approval of the transaction as a "sale of a by-product" and do not preclude the Commission from considering this issue now.

In addition, the findings of the Commission Report cited by witness McGee do not support a finding that the costs associated with beneficial reuse, without a sale, are recoverable through the fuel adjustment clause. The General Assembly directed the Commission to specifically address in its Report "possible revisions to the current policy on allowed incremental cost recoupment that would promote reprocessing and other technologies that allow the reuse of coal combustion residuals stored in surface impoundments for concrete and other beneficial end uses." The Commission Report examined the statutory framework for cost recovery and concluded that current policies and practices are adequate to encourage reuse of CCRs for concrete and other beneficial end uses. However, as noted by Public Staff witness Lucas and as recognized by the Commission in the Report, recovery through the fuel clause presupposes that there is a sale. On page 13 of the Report, the Commission stated, "Customers' rates are adjusted annually to include profits or losses associated with efforts to sell CCRs for beneficial re- use." On page 14 of the Report, the Commission recognized that "sales of CCRs typically result in immediate net costs to ratepayers." The Commission did not conclude in its report that the costs of processing CCRs for beneficial use, without a sale, are recoverable in the fuel clause.

Finally, the record in this case does not support a finding that the costs associated with the Master Contract resulted from a "sale" of CCRs. The Company admitted both in data responses and during the expert witness hearing that nothing in the Master Contract or its associated documents included pricing or discounts to account for a sale of the CCRs. Further, nothing in the bid documents, contracts, purchase orders, or change orders relating to the Master Contract assign any value to the CCRs to "net" against the cost of the services provided by Charah. Moreover, the evidence shows that DEP and Charah knew how to assign a value to CCRs in a true sale. Public Staff witness Lucas testified, and the Company did not challenge, that pursuant to a Master By Product Marketing, Sales, and Storage Agreement (Agreement) entered into by DEC, DEP, and Charah in December of 2013, and associated Work Orders, Charah was obligated to purchase CCRs from DEP or DEC, as applicable, at a price as set forth in the Work Orders. This Agreement formed the basis for the sale of CCRs at the Belews Creek and Marshall plants via Work Orders entered into by DEC and Charah on January 1, 2014.

The Company relies on the existence of three provisions in Exhibit B of the Master Contract in support of its contention that a sale of CCRs occurred. Company witness McGee states in her testimony that per Section 3 of the Master Contract, the Company transferred title to, risk of loss of, and responsibility for the CCRs to Charah once the CCRs wre loaded in to truck or railcar at Sutton, indicating the CCRs had value. However, on cross-examination, she agreed that this language could be interpreted to mean the transfer of liability for the CCRs. This interpretation – that transfer of title relates to the transfer of liability - is supported by the language in the second sentence of Section 3, which states that the Contractor is not assuming any responsibility for any liabilities arising out of or relating to the creations, existence, storage, or handling of the ash prior to the time title to the ash passes to Contractor. In addition, the Scope of Work Clarification provided to the bidders of the Sutton project and attached to PS Kerin Cross-Examination Exhibit 2, page 2, states, under paragraph 6, "Once the ash is loaded into the transport vehicle, <u>liability of shall transfer to the bidder</u>, and shall remain with the bidder unless it is transfer (sic) to the owner of the final ash storage location." (emphasis added) The Commission finds and concludes that Section 3 of the Master Contract does not support a finding that the Sutton CCRs had value. On the contrary, the balance of this evidence supports the conclusion that possession of the CCRs represented a liability, not an asset.

The Company also cites Sections 4.1 and 4.2 of Exhibit B of the Master Contract, which in essence state that the services performed by Charah constitute payment for the CCRs. The

Commission is not persuaded that inclusion of these provisions demonstrate that a sale of CCRs occurred. These provisions are part of the Duke Energy Standard Terms and Conditions for Ash Reclamation and Placement that have been included in other contracts for CCR services, regardless of the type of service and disposal method. PS McGee Confidential Cross-Examination Exhibit 7, the master contract for the Phase 1 Excavation Work at Dan River and W. S. Lee, contain the same provisions and pricing schedules similar to the Master Contract, and witness McGee admitted that the costs incurred under that contract should not be recoverable under the fuel clause, as the CCRs were landfilled. The Commission finds that these provisions are boilerplate that do not support the conclusion that a sale of the Sutton CCRs occurred.

Based on a preponderance of the evidence, the Commission finds and concludes that the specific provisions relating to the services and pricing in the Master Contract, Purchase Orders, and change orders for Sutton, along with the circumstances surrounding the transaction, all support the conclusion that the arrangement was one for Charah to provide CCR excavation, transportation, and disposal services to DEP, not for a sale of DEP's CCRs to Charah under G.S. 62-133.2(a1)(9).

As noted at the beginning of this discussion, DEP witness Bateman testified that of the $260.3 million expected deferred CCR cost balance, $15.1 million -- $13.8 million of spend and $1.3 million of return -- is related to 2017 Charah projected costs. Witness Bateman explained that if the Commission approves the fuel rider treatment requested by the Company, DEP will remove $15.1 million from the deferred balance in this adjustment. (Tr. Vol. 6, pp. 122-23.) The Commission having denied the recovery of the $15.1 million Charah costs in fuel rates, the recovery of this $15.1 million is left in DEP's $260.3 million deferred CCR balance for consideration of recovery in DEP's base rates.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 60

The evidence supporting this finding of fact and conclusion can be found in the Application, Form E-1, the testimony of Company witness Wright, and the testimony of Public Staff witnesses Lucas and Maness.

Public Staff witness Maness stated that CCR costs prudently incurred from January 2015 through August 2017 (i.e., costs not subject to Public Staff recommended disallowances apart from equitable sharing) should be allowed provisional cost recovery. (T Vol. 19, p. 303) He explained that the reasonableness of some of those costs may depend on the outcome of legal proceedings or other legal determinations, as described by witness Lucas. (Id.) Witness Lucas described how past actions of DEP may be determined to be violations in the future with respect to both ongoing review by DEQ and pending litigation. These circumstances affect the ability of the Public Staff and other parties to recommend disallowances for specific costs because an environmental violation must be established before there is any decision on whether to disallow the cost of remedying the violation.

In particular, witness Lucas noted that DEQ is still in the process of deciding which unauthorized seeps will be allowed under renewed NPDES permits and which will require some other action by DEP. (Tr. Vol. 18, pp. 253-54.) He stated in testimony prefiled in October 2017 that DEQ and DEP expected to reach consensus on provisional background threshold values for constituents of interest, meaning that the number of groundwater exceedances that are actual violations would not be known until then. (Tr. Vol. 18, pp. 254, 256.) He further stated that monitoring data to determine compliance with, and violations of, the CCR Rule standards would not be available until January 2018. (Tr. Vol. 18, p. 254.) In supplemental testimony, witness Lucas was able to update the groundwater violations of the 2L regulation. (Tr. Vol. 18, p. 290; Revised Lucas Exhibit 6) In addition, the Public Staff noted that there are pending lawsuits against DEP regarding the Mayo and Roxboro plants that allege violations of environmental laws. (Tr. Vol. 18, pp. 260-62.) The outcome of these lawsuits will affect how much DEP must spend for corrective action, and whether associated litigation costs should be deemed reasonable.

Witness Wright disagreed with the Public Staff's recommendation of provisional cost recovery for coal ash expenditures prudently incurred from January 2015 through August 2017, based on the argument that the appropriateness of such recovery may depend on the outcome of legal determinations. He noted first that this would appear to be retroactive ratemaking. He also stated that the standard is that the utility makes the best possible decisions on expenditures based on the information available at the time, and determinations of the reasonableness and prudency of these costs should not depend on future outcomes of legal proceedings but what was known or knowable at the time. (Tr. Vol. 20, pp. 165-66, 178.)

Provisional cost recovery is appropriate in certain circumstances. However, the Commission is not persuaded that there is good cause to order provisional cost recovery of DEP's CCR costs that are approved in this Order. The Commission has weighed the Public Staff's and other intervenors' concerns about the pending insurance lawsuits and pending determinations by DEQ, EPA, and certain courts, that will establish whether past actions of DEP amount to environmental violations against the uncertainty that is inherent in provisional rates. With regard to the insurance litigation, DEP has committed that insurance proceeds recovered by DEP will benefit ratepayers as an off-set to DEP's CCR costs. Further, the insurance proceeds are not known and measurable as of the end of the test year. Moreover, the Commission has included in this Order specific reporting requirements and other conditions with which DEP must comply regarding the insurance proceeds.

With respect to pending determinations by EPA and DEQ, the Commission is not inclined to delay its work in order to wait for these agencies to complete their work. As a result, on balance the Commission finds and concludes that it will not order that the CCR cost recovery in this docket is provisional.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 61-62

The evidence supporting these findings of fact and conclusions can be found in the Application, Form E-1, the testimony of Company witnesses Kerin and Bateman, and the testimony of Public Staff witness Maness.

CAMA Costs Identified by DEP as North Carolina Only

Witness Maness recommended two adjustments to the jurisdictional allocation factors used by the Company to allocate system-level CCR costs to the North Carolina retail jurisdiction. The first such adjustment was to allocate the costs DEP identified as "CAMA-only" costs by a comprehensive allocation factor, rather than DEP's proposed factor, which did not allocate costs to the South Carolina retail jurisdiction. Company witness Bateman stated in her testimony that there is a small portion of CCR management costs that under CAMA that are unique to North Carolina and appropriate for direct assignment to North Carolina. Company witness Kerin stated that these costs include groundwater wells used specifically for CAMA purposes and permanent water supplies provided to North Carolina customers pursuant to North Carolina law. Consequently, the Company utilized North Carolina retail allocation factors for its CAMA-only costs that did not allocate any of the system level costs to South Carolina retail operations. However, witness Maness stated that even though some of the costs incurred by DEP are being incurred pursuant to North Carolina law, it is still fair and reasonable to allocate those costs to the entire DEP system because the coal plants associated with the costs are being or were operated to serve the entire DEP system. (Tr. Vol. 18, pp. 305-06.)

In rebuttal, Company witness Bateman testified that in general she agreed with witness Maness that the costs of a system should be borne by all of the users of the system. However, she stated that the Company had identified very specific cost categories, groundwater wells used specifically for CAMA purposes and permanent water supplies provided to North Carolina customers pursuant to North Carolina law, and that they should be treated as an exception to this general rule, due to their nature as being unique to North Carolina. She stated that this unique treatment would be consistent with other examples where the Commission had allowed direct assignment to North Carolina, including the incremental costs associated with the North Carolina Renewable Energy and Energy Efficiency Standard (REPS) and the costs to comply with the North Carolina Clean Smokestacks Act. (Tr. Vol. 6, pp. 142-43.)

After consideration of this issue, the Commission finds and concludes that the adjustment recommended by Public Staff witness Maness to allocate all system-level CCR costs by a comprehensive allocation factor produces a more reasonable and appropriate outcome than the proposal by the Company to allocate a portion of these costs in a manner that does not allocate them to the South Carolina retail jurisdiction. Although the costs in question were required pursuant to North Carolina law, the costs are inherently related to the burning of coal to provide electricity to the entire DEP system, including the South Carolina retail jurisdiction. The fact that these particular costs are associated with plants that are geographically located in North Carolina is no more relevant with regard to the proper allocation of these costs than it is to the proper allocation of other costs, such as fuel expense and other variable O&M expenses, which are allocated to the entire DEP system.

Further, the Commission concludes that these CAMA compliance costs are distinguishable from the examples of REPS and Clean Smokestacks costs cited by the Company. With regard to REPS costs, it is important to note that those costs are by their very nature in excess of the normal level of costs that would otherwise need to be incurred to provide an equivalent amount of energy to the Company's customers. Thus, it is appropriate that the Commission allocates the REPS costs to North Carolina customers. With regard to Clean Smokestacks costs, the Commission notes that those costs were closely related to a rate freeze that was instituted by the General Assembly for North Carolina retail purposes. However, the legislature could not require a similar freeze to be established with regard to South Carolina retail customers.

CCR Cost Allocation Factors

The second adjustment recommended by witness Maness to the jurisdictional allocation factors used by the Company to allocate system-level CCR costs to the North Carolina retail jurisdiction is to allocate all CCR expenditures by the energy allocation factor, rather than the demand-related production plant allocation factor, as recommended by DEP. Witness Maness testified that he recommended this change because the CCR costs are being incurred because CCRs were produced by the burning of coal to produce energy over the years and, like the cost of coal, should be allocated by energy, and not peak demand. Therefore, according to the Public Staff the energy allocation factor should be used to determine the North Carolina retail portion of these costs. (Tr. Vol. 18, p. 306.)

In rebuttal, DEP witness Hager testified that the costs in question are associated with compliance with federal and state environmental requirements related to closing CCR basins. She stated that residual end of life costs typically and logically follow the cost of the plant, which is allocated based on demand, and that end of life costs (removal costs) and salvage values are factored into depreciation rates, which are allocated based on demand, as they were in the most recent DEP general rate case. Additionally, witness Hager testified that use of the demand-related factor is consistent with end-of-life nuclear fuel costs in nuclear decommissioning costs. (Tr. Vol. 10, pp. 289-90.)

At the hearing, witness Maness was asked several questions by the Commission and by counsel for DEC regarding his recommendation, particularly how it compared to the allocation methods used for spent nuclear fuel storage. In summary, witness Maness responded that the allocation methods used for nuclear fuel could differ based on the stage of life the fuel is in. When the fuel itself is consumed, it is allocated according to energy. He stated that when it is in a state of interim storage, it may be allocated by different factors, but the portion of interim storage costs embedded in nuclear decommissioning expense is allocated by demand; and the costs paid for permanent storage, to date have largely been allocated on an energy basis. (Tr. Vol. 19, pp. 81-82.)

In its post-hearing Brief, CIGFUR maintains that DEP's proposal to allocate CCR costs based on demand is appropriate. CIGFUR states that CCR, unlike coal, has no energy potential, is not a fuel, and its cost is not recoverable through the fuel clause. (Tr. Vol. 18, p. 363-65. (Maness)) Further, CIGFUR notes that the environmental liability DEP is now tasked with managing is an environmental compliance cost that did not exist when the coal was burned, but arose only much more recently, and that applying a demand factor is consistent with the treatment of end-of-life nuclear fuel costs and nuclear decommissioning costs. (Id. at 289-90.)

In its post-hearing brief, NCSEA argues that costs associated with coal ash remediation are appropriately classified as energy-related costs.

The Commission has carefully considered the evidence presented by the witnesses. The evidence indicates that there have been a mixture of allocation approaches used for costs associated with fuel expense and other expenses over the years, with fuel and other energy-related costs following an energy allocation approach, while other costs, including certain spent fuel costs and costs associated with end-of-life plant costs, have been allocated consistent with the allocation of production plant, which the Commission notes has sometimes been based on peak demand and sometimes based on some type of average of energy and peak demand. The Commission can see credible arguments for the allocation of CCR clean-up costs on both sides – production plant or energy. However, CCR is a residual of the burning of coal in order to produce electricity. For every kWh of electricity that is produced by coal-fired generation, there are CCRs produced that must be properly handled and stored. Thus, the quantity of CCRs and the cost of storing them are energy driven. As a result, the Commission finds and concludes that the appropriate and reasonable course of action is to allocate the CCR costs by the energy allocation factor.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 63-65

The evidence supporting these findings of fact and conclusions is contained in the testimony of DEP witness Fountain and DEP's Late-Filed Exhibit 1.

Witness Fountain testified that DEP is engaged in litigation in Mecklenburg County involving 57 insurance policies purchase by DEP and DEC from 1971 to 1986. The lawsuit was filed on March 29, 2017. Witness Fountain testified that the lawsuit was filed after Duke Energy Corporation requested that the insurance companies provide coverage in connection with DEC's and DEP's liability for CCR costs. All of the insurance companies refused to pay Duke anything under the policies. Witness Fountain testified that DEP is seeking to recover its CAMA compliance costs and "seeking insurance proceeds that would offset those customer costs to the extent that they are provided in conjunction with these rate proceedings." (Tr. Vol. 7, p. 375.)

At the request of the Commission, on December 6, 2017, DEP filed its Late-Filed Exhibit 1. In summary, DEP's exhibit responds to the Commission's inquiries regarding the pending lawsuit, Duke Energy Carolinas, LLC, et al. v. AG Insurance SA/NV, et al., Case No. 17-CVS-5594, Superior Court (Business Court), Mecklenburg County, State of North Carolina (Insurance Case), in which DEP seeks insurance recovery for certain CCR related costs. DEP states that any net insurance recoveries from the Insurance Case will be used to reduce the CCR costs paid by DEP's customers. DEP further states that the Insurance Case seeks recovery under 19 excess-level third-party liability insurance policies issued to DEP's predecessor, Carolina Power & Light Company, between 1971 and 1986. DEP states that each policy will make a pay-out only after a "self-insured retention" – similar to a deductible – is satisfied, which deductibles range from $100,000 to $500,000 per policy. In addition, DEP states that the value and recoverability of the insurance proceeds is hotly disputed, and that each insurer in the Insurance Case takes the position that DEP is entitled to no recovery. Moreover, DEP states that "[i]t is possible that net recovery on behalf of the DEP ratepayers could amount to as much as $300 million dollars over time as future costs are incurred taking into account all of the DEP policies sued upon." DEP Late-Filed Exhibit 1, at p. 2.

Several parties questioned whether DEP has sufficient direct interest in the Insurance Case to motivate DEP to make a reasonable effort at recovering the maximum amount possible to off-set its customers' CCR costs. For example, in its post-hearing Brief Fayetteville PWC recommended that the Commission place three conditions on DEP's recovery of insurance proceeds: (1) DEP will be entitled to the immediate collection from the deferred account of an amount equal to the insurance proceeds that DEP secures for coal ash remediation from the Mecklenburg Case, provided that the offsetting insurance proceeds are credited to DEP's ratepayers; (2) if DEP fails to recover all or any of the insurance proceeds, DEP's CCR cost recovery should be reduced by the amount not recovered, unless DEP satisfies the Commission that it was not at fault in failing to get full insurance recovery; and (3) DEP would not be allowed to accrue a carrying charge on its deferred costs commensurate with any amount of insurance proceeds that it does not recover.

The AGO posits that ratepayers should not bail out DEP from its failure to pursue insurance coverage. Currently, DEP is seeking insurance coverage and has indicated that the total amount of recovery of policies sued upon "may total approximately" between $172 million to $200 million per occurrence. The Company further states that the net recovery on behalf of ratepayers could amount to as much as $300 million. The Company has agreed to use the insurance proceeds to offset the amounts it is otherwise seeking to recover; however, the AGO argues that DEP is disinterested in the outcome. The AGO contends currently there is no downside to DEP if it loses the insurance cases because DEP does not view itself as a stakeholder in the outcome. Further, the AGO contends that DEP might have not filed its claims in time and that the statute of limitations might have run. The AGO requests that if recovery is allowed that the Commission should earmark $300 million as being recovered in damages from the insurance case. The AGO further requests that the Commission should not allow a rate of return on the portion of the coal ash costs that may be recovered via the insurance case.

The Commission is not persuaded that it should adopt Fayetteville's PWC's first recommendation. It appears that the suggestion that DEP be allowed "immediate collection" from the deferred account would not require any Commission review of the deferred CCR costs for prudency or reasonableness. Thus, for example, if DEP settled the litigation for $200 million, it would immediately collect $200 million from the deferred account and be required to immediately credit ratepayers for $200 million. However, if $100 million of DEP's $200 million deferred CCR costs was not prudently or reasonably incurred, then $100 million of the insurance proceeds would go for CCR costs that should be disallowed.

The Commission agrees in principle with Fayetteville's PWC's second recommendation and the AGO's contentions. DEP is representing the interests of its ratepayers in the Insurance Case. Therefore, the Commission finds it appropriate to hold DEP to the same standard of care that DEP is required to exercise each day in providing electric service. That standard is one of reasonableness and prudence. If the parties to this docket, or the Commission on its own motion, raise meritorious issues about DEP's representation of the interests of ratepayers in the Insurance Case, DEP shall bear the burden of proving that it exercised reasonable and prudent efforts to obtain the maximum recovery in the Insurance Case.

With respect to Fayetteville's PWC's third recommendation as well as the AGO's request, the Commission again agrees in principle. However, a blanket denial of carrying costs based solely on DEP's failure to recover every dollar of insurance coverage would be unfair. Rather, the Commission concludes that if DEP exercises reasonable care in representing its ratepayers' interests in the Insurance Case, then DEP should be entitled to receive its full authorized carrying charges on the deferred account. As stated above, if there is a meritorious issue raised about DEP's representation of the interests of its ratepayers in the Insurance Case, DEP shall bear the burden of proving that it took reasonable and prudent steps to obtain the maximum recovery. If DEP fails to meet this burden, the Commission can deny DEP carrying costs on that amount of insurance proceeds that were not recovered as a result of DEP's lack of reasonable and prudent efforts.

Finally, the Commission concludes that DEP should be required to place all insurance proceeds received or recovered by DEP in the Insurance Case in a regulatory liability account and hold such proceeds until the Commission enters an order directing DEP as to the appropriate disbursement of the proceeds. In addition, the regulatory liability account shall accrue a carrying charge at the overall rate of return authorized for DEP in this Order.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 66

The evidence supporting this finding of fact and conclusion is contained in the testimony of DEP witnesses Bateman and Simpson, and Public Staff witness Maness.

DEP witness Bateman testified that DEP is requesting authority to establish a regulatory asset in which to record and defer the cost of existing AMR meters that are replaced by AMI meters. She stated that the Company's Depreciation Study recovers the net value of the meters being replaced over three years, which is the expected AMI deployment period.

DEP witness Simpson testified that pending a management review and approval by the Duke Energy Board of Directors later this year, DEP plans to begin a full deployment of AMI meters in 2018. He also noted the testimony of witness Bateman regarding DEP's request to establish a regulatory asset in which to record and defer the cost of existing AMR meters that are replaced by AMI meters.

Public Staff witness Maness testified that the Public Staff does not oppose the establishment of a regulatory asset to track the remaining depreciation of replaced meters. Further, he recommended that the replaced meters be depreciated using their estimated remaining useful life of 18.3 years, rather than over three years, as recommended by DEP.

The Commission finds and concludes that DEP should be allowed to establish a regulatory asset account and defer to that account the cost of existing AMR meters replaced by AMI meters. However, the approval granted herein is without prejudice to the right of any person to contest the recovery of the amount of the regulatory asset in future rates, and is without prejudice to the Commission's authority to deny or reduce such recovery if the Commission concludes that DEP has not complied with the Commission's rules or other requirements.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 67

The evidence supporting this finding of fact and these conclusions is contained in the testimony of DEP witness Bateman.

With regard to DEP's CCR costs from 2018 forward, DEP witness Bateman testified that DEP is requesting to establish a regulatory asset/liability account and defer to this account the portion in annual rates that is more than DEP's actual costs, or the amount in annual rates that is less than DEP's actual costs. In essence, the asset/liability account would be a tool used to true-up the difference in DEP's next general rate case.

The Commission agrees with DEP's recommended approach, not only for CCR costs, but also for all cost deferral accounts. A deferred cost is not the same as the other cost of service expenses recovered in the Company's non-fuel base rates. A deferred cost is an exception to the general principle that the Company's current cost of service expenses should be recovered as part of the Company's current revenues. When the Commission approves a typical cost of service, such as salaries and depreciation expense, there is a reasonable expectation that the expense will continue at essentially the same level until the Company's next general rate case, at which time it will be reset. On the other hand, when the Commission approves a deferred cost the Commission identifies a specific amount that has already been incurred by the Company, or, in the case of CCR costs, is estimated to be incurred by the Company. In addition, the Commission sets the recovery of the amount over a specific period of time. Further, the Company is directed to record the recovery of the specific amount in a regulatory asset account, rather than a general revenue account. If DEP continues to recover that deferred cost for a longer period of time than the amortization period approved by the Commission that does not mean that DEP is then entitled to convert those deferred costs into general revenue and record them in its general revenue accounts. Rather, the Company should continue to record all amounts recovered as deferred costs in the specific regulatory asset account established for those deferred costs until the Company's next general rate case.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 68

In the post-hearing briefs of CUCA and other intervenors, the parties contended that the Commission should adjust DEP's rates to incorporate the effect of the federal income tax decrease included in the Federal Tax Cuts and Jobs Act of 2017 (FTCJA). CUCA estimates that the annual monetary value in the tax reduction is approximately $116.9 million as stated in its comments in Docket No. M-100, Sub 148.

The AGO, in its post-hearing Brief, notes that the Commission has opened a rulemaking proceeding to consider the rate adjustments that public utilities should make to reflect the impact of the tax cut effectuated by the Federal Tax Cuts and Jobs Act (FTCJA). The AGO states that it will participate in the rulemaking and asks the Commission to take appropriate action in this case to order that rates established in this docket will be billed and collected on a provisional basis and that an appropriate deferral will occur, as directed in the FTCJA Order initiating the proceeding, pending final disposition of the rulemaking in order to reflect the benefit of the tax cut in rates.

In its post-hearing Brief, EDF contends that the Commission should require DEP to reflect the federal income tax reduction effectuated by the FTCJA in its new rates. In support of its position, EDF states that a similar event occurred when Congress passed the Tax Reform Act of 1986, which cut the federal income tax rate from 46% to 34%. The Commission opened Docket No. M-100, Sub 113 to investigate how to reflect the federal income tax reduction in rates. In the appeals that followed, the Supreme Court of North Carolina upheld the Commission's authority to reduce utilities' rates to reflect the federal income tax change, either through a general rate case or through a rulemaking. State ex rel. Utilities Com. v. Nantahala Power & Light Co., 326

N.C. 190, 388 S.E.2d 118 (1990). EDF acknowledges that on January 3, 2018, the Commission opened Docket No. M-100, Sub 148 to address the FTCJA issues.

In its post-hearing Brief, Kroger notes that on December 22, 2017, the FTCJA was signed into law, lowering the Federal corporate income tax rate from 35% to 21%. Kroger states that the Commission noted in its Order initiating proceedings in Docket No. M-100, Sub 148, that the reduction in the corporate income tax rate will have an immediate and favorable impact on the cost of providing services to utility customers, including the customers of DEP. Kroger contends that income taxes are a cost of service for ratemaking, and that when tax expense goes down so too should rates. Kroger urges the Commission to recognize the impact of the new tax rate in this proceeding by lowering customer rates commensurate with DEP's reduced tax expense.

On January 3, 2018, the Commission issued an Order in Docket No. M-100, Sub 148 initiating an inquiry into the effects of the FTCJA. The Commission's Order included notice to affected utilities that effective January 1, 2018, the Federal corporate income tax expense component of all existing rates and charges will be billed and collected on a provisional rate basis. Therefore, the Commission will address the effects of the FTCJA in Docket No. M-100, Sub 148.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 69-71

The evidence supporting these findings and conclusions is contained in the Stipulation, DEP's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

The Company presented Settlement Exhibit 1, Schedule 1 and Updated Bateman Exhibit 1 – Partial Settlement reflecting DEP's revised requested increase incorporating the provisions of the Stipulation, the Company's position on the unresolved issues and the impact of the EDIT decrement rider. Per those exhibits, the resulting proposed revenue requirement of the Company is $305,955,000. Second Revised Settlement Exhibit 1, Schedule 1 shows the Public Staff's revised recommended increase incorporating the provisions of the Stipulation, the impact of the EDIT decrement rider and its adjustments (Coal Ash, Storm Costs) reflecting the Public Staff's position on the Unresolved Issues. The resulting proposed revenue requirement by the Public Staff is $99,726,000.

As discussed in the body of this Order, the Commission approves the Stipulation in its entirety and makes its individual rulings on the unresolved issues as discussed. Due to the intricate and complex nature of some of the issues, the Commission requests that DEP recalculate the required annual revenue requirement as consistent with all of the Commission's findings and rulings herein within 10 days of the issuance of this Order. The Commission further orders that DEP work with the Public Staff to verify the accuracy of the recalculations. Once the Commission receives this filing, the Commission will work promptly to verify the calculations and will issue an Order with final revenue requirement numbers.

In addition, the Commission requests that DEP and the Public Staff provide the Commission with the demand and energy allocation factors that they, respectively, deem appropriate for allocating the CAMA costs to the North Carolina retail jurisdiction.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 72

The evidence supporting this finding of fact and conclusion is contained in the Application, the testimony and exhibits of all the witnesses, the Stipulation, and the entire record in this proceeding.

Pursuant to G.S. 62-133(a), the Commission is required to set rates that are "fair both to the public utilities and to the consumer." In order to strike this balance between the utility and its customers, the Commission must consider, among other factors, (1) the utility's reasonable and prudent cost of property used and useful in providing adequate, safe and reliable service to ratepayers, and (2) a rate of return on the utility's rate base that is both fair to ratepayers and provides an opportunity for the utility through sound management to attract sufficient capital to maintain its financial strength. See G.S. 62-133(b). DEP's continued operation as a safe, adequate, and reliable source of electric service for its customers is vitally important to DEP's individual customers, as well as to the communities and businesses served by DEP. DEP presented credible and substantial evidence of its need for increased capital investment to, among other things, maintain and increase the reliability of its system and comply with environmental requirements.

In its Application and testimony, DEP stated that since 2013 it has been adding new gas-fueled generation, along with adding new utility-scale solar facilities, to replace older, less-efficient coal-fired generation. In addition, DEP noted that it began construction on its Asheville Combined Cycle Plant, and has almost completed construction of its new Sutton Blackstart Combustion Turbine. According to DEP, approximately $253 million of its initially requested $477.5 million revenue increase was intended to recover the costs associated with these plant additions and upgrades. In addition, DEP stated that it has started complying with recently adopted federal and state rules regarding the handling of CCRs and closure of CCR basins, and that $66 million of the requested $477.5 million increase was intended to recover ash basin closure compliance costs incurred since January 1, 2015. Further, DEP stated that it was requesting to recover $129 million toward ongoing ash basin closure compliance costs, with any difference from the requested amount and actual costs to be deferred until a future general rate case. DEP stated that the remaining $29 million of the requested rate increase was intended to recover costs related to tax rate changes, major storm restoration costs, nuclear development costs, and an updated Customer Information System.

These are representative examples of the capital investments that have been made and are planned to be made by DEP in order to continue providing safe, reliable and efficient electric service to its customers.

In addition, the rate increase approved herein is mitigated to some extent by the Partial Settlement Agreement entered into between DEP and the NC Justice Center, wherein DEP agrees to contribute $2.5 million to the Helping Home Fund for low-income energy assistance.

Based on all of the evidence, the Commission finds and concludes that the revenue requirement, rate design and the rates that will result from this Order strike the appropriate balance between the interests of DEP's customers in receiving safe, reliable and efficient electric service at the lowest possible rates, and the interests of DEP in maintaining the Company's financial strength at a level that enables the Company to attract sufficient capital. As a result, the

Commission concludes that the revenue requirement and the rates that will result from that revenue requirement established as a result of this Order are just and reasonable under the requirements of G.S. 62-30, et seq.

IT IS, THEREFORE, ORDERED as follows:

1. That the Stipulation filed by DEP and the Public Staff is hereby approved in its entirety.

2. That DEP is entitled to recover the actual coal ash basin closure costs DEP has incurred (netted against the amount already included in the Company's rates following its last rate case) during the period from January 1, 2015 through August 31, 2017, less a disallowance of $9.5 million, for a total amount to $232,390,000, to be adjusted based on the allocation factors to be provided by DEP and the Public Staff pursuant to Ordering Paragraph No. 5. These costs shall be amortized over a five-year period, with a return on the unamortized balance and then reducing the resulting annual revenue requirement by $6 million for each of the five years.

3. That DEP is authorized to record its September 1, 2017 and future CCR costs in a deferral account until its next general rate case. This deferral account will accrue a return at the overall rate of return approved in this Order.

4. That the appropriate revenue requirement for the first four years shall be reduced by the EDIT Rider decrement of $42.577 million.

5. That DEP shall recalculate and file the annual revenue requirement with the Commission within 10 days of the issuance of this Order, consistent with the findings and conclusions of this Order and the Stipulation. The Company shall work with the Public Staff to verify the accuracy of the filing. DEP shall file schedules (North Carolina Retail Operations – Statement of Rate Base and Rate of Return, Statement of Operating Income, and Statement of Capitalization and Related Costs) summarizing the gross revenue and the rate of return that the Company should have the opportunity to achieve based on the Commission's findings and determinations in this proceeding. In addition, DEP and the Public Staff shall provide the Commission with the demand and energy allocation factors that they, respectively, deem appropriate for allocating the CAMA costs to the North Carolina retail jurisdiction.

6. That DEP is hereby authorized to adjust its rates and charges in accordance with the Stipulation and findings in this Order effective for service rendered on and after the following day after the Commission issues an Order accepting the calculations required by Ordering Paragraph No. 5.

7. That the Commission shall issue an Order approving the final revenue requirement numbers once received from DEP and verified by the Public Staff as soon as practicable.

8. That the three settlement agreements entered into by DEP with Commercial Group, Kroger, and NC Justice Center are in the public interest and should be approved in their entirety.

9. That within 10 days of the resolution by settlement, dismissal, judgment or otherwise of the litigation entitled Duke Energy Carolinas, LLC, et al. v. AG Insurance SA/NV, et al., Case No. 17 CVS 5594, Superior Court (Business Court), Mecklenburg County, North Carolina (Insurance Case), DEP shall file a report with the Commission explaining the result and stating the amount of insurance proceeds to be received or recovered by DEP. This reporting requirement shall apply even if the case is appealed to a higher court.

10. That DEP shall place all insurance proceeds received or recovered by DEP in the Insurance Case in a regulatory liability account and hold such proceeds until the Commission enters an order directing DEP regarding the appropriate disbursement of the proceeds. The regulatory liability account shall accrue a carrying charge at the overall rate of return authorized for DEP in this Order.

11. That the approved base fuel and fuel-related cost factors are as follows (amounts are cents per kWh, excluding regulatory fee): 1.993 for residential customers; 2.088 for SGS customers; 2.431 for MGS customers; 2.253 for LGS customers; and 0.596 for Lighting customers.

12. That the Company shall implement an increment rider, effective on the same date as its new base rates, and expiring at the earlier of (a) January 30, 2020, or the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply for three consecutive months of total coal inventory of 37 days or less, to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $76.11 per ton). The interest on any under- or over-collection shall be set at the Company's net-of-tax overall rate of return. The Company shall adjust the rider annually, concurrently with its DSM/EE, REPS, JAAR and Fuel Adjustment riders.

13. That on or before December 31, 2018, the Company and the Public Staff shall complete an analysis showing the appropriate coal inventory level given market and generation changes since the Company's rate case in Docket No. E-2, Sub 1023.

14. That the Company shall conduct a workshop on its Power/Forward grid investments in the second quarter of 2018.

15. That the aspects of rate design agreed upon in the Stipulation are approved and shall be implemented.

16. That DEP shall not be allowed to defer the costs of the June and July 2016 thunderstorms amounting to $1.720 million in O&M expenses.

17. That DEP shall be, and is hereby, allowed to defer incremental O&M costs of 2016 storms in the total amount of $51.032 million.

18. That DEP is authorized to record the incremental storm cost amortization expense over a five-year period beginning with the month of October 2016.

19. That DEP's request for deferral of the depreciation expense and carrying costs related to the 2016 storms at its weighted average cost of capital on the capital investments, and the carrying costs at its weighted average cost of capital on the deferred costs, shall be, and is hereby, denied.

20. That DEP shall within 30 days of the date of this Order make a $2.5 million contribution from shareholder funds to the Helping Home Fund to be used for low-income energy assistance in DEP's North Carolina service territory.

21. That DEP is allowed to collect in rates a North Carolina retail normalized annual level of storm costs in the amount of $11.018 million.

22. That the Commission's approval in this Order of deferral accounting and other accounting procedures is without prejudice to the right of any party to take issue with the amount of or the accounting treatment accorded these costs in any future regulatory proceeding.

23. That the Company's proposal for a JRR, as modified by this Order, and the JRRR are hereby approved for a one-year pilot with an option to renew it for a second year if the Company provides evidence that the JRR is achieving its intended purpose.

24. That the JRR and JRRR revenues shall be reported to the Commission annually, if the JRR is in effect more than one year, and the JRRR shall be reviewed and will be subject to adjustment annually coincident with DEP's December fuel adjustment to match anticipated recovery revenues and true-up any past over-or under-recovery.

25. That due to the uncertain date of implementation, compliance tariffs shall be filed prior to implementation of the JRRR and customers shall be notified by bill insert or message upon implementation.

26. That within 30 days of this Order, but no later than 10 business days prior to the effective date of the new rates, DEP shall file for Commission approval five copies of all rate schedules designed to comply with this Order, accompanied by calculations showing the revenues that will be produced by the rates for each schedule. This filing shall include a schedule comparing the revenue that was produced by the filed schedules during the test period with the revenue that will be produced under the proposed settlement schedules, and a schedule illustrating the rates of return by class based on the revenues produced by the rates for each schedule.

27. That DEP shall submit a proposed customer notice to the Commission for review and approval, and upon approval of the notice by the Commission, shall give appropriate notice of the approved rate increase by mailing the notice to each of its North Carolina retail customers during the billing cycle following the effective date of the new rates.

28. That the Company shall file annual cost of service studies based on both the SCP and SWPA methodologies.

29. That DEP shall be, and is hereby, authorized to establish a regulatory asset to defer and amortize the costs of its Customer Connect Program (CCP). The regulatory asset account shall accrue AFUDC until the DEP Core Meter-to-Cash release (Releases 5-8) of the CCP project goes into service, or January 1, 2022, whichever is sooner. At that point, the costs will be amortized over 15 years.

30. That DEP shall file reports regarding the development, spending and accomplishments of the CCP each year on December 31 for the next five years, or until the CCP is fully implemented, whichever occurs later. Further, DEP and the Public Staff shall develop a format for the annual CCP report and file the format with the Commission within 90 days of the date of this Order.

31. That DEP shall be, and is hereby, authorized to defer to a regulatory asset account the cost of existing AMR meters replaced by AMI meters. However, the approval granted herein is without prejudice to the right of any person to contest the recovery of the amount of the regulatory asset in future rates, and is without prejudice to the Commission's authority to deny or reduce such recovery if the Commission concludes that DEP has not complied with the Commission's rules or other requirements.

32. That if DEP receives revenue for any deferred cost for a longer period of time than the amortization period approved by the Commission for that deferred cost, the Company shall continue to record all revenue received for that deferred cost in the specific regulatory asset account established for that deferred cost until the Company's next general rate case.

This 23rd day of February, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner ToNola D. Brown-Bland dissents in part.
Commissioner Daniel G. Clodfelter concurs in part, and dissents in part.
Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-2, SUB 1131
DOCKET NO. E-2, SUB 1142
DOCKET NO. E-2, SUB 1103
DOCKET NO. E-2, SUB 1153

Commissioner ToNola D. Brown-Bland, dissenting in part:

I dissent from the majority opinion with respect to the Findings of Fact 35, 54 and 55 and discussion leading to the determination that the Company is entitled to full recovery of all coal ash expenses subject to a one-time mismanagement penalty. I acknowledge that the penalty imposed represents an attempt to hold the Company accountable for its admitted mismanagement and oversight of its coal ash handling and disposal operations. However, this approach, without further analysis, does not reasonably assure that the rates fixed for the Company's service are "fair to both the public utilit[y] and to the consumer," and that the rate set by the Commission and to be received by the Company is just and reasonable. G.S. 62-133 and 131. It is not fair to burden the consumers with rates that include costs attributable to the Company's imprudence nor is it fair to the Company to disallow recovery of reasonable costs necessary to the provision of adequate, efficient and reasonable service.

Fairness in rate fixing requires the Commission to undertake reasonable effort to examine the incurred costs sought to be recovered and distinguish among such costs to reasonably assure consumers are not burdened with costs that are unfair and the utility Company is not denied recovery of its reasonable costs. In this general rate case at hand, imposition of the penalty alone without analysis of costs to determine why they were incurred does not meet the Commission's duty to fairly balance the interests of the consumer and the Company and to reasonably assure that costs are fairly assigned between the two. A one-time penalty cannot substitute for the Commission's duty to make rates that are fair to both the public utility and the consumer on a case by case basis considering the evidence of record in each case.

While it concluded the Company should face a consequence for its mismanagement, the majority failed to acknowledge that the Company's admission in a court of law to mismanagement of its coal combustion residual activities through inadequate oversight that led to unlawful water pollution is conclusive evidence of its imprudence in handling, storage and management of coal ash. Pleading guilty to unlawful criminal activity, *i.e.*, four counts of criminal negligence resulting in coal ash pollutant discharges to surface waters, established negligence per se and therefore it is appropriate to conclude in the case at hand, where the prudence of the Company's actions is at issue, that the same plea established imprudence per se.[1] Where the Company has pled guilty to criminal negligence a finding that its actions concerning those criminal negligent actions were prudent is contrary to law.

Moreover, the Company's imprudence is also established based on other evidence of record in this case. Even if for the sake of argument, the Company's position is accepted that at all times relevant its coal ash handling practices and actions met the requirements of applicable statutory law and regulations, the evidence, as discussed below, shows that the Company failed in or breached its *legal* duty to exercise the ordinary duty of care to protect life, property and the environment from harm and unreasonable risks in the performance of its lawful activities and business obligation to properly handle, store and manage coal ash laden with heavy metals and other contaminants. This ordinary duty of care (and it could be argued the Company has a higher duty stemming from the nature of electric generation and related coal combustion activities) exists at all times and, unless otherwise stated expressly by statute, is not excused by mere compliance with statutes and regulations. Despite its recognition that its guilty plea in federal court was acknowledgement of failure to live up to its own standards, the Company seems to toss aside its ever present duty of care and argue its only duty is compliance with statutes and regulation. It seems to further argue that any action or costs beyond bare compliance would be wrong or considered gold plating by this

[1] Violations of statutes which have the purpose of protecting the public from harm to life or safety constitute negligence per se. See Bell v Page, 271 N.C. 396, 156 S.E.2d 711 (1967); Hampton v. Spindale, 210 N.C. 546, 187 S.E. 775 (1936).

Commission.[1] Yet the Company's own testimony of record shows that it knows better. Company witness Wells testified that in 2006 DEP began groundwater monitoring activities related to its ash facilities without being required to do so by any law or regulation. It is reasonable to infer the Company knew or intuitively recognized in 2006 that it had a duty of care to monitor the groundwater as part of basic safety and environmental protection obligations that could not be delayed due to cost recovery concerns. Actors such as the Company cannot avoid the basic duty of ordinary care to take steps to protect others from unreasonable risks or harm based on concerns that cost recovery from this Commission or any other agency may be denied. Therefore, the applicable standard of care for the Company is not only compliance with statutes and regulations but also compliance with the legal duty of ordinary care as discussed above. Where, as here and as will be discussed below, the evidence of record establishes both that the Company breached this duty and that certain incurred costs were caused as a result of such breach, the majority's finding that incurring those identified costs was reasonable and prudent is contrary to law.

The evidence of record generally shows that around the 1920s when the Company began providing electric service in our state, it did so by generating electricity through the combustion of coal. The generation process created the byproduct of coal ash. At the time, neither the use of fossil fuel in power generation nor the ash byproduct were known to be particularly harmful to human well-being or the environment. Nevertheless, the ash resulting from the generation process was substantial and the Company as part of its provision of service undertook the obligation to properly manage it. It is presumed that during this time period, the rates approved by the Commission and paid by ratepayers were adequate to compensate the Company for its costs for its proper management of the coal ash byproduct. The part of the ash that did not fly into the atmosphere through smokestacks was collected by the Company from the bottom of boilers and placed in on-site storage areas. Before there were ash basins or landfills, the bottom ash would have been placed in a lay of the land area. This could have created a pile on-site or just filled in a low area.

Neither the creation nor management of the ash in this manner was negligent based on the then current knowledge and foreseeability of the risks at that time. In choosing fossil fuel generation, the Company complied with the state's policy of providing service at the least cost and the consumers benefitted from this choice at least in the form of low electric rates for decades down to the present. Storing the dry ash on-site was not negligent as the scientific and healthcare communities had not determined that such disposal could pose a substantial risk of harm to people or the environment and the environmental risks of harm or injury from coal ash management practices were not then foreseeable by the Company. This method of storage also complied with the state's least cost policy from which consumers benefitted in the form of low electric rates.

In the 1950s, the Company, in alignment with the power industry at the time, created unlined basins and ponds to serve as repositories for coal ash sluiced out of boilers using water. The Company's repositories were created on-site with the generation plants from the mid-1950s through 1985. When this practice began in the 1950s, unlined basins were the primary technology for treating and handling coal ash throughout the country. There were no governmental regulations requiring that the ash repositories be lined for safety or health reasons and the scientific and

[1] The gold plating argument is a convenient one and may have been more convincing if the Company had presented a plan to improve its coal ash management safety and compliance practices to the Commission and had shared what it learned from the Sutton report as will be discussed herein.

healthcare communities still had not formed a certain opinion as to the risk of harm posed by unlined ash basins and ponds. The evidence before the Commission does not establish that the Company knew or reasonably foresaw that its coal ash handling practices were problematic or harmful to human life or the environment. Neither our state nor our nation was particularly environmentally aware or concerned with the harmful implications of coal ash management practices before around the time the United States Environmental Protection Agency (EPA) was established in 1970. Thus, it remained true that neither the ash created up through this time nor the Company's early coal ash management activities, including treatment of wet ash in unlined repositories, was imprudent. Fossil fuel generation and wet coal ash treatment in unlined basins and ponds was also compliant with the state policy that electric service be provided for the least cost and consumers continued to benefit in the form of low electric rates. Again, it is presumed that during this time period, the rates paid by ratepayers were adequate to compensate the Company for its costs for its proper handling and disposal of the coal ash.

By 1972, the EPA had begun to regulate unlined coal ash basins under the Clean Water Act and set groundwater standards for industry and water quality standards for contaminants in surface waters. The federal regulation of ash basins was clear indication to power generators like the Company that coal ash was being examined as posing a threat to ground and surface water. By 1979, the State of North Carolina's environmental regulator (today known as DEQ) implemented what is known as the 2L water regulations. Since 1983, these rules required persons including the Company to take actions both to prevent and correct groundwater contamination. By 1988, as reported publicly by the EPA in its report to Congress on wastes from power plant combustion of coal, 40% of generating units built after 1975 used lined ash disposal facilities. The EPA began regulating coal combustion waste under the Resource Conservation and Recovery Act in 2000. In 2008, a huge spill of over 5 million cubic yards of coal ash occurred at the Tennessee Valley Authority Kingston Fossil Plant, which resulted in ash being released into the Emory River. That spill caused both the industry and the EPA to focus more on, among other related issues, understanding the threat posed by unlined coal ash basins to surface and ground water. By 2010, the EPA had developed and issued proposed rules regarding Coal Combustion Residuals (CCR Rules) and had begun the process of receiving comments from interested parties, including power producers.

Thus, the evidence shows the Company had known for about 30 years prior to enactment of the North Carolina Coal Ash Management Act (CAMA) that the state's 2L water regulations required it to prevent and to correct exactly the kind of pollution which the Company admitted through its guilty plea it negligently allowed to occur from at least 2010 through 2014. The TVA incident combined with the regulatory response and the participation of the industry, including the Company, in the EPA rulemaking process informed or should have informed the Company, by 2010 and well before the 2014 enactment of CAMA, of the gravity of the situation surrounding the proper management of coal ash, which was continuing to mount as coal continued to be used in the generation process to meet customer demand for electric power. With knowledge of the foregoing regulatory efforts and requirements as well as the spill incident, the Company certainly had a clear obligation, by 2010 if not sooner, in the exercise of due care to monitor its repositories and take action upon any evidence that the repositories were not containing the coal ash in the intended and required manner. That is to say, that between the TVA spill in 2008 and 2010, by keeping abreast of EPA activities related to the spill including developing the CCR Rules, and through its knowledge of the state requirements making it unlawful to exceed established groundwater contamination levels, the Company knew the concerns and risks associated with coal ash contamination. It is reasonable to infer from the evidence that the Company was aware that it ran the risk of its unlined ash containment repositories failing to contain and that such failure would likely result in unlawful water contamination. It is against the weight of the evidence to infer that the Company was unaware of these risks.

In fact, the evidence further establishes that well prior to the notable and historical TVA spill and the 2014 release of ash into the Dan River from Duke Energy Carolinas' Dan River Steam Station, DEP had actual knowledge that its own ash basins at the Sutton and Asheville plants were not serving their essential purpose of effectively treating and containing ash—at least not at the level that was reasonably expected or required by the Company's duty to exercise due care in coal ash management activities. The National Pollution Discharge Elimination System (NPDES) permitting system, adopted in 1972 with permitting authority granted to North Carolina in 1974, implements standards under the federal Clean Water Act for preventing pollutants from being discharged into surface waters. Similarly, North Carolina's 2L standards were adopted in 1979 to set limits on harmful groundwater pollutants and to require corrective action when pollution occurs. First the evidence is that there were a number of NPDES permit violations and unlawful groundwater exceedances at DEP coal-fired plant sites, including the Sutton and Asheville plants, going back at least 10 years, *i.e*, as far back 2007. The Company knew of the 2007 violations and exceedances when they were noticed by DEQ in 2007. Indeed, DEP witness Wells testified that since 2010 DEP has been attempting to persuade DEQ to issue NPDES permits authorizing DEP's seeps, but DEQ has thus far chosen not to permit them.

Aside from whatever the status of the evolution of ash regulation may have been, upon learning that seeps and exceedances were attributable to its unlined ash ponds and basins, the Company's duty of ordinary care required it to take timely steps to manage its ash *i.e.*, by properly maintaining its water treatment equipment or by removing ash from unlined ponds and placing it in properly lined repositories. Not taking such steps to arrest the seeps and exceedances for more than seven years while waiting for DEQ to act on the Company's request to approve and permit the seeps was not reasonable. It was a breach of the Company's duty of care and imprudent.

The Company's knowledge of the inadequacy of its coal ash management practices is further documented by its own L.V. Sutton Steam Electric Plant long term ash strategy study phase report (Sutton report) produced in November 2004 by the engineers of the Company's fossil generation department.[1] The report provides substantial and convincing evidence that the Company knew its unlined ash ponds were not in compliance with applicable coal ash regulations and posed a risk of failing to contain the ash contaminants. The report put forth for consideration a number of alternatives for handling ash at the Sutton plant because of then present and foreseeable issues with two Sutton ash ponds. The existing 1984 ash pond was predicted to be out of capacity for any future ash storage by June 2006 based on the ash production levels occurring at the time. The 1983 pond was unlined and viewed by the Company's engineers not to meet current ash management compliance requirements. In addition, the study examined and addressed another unlined disposal site on the Sutton property that was used when the plant first went in service, but

[1] Attorney General's Office —Wells Cross Exhibit 3

that had not been studied to determine the extent of any issues it posed and "ha[d] not been high on the EPA's radar."[1]

A cross-disciplinary Company team, that included, among others, representatives from Fossil Generation Department East Region Engineering, Technical Services Department Ash Management, Total Suspended Solids Environmental Section, The Treasury Department and <u>two</u> contract engineering firms, recommended that the Company take steps toward a solution that would accommodate "all of the plant's previous ash production from both the 1983 and 1984 ash ponds and the pre-ash pond disposal site" that would "allow for construction to begin no later than January 2006 to support the 1984 ash pond end of life" forecasted to be June 2006. The solution that the Company team of engineering and environmental experts recommended was the development and construction of an Industrial Park. The study team noted "this option would eliminate the need for the two associated projects of relining [with a compliant liner] the 1983 ash pond and the remediation of the pre-ash pond disposal site." It was further noted that the fastest possible construction for such an Industrial Park would be 3 years, *including "the moving of the ash from the existing sites."* Thus, in addition, the Sutton report identified a contingency plan being implemented for a vertical dike extension to allow the plant to continue to generate electricity for the next 5 to 7 years.

Statements contained in the Sutton report demonstrate that as of 2004, contrary to claims that the Company was always in full compliance with existing regulation, the Company was aware that its unlined ponds were not in compliance with the current regulatory standards and posed contamination risks. In discussion of the 1983 unlined pond, the report contains the following:

> The first issue is that the 1983 ash pond was constructed during a period when it was not required to provide a non-permeable liner, and was constructed with the native sandy soils. This pond has been functionally full since 1983, but is still permitted, and is occasionally used when there are issues requiring the 1984 pond to be temporarily dry. The current environmental atmosphere is that these ponds will eventually have to [sic] emptied and *placed in a lined containment to eliminate the leaching of the ash products into the ground water system.* This is an issue that is not currently being pressed, but it is anticipated that with the tighter environmental conditions it will soon become an emergent issue. This issue is aggravated by the fact that a test monitoring well located 300' from edge of the 1983 ash pond has shown high levels of arsenic during the past two quarterly tests. *This may or may not be related to the unlined ash pond.* A recent study by an independent firm indicated this concern may be less than originally thought. *It could be mitigated* by adding monitoring wells to the NPDES permit, *but could still pose an issue in the future.* [All italics added.]

---

[1] Although this site contained as much or more ash as the 1983 pond, which was functionally full, and had once been designated a Superfund site, it appears from the report that the Company had not cleaned it up or taken any action to remediate apparently because the environmental regulators had not pushed it to do so. Again, regulator inaction or leniency does not relieve an actor like the Company from its ordinary duty of care to prevent or stop a harmful situation it created in the performance of its business activities.

Sutton Report, p. 2. The language in the quoted passage reveals that the company engineers knew at the time of the report that the days when unlined ash ponds were allowed were in the past; that unlined ponds allowed leaching of ash products into ground water and that the purpose of a non-permeable liner was to "eliminate" such leaching; that the 1983 pond could possibly be leaching arsenic; and that even if the arsenic situation were mitigated, it could still pose an issue in the future, making mitigation an insufficient remedy. Thus, the Company and its engineers knew in 2004 that its unlined ash ponds posed a risk of coal ash contaminants leaching into ground water and that one way to stop and effectively remedy that risk or any actual leaching was to place the contents of unlined ponds into lined containment facilities.

The fact that the engineers were not certain at the time of the internal publication of their report whether the 1983 pond was leaching arsenic does not negate their actual knowledge that the pond might have been leaching and could pose a future issue regardless. While the report shows that Company engineers attempted to redress the capacity problems with temporary solutions based on maintaining existing discharge permits and were willing to consider adding additional monitoring wells to perhaps mitigate leaching issues, taken as a whole it nonetheless also indicates that these solutions were viewed only as short term fixes. The report demonstrates that the engineers recognized and recommended that the situation called for a long-term permanent solution to meet the already then current requirement to contain leachate and prevent and remediate water contamination. Having an active discharge permit for a non- compliant containment does not equate with compliance with ash pond or coal combustion residuals regulations.[1]

Additional statements from the 2004 report also show that the Company knew its unlined containment ponds were non-compliant with the then current regulations. As part of the discussion of the alternative of doing nothing to address the containment issuesat Sutton, the report states, "It is assumed that the North Carolina Division of Water Quality (NCDWQ) [as part of its 'increased emphasis on ash ponds and their [e]ffects on the surrounding area and groundwater'] will require the 1983 ash pond to be emptied and lined to comply with *current* ash pond regulations." (Emphasis added.) Translation: At the time the report was written in 2004, the 1983 ash pond did not comply with the current ash pond regulations.

In discussion of other various new pond alternatives, the report states, "The new ash pond would be constructed with the current liner requirements including an impermeable liner with leak detection and monitoring system." This is further evidence the Company knew that to make its unlined repositories compliant with the regulations of 2004, impermeable liners would need to be installed to assure adequate containment of ash waste. Regarding new ponds or alternatives that would allow the 1983 and 1984 ponds to extend capacity for a few years and/or to combine capacity extension with beneficial use projects, the report points out that such solutions would not alleviate the need to line the 1983 ash pond or to have to remediate the pre-ash pond disposal site by 2019. The same was noted in the report with respect to an alternative that called for ash from the 1984 pond to be shipped to other non-plant site locations. In contrast, the report noted three

[1] In the Sutton report, the Company engineers were addressing two distinct problems: 1) maintaining pond discharge permits in order to keep the Sutton plant operating and 2) developing and making ash containment facilities that would comply with ash management regulations. An active discharge permit for a non-compliant ash pond was a measure the engineers recognized as affording the Company time to remedy non-compliance with a permanent solution like a new lined pond or an industrial park that would accommodate all of the Sutton ash as ground fill.

other alternatives, including the industrial park alternative recommended by the engineers, would accommodate all the ash from the two ponds and the pre-ash pond disposal site and eliminate the need to line the 1983 pond and to remediate the pre-ash pond disposal site. The report leaves no doubt that Company engineers knew and advised the Company in 2004 that the old unlined pond was non-compliant, that in any scenario where the pond remained in use, the Company could not escape the requirement to line the pond with a non-permeable liner, and that the Company would in a short time be faced with stricter enforcement of compliance standards by the environmental regulators.

In sum, the 2004 Sutton report is evidence that the Company's own in-house and outside contract engineers put the Company on notice that its unlined (not lined with a non-permeable liner) ash ponds were not compliant with the environmental regulations of the day; that the unlined ponds were subject to leaching of their contents and that ash from at least one unlined Company pond might already be leaching into the groundwater; and that the Company had available to it a number of specific alternative actions that represented reasonable optional pathways to coal ash management compliance. Having this knowledge in 2004 but failing to take timely and appropriate action to bring its unlined ponds into compliance to stop and/or prevent leaching of contaminants into groundwater was at a minimum, whether held accountable by federal and state regulators or not, a breach of the Company's duty to exercise due care in its ash management activities. This failure was both negligent and imprudent.

Because as discussed above, the greater weight of the evidence supports a finding that the Company was negligent and imprudent in its coal ash management by failing to act in a timely and appropriate manner based on information contained in the Sutton report, as well as its NPDES permit and 2L violations, the Commission, in setting just and reasonable rates in the public interest, must examine the coal ash management costs that the Company seeks to recover in the case at hand to determine whether the costs are a result of the Company's imprudence. If the evidence supports a finding that specific costs were incurred by the Company due to the Company's own imprudence, then those costs would have been imprudently incurred. It would be unfair and not in the public interest for the Commission to set rates that are based upon allowing the Company to recover costs attributable to the Company's imprudence. Such rates would not be just and reasonable. On the other hand, if the evidence is insufficient to establish that particular coal ash management costs resulted from the Company's imprudence and those costs were otherwise prudently incurred to comply with current legal requirements, to disallow recovery of those prudent costs would be unfair and not in the public interest of maintaining adequate, reliable and economical electrical service at just and reasonable rates.

The coal ash management costs incurred to date by the Company to comply with the state CAMA legislation and the federal CCR Rule enacted and promulgated respectively in 2014 and 2015 to specify the way coal ash must be handled and stored going forward pertain to ash previously accumulated and treated in unlined basins and ponds. As discussed above, the creation or production of the ash was not unlawful or negligent and ratepayers have enjoyed the benefits of a least cost electric generation process which yielded coal ash as a waste byproduct. The Company's imprudence or negligence in the manner it handled or managed the ash byproduct did nothing to change the existence of the tons of accumulated ash or to require the present need to have this ash properly managed and in accordance with applicable law. With or without the Company's admitted negligence or its imprudence as supported by other evidence discussed hereinabove, the Company would be required to do whatever is reasonably necessary not only to comply with current applicable law but also to manage all existing and stored ash with due care to avoid the unreasonable risk of harm to persons, property and the environment. The heightened standards for coal ash management mandated by the changes in federal and state law under the CCR Rule and CAMA, as with any governmental action, are beyond the control of the Company. The Company has no choice but to comply with such new requirements, notwithstanding the Company's compliance with the prior law, and is expected to so comply as part of its ongoing certificated franchise to provide electric service. If twenty years from now the standards for ash management were to change yet again, the Company at that time would still have no choice but to comply and the costs incurred to take reasonable compliance actions relative to the very same ash being moved and stored today would then be appropriate to be recovered from ratepayers in electric service rates.

To state it another way, even in the case at hand where the evidence establishes that the Company was imprudent in its handling of coal ash, the Company's imprudence did not cause or change the fact that all of the coal ash at issue exists today and would be subject to new environmental and safety requirements. Moreover, with or without passage of CAMA, the Company would still be legally required to prudently manage its existing as well as its hereafter created ash. Based on current federal law, the technology known today and as logically follows from information and discussion in the Sutton report, such prudent handling would without a doubt require utilizing all three compliance mechanisms of making beneficial use of accumulated ash, using cap in place techniques, where appropriate and legally permissible, and moving of some substantial amount of stored coal ash from unlined to lined facilities.[1] CAMA did not change the accepted methods for proper management of coal ash; rather it incorporated those known methods into law. As the Company has known at least since the 2004 Sutton report and well before CAMA, it was going to have to remove ash from non-compliant unlined repositories. The removed ash would have to be put to beneficial use or placed in an acceptably lined facility and monitored for containment unless and until it was determined that the ash no longer posed a threat of harm. Therefore, in this case and going forward, the Company is fairly entitled to recover all the costs it has incurred to cap in place where appropriate under current law and to engineer and construct new lined containment facilities as well as to dewater, excavate and re-store pre-2007 ash production from unlined facilities into lined repositories.

However, as to ash first placed in unlined repositories beginning in 2007 and after, the Company is fairly entitled to recover costs that would be reasonable to implement on- site lined repositories or costs necessary to cap such ash in place. Dewatering, excavation and the "re-placement" costs of putting this ash that was produced in or after 2007 in new repositories (whether on or off-site) are not recoverable. If the Company had acted prudently by developing and implementing plans for compliant storage of ash within a reasonable time following completion of the Sutton report in November of 2004, evidence in the record establishes that it could have completed compliant on-site landfill repositories within 18 months. As Company witness Wells duly noted there can be unexpected delays in the permitting and construction process. Therefore, allowing the Company at least 24 months (from December 2004 to January 2007) to construct and

---

[1] The five ash basins at Cape Fear are not subject to the CCR Rule given certain exclusions in the Rule. Three of the basins at H.F. Lee are excluded from the federal CCR Rule as well.

deploy compliant ash repositories is reasonable and would mean that by 2007, all ash produced during or after 2007 should have and could have been managed through direct one-time placement into lined repositories; there should never have been any need to dewater, excavate and "re-place" the 2007 and post 2007 ash. Thus, the Company's reasonable costs for ash first produced in 2007 and after are only those costs for engineering and constructing the necessary lined facilities and for the ongoing costs of storing and monitoring of the ash once in the new compliant repositories. This ash should have gone from production and collection directly into compliant repositories without needing to be handled a second time and placed into a second repository. The rates previously collected from the ratepayers presumably would have paid for this initial ash handling just as they paid for the ash when it was first placed in the non-compliant unlined basins and ponds. It follows that dewatering and excavation costs for the tons of ash created from 2007 and after would not have been incurred except for the Company's ash mismanagement and negligence, resulting in the need to handle the ash a second time.[1] The engineering, construction and continued storage and monitoring costs areallowable for recovery because these costs were not created by the Company's imprudence, would have been incurred as proper ash management costs without regard to the Company's failure to act sooner to place the ash in an appropriately lined facility as required by due care and current regulation, and have not been previously paid for by the ratepayers.[2]

In addition to the engineering, construction, dewatering, excavation, storage and monitoring costs discussed above, the Company seeks to recover all the transportation costs (minus $9.5 million to transport ash from the Asheville plant, which the Company agreed was reasonable to question) it has incurred to date to truck or haul coal ash from its Sutton and Asheville plants' on-site repositories to off-site locations. The Company should not be entitled to recover these transportation costs (pre-2007 ash nor 2007 and after ash) from the ratepayers because they flow directly from the Company's negligence in its coal ash management and its failure to use reasonable due care to protect life, property and the environment from harm after it knew or should have known that coal ash posed a serious risk of contamination of surface and groundwater and after it knew or reasonably should have known that its repositories were not adequately containing the ash contaminants. Whether CAMA led to the Company's reasoned perception and judgment that it needed to incur trucking, hauling and preparation-to-haul expenses in order to comply with timeline requirements in CAMA, there nevertheless would not have been any or hardly any transportation costs at all if the Company had not mismanaged its coal ash management obligations and negligently failed to take action to move all ash to on-site lined repositories at the Sutton and

[1] While it may be that the total coal ash management costs sought to be recovered may have been less had the Company not negligently delayed converting to lined ash ponds after the Sutton report was completed, the evidence in the record is that it is nearly impossible and probably highly speculative to determine how much less given the passage of time and a number of other complexities and unknowns. Nevertheless all existing ash is subject to the legal requirement that it be properly stored under the provisions of the CCR Rule and CAMA. The heightened handling and storage standards imposed by law and regulation are for the public benefit and are in the public interest. In balancing the interests of consumers and the utility, I find that rates including the reasonable cost of proper containment of ash but excluding dewatering and moving costs associated with ash created in or after 2007 and further excluding transportation costs (as will be discussed in the following paragraph) is just and reasonable. Such rates fairly balance the consumer's and the utility's interests considering the benefits received and the costs reasonably incurred to properly store and manage ash in accordance with new lawfully imposed standards.

[2] The Company and the Public Staff would be charged with assuring that the ratepayers are not charged twice for the same handling and management costs with respect to the ash produced during or after 2007.

Asheville plants when it knew the ash contaminants were not being adequately contained within the repositories and that unlawful and/or violative discharges and exceedances from the repositories that could impact both surface and groundwater were occurring. Looking at the situation as it existed in 2004, the Company should not have been paralyzed and unable to take reasonable actions to move toward compliant containment of accumulated ash and ash being produced at the time by the fact that environmental regulators had not yet created the specific guidance such as that later found in the CCR Rule and CAMA legislation.

As previously discussed, the Company acted imprudently not to have taken steps after learning of the information in the Sutton report in 2004 and not being prepared to move all pre-2007 ash from unlined repositories at least starting by 2007. Moreover, in 2007, the Company had knowledge that some of its unlined facilities were experiencing exceedances and that the Company was knowingly incorporating the use of unpermitted seeps into its coal ash management practices. If the Company had acted prudently to be in a position to have begun dewatering, excavating and moving pre-2007 ash into lined on-site plant landfills by 2007, it would have been "CAMA compliant" at least with respect to its active basins and ponds before the enactment of CAMA.[1] As explained by Public Staff witnesses Garrett and Moore, on-site remediation is generally the most cost- effective closure method and would certainly not be as costly as securing other locations and transporting off-site to those locations. (Tr. Vol. 18, p. 140.) Timely development and use of compliant on-site landfills beginning around 2007 would have completely eliminated the need for the transportation and hauling costs (for both pre-2007 ash and 2007 and after ash) that the Company found necessary to meet compliance timelines contained in CAMA.[2] In my view it is not necessary to determine whether the Public Staff's witnesses are correct that compliance with CAMA did not necessitate transportation or hauling of ash or that the hauling costs should have been less in order to determine from the greater weight of the evidence in the record that the transportation costs (not to be conflated with dewatering and excavation costs as discussed above) were caused by the Company's imprudence, i.e., mismanagement and negligence,[3] in delaying action to correct the issues identified in 2004.

---

[1] Costs related to inactive basins are not part of the costs sought in this case and I am not addressing what would have been reasonable for management of inactive repositories during the 2004 to 2007 timeframe.

[2] There is disputed testimony in the record on whether an on-site landfill could have been constructed at the Asheville plant due to the provisions of the Mountain Energy Act of 2015. If the Company had acted prudently by 2007 to create a compliant on-site landfill at the Asheville plant, the landfill would have been completed prior to enactment of the MEA. The new units contemplated by the MEA would have been planned around the newly constructed basin—not the other way around.

[3] CAMA left the choices and decisions of how best to achieve compliance in a timely manner to the plant/basin owner. I do not take issue with the Company's decision to transport and store ash off-site for compliance purposes, as generally the Commission should avoid substituting its judgment for the Company's business judgment. It is accepted that the Company had several possible workable options to choose from in deciding how best to comply with CAMA and that the Company chose the option[s] it found most appropriate considering a host of information available and pertinent to it at the time. I do not believe the Company chose to haul ash over public roads, creating greater risk of exposure to liability, on the hope of receiving some level of return on any additional expense incurred to do so.

Having determined which costs should be recoverable in rates and which should not, I would allow the recoverable portion to be amortized over seven years (as an unusual or extraordinary expense), with the unamortized balance included in rate base.

DOCKET NO. E-2, SUB 1103
DOCKET NO. E-2, SUB 1153

Commissioner Daniel G. Clodfelter, concurring in part and dissenting in part:

I. MATTERS ADDRESSED IN THE PARTIAL JOINT STIPULATION

With respect to those matters addressed by the partial joint stipulation negotiated between the Company and the Public Staff, I am in substantial agreement with the majority's disposition of those items. I write separately with respect to the topics addressed by the partial joint stipulation for two reasons. First, there is one matter as to which I would reach a different result than the stipulating parties and the Commission majority. Second, because the partial stipulation deals with some topics only in a conditional, preliminary, or contingent manner, or because they are resolved by the stipulating parties for purposes of settlement of this case only and without prejudice to positions that may be asserted in future cases, I wish to offer my own individual views as a supplement to the majority's analysis, in the hope that such insight may be useful to the parties in future cases.

A. Cost Allocation and Cost of Service

As the Commission majority notes, for the allocation of demand-related costs, the historical position of the Public Staff has been to support the use of the Summer/Winter Peak and Average (SWPA) methodology. This position has been favored by the Commission itself in prior general rate cases. See, e.g., Order Granting General Rate Increase, Docket No. E-2, Sub 1023 (May 30, 2013); Order Assessing Rate of Return Penalty and Granting Partial Increase in Rates, Docket No. E-2, Sub 444 (September 24, 1982). In the partial stipulation in this case, as in the Company's prior 2013 general rate case, the Public Staff has agreed – for purposes of settlement of this case only – not to object to the use of the Summer Coincident Peak (SCP) methodology for allocation of demand-related costs. The stated rationale for this acquiescence is that the Public Staff has concluded that, in the present case, the two different methodologies do not yield materially different results. (Tr. Vol. 19, p. 97; Public Staff Floyd's Late-Filed Ex. 1.) One might well ask why this fact is not instead a good rationale for insisting on the historic preference for the SWPA methodology. The answer lies, of course, in the fact that other stipulating parties and several of the intervenors do not support the SWPA methodology. Neither, though, do they all concur in the use of the SCP methodology, with some parties advocating for the use of a Winter Coincident Peak

(WCP) method or even consideration of a dual Summer-Winter Coincident Peak method. In the resulting negotiations, it appears that the SCP method provided a point of agreement among the greatest number of the parties. Underlying the parties' differences are divergent views about the implications of two factors -- the Company's transition from summer planning to winter planning for resource development purposes and the developing evidence of a shift in the Company's peak loading from summer to winter. These trends appear likely to continue, and the Company, the Public Staff, and other parties may benefit from more explicit direction and guidance from the Commission as to its preferred methodology for allocation of demand-related costs. I would hope that the rationale for supporting one methodology over another can receive more attention in the Company's next general rate case. To that end, I would modify ordering paragraph 28 of the Commission's order to require that the Company, in its annual cost of service filings, include an allocation based on the WCP method, as well as the SWPA and the SCP methods.

The second topic concerns the methodology for apportioning distribution system costs among different customer classes, a subject that indirectly enters into rate design as one of the considerations in setting the basic or fixed customer charge component of billing. Several intervenor parties presented testimony highly critical of the Company's method of implementing its minimum system methodology for apportioning distribution system costs, calling into question, among other things, differences in the outcome of the Company's application of that method and the outcomes achieved by other integrated, investor-owned electric utility companies employing the same method. The testimony of witness Barnes was particularly focused on this discrepancy. (Tr. Vol. 16, pp. 57-67.) The Company's rebuttal testimony did not respond in detail to these criticisms.

In evaluating the Company's use of the minimum system method for allocating distribution related costs, I believe it is also important to recognize that the Company's substantial projected investments in its Power/Forward Carolinas grid modernization program means that distribution system cost allocation among customer classes will take on heightened importance in future rate cases. If the Company is using a suboptimal methodology for allocating these costs or is incorrectly applying an otherwise acceptable methodology, the follow-on implications for rate design could be very significant in the future. For this reason, as in the case of the methodology for allocating demand-related costs, I again believe that the Commission, the Public Staff, and all other interested parties would benefit from a more focused and explicit evaluation of optional methods for distribution system cost allocation and an assessment of the extent to which any single allocation methodology is being consistently applied by the utilities using it.

In summary, I believe that changing trends in resource planning and resource demands plus a planned major reconstruction of the Company's distribution system combine to warrant a more formal examination and expression of Commission policies with respect to matters of cost allocation. Continuing to leave those matters to stipulated settlement on a case-by-case basis risks uncertainty for the Company and its customers, as well as inconsistencies in the application of cost allocation principles among the various regulated utilities. While the technical workshop on grid modernization the Company has committed to conduct in Paragraph IV.A. of the partial joint stipulation will be a useful first step in fleshing out some of the questions about cost allocation that may be generated by the Company's proposed distribution system investments, I am doubtful that the workshop will by itself provide sufficient opportunity to explore in depth many of the issues that surfaced in the testimony of witnesses Simpson, Barnes, Golin, Alvarez, and O'Donnell. The Commission majority has for now reserved judgment on whether to initiate a separate docket on the Company's grid modernization plans; I anticipate that question will be before the Commission again after the technical workshop.

B. Per Customer Fixed Charge

The point just made is one part of the reason I would refuse to accept Paragraph IV.F.3.a. of the partial joint stipulation, and would instead decline to authorize any increase in the per customer fixed charge at this time. The case for exercising caution in increasing the fixed portion of customer charges is well set out in Resolution 2015-1 adopted by the National Association of State Utility Customer Advocates (NASUCA), and I will not repeat here the considerations identified and expressed in NASUCA's resolution. (Ex. Vol. 19, pp. 286-289.) Certain additional factors counsel the same caution in this case. Until there is greater clarity as to how the Company's planned grid modernization investments will affect distribution system costs, it would be premature, I think, toassess how, if at all, the fixed customer charge should be changed. Leading me to the same conclusion, Company witness Wheeler testified that it is his expectation that implementation of the Company's proposed AMI metering system, when combined with the greater flexibility and data management capabilities of the Company's new customer information and billing system, will open opportunities for new and more creative rate designs. (Tr. Vol. 10, pp. 225-228.) In my view, these opportunities should include, among others, ways to address internal subsidization within the residential rate class between low- and high-usage customers, a better method for recovering distribution related costs from net metered customers, and ways to provide additional relief and support for customers who have difficulty paying their bills.

As for this last group of customers, I note that while the partial stipulation between the Company and the North Carolina Justice Center provides for an additional contribution of $2.5 million by the Company to the Helping Home Fund (Fund) for low- income customers. While this is commendable and something I support, mechanisms such as the Fund are imperfect and are not the most desirable means for addressing the impact of electricity cost increases on low-income customers. Innovative rate designs made possible by the Company's deployment of AMI and new customer information and billing systems could be of wider and more sustained benefit to this particular customer group. They could present opportunities for the Company to consider programs similar to the Percentage of Payment Plan and the Residential Service Low Income rate offered by the Company's Duke Energy Ohio affiliate. Again, given the expectation that these developments may or will affect the setting of the per customer fixed charge, I would support deferring any decision to allow a change to the basic customer charge at this time.

II. COAL COMBUSTION WASTES – GENERAL MATTERS

The Company's request to recover costs incurred since 2015 associated with permanent disposal of coal combustion residuals located in nineteen active or inactive surface impoundments at the Company's eight coal-fired plants in North and South Carolina, and to include ongoing and future costs of disposal in its present retail rates, presents a host of difficult questions, many of which have been only infrequently addressed, if at all, in prior rate cases.[1] The Commission has in past cases addressed the recovery in rates for utility investments in abandoned or cancelled generating plants. See, e.g., State ex rel. Utilities Comm'n. v. Thornburg, 325 N.C. 463, 385 S.E.2d 451 (1989) (Thornburg I); State ex rel. Utilities Comm'n. v. Thornburg, 325 N.C. 484, 385 S.E.2d 463 (1989) (Thornburg II). However, the matters at issue in this case differ from such investments in that they involve present and future expenditures incurred and to be incurred to dispose of wastes produced over many years from the generation and sale of electricity to several different generations of customers. As far as I am aware, the Commission's only published decision involving similar facts occurred in connection with a request by Public Service Company of North Carolina (PSNC) to recover costs incurred to remediate environmental contamination at several decommissioned manufactured gas plants owned and formerly operated by it. See Order Granting Partial Rate Increase, Docket No. G-5, Sub 327 (October 7, 1994) (1994 PSNC Order). Even this precedent, at least so far as the published opinion discloses, did not address many of the most ardently contested issues in the current case. To mention only one prominent difference, there is no indication in the 1994 PSNC Order that the PSNC's history of management of the manufactured gas plants and associated environmental compliance involved any instances of criminal misconduct. In part because the facts of this case do not neatly conform to any prior precedent, I have chosen to write separately from the majority to set out my own views as to the appropriate disposition of the issues in this case.

In several important respects, I reach different conclusions from those of the majority, but in others, I am in accord with the Commission majority for the reasons stated in its opinion. Before turning to my areas of disagreement, I will briefly recap the matters where I concur:

First, I believe the majority correctly determines that the costs incurred to comply with the EPA's Coal Combustion Residuals Rule (CCR Rule) and with North Carolina's Coal Ash Management Act (CAMA) should be recovered on a system basis and not solely from North Carolina retail ratepayers.

Second, for the reasons stated in the majority's opinion, I agree that allowed costs should be allocated among retail customer classes based on an energy usage factor and not based on a demand factor, as requested by the Company and some of the intervenors.

Third, I concur in the majority's determination that the Company's proposal to recover as part of its fuel costs some $13.8 million for offsite disposal of ash wastes from its L.V. Sutton plant at Charah, Inc.'s Brickhaven facility in Chatham County may not be recovered under G.S. 62-133.2(a1)(9) for the simple reason that no "sale" of the waste by the Company occurred.

Finally, I agree with the majority's conclusion that it would be inappropriate to allow the Company to recover in its present rates those costs yet to be incurred for future disposal activities relating to the coal combustion residuals at the eight plants. Although

[1] Although I was not a member of the Commission and thus did not participate in the 2016 consideration of Dominion North Carolina Power's request, in Docket No. E-22, Sub 532, to recover similar waste disposal costs, for reasons set out in the majority opinion, I agree that the ruling in that case rests on materially different facts and considerations and, therefore, is not precedent for this case.

the Company has offered its best projection on its expected year-by-year expenditures going forward, the Company's witnesses conceded that there was some measure of uncertainty in those projections, if for no other reason than that the volume of combustion wastes in each of the nineteen impoundments is not yet known with certainty, and disposal costs will vary according to the quantities finally determined. Also, as I note later with respect to the Roxboro and Mayo plants, regulatory approval has not yet been secured for the Company's plans for some of the waste impoundments, and the outcome of those approvals may significantly alter the Company's present cost estimates.

A. Framing the Issues – Part One

Following the precedent of the 1994 PSNC Order, I believe the Commission should consider both whether the Company's expenditures to comply with current law were reasonable and prudent as to the elements and the amount of the expenditures, and also whether the Company's history of design, construction, operation, and maintenance of the waste impoundments were reasonable and prudent. The Company's position appears to be that the first of these inquiries is dispositive in itself. I do not agree. It is worth noting that the Commission observed, in the 1994 PSNC Order, that PSNC had handled the wastes and byproducts from the gas manufacturing process in accord with laws applicable at the time. See 1994 PSNC Order, at p. 20. That fact, however, did not lead the Commission to conclude that it was therefore unnecessary to undertake a review of the reasonableness of PSNC's operation of the plants before they were finally closed.

Left unresolved by the 1994 PSNC Order, at least so far as the order itself discloses, is the matter of reconciling the outcome of the two determinations if the results diverge. Consider that if the Commission were to conclude that both the fact and the amount of the current expenditures for ash disposal are reasonable and prudent and that the Company's historical handling of the coal combustion wastes also was reasonable and prudent, the need to resolve conflicting determinations does not arise. Likewise, if the Commission were to conclude that the historical operation of the waste impoundments was reasonable and prudent but that some or all of the proposed current expenditures for closure and permanent disposal of the combustion residuals were not reasonable and prudent, either in fact or in amount, then the Commission would disallow some items or amounts and allow others, but would not look further.

The more difficult case is the one which I believe arises on the evidentiary record as it stands. With limited exceptions as to specific items challenged by the Public Staff, none of the objecting intervenors has questioned the reasonableness of the items of expenditure or the amounts of those expenditures that the Company proposes to recover on account of its efforts to comply with current law relating to the disposal of coal ash wastes. However, using several different theories, emphasizing various different pieces of evidence, and proposing several different remedies, the Public Staff, the Attorney General's Office (AGO), and all of the objecting intervenors have challenged the reasonableness and prudence of the Company's historical management of coal combustion wastes. In so doing, they have presented the Commission with the task of deciding from the record how, to what extent, and in what amounts the Company's history of waste management affected or impacted, if at all, its current and expected future expenditures for permanent disposal of the coal combustion residuals. This is not a simple determination, and it will occupy much of my remaining discussion.

B. Framing the Issues – Part Two

A second challenge centers on proper characterization of the items of cost associated with disposal of ash wastes for purposes of applying G.S. 62-133. Here, the difficulty comes from the tendency of all parties to speak about the wastewater impoundments where most of the wastes are now stored as being in the nature of "property," or "plant," or "facilities" within the scope and meaning of G.S. 62-133(b)(1). While this manner of speaking and thinking is understandable, it is strictly correct only insofar as the impoundments are now or were formerly used and useful for the treatment of the wastewater used to flush coal combustion residuals from the generating facilities before recycling the water for other plant uses or discharging the treated wastewater to nearby surface waters.[1] However, it is not the impoundments themselves that are at issue in this proceeding; instead, it is the ash wastes that have accumulated in them. The costs the Company has incurred and will continue to incur arise not from the impoundments *per se*, but instead from the need to permanently dispose of the waste combustion residuals that have accumulated in them. In my view, costs to dispose of waste products generated from the burning of coal are very plainly operating expenses within the meaning of G.S. 62-133(b)(3). Those waste products are not in any sense "property," "plant" or "facilities" comprehended by G.S. 62-133(b)(1). Consider that disposal of these wastes can occur in several ways. They may be sold for beneficial reuse as structural fill, mine reclamation, additive for concrete, or for other uses. They may be removed for permanent disposal offsite in landfills owned by a third party. Certainly none of such disposal methods would involve the Company's "plant" or "facilities." Permanent disposal of the wastes on the Company's own property, in a landfill, or in a properly closed impoundment that was formerly used for wastewater treatment purposes are other methods of disposal of the wastes, but those methods of disposal do not convert the disposal costs from being treated as operating expenses to being treated instead as investment in "plant" or "facilities." I emphasize this point primarily because proper characterization of the costs at issue is, I believe, an important first step in determining how those costs should be allowed and recovered.

C. The State of the Record

On the questions thus framed, the state of the evidentiary record leaves something to be desired. The Company presented no witness with first-hand knowledge or experience regarding its waste ash management policies, decision-making, or operating practices prior to 2014. Company witness Kerin provided clear and comprehensive testimony concerning the Company's decision-making and activities with respect to coal combustion residuals after his assignment to the issue in 2014, but he came to his task with no prior experience relating to the issue. Company witness Wells gave informative and knowledgeable testimony concerning the Company's history of environmental compliance, but only for the period after 2009. Company witness Wright had no prior education, training, or experience with the management of coal combustion residuals, and his testimony largely consisted of opinions on matters of interpretation of law and legal inference, which are in any event the province of the Commission itself and not subjects for witness testimony.

---

[1] Some of the impoundments also were used to treat wastewater streams originating from plant processes other than coal combustion.

From the Public Staff and intervenors, only AGO witness Wittliff had first-hand knowledge and experience of ash waste handling practices during the time period prior to 2000 and extending back to earlier decades. His experience, while certainly relevant and highly important in evaluating the Company's conduct, was based only on a review of Company records and documents produced in discovery and did not involve a first-hand inspection of any of the waste impoundments or contemporaneous knowledge of the Company's historical activities. Even so, I find witness Wittliff's overarching opinions and conclusions to be entitled to substantial weight, especially in the absence of contrary testimony from any other witnesses with more direct knowledge.

Much of my own evaluation and assessment, therefore, depends ondocumentary evidence which itself has many gaps, especially in regards to the operating history of the individual waste impoundments at the Company's eight plants. The state of the evidentiary record is, I believe, in large part a consequence of the framing of the issue by the Company, as explained above. If the reasonableness and prudence of the Company's proposed cost recovery is limited solely to examination of the items of expenditure and the amount of expenditures incurred by the Company to comply with CAMA and the CCR Rule from and after the date of enactment of those regulations, then it is not necessary to present extensive evidence concerning the decisions, policies, and operating practices that occurred over the many years prior to the adoption of the CCR Rule and the enactment of CAMA. As already noted, I think this framing of the issue is incorrect, but that conclusion then requires an answer as to what the Commission should do about the state of the record. There are, I think, several possible responses.

One is to accept the often-repeated conclusory testimony of the Company's witnesses, that during the decades prior to 2014, the Company's management of wastes from the burning of coal was reasonable and prudent and in accord with prevailing industry standards and practices. I find this testimony, especially coming from witnesses with no experience of the matter and which merely restates the ultimate issue to be decided, to be unacceptable. In large part, I am compelled to do so because the conclusory statements of the witnesses simply cannot be reconciled with the Company's admission in the federal criminal cases that it had been criminally negligent over a period of at least several years with respect to the matters charged, meaning that it failed to exercise the degree of care in the management of the waste impoundments that a reasonably prudent person would have exercised. As the Company's counsel explained in his address to the District Court: "I want to talk for a second about the kinds of crimes that the company has acknowledged and pleaded guilty to. These are crimes of negligence. These are negligence-based crimes." (Err. Ex. Vol. 15, p.61.)

A second approach would be to conclude that the Company has failed to carry its burden of proof as to the reasonableness and prudence of its historical coal waste management policies and practices. In its post-hearing briefing, the Company points out that under the prevailing procedural and evidentiary standards, the Company's expenditures should be presumed to be reasonable and prudent until an objecting party steps forward with evidence suggesting to the contrary, at which point the Company bears the burden of proof to substantiate the reasonableness of the expenditures. The Company argues that no party other than the Public Staff satisfied the initial prong of this procedure, and that the Public Staff did so only with respect to the discrete items of expenditure recommended for disallowance by witnesses Garrett and Moore and by witness Lucas. I believe that the precedents cited by the Company are inadequate to carry the weight of the burden such precedents place upon them. When the matter under review involves the reasonableness and prudence of a known and discrete expenditure made at a definite point in time, it is appropriate to require that parties challenging that expenditure come forward with some evidence that reasonable alternatives were available and to quantify the amount of the alleged error. See State ex rel. Utils. Comm'n v. Conservation Council of North Carolina, 320 S.E.2d 679, 312 N.C. 59 (1984). In this case, the challenges made by the Public Staff, the AGO, and the intervenors, except in the case of specific items of expenditure challenged by the Public Staff, do not involve discrete, known items of expense but are instead matters of omission, inaction, inattention, neglect and delay. From the very nature of the errors asserted by the objecting parties, it is not possible to reconstruct hypothetical histories and then, today, after many years, reconstruct the costs that might have been incurred under those alternative histories. I would find that there was ample evidence presented by several of the intervenors, by the AGO, and by the Public Staff, to put at issue the reasonableness and prudence of the Company's historical coal waste management policies and practices and thereby require the Company to carry its burden of proof on that subject.

The consequences of adopting the second approach and denying the Company all cost recovery for failure to carry its burden of proof would have severe financial consequences for the Company and would, as the majority points out, likely lead to the Company's having to pay even higher costs to secure equity and debt financing for future operations and investments, a result that would significantly harm ratepayers. It would, I believe, fail the fundamental test set out in G.S. 62-133(a), requiring that the Commission's determination of rates be fair and reasonable not only to objecting parties and ratepayers, but also to the Company.

Complete disallowance of all coal ash disposal cost recovery on the ground that the Company has failed to carry its burden of proof also flies in the face of common sense. Had the Company's management of coal combustion wastes resulted in no exceedances of the state's 2L groundwater standards, no violations of any NPDES permits, no criminal prosecutions, and no civil or administrative lawsuits, the record taken as a whole shows that the Company would eventually have been required to undertake many or even most of the ash disposal activities now required of it by the CCR Rule and CAMA. As evidence for this, I refer to the Company's 2004 study and report concerning options for long-term management of combustion residuals at its L.V. Sutton plant, which I consider to be one of the more important documents admitted into evidence in this case. (Ex. Vol. 22, pp. 165-211.) The 2004 study was authored *before* the Kingston, Tennessee, ash spill in 2008, *before* the promulgation of the initial drafts of the CCR Rule, *before* the administrative actions commenced by the North Carolina Department of Environmental Quality (DEQ) against the Company in 2013, *before* the 2014 spill at Duke Energy Carolinas, LLC's Dan River plant, *before* the adoption of the final CCR Rule, and *before* the adoption of CAMA. As the study discloses, even in 2004, when the regulatory regime was defined by the Clean Water Act and NPDES permits issued pursuant to that statute, by Part D of the Resource Conservation and Recovery Act, and by state regulations implementing those two statutes and imposing the 2L groundwater standards, the Company had developed the view that eventual closure of the existing impoundments would be required either by dewatering the impoundments and capping the ash in place, or by excavation of the ponds and disposal of the combustion wastes in dry landfills. As subsequent events proved out, the Company's assessment in 2004 turned out to be absolutely correct.

The third approach, and the only one I would find proper under the circumstances of this case, is to grapple with the available evidence, most of it documentary, in order to form a best judgment as to whether the Company's history of management of coal wastes is so flawed as to render its present expenditures for permanent disposal of those wastes unreasonable and, if so, how to quantify the effects of the past on the present. On the record as it stands, I believe the only way to undertake these two tasks is to consider the evidence on a plant-by-plant basis, and I attempt to do so in later sections of my opinion. First, though, a short discussion about the standard of care I believe should be applied in assessing the Company's actions and omissions.

D. The Standard for Evaluating the Company's History

Company witnesses and opposing Public Staff and intervenor witnesses alike concurred that regulatory standards and customary industry practices for handling and disposal of coal ash wastes have evolved over an extended period of years. (See, e.g., Ex. Vol. 16, p. 211; Tr. Vol. 16, pp. 109-135.) The question the Commission must consider is whether the Company acted reasonably in response to, and in light of, those evolving standards. This is made more difficult by the long period of development of scientific and environmental understanding and regulatory interest in coal combustion waste between the time of the Company's general rate case in 1987 and its next-but-this rate case in 2013. However, I believe that the record taken as a whole clearly reflects that, during that twenty-six year period, both "best practices" and regulatory requirements with respect to ash wastes advanced in a direction that converges toward the present mandates embodied in CAMA and the CCR Rule.

When environmental regulations prohibited discharge of fly ash from stacks, two methods of handling that ash developed. One, which had long been used with respect to bottom ash (including by the Company itself) was dry handling, which involved manual removal of the collected ash followed by dry disposal in either a lined or unlined landfill, land application, or dry stacking of the wastes. The second method involved using water to flush the accumulated ash, bottom ash and fly ash, and other combustion by-products, from the generating plant. The resulting ash laden wastewater was sluiced to detention ponds where the ash was allowed to precipitate and settle out, thereby permitting discharge or reuse of the treated wastewater. After enactment of the Clean Water Act in 1972, the regulatory regime applicable to wet handling of coal combustion residuals was primarily intended to address treatment of the wastewater before discharge and not the ultimate disposal of the waste ash itself. Hence the impoundments themselves should be considered – as they are and were treated under the Clean Water Act - as wastewater treatment facilities, not as permanent facilities for disposal of the waste combustion residuals.

The record establishes that the different environmental risks associated with wet handling of ash and the resulting accumulation of precipitated ash in the wastewater treatment basins, as compared with dry handling followed by permanent disposal of the ash in landfills, were well understood as far back as the time of the enactment of the Clean Water Act. When left in standing water, unprotected from rainfall or storm water runoff from surrounding areas, in impoundments that were not hydrostatically isolated from groundwater, there is now and was then a risk that constituents in the waste ash would migrate into groundwater or seep to the surface outside the impounded area. These are fact of elementary chemistry, hydraulics, and hydrology; they were not something awaiting discovery in some new scientific breakthrough.[1]

At all points after the time the emission of waste fly ash from smokestacks was prohibited, the Company had a choice between dry and wet methods of handling combustion wastes.[2] Although the applicable regulatory regime permitted the Company to choose between these two methods, that fact does not mean that their environmental and regulatory risk profiles were the same, nor does it absolve the Company from its obligation to implement its chosen method in a reasonable and prudent manner in light of the specific risks inherent in that method. The knowledge that is to be charged to the Company during the last four decades of the twentieth century, and the first two decades of this one, is not knowledge of what actions legislatures and regulators might take at some future point. Instead, the knowledge that the Company is charged with is knowledge of the different environmental consequences of dry management of ash in landfills or mineshafts versus wet management in wastewater treatment ponds, and these differences are matters of basic chemistry and hydrology. The Company's inability to predict regulatory and legislative developments does not mean it was unable to understand and foresee the environmental consequences of improper design, construction, operation, repair, and maintenance of the surface impoundments it chose to use for treatment wastewater laden with coal ash wastes.

The Company cannot disclaim contemporaneous knowledge of the basic differences between wet and dry handling of waste ash. As early as August, 1978, in connection with its review of the Company's proposal to construct an ash settling impoundment in the upper reaches of Crutchfield Branch at the Mayo plant, the North Carolina Department of Environmental Management advised that it was the State's intention to require that the Company "... provide controls as necessary for the prevention of pollutant materials from entering ground water and thereby reentering the surface waters some point downstream of the proposed dam," and further that the Company "...provide such testing as is necessary to assure that pollutants are not discharged to the ground waters and thereby to the downstream point of the Crutchfield Branch ..." (Ex. Vol. 22, pp. 216-217.) More generally, the Company's NPDES permits issued under the Clean Water Act contained certain standard conditions the Company was obligated to comply with, including the following:

---

[1] In 1979, a researcher at the Los Alamos Scientific Laboratory submitted a report at the Environmental Technology Training Conference in Arizona, titled "The Disposal and Reclamation of Southwestern Coal and Uranium Wastes," which contained the summary conclusion that "[t]here is growing awareness that the discarded wastes from coal combustion are a serious potential source of surface and ground water contamination." (Ex. Vol. 22, p. 224.) The author of the report cited to a number of other contemporaneous papers and reports on the subject. Although no Company witness testified to personal knowledge of this report, it is indicative of the general state of knowledge at the time. The applicable standard is, in any event, not what the Company actually knew, but what it reasonably could and should have known. See 78 North Carolina Utilities Commission Orders and Decisions 238, pp. 251-252 (August 5, 1988).

[2] In its 1988 report to Congress on the question of whether coal combustion wastes should be regulated as a hazardous waste under Subpart C of the Resource Conservation and Recovery Act, the EPA notes that, by that date, the most common method of disposal of waste ash throughout the United States was in dry landfills. While surface impoundments were also very common, their use was concentrated in the southeastern United States where, the EPA noted that access to sufficient, affordable water can make surface impoundments a realistic, economic option. (Tr. Vol. 16, pp. 220-225; Ex. Vol.21, pp. 513-516.)

a. The Permittee shall take all reasonable steps to minimize orprevent any discharge or sludge use or disposal in violation of this permit with a reasonable likelihood of adversely affecting human health or the environment...

b. The Permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the Permittee to achieve compliance with the conditions of this permit...

(Ex. Vol. 17, p. 378; see also 40 C.F.R. § 122.41.) The Company, having chosen a method for waste handling that was known to have a potential risk of contamination of groundwater and surface water, I conclude that the degree of care expected of the Company in its management of the wastes should have been commensurate with that risk. Put differently, the standard of care expected of a reasonable and prudent utility is not now, and was not in the past, the absolute minimum necessary to avoid criminal prosecution or sanctions for violation of civil law; it was instead to take such actions as could or should reasonably have been taken at the time to minimize the risk that contaminants from coal ash waste would enter groundwater or surface waters.

Against the argument that the Commission's function is to be an "economic regulator," and not an "environmental regulator," I would respond that the position I have taken here is not tantamount to advocating that the Commission should substitute its judgment for that of DEQ or the federal EPA; it is just the very simple point that "reasonableness" for purposes of G.S. 62-133(b)(3) means something more than just not getting caught or, if caught, not getting prosecuted, fined, or sanctioned. Otherwise, there is really no way to carry out the General Assembly's declared policy that one purpose of the regulatory regime established in Chapter 62 is "...to encourage and promote harmony between public utilities, their users and the environment." G.S. 62-2(a)(5).

I would find from the record taken as a whole that the Company's history of managing wastes from burning coal to produce electricity contains significant and non-trivial evidence of inattention, inaction, and neglect in maintaining the wastewater treatment impoundments where the wastes were allowed to accumulate over a period of years, and that the Company was slow to take up and apply evolving best practices as they developed over time. From the very nature of unlined surface impoundments and the way water-borne contaminants enter groundwater and then migrate to surface water, any improper siting or construction of an impoundment or lax and inconsistent maintenance will have consequences that may become readily apparent only over an extended period of time. The parties focused their evidentiary presentations largely on events that occurred in the two most recent decades, most especially centering on the events that formed the predicate for the Company's federal criminal prosecution and the several civil administrative enforcement actions and private party lawsuits that were initiated during the same time period. The federal criminal charges against the Company use the formulation "... from at least [a recited date] ...," leaving open the precise date the charged misconduct may in fact have begun. I find it plausible to infer from the character of the alleged criminal violations and from the nature of the surface impoundments themselves, as noted, that the Company's actions, inaction, and omissions did not suddenly start at some date in 2010, 2011, or 2012, or another subsequent date certain, but were instead a continuation of prior operating practices.

As I have already observed, the Company's decisions to use unlined surface impoundments to manage waste combustion residuals were not *per se* unreasonable or imprudent at the time those decisions were made. To the question of whether the Company managed those impoundments with the degree of care, attention, and skill I think was required at the time, I would answer that the record contains sufficient evidence to conclude that it did not do so, even under the regulatory regime in place prior to the CCR Rule and CAMA, as evidenced by the fact that the federal criminal prosecution and the various civil administrative actions were all grounded on the regulatory regime predating the enactment of those two regulations. That is not, however, the end of the inquiry. As the majority notes, and I agree, the overriding difficulty confronting the Commission is how to quantify the extent to which the Company's past conduct translates into present costs incurred. As I have already pointed out, precision in doing this would require the impossible construction and evaluation of several different alternative histories and realities. Neither Public Staff witness Lucas nor the AGO witness Wittliff, the two principal witnesses whose testimony extensively and persuasively attacked and challenged the Company's claim that its historical management of coal ash wastes had been reasonable and prudent, was able to provide any general or overall quantification of the financial consequences of the Company's mismanagement.

III. COAL COMBUSTION WASTES – PLANT-BY-PLANT CONSIDERATION

I would conclude that the general evidence in the record concerning the Company's waste handling policies and practices is not adequate to support an across-the-board denial of all cost recovery, but neither is it sufficient to resolve all questions of reasonableness and prudence in the Company's favor. I do believe, however, that such general evidence is informative and instructive in deciding the weight that should be given to specific evidence going to the reasonableness of particular items of cost recovery in the Company's application. Although my general conclusions support and undergird the following discussion, I base my final determinations primarily on factors specific to the individual coal-fired generating plants in the Company's portfolio. As Company witness Kerin acknowledged in his testimony, every waste impoundment is different with respect to important matters such as topography, hydrology, engineering, surrounding environment, and operating history. (See, e.g., Ex. Vol. 17, pp. 127-129; Tr. Vol. 17, pp. 62-63.)

A. L.V. Sutton Plant

The evidence is most extensive for the two impoundments at the L.V. Sutton plant, one constructed in 1971 and the second constructed in 1984. In 2014, these two impoundments contained an estimated 3,540,000 tons and 2,780,000 tons, respectively, of combustion residuals. (Ex. Vol. 17, p. 79.) By January 1, 2017, this amount had been reduced to approximately 2,600,000 tons remaining in the 1971 impoundment and approximately 2,800,000 tons remaining in the 1984 impoundment. (Ex. Vol. 16, p. 210.)

In the present case, the Company seeks to recover $116,858,895 expended between January 1, 2015, and December 31, 2016, for disposal of the wastes at the L.V. Sutton plant.[1] The

[1] This amount, as with the amounts subsequently stated for the other plants, were provided by the Company on a system-wide basis and do not reflect the North Carolina retail allocation. They also do not include actual expenditures in 2017 through October 31, 2017

amount in contention among the parties is the disallowance of $80,513,871 recommended by Public Staff witnesses Garrett and Moore. **[BEGIN CONFIDENTIAL] [END CONFIDENTIAL]**

The Company contends that these expenses were necessary if the Company was to meet the CAMA-imposed deadline for permanent closure of the two impoundments. I would conclude that had the Company acted reasonably and prudently, it could have avoided the costs of offsite shipment and disposal to the Brickhaven site. Accordingly, I would deny cost recovery of the amount expended to prepare, transport, and then pay for permanent offsite disposal of any of the Sutton combustion residuals.

In reaching this conclusion, I rely in part on the testimony by Public Staff witnesses Garrett and Moore, who concluded that had the Company commenced construction of an onsite landfill on the same start date as it commenced transport of ash to the Brickhaven disposal site, it would have avoided the offsite disposal costs altogether. (Tr. Vol. 18, pp. 153-155.) The Company disputes witnesses Garrett and Moore's conclusion, noting that delays in receiving the necessary permit to construct an onsite landfill at the Sutton plant rendered it impossible for the Company to meet the CAMA-mandated deadline for closure of the impoundments and permanent disposal of the waste material in them. (Tr. Vol. 20, pp. 32-41, 56; Ex. Vol. 20, pp. 234-240.) The parties differ sharply on whether the Company can or should be able to avail itself of options provided in CAMA and in the federal criminal plea agreement to extend the compliance deadline to accommodate these delays. I find it unnecessary to resolve that disagreement for a more fundamental reason.

The evidence shows that by 2004, the Company recognized that the 1984 impoundment at the Sutton plant was nearing capacity and the end of its useful life, and that there were significant environmental concerns involving the 1971 impoundment. Accordingly, it undertook a study to identify options for a long-range strategy for combustion wastes at the Sutton plant. That study resulted in a report issued in November, 2004, containing a detailed analysis of both the then-current situation of the impoundments and disposal sites, in addition to alternatives for future management of ash. (Ex. Vol. 22, pp. 165-211.) According to the report, the objective was to identify a solution that would not only allow capacity for storage and treatment of coal combustion residuals from future electric generation *but would also utilize all of the ash previously deposited in the two existing impoundments.* (Id. at p. 168.) To repeat for emphasis, the study considered not only management of future combustion residuals, but also a long- term permanent solution for the waste ash in the existing impoundments.

This report considered both capacity constraints affecting the existing impoundments and known environmental concerns relating to the unlined 1983 impoundment.[1] Discussing these concerns, the report stated:

---

[1] This impoundment is referred to in the report as the "1983 ash pond." In the Company's exhibits, this impoundment is not identified as such, but there is instead a reference to a 1971 impoundment. (Ex. Vol. 16, p. 210.) In the 2004 study, it appears that the reference to the unlined 1983 ash pond is meant to refer to the original 1971 impoundment and that the two are one and the same. (Ex. Vol. 22, p. 169.)

> The current environmental atmosphere is that these ponds will eventually have to be emptied and placed in a lined containment to eliminate the leaching of the ash products into the ground water system. This is an issue that is not currently being pressed, but it is anticipated that with the tighter environmental conditions it will soon become an emergent issue. This issue is aggravated by the fact that a test monitoring well located 300' from the edge of the 1983 ash pond has shown high levels of arsenic during the past two quarterly tests. This may or may not be related to the unlined ash pond.
>
> ....
>
> The plant lab personnel, plant management, the East Region engineers, and the environmental section are concerned with the ability to maintain the [NPDES] discharge permit limits of the ash pond associated with the continued running of the Sutton plant, as well as pond volume concerns.

(Id. at pp. 169-170.) According to the report, the Sutton plant needed an alternative solution for ash management in place by June, 2006. The target date was explained thus: "The 1984 ash pond is currently estimated to be non-operational due to Total Suspended Solids (TSS) limit exceedance which will cause a violation of the NPDES permit. The ash pond is expected to be un-operational by June, 2006." (Id. at p. 168.)

Unlike the majority, I find no ambiguity or uncertainty in the report about the need for immediate action, and that the identified need was not simply to add capacity for future waste handling. In the environmental analysis section of the report, the study team observed:

> The Analysis performed on each of the alternatives looked at both the current regulations and the current atmosphere related to regulatory regulations that are currently under review or have gotten an increased focus in the recent year. Unfortunately the past several years have seen an increased scrutiny in the ash storage regulatory area. While coal burning facilities are currently able to permit a new ash pond, every opportunity that regulators are allowed to look at existing sites and current practices it opens the facility up to questions and further scrutiny. This risk was taken into account in the ranking of the alternatives.

(Id. at pp. 179-180.)

The report identified ten alternative courses of action, including a "do-nothing" option. Three involved beneficial reuse, one involved an experimental new technology, one involved off-site landfill disposal in either a private landfill or a new landfill constructed by the Company, and the remaining alternatives involved some combination of dry stacking of the ash, construction of vertical dikes to increase capacity of the existing impoundments, or construction of a new, lined impoundment. (Id. at pp. 170-179.)

The recommended, preferred alternative identified in the study was one of the beneficial reuse options, noting that it would constitute "...a proactive approach that will positively impact the environmental position of the Sutton plant, and allow the company to benefit from the creation of a revenue generating project that will create a positive public image in dealing with an environmental issue associated with fossil plant electricity production." (Id. at p. 188.) While no witness was able to testify as to exactly what was done with the 2004 report and its recommendations, it appears from the record that none of the long-term solutions considered in the report had been implemented by 2014. (See Ex. Vol. 17, pp. 131-133 (closure plan for 1971 and 1984 impoundments)) I would conclude that had the Company taken timely action in 2004 when it had concluded that action was both necessary and appropriate, or even at any other time thereafter up until 2014, the delays and time constraints cited by the Company as its rationale for transport and off-site disposal of the waste from the Sutton impoundments could have been avoided. Accordingly, I would disallow as unreasonable and imprudent recovery of those costs identified by witnesses Garrett and Moore as the costs for transport and disposal of waste ash from the Sutton impoundments to the Brickhaven site.[1]

In addition to disallowance of the costs for transport and offsite disposal, I would also disallow the amount of $6,693,390 identified by Public Staff witness Lucas representing costs for extraction wells and treatment of groundwater relating to offsite contamination originating from the Sutton impoundments. (Tr. Vol. 18, p. 279.) As is recited in the Company's settlement agreement with DEQ, these costs are for accelerated groundwater remediation going beyond the requirements under CAMA for closure of the Sutton impoundments. (Ex. Vol. 21, pp. 586-598.) The 2004 report concerning a long- term management strategy for ash wastes at Sutton noted that by that date contaminants often found in coal ash had been identified in at least one groundwater well near the 1983 impoundment, but the report drew no conclusions about the source or extent of possible groundwater contamination. In discussing the "do nothing" option, the authors of the report noted:

> This alternative would not alleviate the potential emergent projects associated with the unlined 1983 ash pond or the pre-ash pond disposal site, and the monitoring well issues.

(Ex. Vol. 22, p. 184.) Instead of taking timely action when it knew that action was required, the Company waited another decade, until action was forced by DEQ's issuance of a Notice of Violation based on exceedance of the state's 2L groundwater standards. By that time, evidence of groundwater contamination existed not only on the plant site itself but at the property boundary and offsite beyond. I would find that the Company's failure to act in response to the recommendations of the 2004 report unreasonably and imprudently increased the risk of additional groundwater contamination and of migration of contaminants to and beyond the property boundary, and that its inaction is directly linked to the groundwater remediation costs incurred as part of its settlement of the 2014 Notice of Violation issued by DEQ.

---

[1] I do not agree with witness Garrett and Moore's recommended disallowance of **[BEGIN CONFIDENTIAL] [END CONFIDENTIAL]** for installation of liner material that they contend was in excess of applicable regulatory requirements. (Tr. Vol. 18, p. 154.) In light of the history of offsite groundwater and surface water contamination associated with the Sutton plant, I would not penalize the Company for taking additional steps to help ensure that contaminants from landfilled wastes did not leach to groundwater after permanent disposal of the waste material.

B. Asheville Plant

The two impoundments at the Asheville plant, known as the 1964 ash pond and the 1982 ash pond, contained as of August, 2014, an estimated 2,200,000 tons and 800,000 tons of coal ash, respectively. (Ex. Vol. 17, p. 79.) By January 1, 2017, the Company estimated that the 1982 impoundment contained no remaining combustion residuals, and the 1964 impoundment contained 2,900,000 tons of ash, the difference in these figures largely resulting from the Company's temporary transfer of ash from the 1982 impoundment to the 1964 impoundment in order to facilitate construction of its new combined cycle gas generating plant within the footprint of the 1982 impoundment. (Ex. Vol. 16, pp. 209-214.)

Controversy centering on the management of combustion residuals at the Asheville plant centered on three topics: the Company's guilty plea to one count in the criminal indictment relating to unpermitted discharges from engineered seeps at the Asheville plant, the Company's decision to transfer ash from the 1982 impoundment to the 1964 impoundment prior to shipment to an offsite landfill for permanent disposal, and the Company's decision to dispose of the ash at a more distant and more expensive landfill facility in Georgia instead of using the landfill facility located at its affiliate's Cliffside plant in North Carolina.

The action that formed the basis for the Company's plea to one count of violating its NPDES permit for the Asheville plant is summarized in the following statement of counsel at the hearing before Judge Howard:

> ...[I]t's fair to say there is a disagreement among us about whether a seep by itself that simply percolates up and may reach a water of the United States is a violation of the law. The Government takes the position it is. That issue is not resolved in this plea. What the company did in this plea is it acknowledged it should not have had specific engineering structures that take seeps, pull them together and then put them into a water of the United States, unless it was part of the permit.

(Ex. Vol. 14, p. 382.) Translating "specific engineering structures" into simpler English – the unpermitted discharge was an intentional action, not simply the result of inattention or neglect. Although I would find that this admission by the Company is some evidence supporting the imposition of a penalty for mismanagement, I would not find that it affected the reasonableness of the costs the Company has actually incurred in order to permanently dispose of the waste in the two Asheville impoundments.

Several parties argued that "but for" the Company's criminal prosecution, which was based in part on the unpermitted discharges from the Asheville impoundments, the Company might have been able to dewater, cap the waste ash, and thereby close the impoundments in place, avoiding the higher costs of CAMA's mandate that the impoundments be excavated and the ash removed to a dry landfill. Drawing conclusions about "might-have-beens" is inherently difficult and is especially so when the "might-have-been" relates to legislative actions. With respect to the two Asheville impoundments, that task is rendered even more complicated because of the enactment of S.L. 2015-110 (Mountain Energy Act of 2015), which required the accelerated closure and decommissioning of the remaining coal-burning generation units at the Asheville plant. To replace those coal-burning units, the Company's only reasonable option was to excavate the

1982 impoundment and construct a new gas-fired combined cycle plant within the footprint of the impoundment. Excavation, in other words, was independently driven, at least in part, by the need to comply with the Mountain Energy Act of2015.

On the two remaining matters in dispute relating to closure of the Asheville impoundments, I am persuaded by the Company's testimony that the timelines necessary to comply with the Mountain Energy Act of 2015 could not have been reasonably anticipated by the Company, and that such compliance required immediate removal of ash waste from the 1982 impoundment in order to enable construction of the new generating plant. The Company has acknowledged, however, that the contract prices it paid in 2015 and 2016 for transport and offsite disposal of the wastes from Asheville may have been excessive in light of later prices it was able to negotiate, and that an adjustment in the costs of offsite disposal of $9,500,000 would not be inappropriate accordingly. (Tr. Vol. 20, p. 45.) Accordingly, like the majority, I would reduce by $9,500,000 the costs of offsite disposal for which the Company seeks recovery.

C. Roxboro and Mayo Plants

The Company's Roxboro coal plant has two ash impoundments, known as the East Basin, constructed in 1966, and the West Basin, constructed in 1973. As of January 1, 2017, the total combined estimated amount of combustion residuals in these two basins was approximately 19.7 million tons. (Ex. Vol. 16, p. 209.) The Mayo plant has a single impoundment, constructed in 1983, which holds an estimated 6.6 million tons of combustion residuals. (Id.) These two plants are still in operation and the three impoundments are still receiving ash and combustion residuals from the burning of coal to generate electricity for current customers.

To date, the Company has expended a total of $14,867,363 to prepare and submit to DEQ a plan for closure of the Mayo impoundment, including preparation of engineering plans and cost estimates. (Ex. Vol. 16, p. 268.) For the Roxboro plant, the Company has expended and seeks recovery of $20,370,325 for the same activities. The closure plans for all three impoundments call for leaving the combustion residuals in place, installing a cap over the waste material, and taking other steps to guard against migration of ash from the capped impoundments. The Company is not now seeking recovery of any costs for implementation of its proposed closure plans.

In this case, Sierra Club witness Quarles testified, based on his expertise and prior experience with coal waste issues[1] and his analysis of the site conditions, topography, hydrology, and operation of the two impoundments at the Roxboro plant and the one unit at the Mayo plant, that the closure plans proposed by the Company for those units would not meet the requirements of the CCR Rule or of CAMA, and would not protect against future migration of contaminants from the ash into groundwater and, ultimately, surrounding surface waters. (Tr. Vol. 13, pp. 132-73, 175-77.) Witness Quarles' opinion, which was left essentially unrebutted by any Company witness, places in doubt the appropriate treatment of the preparatory and planning expenditures incurred by the Company for which it seeks recovery in this case.

[1] Witness Quarles' testimony is entitled to substantial weight. He was involved in the development of a monitoring program to determine the lateral extent of contamination from the 2008 Kingston, Tennessee ash spill and thereafter has been involved with investigations at more than 70 coal ash disposal sites in the United States. (Tr. Vol. 13, p. 131.)

One option would be to allow the Company's current request for cost recovery subject to later adjustment or offset against actual final closure costs as determined in a future general rate case. This option is unsatisfactory since it would involve improper retroactive ratemaking – costs approved for recovery in this case might be disallowed and ordered disgorged in a later case. A second option would be to accept witness Quarles' opinion, which is that the Company is proposing an unworkable and, therefore, unreasonable and imprudent closure plan, and, as a result, disallow the costs in their entirety in this case. I likewise find this option unacceptable since it would preempt a decision that is properly to be made by DEQ and not by the Commission. The sufficiency of the Company's closure plans for these three impoundments is a matter that should first be decided by DEQ, after which the Commission can review the record and make a determination of the reasonableness and prudence of the costs the Company has incurred and will incur. I would therefore conclude that the most appropriate treatment of the costs incurred to date with respect to the three impoundments at the Roxboro and Mayo plants would be to allow the Company to defer those costs to a regulatory asset account for possible later recovery in a future general rate case, after closure plans have been approved by DEQ, and upon presentation of a more fully developed record concerning the history of ash management policies and practices at the two plants.

D. H.F. Lee Plant

The Company's H.F. Lee plant in Wayne County was decommissioned in 2012. At that time, there was one active wastewater impoundment at the plant site – theso-called 1982 basin, which was constructed in 1978, containing as of January 1, 2017, an estimated 4.5 million tons of combustion residuals. (Ex. Vol. 16, p. 210.) In addition, there were four inactive or abandoned impoundments as follows: (a) the 1950 basin, last used in 1963; (b) the 1955 basin, last used in 1969; (c) the 1962 basin, last used in 1973; and (d) the so-called "polishing pond," which opened in 1982 and was last used in 2012.[1] Collectively, these four impoundments contained an estimated 1.709 million tons of combustion residuals as of January 1, 2017. (Id.) In this case, the Company seeks to recover $20,759,183 in expenditures made in 2015 and 2016 for preparation of closure plans, engineering for implementation of the plans, and for expenses relating to dewatering the ash in the active impoundment. As far as the record discloses, these costs are not further broken down between the four inactive impoundments and the remaining active 1982 basin.

The inactive impoundments at the Lee plant are, together with those of similar vintage at the Cape Fear plant, the oldest among the Company's total of nineteen impoundments. Three of the four were constructed before the Clean Water Act became effective, and active use of the impoundments ceased before the practice of lined impoundments became widespread. None of the four are subject to the CCR Rule, although their closure is mandated by CAMA. (Id.) The 1950, 1955, and 1962 impoundments were inactive and were no longer in use by the time of the Company's 1987 general rate case. (For shorter reference, I will call these the "pre-1973 impoundments," since they were all inactive by 1973.) The record does not disclose whether any allowance for costs of closure of the pre-1973 impoundments and permanent disposal of the waste ash was made in that rate case.

[1] The exact status and history of the "polishing pond" is not detailed in the record. It is estimated to contain only approximately 9,000 tons of wastes and, therefore, does not appear to materially affect the Company's total expenditures.

No party has contested that the items of expenditure or the amounts of the expenditures made by the Company with respect to the impoundments at the Lee plant are reasonable and prudent. The difficulty I find with the Company's request for cost recovery centers on the inactive impoundments, and more particularly on the fact that the pre-1973 impoundments were last used for wastewater treatment and removal of combustion residuals between thirty and thirty-five years before the enactment of CAMA. The impoundments themselves, whose purpose was to treat ash laden wastewater before the treated wastewater could then be discharged into surface waters or recycled for other purposes at the plant, have served no such purpose for the same period of time. The waste products that now must be removed from the footprint of the impoundments and permanently disposed are the residuals from coal burned to generate electricity for a very different group of customers than the Company's current ratepayers.

Based on these factors, I find the principle supporting the Court's decision in State ex rel. Utils. Comm'n v. Edmisten, 291 N.C. 451, 232 S.E.2d 184 (1977), to be an apt one for this case – that the costs of service should be borne by those who were customers during the period the service was rendered. Id., 291 N.C. at 470-71, 232 S.E.2d at 195. The facts in Edmisten differ from those in this case in several respects, and Edmisten presents a simpler illustration of the general principle stated. The question that I believe implicates Edmisten in this case can be formulated in the following way. Permanent disposal of waste products from the generation of electricity is an expense directly associated with the generation of that electricity and should, therefore, be treated as an ordinary expense of operation. However, perfect identity between the time period during which electricity is generated and the time the resulting waste products are permanently disposed is not reasonable or even possible. The water used to flush the waste products from the plant must first be treated to remove the combustion wastes, and some accumulation or storage of that waste must occur in order to permit the most efficient and cost-effective permanent disposal of the waste. While an impoundment is still receiving new wastes and is used for treatment of wastewater, removal of accumulated wastes in the impoundment may be impractical and costly. Because some delay between the generation of coal combustion wastes and their final, permanent disposal is not unreasonable, the question then is when does the delay between (a) the production of waste in the course of generating electricity to serve one group of customers and (b) the final disposal of that waste accompanied by a request that then-current customers shoulder the costs of disposal become so great that it offends the principle articulated in Edmisten?

In the case of impoundments that were still actively receiving combustion residuals and treating wastewater when the Lee plant and several others were retired in 2012, it is reasonable for present ratepayers to be assigned costs associated with the final, permanent disposal of the wastes remaining in those impoundments at the time of their decommissioning. However, I would find that this is not so in the case of the pre-1973 impoundments. This distinction in treatment is supported, I believe, by the essentially undisputed evidence in the record as to the manner in which the pre-1973 impoundments were "decommissioned" at the time.

Company witness Kerin testified that when use of the inactive impoundments ceased, no steps were taken to dewater the ash remaining in the impoundments, although over time the impoundments dewatered naturally. (Tr. Vol. 17, pp.116-117.) He also testified that "...at a retired site, the first thing you want to do is start removing the water. That improves the factors of safety of the dam. It also, if you would have seep issues, that will eliminate the seeps." (Tr. Vol. 16, pp. 173-174.) Nor was anything done to protect the ash from rainwater or from storm water runoff from surrounding areas, such as by capping the accumulated ash in place or engineering storm water diversions. None of the ash was excavated and placed in dry stacks, piles, or landfills, and no groundwater monitoring or leachate collection system was installed to detect and prevent migration of contaminants from the ash into groundwater and nearby surface water. (Tr. Vol. 17, pp. 117-118.) Witness Kerin testified that from the time use of the impoundments ceased, no actions were taken other than performing inspections of the dams. (Id. at pp. 118-119.) [1]

In his direct testimony, witness Kerin attempted to avoid the matter of the inactive impoundments by testifying as follows: "In the absence of any regulatory directive to do so, the Company reasonably did not pursue and should not have pursued regulatory closure or retrofitting *for any site that was still generating ash* and that maintained its NPDES permit." (Tr. Vol. 16, p. 115 (emphasis added)) In other words, final disposition of the waste ash accumulated in any impoundment, even an inactive one, could await decommissioning of the generating plant itself. I find this position wholly unpersuasive. It is equivalent to claiming that it would be reasonable and prudent to leave hazardous sludges left from equipment cleaning solvents to be stored in leaking metal containers on an open and unprotected part of the power plant site for as many decades as the plant thereafter continued in operation, without any regard to what might become of them in the meantime.

In short, the pre-1973 impoundments at the H.F. Lee plant were not so much "closed" as they were abandoned, along with the combustion residuals left in them.[2] I would conclude that the Company's failure to take any steps to ensure that the ash in the pre-1973 impoundments remained in place and that contaminants did not enter groundwater or surface water at any time until it was forced to take action by the enactment of CAMA in 2014 was unreasonable and imprudent, and that the extended delay in taking any action to dispose of the ash on a permanent basis violates the principle of Edmisten.[3]

---

[1] Interestingly, when the Lee plant was retired in 2012, the Company commissioned a study of the activities required for decommissioning and the costs associated therewith. This study pre-dated adoption of the CCR Rule and the enactment of CAMA, but was intended to be responsive to the regulatory regime in place at the time under the Clean Water Act and applicable state groundwater protection regulations. For the impoundments at the Lee plant, the study indicated the "[e]xisting ash ponds will be pumped dry, filled with inert debris, capped with 40 mil geo-membrane, geo-net drainage, 18 inches of soil, and vegetated cover." (Ex. Vol. 20, p. 180.) The same activity was indicated for the impoundments at the Cape Fear, Weatherspoon, and L.V. Sutton plants. While there is no evidence to indicate whether CAMA would have addressed the inactive impoundments at the Lee plant differently had they been sooner closed in the manner recommended in the 2012 study, it is reasonable to ask whether the result under CAMA might have been different had the Company taken action to permanently close the impoundments and secure the ash in them within a reasonably prompt period of time after use of the impoundments was discontinued.

[2] The 1988 EPA Report to Congress indicates that as of 1983, North Carolina had in place regulations governing closure of surface impoundments. (p. 4-4) The record in this case does not further detail what those regulations provided. The EPA report does illustrate, generically, two methods of surface impoundment closure – removal of the wastes and dewatering the wastes and covering them with a soil cover. (Tr. Vol. 16, pp. 220-225; Ex. Vol. 21, pp. 513-516.) Whatever the state of the regulations at the time, the undisputed evidence from the Company's own witness is that nothing at all was done when use of the pre-1973 impoundments ceased.

[3] I do not believe this result is inconsistent with the Commission's 1994 PSNC Order due to significant factual differences between the cases. The manufactured gas plants owned by PSNC were acquired from other owners who had operated them for many years before PSNC purchased them. Three of the six plants were jointly owned with

The Company has provided no allocation between the pre-1973 impoundments and one active impoundment of any of the costs for which it seeks recovery at the Lee plant; however, witness Kerin testified that although disposal costs of ash wastes are not a direct function of quantities, quantity is certainly a very important determinant of cost. (Tr. Vol. 17, p. 54.) Some costs, such as preparation and submission of a plan for permanent disposal, site mobilization, and similar items, could be considered common to all the different impoundments at a single site, and it seems reasonable to allocate those common costs based on the most important variable involved – the quantity of the wastes in each impoundment. Accordingly, relying on the data provided by the Company in Kerin Direct Exhibit 5 and using the allocation method just described, I would disallow 37.9% of the total for which the Company seeks recovery in this case on account of the impoundments at the H.F. Lee Plant.[1]

E. Cape Fear Plant

The Company's Cape Fear plant near Moncure was decommissioned in 2012, at the same time the H.F. Lee, Weatherspoon, and the coal units at the L.V. Sutton plants also were retired. At that time there was one impoundment constructed in 1985 that was still receiving some waste. The Company estimated that the volume in this 1985 impoundment as of January 1, 2017, was approximately 2.8 million tons. Also at the plant site were four other impoundments whose use had ceased by not later than 1985, as follows: (a) the 1956 impoundment, whose use ceased in 1963; (b) the 1963 impoundment, no longer used after 1978; (c) the 1970 impoundment, discontinued in 1978; and (d) the 1978 impoundment, which no longer received waste after 1985. Taken together, these four discontinued impoundments contained an estimated 2.9 million tons of combustion residuals as of January 1, 2017. None of these impoundments are subject to the CCR Rule, and the Company's expenditures are mandated solely by the requirements of CAMA.

In this proceeding, the Company seeks to recover a total of $16,052,310 in expenditures to cover preparation of closure plans, engineering for implementation, and mobilization and dewatering of the 1985 impoundment. As is the case for the pre-1973 impoundments at the H.V. Lee plant, the four Cape Fear impoundments whose use ceased in or before 1985 (hereafter referred to as "the pre-1985 impoundments") are not subject to the CCR Rule, but are instead subject to

---

other parties. As far as the 1994 PSNC Order discloses, there was no evidence or finding that when the plants were finally closed in the 1950s, PSNC in any way failed to take steps that were reasonably and prudently known and possible at the time, based on the state of PSNC's knowledge and understanding at that time. I also find it significant that, whereas the Commission found that PSNC had handled by-products from the manufacturing process consistent with applicable laws at the time, in this case the Company's federal criminal admissions, the DEQ administrative and civil actions, and private party civil litigation all relate to actions or omissions under the Clean Water Act, which was in effect at the time two out of the five Lee impoundments were last in use. (Ex. Vol. 16, p. 210.)

[1] Kerin Direct Exhibit 5 reports estimated tonnages of ash as of January 1, 2017, and might be thought more appropriate to base an allocation on the tonnages shown on Public Staff Kerin Cross Exhibit 3, which contains estimates as of August, 2014, when activities commenced to close the impoundments and permanently dispose of the ash wastes. However, the August, 2014 tonnages shown on Public Staff Kerin Cross Exhibit 3 for the closed impoundments are significantly *less* than the estimated tonnages as of January 1, 2017, notwithstanding the fact that the four inactive impoundments had not been receiving any new combustion residuals after August, 2014. (The totals for the one "active" impoundment are the same on both exhibits.) As indicated in the footnotes to the two exhibits, estimated quantities were subject to change based on detailed site examination and analysis. For that reason, I have concluded that Kerin Direct Exhibit 5 provides a more accurate basis for the proposed allocation. (Ex. Vol. 16, p. 210.)

closure as mandated by CAMA. The 1985 impoundment, though no longer receiving new wastes after 2012, is classified as "active" under the CCR Rule since it continued to impound water at the time the CCR Rule became effective. Again, as in the case of the impoundments at the H.V. Lee facility, the Company has provided no breakdown of its cost recovery request as between the 1985 impoundment and the pre-1985 impoundments.

The 1978 impoundment was the subject of Count 5 of the federal criminal prosecution, centering on the Company's failure to take timely and reasonable action to maintain and repair the riser and skimmer, allowing leakage in violation of the Company's NPDES permit. The facts are extensively reviewed in the Joint Factual Statement. (Ex. Vol. 21, pp. 142-150.) They demonstrate that the Company was slow to respond or non-responsive entirely to repeated evidence of problems with the riser and skimmer and knowledge that these problems were resulting in leakage from the impoundment. Not until 2013 did the Company begin to dewater the 1978 and 1985 impoundments. This was approximately 28 years after the 1978 impoundment had been retired, a delay that should be considered in light of witness Kerin's testimony, already noted, that the first thing that should be done when an impoundment is retired is to dewater the basin, thereby reducing the hydrostatic pressure that can cause or increase the likelihood of groundwater intrusion or surface seeps.

For the reasons discussed earlier concerning the pre-1973 impoundments at the H.F. Lee plant, I would disallow any cost recovery for removal and final disposal of the coal combustion residuals in the four pre-1985 impoundments at the Cape Fear plant. As was the case with the cost figures for the Lee impoundments, the Company did not provide a breakdown of its total request for cost recovery by individual impoundment. Using the same source of data and the same method of allocating the total costs as in the case of the H.F. Lee plant, I would disallow 50.87% of the total amount of cost for which the Company seeks recovery in this case in account of the impoundments at the Cape Fear Plant.[1]

F. Robinson Plant

The Company's Robinson plant in South Carolina has one impoundment constructed in the mid-1970s. (Ex. Vol. 16, p. 210.) The Robinson plant is now retired and the record is unclear as to the quantity of ash remaining at the plant site. Kerin Direct Exhibit 5 shows an estimate as of January 1, 2017, of approximately 3.2 million tons, while Public Staff Kerin Cross Exhibit 3 indicates that as of September 30, 2014, the quantity of ash in the impoundment was only 660,000 tons, with perhaps additional ash in dry stacks, piles, or otherwise present in some form at the site. This uncertainty is consistent with the general absence of evidence in the record concerning the Robinson plant's history of operations or the management of combustion residuals at the plant site. According to Kerin Direct Exhibit 10, the Company is in this case seeking recovery of $6,415,618 expended to date in preparatory engineering and related expenses for a closure plan to involve excavation of the ash at the site and permanent disposal in a lined landfill. (Ex. Vol. 16, p. 268.) The Company's closure plan has been approved by the South Carolina

[1] The discrepancies in tonnages between Kerin Direct Ex. 5 and Public Staff Kerin Cross Exhibit 3 that exist in the case of the H.F. Lee plant do not exist in the case of the Cape Fear plant. The small difference in totals likely reflects rounding or different methods of estimation.

Department of Health and Environmental Control, a fact which distinguishes the Company's expenses at the Robinson site from the situation with respect to the Mayo and Roxboro plants discussed earlier.

Because none of the intervenors presented evidence disputing the reasonableness or prudence of the Company's expenditures for which it seeks recovery, or concerning the Company's history of management of combustion residuals at the Robinson plant, I would conclude that they should be allowed for recovery in this case, subject to amortization along with other allowed costs for ash remediation and disposal.

G. Weatherspoon Plant

As in the case of the Robinson plant, the parties' evidentiary presentations gave small attention to the Company's Weatherspoon plant, which was retired in 2011 and, at the time of its decommissioning, had one active ash impoundment constructed in 1955 and containing, as of January 1, 2017, combustion residuals estimated at either 2.5 million tons (Ex. Vol. 16, p. 210.), or 1,700,000 tons as of August, 2014. (Ex. Vol. 17, p. 79.) In this case, the Company seeks recovery of $9,120,342 incurred in connection with preliminary preparation of a closure plan and engineering for implementation of the plan involving excavation and offsite disposal of the ash remaining in the decommissioned impoundment. The Company has selected beneficial reuse as its preferred method for permanent disposal of the waste ash from the Weatherspoon impoundment.

The objecting parties presented little or no evidence concerning the reasonableness or prudence of the Company's expenditures for which it seeks recovery in this case, or concerning the Company's history of management of combustion residuals at the Weatherspoon plant. The Weatherspoon plant did not figure in the Company's federal criminal prosecution. Although the 2013 enforcement action commenced in Wake County Superior Court by DEQ contain allegations that the applicable 2L standards for certain groundwater contaminants (iron, thallium, and manganese) were exceeded in or around the Weatherspoon plant at various monitoring sites on various dates, the allegations of DEQ's Complaint are tentative and, in some cases, state that it is uncertain whether these exceedances are naturally occurring or whether corrective action will be required. (Ex. Vol. 22, p. 267.) DEQ's action was resolved by an order on motion for summary judgment, consented to by the Company. (Ex. Vol. 22, pp. 328-407.) Accordingly, I would find that there is insufficient evidence to disallow the costs forwhich recovery is sought in this case as imprudently incurred and that cost recovery should be allowed.

IV. COAL COMBUSTION WASTE – GENERAL MATTERS, ONCE AGAIN

This proceeding may be the first, but it will not be the last in which recovery of costs for permanent disposal of coal combustion wastes will be at issue. Two questions of moment for future rate cases were litigated in the present case. On one of those questions I am in substantial agreement with the Commission's majority but not so with the other question. Finally, I wish to set out my views about the mismanagement penalty ordered by the Commission majority.

A. Insurance Recoveries

The first matter relates to potential insurance recoveries that may be used to offset some portion of the costs the Company has incurred and will incur for permanent disposal of the waste materials. I concur in the majority's treatment of this issue and wish to set forth my own view as to why that treatment is appropriate. As the evidence disclosed, the Company's entitlement to recover under its insurance policies is currently in litigation that will not be finally resolved for a number of months or even some years. Accordingly, the Company is not presently able to make any useful prediction or estimation of its likely recoveries under the policies in litigation. The Company has proffered that any and all proceeds from the insurance litigation, by judgment or settlement, will be applied, net of costs of litigation, against its costs incurred to comply with CAMA and the CCR Rule. Of course, it is the Company's position that all of those costs are recoverable from ratepayers, now and in the future, including an allowed rate of return. I find this proposal highly unsatisfactory. Under it, the Company would retain full control over the litigation, including the pace of the suit, the costs of the suit, the development of evidence through discovery, the presentation of the case, and the determination whether to settle and, if so, for what amounts. Yet because the Company seeks full recovery from ratepayers today for all of the costs to which insurance coverage is potentially available, it lacks any real incentive to prosecute the pending insurance litigation vigorously, to settle the case for the highest amount that can reasonably be negotiated, or to control the costs of the suit. The Company would retain control but would have no stake in the outcome.

It is, I believe, premature to decide in this case how any insurance recoveries should be allocated between the Company's ratepayers and its shareholders and, in stating this view, I am in accord with the majority. Much depends on how the insurance litigation develops, most particularly on which issues will turn out to be central to the disposition of the litigation and what evidence is developed on those controlling issues. For now, however, I believe that the cost recovery disallowances and cost deferrals that I have advocated in this opinion would give the Company sufficient incentives to ensure that the insurance litigation is prosecuted vigorously and cost effectively. If the Company is able to prevail, either in whole or in part, the Commission will then have an opportunity to assess whether and in what amount the Company should be able to offset the insurance proceeds against items of cost that have been disallowed in rates or deferred for recovery.

B. Ongoing Coal Ash Disposal Costs

The second matter centers on the treatment of the Company's ongoing and future expenditures relating to waste ash disposal. As noted in the beginning, I concur with the majority that these costs are appropriately treated by allowing the Company to establish a regulatory asset account, with the amount of any eventual allowance or disallowance to be determined in one or more future rate cases. I depart from the majority, however, on the extent to which the Company may be allowed to accrue a rate of return on this regulatory asset account.

The expenditures that will be recorded to this account are, in my view and as I have already explained, operating expenses upon which a return is not ordinarily allowed. The Company contends that a rate of return is appropriate nonetheless since the expenses are being capitalized and will be funded from the Company's working capital, citing the decision in State ex rel. Utils. Comm'n v. Virginia Electric & Power Co., 285 N.C. 398, 206 S.E.2d 283 (1974) (VEPCO) for support of its position. The matter is not quite so simple. The Court in VEPCO did not hold that *all* amounts classified as working capital could be included in the utility's rate base upon which it was entitled to earn a return, but only those funds used as working capital that were provided by or belonged to investors. After first endorsing inclusion in rate base of the Company's own funds used as working capital, the Court pointed out:

> Conversely, the utility is not entitled to include in its rate base funds which it has not provided but which it has been permitted to collect from its customers for the purpose of paying expenses at some future time and which it actually uses as working capital in the meantime. Such funds, so supplied by the customers, are 'used and useful in rendering the service' and the utility, having lawfully collected them, is the owner thereof. Nevertheless, such funds, so collected from the customers and used by the utility as working capital, are not 'the public utility's property' within the meaning of G.S. 133(b)(1).

VEPCO, 285 N.C. at 415, 206 S.E.2d at 293. Importantly, the Court also observed that the determination as to when working capital is sufficient such that no additional amount is required to be included in rates is largely a subjective one. Id.

The record in the present case is unclear as to the extent to which the Company will require an increase in investor-provided working capital beyond what is currently available to fund ongoing expenditures for coal ash disposal. The Company has been able to fund from the revenues provided by existing rates and from existing working capital its coal ash expenditures in 2015 and 2016, and these amounts will be replenished as allowed by the Commission's order allowing amortization and recovery in rates of these expenditures. Although the Company contends that in some future years its expenditures for coal ash disposal will exceed its expenditures in the test year, it also acknowledges that in other years its expenditures are projected to be less. (Tr. Vol. 6, pp. 144-145.) In its application, the Company proposed to increase its pro forma cash working capital by $129.1 million on account of future expenditures for coal ash disposal costs, and to recover this amount from customers in rates. (Tr. Vol. 6, pp. 41-42.) This amount represented the Company's expenditures in the test year, which, as I noted already, it has funded from its existing working capital under current rates. I would infer from this requested number that the Company does not believe that it needs an increase in working capital for those years in which its future expenditures are projected to exceed the test year amount.

Because I am unable to determine from the record as it stands what portion, if any, of the Company's future coal ash disposal expenditures may require an increase in investor-provided working capital, I am therefore unable to support the accrual of a rate of return on amounts recorded to the regulatory asset account for future coal ash disposal costs.

C. The Penalty for Mismanagement

Finally, I write to explain my reasons for not joining the majority's decision to impose what it has called a penalty for mismanagement. The majority would allow all costs sought for recovery by the Company for the period January 1, 2015, through August 31, 2017, excepting only the $9.5 million excess disposal costs at the Asheville Plant. Its proposed penalty consists of amortizing recovery of the allowed costs over a five year period and including a return on the unamortized balance equal to the authorized combined return on rate base but then reduced by the sum of $6 million per year. The majority estimates that the value of this penalty is approximately $30 million. I cannot concur that what the majority has ordered constitutes, in any real sense, a penalty.

Requiring amortization over a period of years for extraordinary operating expenses is not unusual, and the five year period allowed by the majority for recovery of costs already incurred is what the Company has requested. I do not consider allowing a return on the unamortized balance, albeit at a reduced rate, to be a penalty in any meaningful sense. In Thornburg I, the Supreme Court upheld the Commission's allowance and amortization of certain costs associated with a cancelled generating plant as "reasonable operating expenses," while denying any return on the unamortized balance of such expenses. In the course of its discussion of the issue, the Court observed:

> While this statute [referring to G.S. 62-133(b)] makes clear that the rates to be charged by the public utility allow a return on the cost of the utility's property which is used and useful within the meaning of N.C. Gen. Stat. § 62-133(b)(1), the statute permits recovery but no return on the reasonable operating expenses ascertained pursuant to subdivision (3).

Id., 325 N.C. at 475, 385 S.E.2d at 458. Elaborating on this point later in the same opinion, the Court stated:

> We note that jurisdictions have generally dealt with the allocation of cancelled plant costs in one of the following three ways: (1) recovery of all of the costs from ratepayers, by allowing amortization of the investment plus a return on the unamortized balance; (2) recovery of all costs from shareholders through a total disallowance of recovery in rates, instead requiring the utility to write off the entire amount in a single year; or (2) recovery from ratepayers and shareholders through amortization of costs in rates over a period of years, with no return on the unamortized balance. Strong policy considerations support the Commission and commentators who have concluded that method three is the best of the three alternatives in that it promotes "an equitable sharing of the loss between ratepayers and the utility stockholders."

Id., 325 N.C. at 480, 385 S.E.2d at 460 (citations omitted).

The Thornburg I decision involved investment in cancelled plant, but the Commission applied the same method of recovery to costs associated with environmental remediation costs arising from decommissioned manufactured gas plants in the 1994 PSNC Order, where deferral and amortization was permitted without any rate of return on the unamortized balance, even though the Commission did not in its opinion make a finding of imprudence or mismanagement.[1] Finally,

[1] As noted in the passage quoted from Thornburg I, other states have taken different approaches, and that was also true in the series of decisions from the 1990s relating to manufactured gas plants. However, the Commission's decision not to allow a return on unamortized balances in the 1994 PSNC Order was not unique. Similar decisions were

in the present case itself, the Commission majority would permit the Company to recover certain extraordinary operating costs incurred in connection with a series of major storms but proposes not to allow any return on the unamortized balance of those costs. Again, disallowance of a return is not being justified by any finding that the Company had mismanaged its response to the storms. Because I consider the costs of permanent disposal of coal ash wastes to be an operating expense under G.S. §62-133(b)(3) I find these precedents particularly compelling.

Two additional considerations lead me to the view that the imposition of a mismanagement penalty in the amount established by the majority is not an adequate response to the evidence in this case. In earlier cases in which the Commission has determined that imposition of a penalty for mismanagement and poor service was appropriate, the Commission has often endeavored to identify the specific ways in which the utility has fallen short and, where possible, to quantify the financial consequences of the mismanagement or poor service. This has been done to ensure that the amount of the penalty is not disproportionate to the nature of the underlying acts or omissions at issue. In the present case, I am not able to make any clear connection between the amount selected for the penalty ($6 million a year for five years) and any particular actions or omissions by the Company. In part for this reason, I prefer an approach that attempts to explore and then quantify causal relationships between specific acts of mismanagement and imprudence, and the resulting financial loss or avoidable costs.

Third, and finally, I note that in past cases where the Commission has seen fit to impose a penalty for mismanagement, there has been a forward-looking element to the Commission's action; that is, the penalty was not merely a response to the utility's past actions, but was also designed to provide an incentive for the utility to correct errors and improve future service. In the present case the imposition of a generic penalty may do little to provide any additional incentive for better service by the Company in the future. As a result of the federal criminal plea agreement and the conditions of probation arising therefrom, the adoption of the CCR Rule, the enactment and implementation of CAMA, and the terms of the various settlement agreements embodied in judgments entered in DEQ administrative proceedings and private party lawsuits, the Company is now subject to a highly prescriptive and closely-monitored regime dictating the details of how it will manage coal ash wastes from this point forward. In addition, and unlike those instances where the Commission has imposed a penalty for poor service or mismanagement, the Company has been subjected to steep and punitive criminal fines, civil penalties, and costly administrative settlements all occasioned by its past actions.[1]

For all these reasons, I am unable to join the majority's imposition of what it calls a penalty for mismanagement. I would instead, and for the reasons previously set forth, disallow from cost recovery and exclude from rates the following amounts:

---

made in some, but not all, other jurisdictions. E.g., Northern States Power Company, Docket No. G-002/GR-86-160, 1987 Minn. PUC Lexis (Minn. Pub. Util. Comm'n, Jan. 27, 1987); Chesapeake Utilities Corp., Docket No. 85-17, 1986 Del. PSC Lexis (Del. Pub. Serv. Comm'n. March 25, 1986).

[1] Although I am being repetitive in doing so, I believe it is important to state once again that the Company is not seeking in this case any recovery on account of any criminal or civil fines, penalties or forfeitures, nor is it permitted to do so. This is a point that has often been overlooked by opponents of the Company's proposal for cost recovery.

1. **[BEGIN CONFIDENTIAL] [END CONFIDENTIAL]** in preparation, transport, and offsite disposal costs incurred to remove wastes from the two impoundments at the L.V. Sutton plant for disposal at the Brickhaven site in Chatham County.

2. $6,693,390 in accelerated groundwater remediation costs incurred at the L.V. Sutton plant pursuant to the September 29, 2015, agreement with the North Carolina Department of Environmental Quality.

3. $9,500,000 in excess contractual costs for offsite disposal ofwastes from the Asheville plant.

4. All costs with respect to the permanent disposal of ash wastes from the three pre-1973 impoundments at the H.V. Lee Plant, which based on the evidence provided, I would determine to be $7,867,730 on a system-wide basis through December 31, 2016. This number would be adjusted to calculate the North Carolina retail allocation. The disallowance would extend to all costs from before and after January 1, 2017, related to the pre-1973 impoundments.

5. All costs with respect to the permanent disposal of ash waste from the four pre-1985 impoundments at the Cape Fear Plant, which in this case and based on the evidence provided, I would determine to be $8,265,810 on a system-wide basis through December 31,2016. This number would be adjusted to calculate the North Carolina retail allocation. The disallowance would extend to all costs from before and after January 1, 2017, related to the pre-1985 impoundments.

6. Defer to a regulatory asset account all costs sought in this case, totaling $35,237,688, for the three impoundments at the Mayo and Roxboro plants, for further determination at the Company's next general rate case, and after DEQ determination as to thesufficiency and adequacy of the closure plans submitted by theCompany.

For all remaining costs incurred for the period January 1, 2015, through October 31, 2017, I would permit deferral and amortization over a period of five years, the period requested by the Company, but with no return allowed on the unamortized balance, in accord with prior Commission policy and practice and not as a penalty. Finally, I would grant deferral accounting treatment for all future costs, except for those items disallowed as noted above, but the deferral account would not accrue a rate ofreturn.

/s/ Daniel G. Clodfelter

Commissioner Daniel G. Clodfelter

DOCKET NO. E-22, SUB 546

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina Pursuant to G.S. § 62-133.2 and Commission Rule R8-55 Regarding Fuel and Fuel-Related Costs Adjustments for Electric Utilities	))))))	ORDER APPROVING FUEL RIDERS AND NOTICE TO CUSTOMERS OF CHANGE IN RATES

BY THE CHAIRMAN: On January 25, 2018, the Commission issued its Order Deciding Contested Issues and Requiring Compliance Filing (Fuel Order) in Docket No. E-22, Sub 546. In the Fuel Order, the Commission approved the level of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina's (Company's) system fuel expense, $1,758,608,978, to be used to set the Company's prospective, or forward-looking, fuel factor (Rider A) for 2018. The Commission also approved the Company's North Carolina retail test period jurisdictional fuel expense over-collection, $5,450,950, including interest, and to be adjusted as appropriate to reflect an 11-month rate period and the adjusted North Carolina retail jurisdictional test period sales, 4,299,466,351 kilowatt hours (kWh) for purposes of calculating the experience modification factor (EMF) (Rider B), and concluded that it is appropriate to implement the final phase of the Company's under-recovery of $381,535 EMF (Rider B2) from the mitigation proposal approved by the Commission in Docket No. E-22, Sub 515.

In the Ordering Paragraphs to the Fuel Order, the Commission directed the Company to: (1) recalculate and file proposed fuel factor increments (Rider A), EMF decrements (Rider B), EMF increments (Rider B2), and the total net fuel factors, on a voltage-differentiated basis consistent with the Fuel Order, to be effective for an 11-month period beginning on February 1, 2018; (2) work with the Public Staff—North Carolina Utilities Commission (Public Staff) to verify the accuracy of the increments and decrements to the Company's fuel riders; (3) to prepare a joint proposed notice to customers of the rate rider adjustments approved by the Commission in the Fuel Order; and (4) to file this information in a proposed order approving the proposed riders and customer notice.

Consistent with these directives, on January 29, 2018, the Company made a compliance filing with the Commission that included revised fuel rider tariff sheets reflecting the rates for Rider A and EMF Riders B and B2 for an 11-month period beginning on February 1, 2018, together with supporting workpapers showing the calculation of the proposed riders, and a joint proposed Notice to Customers of Change in Rates (Customer Notice) that was developed by the Company and the Public Staff. The Company's compliance filing stated that the Public Staff agrees with the content of the Customer Notice and with the calculation of the proposed riders. The Company requested that the Commission issue an order approving the recalculated fuel adjustment riders and the Customer Notice on or before January 30, 2018, to allow the Company to implement the new fuel riders effective February 1, 2018.

ELECTRIC – ADJUSTMENTS OF RATES/CHARGES

As reflected in the Company's compliance filing and proposed Customer Notice, the proper fuel factors (Rider A) for use in this proceeding, including the regulatory fee, are as follows:

Customer Class	Rider A
Residential	0.006 ¢/kWh
SGS & PA	0.006 ¢/kWh
LGS	0.003 ¢/kWh
Schedule NS	0.006 ¢/kWh
6VP	0.006 ¢/kWh
Outdoor Lighting	0.006 ¢/kWh
Traffic	0.006 ¢/kWh

The appropriate EMF (Rider B) for this proceeding, including interest and the regulatory fee, are as follows:

Customer Class	EMF Billing Factor
Residential	(0.141) ¢/kWh
SGS & PA	(0.141) ¢/kWh
LGS	(0.140) ¢/kWh
Schedule NS	(0.136) ¢/kWh
6VP	(0.137) ¢/kWh
Outdoor Lighting	(0.141) ¢/kWh
Traffic	(0.141) ¢/kWh

The appropriate EMF (Rider B2) factors for this proceeding, including the current regulatory fee, are as follows:

Customer Class	EMF Billing Factor
Residential	0.011 ¢/kWh
SGS & PA	0.011 ¢/kWh
LGS	0.010 ¢/kWh
Schedule NS	0.010 ¢/kWh
6VP	0.010 ¢/kWh
Outdoor Lighting	0.011 ¢/kWh
Traffic	0.011 ¢/kWh

Finally, the total net fuel factors (¢/kWh), with regulatory fee, are as follows:

Customer Class	Total Net Fuel Factor
Residential	1.971 ¢/kWh
SGS & PA	1.969 ¢/kWh
LGS	1.952 ¢/kWh

Schedule NS	1.894 ¢/kWh
6VP	1.922 ¢/kWh
Outdoor Lighting	1.971 ¢/kWh
Traffic	1.971 ¢/kWh

Based on the foregoing and the record, the Chairman finds good cause to approve the recalculated fuel factor riders and the Customer Notice filed by the Company on January 29, 2018, and to direct that the Company give notice to its customers using the format of the Customer Notice attached hereto as Attachment A.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 30th day of January, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

ATTACHMENT A

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. E-22, SUB 546

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina Pursuant to G.S. 62-133.2 and Commission Rule R8-55 Regarding Fuel and Fuel-Related Costs Adjustments for Electric Utilities	NOTICE TO CUSTOMERS OF CHANGE IN RATES

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) has authorized Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina (Company), to implement an overall increase in its fuel rates and charges paid by customers for retail electric service in North Carolina, as detailed below, to recover an increase in the Company's total fuel expenses, to refund through an experience modification factor (EMF) over-collection of retail fuel expense, and to collect non-base fuel revenues associated with EMF revenues. The Commission's Orders authorizing these rate changes were issued on January 25 and 30, 2018, in Docket No. E-22, Sub 546.

The Commission approved annual non-base fuel rate changes to become effective February 1, 2018, including a projected fuel factor (Rider A), EMF Rider B designed to refund \$5,450,950 (including interest, and to be adjusted as appropriate to reflect an 11-month rate period) due to over-collection in the prior period, and EMF Rider B2 designed to collect \$381,535 in unrecovered expenses related to Docket No. E-22, Sub 515. The overall fuel rate increase was approved by the Commission after review of the Company's fuel expenses and related revenues during the 12-month period ending on June 30, 2017, and represents changes experienced by the Company with respect to its reasonable costs of fuel and the fuel component of purchased power.

The increments in forward fuel factors (Rider A) approved by the Commission are: Residential – 0.006 ¢/kWh; SGS & Public Authority – 0.006 ¢/kWh; LGS – 0.003 ¢/kWh; NS – 0.006 ¢/kWh; 6VP – 0.006 ¢/kWh; Outdoor Lighting – 0.006 ¢/kWh; and Traffic – 0.006 ¢/kWh.

The EMF decrement fuel factors (Rider B) approved by the Commission are: Residential – (0.141) ¢/kWh; SGS & Public Authority – (0.141) ¢/kWh; LGS – (0.140) ¢/kWh; NS – (0.136) ¢/kWh; 6VP – (0.137) ¢/kWh; Outdoor Lighting – (0.141) ¢/kWh; and Traffic – (0.141) ¢/kWh.

The EMF increment fuel factors (Rider B2) approved by the Commission are: Residential – 0.011 ¢/kWh; SGS & Public Authority – 0.011 ¢/kWh; LGS – 0.010 ¢/kWh; NS – 0.010 ¢/kWh; 6VP – 0.010 ¢/kWh; Outdoor Lighting – 0.011 ¢/kWh; and Traffic – 0.0141 ¢/kWh.

All factors are based on an 11-month rate period as directed by the Commission in this proceeding.

The net change in the EMF rates and Fuel Rider A will result in a monthly increase of approximately \$3.49 for a residential customer using 1,000 kWh per month during the period February 1, 2018, through December 31, 2018, as compared to 2017 fuel rates. The total monthly impact for commercial and industrial customers will vary based upon consumption and customers' participation in Dominion Energy North Carolina's demand-side management and energy-efficiency programs.

Dominion Energy North Carolina's total net fuel factors for each customer class are: Residential – 1.971¢/kWh; SGS & Public Authority – 1.969¢/kWh; LGS – 1.952¢/kWh; NS – 1.894¢/kWh; 6VP – 1.922¢/kWh; Outdoor Lighting – 1.971¢/kWh; and Traffic – 1.971¢/kWh.

The Commission's Order directed the Company to bill these amounts during the period February 1, 2018, through and including December 31, 2018.

ISSUED BY ORDER OF THE COMMISSION.
This the 30th day of January, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. E-34, SUB 47

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Appalachian State University,	)	ORDER APPROVING 2018
d/b/a NRLP Light and Power Company, for	)	PURCHASE POWER ADJUSTMENT
Approval of 2018 Purchase Power	)	FACTOR AND 2018 COAL ASH
Adjustment Factor and 2018 Coal Ash	)	COST RECOVERY RIDER
Cost Recovery Rider	)	

BY THE COMMISSION: On October 2, 2017, Appalachian State University, d/b/a NRLP Light and Power Company (NRLP) filed its preliminary Purchased Power Adjustment (PPA) for 2018. NRLP purchases energy and capacity from Blue Ridge Electric Membership Corporation (BREMCO), who purchases its energy and capacity from Duke Energy Carolinas, LLC (DEC). NRLP's yearly PPA adjustment process was authorized by the Commission's Order Approving Rate Increase and Annual Procedure issued on December 22, 2010, in Docket No. E-34, Sub 38 (Sub 38 Order). NRLP enclosed in its preliminary filing a proposed adjustment to the PPA factor of $0.020344 per kilowatt-hour (kWh), excluding the North Carolina regulatory fee, or $0.020372 per kWh, including the regulatory fee. NRLP requested that this PPA factor be included in rates for bills rendered after February 1, 2018.[1]

On January 12, 2018, the Public Staff filed a motion for extension of time, requesting that the Commission extend the effective date for NRLP's 2018 PPA factor from February 1, 2018 to April 1, 2018. In support of its requested extension, the Public Staff first noted that on June 30, 2017, NRLP filed an application for a general rate increase in Docket No. E-34, Sub 46 (NRLP's General Rate Case). The Public Staff also stated that it and NRLP are engaged in settlement negotiations with regard to the issues in NRLP's General Rate Case, including the proper mechanism for including coal ash cleanup costs in NRLP's rates. Further, the Public Staff stated that the annual PPA filing that is the subject of this proceeding includes, for the first time, certain coal ash cleanup costs incurred by DEC, passed on to BREMCO, and charged to NRLP by BREMCO during 2017.

On January 19, 2018, the Commission issued an Order Granting Extension of Time, extending the date on which NRLP's 2018 PPA factor shall become effective from February 1, 2018, to April 1, 2018, as requested by the Public Staff.

Also on January 19, 2018, in NRLP's General Rate Case, NRLP and the Public Staff filed a stipulation, settling all issues between them in that proceeding. Among the issues that NRLP and the Public Staff have agreed to in NRLP's General Rate Case are 1) that it is appropriate and reasonable for the current procedure and method used to determine the annual PPA rider to

[1] On January 23, 2014, in Docket No. E-34, Sub 41, the Commission issued an Order establishing February 1 as the date that NRLP's PPA factor becomes effective. This date was chosen to provide NRLP sufficient time to incorporate its final bill from BREMCO for the preceding calendar year in its PPA factor. Since that time, the procedure has been for NRLP to file its preliminary PPA in October, and its new PPA has gone into effect for service rendered on and after February 1 of the next year.

continue, and, if approved by the Commission, the annual PPA rider can be determined without the requirement that NRLP's ongoing earnings be considered as part of the annual PPA rider determination. NRLP and the Public Staff also agreed that the appropriate base purchased power cost factor reflected in their agreement, which should be established in NRLP's General Rate Case for use in future PPA Rider proceedings is $0.062846 per kWh (excluding the North Carolina regulatory fee); and 2) that NRLP should be allowed to begin recovering reasonable and appropriate coal ash costs charged to it by BREMCO through a separate rider or separate component of NRLP's PPA rider. NRLP and the Public Staff further agreed that the coal ash cost recovery (CACR) rider should be implemented concurrent with this proceeding and future similar proceedings. NRLP and the Public Staff also agreed that the appropriate base CACR rider for use in future CACR rider proceedings is $0.000000 per kWh (excluding the North Carolina regulatory fee).

On March 20, 2018, NRLP filed its final proposed 2018 PPA factor, including an experience modification factor (EMF) based on total actual purchased power revenues and costs for the period January through December 2017. The 2018 PPA factor NRLP requests in this filing is $0.001005 per kWh (excluding the regulatory fee), consisting of two elements: 1) an estimated decrement in purchased power costs for the period January through December 2018 of ($0.000880) per kWh, and 2) an EMF increment of $0.001885 per kWh. NRLP states that when calculated to include the regulatory fee, the PPA factor totals $0.001006 per kWh, which results in an increase in total purchased power rates of $0.001006 per kWh above the base purchased power revenues recommended in NRLP's General Rate Case. Thus, NRLP requests that the Commission approve the 2018 PPA factor of $0.001006 per kWh as an adjustment from the base purchase power cost rate of $0.062846 per kWh.[1] NRLP requested that the new rates be approved for all service rendered on or after April 1, 2018.

In its March 20, 2018 filing, NRLP proposes to revise each of its retail rate schedules as agreed to by NRLP and the Public Staff in NRLP's General Rate Case, including its outdoor lighting schedules, by incorporating the $0.001006 per kWh PPA factor. The Company states that its proposed PPA factor, if approved by the Commission, will increase rates for its customers over the base rates established in NRLP's General Rate Case by a range of 1.0% (for residential customers) to 1.4% (for large commercial customers).

Also in its March 20, 2018 filing, NRLP requested approval of a CACR rider, with a CACR base factor of $0.000000, as agreed to by NRLP and the Public Staff in their stipulation filed in NRLP's General Rate Case. NRLP's proposed 2018 CACR factor estimate is $0.003246 per kWh (excluding the North Carolina regulatory fee), or $0.003251 per kWh (including the North Carolina regulatory fee). NRLP states that it has determined this estimate by dividing its current estimate of total coal ash costs through 2021, dividing that amount by 44 months, and then multiplying that monthly average by 12 months. This estimate, with any appropriate interest calculated, will be subject to true-up in future NRLP PPA/CACR rider proceedings. The Company states that its proposed CACR factor, if approved by the Commission, will increase rates for its

[1] Contemporaneous with the issuance of this order, the Commission has issued an Order in NRLP's General Rate Case, approving the stipulation between NRLP and the Public Staff. Among other things, that Order approves the base purchased power cost rate of $0.062846 per kWh, as agreed to by NRLP and the Public Staff in their stipulation filed in NRLP's General Rate Case.

customers over the NRLP's General Rate Case base rates by a range of 3.1% (for residential customers) to 4.6% (for commercial demand high load factor customers).

The Public Staff presented this matter at the Commission's regular Staff Conference on March 26, 2018, stating that it had reviewed NRLP's calculations for the PPA, and determined that the proposed PPA has been calculated accurately and in a reasonable manner, given the projections of purchased power costs received from BREMCO, and is consistent with previous NRLP pass through requests approved by the Commission. Furthermore, pursuant to the provision of the Sub 38 Order that each annual PPA factor adjustment should take into consideration, as appropriate, NRLP's overall level of earnings and return on rate base at that time, the Public Staff has also conducted a review of NRLP's 2017 earnings. For purposes of this proceeding, this review has been accomplished by virtue of the Public Staff's investigation in NRLP's General Rate Case. Based on the results of its review, the Public Staff concluded that the requested PPA is appropriate and reasonable in that it is based solely on the level of purchased power expense expected to be incurred by NRLP (including the EMF), and when combined with the Public Staff's findings in its general rate case investigation, does not appear to be unreasonable overall. The Public Staff further states that it reviewed the components and calculations of the estimated coal ash costs that NRLP seeks to collect from its retail customers through the CACR rider, and, based on its review, the Public Staff recommends that the Commission approve the 2018 CACR factor as proposed.

Based on the foregoing and the entire record herein, the Commission finds good cause exists to approve the proposed 2018 PPA factor and 2018 CACR rider, allowing NRLP to recover through retail rates charged to its customers the increased cost of purchased power and coal ash cleanup, respectively. The Commission further finds good cause to approve the proposed 2018 PPA factor and 2018 CACR rider without public hearing, subject to refund of any amounts subsequently found to be unjust or unreasonable upon protest and hearing as is allowed in the notice to customers attached hereto as Appendix A.

IT IS, THEREFORE, ORDERED as follows:

1. That, effective with service rendered on and after April 1, 2018, NRLP is authorized to adjust its rates and charges to reflect a 2018 PPA factor of $0.001005 per kWh (excluding the regulatory fee) and $0.001006 per kWh (including the regulatory fee), resulting in an increase of $0.001006 per kWh in the PPA factor;

2. That, effective with service rendered on and after April 1, 2018, NRLP is authorized to implement a 2018 CACR rider of $0.003246 per kWh (excluding the regulatory fee) and $0.003251 per kWh (including the regulatory fee);

3. That the rates authorized by this order are subject to refund of any amounts which may subsequently be found unjust and unreasonable after public hearing, which may be held as provided in the Notice to Customers attached hereto as Appendix A;

4. That, within 10 days of this order, NRLP shall file copies of its approved rates and charges, as modified herein; and

5. That, within seven days of the date of this order, NRLP shall mail by separate mail or bill insert the Notice to Customers attached hereto as Appendix A to each of its customers, and publish, at its own expense, in newspapers having general circulation in its North Carolina service area once a week for two consecutive weeks. The first publication of the Notice to Customers shall appear not later than seven days following the date of this Order, and cover no less than one-quarter of a page. Within 10 days of the last date of mailing or publication, whichever is later, NRLP shall affidavits evidencing compliance with the requirements of this ordering paragraph.

ISSUED BY ORDER OF THE COMMISSION.
This the 29th day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION

NOTICE TO CUSTOMERS

DOCKET NO. E-34, SUB 47
BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

Notice is hereby given that New River Light and Power Company (NRLP) has requested that the North Carolina Utilities Commission (Commission) approve an adjustment to its purchased power adjustment (PPA) factor, and the establishment of a coal ash cost recovery (CACR) factor, for service rendered on and after April 1, 2018, to pass through to its customers the increased cost of purchased power and coal ash cleanup costs from its wholesale power supplier, Blue Ridge Electric Membership Corporation (BREMCO).

The amount of the increase to NRLP's customers resulting from the new PPA and CACR factors will be approximately $873,000 per year, an increase of approximately 4.6%. The increase will be applied to NRLP's customers as uniform increases to the kilowatt-hour (kWh) energy charge. The increment in revenue produced by the increase will be the same as the increase in the cost of purchased power and coal ash cleanup from BREMCO, adjusted for the effects of the utility regulatory fee. The proposed increases of $0.001006 per kWh (PPA) and $0.003251 per kWh (CACR) will result in an increase in the monthly bill of a residential customer using 1,000 kWh from $103.35 to $107.60. The approximate percentage increases in customers' bills, by rate schedule, are as follows (actual percentages may differ depending on specific customers' usage amounts):

Residential	4.1%
Schedule G (Commercial)	4.3%
Schedule GL (Large Commercial)	5.0%
Schedule GLH (Commercial Demand High Load Factor)	6.0%
Schedule A (App. State Univ.)	5.3%

The Commission has concluded that the PPA and CACR requested by NRLP are reasonable, in that they are based solely on the level of purchased power and coal ash cleanup expense expected to be incurred by NRLP.

Therefore, the Commission has approved NRLP's requests without public hearing, subject to refund of any amounts which should subsequently be found to be unjust or unreasonable after any public hearing in this matter that may subsequently be held by the Commission, as described below.

Persons desiring to intervene in this matter as formal parties of record should file a motion under Commission Rules R1-6, R1-7, and R1-19 not later than 45 days after the date of this notice. Persons desiring to present testimony or evidence at a hearing should so advise the Commission. Persons desiring to send written statements to inform the Commission of their position in the matter should address their statements to the Chief Clerk, North Carolina Utilities Commission, 4325 Mail Service Center, Raleigh, North Carolina 27699-4300. However, such written statements cannot be considered competent evidence unless those persons appear at a public hearing and testify concerning the information contained in their written statements. If a significant number of requests for a public hearing are received within 45 days after the date of this notice, the Commission may schedule a public hearing.

The Public Staff – North Carolina Utilities Commission is authorized by statute to represent the using and consuming public in proceedings before the Commission. Written statements to the Public Staff should include any information which the writer wishes to be considered by the Public Staff in its investigation of the matter, and such statements should be addressed to Christopher J. Ayers, Executive Director, Public Staff, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300.

ISSUED BY ORDER OF THE COMMISSION.
This the 29th day of March, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. E-35, SUB 48

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application by Western Carolina University for Authority to Recover Purchased Power Expense	)))	ORDER APPROVING PURCHASED POWER COST RIDER

BY THE COMMISSION: On December 15, 2017, in compliance with Commission orders in Docket No. E-35, Subs 17, 19, and 40, respectively, Western Carolina University (WCU) filed an application for a change in its Schedule CP Purchased Power Cost Rider (Rider) to be effective for the twelve monthly billings beginning with the bills rendered in January 2018. This filing included actual purchased power cost and recovery information only for the period January 2017 through November 2017. On January 19, 2018, the Commission issued an Order Granting Extension of Time in this proceeding, providing that the date on which WCU's 2018 PPA factor shall become effective would be extended by one month. On February 13, 2018, WCU filed its final rates for the Rider, which incorporated actual purchased power costs and revenues through December 2017.

The net purchased power adjustment factor requested by WCU for use in Schedule CP is an increment of $0.00155 per kWh. This proposed factor would replace the currently expiring decrement factor of $(0.00488) and would thus result in a net increase, relative to current rates, in a customer's monthly bill by $6.43 for 1,000 kWh of usage. The requested factor is made up of two elements. The first is a decrement of $(0.00092) per kWh to recover, in conjunction with purchased power revenues included in base rates, estimated purchased power costs for the period February 2018 through December 2018. The second element is an Experience Modification Factor (EMF) increment of $0.00247 per kWh to collect purchased power costs undercollected during the period January 2017 through December 2017.

The Public Staff presented this matter at the Commission's Regular Staff Conference on February 19, 2018, and recommended that the proposed Rider increment be approved effective for the eleven monthly bills rendered on and after February 19, 2018, and before January 1, 2019. In support of this recommendation, the Public Staff stated that it had reviewed the calculations and documentation supporting the Rider requested by WCU and found them to be accurate.

The Public Staff also stated that both the 2018 estimated and the 2017 actual rider amounts include charges actually or expected to be billed at wholesale to WCU by its power supplier, Duke Energy Carolinas, LLC (DEC), for coal ash cleanup costs at DEC's generation facilities. Pursuant to certain sections of WCU's power purchase contract with DEC, these costs may be subject to adjustment based on the outcome of DEC's currently ongoing general rate case proceeding, Docket No. E-7, Sub 1146 (Sub 1146). If such adjustments in charges by DEC occur, WCU plans to flow through those adjustments to its retail customers in future Schedule CP Riders. With regard to the estimated component of the Rider proposed in this proceeding, WCU proposes to defer 50% of the coal ash cleanup costs included therein, to be recovered in the EMF component of next year's Rider (as trued up to actual), but still subject to the ultimate outcome of the Sub 1146 proceeding.

In this case, the deferred estimate amount equals approximately $94,000. The Public Staff indicated that it does not object to this proposal.

Furthermore, the Public Staff stated that it and WCU had also discussed a reasonable amount of carrying costs for the deferred coal ash cleanup estimate, and have agreed that it is reasonable for WCU to calculate carrying costs typically for one year (but only 11.5 months in this case, due to the one-month delay approved by the Commission), at the Federal Energy Regulatory Commission (FERC) interest rate (currently 4.25% annually) as set forth in Section 35.19a of the FERC Regulations and published quarterly, but in no event at a rate greater than the weighted overall rate of return approved in WCU's most recent general rate case. The carrying costs would be calculated and added to the Rider as part of the EMF true-up of the applicable deferred coal ash cleanup estimate (in this case in next year's Rider). The Public Staff stated that it recommends that the Commission approve this method of calculating carrying costs.

Finally, the Public Staff stated that the approval of this Rider should be without prejudice to the right of any party to take issue with it or the Commission's conclusions regarding the deferral of coal ash cleanup costs in a general rate case.

After careful review of WCU's proposal and based upon the recommendation of the Public Staff, the Commission concludes that the PPA factor increment of $0.00155 per kWh proposed by WCU should be approved. The Commission also concludes that WCU's request to defer 50% of the coal ash cleanup costs included in the estimated component of its proposed Schedule CP Rider, with future true-ups as discussed in this Order, is reasonable and should be approved. Finally, the Commission concludes that the method recommended by WCU and the Public Staff for calculating and applying carrying costs to the deferred estimated coal ash cleanup costs is reasonable and should be approved.

IT IS, THEREFORE, ORDERED as follows:

1. That WCU's Purchased Power Cost Rider, Schedule CP, which is attached to this order as Attachment A, is allowed to become effective for the eleven monthly bills rendered on and after February 19, 2018, and before January 1, 2019.

2. That WCU shall give appropriate notice to its retail customers for the Purchased Power Cost Rider by bill insert in the bills issued in February 2018. A copy of this notice shall be filed with the Chief Clerk of the North Carolina Utilities Commission within five working days of the date of this Order.

3. That WCU shall file appropriate rate schedules and riders with the Commission in order to implement the approved purchased power adjustment no later than ten working days from the date of this Order.

4. That WCU's request to defer 50% of the coal ash cleanup costs included in the estimated component of its proposed Schedule CP Rider, with future true-ups, as discussed in this Order, is hereby approved.

5. That the method recommended by WCU and the Public Staff for calculating and applying carrying costs to the deferred estimated coal ash cleanup costs, as discussed in this Order, is hereby approved.

6. That the Purchased Power Cost Rider is approved without prejudice to the right of any party to take issue with it or the Commission's conclusions regarding the deferral of coal ash cleanup costs in a general rate case.

ISSUED BY ORDER OF THE COMMISSION.
This the __21st__ day of February, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Daniel G. Clodfelter dissents.
Commissioner Charlotte A. Mitchell did not participate in this decision.

ATTACHMENT A

WESTERN CAROLINA UNIVERSITY
DOCKET NO. E-35, SUB 48

SCHEDULE "CP"
PURCHASED POWER COST RIDER

Each customer's eleven monthly bills rendered on and after February 19, 2018, for each month between February 19, 2018, and January 1, 2019, shall be adjusted by an incremental charge of $0.00155 per kWh as determined to be appropriate by the North Carolina Utilities Commission.

This rate is determined as follows:a

	$/kWh
Factor for estimated purchased power costs for the period February 2018 through December 2018	($0.00092)
Experience Modification Factor to reflect actual results for the period January 2017 through December 2017	$0.00247
TOTAL RATE	$0.00155

Effective for bills rendered on and after February 19, 2018 and before January 1, 2019.

DOCKET NO. E-2, SUB 1158

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Duke Energy Progress, LLC, for a Certificate of Environmental Compatibility and Public Convenience and Necessity and Motion for Waiver of Notice and Hearing Pursuant to N.C. G.S. 62-100 et seq. to Construct Approximately 350 feet of New 230 kV Transmission Line in Pitt County, North Carolina	ORDER WAIVING NOTICE AND HEARING REQUIREMENT AND ISSUING CERTIFICATE

BY THE COMMISSION: On June 12, 2017, pursuant to G.S. 62-101 and G.S. 62-102, and Commission Rule R8-62(k), Duke Energy Progress, LLC (DEP or the Company), prefiled with the Commission an application for a certificate of environmental compatibility and public convenience and necessity to construct a new 230-kV transmission tap line approximately 350 feet in length, and a 230-kV breaker station (Tap Line) in Pitt County, North Carolina to serve a new 50 megawatt (MW) solar photovoltaic electric generating facility to be constructed by Cypress Creek Renewables (CCR). Shoe Heel Creek Solar, LLC, an affiliate of CCR, was issued a certificate of public convenience and necessity to construct the generating facility by Order Issued December 1, 2015 in Docket No. SP-5275, Sub 0. The prefiled application stated that the proposed Tap Line will connect the new solar facility to DEP's existing Greenville – Kinston Dupont 230-kV transmission line. CCR will build a new 230kV/34.5kV substation that will be placed adjacent to the DEP breaker station. Included in the prefiled application was a motion for waiver of the notice and hearing requirements of G.S.62-102, G.S. 62-104, and Commission Rule R8-62, as provided for in G.S. 62-101(d)(1). As detailed in DEP's prefiled certificate application, the Company will construct the Tap Line on property for which it has purchased the right of way from the property owner, and the property owner does not object to a waiver of the hearing and notice requirements of G.S. 62-102 and G.S. 62-104.

On December 6, 2017, DEP formally filed the application for a certificate and motion for waiver of notice and hearing.

G.S. 62-101(d)(1) authorizes the Commission to waive the notice and hearing requirements of G.S. 62-102 and G.S. 62-104 when it finds that the owners of the land to be crossed by the proposed transmission line do not object to the waiver and either the transmission line is less than one mile long or to connect an existing transmission line to a substation, to another public utility, or to a public utility customer when any of these is in proximity to the existing transmission line. The application states that the Company will construct the Tap Line on property for which it has acquired an easement from the property owner whose land will be crossed by the Tap Line, the property owner does not object to the waiver of notice or hearing, and that the total length of the line is approximately 350 feet. Thus, the conditions of G.S. 62-101(d)(1) for a waiver of notice and hearing have been met. The application is also supported by a Certificate Application Report. This report satisfies the requirements of G.S. 62-102(a).

ELECTRIC – ELECTRIC TRANSMISSION LINE CERTIFICATE

The Public Staff presented this matter at the Commission's regular Staff Conference on January 8, 2018. The Public Staff stated that the application meets the requirements of G.S. 62-102 and Commission Rule R8-62 for a certificate and the conditions of G.S. 62-101(d)(1) for waiver of the notice and hearing requirements of G.S. 62-102 and G.S. 62-104. The Public Staff recommended that the Commission grant the motion for waiver and issue the requested certificate.

Based on the foregoing and the recommendation of the Public Staff, the Commission finds and concludes that the notice and hearing requirements of G.S. 62-102 and G.S. 62-104 should be waived as allowed by G.S. 62-101(d)(1) and that a certificate of environmental compatibility and public convenience and necessity should be issued for the proposed construction of a new 230-kV transmission tap line.

IT IS, THEREFORE, ORDERED as follows:

1. That, pursuant to G.S. 62-101, the requirement for publication of notice and hearing is waived; and

2. That, pursuant to G.S. 62-102, a Certificate of Environmental Compatibility and Public Convenience and Necessity to construct approximately 350 feet of new 230-kV transmission line in Pitt County, North Carolina, as described in DEP's application is issued, and the same is attached as Appendix A.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of January, 2018

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

Commissioner Jerry C. Dockham did not participate in this decision.

APPENDIX A

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. E-2, SUB 1158

Know All Men by These Presents, That

DUKE ENERGY PROGRESS, LLC

is hereby issued this

CERTIFICATE OF ENVIRONMENTAL COMPATIBILITY AND PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO G.S. 62-102

to construct approximately 350 feet of new 230-kV transmission line to connect Cypress Creek Renewables' solar facility to the DEP Greenville – Kinston Dupont 230-kV transmission line in Pitt County, North Carolina

subject to receipt of all federal and state permits as required by existing and future regulations prior to beginning construction and further subject to all other orders, rules, regulations, and conditions as are now or may hereafter be lawfully made by the North Carolina Utilities Commission.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of January, 2018.

DOCKET NO. G-5, SUB 585

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Joint Application of Dominion Energy, Inc. and SCANA Corporation to Engage in a Business Combination Transaction	))))	ORDER APPROVING MERGER SUBJECT TO REGULATORY CONDITIONS AND CODE OF CONDUCT

HEARD: On October 10, 2018, in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Chairman Edward S. Finley, Jr., Presiding; Commissioners ToNola D. Brown-Bland, Jerry C. Dockham, James G. Patterson, Daniel G. Clodfelter, and Charlotte A. Mitchell

APPEARANCES:

For Dominion Energy, Inc.:

Joseph K. Reid, II, McGuireWoods, LLP, Gateway Plaza, 800 East Canal Street, Richmond, Virginia 23219

Mary Lynne Grigg, McGuireWoods, LLP, 434 Fayetteville Street, Suite 2600, Raleigh, Charlotte, North Carolina 27601

Andrea R. Kells, McGuireWoods, LLP, 434 Fayetteville Street, Suite 2600, Raleigh, Charlotte, North Carolina 27601

Lisa Booth, Dominion Energy Services, Inc., 120 Tredegar Street, Richmond, Virginia 23261

For SCANA Corporation:

Joseph K. Reid, II, McGuireWoods, LLP, Gateway Plaza, 800 East Canal Street, Richmond, Virginia 23219

Mary Lynne Grigg, McGuireWoods, LLP, 434 Fayetteville Street, Suite 2600, Raleigh, North Carolina 27601

Andrea R. Kells, McGuireWoods, LLP, 434 Fayetteville Street, Suite 2600, Raleigh, North Carolina 27601

Craig Collins, SCANA Services, Inc., 220 Operation Way, Cayce, South Carolina 29033

For the Carolina Industrial Group for Fair Utility Rates I:

Warren K. Hicks, Bailey & Dixon, LLP, Post Office Box 1351, Raleigh, North Carolina 27602

For Transcontinental Gas Pipe Line Company, LLC:

Dwight Allen, The Allen Law Offices, 1514 Glenwood Avenue, Suite 200, Raleigh, North Carolina 27608

Brady Allen, The Allen Law Offices, 1514 Glenwood Avenue, Suite 200, Raleigh, North Carolina 27608

For the Using and Consuming Public:

Gina C. Holt, Staff, Attorney, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

Robert Josey, Staff Attorney, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

BY THE COMMISSION: On January 24, 2018, pursuant to N.C. Gen. Stat. § 62- 111(a) and Commission Rule R1-5, Dominion Energy, Inc. (Dominion Energy) and SCANA Corporation (SCANA) (collectively referred to hereinafter as Applicants), filedan application (Application) for authorization to engage in a business combination transaction (Merger). The Application included a copy of the Agreement and Plan of Merger between Dominion Energy and SCANA (Merger Agreement) as well as a cost- benefit analysis (Cost-Benefit Analysis) and a market power analysis (Market Power Analysis) as required by the Commission's Order Requiring Filing of Analyses, issued November 2, 2000, in Docket No. M-100, Sub 129 (M 100, Sub 129 Order).

On June 22, 2018, the Applicants filed the testimony of Thomas F. Farrell, II, Jimmy E. Addison, D. Russell Harris, Craig C. Wagstaff, James R. Chapman, and David Hunger. An updated exhibit JRC-1 to the testimony of James R. Chapman was subsequently filed on July 20, 2018.

On June 19, 2018, the Commission issued its Order Scheduling Hearing, Establishing Procedural Deadlines, and Requiring Public Notice (Scheduling Order). The Scheduling Order, among other things, established a hearing date of October 10, 2018, set prefiled testimony dates, and required the Applicants to give notice to their customers of the hearing in this matter. In addition, the Scheduling Order found and concluded that the Application satisfied the requirements of the M-100, Sub 129 Order.

Petitions to intervene were filed by Carolina Industrial Group for Fair Utility Rates I (CIGFUR I), North Carolina Sustainable Energy Association (NCSEA), and Transcontinental Gas Pipe Line Company, LLC (Transco). By separate orders, the Commission granted these petitions to intervene. The intervention of the Public Staff – North Carolina Utilities Commission (Public Staff) is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e).

Limited admission to practice before the Commission was granted to out-of-state attorneys for Dominion Energy and SCANA.

On August 23, 2018, Applicants filed affidavits of publication of notice to customers of the hearing.

On September 27, 2018, the Public Staff filed the direct testimony and exhibits of Michael C. Maness, Jan A. Larsen, James S. McLawhorn, and John R. Hinton (Public Staff Panel).

On September 27, 2018, Transco filed the testimony and exhibits of Camilo Amezquita.

On October 4, 2018, the Applicants filed an Agreement and Stipulation of Settlement (Stipulation) between the Applicants, Transco, and the Public Staff (Stipulating Parties), which included stipulated Regulatory Conditions and a Code of Conduct.

On October 5, 2018, the Applicants filed black-line versions of the Proposed Regulatory Conditions and Code of Conduct filed by the Public Staff with its testimony on September 27, 2018, compared to the Proposed Regulatory Conditions and Code of Conduct filed by the Stipulating Parties on October 4, 2018.

On October 5, 2018, the Applicants filed supplemental testimony of Thomas P. Wohlfarth and D. Russell Harris in support of the Stipulation.

On October 5, 2018, Dominion Energy, SCANA, Transco, and the Public Staff filed a Joint Motion to Excuse Witnesses, which was granted in part by order of the Commission issued October 8, 2018.

On October 5, 2018, pursuant to the Scheduling Order, the Applicants filed the Joint List and Order of Witnesses.

On October 8, 2018, the Public Staff filed revised testimony of the Public Staff Panel.

On October 10, 2018, the Public Staff filed revised versions of the Regulatory Conditions and Code of Conduct, revising those that had been attached as Attachment A to the Stipulation filed on October 4, 2018.

The matter came for hearing on October 10, 2018, as scheduled. No public witnesses appeared to offer testimony. The pre-filed testimony and exhibits of the following party witnesses were received into evidence:

<u>For the Applicants</u>: Thomas F. Farrell, II, Chairman, President and Chief Executive Officer of Dominion Energy; Jimmy E. Addison, Chief Executive Officer of SCANA; D. Russell Harris, President and Chief Operating Officer of PSNC, President of Gas Operations for SCE&G, and President of SCANA Energy Marketing, Inc.; Craig C. Wagstaff, President of Gas Distribution of Dominion Energy; James R. Chapman, Senior Vice President, Mergers and Acquisitions and Treasurer of Dominion Energy; Thomas P. Wolfarth, Senior

Vice President of Regulatory Affairs of Dominion Energy; David Hunger, Vice President of Charles River Associates.

For the Public Staff: Michael C. Maness, Director, Accounting Division; Jan A. Larsen, Director, Natural Gas Division; James S. McLawhorn, Director, Electric Division; John R. Hinton, Director, Economic Research Division.

For Transco: Camilo Amezquita.

At the hearing, the Application and exhibits thereto, as well as the Stipulation and the revised proposed Regulatory Conditions and Code of Conduct as filed on October 4, 2018, and October 10, 2018, were entered into the record without objection.

On October 31, 2018, the Applicants filed responses to Commission questions which were included in the October 8, 2018 Order Granting in Part Motion to Excuse Several Witnesses and Requiring Late-Filed Exhibit.

On October 31, 2018, Applicants and the Public Staff filed a Joint Proposed Order.

On November 9, 2018, Applicants and the Public Staff filed a revised Code of Conduct.

Based on the foregoing, the testimony and exhibits presented at the hearing of this matter, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

Jurisdiction

1. Dominion Energy is a corporation duly organized and existing under the laws of Virginia and is headquartered in Richmond, Virginia. Virginia Electric and Power Company is a wholly-owned subsidiary of Dominion Energy that does business in North Carolina as Dominion Energy North Carolina (DENC).

2. DENC is headquartered in Richmond, Virginia, and is engaged in the business of generating, transmitting, and distributing electricity in its service territories in Virginia and North Carolina. It serves approximately 120,000 customers in northeastern North Carolina. DENC also provides power and/or transmission services to the North Carolina Electric Membership Corporation, the North Carolina Eastern Municipal Power Agency, and the Town of Windsor, which in turn provide service to approximately 100,000 customers.

3. DENC is a public utility under the laws of North Carolina and its respective public utility operations are subject to the jurisdiction of this Commission.

4. Dominion Energy also owns gas utility subsidiaries in Ohio, West Virginia, Utah, Wyoming, and Idaho – Dominion Energy Ohio, Dominion Energy West Virginia, Dominion Energy Utah, Dominion Energy Wyoming, and Dominion Energy Idaho – which collectively provide service to 2.3 million distribution customers in those states.

5. Dominion Energy is also the sole owner of Sedona Corp. (Sedona), a South Carolina corporation and wholly-owned subsidiary of Dominion Energy formed for the purpose of effectuating the business combination transaction with SCANA. Sedona is not a public utility in North Carolina or elsewhere.

6. SCANA is a South Carolina corporation and a publicly-held holding company, whose principal subsidiaries are Public Service Company of North Carolina, Incorporated (PSNC), South Carolina Electric & Gas Company (SCE&G), and SCANA Energy Marketing, Inc.

7. PSNC is a corporation duly organized, existing, and operating under the laws of South Carolina. PSNC is engaged in the business of purchasing, transporting, distributing, and selling natural gas in North Carolina to approximately 550,000 residential, commercial, or industrial customers in its service territory. PSNC's service territory reaches all or parts of 28 franchised counties, including the Raleigh / Durham / Chapel Hill, Gastonia / Concord / Statesville, and Asheville / Hendersonville areas.

8. PSNC is a public utility under the laws of North Carolina and its public utility operations are subject to the jurisdiction of this Commission.

Procedural Status

9. The Applicants are lawfully and properly before this Commission pursuant to N.C. Gen. Stat. § 62-111(a) with respect to the relief sought in the Application and are in compliance with the requirements of the M-100, Sub 129 Order with respect to the filing of a market power analysis and a cost-benefit analysis related to the proposed transaction.

10. The Application, testimony, exhibits, affidavits of publication, and public notices submitted by the Applicants are in compliance with the procedural requirements of the North Carolina General Statutes and the Rules and Regulations of the Commission.

The Proposed Transaction

11. The Merger Agreement provides that, at closing, SCANA will merge with Sedona and SCANA will be the surviving corporation. Upon consummation of the Merger, each issued and outstanding share of common stock of SCANA (other than the cancelled shares as defined in Section 2.01(b) of the Merger Agreement) will be converted into the right to receive 0.6690 validly issued, fully paid and non-assessable shares of common stock of Dominion Energy. Upon consummation of the Merger, each issued and outstanding share of Sedona will be converted into and become one validly issued, fully paid, and non-assessable share of common stock of SCANA as the surviving corporation. Thus, as a result of the Merger, Dominion Energy will own all the stock of SCANA.

12. Following the closing of the Merger, Dominion Energy intends to add one member from SCANA's Board of Directors or SCANA's executive management team to the Dominion Energy Board of Directors.

13. Following the closing of the Merger, PSNC will remain a direct, wholly- owned subsidiary of SCANA and will continue to exist as a separate legal entity. Dominion Energy intends to manage PSNC from an operations standpoint as a separate regional business.

14. Following the closing of the Merger, Dominion Energy intends to maintain PSNC's headquarters in Gastonia, North Carolina, and to maintain compensation levels for PSNC employees until January 1, 2020.

The Stipulation

15. In summary, the Stipulation between the Applicants, the Public Staff, and Transco includes commitments by the Applicants to forego recovery of Merger-related expenses and hold DENC and PSNC customers[1] harmless from the impacts of debt downgrade; to create a regulatory liability of $3.75 million representing a refund to PSNC's customers of 2017 revenues over the course of three years; to increase PSNC's charitable contributions over its 2017 contributions by $150,000; to not file an application for a PSNC general rate case before April 1, 2021; to maintain current levels of PSNC's customer service and professional cooperation; to pursue cost savings opportunities between DENC and SCE&G; to provide for future filing and operation under new or amended affiliate agreements; and to comply with the Regulatory Conditions and Code of Conduct.

16. The Commission finds that the Stipulation is the product of give-and-take settlement negotiations among the parties and is material evidence entitled to be given appropriate weight by the Commission.

Benefits of the Merger

17. The Merger, as supplemented by the terms of the Stipulation, will result in quantifiable economic benefits for the customers of DENC and PSNC, as described in Findings of Fact Nos. 18 and 19 below.

18. The Stipulation requires PSNC to provide its North Carolina customers a total credit of $3.75 million through three direct bill credits of $1.25 million on January 1, 2019 (or as soon thereafter as practicable), January 1, 2020, and January 1, 2021.

19. The Stipulation requires that PSNC increase its charitable contributions over its 2017 contributions by $150,000, which shall be used to provide energy assistance for low-income customers in PSNC's service territory and shall be treated as below-the- line expenses for regulatory accounting, reporting, and ratemaking purposes.

[1] The Regulatory Conditions and Code of Conduct define the "customers" of DENC and PSNC as "retail electric customer of DENC in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of PSNC located in North Carolina." In this Order, these customers are referred to as either "customers" or "retail customers."

20. The Merger will also result in non-quantifiable economic and non-economic benefits for the customers of DENC and PSNC. The non-quantifiable benefits are identified in the Cost-Benefit Analysis and testimony, as described in Findings of Fact Nos. 21-26 below.

21. The Cost-Benefit Analysis and testimony conclude that the Merger will increase PSNC's financial strength and reduce its market risk.

22. The Cost-Benefit Analysis and testimony conclude that PSNC will benefit from the shared services that will be available due to the Merger.

23. The Cost-Benefit Analysis and testimony conclude that PSNC will receive safety, reliability, environmental, and customer service benefits from the Merger.

24. The Cost-Benefit Analysis and testimony conclude that the proposed Merger will result in a more stable financial position for SCANA and PSNC.

25. The Cost-Benefit Analysis and testimony conclude that PSNC will benefit from lower corporate governance costs due to the Merger.

26. The Cost-Benefit Analysis and testimony conclude that PSNC will benefit from the maintenance of its employee compensation until January 1, 2020, and the retention of its headquarters and operations in Gastonia following the Merger.

Potential Costs

27. The Merger will result in known and potential costs. However, the known and potential costs of the Merger to North Carolina customers of DENC and PSNC are sufficiently mitigated by the Stipulation and the continued full regulatory authority of the Commission.

28. The Cost-Benefit Analysis identified transaction fees, integration costs, and an acquisition premium as transaction-related costs to be borne by Dominion Energy.

29. The Stipulation requires the Applicants to exclude from recovery from customers of DENC and PSNC the Merger-related expenses, which include acquisition premiums, change in control payments made to terminated executives, regulatory process costs, transactions costs, integration costs, and other transition costs.

30. The Stipulation also provides that PSNC will not file an application for a general rate case before April 1, 2021, and will not, except in certain circumstances, adjust its rates and charges or file for any cost deferral during or covering any period from the date of an order approving the Merger until after October 31, 2021.

Potential Risks

31. The Merger will result in potential risks. However, the potential risks of the Merger to North Carolina customers of DENC and PSNC are sufficiently mitigated by the Stipulation, the Regulatory Conditions, the Code of Conduct, and the continued full regulatory authority of the Commission.

ELECTRIC – MERGER

A. Potential Risks Addressed by the Stipulation

32. The Stipulation provides reasonable and adequate regulatory scrutiny over transactions involving DENC or PSNC with each other or with non-utility affiliates of Dominion Energy.

33. The Stipulation provides reasonable and adequate protections against the potential for discriminatory behavior in intra-company transactions by DENC and PSNC compared to their similar transactions with third parties.

34. The Stipulation precludes adverse impacts from the Merger on rates and services provided by DENC and PSNC.

B. Potential Risks Addressed by the Regulatory Conditions

35. The Regulatory Conditions included in the Stipulation are another benefit of the Merger to North Carolina retail customers in that they update, clarify, strengthen, and expand DENC's and PSNC's previous regulatory conditions.

36. The Regulatory Conditions effectively address potential risks and concerns related to financing issues arising from the Merger by ensuring that (a) DENC's and PSNC's capital structures and cost of capital are not adversely affected because of their affiliation with Dominion Energy, each other, and other affiliates, and (b) DENC and PSNC have sufficient access to equity and debt capital at reasonable costs to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their retail customers.

37. The Regulatory Conditions effectively address potential risks and concerns related to corporate governance and ring-fencing issues arising from the Merger by ensuring the continued viability of DENC and PSNC and insulating and protecting DENC and PSNC and their retail customers from the business and financial risks of Dominion Energy and the affiliates within the Dominion Energy holding company system, including the protection of utility assets from the liabilities of affiliates.

38. The Regulatory Conditions effectively enable the Commission to exercise its jurisdiction over certain future business combinations involving Dominion Energy or other members of the Dominion Energy holding company family following the Merger by ensuring that the Commission receives sufficient notice and opportunity to exercise its lawful authority.

39. The Regulatory Conditions effectively address potential risks and concerns related to structure and organization arising from the Merger by ensuring that the Commission will receive adequate notice of, and opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Dominion Energy, DENC, PSNC, and other affiliates, and non-public utility operations as they may affect North Carolina retail ratepayers.

40. The Regulatory Conditions provide appropriate and effective procedures requiring advance notices and other filings arising from the Merger, and ensure monitoring of and compliance with their provisions, including the Code of Conduct, by requiring Dominion Energy, DENC,

PSNC, and other affiliates to establish and maintain the structures and processes necessary to fulfill the commitments expressed in the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner.

41. The Regulatory Conditions effectively ensure that DENC and PSNC maintain a strong commitment to customer service following the Merger.

42. The Regulatory Conditions effectively ensure that DENC's and PSNC's North Carolina retail customers are protected from any adverse effects of any tax sharing agreement and receive an appropriate portion of any income tax benefits associated with services taken by DENC and PSNC from an affiliated service company.

43. The Regulatory Conditions effectively protect the Commission's jurisdiction as a result of the Merger, including risks related to agreements and transactions between and among DENC, PSNC, and their affiliates; financing transactions involving Dominion Energy, DENC, PSNC, and any other affiliate; the ownership, use, and disposition of assets by DENC or PSNC; and filings with federal regulatory agencies. In addition, they protect DENC's and PSNC's retail ratepayers as much as reasonably possible from any adverse consequences potentially resulting from the Merger.

44. The Regulatory Conditions effectively address potential risks and concerns related to the possible adverse impact on the cost of capital of DENC and PSNC from Merger-related credit downgrades.

45. The Regulatory Conditions effectively ensure that DENC will continue to comply with the reporting requirements with regard to Dominion Energy's integration into PJM Interconnection, L.L.C. (PJM).

46. The Regulatory Conditions effectively protect DENC and PSNC customers by establishing a refund to customers by PSNC, establishing a rate moratorium for PSNC, requiring DENC and SCE&G to seek cost savings opportunities, and establishing a most favored nation obligation.

C. Potential Risks Addressed by the Code of Conduct

47. The Code of Conduct, as well as existing regulatory requirements, provides reasonable and adequate regulatory oversight of affiliate contracts and cost allocations.

48. The Code of Conduct provides reasonable and adequate regulatory oversight to ensure that the costs of common goods and services are fairly allocated among affiliates, to protect customers from overcharges by non-regulated affiliates, and to prevent cross-subsidization of non-regulated affiliates by DENC's and PSNC's customers.

49. The Code of Conduct provides reasonable and adequate regulatory oversight to ensure that costs incurred by DENC and PSNC are properly incurred, accounted for, and directly charged, assigned, or allocated to their respective North Carolina retail operations.

50. The Code of Conduct provides reasonable and adequate regulatory oversight by providing for appropriate and effective auditing and reporting requirements with respect to affiliate transactions and cost of service for retail ratemaking purposes.

51. The Code of Conduct provides reasonable and adequate regulatory oversight to ensure that DENC and PSNC continue to independently acquire and own their own upstream pipeline capacity and supply contracts based upon the needs of their respective customers.

Market Power Study

52. The proposed Merger will not lead to competitive concerns or an increased ability to exercise additional market power by Dominion Energy, DENC, or PSNC, will not result in an anti-competitive impact on markets subject to the Commission's jurisdiction, and will not create the potential for self-dealing between DENC and PSNC.

Approval of Stipulation

53. The Commission finds and concludes in light of the evidence presented that the Stipulation is just and reasonable to the customers of DENC and PSNC and to all parties to this proceeding, and that it serves the public interest. Therefore, the Stipulation should be approved in its entirety. In addition, it is entitled to substantial weight and consideration in the Commission's decision in this matter.

Public Convenience and Necessity

54. The proposed Merger, as modified, limited, and restricted by the Stipulation, including the Regulatory Conditions and Code of Conduct, is justified by the public convenience and necessity, serves the public interest, and should be approved pursuant to N.C. Gen. Stat. § 62-111.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-10

The evidence supporting these findings of fact is set forth in the Application, the Merger Agreement, the Market Power Analysis, the Cost-Benefit Analysis, the testimony of Applicants' witnesses Farrell, Addison and Chapman, and the Commission's records in this and other proceedings. These findings are essentially informational, procedural, and jurisdictional in nature and are not contested by any party.

According to the Application and Merger Agreement, as well as the testimony of witnesses Farrell, Addison, and Chapman, Dominion Energy and SCANA intend to engage in a merger transaction pursuant to which SCANA will become a wholly-owned subsidiary of Dominion Energy. Upon consummation of the Merger, each issued and outstanding share of common stock of SCANA will be converted into the right to receive 0.6690 validly issued, fully paid and non-assessable shares of common stock of Dominion Energy. Tr. pp. 29-30, 56. The transaction requires the approval of the Commission under N.C. Gen. Stat. § 62-111(a), and the Application seeks such approval.

In addition, the M-100, Sub 129 Order requires the Applicants to file both a market power analysis and a cost-benefit analysis in conjunction with an application for Commission approval of the proposed Merger. The market power analysis must include a Herfindahl-Hirschman Index (HHI) evaluation of the proposed Merger, and the cost- benefit analysis must set forth a "comprehensive list of all material areas of expected benefit, detriment, cost, and savings over a specified period (e.g., three to five years) following consummation of the merger. . . ." See M-100, Sub 129 Order, p. 7. The purpose of these required filings is to assist the Commission in making the public convenience and necessity determination required under N.C. Gen. Stat. § 62-111(a).

Consistent with the requirements of the M-100, Sub 129 Order, the Application included both a Cost-Benefit Analysis and a Market Power Analysis as Exhibits 4 and 5, respectively. The Market Power Analysis was prepared by Charles River Associates and contains, among other things, an HHI analysis of the relative market power of Dominion Energy both before and after the proposed Merger, as required by the M-100, Sub 129 Order. The Cost-Benefit Analysis enumerates identified costs and benefits associated with the proposed Merger. In its Scheduling Order, the Commission found and concluded that "the application satisfies the requirements of the November 2, 2000, Order in Docket No. M-100, Sub 129." Scheduling Order, p. 2. No party challenged Applicants' satisfaction of the M-100, Sub 129 Order requirements.

Finally, a review of the record in this proceeding indicates that the Applicants have complied with all procedural and notice requirements established by the Commission in the Scheduling Order.

The Commission, therefore, finds and concludes that Dominion Energy and SCANA are lawfully before the Commission with respect to the relief sought in the Application and are in compliance with the Merger filing requirements established in Docket No. M-100, Sub 129, with respect to the Market Power Study and Cost-Benefit Analysis submitted with the Application.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 11-14

The evidence supporting these findings of fact is set forth in the Application, the Merger Agreement, and the testimony of Applicants' witnesses Farrell, Addison, Chapman, Wagstaff and Wohlfarth.

Through the Application and supporting testimony, the Applicants described the process for accomplishing the Merger, and the holding company structure that will exist upon closing.

The Application describes the proposed Merger transaction as follows:

(i) Sedona and SCANA will merge, with SCANA being the surviving entity;
(ii) Immediately following the time the Merger is effective, the officers of SCANA will be those persons that were the officers of SCANA immediately prior to the effective time of the Merger. Subsequent to the effective time of the Merger, changes to the officers of SCANA may be made based upon integration efforts and Dominion Energy's entity management conventions; and
(iii) SCANA will be a direct, wholly-owned subsidiary of Dominion Energy.

Application, Paragraph No 8.

The Application further indicates that

> upon consummation of the Merger, each issued and outstanding share of common stock of SCANA (other than the cancelled shares as defined in Section 2.01(b) of the Merger Agreement) will be converted into the right to receive 0.6690 validly issued, fully paid and non-assessable shares of common stock of Dominion Energy.

Id. Finally, the Application indicates that "[f]urther, upon consummation of the Merger, each issued and outstanding share of common stock of Sedona will be converted into and become one validly issued, fully paid, and non-assessable share of common stock of SCANA as the surviving corporation. Thus, as a result of the Merger, Dominion Energy (which currently owns all of the stock of Sedona) will own all the stock of SCANA." Id.

This structure is further confirmed by the provisions of the Merger Agreement, which is attached to the Application as Exhibit 1. This structure is also described in the testimony of Applicants' witnesses Farrell, Addison, and Chapman, and those descriptions are consistent with the Application and Merger Agreement.

The Application provides, in Paragraph No. 30(i), that "[t]he Transaction will not have a net adverse impact on the rates and services of Dominion Energy North Carolina or PSNC Energy."

The Merger Agreement provides, in Section 5.16(c), that Dominion Energy "will take all necessary action as soon as practicable after the Effective Time to appoint a mutually agreeable current member of the Company [SCANA] Board or the Company's executive management as a director to serve on Parent's board of directors." The Application provides that "Dominion Energy intends that its board of directors will take all necessary action, as soon as practical after the Effective Time, to appoint a mutually agreeable current member of the SCANA Board or SCANA's executive management team." Id. at Paragraph No. 29.i.b.

The Application provides, in Paragraph No. 24, that "[f]ollowing the Merger, Dominion Energy and SCANA plan to operate PSNC Energy in substantially the same manner as it is operated today .... Dominion Energy intends to maintain PSNC Energy's headquarters in Gastonia, North Carolina." Similarly, in Paragraph No. 29.i.a., the Application states that "Dominion Energy intends to maintain PSNC Energy's headquarters in Gastonia, North Carolina" In Paragraph No. 29.ii., the Application provides that "Dominion Energy will maintain compensation levels for employees of SCANA and its subsidiaries following the Effective Time of the Merger until January 1, 2020 ... Dominion Energy will give employees of SCANA and its subsidiaries due and fair consideration for other employment and promotion opportunities within the larger Dominion Energy organization to the extent any such employment positions are re-aligned, reduced, or eliminated in the future as a result of the Merger."

The Merger Agreement provides additional evidence on these matters. In Section 5.06(a), the Merger Agreement provides that from the Effective Time and until December 31, 2019, "Parent shall provide, or shall cause the Surviving Corporation to provide, the individuals who are employed by the Company or any of its Subsidiaries immediately before the Effective Time ...

(i) annual base compensation no less than the annual base compensation provided to such Company Non-Union Employees immediately prior to the Effective Time."

Applicants' witness Farrell testified that "Dominion Energy will maintain PSNC's corporate headquarters in Gastonia, North Carolina" and that "PSNC's generous historical charitable giving levels—all funded by shareholders—also will be increased." Tr. p. 24. Witness Farrell also explained that "[f]ollowing the combination, Dominion Energy plans to operate PSNC in substantially the same manner as it is operated today, enhanced by Dominion Energy's broad and deep experience in the successful management of natural gas systems." Tr. p. 21. Applicants' witness Wagstaff testified that "Dominion Energy has no current plans to change the organizational structure of PSNC operations as a result of the combination." Tr. p. 46. Witness Wagstaff also testified that "Dominion Energy will manage PSNC from an operations standpoint as a separate regional business under Dominion Energy." Tr. p. 47. Applicants' witness Wohlfarth also explained that PSNC will be managed "from an operations standpoint as a separate regional business with responsibility for making decisions that achieve" the Applicants' objectives. Tr. p. 99.

At the hearing, witness Wohlfarth clarified in response to Commissioners' questions that the management of PSNC as an independent regional entity would continue both during and subsequent to the initial post-Merger transition period. Tr. pp. 106-107.

Based on the foregoing evidence, the Commission finds and concludes that following the Merger PSNC will continue to be operated in substantially the same manner that it is operated today.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 15-16

The evidence for these findings of fact is set forth in the Stipulation and the testimony of Applicants' witnesses Wohlfarth and Harris.

The Stipulation includes agreements among the Stipulating Parties on numerous subjects, revised Regulatory Conditions, and a revised Code of Conduct. The main provisions included in the Stipulation are: (i) creation of a regulatory liability of $3.75 million representing a refund to PSNC's North Carolina customers through three $1.25 million in bill credits in 2019, 2020, and 2021; (ii) in 2019, a commitment to increase PSNC's annual community support and charitable contribution initiatives by $150,000 more than its 2017 contributions; (iii) exclusion of Merger-related direct expenses, including acquisition premiums, integration costs, and severance payments, from recovery through customer rates; (iv) to not file an application for a PSNC general rate case before April 1, 2021; (v) customer protection from debt downgrade; (vi) maintenance of PSNC's current level of customer service; and (vii) a requirement to file any new or amended affiliate contracts for approval by the Commission.

Additionally, the Stipulating Parties agreed to a set of Regulatory Conditions and a Code of Conduct, appended as Attachment A to the Stipulation, which were revised by the Public Staff's filing on October 10, 2018. The Stipulating Parties stated that they used as a starting point the Regulatory Conditions and Code of Conduct that were approved by the Commission in the Order Approving Merger Subject to Regulatory Conditions and Code of Conduct issued

September 29, 2016, in Docket Nos. E-2, Sub 1095; E-7, Sub 1100; and G-9, Sub 682 (Duke-Piedmont Merger Order), and the Order Granting Motion to Amend Regulatory Conditions issued August 24, 2018, in Docket Nos. E-2, Sub 1095A; E-7, Sub 1100A; and G-9, Sub 682A (Duke-Piedmont Amended Conditions Order). The Stipulating Parties stated that the Regulatory Conditions and Code of Conductrepresent commitments by the Applicants as a precondition of approval of the Application and that the Regulatory Conditions would be incorporated into any order of the Commission approving the Merger. Stipulation, at Tr. pp. 1-2.

Paragraph No. 14 of the Stipulation states, in pertinent part, that the agreement "is the product of give-and-take negotiations."

In addition, the Stipulation is supported by the supplemental testimony of Applicants' witnesses Wohlfarth and Harris. Witness Wohlfarth's supplemental testimony described the discovery process with the Public Staff and the subsequent settlement negotiations among the Stipulating Parties that "involved substantial compromise by all parties on numerous issues." Tr. p. 91. Witness Wohlfarth explained that the Stipulation benefits customers in a number of ways, including rate stability associated with PSNC's commitment not to file a general rate case prior to April 1, 2021, and incorporation of the revised Code of Conduct and Regulatory Conditions that "put safeguards in place to ensure that customers will not be harmed by the Merger." Tr. pp. 97-98. Witness Wohlfarth also testified that the "Merger will have no adverse impact on the rates charged and the services provided by DENC and PSNC to North Carolina customers" and that "the benefits of the Merger to DENC's and PSNC's customers are sufficient to offset any potential costs and risks." Tr. pp. 99-100.

Witness Harris also testified about the benefits to customers as a result of the Merger, including a refund to PSNC customers as a bill credit of $1.25 million each January in 2019, 2020 and 2021. Tr. p. 83. Witness Harris further testified to the benefits of PSNC's rate moratorium as well as PSNC's increase in charitable contributions over its 2017 contribution level by $150,000. Tr. p. 83. Finally, Witness Harris stated that the Stipulation will "ensure that the Merger will have no adverse impact on the rates and the service provided by PSNC to North Carolina customers and that the benefits of the Merger to PSNC's customers are sufficient to offset any potential costs and risks." Tr. p. 84.

At the hearing, in response to questions by the Chairman, witness Wohlfarth testified to the back and forth nature of the negotiations that resulted in the Stipulation. He stated that even though the Stipulation may include provisions that, on an individual basis, the Applicants would prefer not be included, the Applicants are satisfied with the overall comprehensive settlement, given the "puts and takes of the many different provisions" of the Stipulation. Tr. pp. 118-119.

The Stipulation has not been adopted by all of the parties to this docket. Therefore, its acceptance by the Commission is governed by the standards set out by the North Carolina Supreme Court in State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 348 N.C. 452, 500 S.E.2d 693 (1998) (CUCA I), and State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 351 N.C. 223, 524 S.E.2d 10 (2000) (CUCA II). In CUCA I, the Supreme Court held that

> [A] stipulation entered into by less than all of the parties as to any facts or issues in a contested case proceeding under Chapter 62 should be accorded full consideration

> and weighed by the Commission with all other evidence presented by any of the parties in the proceeding. The Commission must consider the nonunanimous stipulation along with all the evidence presented and any other facts the Commission finds relevant to the fair and just determination of the proceeding. The Commission may even adopt the recommendations or provisions of the nonunanimous stipulation as long as the Commission sets forth its reasoning and makes "its own independent conclusion" supported by substantial evidence on the record that the proposal is just and reasonable to all parties in light of all the evidence presented.

348 N.C. at 466, 500 S.E.2d at 703.

However, as the Court made clear in CUCA II, the fact that fewer than all of the parties have adopted a settlement does not permit a court to subject the Commission's Order adopting the provisions of a non-unanimous stipulation to a "heightened standard" of review. CUCA II, 351 N.C. at 231, 524 S.E.2d at 16. Rather, the Court held that Commission approval of the provisions of a non-unanimous stipulation "requires only that the Commission ma[k]e an independent determination supported by substantial evidence on the record [and] satisf[y] the requirements of chapter 62 by independently considering and analyzing all the evidence and any other facts relevant to a determination that the proposal is just and reasonable to all parties." Id. at 231-32, 524 S.E.2d at 16.

The Commission gives substantial weight to the testimony of the Applicants' witnesses regarding the Stipulation, and finds and concludes that the Stipulation is the product of the give-and-take of the settlement negotiations between the Applicants, the Public Staff and Transco in an effort to appropriately balance the Applicants' desire for approval of the Merger with the impact of the Merger on DENC's and PSNC's customers. Based on the foregoing and the record, the Commission finds and concludes that the Stipulation is the result of give-and-take negotiations, and is material evidence to be given appropriate weight in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 17-26

The evidence for these findings of fact is set forth in the Application, the Cost-Benefit Analysis, the testimony of Applicants' witnesses, the testimony of the Public Staff Panel, and the Stipulation.

The Application recites several asserted benefits from the proposed Merger. These include: (i) financial benefits resulting from a larger more diversified company; (ii) direct and immediate operational benefits to customers; (iii) enhanced ability of Dominion Energy and SCANA to participate in the growing natural gas sector of the US economy; future integration benefits; (v) maintenance of a strong corporate presence in North Carolina; and (vi) maintenance of effective regulation by the Commission.

In the Cost-Benefit Analysis, Dominion Energy and SCANA also identified the benefits attendant to the proposed Merger, including: (i) increased financial strength and reduced market risk; (ii) shared services benefits; (iii) safety, reliability, environmental, and customer service benefits; (iv) removal of the current financial uncertainty of SCANA and a more stable financial position for SCANA and PSNC; (v) lowered corporate governance costs; (vi) increased corporate contributions; and (vii) maintenance of PSNC's Energy's corporate presence in North Carolina.

In addition, Applicants' witness Farrell testified to a number of benefits from the Merger. These ranged from growth of safe, reliable, and cost-effective service to continued Commission regulatory authority over both PSNC and DENC to ensure protection of North Carolina customers. Tr. pp. 21-23.

Applicants' witnesses Addison and Harris testified regarding benefits to PSNC and its customers arising from the proposed Merger. These include access to greater financial resources along with more geographic and business diversity. Tr. pp. 34, 78. According to witness Addison, the Merger will also offer greater economies of scale in providing or acquiring services to support the SCANA companies, such as PSNC, and their customers. Tr. p. 34.

Witness Harris testified that the Merger will enhance PSNC's ability to continue providing safe, reliable, and cost-effective operations across a growing customer base due to greater access to equity capital. Witness Harris also noted that the Mergershould positively affect PSNC's credit rating. Tr. pp. 78-79. Witness Harris testified to his belief that the Merger will be seamless to customers as a result of Dominion Energy's express intent to operate PSNC in substantially the same way as it is operated today. Tr. p. 79. He stated that the integration of the companies should result in operational cost savings going forward and enhanced service quality through the sharing of best practices between DENC and PSNC. Tr. p. 78. Witness Harris also co-sponsored the Cost-Benefit Analysis attached to the Application, which described the benefits that will be realized by the companies and their respective customers. Tr. p. 75.

Applicants' witness Chapman testified that the proposed Merger would benefit the companies and their customers. Witness Chapman specifically identified the following discrete benefits from the transaction: (i) PSNC will benefit from being part of a large corporate organization with enhanced geographic, business, and regulatory diversity and a greater financial and operational scale; (ii) Dominion Energy will provide equity, as needed, to PSNC to maintain PSNC's current capital structure and improve credit ratings; (iii) access to an array of services, support, and economies of scale; and (iv) stabilization of the companies' long-term growth objectives. Tr. p. 61.

Applicants' witness Wagstaff also testified that the proposed Merger would have operational and financial benefits that would ultimately benefit DENC and PSNC customers. Specifically, witness Wagstaff testified that Dominion Energy will: (i) maintain PSNC's current customer service levels; (ii) not diminish PSNC's focus on installing, upgrading, and maintaining facilities for safe and reliable operations; (iii) maintain the pipeline integrity program at or above PSNC's current levels; and (iv) increase SCANA's historical level of corporate contributions. Tr. pp. 47-48. Witness Wagstaff also indicated that PSNC will benefit from being part of a corporate organization with enhanced geographic, business, and regulatory diversity, as well as greater financial and operational scale. Tr. p. 49.

The Public Staff Panel also testified to the benefits and protections of the Merger for North Carolina customers. These benefits and protections include: (i) preventing Merger-related direct expenses from being passed on to customers; (ii) Merger-related cost savings guaranteed through the Stipulation; (iii) provisions regarding the replacement cost rate for debt; and (iv) creating a financially stronger company allowing PSNC greater access to capital markets. Tr. pp. 148-51, 161. The Public Staff Panel expressed concern that Dominion Energy and SCANA had not quantified economic benefits to customers, noting the Applicants' explanation that quantification was not possible at this time. The Public Staff recommended several conditions be imposed on approval of the Merger due to the lack of quantified benefits, including: (1) a bill credit to PSNC customers totaling $3.75 million over 3 years; (2) to not file an application for a PSNC general rate case before April 1, 2021, and will not increase its non-gas cost margin in its rates until November 1, 2021; (3) holding DENC and PSNC customers harmless from the impacts of debt downgrades for a period of five years; (4) requiring PSNC to maintain current levels of customer service and behavior towards customers and professional cooperation with regulators, consumer advocates, and intervenors; (5) post- merger opportunities for the electric utility operations of DENC and SCE&G; and (6) other benefits to customers such as the most favored nation clause that is intended to ensure that North Carolina retail customers receive the benefit of a "Most favored Nation" status with regard to the provision of Merger benefits and protections among the states involved in this proceeding. Ultimately, however, the Public Staff Panel recommended that the Merger be approved. Tr. pp. 150-67.

As discussed above, in the Stipulation the Stipulating Parties agreed to a number of benefits to be provided to customers of DENC and PSNC upon closing of the Merger. Paragraph No. 10 of the Stipulation concludes that these terms will assure that the proposed Merger is justified by the public convenience and necessity and meets the standard for approval by the Commission under N.C. Gen. Stat. § 62-111(a).

This conclusion is echoed in the supplemental testimony of Applicants' witnesses Wohlfarth and Harris. As noted above, Applicants' witnesses Wohlfarth and Harris testified that the Stipulation was the result of "substantial compromise by all parties" and provided numerous benefits to customers.

The Commission has carefully reviewed and considered all of the evidence set forth above describing the known and potential benefits of the proposed Merger, finds it to be credible, and gives it substantial weight. Many of these benefits have been enhanced and guaranteed as a result of the Stipulation filed in this proceeding. Based upon that evidence, and the lack of any significant countervailing evidence, the Commission finds and concludes that there are substantial quantifiable and non- quantifiable benefits to be derived from the Merger by the customers of DENC and PSNC.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 27-29

The evidence supporting these findings of fact is set forth in the Application, the Cost-Benefit Analysis, the testimony of Applicants' witnesses, the testimony of the Public Staff Panel, and the Stipulation.

In the Application, the Applicants stated that the Merger will not have a net adverse impact on the rates and services of DENC or PSNC and that, although the Applicants had not yet determined the transaction fees, integration costs, and any acquisition premium that will result from the

Merger, none of those costs will be passed on to DENC or PSNC customers. Application, Paragraph No. 30(i).

The Cost-Benefit Analysis identified transaction fees, integration costs, and acquisition premium over book value as potential costs of the Merger, but concluded that while Applicants had not yet determined the amount of such costs, none of these costs will be passed on to DENC or PSNC customers. Cost-Benefit Analysis, at p. 6. The Cost- Benefit Analysis concluded that the Merger provides only benefits, and no detriment to the State of North Carolina and to PSNC, and that all transaction fees and integration costs and any acquisition premium that will result from the Merger would not be passed on to PSNC's or DENC's customers. Cost-Benefit Analysis, at p. 1.

Applicants' witness Farrell testified that the Merger of SCANA and Dominion Energy will not have a net adverse impact on DENC's or PSNC's rates or services. He explained that no transaction fees, integration costs, or any acquisition premium resulting from the Merger would be passed on to DENC or PSNC customers. Tr. p. 22. Similarly, Applicants' witness Chapman testified that PSNC and DENC will not seek recovery of any acquisition premium costs, transition costs, or transaction costs associated with the Merger from their customers. Tr. p. 61.

The Public Staff Panel recognized the Applicants' commitment that no change in control payments or severance payments, transaction fees, integration costs, or acquisition premium will be passed on to customers. The panel testified that based on its review of SCANA's Proxy Statement dated June 15, 2018, SCANA's estimated transaction costs are $59 million. The panel also testified to Applicants' estimate of the incremental change in control payments to SCANA executives provided through discovery, and that, based on SCANA's book value as of December 31, 2017, the Merger would result in an estimated $839 million acquisition premium, which would be recorded at the Dominion Energy holding company level and would not impact DENC's or PSNC's financial statements. The Public Staff recommended that DENC and PSNC file a summary report of their final accounting for Merger-related direct expenses and the acquisition premium within 60 days of the Merger as well as supplemental reports as necessary. Tr. pp. 146-49.

As noted above, the Stipulation provides that the Applicants will forego recovery of Merger-related direct expenses.

The Commission finds and concludes that the evidence demonstrates that customers will not pay for Merger-related direct expenses associated with the Merger. First, the Application and the Cost-Benefit Analysis commit the Applicants not to seek recovery of several categories of Merger-related costs of which they would otherwise be entitled to seek recovery. Specifically, the Applicants have expressly waived, in both the Application and the Cost-Benefit Analysis, any right to seek recovery of any acquisition premium associated with the Merger as well as any transaction fees or integration costs (including severance payments) associated with the Merger. Given the estimated transaction costs of $59 million, the estimated integration costs, and the acquisition premium, the latter of which was estimated at $839 million, this waiver is a significant commitment, and serves to insulate customers from the costs of the Merger transaction itself as well as other Merger-related expenses. In addition, based on the Stipulation, Applicants have precluded the possibility that they may seek recovery of any Merger- related costs from customers for Commission financial reporting and ratemaking purposes. As defined in Paragraph No. 4 of the Stipulation, these Merger-related expenses include acquisition premiums, change in control payments, regulatory process costs, and transaction costs, such as investment banking, legal, accounting, securities issuances, and advisory fees. Paragraph No. 4 defines integration costs to include the integration of financial, IT, human resources, billing, accounting, and telecommunications systems. This provision further states that "other transition costs" include severance payments, changes to signage, the cost of transitioning employees to post-Merger employee benefits plans, and costs to terminate any duplicative leases, contracts and operations. This provision provides significant additional protection for DENC and PSNC customers from the costs and quantifiable risks associated with the Merger.

The Commission has carefully reviewed and considered all of the evidence set forth above describing the potential costs and the known and potential benefits of the proposed Merger, finds it to be credible, and gives it substantial weight. Further, the Commission finds and concludes that the commitments in the Stipulation are significant and effectively mitigate the potential direct costs of the Merger to customers.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 30-34

The evidence supporting these findings of fact is set forth in the Public Staff Panel testimony, the Transco testimony, the Stipulation, Applicants' supplemental testimony, and the Commission's statutory and inherent supervisory authority.

The Public Staff Panel testified in support of a number of conditions to the Merger that it believed were necessary to address risks that the Public Staff identified in association with the Merger. With regard to its recommendation for a rate moratorium until November 1, 2021, the Public Staff clarified that, because the Commission found in its order in Docket No. G-5, Sub 565, that the proposed integrity management tracker (IMT) expressly provides for Commission review of the mechanism at the earlier of PSNC's next general rate case proceeding or four years from the implementation of the mechanism, the Public Staff believes that the IMT can still continue without PSNC having to file a general rate case. Tr. p. 156. With respect to the effect of the Merger on the PJM regulatory conditions imposed by the Commission on DENC in Docket No. E-22, Sub 532, the Public Staff testified that based on Section VI of the revised Regulatory Conditions, all of the PJM conditions imposed by the Commission in the Sub 532 case will remain in effect. Tr. p. 164. Finally, the Public Staff testified in support of a most favored nation clause. Tr. pp. 166-67.

Transco witness Amezquita testified to concerns about the impact of the proposed Merger, including that Transco's natural gas capacity may not be utilized as much as a result of the Merger, which could cause price increases for North Carolina customers. Tr. p. 131. Witness Amezquita provided several recommendations to the Commission to avoid these potential impacts, including a requirement for PSNC to engage in good faith negotiations with third party natural gas capacity suppliers, with Commission oversight. Tr. pp. 134-35. Subsequent to filing witness Amezquita's testimony, Transco joined the Stipulation as a Stipulating Party.

As discussed above, the provisions of the Stipulation protect customers from adverse impacts to rates and services, prohibit unfair dealing through affiliate agreement provisions, and commit DENC and PSNC to the Regulatory Conditions and Code of Conduct. Additionally, Applicants' witnesses Wohlfarth and Harris testified in support of these provisions of the Stipulation in their supplemental testimonies and identified the benefits and financial protections that PSNC customers will receive as a result of the Stipulation.

At the hearing, Applicants' witness Harris and Public Staff witness Larsen confirmed in response to questions by the Commission that the IMT could continue without PSNC filing a general rate case before April 1, 2021, as provided in the Stipulation. Tr. pp. 111, 183.

Under N.C. Gen. Stat. § 62-30, the Commission has general power and authority to supervise and control public utilities. Further, N.C. Gen. Stat. § 62-32 grants the Commission supervisory power over public utility rates and service, including the power to compel reasonable service and set reasonable rates. As noted above, Paragraph No. 29 of the Application provides that, after the Merger, the "Commission will continue to exercise its regulatory authority over [PSNC] and [DENC] in the same way it does today, thereby ensuring continued protection of the interests of North Carolina customers."This continuing and undiminished regulatory oversight will serve to protect customers from adverse consequences of the Merger.

Separate and apart from the Commission's inherent and continuing supervisory function, there is substantial evidence in this proceeding that customers are and will be protected from potential costs and risks of the Merger. In addition to the protections against the costs of the Merger discussed above, the Stipulation provides that PSNC and DENC customers will be held harmless from the impacts of a debt downgrade, requires that PSNC maintain current levels of customer service and behavior toward customers and current levels of professional cooperation, imposes additional obligations on the Applicants with respect to affiliate agreements, and commits the Applicants to abide by the Regulatory Conditions and Code of Conduct. Based on the evidence presented, the Commission concludes that the Stipulation provides reasonable and adequate regulatory scrutiny over transactions involving DENC or PSNC with each other, or with non-utility affiliates of Dominion Energy. Further, the Commission concludes that the Stipulation provides reasonable and adequate protections against the potential for discriminatory behavior in intra-company transactions by DENC and PSNC compared to their similar transactions with third parties, through the Applicants' commitment to the Regulatory Conditions and Code of Conduct, and through the requirements in Paragraph No. 9 of the Stipulation pertaining to affiliate agreements. In addition, the Commission concludes that the Stipulation resolves Transco's concerns regarding the Merger.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 35-46

The evidence supporting these findings of fact is set forth in the Stipulation, including the proposed Regulatory Conditions and Code of Conduct, the testimony of the Public Staff Panel, the testimony of Applicants' witnesses Wohlfarth and Harris, and the Commission's statutory and inherent supervisory authority.

In addition to the protection against risks of the Merger provided by the Stipulation itself, the proposed Regulatory Conditions and Code of Conduct also safeguard customers from potential adverse impacts on rates and services as a result of the Merger. As noted above, the proposed Regulatory Conditions and Code of Conduct would update the regulatory conditions and codes of conduct currently in effect for DENC and PSNC, and are largely based on the Regulatory Conditions and Code of Conduct that were approved by the Commission in the Duke-Piedmont Merger Order and the Duke- Piedmont Amended Conditions Order.

The Regulatory Conditions provide numerous protections and restrictions governing the ongoing operations of DENC and PSNC. These safeguards include a number of provisions designed to (i) preserve the Commission's jurisdiction over the regulated utilities (Regulatory Conditions, Section III); (ii) establish intra-company financing requirements and separate accounting for each utility (Regulatory Conditions, Sections VII and VIII); (iii) ensure ongoing review of the operations of DENC and PSNC under a holding company structure (Regulatory Conditions, Section VIII); (iv) provide the Commission with advance notice of proposed business combinations and mergers, and advance notice of changes in the structure and organization of Dominion Energy, DENC, and PSNC (Regulatory Conditions, Section IX and X); (v) ensure continuing levels of service quality for the respective customers of DENC and PSNC (Regulatory Conditions, Section XI); (vi) ensure that DENC's and PSNC's North Carolina retail customers do not bear any additional tax costs as a result of the Merger and that they receive an appropriate share of any tax benefits associated with the service company affiliates (Regulatory Conditions, Section XII); (vii) ensure that Dominion Energy, DENC, PSNC, and all other affiliates establish and maintain the structures and processes necessary to fulfill the commitments expressed in the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner (Regulatory Conditions, Section XIV); (viii) preserve the integrity of utility-specific acquisitions of upstream supply and capacity (Regulatory Conditions, Section XV); and (ix) ensure through rate and other protections for PSNC's North Carolina retail customers that the benefits of the Merger are equal to or surpass the costs of the Merger to those customers (Regulatory Conditions, Section XVI).

The purpose of Section III of the Regulatory Conditions is to protect the Commission's jurisdiction as a result of the Merger, including risks related to agreements and transactions between and among DENC, PSNC, and any of their affiliates, financing transactions involving Dominion Energy, DENC or PSNC, and any other affiliate, and the ownership, use, and disposition of assets by DENC or PSNC. This section includes Regulatory Condition No. 3.1, which requires DENC and PSNC to submit proposed affiliate agreements to the Public Staff for informal review at least 15 days before filing with the Commission so that a determination can be made as to whether the agreements require Commission action. This condition also requires that, for any contract that must be filed with the Federal Energy Regulatory Commission (FERC), DENC and PSNC will file for informational purposes a copy of the proposed agreement with the Commission at least 15 days prior to filing the agreement with FERC.

Regulatory Condition No. 3.2 states that contracts memorializing financing transactions between DENC and PSNC and their affiliates, or between affiliates that are reasonably likely to affect DENC's or PSNC's rates or service, must provide that DENC or PSNC shall not include the effects of any capital structure or debt or equity costs associated with the transactions in its North Carolina retail cost of service or rates, except as allowed by the Commission.

Regulatory Condition No. 3.3 stipulates that DENC and PSNC will own and control the assets used to serve their respective retail customers. Further, if DENC or PSNC intends to transfer an asset having a net book value in excess of $10 million, they are required to provide the

Commission with at least 30 days advance notice of the proposed transfer and cannot include the value of the transfer in rates without Commission approval.

Regulatory Condition No. 3.8 also includes provisions intended to protect the Commission's jurisdiction. Regulatory Condition No. 3.8(f) as proposed in the October 10, 2018, filing by the Public Staff, provides that DENC, PSNC, Dominion Energy, other affiliates and the nonpublic utility operations shall (a) acknowledge the risk of any possible preemptive effects of federal law with respect to any contract, transaction, or commitment entered into or proposed by DENC or PSNC or that could affect DENC's or PSNC's operations, service, or rates and (b) take all actions as may be reasonably necessary and appropriate to hold North Carolina ratepayers harmless from rate increases, foregone opportunities for rate decreases, or other adverse effects of the preemption. At the hearing, the Chairman questioned how the Applicants interpreted this condition, and whether it could be interpreted to mean that, in circumstances where the Commission did not agree that costs incurred pursuant to federally approved rates should be passed to North Carolina customers, the utility's shareholders should bear that cost. Applicants' witness Wohlfarth testified that, while this condition could in the future be subject to interpretation, the Applicants remain obligated to act prudently regardless of any approved federal rate, and the Commission maintains its authority to make such prudence determinations. Tr. pp. 114-20. Public Staff witness Maness testified in response to similar questions by the Chairman that the key language in this condition is the requirement to take all actions as may be reasonably necessary and appropriate to hold North Carolina customers harmless. Witness Maness testified that the Public Staff determined that inclusion of this condition was reasonable because it was included in the regulatory conditions approved in the Duke-Piedmont Amended Conditions Order. Tr. pp. 179-81.

On October 31, 2018, the Public Staff and Applicants filed their Joint Proposed Order, which revised Regulatory Condition No. 3.8(f) to address the Chairman's concerns. The revised condition modifies subsection (B) of Regulatory Condition No. 3.8(f) to provide that DENC, PSNC, Dominion Energy, and any other Affiliates and the Nonpublic Utility Operations "shall take all actions as may be reasonably *and lawfully* necessary and appropriate to *advance the interests of* North Carolina ratepayers to avoid rate increases, foregone opportunities for rate decreases or any other adverse effects of such preemption *including but not limited to intervention in FERC proceedings on behalf of the interests of North Carolina ratepayers*." (Revisions in italics.)

Based on this evidence, the Commission finds and concludes that the Regulatory Conditions, including revised Regulatory Condition No. 3.8(f) as revised in the Joint Proposed Order filed on October 31, 2018, effectively address the concerns related to potential loss of or reduction in the Commission's jurisdiction arising from the Merger.

Section IV of the Regulatory Conditions is intended to ensure that the costs incurred by DENC and PSNC are properly incurred, accounted for, and directly charged, assigned, or allocated to their respective North Carolina retail operations, and that only costs that produce benefits to DENC's and PSNC's retail customers are included in their North Carolina cost of service for ratemaking purposes. The Commission finds and concludes that the Regulatory Conditions effectively address concerns related to the incurrence of, accounting for, and charging of costs to DENC's and PSNC's respective retail operations.

Section VI of the Regulatory Conditions incorporates the remaining conditions of Dominion Energy's integration into PJM, which are primarily reporting requirements. The Commission finds that these conditions will continue to apply to DENC and serve their intended purpose under these Regulatory Conditions.

The purposes of Section VII of the Regulatory Conditions are to ensure that (a) DENC's and PSNC's capital structures and cost of capital are not adversely affected through their affiliation with Dominion Energy, each other, and other affiliates, and (b) that DENC and PSNC have sufficient access to equity and debt capital at reasonable costs so as to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their customers.

The Commission finds and concludes that the Regulatory Conditions effectively address the concerns related to potential financing issues arising from the Merger. In particular, the Commission finds and concludes that the Regulatory Conditions effectively protect DENC's and PSNC's capital structures and cost of capital from adverse consequences that might result from their affiliation with Dominion Energy, each other, and other affiliates, and ensure that DENC and PSNC have sufficient access to equity and debt capital at a reasonable cost to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their customers.

Section VIII of the Regulatory Conditions addresses the risks and concerns related to corporate governance and ring-fencing issues arising from the Merger. These Regulatory Conditions are intended to ensure the continued viability of DENC and PSNC and to insulate and protect DENC and PSNC and their North Carolina retail customers from the business and financial risks of Dominion Energy and the affiliates within the Dominion Energy holding company system, including the protection of utility assets from liabilities of affiliates.

For example, Regulatory Condition No. 8.1 requires DENC and PSNC to manage their respective businesses so as to maintain an investment grade debt rating on all of their rated debt issuances with all of the debt rating agencies. If the debt rating of either DENC or PSNC falls to within one notch of an investment grade rating by S&P and Moody's, a written notice by DENC or PSNC must be filed with the Commission and provided to the Public Staff within five days, along with an explanation as to why the downgrade occurred. Furthermore, within 45 days of such notice, DENC or PSNC are required to provide the Commission and the Public Staff with a specific plan for maintaining and improving its debt rating. The Commission, after notice and hearing, may then take whatever action it deems necessary, consistent with North Carolina law, to protect the interests of DENC's or PSNC's North Carolina retail customers in the continuation of adequate and reliable service at just and reasonable rates.

In addition, Regulatory Condition No. 8.2 holds DENC's and PSNC's customers harmless against any potential increase in costs associated with a debt downgrade attributable to the Merger. The condition provides that if a downgrade occurs and is continuing, a replacement cost calculation will be determined, as part of DENC's and PSNC's future general rate cases, and the procedure shall be effective for five years following the Merger.

Another example of the financial integrity protections provided by the Regulatory Conditions is Regulatory Condition No. 8.3, which limits DENC's and PSNC's cumulative distributions paid to Dominion Energy subsequent to the Merger to (a) the amount of retained earnings on the day prior to the closure of the Merger, plus (b) any future earnings recorded by DENC and PSNC subsequent to the Merger.

The Commission finds and concludes that the Regulatory Conditions effectively address potential risks and concerns related to corporate governance and ring-fencing issues arising from the Merger by ensuring the continued viability of DENC and PSNC, and insulating and protecting DENC and PSNC and their retail customers from the business and financial risks of Dominion Energy and the affiliates within the Dominion Energy holding company system, including the protection of utility assets from the liabilities of affiliates.

The purpose of Section IX of the Regulatory Conditions is to ensure that the Commission receives sufficient notice to exercise its lawful authority over proposed mergers, acquisitions, and other business combinations involving Dominion Energy, DENC, PSNC, other affiliates, or non-public utility operations. Regulatory Condition No. 9.1 requires that advance notification be filed with the Commission at least 180 days prior to the proposed closing date for a proposed merger, acquisition, or other business combination that would affect DENC's or PSNC's rates or service. Regulatory Condition No. 9.2 requires that advance notification be filed with the Commission at least 90 days prior to the proposed closing date for the proposed merger, acquisition, or other business combination that is believed not to have an effect on DENC's or PSNC's rates or service, but that involves Dominion Energy, other affiliates, or non-public utility operations and that has a transaction value exceeding $1.5 billion. Any interested party may file comments within 45 days of the filing of the advance notification, and, if timely comments are filed, the Public Staff is required to place the matter on a Commission Staff Conference agenda and recommend how the Commission should proceed. This condition further provides that if the Commission determines that the merger, acquisition, or other business combination requires approval, an order shall be issued requiring the filing of an application, and no closing can occur until and unless the Commission approves the proposed merger, acquisition, or business combination.

The Commission finds and concludes that the Regulatory Conditions will effectively enable the Commission to exercise its jurisdiction over business combinations involving Dominion Energy or other members of the Dominion Energy holding company structure following the Merger by ensuring that the Commission receives sufficient notice to exercise its lawful authority over proposed mergers, acquisitions, and other business combinations involving Dominion Energy, DENC, PSNC, other affiliates, or the nonpublic utility operations of DENC and PSNC.

The Regulatory Conditions in Section X are intended to ensure that the Commission receives adequate notice of, and opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Dominion Energy, DENC, PSNC, and other affiliates, and nonpublic utility operations of DENC and PSNC as they may affect North Carolina retail customers.

Regulatory Condition No. 10.1 provides that DENC and PSNC are required to file notice with the Commission 30 days prior to the initial transfer or any subsequent transfer of any services, functions, departments, employees, rights, obligations, assets, or liabilities from DENC or PSNC to Dominion Energy's Service Company that (a) involves services, functions, departments, employees, rights, obligations, assets, or liabilities other than those of a governance or corporate nature that traditionally have been provided by a service company, or (b) potentially would have a significant effect on DENC's or PSNC's public utility operations.

Regulatory Condition No. 10.2 provides that, upon request, DENC and PSNC shall meet and consult with, and provide requested relevant data to the Public Staff regarding plans for significant changes in DENC's, PSNC's, or Dominion Energy's organization, structure (including RTO developments), and activities; the expected or potential impact of such changes on DENC's or PSNC's retail rates, operations, and service; and proposals for assuring that such plans do not adversely affect DENC's or PSNC's retail customers. To the extent that proposed significant changes are planned for the organization, structure, or activities of an affiliate or nonpublic utility operation and such proposed changes are likely to have an adverse impact on DENC's or PSNC's retail customers, then DENC's and PSNC's plans and proposals for assuring that those plans do not adversely affect those customers must be included in these meetings. DENC and PSNC shall inform the Public Staff promptly of any such events and changes.

The Commission finds and concludes that the Regulatory Conditions effectively address risks and concerns related to structure and organization arising from the Merger by ensuring that the Commission and the Public Staff will receive adequate notice of, and an opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Dominion Energy, DENC, PSNC, and other affiliates, and nonpublic utility operations of DENC and PSNC as they may affect North Carolina retail customers.

The Applicants state in the application that the proposed Merger in no way diminishes the Commission's authority to regulate the service quality of PSNC. Application, Paragraph No. 33. Section XI of the Regulatory Conditions contains twelve separate provisions that are intended to ensure that DENC and PSNC continue to implement and further their commitment to providing superior utility service by meeting recognized service quality indices and implementing the best practices of each other and their utility affiliates to the extent reasonably practicable. These provisions include overall service quality, best practices, right-of-way maintenance expenditures and clearance practices, customer access to service representatives and other services, call center operations, customer surveys, and regular meetings with the Public Staff on matters related to service quality. With respect to DENC, Regulatory Condition No. 11.2 also requires that DENC continue to take all reasonable and prudent actions necessary to continue to provide its North Carolina retail customers with superior bundled retail electric service.

In addition, Applicants' witness Farrell testified that Dominion Energy's "proven leadership team is unfailingly committed to the safe, reliable, cost-effective, and environmentally responsible provision of utility services to its customers" and "[t]hat commitment will apply equally to its operation of PSNC." Tr. p. 22.

The Commission finds and concludes that the Commission's continuing regulatory authority and procedures and the Regulatory Conditions will effectively ensure that DENC and PSNC maintain a strong commitment to customer service after the Merger.

Section XII of the Regulatory Conditions is intended to ensure that DENC's and PSNC's North Carolina retail customers do not bear any additional tax costs as a result of the Merger and that they receive an appropriate share of any tax benefits associated with the service company affiliates.

Regulatory Condition No. 12.1 provides that under any tax sharing agreement DENC and PSNC will not seek to recover from their North Carolina retail customers any tax cost that exceeds DENC's or PSNC's tax liability calculated as if DENC and PSNC were stand-alone taxable entities for tax purposes.

Regulatory Condition No. 12.2 provides that the appropriate portion of any income tax benefits associated with the Service Company will accrue to the North Carolina retail operations of DENC and PSNC for regulatory accounting, reporting, and ratemaking purposes.

The Commission finds and concludes that Regulatory Condition Nos. 12.1 and will effectively ensure that DENC's and PSNC's North Carolina retail customers (a) are protected from any adverse effects of a tax sharing agreement, and (b) will receive an appropriate portion of income tax benefits associated with the Service Company.

Section XIII of the Regulatory Conditions provides procedures for the implementation of conditions requiring advance notices and other filings arising from the Merger. The Commission finds and concludes that Section XIII of the Regulatory Conditions provides appropriate and effective procedures for the implementation of conditions requiring advance notices and other filings arising from the Merger.

Sections V and XIV of the Regulatory Conditions address compliance with the Code of Conduct. Section V obligates DENC, PSNC, Dominion Energy, and other affiliates to comply with the terms of the Code of Conduct. The purpose of Section XIV of the Regulatory Conditions is to ensure that Dominion Energy, DENC, PSNC, and all other affiliates establish and maintain the structures and processes necessary to fulfill the commitments expressed in the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner.

Regulatory Condition No. 14.1 requires Dominion Energy, DENC, PSNC, and all other affiliates to devote sufficient resources to the creation, monitoring, and ongoing improvement of effective internal compliance programs to ensure compliance with the Regulatory Conditions and the Code of Conduct. It further requires them to take a proactive approach toward correcting any violations and reporting them to the Commission, including the implementation of systems and protocols for monitoring, identifying, and correcting possible violations, a management culture that encourages compliance among all personnel, and the tools and training sufficient to enable employees to comply with Commission requirements.

Regulatory Condition No. 14.2 requires DENC and PSNC to designate a chief compliance officer who will be responsible for compliance with the Regulatory Conditions and Code of Conduct. This person's name and contact information must be posted on DENC's and PSNC's Internet Websites. Regulatory Condition No. 14.3 requires that annual training be provided by DENC and PSNC on the requirements and standards contained within the Regulatory Conditions and Code of Conduct to all of their employees, including Service Company employees, whose duties in any way may be affected by such requirements and standards.

Regulatory Condition No. 14.4 states that if DENC or PSNC discover that a violation of the requirements or standards contained within the Regulatory Conditions and Code of Conduct has occurred, then they are required to file a statement with the Commission describing the circumstances leading to that violation and the mitigating and other steps taken to address the current or any future potential violation.

The Commission finds and concludes that the Regulatory Conditions will effectively ensure monitoring and compliance with the Regulatory Conditions and the Code of Conduct by requiring Dominion Energy, DENC, PSNC, and all other affiliates to establish and maintain the structures and processes necessary to fulfill the commitments expressed in the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner. The purpose of Regulatory Condition XV is to preserve the integrity of utility specific acquisitions of upstream supply and capacity. Regulatory Condition No. 15.1 requires DENC and PSNC to determine the appropriate sources for their interstate pipeline capacity and supply on the basis of the benefits and costs to their respective customers. It also prohibits PSNC from contracting with an affiliate interstate pipeline for additional capacity with a contractual term of ten years or more without issuing a request for proposals, requires PSNC to consider the proposals in good faith, and prohibits PSNC from contracting with an affiliate unless the affiliate is the least cost provider or unless otherwise approved by the Commission. This regulatory condition addresses the concerns expressed by Transco witness Amezquita. Regulatory Condition No. 15.2 specifies that, except as provided in Code of Conduct Section III.D.5 (Joint purchases), PSNC shall retain title, ownership, and management of all gas contracts necessary to ensure the provision of reliable service to PSNC's customers consistent with its best cost gas and capacity procurement methodology.

The Commission finds and concludes that these Regulatory Conditions will effectively ensure the continuation of DENC's and PSNC's current practices for determining their long-term sources of interstate pipeline capacity and supply.

The purpose of Regulatory Condition XVI is to ensure, through rate and other protections for DENC's and PSNC's North Carolina retail customers that the benefits of the Merger are equal to or surpass the costs of the Merger to those customers. Regulatory Condition No. 16.1 echoes the commitment contained in the Stipulation that PSNC will create a regulatory liability of $3.75 million representing a refund to customers of 2017 revenues to be provided as bill credits of $1.25 million on January 1 of 2019 (or as soon thereafter those dates as practicable), January 1, 2020, and January 1, 2021. In addition, Regulatory Condition No. 16.2 states that PSNC will not file an application for a general rate case proceeding to adjust its rates and charges before April 20, 2021, and that, except in certain specified circumstances, PSNC will not file for any cost deferral during or covering any period from the date of an order approving the Merger until after October 31, 2021.

Regulatory Condition No. 16.3 states PSNC's agreement to maintain current levels of customer service and behavior towards customers, and of professional cooperation. Regulatory Condition No. 16.4 provides that the electric utility operations of DENC and SCE&G, along with their affiliates and subsidiaries, will look for post-Merger opportunities to engage in joint planning, purchasing, and services that will result in cost savings to DENC's customers while not compromising reliability or service quality. Finally, Regulatory Condition 16.5 is intended to ensure that DENC's and PSNC's North Carolina retail customers receive the benefit of a "most-favored-nation" status with regard to the provision of Merger benefits and protections among Georgia, South Carolina, and any other jurisdiction where approval of the Merger is required, by increasing the benefits and protections to DENC's or PSNC's retail North Carolina customers to match the greatest level of benefits and protections provided to DENC's or PSNC's retail customers in other jurisdictions, if applicable. The most favored nation clause protects North Carolina retail ratepayers of DENC and PSNC by ensuring that they receive at least equal customer benefits if the settlement stipulations and orders entered in other jurisdictions contain materially better benefits for DENC's and PSNC's ratepayers. Regulatory Condition 16.5 therefore provides that following the approval of the Merger in other jurisdictions, any mechanisms adopted pursuant to which benefits and ratepayer protections are provided to DENC and PSNC ratepayers will be reviewed to identify the states in which each of DENC's and/or PSNC's retail customers will receive the largest financial (including, but not limited to, rate reductions, rebates, refunds, other payments, bill credits, rate moratoriums, etc.) and non-financial benefits, and other ratepayer protections, on a per customer or pro rata basis. If the application of those benefits to DENC's and/or PSNC's North Carolina retail ratepayers would result in a greater level of benefits and/or protections than that which has otherwise been provided for their North Carolina retail customers in these Regulatory Conditions, then the benefits and protections to North Carolina retail ratepayers will be increased to match the greatest level of benefits and protections provided to the DENC and/or PSNC retail ratepayers in any of the other jurisdictions. The condition, however, provides that in no event will the application of the methodology cause North Carolina retail customers' benefits to be reduced.

The Commission finds and concludes that these Regulatory Conditions will effectively ensure that the benefits of the Merger are equal to or surpass the costs of the Merger to DENC's and PSNC's customers.

With regard to Findings of Fact Nos. 35-46, the Regulatory Conditions provide the protections noted in each such finding of fact. No party has offered evidence contesting these provisions of the Regulatory Conditions or the testimony of the witnesses in support thereof. As a result, the Commission determines that the evidence is sufficient to support these findings of fact and need not be repeated here.

With regard to all of the Regulatory Conditions approved herein, with the exception of Section VI (PJM Conditions) and XVI, the Regulatory Conditions are substantially similar to those approved by the Commission in the Duke-Piedmont Merger Order, as modified by the Duke-Piedmont Amended Conditions Order. In turn, those Regulatory Conditions are, with certain exceptions as approved in the Amended Conditions Order, identical to those approved in the 2006 merger of Duke Energy and Cinergy Corporation, and the 2012 merger of Duke Energy and Progress Energy, Inc. Thus, the Commission and the Public Staff have more than a decade of experience with the application and enforcement of the majority of these Regulatory Conditions.

The Commission has found them to be effective in protecting customers from the real and potential risks of those mergers. Additionally, the Commission has concluded that the Stipulation, including the Regulatory Conditions, was the product of give-and-take settlement negotiations among the parties. The Commission is, therefore, confident in the ongoing strength of the Regulatory Conditions as modified for this proceeding, and their ability to protect DENC's and PSNC's North Carolina retail customers from the real and potential risks of SCANA's Merger with Dominion Energy.

The Commission has carefully reviewed and considered all of the evidence set forth above and finds it to be credible and entitled to substantial weight. Based on the testimony and for the reasons discussed above, the Commission concludes that the Regulatory Conditions safeguard customers from potential adverse impacts of the Merger on rates, services, and other aspects of the public utility operations of DENC and PSNC as much as reasonably possible.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 47-51

The evidence supporting these findings of fact is set forth in the testimony of the Public Staff Panel, the testimony of Applicants' witnesses, and the Stipulation, including the Code of Conduct.

Potential risks to customers of the Merger are also addressed by the Code of Conduct. As with the proposed Regulatory Conditions, the proposed Code of Conduct would update the codes of conduct currently in effect and applicable to DENC and PSNC, and is largely based on the Code of Conduct that was approved by the Commission in the Duke-Piedmont Merger Order.

The Public Staff Panel testified that its proposed Code of Conduct, together with the Regulatory Conditions, were developed in order to provide cost allocation and pricing standards, natural gas marketing standards, requirements regarding the sharing of potentially competitive sensitive information, and requirements to file cost allocation manuals and annual reports on affiliate transactions, all of which would work to minimize any market power of the proposed Merger. Tr. p. 165.

Applicants' witness Wohlfarth testified that the Code of Conduct governs the relationship, activities, and transactions among the public utility operations and their affiliates. Tr. p. 97. Applicants' witness Harris testified that, together with the Regulatory Conditions, the Code of Conduct provides additional benefits and protections for PSNC's customers, ensures that the Merger will not adversely impact the rates charged and service provided by PSNC to its North Carolina customers, and ensures that the benefits of the Merger to PSNC's customers are sufficient to offset any potential costs and risks. Tr. pp. 86-88.

Section III.A of the Code of Conduct (Code) discusses Independence and Information Sharing. This section requires Dominion Energy, DENC, PSNC, and other affiliates to operate independently of each other, and sets guidelines and restrictions on the exchange of customer information and confidential systems operation information.

Section III.B of the Code addresses Nondiscrimination. It prohibits the Applicants from giving any preference in pricing or service priority to an affiliate or from requiring the purchase of any goods or services in return for receiving electric or gas service.

Section III.C of the Code addresses Marketing. It allows joint sales and joint advertising by DENC and PSNC with their affiliates and nonpublic utility operations subject to restrictions imposed by the Commission, but requires DENC and PSNC to make any such joint marketing opportunities available to third parties. This section of the Code also prohibits the use by an affiliate, including Dominion Energy, of DENC's or PSNC's names and logos unless disclaimers accompany such use. The disclaimers clarify that the utilities/affiliates are separate companies and that the Commission does not regulate Dominion Energy or the affiliate.

Section III.D of the Code addresses Transfers of Goods and Services, Transfer Pricing, and Cost Allocation. This section sets guidelines for the pricing of goods and services exchanged between affiliates.

Provisions D.4 and D.6 provide that charges for shared services and all permitted transactions among the affiliates shall be allocated to the affiliated utilities in accordance with the Service Company cost allocation manual filed with the Commission.

Provision D.5 provides that DENC, PSNC, and their utility affiliates may "capture economies-of-scale in joint purchases of goods and services" (excluding the purchase of electricity or ancillary services purchased for resale unless purchased pursuant to a Commission-approved contract or service agreement) if the joint purchases result in cost savings for customers.

Provision D.8 provides that trade secrets shall not be transferred from DENC or PSNC to Dominion Energy or other affiliates without just compensation and filing of 60-day prior notice to the Commission.

Provision D.9 provides that DENC and PSNC shall receive compensation from Dominion Energy or other affiliates for intangible benefits, if appropriate.

Section III.E, "Regulatory Oversight," reiterates that N.C. Gen. Stat. § 62-153 will continue to apply to all transactions between DENC, PSNC, Dominion Energy, and other affiliates. This statute requires all public utilities to file with the Commission any contract with any affiliate, and the Commission may disapprove such contract if it is found to be unjust or unreasonable. Further, the books and records of the Applicants and their affiliates will be open for examination by the Commission or the Public Staff. Finally, DENC shall file a report with its annual fuel cost recovery rider demonstrating that any gas services purchased from PSNC (except those provided under Commission-approved contracts) were prudent and reasonably priced.

Section III.F is entitled "Utility Billing Format" and provides that if customers receive bills for a variety of services such bills shall clearly separate the electric service charges and gas service charges from the charges for any other services. In addition, the bill shall clearly state that a customer's utility service will not be terminated for failure to pay for any other services billed.

Section III.G of the Code provides a "Complaint Procedure" for resolving complaints that arise due to the relationship of DENC and PSNC with Dominion Energy and other affiliates.

Section III.H is entitled "Natural Gas/Electricity Competition" and provides that DENC and PSNC shall continue to compete against all energy providers to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DENC and PSNC shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DENC and PSNC shall maintain certain minimum standards.

The Commission has reviewed the Code of Conduct and finds and concludes that it represents significant commitments by the Applicants to provide ongoing protection to customers from possible costs and risks of the proposed Merger.

Also applicable is N.C. Gen. Stat. § 62-138, the requirement to obtain Commission approval over service contracts; N.C. Gen. Stat. § 62-140, the prohibition against discrimination; and, as discussed previously, N.C. Gen. Stat. § 62-153, which requires the Applicants to file affiliated contracts and to obtain approval for affiliated service contracts. Each of these statutory provisions either prohibits or mandates utility conduct for the purpose of assuring that rates charged to customers for utility services are just and reasonable.

The Commission has carefully reviewed and considered all of the evidence set forth above and finds it to be credible and entitled to substantial weight.

Further, the Code of Conduct is essentially identical to the Code of Conduct approved by the Commission in the Duke-Piedmont Merger Order, which, in turn, was essentially identical to the Code of Conduct approved in the 2006 merger of Duke Energy and Cinergy Corporation and the 2012 merger of Duke Energy and Progress Energy, Inc. Thus, the Commission and the Public Staff have more than a decade of experience with the application and enforcement of the Code of Conduct. The Commission has found the Code of Conduct to be effective in protecting ratepayers from the real and potential risks of those mergers. The Commission is, therefore, confident in the ongoing strength of the Code of Conduct and its ability to protect PSNC's customers from the real and potential risks of SCANA's Merger with Dominion Energy.

Based on the foregoing, the Commission finds and concludes that potential risks of the Merger to customers have been effectively mitigated as much as reasonably possible by the commitments of the Applicants in the Application, as well as the testimony of Applicants' witnesses, the testimony of the Public Staff Panel, and the Stipulation, including the Regulatory Conditions and Code of Conduct.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 52

The evidence supporting this finding of fact is contained in the Market Power Analysis, the testimony of Applicants' witness Hunger, the testimony of the Public Staff Panel, the testimony of Transco witness Amezquita, and the Stipulation, including the stipulated Regulatory Conditions and Code of Conduct.

ELECTRIC – MERGER

In the M-100, Sub 129 Order, the Commission required natural gas and electric utilities proposing to engage in a merger to file a market power analysis with their merger approval petitions. The purpose of this requirement was to allow the Commission to evaluate the impact of the proposed merger on competitive and regulated markets and to assess whether any potential anticompetitive effects might flow from the proposed merger.

The Commission has carefully reviewed the record in this proceeding related to these issues and finds no substantial evidence that would support the conclusion that the proposed Merger will result in materially increased market or monopoly power, particularly when viewed in the light of the restrictions and requirements set forth in the stipulated Regulatory Conditions and Code of Conduct.

In this regard, the Commission has reviewed the HHI study performed by Charles River Associates (CRA), which concludes that the proposed Merger does not raise competitive concerns in any of the studied markets. Market Power Analysis, Application Exhibit 5, at p. 24. Further, the Market Power Analysis found that the wholesale gas market is "moderately concentrated, and the proposed transaction will increase market concentration, but it will remain moderately concentrated" and that planned pipeline development in the region "would not raise competitive concerns, and would improve market supply and competitive alternatives." Id. at 24. Regarding wholesale electricity, "[w]ithin North Carolina, there will be no change in ownership of generation, and therefore no concentration of the market that would raise concerns over the exercise of market power." Id. at 24. The analysis also found that "there is no overlap in service territories between retail gas service provided by PSNC Energy (retail gas) and Dominion Energy North Carolina (retail electricity) so there is no concern about reduced competition for utility customers who have the ability to switch between electricity and gas for certain needs ... [t]hus, the proposed transaction should not raise concerns that, following the merger, there will be incentives to invest in one type of infrastructure over another to the disservice of its ratepayers." Id. at 24.

Applicants' witness Hunger testified in support of the Market Power Analysis and concluded that the Merger does not raise competitive concerns in any studied markets and will not create an increased ability to exercise market power. Witness Hunger stated that in the market power analysis he addressed the full range of competitive concerns in gas and electricity markets associated with the Merger as it relates to North Carolina. With regard to the wholesale gas market, he stated that the Merger would increase the market concentration, but that the market would remain moderately concentrated. With regard to the wholesale electricity market, he testified that within North Carolina there likely will be a slight increase in market concentration, but no harm to competition as a result. With regard to the retail gas and retail electricity markets, as there is no competitive retail regime for gas service or electricity service in North Carolina, he concluded that the Merger will not impact retail gas competition or retail electricity competition. With regard to cross-fuel competition, witness Hunger noted that there is no overlap in service territories between retail service provided by PSNC and DENC, so there is no concern about reduced competition for utility customers who have the ability to switch between electricity and natural gas for certain needs. He also concluded that the Merger should not raise concerns that following the Merger there will be incentives to invest in one type of infrastructure over another to the disservice of customers. Tr. pp. 69-70.

The Public Staff Panel testified that its review of witness Hunger's testimony, Applicants' joint application under Section 203 of the Federal Power Act, and the July 12, 2018 FERC order approving the Merger support a conclusion that the Merger is in the public interest. The Public Staff Panel noted FERC's recognition that there is no geographic overlap of the DENC and PSNC service areas. The Public Staff Panel testified further that its recommended Regulatory Conditions and Code of Conduct provide cost allocation and pricing standards, natural gas marketing standards, requirements regarding the sharing of potentially competitive sensitive information, and requirements to file cost allocation manuals and annual reports on affiliate transactions that should work to minimize any market power of the merged company. Tr. pp. 164-65.

Transco witness Amezquita testified that the Merger would create a vertically integrated business structure that could have significant control over essential facilities in the sale, distribution, and transmission of natural gas and electricity in North Carolina, which could lead to decisions by the merged company that could result in North Carolina customers paying higher prices. As noted above, Transco advocated for conditions on any approval of the Merger including requiring PSNC to issue a request for proposals for additional pipeline capacity, the filing of confidential reports of any resulting negotiations, and requiring PSNC to use a "least cost" standard when contracting for natural gas supply and services. Tr. pp. 127-128, 131-34.

As indicated by the Commission's questions for witness Hunger in its Order Granting in Part Motion to Excuse Several Witnesses and Requiring Late-Filed Exhibit, the Commission had some concern about CRA's conclusions regarding available pipeline capacity. Specifically, on page 8 of the CRA analysis, CRA employed a proxy for the total pass-through capacity available in Zone 5 on January 8, 2017, PSNC's peak day in 2017, and concluded that 1,020 MDth/d, 22% of the total market, was available as firm capacity. As indicated by the Commission's Question No. 1 to witness Hunger, the Commission was not persuaded that this proxy was applicable, particularly given that January 8, 2017, was not a design day for PSNC. As a result, there may have been released capacity available that day that could not be considered firm. Witness Hunger's answer to the Commission's Question No. 1 did not effectively address the Commission's concern. Nonetheless, aside from that point the Commission finds the conclusions of the Market Power Analysis to be acceptable and entitled to substantial weight. The Commission also finds the testimony of the Public Staff Panel on this matter to be entitled to substantial weight. Finally, the Commission finds that the testimony of Transco on this matter is effectively addressed by the evidence presented by the Market Power Analysis and the Public Staff Panel, and by the Stipulation.

With respect to the possibility of self-dealing or anti-competitive conduct by and among DENC and PSNC after the Merger, the Commission finds that risk to be effectively mitigated by the stipulated Regulatory Conditions and Code of Conduct, and by the ongoing authority of the Commission over the rates, terms, and conditions of service offered by DENC and PSNC.

The Regulatory Conditions and Code of Conduct, as set forth in the Stipulation and supported by the testimony of Applicants' witnesses Wohlfarth and Harris, address several areas in which self-dealing or anticompetitive behavior by DENC and PSNC could arise. The affiliated transaction rules set forth in the Regulatory Conditions are intended to address risks related to agreements and transactions between and among DENC, PSNC, and their affiliates; financing transactions involving Dominion Energy, DENC or PSNC, and any affiliate (Regulatory Condition Section III); and the proper incurrence of, accounting for, and direct charging, assignment, or allocation of costs incurred by DENC and PSNC (Regulatory Condition Sec. IV).The affiliate related provisions of the Code of Conduct are designed to ensure independence of DENC and PSNC and their affiliates, prohibit discrimination by DENC or PSNC against non-affiliates, and regulate joint marketing and transfer pricing. According to the Public Staff Panel's testimony, these provisions appropriately address concerns raised by the proposed Merger.

Based on the foregoing evidence, the Commission concludes that the proposed Merger will not result in materially increased market or monopoly power to the detriment of customers.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 53

The evidence supporting this finding of fact is contained in the Stipulation, the testimony of Applicants' witnesses Wohlfarth and Harris, and the testimony of the Public Staff Panel.

As fully discussed in the Evidence and Conclusions for Findings of Fact Nos. 15 and 16, the provisions of the Stipulation are the product of the give-and-take of settlement negotiations between the Applicants, the Public Staff, and Transco. As a result, the Stipulation reflects the fact that the Applicants agreed to certain provisions that advanced the Public Staff's interests and the Public Staff agreed to other provisions that advanced the Applicants' interests. It also reflects the Applicants' agreement to provisions that addressed Transco's concerns and Transco's agreement to provisions that advanced Applicants' interests. The end result is that the Stipulation strikes a fair balance between the interests of the Applicants and their customers.

In his supplemental testimony, Applicants' witness Wohlfarth testified that, following the Public Staff's extensive audit and discovery process investigating the public convenience and necessity of the proposed Merger, the Applicants and the Public Staff began discussions regarding a possible settlement. He also stated that, after intervenor testimony was filed, the Applicants engaged in discussions with Transco regarding the Regulatory Conditions. He testified that the negotiations involved substantial compromise by all parties on numerous issues. Witness Wohlfarth testified further that the terms of the Stipulation, including the Regulatory Conditions and Code of Conduct, will ensure that the Merger will have no adverse impact on the rates charged and the services provided by DENC and PSNC to North Carolina customers and that the benefits of the Merger to those customers are sufficient to offset any potential costs and risks. He stated that PSNC will continue to provide efficient, reliable, and safe service at a reasonable cost through the many commitments made by Dominion Energy and SCANA and testified to his belief that approval of the Merger and the Stipulation will benefit PSNC and its customers. Tr. pp. 91, 99-100. In his supplemental testimony, Applicants' witness Harris testified to a number of ways that PSNC will benefit from the Merger, and that the terms of the Stipulation, Regulatory Conditions, and Code of Conduct will ensure that the Merger will not result in adverse impacts to PSNC's rates and service. Tr. pp. 82-84.

The Commission finds and concludes that the Stipulation is a reasoned and balanced resolution of the matters that might otherwise be in dispute between the Stipulating Parties in this docket. Further, the Stipulation is just and reasonable to all parties in light of the evidence presented and serves the public interest. Therefore, the Commission approves the Stipulation in its entirety. In addition, the Commission finds and concludes that the Stipulation is entitled to substantial weight and consideration in the Commission's decision in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 54

The evidence supporting this finding of fact is contained in the Application, the Applicants' testimony, Public Staff Panel testimony, the Stipulation, including the Regulatory Conditions and Code of Conduct, and the Commission's supervisory authority under Chapter 62 of the General Statutes over the rates, terms, and conditions of service provided to the public by DENC and PSNC.

Pursuant to N.C. Gen. Stat. § 62-111(a), the Commission is required to determine whether the proposed merger is "justified by the public convenience and necessity." Upon such finding, the statute instructs that approval of the proposed merger "shall be given."

In prior merger proceedings the Commission has established a three-part test for determining whether a proposed utility merger is justified by the public convenience and necessity. That test is (1) whether the merger would have an adverse impact on the rates and services provided by the merging utilities; (2) whether ratepayers would be protected as much as possible from potential costs and risks of the merger; and (3) whether the merger would result in sufficient benefits to offset potential costs and risks. See Order Approving Merger Subject to Regulatory Conditions and Code of Conduct (Duke/Progress Merger Order), issued June 29, 2012, in Docket Nos. E-2, Sub 998 and E-7, Sub 986, aff'd, In re Duke Energy Corp., 232 N.C. App. 573, 755 S.E.2d 382 (2014); see also Duke- Piedmont Merger Order. These questions are related to one another and together establish a reasoned framework upon which utility mergers may be evaluated. In making these assessments, the Commission has also examined factors such as whether service quality will be maintained or improved, the extent to which costs can be lowered and rates can be maintained or reduced, and whether effective regulation of the merging utilities will be maintained. See Order Approving Merger and Issuance of Securities, issued April 22, 1997, in Docket No. E-7, Sub 596.

The Commission has made findings of fact regarding the substantial economic and non-economic benefits to be received by customers as a result of the Merger. In addition, the Commission notes the absence of any proposal to change rates, terms, or conditions of service for any customer of DENC or PSNC in conjunction with or as a direct result of the proposed Merger. This is confirmed in the testimony of Applicants' witness Farrell that "no transaction fees, integration cost, or any acquisition premium that will result from the combination will be passed on to the customers of PSNC or Dominion Energy North Carolina." Tr. p. 24. It is also confirmed by Paragraph No. 30.i. of the Application, which provides that the Merger will "not have a net adverse impact on the rates and services of Dominion Energy North Carolina or PSNC Energy." Additionally, the Cost-Benefit Analysis filed with the Application indicates that customers will not be charged for Merger costs such as the acquisition premium and transaction fees, which, instead, will be absorbed by Dominion Energy. Finally, the Stipulation provides that direct expenses associated with the Merger will be excluded from the regulated expenses of PSNC and DENC for Commission financial reporting and ratemaking purposes.

Further, the Commission concludes that the potential risks or costs attendant to the proposed Merger are adequately mitigated by the Applicants' commitments concerning absorption of Merger-related expenses and by the restrictions imposed on the Applicants' conduct by the Stipulation, the Regulatory Conditions and Code of Conduct, and by this Commission's continuing jurisdiction and authority over the rates, terms, and conditions of service provided by DENC and PSNC. Finally, the Commission has given appropriate weight to the Applicants' testimony that the Merger will also result in non- quantifiable economic and non-economic benefits for the customers of DENC and PSNC. On balance, the Commission concludes that the Merger will have no adverse impact on the rates and services provided by DENC and PSNC to their North Carolina customers and that the known and potential benefits of the Merger are sufficient to offset the potential costs and risks.

In addition, the Commission has made findings of fact that the Regulatory Conditions, Code of Conduct, and other provisions of the Stipulation, as approved herein, will protect DENC's and PSNC's North Carolina retail customers from known and potential costs and risks of the Merger.

Therefore, the Commission concludes that the proposed Merger of Dominion Energy and SCANA is justified by the public convenience and necessity, serves the public interest, and should be approved pursuant to N.C. Gen. Stat. § 62-111.

IT IS, THEREFORE, ORDERED as follows:

1. That the Application of Dominion Energy and SCANA pursuant to N.C. Gen. Stat. § 62-111(a) to engage in a business combination transaction shall be, and is hereby, approved subject to the provisions of the Stipulation and of the revised Regulatory Conditions and Code of Conduct, attached hereto as Appendix A and incorporated herein.

2. That subject to the Merger being consummated and the Regulatory Conditions and Code of Conduct approved herein becoming effective, the Regulatory Conditions and Codes of Conduct approved by the Commission in the Dominion Energy- Consolidated Natural Gas merger order and the SCANA-PSNC merger order shall be nullified.

3. That upon closing of the Merger PSNC shall create a regulatory liability of \$3.75 million and shall refund that amount to its North Carolina customers through bill credits of \$1.25 million each provided on January 1, 2019 (or as soon thereafter as possible), January 1, 2020, and January 1, 2021.

4. That in 2019 PSNC shall increase its charitable contributions over its 2017 contributions by \$150,000. Such charitable contributions shall be used to provide energy assistance to low-income customers in PSNC's service territory and shall be treated as below-the-line expenses for regulatory accounting, reporting, and ratemaking purposes.

5. That DENC and PSNC shall exclude direct expenses associated with the Merger from their regulated expenses for Commission financial reporting and ratemaking purposes. Such expenses to be excluded include: acquisition premiums; change-in- control payments made to terminated executives; regulatory process costs; transaction costs such as investment banking, legal, accounting, securities issuances, and advisory fees; integration costs such as costs related to the integration of financial, IT, human resources, billing, accounting, and telecommunications

systems; and other transition costs such as severance payments, changes to signage, transitioning employees to post- Merger employee benefit plans, and costs to terminate any duplicative leases, contracts and operations. PSNC and DENC shall file a report of their accounting for Merger-related direct expenses within 60 days after the close of the Merger, and supplemental reports within 60 days after each calendar year, as necessary.

6. That PSNC will not file an application for a general rate case proceeding to adjust its rates and charges before April 1, 2021. PSNC will not increase its non-gas cost margin in its rates until November 1, 2021, except for the following reasons: (1) adjustments or changes pursuant to Rider C (Customer Usage Tracker), Rider D (Purchased Gas Adjustment Procedures), and Rider E (Integrity Management Tracker) pursuant to N.C. Gen. Stat. § 62-133.4, N.C. Gen. Stat. § 62-133.7, and N.C. Gen. Stat. § 62-133.7A; (2) to reflect the financial impact of governmental action (legislative, executive, or regulatory) having a substantial specific impact on the gas industry generally or on a segment thereof that includes PSNC, including but not limited to major expenditures for environmental compliance; (3) to implement natural gas expansion surcharges imposed pursuant to N.C. Gen. Stat. § 62-158; or (4) to reflect the financial impact of major expenditures associated with force majeure. In addition, PSNC shall not file for any cost deferral during or covering any period from the date of this Order until after October 31, 2021, except: (1) to reflect the financial impact of governmental action (legislative, executive, or regulatory) having a substantial specific impact on the gas industry generally or on a segment thereof that includes PSNC, including but not limited to major expenditures for environmental compliance; or (2) to reflect the financial impact of major expenditures associated with force majeure.

7. That no later than March 1, 2019, and in accordance with and as provided by N.C. Gen. Stat. § 62-153 and the related Regulatory Conditions, DENC and PSNC shall file any new or amended affiliate agreements for use by DENC and PSNC. DENC and PSNC may operate, as of the date of the Merger's closing, under the new or amended affiliate agreements until the Commission issues an order approving or accepting the new or amended affiliate agreements under N.C. Gen. Stat. § 62-153. DENC's and PSNC's interim operations under the new or amended affiliate agreements shall be subject to any fully adjudicated Commission order on the matter.

8. That the Stipulation is hereby approved in its entirety.

9. That the Applicants are authorized to take such other and further actions as are reasonable and necessary to consummate the Merger transaction set forth in the Merger Agreement subject to the terms hereof.

10. That Applicants shall file a written notice in this docket within ten (10) days of the consummation of the Merger approved herein.

11. That these dockets shall remain open pending the filing of such notice and further orders of the Commission.

ISSUED BY ORDER OF THE COMMISSION.
This the 19th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Lyons Gray did not participate in this decision.

APPENDIX A

DOCKET NO. E-22, SUB 551
DOCKET NO. G-5, SUB 585

REGULATORY CONDITIONS

These Regulatory Conditions set forth commitments made by Dominion Energy and SCANA, and their public utility subsidiaries, DENC and PSNC, respectively, as a precondition of approval of the application by Dominion Energy and SCANA pursuant to G.S. 62-111(a) for authority to engage in their proposed business combination transaction. These Regulatory Conditions, which become effective only upon closing of the Merger, shall apply jointly and severally to Dominion Energy and SCANA, as well as DENC and PSNC and shall be interpreted in the manner that most effectively fulfills the Commission's purposes as set forth in the preamble to Section II of these Regulatory Conditions.

SECTION I
DEFINITIONS

For the purposes of these Regulatory Conditions, capitalized terms shall have the meanings set forth below. If a capitalized term is not defined below, it shall have the meaning provided elsewhere in this document or as commonly used in the electric or natural gas utility industry.

Affiliate: Dominion Energy, and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Dominion Energy. For purposes of these Regulatory Conditions, Dominion Energy and each business entity so controlled by it are considered to be Affiliates of DENC and PSNC, and DENC and PSNC are considered to be Affiliates of each other.

Affiliate Contract: (a) Any contract or agreement between DENC and PSNC or between DENC or PSNC and any other Affiliate or proposed Affiliate, and (b) any contract or agreement between such other Affiliate or proposed Affiliate and another Affiliate that is related to the same subject matter and is reasonably likely to have an Effect on DENC's or PSNC's Rates or Service. Such contracts and agreements include, but are not limited to, service, operating, interchange, pooling, and wholesale power sales agreements and agreements involving financings and asset transfers and sales.

Code of Conduct: The minimum guidelines and rules approved by the Commission that govern the relationships, activities, and transactions between and among the public utility operations of DENC and PSNC, Dominion Energy and SCANA, the other Affiliates of DENC and PSNC, and the Nonpublic Utility Operations of DENC and PSNC, as those guidelines and rules may be amended by the Commission from time to time.

Commission: The North Carolina Utilities Commission.

CNG: Consolidated Natural Gas Company, which merged with Dominion Resources, Inc. (now Dominion Energy) in 1999 as approved by the Commission in Docket No. E-22, Sub 380.

Customer: Any retail electric customer of DENC in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of PSNC located in North Carolina.

DENC: Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina, the business entity, wholly owned by Dominion Energy, that holds the franchises granted by the Commission to provide Electric Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina. DENC refers to the system business and operation of Virginia Electric and Power Company, and not simply the North Carolina retail assigned or allocated portions of that business and operation.

Dominion Energy: Dominion Energy, Inc., which is the current holding company parent of DENC and PSNC, and any successor company.

Effect on DENC's or PSNC's Rates or Service: When used with reference to the consequences to DENC or PSNC of actions or transactions involving an Affiliate or Nonpublic Utility Operation, this phrase has the same meaning that it has when the Commission interprets G.S. 62-3(23)(c) with respect to the affiliation covered therein.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and retail sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of electric service to other suppliers.

Federal Law: Any federal statute or legislation, or any regulation, order, decision, rule or requirement promulgated or issued by an agency or department of the federal government.

FERC: The Federal Energy Regulatory Commission.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing the goods and services in question.

Joint Owners: Old Dominion Electric Cooperative (ODEC), with respect to its ownership interests in the North Anna Nuclear Station and the Clover Power Station, and First Energy and LS Power (and/or their subsidiaries and affiliates), with regard to their ownership interests in the Bath County Pumped Storage Station. For purposes of these Regulatory Conditions, DENC is not included in the definition of Joint Owners. Also, for purposes of these Regulatory Conditions, Joint Owners include any successors and assigns to ODEC and First Energy.

Market Value: The price at which property, goods, or services would change hands in an arm's-length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Dominion Energy and SCANA.

Merger-Related Expenses: Merger–Related Expenses include acquisition premiums, change-in-control payments made to terminated executives, regulatory process costs, and transaction costs, such as investment banking, legal, accounting, securities issuances and advisory fees. Integration costs include the integration of financial, IT, human resources, billing, accounting, and telecommunications systems. Other transition costs include severance payments to employees, changes to signage, the cost of transitioning employees to post-merger employee benefit plans, and costs to terminate any duplicative leases, contracts and operations, etc.

Native Load Priority: Power supply service being provided or electricity otherwise being sold with a priority of service equivalent to that planned for and provided by DENC to its respective Retail Native Load Customers.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Nonpublic Utility Operations: All business operations engaged in by DENC or PSNC involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including Service Company, other than a Utility Affiliate, DENC, or PSNC.

PSNC: Public Service Company of North Carolina, Inc., the business entity, wholly owned by Dominion Energy and SCANA, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Purchased Power Resources: Purchases of energy by DENC at wholesale, the contract terms for which are one year or longer.

Retail Native Load Customers: The captive retail Customers of DENC in North Carolina for which DENC has the obligation under North Carolina law to engage in long-term planning and to supply all Electric Services, including installing or contracting for capacity, if needed, to reliably meet their electricity needs.

Retained Earnings: The retained earnings currently required to be listed on page 112, line 11, of the pre-Merger DENC FERC Form 1 and page 112, line 11 of the pre-Merger PSNC FERC Form 2.

SCANA: SCANA Corporation, which is the former and current direct holding company parent of PSNC and is a subsidiary of Dominion Energy, and any successors.

Service Company: A centralized service company Affiliate that provides Shared Services to DENC, PSNC, other Affiliates, and/or the Nonpublic Utility Operations of DENC or PSNC, singly or in any combination.

Shared Services: The services that meet the requirements of these Regulatory Conditions and that the Commission has explicitly authorized DENC and PSNC to take from the Service Company pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and these Regulatory Conditions.

Utility Affiliates: The regulated public utility operations of the East Ohio Gas Company (Dominion Energy Ohio), Hope Gas, Inc. (Dominion Energy West Virginia), Questar Gas Company (Dominion Energy Utah, Dominion Energy Wyoming, and Dominion Energy Idaho), and South Carolina Electric & Gas Company (SCE&G).

SECTION II
AUTHORITY, SCOPE, AND EFFECT

These Regulatory Conditions are based on the general power and authority granted to the Commission in Chapter 62 of the North Carolina General Statutes to control and supervise the public utilities of the State. The Regulatory Conditions address specific exercises of the Commission's authority and provide mechanisms that enable the Commission to determine the extent of its authority and jurisdiction over proposed activities of, and transactions involving, DENC, PSNC, Dominion Energy, and other Affiliates or Nonpublic Utility Operations. The purpose of these Regulatory Conditions is to ensure that DENC's Retail Native Load Customers and PSNC's Customers (a) are protected from any known adverse effects from the Merger, (b) are protected as much as possible from potential costs and risks resulting from the Merger, and (c) receive sufficient known and expected benefits to offset any potential costs and risks resulting from the Merger. These Regulatory Conditions are not intended to impose legal obligations on entities in which Dominion Energy does not directly or indirectly have a controlling voting interest, or to affect any rights of any party to participate in subsequent proceedings.

2.1 Commission Authority Over Certain Transactions. DENC, PSNC, Dominion Energy, and other Affiliates acknowledge that the Commission has authority over intra-company transactions as provided for in Chapter 62.

2.2 Limited Right to Challenge Commission Orders. Other than as provided for, or explicitly prohibited, in these conditions, Dominion Energy, DENC, PSNC, and other Affiliates retain the right to challenge the lawfulness of any Commission order issued pursuant to or relating to these Regulatory Conditions on the basis that such order exceeds the Commission's statutory authority under North Carolina or Federal Law or the other grounds listed in G.S. 62-94(b).

2.3 Waiver Requests. DENC, PSNC, Dominion Energy, and other Affiliates may seek a waiver of any aspect of these Regulatory Conditions in a particular case or circumstance for good cause shown by filing such a request with the Commission.

SECTION III
PROTECTION OF RIGHTS

The following Regulatory Conditions are intended to protect the jurisdiction of the Commission as a result of the Merger, including risks related to agreements and transactions between and among DENC, PSNC, and any of their Affiliates; financing transactions involving Dominion Energy, DENC or PSNC, and any other Affiliate; and the ownership, use, and disposition of assets by DENC or PSNC.

3.1 Transactions between DENC, PSNC, and Other Affiliates; Notice of Affiliate Contracts to be Filed with the FERC.

(a) DENC and PSNC shall not engage in any transactions with Affiliates or proposed Affiliates without first filing the proposed contracts oragreements memorializing such transactions pursuant to G.S. 62-153 and taking such actions and obtaining from the Commission such determinations and authorizations as may be required under North Carolina law. DENC or PSNC, as applicable, shall submit each proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract to the Public Staff for informal review at least 15 days before filing it with the Commission. If DENC or PSNC and the Public Staff agree within the 15-day period that the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract does not require any action by the Commission, DENC or PSNC may proceed to execute the agreement subject to later disapproval and voidance by the Commission pursuant to G.S. 62 - 153(a). Otherwise, the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract shall not be executed until the agreement has been filed and payment of compensation has been approved by the Commission pursuant to G.S. 62-153(b).

(b) In addition to the requirements of Regulatory Condition 3.1(a), for any contract requiring filing with FERC, DENC or PSNC shall file, for informational purposes, a copy of a proposed Affiliate Contract, a contract with a proposed Affiliate, or an amendment to an existing Affiliate Contract with the Commission at least 15 days prior to filing with FERC.

3.2 Financing Transactions Involving DENC, PSNC, Dominion Energy, or Other Affiliates.

(a) With respect to any financing transaction between or among DENC or PSNC and Dominion Energy or any one or more other Affiliates, any contract memorializing such transaction shall expressly provide that DENC or PSNC shall not enter into any such financing transaction except in accordance with North Carolina law and the rules, regulations, and orders of the Commission promulgated thereunder; and

(b) With respect to any financing transaction (i) between or among any of the Affiliates if such contracts are reasonably likely to have an Effect on DENC's or PSNC's Rates or Service, or (ii) between DENC and PSNC or between DENC or PSNC and any other Affiliate, any contract memorializing such transaction shall expressly provide that DENC or PSNC shall not include the effects of any capital structure or debt or equity costs associated with such financing transaction in its North Carolina retail cost of service or rates except as allowed by the Commission.

3.3 Ownership and Control of Assets Used by DENC and PSNC to Supply Electric Power or Natural Gas Services to North Carolina Customers; Transfer of Ownership or Control.

(a) DENC and PSNC shall own and control all assets or portions of assets used for the generation, transmission, and distribution of electric power or the transmission, storage, or distribution of natural gas to their respective Customers (with the exception of assets both (1) not otherwise owned or controlled by DENC or PSNC and (2) used to provide power purchased by DENC at wholesale or natural gas transportation to PSNC). This paragraph 3.3(a) shall also not apply to the ordinary course of the operation of DENC's transmission assets in accordance with its membership in PJM, Inc.

(b) With respect to the voluntary transfer by DENC or PSNC to Nonpublic Utility Operations, an Affiliate, and/or a non-Affiliate, of the control of, operational responsibility for, or ownership of any asset or portion thereof used for the transmission, distribution, generation, or other provision of electric power and/or service, or natural gas service, to customers in North Carolina:

(i) DENC or PSNC shall provide written notice to the Commission at least 30 days in advance of any proposed transfer falling under Section 3.3(b) with a net book value in excess of ten million dollars ($10 million). The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition. DENC or PSNC shall not commit to or carry out such a transfer except in accordance with North Carolina law and the rules, regulations, and orders of the Commission promulgated thereunder; and

(ii) DENC or PSNC may not include in rates the value of any such transfer, except as allowed by the Commission in accordance with North Carolina law.

3.4 Purchases and Sales of Electricity and Natural Gas between DENC, PSNC, SCANA, Dominion Energy, Other Affiliates, or Nonpublic Utility Operations. Subject to additional restrictions set forth in the Code of Conduct, neither DENC or PSNC shall purchase electricity (or related ancillary services) or natural gas from Dominion Energy, another Affiliate, or a Nonpublic Utility Operation under circumstances where the total all-in costs, including generation, transmission, ancillary costs, distribution, taxes and fees, and delivery point costs, incurred (whether directly or through allocation), based on information known, anticipated, or reasonably available at the time of purchase, exceed fair Market Value for comparable service, nor shall DENC or PSNC sell electricity (or related ancillary services) or natural gas to Dominion Energy, another Affiliate, or a Nonpublic Utility Operation for less than fair Market Value; provided, however, that such restrictions shall not apply to emergency transactions.

3.5 Least Cost Integrated Resource Planning and Resource Adequacy. DENC shall retain the obligation to pursue least cost integrated resource planning for its regulated electric Customers and remain responsible for its own resource adequacy subject to Commission oversight in accordance with North Carolina law. DENC shall determine the appropriate self-built or purchased power resources to be used to provide future generating capacity and energy to its regulated electric Customers, including the siting considered appropriate for such resources, on the basis of the benefits and costs of such siting and resources to those regulated electric Customers.

3.6 Native Load Service. DENC shall continue to serve its Retail Native Load Customers with the lowest-cost power it can generate or purchase from other sources in order to meet its native load requirements in accordance with Condition No. 11.1 before making power available to customers that are not entitled to the same level of priority as Retail Native Load Customers. Before DENC executes any contract that grants Native Load Priority to a wholesale customer or to one or more retail customers of another entity, it shall, for informational purposes, provide the Public Staff with at least 15 days' written advance notice of its intent to grant Native Load Priority and to treat the retail native load of a proposed wholesale customer as if it were DENC's retail native load pursuant to this subsection and subsection 3.5.

3.7 Additional Provisions Regarding Wholesale Contracts Entered into by DENC as Seller.

(a) This Regulatory Condition does not apply to PSNC.
(b) The Commission retains the right to assign, allocate, impute, and make pro- forma adjustments with respect to the revenues and costs for retail ratemaking and regulatory accounting and reporting purposes.
(c) DENC acknowledges that when it enters into wholesale contracts that obligate DENC to construct generating facilities or make commitments to purchase capacity and energy to meet those contractual commitments such action constitutes

acceptance by DENC, Dominion Energy, and other Affiliates or Nonpublic Utility Operations thereof of the risks that investments in generating facilities or commitments to purchase capacity and energy to meet such contractual commitments and maintain an adequate reserve margin throughout the term of such contracts may become uneconomic sunk costs that may not be recoverable from DENC's Retail Native Load Customers. In a future Commission retail proceeding in which cost recovery is at issue, DENC shall not claim that it does not bear this risk, and DENC shall acknowledge that the Commission retains full authority under Chapter 62 to ascertain whether such costs are used and useful. For purposes of this condition, capacity will be considered used and useful and not excess capacity to the extent the Commission determines such capacity is needed by DENC to meet the expected peak loads of DENC's Retail Native Load Customers in the near term future plus a reserve margin comparable to that currently being used or otherwise considered appropriate by the Commission.

(d) Except as provided in the foregoing conditions, DENC retains the right to challenge the lawfulness of any order issued by the Commission in connection with the assignment, allocation, imputation, pro-forma adjustments to, or disallowances of the revenues and costs associated with DENC's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes on any other grounds, including but not limited to the rights outlined in G.S. 62-94(b).

3.8 Other Protections.

(a) DENC, PSNC, Dominion Energy, another Affiliate, and a Nonpublic Utility Operation shall not assert in any forum - whether judicial, administrative, federal, state, local or otherwise - that the Commission's authority to determine the reasonableness or prudence of DENC's or PSNC's decisions with respect to supply-side resources, demand-side management, or any other aspect of resource adequacy is limited.

(b) Any contract or filing regarding DENC's withdrawal from an RTO or comparable entity must be contingent upon state regulatory approval. This Regulatory Condition does not apply to PSNC.

(c) DENC and PSNC shall obtain Commission approval before the Service Company is sold, transferred, merged with any other entities, has any ownership interest therein changed, or otherwise changed so that a change of control could occur. This requirement does not apply to any movement of the Service Company within the Dominion Energy holding company system that does not constitute a change of control.

(d) DENC and PSNC may participate in joint comments and other joint filings with Affiliates only when such participation fully complies with both the letter and the spirit of the Regulatory Conditions. Any filing made by the Service Company on behalf of DENC or PSNC must clearly identify the Service Company as an agent of DENC or PSNC for purposes of making the filing.

(e) Neither DENC, PSNC, Dominion Energy, another Affiliate, nor a Nonpublic Utility Operation shall make any assertion or argument either on its own initiative or in support of any other entity's assertions in any forum - whether judicial, administrative, federal, state, or otherwise - with respect to any contract, transaction, or other matter in which DENC or PSNC is involved or proposes to be involved or any contract, transaction, or matter involving or proposed to involve Dominion Energy, any other Affiliate, or any Nonpublic Utility Operation that may have an Effect on DENC's or PSNC's Rates or Service, that any of the following actions exceed the Commission's power, authority or jurisdiction under North Carolina law:

(i) reviewing the reasonableness of any Affiliate commitment entered into or proposed to be entered into by DENC or PSNC, or disallowing the costs of, or imputing revenues related to such commitment to, DENC or PSNC;
(ii) exercising its authority over financings or setting rates based on the capital structure, corporate structure, debt costs, or equity costs that it finds to be appropriate for retail ratemaking purposes;
(iii) reviewing the reasonableness of any commitment entered into or proposed to be entered into by DENC or PSNC to transfer an asset;
(iv) mandating, approving, or otherwise regulating a transfer of assets by or to DENC or PSNC;
(v) scrutinizing and establishing the value of any asset transfers for the purpose of determining the rates for services rendered to DENC's Retail Native Load Customers or PSNC's Customers; or
(vi) exercising any other lawful authority it may have.

Should any other entity so assert, neither DENC, PSNC, Dominion Energy, other Affiliates, nor the Nonpublic Utility Operations shall support any such assertion and shall, promptly upon learning of such assertion, advise and consult with the Commission and the Public Staff regarding such assertion.

(f) DENC, PSNC, Dominion Energy, and any other Affiliates, and the Nonpublic Utility Operations shall (A) acknowledge the risk of any possible preemptive effects of Federal Law with respect to any contract, transaction, or commitment entered into or made or proposed to be entered into or made by DENC or PSNC, or which may otherwise affect DENC's or PSNC's operations, service, or rates and (B) shall take all actions as may be reasonably and lawfully necessary and appropriate to advance the interests of North Carolina ratepayers to avoid rate increases, foregone opportunities for rate decreases or any other adverse effects of such preemption including but not limited to intervention in FERC proceedings on behalf of the interests of North Carolina ratepayers.

3.9 <u>FERC Filings and Orders</u>. In addition to the filing requirements of Commission Rule R8-27 and all other applicable statutes and rules, and to keep the Commission informed of its activities, DENC shall, on a quarterly basis, file with the Commission the following: (a) a list of all active dockets at the FERC, including a sufficient description to identify the type of proceeding, in which DENC, Dominion Energy, or the Service Company on behalf of DENC or Dominion Energy is a party, with new information in each quarterly filing tracked; and (b) a list of the periodic reports filed by DENC, Dominion Energy, or the Service Company on behalf of DENC or Dominion Energy with the FERC, including sufficient information to identify the subject matter of each report and how each report can be accessed. These filings shall be made in Docket No. E-22, Sub 551D and updated regularly.

In addition, DENC shall serve on the Public Staff all of its FERC filed cost-based and market-based wholesale agreements and amendments; interconnection agreements and amendments for all generation facilities in DENC's North Carolina retail service territory and all generation facilities 20 megawatts or greater in size in the remainder of DENC's service territory; and any other filings made by DENC, Dominion Energy, or the Service Company on behalf of DENC or Dominion Energy with the FERC, to the extent these other filings are reasonably likely to have an Effect on DENC's Rates or Service. This Regulatory Condition does not apply to PSNC, as relevant FERC-related information is required to be filed with the Commission in annual gas cost prudence reviews.

SECTION IV
TREATMENT OF AFFILIATE COSTS AND RATEMAKING

The following Regulatory Conditions are intended to ensure that the costs incurred by DENC and PSNC are properly incurred, accounted for, and directly charged, directly assigned, or allocated to their respective North Carolina retail operations and that only costs that produce benefits to DENC's Retail Native Load Customers and PSNC's Customers are included in DENC's and PSNC's North Carolina cost of service for ratemaking purposes. The procedures set forth in Regulatory Condition 13.2 do not apply to an advance notice filed pursuant to Regulatory Condition 4.5.

4.1 Access to Books and Records. In accordance with North Carolina law, the Commission and the Public Staff shall continue to have access to the books and records of DENC, PSNC, Dominion Energy, other Affiliates, and the Nonpublic Utility Operations.

4.2 Procurement or Provision of Goods and Services by DENC or PSNC from or to Affiliates or Nonpublic Utility Operations. Except as to transactions between and among DENC and PSNC pursuant to filed and approved service agreements and lists of services, and subject to additional provisions set forth in the Code of Conduct, DENC and PSNC shall take the following actions in connection with procuring goods and services for their respective utility operations from Affiliates or Nonpublic Utility Operations and providing goods and services to Affiliates or Nonpublic Utility Operations:

(a) DENC and PSNC each shall seek out and buy all goods and services from the lowest cost qualified provider of comparable goods and services, and shall have the burden of proving that any and all goods and services procured from their Utility Affiliates, Non-Utility Affiliates, and Nonpublic Utility Operations have been procured on terms and conditions comparable to the most favorable terms and conditions reasonably available in the relevant market, which shall include a showing that comparable goods or services could not have been procured at a lower price from qualified non- Affiliate sources or that DENC or PSNC could not have provided the services or goods for itself on the same basis at a lower cost. To this end, no less than every four years DENC and PSNC shall perform comprehensive non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services they receive from a Utility Affiliate, the Service Company, another Non-Utility Affiliate, and a Nonpublic

Utility Operation, including periodic testing of services being provided internally or obtained individually through outside providers. To the extent the Commission approves the procurement or provision of goods and services between or among DENC, PSNC, and the Utility Affiliates, those goods and services may be provided at the supplier's Fully Distributed Cost.

(b) To the extent they are allowed to provide such goods and services, DENC and PSNC shall have the burden of proving that all goods and services provided by either of them to Dominion Energy, a Non-Utility Affiliate, any other Affiliate, or a Nonpublic Utility Operation have been provided on the terms and conditions comparable to the most favorable terms and conditions reasonably available in the market, which shall include a showing that such goods or services have been provided at the higher of cost or market price. To this end, no less than every four years DENC and PSNC shall perform comprehensive, non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services provided by either of them to a Utility Affiliate, the Service Company, another Non-Utility Affiliate, any other Affiliate, and a Nonpublic Utility Operation.

(c) The periodic assessments required by subdivisions (a) and (b) of this subsection may take into consideration qualitative as well as quantitative factors. To the extent that comparable goods or services provided to DENC or PSNC, or by DENC or PSNC are not commercially available, this Regulatory Condition shall not apply.

4.3 Location of Core Utility Functions.

(a) This Regulatory Condition does not apply to PSNC.

(b) Core utility functions are those functions related to Electric Services. Core utility functions do not include services of a governance or corporate type nature that have been traditionally provided by a service company, the specific services listed on the service company agreement services list for DENC filed with the Commission pursuant to Regulatory Condition 4.4(a), and roles that provide oversight to the enterprise and are not jurisdiction- specific (Excluded Functions). DENC shall annually review core utility function employees charging more or less than 50% of their time to DENC over a six-month period from January 1 to June 30. DENC shall annually file, on or before January 1, a report containing the results of the annual review. DENC may file a list of employees at the higher levels of management (not including those levels of management that report directly to the Chief Executive Officer for Dominion Energy) for their core utility functions that they propose to be Service Company employees in their annual filing. DENC shall also include in its annual filing a list of any DENC employee positions or functions that have been transferred to the Service Company, Dominion Energy, or another Affiliate during the preceding year, and the reason(s) for each transfer. DENC shall meet with the Public Staff no later than March 31 of each year, beginning in 2020, to review the results of the annual reviews and, to the extent necessary, develop a proposal for any appropriate modifications to this Condition 4.3.

4.4 Service Agreements and Lists of Services.

(a) DENC and PSNC shall file pursuant to G.S. 62-153 final proposed service agreements that authorize the provision and receipt of non-power goodsor services between and among DENC, PSNC, or their Affiliates, the list(s) of goods and services that DENC and PSNC each intend to take from the Service Company, the list(s) of goods and services DENC and PSNC intend to take from each other and the Utility Affiliates, and the basis for the determination of such list(s) and the elections of such services. All such lists that involve payment of fees or other compensation by DENC or PSNC shall require acceptance and authorization by the Commission, and shall be subject to any other Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) DENC and PSNC shall take goods and services from an Affiliate only in accordance with the filed service agreements and approved list(s) of services. DENC and PSNC shall file notice with the Commission in Docket Nos. E-22, Sub 551A and G-5, Sub 585A, respectively, at least 15 days prior to making any proposed changes to the service agreements or to the lists of services.

4.5 Charges for and Allocations of the Costs of Affiliate Transactions. To the maximum extent practicable, all costs of Affiliate transactions shall be directly charged. When not practicable, such costs shall be assigned in proportion to the direct charges. If such costs are of a nature that direct charging and direct assignment are not practicable, they shall be allocated in accordance with Commission- approved allocation methods. The following additional provisions shall apply:

(a) DENC and PSNC shall keep on file with the Commission a cost allocation manual (CAM) with respect to goods or services provided by DENC or PSNC, any Utility Affiliate, the Service Company, any other Non-Utility Affiliate, Dominion Energy, any other Affiliates, or any Nonpublic Utility Operation to DENC or PSNC. PSNC will adopt DENC's CAM.

(b) The CAM shall describe how all directly charged, direct assignment, and other costs for each provider of goods and services will be charged between and among DENC, PSNC, their Utility Affiliates, Non-Utility Affiliates, Dominion Energy, any other Affiliates, and the Nonpublic Utility Operations, and shall include a detailed review of the common costs to be allocated and the allocation factors to be used.

(c) The CAM shall be updated annually, and the revised CAM shall be filed with the Commission no later than March 31 of the year that the CAM is to be in effect. DENC and PSNC shall review the appropriateness of the allocation bases every two years, and the results of such review shall be filed with the Commission. Interim changes shall be made to the CAM, if and when necessary, and shall be filed with the Commission, in accordance with Regulatory Condition 4.6.

(d) No changes shall be made to the procedures for direct charging, direct assigning, or allocating the costs of Affiliate transactions or to the method of accounting for such transactions associated with goods and services (including Shared Services provided by the Service Company) provided to or by Dominion Energy, other Affiliates, and the Nonpublic Utility Operations until DENC or PSNC has given

15 days' notice to the Commission of the proposed changes, in accordance with Regulatory Condition 4.6.

4.6 Procedures Regarding Interim Changes to the CAM or Lists of Goods and Services for which 15 Days' Notice is Required. With respect to interim changes to the CAM or changes to lists of goods and services, for which the 15 day notice to the Commission is required, the following procedures shall apply: the Public Staff shall file a response and make a recommendation as to how the Commission should proceed before the end of the notice period. If the Commission has not issued an order within 30 days of the end of the notice period, DENC or PSNC may proceed with the changes but shall be subject to any fully adjudicated Commission order on the matter. The provisions of Regulatory Condition 13.2 do not apply to advance notices filed pursuant to Regulatory Condition 4.5(c) and (d). Such advance notices shall be filed in Docket Nos. E-22, Sub 551A and G-5, Sub 585A.

4.7 Annual Reports of Affiliate Transactions. DENC and PSNC shall file annual report(s) of affiliated transactions with the Commission in a format to be prescribed by the Commission in Docket Nos. E-22, Sub 551A and G-5, Sub 585A. The report(s) shall be filed on or before May 30 of each year, for activity through December 31 of the preceding year. DENC, PSNC, and other parties may propose changes to the required affiliated transaction reporting requirements and submit them to the Commission for approval, also in Docket Nos. E-22, Sub 551A and G- 5, Sub 585A.

4.8 Ongoing Review by Commission.

(a) The services rendered by DENC and PSNC to their Affiliates and Nonpublic Utility Operations and the services received by DENC or PSNC from their Affiliates and Nonpublic Utility Operations pursuant to the filed service agreements, the costs and benefits assigned or allocated in connection with such services, and the determination or calculation of the bases and factors utilized to assign or allocate such costs and benefits, as well as DENC's and PSNC's compliance with the Commission-approved Code of Conduct and all Regulatory Conditions, shall remain subject to ongoing review. These agreements shall be subject to any Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) The service agreements, the CAM and the assignments and allocations of costs pursuant thereto, the biannual allocation factor reviews required by Regulatory Condition 4.5(c), the list(s) and the goods and services provided pursuant thereto, and any changes to these documents shall be subject to ongoing Commission review, and Commission action if appropriate.

4.9 Future Orders. For the purposes of North Carolina retail accounting, reporting, and ratemaking, the Commission may, after appropriate notice and opportunity to be heard, issue future orders relating to DENC's or PSNC's cost of service as the Commission may determine are necessary to ensure that DENC's and PSNC's operations and transactions with their Affiliates and Nonpublic Utility Operations are consistent with the Regulatory Conditions and Code of Conduct, and with any other applicable decisions of the Commission.

4.10 Review by the FERC. Notwithstanding any of the provisions contained in these Regulatory Conditions, to the extent the allocations adopted by the Commission when compared to the allocations adopted by the other State commissions with ratemaking authority as to a Utility Affiliate of DENC or PSNC result in significant trapped costs related to "non-power goods or administrative or management services provided by an associate company organized specifically for the purpose of providing such goods or services to any public utility in the same holding company system," including DENC and PSNC, DENC or PSNC may request pursuant to Section 1275(b) of Subtitle F in Title XII of the Energy Policy Act of 2005 that the FERC "review and authorize the allocation of the costs for such goods and services to the extent relevant to that associate company." Such review and authorization shall have whatever effect it is determined to have under the law. The quoted language in this Regulatory Condition is taken directly from Section 1275(b) of Subtitle F in Title XII of the Energy Policy Act of 2005. The terms "associate company" and "holding company system" are defined in Sections 1262(2) and 1262(9), respectively, of Subtitle F in Title XII of the Energy Policy Act of 2005 and have the same meanings for purposes of this condition.

4.11 Biannual Review of Certain Transactions by Internal Auditors. At least biannually, Dominion Energy shall conduct an internal audit to review the affiliate transactions undertaken pursuant to Affiliate agreements filed in accordance with Regulatory Condition 4.4 and of DENC's compliance with all conditions approved by the Commission concerning Affiliate transactions, including the propriety of the transfer pricing of goods and services between or among DENC, PSNC, other Affiliates, and all of the Nonpublic Utility Operations. The first audit shall begin two years from the date of the close of the Merger. It shall include whether DENC's and PSNC's transactions, services, and other Affiliate dealings pursuant to the regulated utility-to-regulated utility service agreement and any other utility to utility agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DENC and PSNC have operated in accordance with those conditions and Code of Conduct. The second audit shall begin two years from the date of the Commission's order on the internal auditor's final report on the first audit or, if no such order is issued, two years from the date of such final report. It shall include whether DENC's and PSNC's transactions, services, and other Affiliate dealings pursuant to the Service Company Utility Service Agreement and other Affiliate transactions other than transactions undertaken pursuant to regulated utility to regulated utility service agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DENC and PSNC have operated in accordance with those conditions and Code of Conduct. Thereafter, internal audits shall occur every two years from the date of the Commission's order on the immediately preceding auditor's final report or, if no such order is issued, two years from the date of such final report. The subject matter of these audits shall alternate between the subject matters for the first and second internal audits. DENC and PSNC may request a change in the frequency of the audit reports in future years, subject to approval by the Commission. Such biannual reviews shall also address transactions between DENC or PSNC and Dominion Energy, other Affiliates, and the Nonpublic Utility Operations, transactions between DENC and PSNC, and other transactions between or among Affiliates if such transactions are reasonably likely to have a significant Effect on DENC's or PSNC's Rates or Service. To the extent external audits of the transactions are conducted, DENC and PSNC shall make available such audits for review by the Public Staff and the Commission. DENC and PSNC also shall make available for review by the Public Staff and the Commission all workpapers relating to internal audits and all other internal audit workpapers, if any, related to affiliate transactions, and shall not oppose Public Staff and Commission requests to review relevant external audit workpapers. Neither DENC, PSNC, Dominion Energy, any other Affiliate, nor any Nonpublic Utility Operation shall assert the attorney-client privilege for any internal audit report or workpaper, any portion of such report or workpaper, or any support requested by the Public Staff or Commission with regard to such report or workpaper, with regard to the internal audits required by this paragraph.

4.12 Notice of DENC, PSNC, Dominion Energy, and Service Company and Non-Utility Affiliates FERC Audits. At such time as DENC, PSNC, Dominion Energy, or the Service Company receives notice from the FERC related to an audit of any Affiliate of DENC or PSNC, DENC or PSNC shall promptly file a notice with the Commission that such an audit will be commencing. Any initial report of the FERC's audit team shall be provided to the Public Staff, and any final report shall be filed with the Commission in Docket Nos. E-22, Sub 551E and G-5, Sub 585E, respectively.

4.13 Acquisition Adjustment. Any acquisition adjustment that results from the Merger shall be excluded from DENC's and PSNC's utility accounts and treated for regulatory accounting, reporting, and ratemaking purposes so that it does not affect DENC's North Carolina retail rates and charges for Electric Services or PSNC's North Carolina rates and charges for Natural Gas Services.

4.14 Non-Consummation of Merger. If the Merger is not consummated, neither the cost, nor the receipt, of any termination payment between Dominion Energy and PSNC shall be allocated to DENC or PSNC or recorded on their books. DENC's Retail Native Load Customers or PSNC's Customers shall not otherwise bear any direct expenses or costs associated with a failed merger.

4.15 Protection from Commitments to Wholesale Customers.

(a) This Regulatory Condition does not apply to PSNC.

(b) For North Carolina retail electric cost of service/ratemaking purposes, DENC's electric system costs shall be assigned or allocated between and among retail and wholesale jurisdictions based on reasonable and appropriate cost causation principles, taking into consideration the Commission's findings and conclusions regarding the costs associated with DENC's membership in PJM, Inc., set forth in the Commission's Dec. 22, 2016, order issued in Docket No. E-22, Sub 532. For cost of service/ratemaking purposes, North Carolina retail ratepayers shall be held harmless from any cost assignment or allocation of costs resulting from agreements between DENC and any of its wholesale customers, other than for reasonable and appropriate load decline or growth.

(c) To the extent that commitments are made by or imposed upon DENC, PSNC, Dominion Energy, another Affiliate, or a Nonpublic Utility Operation relating to the Merger, either through an offer, a settlement, or as a result of a regulatory order, the effects of which serve to increase the North Carolina retail cost of service or

North Carolina retail fuel costs under reasonable cost allocation practices, or decrease the bulk power revenues that are assigned or allocated to DENC's North Carolina retail operations or credited to DENC's jurisdictional fuel expenses, the effects of these commitments shall not be recognized for North Carolina retail ratemaking purposes.

4.16 Joint Owner-Specific Issues. Assignment or allocation of costs to the North Carolina retail jurisdiction shall not be adversely affected by the manner and amount of recovery of electric system costs from the Joint Owners as a result of agreements between DENC and the Joint Owners. This Regulatory Condition does not apply to PSNC.

4.17 Inclusion of Cost Savings in Future Rate Proceedings. Neither DENC, PSNC, Dominion Energy, any other Affiliate, nor a Nonpublic Utility Operation shall assert that any interested party is prohibited from seeking the inclusion in future rate proceedings of cost savings that may be realized as a result of any business combination transaction impacting DENC and PSNC.

4.18 Reporting of Merger-Related Expenses. The North Carolina portion of Merger- Related Expenses shall be reflected in DENC's North Carolina ES-1 Reports and PSNC's North Carolina GS-1 Reports, as recorded on their books and records under generally accepted accounting principles. DENC and PSNC shall include as a footnote in their ES-1 and GS-1 Reports, as applicable, the Merger- Related Expenses that were expensed during the relevant period.

4.19 Liabilities of CNG and SCE&G. DENC's Retail Native Load Customers and PSNC's Customers shall be held harmless from all liabilities of CNG and SCE&G and their subsidiaries, including those incurred prior to and after Dominion Energy's acquisition of CNG in 1999. These liabilities include, but are not limited to, those associated with the following: (i) manufactured gas plant sites, (ii) asbestos claims, (iii) environmental compliance, (iv) pensions and other employee benefits, (v) decommissioning costs, and (vi) taxes. DENC's Retail Native Load Customers and PSNC's Customers shall also be held harmless from all liabilities of SCE&G, including all liabilities associated with the Summer Nuclear Station.

4.20 Hold Harmless Commitment. PSNC's Customers shall be held harmless from all current and prospective liabilities of DENC. DENC's Customers shall be held harmless from all current and prospective liabilities of PSNC. DENC, PSNC, Dominion Energy, the other Affiliates, and all of the Nonpublic Utility Operations shall take all such actions as may be reasonably necessary and appropriate to hold North Carolina Customers harmless from the effects of the Merger, including rate increases or foregone opportunities for rate decreases, and other effects otherwise adversely impacting Customers.

Cost of Service Manual. Within six months after the closing date of the Merger, DENC shall file with the Commission revisions to its electric cost of service manual to reflect any changes to the cost of service determination process made necessary by the Merger, any subsequent alterations in the organizational structure of DENC, PSNC, Dominion Energy, other Affiliates, or the Nonpublic Utility Operations, or other circumstances that necessitate such changes. These filings shall be made in Docket No. E-22, Sub 551A.

SECTION V
CODE OF CONDUCT

These Regulatory Conditions include a Code of Conduct. The Code of Conduct governs the relationships, activities, and transactions between or among the public utility operations of DENC, PSNC, Dominion Energy, the Affiliates of DENC and PSNC, and the Nonpublic Utility Operations of DENC and PSNC.

5.1 Compliance. DENC, PSNC, Dominion 'Energy, the other Affiliates, and the Nonpublic Utility Operations shall be bound by the terms of the Code of Conduct set forth in Appendix A and as it may subsequently be amended.

SECTION VI
PJM CONDITIONS

6.1 Cost-based Rates. DENC's North Carolina retail Customers will continue to be entitled to, and receive, cost-based rates for generation, transmission, and distribution (including any ancillary services) determined pursuant to North Carolina law notwithstanding DENC's integration into PJM or decision to participate in any capacity or energy market administered by PJM.

6.2 Reporting Requirements. DENC shall continue to comply with the reporting obligations established in Paragraph 5[1] of the Joint Offer of Settlement entered into between DENC and PJM filed in Docket No. E-22, Sub 418, on December 6, 2004, as set forth below.

Condition 5:

Dominion agrees to submit annually to the Commission, [on or before August 31 of each year,] a report or reports that provide the following information set forth in items a. through d. below. [The annual report or

---

[1] Pursuant to the letter filed by Monitoring Analytics, LLC in Docket No. E-22, Sub 532 on Nov. 16, 2016, Monitoring Analytics, LLC, acting in its capacity as the Independent Market Monitor ("IMM") for PJM, will continue to annually file the information specified in Paragraph 6 of the December 16, 2004 Joint Offer of Settlement. Paragraph 6 provides:

6. [The PJM IMM] will provide annual reports to the Commission [on or before July 15 of each year,] detailing the following information:

a. A description of transmission constraints impacting Dominion's service territory within North Carolina and the events leading up to such constraints. Such description should include an estimate of the congestion costs associated with each event.
b. The actual locational marginal prices by bus impacting Dominion's service territory within North Carolina, including a separate identification of the congestion component of such prices.
c. Such reports will be provided annually [original language inapplicable].

reports] will cover the twelve month period June 1 through the following May 31, to correspond with PJM's FTR allocation and auction schedule:

a. A summary of monthly congestion costs and FTR revenues allocated to the North Carolina portion of the Company's service territory, including a description of the method of allocating such costs and revenues. This summary should provide a breakdown of explicit congestion costs (incurred through transmission congestion charges) and discuss the extent to which explicit congestion costs are mitigated through the receipt of FTR or ARR revenue.

b. A summary of the Company's monthly capacity and energy transactions with the PJM markets to the extent they impact costs and revenues allocated to the North Carolina portion of the Company's service territory.

c. A narrative description of the LMP load aggregation zones designated within the North Carolina portion of the Company's service territory. This description should describe any change (actual or proposed) in the designation of such zones and the cause of any such change.

d. A narrative description of the Company's general approach for requesting or obtaining ARRs or FTRs, the level of ARRs or FTRs requested, and the amount received that impacts the Company's operations in North Carolina. This description should describe any change (actual or proposed) in the allocation of ARRs or FTRs to the Company and the cause of any such change.

SECTION VII
FINANCINGS

The following Regulatory Conditions are intended to ensure (a) that DENC's and PSNC's capital structures and cost of capital are not adversely affected through their affiliation with Dominion Energy, each other, and other Affiliates and (b) that DENC and PSNC have sufficient access to equity and debt capital at a reasonable cost to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their Customers.

These conditions do not supersede any orders or directives of the Commission regarding specific securities issuances by DENC, PSNC, or Dominion Energy. The approval of the Merger by the Commission does not restrict the Commission's right to review, and by order to adjust, DENC's or PSNC's cost of capital for ratemaking purposes for the effect(s) of the securities-related transactions associated with the Merger.

7.1 Accounting for Equity Investment in Subsidiaries. Dominion Energy shall maintain its books and records so that any net equity investment in CNG or SCANA, their subsidiaries, or their successors, by Dominion Energy or any Affiliates can be identified and made available on an ongoing basis. This information shall be provided to the Public Staff upon its request.

7.2 Accounting for Capital Structure Components and Cost Rates. Dominion Energy, DENC, and PSNC shall keep their respective accounting books and records in a manner that will allow all capital structure components and cost rates of the cost of capital to be identified easily and clearly for each entity on a separate basis. This information shall be provided to the Public Staff upon its request.

7.3 Accounting for Equity Investment in DENC and PSNC. DENC and PSNC shall keep their respective accounting books and records so that the amount of Dominion Energy's equity investment in DENC and PSNC can be identified and made available upon request on an ongoing basis. This information shall be provided to the Public Staff upon request.

7.4 Reporting of Capital Contributions. As part of their Commission ES-1 and GS-1 Reports, DENC and PSNC shall include a schedule of any capital contribution(s) received from Dominion Energy in the applicable calendar quarter.

7.5 Identification of Long-term Debt Issued by DENC and PSNC. DENC and PSNC shall each identify as clearly as possible long-term debt (of more than one year's duration) that they issue in connection with their regulated utility operations and capital requirements or to replace existing debt.

7.6 Procedures Regarding Proposed Financings.

(a) The issuance of securities by Dominion Energy, DENC, or PSNC after the announcement of the Merger does not restrict the Commission's authority to review and, if required in order to establish just and reasonable rates, adjust the cost of capital of Dominion Energy, DENC, or PSNC, as the case may be, for ratemaking purposes.

(b) For all types of financings for which PSNC (or its subsidiaries) are the issuers of the respective securities, PSNC (or its subsidiaries) shall request approval from the Commission to the extent required by G.S. 62-160 through G.S. 62-169 and Commission Rule R1-16. Generally, the format of these filings should be consistent with past practices. A "shelf registration" approach (similar to Docket No. E-7, Sub 727) may be requested.

(c) Securities issuances or financings that are associated with a merger, acquisition, or other business combination shall be filed in conjunction with the information requirements and deadlines stated in Regulatory Conditions 9.1 and 9.2, and this Condition 7.6 shall not apply to such securities issuances or financings.

7.7 Intercompany Revolving Line of Credit (Loan) Agreement Subject to the limitations imposed in Regulatory Condition 8.6, DENC and PSNC may borrow through Dominion Energy. Dominion Energy intends to have in place a one-way Intercompany Revolving Credit Agreement ("IRCA") that allows PSNC to borrow directly from Dominion Energy but does not allow for Dominion Energy (or Affiliates) to borrow from PSNC. Funds under the IRCA will be available on a daily basis, as needed. PSNC will file monthly reports on its participation in the Intercompany Revolving Line of Credit (Loan) Agreement.

7.8 Borrowing Arrangements. Subject to the limitations imposed in Regulatory Condition 8.6, DENC may borrow short-term funds through one or more joint external debt or credit arrangements (a Credit Facility), provided that the following conditions are met:

(a) No borrowing by DENC under a Credit Facility shall exceed one year in duration, absent Commission approval;
(b) No Credit Facility shall include, as a borrower, any party other than DENC; and
(c) DENC's participation in any Credit Facility shall in no way cause it to guarantee, assume liability for, or provide collateral for any debt or credit other than its own.
(d) Should PSNC decide in the future to seek short-term financing via sources other than those permitted pursuant to Section 7.7, it will not do so without first notifying the Commission. PSNC will file monthly reports on any such short-term borrowings.

7.9 Long-Term Debt Fund Restrictions. DENC and PSNC shall acquire their respective long-term debt funds through the financial markets, and shall neither borrow from, nor lend to, on a long-term basis, Dominion Energy or any of the other Affiliates. To the extent that either DENC or PSNC borrows on short-term or long- term bases in the financial markets and is able to obtain a debt rating its debt shall be rated under its own name.

SECTION VIII
CORPORATE GOVERNANCE/RING FENCING

The following Regulatory Conditions are intended to ensure the continued viability of DENC and PSNC and to insulate and protect DENC, PSNC, and DENC's Retail Native Load Customers and PSNC's Customers from the business and financial risks of Dominion Energy and the Affiliates within the Dominion Energy holding company system, including the protection of utility assets from liabilities of Affiliates.

8.1 Investment Grade Debt Rating. DENC and PSNC shall manage their respective businesses so as to maintain an investment grade debt rating on all of their rated debt issuances with all of the debt rating agencies. If Dominion Energy's or PSNC's debt rating falls within one notch of an investment grade rating by S&P and Moody; then, DENC and PSNC shall file written notice to the Commission and the Public Staff within five (5) days of such change and an explanation as to why the downgrade occurred. Within 45 days of such notice, DENC or PSNC shall provide the Commission and the Public Staff with a specific plan for maintaining and improving its debt rating. The Commission, after notice and hearing, may then take whatever action it deems necessary consistent with North Carolina law to protect the interests of DENC's Retail Native Load Customers and PSNC's Customers in the continuation of adequate and reliable service at just and reasonable rates.

8.2 Protection Against Debt Downgrade. To the extent the cost rates of any of DENC's or PSNC's long-term debt (more than one year) or short-term debt (one year or less) are adversely affected after closing of the Merger through a ratings downgrade of those entities attributable to the Merger, a replacement cost rate to remove the effect shall be used for all purposes affecting any of DENC's North Carolina retail rates and charges and

PSNC's North Carolina rates and charges. This replacement cost rate shall be applicable to all financings, refundings, and refinancings taking place following an adverse change in ratings attributed to the Merger, and shall reflect the cost rate that is comparable to an issuer credit rating of a "BBB+" rating by S&P and an "A2" rating by Moody's. If a downgrade has occurred and is continuing, a replacement cost calculation will be determined, as part of DENC's and PSNC's future general rate cases. This procedure shall be effective for five years following the merger. This Regulatory Condition does not indicate a preference for a specific debt rating or preferred stock rating for DENC or PSNC on current or prospective bases.

8.3 Distributions from DENC and PSNC to Holding Company. DENC and PSNC shall limit cumulative distributions paid to Dominion Energy subsequent to the Merger to (a) the amount of Retained Earnings on the day prior to the closure of the Merger, plus (b) any future earnings recorded by DENC and PSNC subsequent to the Merger. DENC and PSNC shall notify the Commission and Public Staff if the payment of any distributions or dividends results in DENC's and PSNC's actual common equity component of total capitalization falling below 45%, using the method of calculating equity levels under the ratemaking precedents of this Commission. The notification shall include a brief explanation and planned steps to remedy the balance of common equity.

8.4 Debt Ratio Restrictions. To the extent any of Dominion Energy's external debt or credit arrangements contain covenants restricting the ratio of debt to total capitalization on a consolidated basis to a maximum percentage of debt, Dominion Energy shall ensure that the capital structures of both DENC and PSNC individually meet those restrictions.

8.5 Dominion Energy, Inc. commits to use commercially reasonable efforts to maintain a "BBB+" issuer credit rating by S&P and an "A2" rating by Moody's for PSNC and DENC.

8.6 Limitation on Continued Participation in Credit Arrangements with Affiliates. DENC and PSNC may participate in any authorized joint debt or credit arrangement as provided in Regulatory Conditions 7.7 and 7.8 only to the extent such participation is beneficial to DENC's respective Retail Native Load Customers and PSNC's Customers and does not negatively affect DENC's, or PSNC's ability to continue to provide adequate and reliable service at just and reasonable rates.

8.7 Notice of Level of Non-Utility Investment by Holding Company. In order to enable the Commission to determine whether the cumulative investment by Dominion Energy in assets, ventures, or entities other than regulated utilities is reasonably likely to have an Effect on DENC's or PSNC's Rates or Service so as to warrant Commission action (pursuant to Regulatory Condition 8.8 or other applicable authority) to protect DENC's Retail Native Load Customers or PSNC's Customers, Dominion Energy shall notify the Commission within 90 days following the end of any fiscal year for which Dominion Energy reports to the Securities and Exchange Commission assets in its operations other than regulated entities that are in excess of 22% of its consolidated total assets. The following procedures shall apply to such a notice:

(a) Any interested party may file comments within 45 days of the filing of Dominion Energy's notice.

(b) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall make a recommendation as to how the Commission should proceed. If the Commission determines that the percentage of total assets invested in Dominion Energy's operations other than regulated entities is reasonably likely to have an Effect on DENC's or PSNC's Rates or Service so as to warrant action by the Commission to protect DENC's Retail Native Load Customers and PSNC's Customers, the Commission shall issue an order setting the matter for further consideration. If the Commission determines that the percentage threshold being exceeded does not warrant action by the Commission, the Commission shall issue an order so ruling.

8.8 Use of nuclear decommissioning funds. DENC's nuclear decommissioning funds shall not be used in full or in part for the purpose of the Merger or any other purpose other than providing financial assurance for decommissioning the Surry and North Anna nuclear power stations owned by DENC.

8.9 Notice by Holding Company of Certain Investments. Dominion Energy shall file a notice with the Commission subsequent to Board approval and as soon as practicable following any public announcement of any investment in a regulated utility or a non-regulated business that represents five (5) percent or more of Dominion Energy's book capitalization.

8.10 Ongoing Review of Effect of Holding Company Structure. The operation of DENC and PSNC under a holding company structure shall continue to be subject to Commission review. To the extent the Commission has authority under North Carolina law, it may order modifications to the structure or operations of Dominion Energy, the Service Company, another Affiliate, or a Nonpublic Utility Operation, and may take whatever action it deems necessary in the interest of DENC's Retail Native Load Customers and PSNC's Customers to protect the economic viability of DENC and PSNC, including the protection of DENC's and PSNC's public utility assets from liabilities of Affiliates.

8.11 Investment by DENC or PSNC in Non-regulated Utility Assets and Non-utility Business Ventures. Neither DENC nor PSNC shall invest in a non-regulated utility asset or any non-utility business venture exceeding $50 million in purchase price or gross book value to DENC or PSNC unless it provides 30 days' advance notice. Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition. Purchases of assets, including land that will be held with a definite plan for future use in providing Electric Services in DENC's franchise area or Natural Gas Services in PSNC's franchise area, shall be excluded from this advance notice requirement.

8.12 Investment by Holding Company in Exempt Wholesale Generators. By April 15 of each year, Dominion Energy shall provide to the Commission and the Public Staff a report summarizing Dominion Energy's investment in exempt wholesale generators (EWGs) and foreign utility companies (FUCOs) in relation to its level of consolidated retained earnings and consolidated total capitalization at the end of the preceding year. Exempt wholesale generator and foreign utility company are defined in Section 1262(6) of Subtitle F in Title XII of the Energy Policy Act of 2005 and have the same meanings for purposes of this condition.

8.13 Notice by DENC or PSNC of Default or Bankruptcy of Affiliate. If an Affiliate of DENC or PSNC experiences a default on an obligation that is material to Dominion Energy or files for bankruptcy, and such bankruptcy is material to Dominion Energy, DENC, or PSNC, DENC and PSNC shall notify the Commission in advance, if possible, or as soon as possible, but not later than ten days from such event.

8.14 Annual Report on Corporate Governance. No later than March 31 of each year, DENC and PSNC shall file a report including the following:

(a) A complete, detailed organizational chart (i) identifying DENC, PSNC, and each Dominion Energy financial reporting segment, and (ii) stating the business purpose of each Dominion Energy financial reporting segment. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.

(b) A list of all Dominion Energy financial reporting segments that are considered to constitute non-regulated investments and a statement of each segment's total capitalization and the percentage it represents of Dominion Energy's non-regulated investments and total investments. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.

(c) An assessment of the risks that each unregulated Dominion Energy financial reporting segment could pose to DENC or PSNC based upon current business activities of those affiliates and any contemplated significant changes to those activities.

(d) A description of DENC's, PSNC's and each significant Affiliate's actual capital structure.

(e) A list of all protective measures (other than those provided for by these Regulatory Conditions) in effect between DENC, PSNC, and any of their Affiliates, and a description of the goal of each measure and how it achieves that goal, such as mitigation of DENC's and PSNC's exposure in the event of a bankruptcy proceeding involving any Affiliate(s).

(f) A list of corporate executive officers and other key personnel that are shared between DENC and PSNC, and any Affiliate, along with a description of each person's position(s) with, and duties and responsibilities to each entity.

(g) A calculation of Dominion Energy's total book and market capitalization as of December 31 of the preceding year for common equity, preferred stock, and debt.

SECTION IX
FUTURE MERGERS AND ACQUISITIONS

The following Regulatory Conditions are intended to ensure that the Commission receives sufficient notice to exercise its lawful authority over proposed mergers, acquisitions, and other business combinations involving Dominion Energy, DENC, PSNC, other Affiliates, or the

Nonpublic Utility Operations. The advance notice provisions set forth in Regulatory Condition 13.2 do not apply to these conditions.

9.1 Mergers and Acquisitions by or Affecting DENC or PSNC. For any proposed merger, acquisition, or other business combination by DENC or PSNC that would have an Effect on DENC or PSNC's Rates or Service, DENC, or PSNC shall file in a new Sub docket an application for approval pursuant to G S. 62 - 111(a) at least 180 days before the proposed closing date for such merger, acquisition, or other business combination.

9.2 Mergers and Acquisitions Believed Not to Have an Effect on DENC's, or PSNC's Rates or Service. For any proposed merger, acquisition, or other business combination that is believed not to have an Effect on DENC's, or PSNC's Rates or Service, but which involves Dominion Energy, other Affiliates, or the Nonpublic Utility Operations and which has a transaction value exceeding $1.5 billion, the following shall apply:

(a) Advance notification shall be filed with the Commission in a new Sub docket by the merging entities at least 90 days prior to the proposed closing date for such proposed merger, acquisition or other business combination. The advance notification is intended to provide the Commission an opportunity to determine whether the proposed merger, acquisition, or other business combination is reasonably likely to affect DENC or PSNC so as to require approval pursuant to G S. 62-111(a). The notification shall contain sufficient information to enable the Commission to make such a determination. If the Commission determines that such approval is required, the 180-day advance filing requirement in Regulatory Condition 9.1 shall not apply.

(b) Any interested party may file comments within 45 days of the filing of the advance notification.

(c) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall recommend that the Commission issue an order deciding how to proceed. If the Commission determines that the merger, acquisition, or other business combination requires approval pursuant to G.S. 62-111(a), the Commission shall issue an order requiring the filing of an application, and no closing can occur until and unless the Commission approves the proposed merger, acquisition, or business combination. If the Commission determines that the merger, acquisition, or other business combination does not require approval pursuant to G.S. 62-111(a), the Commission shall issue an order so ruling. At the end of the notice period, if no order has been issued, Dominion Energy, any other Affiliate, or the Nonpublic Utility Operation may proceed with the merger, acquisition, or other business combination but shall be subject to any fully-adjudicated Commission order on the matter.

ELECTRIC – MERGER

SECTION X
STRUCTURE/ORGANIZATION

The following Regulatory Conditions are intended to ensure that the Commission receives adequate notice of, and opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Dominion Energy, DENC, PSNC, and other Affiliates, and Nonpublic Utility operations as they may affect Customers.

10.1 Transfer of Services, Functions, Departments, Rights, Assets, or Liabilities. DENC and PSNC shall file notice with the Commission 30 days prior to the initial transfer or any subsequent transfer of any services, functions, departments, rights, obligations, assets, or liabilities from DENC or PSNC to the Service Company that involves services, functions, departments, rights, obligations, assets, or liabilities other than those of a governance or corporate type nature that traditionally have been provided by a service company or (b) potentially would have a significant effect on DENC's or PSNC's public utility operations. The provisions of Regulatory Condition 13.2 apply to an advance notice filed pursuant to this Regulatory Condition.

10.2 Notice and Consultation with Public Staff Regarding Proposed Structural and Organizational Changes. Upon request, DENC and PSNC shall meet and consult with, and provide requested relevant data to, the Public Staff regarding plans for significant changes in DENC's, PSNC's, or Dominion Energy's organization, structure (including RTO developments), and activities; the expected or potential impact of such changes on Customer rates, operations, and service; and proposals for assuring that such plans do not adversely affect DENC's Retail Native Load Customers or PSNC's Customers. To the extent that proposed significant changes are planned for the organization, structure, or activities of an Affiliate or Nonpublic Utility Operation and such proposed changes are likely to have an adverse impact on DENC's Retail Native Load Customers or PSNC's Customers, then DENC's and PSNC's plans and proposals for assuring that those plans do not adversely affect their Customers must be included in these meetings. DENC and PSNC shall inform the Public Staff promptly of any such events and changes.

SECTION XI
SERVICE QUALITY

The following Regulatory Conditions are intended to ensure that DENC and PSNC continue to implement and further their commitment to providing superior public utility service by meeting recognized service quality indices and implementing industry best practices of each other and their Utility Affiliates, to the extent reasonably practicable.

11.1 Overall Service Quality. Upon consummation of the Merger, DENC and PSNC each shall continue their commitment to providing superior public utility service and shall maintain the overall reliability of Electric Services and Natural Gas Services at levels no less than the overall levels it has achieved in the past decade.

11.2 Superior bundled retail electric service. DENC will continue to take all reasonable and prudent actions necessary to continue to provide its North Carolina retail customers with superior bundled retail electric service including but not limited to: reliable generation, transmission, and distribution service; minimization of power outages; efficient restoration of service; and responsive customer service.

11.3 Best Practices. DENC and PSNC shall make every reasonable effort to incorporate each other's industry best practices into its own practices to the extent reasonably practicable.

11.4 Quarterly Reliability Reports. DENC shall provide quarterly service reliability reports to the Public Staff on the following measures: System Average Interruption Duration Index (SAIDI) and System Average Interruption Frequency Index (SAIFI).

11.5 Notice of NERC Audit. At such time as DENC receives notice that the North American Electric Reliability Corporation (NERC) or the SERC Reliability Corporation will be conducting a non-routine compliance audit with respect to DENC's compliance with mandatory reliability standards, DENC shall notify the Public Staff.

11.6 Right-of-Way Maintenance Expenditures (DENC). DENC shall budget and expend sufficient funds to trim and maintain its lower voltage line rights-of-way and its distribution rights-of-way in a manner consistent with its internal right-of-way clearance practices and Commission Rule R8-26. In addition, DENC shall track annually, on a major category basis, departmental or division budget requests, approved budgets, and actual expenditures for right-of-way maintenance.

11.7 Right-of-Way Maintenance Expenditures (PSNC). PSNC shall budget and expend sufficient funds to maintain its pipeline rights-of-way so as to allow ready access by personnel and vehicles for the purpose of responding to pipeline damage, conducting leak and corrosion surveys, performing maintenance activities, and ensuring system integrity, safety, and reliability.

11.8 Right-of-Way Clearance Practices (DENC). DENC shall provide a copy of its internal right-of-way clearance practices to the Public Staff, and shall promptly notify the Public Staff of any significant changes or modifications to the practices or maintenance schedules.

11.9 Right-of-Way Clearance Practices (PSNC). PSNC shall provide a copy of its Operating and Maintenance Manual to the Public Staff and shall promptly notify the Public Staff in writing of any substantive changes to the practices or maintenance schedules.

11.10 Meetings with Public Staff.

(a) DENC and PSNC shall each meet annually with the Public Staff to discuss service quality initiatives and results, including (i) ways to monitor and improve service quality, (ii) right-of-way maintenance practices, budgets, and actual expenditures, and (iii) plans that could have an effect on customer service, such as changes to call center operations.

(b) DENC and PSNC shall each meet with the Public Staff at least annually to discuss potential new tariffs, programs, and services that enable its customers to appropriately manage their energy bills based on the varied needs of their customers.

(c) DENC also commits to provide such other data as required by the Commission and/or the Public Staff, including information on transmission and generation reliability. DENC will meet with the Public Staff every six months to review such reports and other operational information.

11.11 Customer Access to Service Representatives and Other Services. DENC and PSNC shall continue to have knowledgeable and experienced customer service representatives available 24 hours a day to respond to service outage calls and during normal business hours to handle all types of customer inquiries. DENC and PSNC shall also maintain up-to-date and user-friendly online services and automated telephone service 24 hours a day to perform routine customer interactions and to provide general billing and customer information.

11.12 Customer Surveys. DENC and PSNC shall continue to survey their Customers regarding their satisfaction with public utility service and shall incorporate this information into their processes, programs, and services.

SECTION XII
TAX MATTERS

The following Regulatory Conditions are intended to ensure that DENC's Retail Native Load Customers and PSNC's North Carolina Customers do not bear any additional income taxes as a result of the Merger and receive an appropriate share of any income tax benefits associated with the service company Affiliates.

12.1 Costs Under Tax Sharing Agreements. Under any tax sharing agreement, DENC and PSNC shall not seek to recover from North Carolina Customers any taxes that exceed DENC's or PSNC's tax liability calculated as if it were a stand-alone, taxable entity for tax purposes.

12.2 Taxes Associated with Service Companies. The appropriate portion of any taxes or tax benefits associated with the Service Company shall accrue to the North Carolina retail operations of DENC and PSNC for regulatory accounting, reporting, and ratemaking purposes.

SECTION XIII
PROCEDURES

The following Regulatory Conditions are intended to apply to all filings made pursuant to these Regulatory Conditions unless otherwise expressly provided by, Commission order, rule, or statute.

13.1 Filings that Do Not Involve Advance Notice. Regulatory Condition filings that are not subject to Regulatory Condition 13.2 shall be made in sub-dockets of Docket Nos. E-22, Sub 551 and G-5, Sub 585, as follows:

(a) Filings related to affiliate matters required by Regulatory Conditions 4.3, 4.4, 4.5, 4.6, 4.7, and 4.21, and Sections III.B.11 and III.D.8 of the Code of Conduct, shall be made by DENC and PSNC in Subs 551A and 585A, respectively;
(b) Filings related to financings required by Regulatory Condition 7.7 and 7.8, and the filings required by Regulatory Conditions 8.1, 8.3, 8.7, 8.9, 8.12, 8.13, and 8.14, shall be made by DENC and PSNC in Subs 551B and 585B, respectively;
(c) Filings related to compliance as required by Regulatory Condition 14.4 and filings required by Sections III.A.2(k), III.A.3(e), III.A.3(f), and III.D.5 of the Code of Conduct shall be made by DENC and PSNC in Subs 551C and 585C, respectively;
(d) Filings related to orders and filings with the FERC, as required by Regulatory Condition 3.9 and Section III.A.3(g) of the Code of Conduct shall be made by DENC and PSNC in Subs 551D and 585D, respectively.
(e) Filings related to notices from the FERC of audits of any Affiliate of DENC or PSNC, as required by Regulatory Condition 4.12, shall be made by DENC and PSNC in Subs 551E and 585E, respectively.

13.2 Advance Notice Filings. Advance notices filed pursuant to Regulatory Conditions 3.3(b), 8.11, and 10.1 shall be assigned a new, separate Sub docket. Such a filing shall identify the condition and notice period involved and state whether other regulatory approvals are required and shall be in the format of a pleading, with a caption, a title, allegations of the activities to be undertaken, and a verification. Advance notices may be filed under seal if necessary. The following additional procedures apply:

(a) Advance notices of activities to be undertaken shall not be filed until sufficient details have been decided upon to allow for meaningful discovery as to the proposed activities.
(b) The Chief Clerk shall distribute a copy of advance notice filings to each Commissioner and to appropriate members of the Commission Staff and Public Staff.
(c) DENC or PSNC shall serve such advance notices on each party to Docket Nos. E-22, Sub 551 and G-5, Sub 585, respectively, that has filed a request to receive them with the Commission within 30 days of the issuance of an order approving the Merger in this docket. These parties may participate in the advance notice proceedings without petitioning to intervene. Other interested persons shall be required to follow the Commission's usual intervention procedures.
(d) To effectuate this Regulatory Condition, DENC or PSNC shall serve pertinent information on all parties at the time it serves the advance notice. During the advance notice period, a free exchange of information is encouraged, and parties may request additional relevant information. If DENC or PSNC objects to a discovery request, DENC or PSNC and the requesting party shall try to resolve the matter. If the parties are unable to resolve the matter, DENC or PSNC may file a motion for a protective order with the Commission.

(e) The Public Staff shall investigate and file a response with the Commission no later than 15 days before the notice period expires. Any other interested party may also file a response or objection within 15 days before the notice period expires. DENC or PSNC may file a reply to the response(s).

(f) The basis for any objection to the activities to be undertaken shall be stated with specificity. The objection shall allege grounds for a hearing, if such is desired.

(g) If neither the Public Staff nor any other party files an objection to the activities within 15 days before the notice period expires, no Commission order shall be issued, and the Sub docket in which the advance notice was filed may be closed.

(h) If the Public Staff or any other party files a timely objection to the activities to be undertaken by DENC or PSNC, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than two weeks after the objection is filed, and shall recommend that the Commission issue an order deciding how to proceed as to the objection. The Commission reserves the right to extend an advance notice period by order should the Commission need additional time to deliberate or investigate any issue. At the end of the notice period, if no objection has been filed by the Public Staff and no order, whether procedural or substantive, has been issued, DENC, PSNC, Dominion Energy, any other Affiliate, or the Nonpublic Utility Operation may execute the proposed agreement, proceed with the activity to be undertaken, or both, but shall be subject to any fully-adjudicated Commission order on the matter.

(i) If the Commission schedules a hearing on an objection, the party filing the objection shall bear the burden of proof at the hearing.

(j) The precedential effect of advance notice proceedings, like most issues of res judicata, will be decided on a fact-specific basis.

(k) If some other Commission filing or Commission approval is required by statute, notice pursuant to a Regulatory Condition alone does not satisfy the statutory requirement.

SECTION XIV
COMPLIANCE WITH CONDITIONS AND CODE OF CONDUCT

The following Regulatory Conditions are intended to ensure that Dominion Energy, DENC, PSNC, and all other Affiliates establish and maintain the structures and processes necessary to fulfill the commitments expressed in all of the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner.

14.1 Ensuring Compliance with Regulatory Conditions and Code of Conduct. Dominion Energy, DENC, PSNC, and all other Affiliates shall devote sufficient resources into the creation, monitoring, and ongoing improvement of effective internal compliance programs to ensure compliance with all Regulatory Conditions and the Code of Conduct, and shall take a proactive approach toward correcting any violations and reporting them to the Commission. This effort shall include the implementation of systems and protocols for monitoring, identifying, and correcting possible violations, a management culture that encourages compliance among all personnel, and the tools and training sufficient to enable employees to comply with Commission requirements.

14.2 Designation of Chief Compliance Officer. DENC and PSNC shall designate a chief compliance officer who will be responsible for compliance with the Regulatory Conditions and Code of Conduct. This person's name and contact information must be posted on DENC's and PSNC's Internet Websites.

14.3 Annual Training. DENC and PSNC shall implement within one (1) year of the closing of the Merger an annual training program on the requirements and standards contained within the Regulatory Conditions and Code of Conduct to all of their employees (including service company employees) whose duties in any way may be affected by such requirements and standards. New employees must receive such training within the first 60 days of their employment. Each employee who has taken the training must certify electronically or in writing that s/he has completed the training.

14.4 Report of Violations. If DENC or PSNC discover that a violation of their requirements or standards contained within the Regulatory Conditions and Code of Conduct has occurred then DENC or PSNC shall file a statement with the Commission in Docket Nos. E-22, Sub 551C and G-5, Sub 585C, respectively, describing the circumstances leading to that violation of DENC's or PSNC's requirements or standards, as contained within the Regulatory Conditions and Code of Conduct, and the mitigating and other steps taken to address the current or any future potential violation.

SECTION XV
PROCEDURES FOR DETERMINING LONG-TERM SOURCES OF PIPELINE CAPACITY AND SUPPLY

The following Regulatory Conditions are intended to ensure the continued practices of DENC and PSNC for determining long-term sources of pipeline capacity and supply.

15.1 Cost-benefit Analysis. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by DENC on the basis of the benefits and costs of such source(s) specific to its electric customers. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by PSNC on the basis of the specific benefits and costs of such source(s) specific to its natural gas customers, including electric power generating customers. PSNC shall not contract with an Affiliate interstate pipeline for additional capacity with a contractual term of ten years or more unless or until it has issued a request for proposals to obtain such capacity and considers the proposals in good faith. PSNC shall not contract with an Affiliate interstate pipeline for additional capacity with a contractual term of ten years or more unless the Affiliate is the least cost provider of such capacity or unless otherwise approved by the Commission.

15.2 Ownership and Control of Contracts. Except as provided in Code of Conduct Section III.D.5 (Joint purchases), PSNC shall retain title, ownership, and management of all gas contracts necessary to ensure the provision of reliable Natural Gas Services consistent with PSNC's best cost gas and capacity procurement methodology.

ELECTRIC – MERGER

SECTION XVI
RATE REDUCTION, MOST FAVORED NATION CLAUSE, AND OTHER RATEPAYER PROTECTION MATTERS

The following Regulatory Conditions are intended to ensure, through rate and other protections for PSNC's North Carolina retail ratepayers, that the benefits of the Merger are equal to or surpass the costs of the merger to those ratepayers.

16.1 Bill Credit - PSNC will create a regulatory liability of $3.75 million representing a refund to customers of 2017 revenues and will subsequently provide such refund to customers as a bill credit of $1.25 million on January 1, 2019 or as soon thereafter as practicable, another bill credit of $1.25 million on January 1, 2020, and a final bill credit of $1.25 million on January 1, 2021.

16.2 Rate Moratorium - PSNC will not file an application for a general rate case proceeding to adjust its rates and charges before April 20, 2021. PSNC will not increase its non-gas cost margin in its rates until November 1, 2021, except for the following reasons: (1) adjustments or changes pursuant to Rider C (Customer Usage Tracker), Rider D (Purchased Gas Adjustment Procedures), and Rider E (Integrity Management Tracker) pursuant to G.S. 62-133.4, G.S. 62-133.7, and G.S. 62-133.7A; (2) to reflect the financial impact of governmental action (legislative, executive, or regulatory) having a substantial specific impact on the gas industry generally or on a segment thereof that includes PSNC, including but not limited to major expenditures for environmental compliance; (3) to implement natural gas expansion surcharges imposed pursuant to G.S. 62-158; or (4) to reflect the financial impact of major expenditures associated with force majeure. In addition, PSNC shall not file for any cost deferral during or covering any period from the date of an order approving the merger until after October 31, 2021, except: (1) to reflect the financial impact of governmental action (legislative, executive, or regulatory) having a substantial specific impact on the gas industry generally or on a segment thereof that includes PSNC, including but not limited to major expenditures for environmental compliance; or (2) to reflect the financial impact of major expenditures associated with force majeure. This provision does not indicate that the Public Staff would support, or that the Commission would approve, such cost deferral.

16.3 Customer Service: PSNC agrees to maintain current levels of customer service and behavior towards customers, as well as current levels of professional cooperation with regulators, consumer advocates, and intervenors.

16.4 Cost Saving Opportunities: The electric utility operations of DENC and SCE&G, along with their affiliates and subsidiaries, will look for post-Merger opportunities to engage in joint planning, purchasing, and services that will result in cost savings to DENC's retail electric customers, while not compromising reliability or service quality.

16.5 Most Favored Nations Clause - Following the approval of the Merger by the state commissions of Georgia, South Carolina, and any other jurisdictions where DENC or PSNC must obtain approval, and approval of merger-related affiliate agreements and any other merger-related filings required to be or otherwise approved by any applicable jurisdiction, any mechanisms pursuant to which benefits and ratepayer protections are provided to DENC and/or PSNC retail customers in each of these states will be reviewed to identify the states in which each of DENC's and/or PSNC's retail customers will receive the largest financial (including, but not limited to, rate reductions, rebates, refunds, other payments, bill credits, rate moratoriums, etc.) and non-financial benefits, and other ratepayer protections, on a per customer or pro rata basis. If the application of those benefits to DENC's and/or PSNC's North Carolina retail ratepayers would result in a greater level of benefits and/or protections than that which has otherwise been provided for their North Carolina retail customers in these Regulatory Conditions, then the benefits and protections to that utility's North Carolina retail ratepayers will be increased to match the greatest level of benefits and protections provided to the DENC and/or PSNC retail ratepayers in any of the other jurisdictions. Application of this methodology is intended to ensure that DENC's and PSNC's North Carolina retail customers receive the benefit of a "Most Favored Nation" status with regard to the provision of Merger benefits and protections among the states named above. In no event will the application of the methodology cause North Carolina retail customers' benefits or protections to be reduced. To facilitate this review, DENC and PSNC will jointly file final Orders, Stipulations, etc., from all jurisdictions listed above.

CODE OF CONDUCT GOVERNING THE RELATIONSHIPS AMONG DOMINION ENERGY NORTH CAROLINA, PUBLIC SERVICE COMPANY OF NORTH CAROLINA, INC., THEIR AFFILIATES, AND THEIR NONPUBLIC UTILITY OPERATIONS

I. DEFINITIONS

For purposes of this Code of Conduct, the terms listed below shall have the following definitions:

Affiliate: Dominion Energy, or any business entity of which ten percent (10%) ormore is owned or controlled, directly or indirectly, by Dominion Energy. For purposes of this Code of Conduct, Dominion Energy and any business entity controlled by it are considered to be Affiliates of DENC and PSNC, and DENC and PSNC are considered to be Affiliates of each other.

Commission: The North Carolina Utilities Commission.

Confidential Systems Operation Information or CSOI: Non-public information that pertains to Electric Services provided by DENC, including, but not limited to, information concerning electric generation, transmission, distribution, or sales, and non-public information that pertains to Natural Gas Services provided by PSNC, including, but not limited to, information concerning transportation, storage, distribution, gas supply, or other similar information.

Customer: Any retail electric customer of DENC in North Carolina and any Commission- regulated natural gas sales or natural gas transportation customer of PSNC located in North Carolina.

Customer Information: Non-public information or data specific to a Customer or a group of Customers, including, but not limited to, electricity consumption, natural gas consumption, load profile, billing history, or credit history, that is or has been obtained or compiled by DENC or PSNC in connection with the supplying of Electric Services or Natural Gas Services to that Customer or group of Customers.

DENC: Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina, the business entity, wholly owned by Dominion Energy, that holds the franchises granted by the Commission to provide Electric Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina. DENC refers to the system business and operation of Virginia Electric and Power Company, and not simply the North Carolina retail assigned or allocated portions of that business and operation.

Dominion Energy: Dominion Energy, Inc., which is the current holding company parent corporation of DENC and PSNC, and any successor company.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and retail sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of electric service to other suppliers.

FERC: The Federal Energy Regulatory Commission.

Fuel and Purchased Power Supply Services: All fuel for generating electric power and purchased power obtained by DENC from sources other than DENC for the purpose of providing Electric Services.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing the goods and services in question.

Gas Marketing Affiliate: An Affiliate, the business unit of an Affiliate, or the Nonpublic Utility Operations of PSNC that is engaged in the unregulated sale, arrangement, brokering, or management of gas supply, pipeline capacity, or gas storage.

Gas Marketing Affiliate Personnel: An employee or other representative of a Gas Marketing Affiliate that is involved in fulfilling the business purpose of the gas marketing affiliate. An officer or board member of both PSNC and a Gas Marketing Affiliate shall not be considered Gas Marketing Affiliate Personnel unless that individual is directly involved in the day-to-day fulfillment of the business purpose of the Gas Marketing Affiliate.

Market Value: The price at which property, goods, or services would change hands in an arm's-length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Dominion Energy and SCANA Corporation.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Nonaffiliated Gas Marketer: An entity, not affiliated with DENC or PSNC, engaged in the unregulated sale, arrangement, brokering, or management of gas supply, pipeline capacity, or gas storage.

Nonpublic Utility Operations: All business operations engaged in by DENC or PSNC involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including Service Company, other than a Utility Affiliate, DENC, or PSNC.

Personnel: An employee or other representative of DENC, PSNC, Dominion Energy, another Affiliate, or a Nonpublic Utility Operation, who is involved in fulfilling the business purpose of that entity.

PSNC: Public Service Company of North Carolina, Inc., the business entity, wholly owned by Dominion Energy and SCANA, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

PSNC Operating Personnel: An employee or other representative of PSNC that is directly involved on a day-to day basis in the acquisition, marketing, pricing, or scheduling of gas supply, interstate pipeline capacity, or gas storage facilities on behalf of PSNC. PSNC Operating Personnel also includes personnel directly on a day-to day basis involved in managing PSNC's facilities or responsible for determining which Customers to curtail, or involved in selling products and services to PSNC's Customers eligible to purchase gas, products, and services from persons other than PSNC.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Regulatory Conditions: The conditions imposed by the Commission in connection with or related to the Merger.

Service Company: A centralized service company Affiliate that provides Shared Services to DENC, PSNC, other Affiliates, and/or the Nonpublic Utility Operations of DENC or PSNC, singly or in any combination.

Shared Services: The services that meet the requirements of the Regulatory Conditions approved in Docket Nos. E-22, Sub 551 and G-5, Sub 585, or subsequent orders of the Commission, and that the Commission has explicitly authorized DENC and PSNC to take from Service Company pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

Shipper: A Gas Marketing Affiliate, Nonaffiliated Gas Marketer, a municipal gas customer, or an end-user of gas.

Utility Affiliates: The regulated utility operations of The East Ohio Gas Company (Dominion Energy Ohio), Hope Gas, Inc. (Dominion Energy West Virginia), Questar Gas Company (Dominion Energy Utah, Dominion Energy Wyoming, and Dominion Energy Idaho), and South Carolina Electric & Gas Company (SCE&G).

II. GENERAL

This Code of Conduct establishes the minimum guidelines and rules that apply to the relationships, transactions, and activities involving the public utility operations of DENC and PSNC, Dominion Energy, other Affiliates, or the Nonpublic Utility Operations of DENC and PSNC, to the extent such relationships, transactions, and activities affect operations of DENC and PSNC in their respective service areas. DENC, PSNC, and the other Affiliates are bound by this Code of Conduct pursuant to Regulatory Condition 5.1 approved by the Commission in Dockets No. E-22, Sub 551, and G-5, Sub 585. This Code of Conduct is subject to modification by the Commission as the public interest may require, including, but not limited to, addressing changes in the organizational structure of DENC, PSNC, Dominion Energy, other Affiliates, or the Nonpublic Utility Operations; changes in the structure of the electric industry or natural gas industry; or other changes that warrant modification of this Code.

DENC or PSNC may seek a waiver of any aspect of this Code of Conduct by filing a request with the Commission showing that circumstances in a particular case justify such a waiver.

III. STANDARDS OF CONDUCT

A. Independence and Information Sharing

1. Separation:

(a) DENC, PSNC, Dominion Energy, and the other Affiliates shall operate independently of each other and in physically separate locations to the maximum extent practicable; provided, however, that (i) Gas Marketing Affiliate Personnel must be located in a facility that is physically separate from that used by the PSNC Operating Personnel performing similar functions and (ii) to the extent that the Commission has approved or accepted a service company-to-utility or utility-to-utility service agreement or list, DENC, PSNC, Dominion Energy, and the other Affiliates may operate as described in the agreement or list on file at the Commission. DENC, PSNC, Dominion Energy, and each of the other Affiliates shall maintain separate books and records. Each of DENC's and PSNC's Nonpublic Utility Operations shall maintain separate records from those of DENC's and PSNC's public utility operations to ensure appropriate cost allocations and any arm's-length transaction requirements.

(b) PSNC Operating Personnel may not perform any of the following functions on behalf of a Gas Marketing Affiliate:

(i) Purchase gas, pipeline capacity, or storage capacity.
(ii) Market or sell gas and related services.
(iii) Price or administer products and services.
(iv) Hire and/or train Gas Marketing Affiliate Personnel.
(v) Offer consulting services regarding gas functions.

(c) With respect to PSNC and a Gas Marketing Affiliate, an individual may be an officer or a member of the board of directors of both PSNC and a Gas Marketing Affiliate provided that the individual does not obtain or use knowledge of market-sensitive information for more than one of the entities. PSNC shall post on its website the identity, job title, and responsibilities for each officer or board member that falls within the definition of PSNC Operating Personnel.

2. Disclosure of Customer Information:

(a) Upon request, and subject to the restrictions and conditions contained herein, DENC and PSNC may provide Customer Information to Dominion Energy or another Affiliate under the same terms and conditions that apply to the provision of such information to non-Affiliates. In addition, DENC may provide Customer Information to its Nonpublic Utility Operations under the same terms and conditions that apply to the provision of such information to non-Affiliates.
(b) Except as provided in Section III.A.2.(f), Customer Information shall not be disclosed to any Affiliate or non-affiliated third party without the Customer's consent, and then only to the extent specified by the Customer. Consent to disclosure of Customer Information to Affiliates of DENC and PSNC or to DENC's Nonpublic Utility Operations may be obtained by means of written, electronic, or recorded verbal authorization upon providing the Customer with the information set forth in Attachment A or in a format that is otherwise acceptable to the Public Staff; provided, however, that DENC and PSNC retain such authorization for verification purposes for as long as the authorization remains in effect. Written, electronic, or recorded verbal authorization or consent for the disclosure of PSNC's Customer Information to PSNC's Nonpublic Utility Operations is not required.
(c) If the Customer allows or directs DENC or PSNC to provide Customer Information to Dominion Energy, another Affiliate, or to DENC's Nonpublic Utility Operations, then DENC or PSNC shall ask if the Customer would like the Customer Information to be provided to one or more non-Affiliates. If the Customer directs

DENC or PSNC to provide Customer Information to one or more non-Affiliates, the Customer Information shall be disclosed to all entities designated by the Customer contemporaneously and in the same manner.

(d) Section III.A.2 shall be permanently posted on DENC's and PSNC's website(s).

(e) No DENC or PSNC employee who is transferred to Dominion Energy or another Affiliate shall be permitted to copy or otherwise compile any Customer Information for use by such entity except as authorized by the Customer pursuant to Section III.A.2.(b). DENC and PSNC shall not transfer any employee to Dominion Energy or another Affiliate for the purpose of disclosing or providing Customer Information to such entity.

(f) Notwithstanding the prohibitions established by this Section III.A.2:

(i) DENC and PSNC may disclose Customer Information to Service Company, any other Affiliate, or a non- affiliated third party without Customer consent to the extent necessary for the Affiliate or non-affiliated third party to provide goods or services to DENC or PSNC and upon the written agreement of the other Affiliate or non-affiliated third party to protect the confidentiality of such Customer Information. To the extent the Commission approves a list of services to be provided and taken pursuant to one or more utility-to-utility service agreements, then Customer Information may be disclosed pursuant to the foregoing exception to the extent necessary for such services to be performed.

(ii) DENC may disclose Customer Information to its Nonpublic Utility Operations without Customer consent to the extent necessary for the Nonpublic Utility Operations to provide goods or services to DENC and upon the written agreement of the Nonpublic Utility Operations to protect the confidentiality of such Customer Information.

(iii) DENC and PSNC may disclose Customer Information if a state or federal regulatory agency or court of competent jurisdiction over the disclosure of the Customer Information requires the disclosure.

(iv) DENC may disclose Customer Information to PJM Interconnection, L.L.C. (PJM), and its Market Monitoring Unit (MMU), without Customer consent, but only to the extent necessary for PJM or PJM's MMU to perform duties for DENC as allowed in Docket No. E-22, Sub 418, the performance of which requires the provision of Customer Information. DENC shall designate Customer Information as confidential, or shall direct PJM and PJM's MMU to treat

Customer Information as confidential, prior to such provision, and any Customer Information provided shall be considered to be "a Member's confidential data or information" pursuant to, and subject to the provisions of, Section 18.17 of the PJM Operating Agreement; provided, however, that in the event Section 18.17 is changed, the exception provided herein is subject to review by the Commission to determine whether the changed procedures provide sufficient protection. DENC may not authorize PJM or PJM's MMU to release such Customer Information except as allowed by this section.

(g) DENC and PSNC shall take appropriate steps to store Customer Information in such a manner as to limit access to those persons permitted to receive it and shall require all persons with access to such information to protect its confidentiality.

(h) DENC and PSNC shall establish guidelines for its employees and representatives to follow with regard to complying with this Section III.A.2.

(i) No Service Company employee may use Customer Information to market or sell any product or service to DENC's or PSNC's Customers, except in support of a Commission-approved rate schedule or program or a marketing effort managed and supervised directly by DENC or PSNC.

(j) Service Company employees with access to the Customer Information must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the Customer Information by employees of Service Company that do not have access to such information, or by other employees of Dominion Energy or other Affiliates or Nonpublic Utility Operations of DENC.

(k) Should any inappropriate disclosure of DENC or PSNC Customer Information occur at any time, DENC or PSNC shall promptly file a statement with the Commission describing the circumstances of the disclosure, the Customer Information disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(l) Notwithstanding the foregoing, PSNC shall not disclose information provided by Nonaffiliated Gas Marketers and Customers to its Gas Marketing Affiliate, unless such parties specifically authorize disclosure of the information.

3. Disclosure of Confidential Systems Operation Information – The disclosure of Confidetial Systems Operation Information of DENC and PSNC shall be governed as follows:

(a) CSOI shall not be disclosed by DENC or PSNC to an Affiliate or a Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates contemporaneously and in the same manner. Disclosure to non-Affiliates is not required under the following circumstances:

(i) The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.
(ii) A state or federal regulatory agency or court of competent jurisdiction over the disclosure of the CSOI requires the disclosure.
(iii) The CSOI is provided to employees of Service Company or to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.
(iv) The CSOI is provided to employees of DENC's or PSNC's Utility Affiliates for the purpose of sharing best practices and otherwise improving the provision of regulated utility service.
(v) The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.
(vi) Disclosure is otherwise essential to enable DENC to provide Electric Services to its Customers or for PSNC to provide Natural Gas Services to its Customers.
(vii) Disclosure of the CSOI is necessary for compliance with the Sarbanes-Oxley Act of 2002.

(b) Any CSOI disclosed pursuant to Section III.A.3.(a)(i)-(vi) shall be disclosed only to employees that need the CSOI for the purposes covered by those exceptions and in as limited a manner as possible. The employees receiving such CSOI must be prohibited from acting as conduits to pass the information to any Affiliate(s) and must have explicitly agreed to protect the confidentiality of such CSOI.

(c) For disclosures pursuant to Section III.A.3.(a)(vi) and (vii), DENC and PSNC shall include in their annual affiliated transaction reports the following information:

(i) The types of CSOI disclosed and the name(s) of the Affiliate(s) to which it is being, or has been, disclosed;
(ii) The reasons for the disclosure; and
(iii) Whether the disclosure is intended to be a one-time occurrence or an ongoing process.

To the extent a disclosure subject to the reporting requirement is intended to be ongoing, only the initial disclosure and a description of any processes governing subsequent disclosures need to be reported.

(d) DENC, PSNC, and Service Company employees with access to CSOI must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the CSOI by employees that do not have access to such information, or by other employees of Dominion Energy or other Affiliates or Nonpublic Utility Operations of DENC and PSNC.

(e) Should the handling or disclosure of CSOI by the Service Company, or another Affiliate or Nonpublic Utility Operation, or its respective employees, result in (i) a violation of DENC's FERC Statement of Policy and Code of Conduct (FERC Code), 18 CFR 358 - Standards of Conduct for Transmission Providers (Transmission Standards), or any other relevant FERC standards or codes of conduct, (ii) the posting of such data on an Open Access Same-Time Information System (OASIS) or other Internet website, or (iii) other public disclosure of the data, DENC and PSNC shall promptly file a statement with the Commission in Docket Nos. E-22, Sub 551C, and G-5, Sub 585C, respectively, describing the circumstances leading to such violation, posting, or other public disclosure describing the circumstances leading to such violation, posting, or other public disclosure, any data required to be posted or otherwise publicly disclosed, and the steps taken to mitigate the effects of the current and prevent any future potential violation, posting, or other public disclosure.

(f) Should any inappropriate disclosure of CSOI occur at any time, DENC or PSNC shall promptly file a statement with the Commission in Dockets No. E-22, Sub 551C, and G-5, Sub 585C, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(g) Unless publicly noticed and generally available, should the FERC Code, the Transmission Standards, or any other relevant FERC standards or codes of conduct be eliminated, amended, superseded, or otherwise replaced, DENC shall file a letter with the Commission in Docket No. E-22, Sub 551D, describing such action within 60 days of the action, along with a copy of any amended or replacement document.

B. Nondiscrimination

1. General – DENC's and PSNC's employees and representatives shall not unduly discriminate against non-Affiliated entities.

2. Preferences – In responding to requests for Electric Services, Natural Gas Services, or both, DENC and PSNC shall not provide any preference to Dominion Energy, another Affiliate, or a Nonpublic Utility Operation, or to any customers of such an entity, as compared to non-Affiliates or their customers. Moreover, neither DENC, PSNC, Dominion Energy, nor any other Affiliates shall represent to any person or entity that Dominion Energy, another Affiliate, or a Nonpublic Utility Operation will receive any such preference.

3. Application of Tariffs – DENC and PSNC shall apply the provisions of their respective tariffs equally to Dominion Energy, the other Affiliates, the Nonpublic Utility Operations, and non-Affiliates.

4. Requests for Service:

(a) DENC and PSNC shall process all similar requests for Electric Services, Natural Gas Services, or both, in the same timely manner, whether requested on behalf of Dominion Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity.

(b) PSNC shall treat similarly situated Shippers in the same manner with respect to the delivery of gas on distribution facilities, contract terms, the scheduling of gas supplies, balancing provisions, and allocation of gas supplies and capacity at city gate stations.

(c) PSNC shall post on its website its criteria for evaluating proposals from Shippers. PSNC shall not give one Shipper any form of preference over other similarly situated Shippers in matters relating to assignment, release, or other transfer of capacity rights on interstate pipeline systems.

5. Speaking for Utility – No Personnel of DENC, PSNC, Dominion Energy, or another Affiliate shall indicate, represent, or otherwise give the appearance to another party that Dominion Energy or another Affiliate speaks on behalf of DENC or PSNC; provided, however, that this prohibition shall not apply to employees of Service Company providing Shared Services or to employees of another Affiliate to the extent explicitly provided for in an affiliate agreement that has been accepted by the Commission. In addition, no Personnel of a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that they speak on behalf of DENC's or PSNC's regulated public utility operations.

6. Advantages – No Personnel of DENC, PSNC, Dominion Energy, another Affiliate, or a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that any advantage to that party with regard to Electric Services or Natural Gas Services exists as the result of that party dealing with Dominion Energy, another Affiliate, or a Nonpublic Utility Operation, as compared with a non-Affiliate.

7. Tying – DENC and PSNC shall not condition or otherwise tie the provision or terms of any Electric Services or Natural Gas Services to the purchasing of any goods

or services from, or the engagement in business of any kind with, Dominion Energy, another Affiliate, or a Nonpublic Utility Operation.

8. Information to Customers:

(a) When any DENC or PSNC Personnel receives a request for information from or provides information to a Customer about goods or services available from Dominion Energy, another Affiliate, or a Nonpublic Utility Operation, the Personnel shall advise the Customer that such goods or services may also be available from non-Affiliated suppliers.

(b) All PSNC information pertaining to interstate pipeline transportation, storage, distribution, or gas supply that is provided to a Gas Marketing Affiliate shall be made available to all Shippers on a contemporaneous, nondiscriminatory, and non-preferential basis by posting the information on its website and provided in a written form upon the request of a Shipper. Aggregate customer information and market data made available to Shippers shall be made available on a similar basis.

(c) PSNC shall post on its website a current list of contact persons and telephone numbers of all gas marketers that are active on its system.

9. Disclosure of Customer Information – Disclosure of Customer Information to Dominion Energy, another Affiliate, or a Nonpublic Utility Operation, or a non-Affiliated entity shall be governed by Section III.A.2. of this Code of Conduct.

10. Unless otherwise directed by order of the Commission, electric generation shall not receive a priority of use from PSNC that would supersede or diminish PSNC's provision of service to its human needs firm residential and commercial customers.

11. PSNC shall file an annual report with the Commission summarizing all requests or inquiries for Natural Gas Services made by a non-utility generator, PSNC's response to the request, and the status of the inquiry.

C. Marketing

1. Joint Marketing – The public utility operations of DENC and PSNC may engage in joint sales, joint sales calls, joint proposals, or joint advertising (a joint marketing arrangement) with their Affiliates and with their Nonpublic Utility Operations, subject to compliance with other provisions of this Code of Conduct and any conditions or restrictions that the Commission may hereafter establish. DENC and PSNC shall not otherwise engage in such joint activities without making such opportunities available to comparable third parties.

2. Affiliate Disclaimers – Neither Dominion Energy nor any of the other Affiliates shall use the names or logos of DENC or PSNC in any communications targeted at DENC's or PSNC's North Carolina service territories without the following disclaimers:

(a) "[Dominion Energy/Affiliate] is not the same company as [DENC/PSNC], and [Dominion Energy/Affiliate] has separate management and separate employees;"
(b) "[Dominion Energy/Affiliate] is not regulated by the North Carolina Utilities Commission or in any way sanctioned by the Commission;"
(c) "Purchasers of products or services from [Dominion Energy/Affiliate] will receive no preference or special treatment from [DENC/PSNC];" and
(d) "A customer does not have to buy products or services from [Dominion Energy/Affiliate] in order to continue to receive the same safe and reliable electric service from DENC or natural gas service from PSNC."

3. Nonpublic Utility Operations Disclaimers:

(a) Nonpublic Utility Operations may not use the names or logos of DENC or PSNC in any communications targeted at DENC's or PSNC's North Carolina service territories without the following disclaimer:

> "[Name of product or service being offered by Nonpublic Utility Operation] is not part of the regulated services offered by [DENC/PSNC] and is not in any way sanctioned by the North Carolina Utilities Commission:"

(b) DENC's Nonpublic Utility Operations may not use the name or logo of DENC in any communications targeted at DENC's North Carolina service territory without the following disclaimers:

(i) "Purchasers of [name of product or service being offered by Nonpublic Utility Operation] from [Nonpublic Utility Operation] will receive no preference or special treatment from DENC;" and
(ii) "A customer does not have to buy this product or service from [Nonpublic Utility Operation] in order to continue to receive the same safe and reliable electric service from DENC."

The required disclaimers in this Section III.C.3.(b) must be sized and displayed in a way that is commensurate with the name and logo so that the disclaimer is at least the larger of one-half the size of the type that first displays the name and logo or the predominant type used in the communication.

D. Transfers of Goods and Services, Transfer Pricing, and Cost Allocation

1. Cross-Subsidies – Cross-subsidies involving DENC or PSNC and Dominion Energy, other Affiliates, or the Nonpublic Utility Operations are prohibited.

2. Charging of Costs – All costs incurred by Personnel of DENC or PSNC for or on behalf of Dominion Energy, other Affiliates, or the Nonpublic Utility Operations shall be charged to the entity responsible for the costs.

3. General Transfer Pricing Guidelines – The following conditions shall apply as a general guideline to the transfer prices charged for goods and services, including the use or transfer of Personnel, exchanged between and among DENC or PSNC, and, Dominion Energy, the other Non-Utility Affiliates, and the Nonpublic Utility Operations, to the extent such prices affect DENC's or PSNC's operations or costs of utility service:

(a) Except as otherwise provided for in this Section III.D., for untariffed goods and services provided by DENC or PSNC to Dominion Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer price paid to DENC or PSNC shall be set at the higher of Market Value or DENC's or PSNC's Fully Distributed Cost.

(b) Except as otherwise provided for in this Section III.D., for goods and services provided, directly or indirectly, by Dominion Energy, a Non-Utility Affiliate other than Service Company, or a Nonpublic Utility Operation to DENC or PSNC, the transfer price(s) charged by Dominion Energy, the Non- Utility Affiliate, and/or the Nonpublic Utility Operation to DENC or PSNC shall be set at the lower of Market Value or Dominion Energy's, the Non-Utility Affiliate's, or the Nonpublic Utility Operation's Fully Distributed Cost(s). If DENC or PSNC does not engage in competitive solicitation and instead obtains the goods or services from Dominion Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, DENC and PSNC shall implement adequate processes to comply with this Code provision and related Regulatory Conditions and ensure that in each case DENC's and PSNC's Customers receive service at the lowest reasonable cost, unless otherwise directed by order of the Commission. For goods and services provided by Service Company to DENC, PSNC, and Utility Affiliates, the transfer price charged shall be set at Service Company's Fully Distributed Cost.

(c) Tariffed goods and services provided by DENC and PSNC to Dominion Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services under the applicable tariff.

(d) With the exception of gas supply transactions, transportation transactions, or both, between DENC and PSNC, untariffed non-power, non-generation, or non-fuel goods and services provided by DENC or PSNC to DENC, PSNC, or the other Utility Affiliates or by the Utility Affiliates to DENC or PSNC shall be transferred at the supplier's Fully Distributed Cost, unless otherwise directed by order of the Commission.

(e) All PSNC deliveries to DENC pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal,annual), location on PSNC's system, and costs to serve and rates. PSNC shall maintain records in sufficient detail to demonstrate compliance with this requirement.

(f) All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DENC and PSNC shall be at the fair market value for similar transactions between non-affiliated third parties. DENC and PSNC shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.

(g) All of the margins, also referred to as net compensation, received by PSNC on secondary market sales to DENC shall be recorded in PSNC's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by PSNC to DENC shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its Order Approving Stipulation, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.

4. Shared Services Pricing – To the extent that DENC, PSNC, Dominion Energy, other Affiliates, or the Nonpublic Utility Operations receive Shared Services from Service Company (or its successor), these Shared Services may be jointly provided to DENC, PSNC, Dominion Energy, other Affiliates, or the Nonpublic Utility Operations on a Fully Distributed Cost basis, provided that the taking of such Shared Services by DENC and PSNC is cost beneficial on a service- by-service (e.g., accounting management, human resources management, legal services, tax administration, public affairs) basis to DENC and PSNC. Charges for such Shared Services shall be allocated in accordance with the Service Company cost allocation manual filed with the Commission pursuant to Regulatory Condition 4.5, subject to any revisions or other adjustments that may be found appropriate by the Commission on an ongoing basis.

5. Joint Purchases – DENC, PSNC, and their Utility Affiliates may capture economies-of-scale in joint purchases of goods and services (excluding the purchase of electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement), if such joint purchases result in cost savings to DENC's and PSNC's Customers. DENC, PSNC, and their Utility Affiliates may capture economies-of- scale in joint purchases of coal and natural gas, if such joint purchases result in cost savings to DENC's and PSNC's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits clear

identification of each participant's portion of the purchases and shall be reported in DENC's and PSNC's affiliated transaction reports filed with the Commission.

6. Accounting – All permitted transactions between DENC, PSNC, Dominion Energy, other Affiliates, and the Nonpublic Utility Operations shall be recorded and accounted for in accordance with the cost allocation manual required to be filed with the Commission pursuant to Regulatory Condition 4.5 and with Affiliate agreements accepted by the Commission or otherwise processed in accordance with North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

7. Information Costs – Costs that DENC and PSNC incur in assembling, compiling, preparing, or furnishing requested Customer Information or CSOI for or to Dominion Energy, other Affiliates, or the Nonpublic Utility Operations shall be recovered from the requesting party pursuant to Section III.D.3. of this Code of Conduct.

8. Transfers of Technology and Trade Secrets – Any technology or trade secrets developed, obtained, or held by DENC or PSNC in the conduct of regulated operations shall not be transferred to Dominion Energy, another Affiliate, or a Nonpublic Utility Operation without just compensation and the filing of 60-days prior notification to the Commission. DENC and PSNC are not required to provide advance notice for such transfers to each other and may request a waiver of this requirement from the Commission with respect to such transfers to Dominion Energy, a Utility Affiliate, a Non-Utility Affiliate, or a Nonpublic Utility Operation. In no case, however, shall the notice period requested be less than 20 business days.

9. Intangible Benefits – DENC and PSNC shall receive compensation from Dominion Energy, other Affiliates, and the Nonpublic Utility Operations for intangible benefits, if appropriate.

E. Regulatory Oversight

1. Affiliate Transactions – The requirements regarding affiliate transactions set forth in G.S. 62-153 shall continue to apply to all transactions between DENC, PSNC, Dominion Energy, and the other Affiliates.

2. Books and Records – The books and records of DENC, PSNC, Dominion Energy, other Affiliates, and the Nonpublic Utility Operations shall be open for examination by the Commission, its staff, and the Public Staff as provided in G.S. 62-34, 62-37, and 62-51.

3. Generator Supply Services:

(a) If PSNC supplies any Natural Gas Services, with the exception of Natural Gas Services provided pursuant to Commission-approved contracts or service agreements, used by DENC to generate electricity, DENC shall file a report with the Commission in its annual fuel and fuel-related cost recovery case demonstrating that the purchase was prudent and the price was reasonable.

(b) To the extent North Carolina law, the orders and rules of the Commission, and the Regulatory Conditions permit Dominion Energy, an Affiliate, or a Nonpublic Utility Operation to supply DENC with Natural Gas Services or other Fuel and Purchased Power Supply Services used by DENC to provide Electric Services to Customers, and to the extent such Natural Gas Services or other Fuel and Purchased Power Supply Services are supplied, DENC shall demonstrate in its annual fuel adjustment clause proceeding that each such acquisition was prudent and the price was reasonable.

F. Utility Billing Format

To the extent any bill issued by DENC, PSNC, Dominion Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party includes charges to Customers for Electric Services or Natural Gas Services and non- Electric Services, non-Natural Gas Services, or any combination of such services, from Dominion Energy, another Affiliate, a Nonpublic Utility Operation, or a non- Affiliated third party, the charges for Electric Services and Natural Gas Services shall be separated from the charges for any other services included on the bill. Each such bill shall contain language in bold print stating that the Customer's Electric Services and Natural Gas Services, as applicable, will not be terminated for failure to pay for any other services billed.

G. Complaint Procedure

1. Procedures – DENC and PSNC shall establish procedures to resolve potential complaints that arise due to the relationship of DENC and PSNC with Dominion Energy, the other Affiliates, and the Nonpublic Utility Operations. The complaint procedures shall provide for the following:

(a) Verbal and written complaints shall be referred to a designated representative of DENC or PSNC.
(b) The designated representative shall provide written notification to the complainant within 15 days that the complaint has been received.
(c) DENC or PSNC shall investigate the complaint and communicate the results or status of the investigation to the complainant within 60 days of receiving the complaint.
(d) DENC and PSNC shall each maintain a log of complaints and related records and permit inspection of documents (other than those protected by the attorney/client privilege), by the Commission, its staff, or the Public Staff.

2 Notwithstanding the provisions of Section III.G.1., any complaints received through the Dominion Energy Compliance Line (or its successor), which is a confidential mechanism available to the employees of the Dominion Energy holding company system, shall be handled in accordance with procedures established for the Dominion Energy Compliance Line.

3. Commission – These complaint procedures do not affect a complainant's right to file a formal complaint or otherwise address questions to the Commission or the Public Staff regarding a complaint.

H. Natural Gas/Electricity Competition

DENC and PSNC shall continue to compete against all energy providers to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DENC and PSNC shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DENC and PSNC shall maintain the following minimum standards:

1. PSNC will make all reasonable efforts to extend the availability of natural gas to as many new customers as possible.
2. In determining where and when to extend the availability of natural gas, PSNC will at a minimum apply the same standards and criteria that it applied prior to the Merger.
3. In determining where and when to extend the availability of natural gas, PSNC will make decisions in accordance with the best interests of PSNC, rather than the best interest of DENC.
4. To the extent that either the natural gas industry or the electricity industry is further restructured, DENC and PSNC will undertake to maintain the full level of competition intended by this Code of Conduct subject to the right of DENC, PSNC or the Public Staff to seek relief from or modifications to this requirement by the Commission.

CODE OF CONDUCT
ATTACHMENT

DENC/PSNC CUSTOMER INFORMATION DISCLOSURE AUTHORIZATION

For Disclosure to Affiliates:

DENC's/PSNC's Affiliates offer products and services that are separate from the regulated services provided by DENC/PSNC. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DENC/PSNC to provide any data associated with the Customer accounts(s) residing in any DENC/PSNC files, systems, or databases **[or specify specific types of data]** to the following Affiliate(s):__________________________________. DENC/PSNC will provide this data on a nondiscriminatory basis to any other person or entity upon the Customer's authorization.

ELECTRIC – MERGER

For Disclosure to Non-Affiliates:

The Customer authorizes DENC/PSNC to provide any data associated with the Customer accounts(s) residing in any DENC/PSNC files, systems, or databases **[or specify specific types of data]** to the following non-Affiliate(s): ______________________________

For Disclosure to Nonpublic Utility Operations:

DENC offers optional, market-based products and services that are separate from the regulated services provided by DENC. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DENC to provide any data associated with the Customer accounts(s) residing in any DENC files, systems, or databases **[or specify specific types of data]** for the purpose of offering and providing energy-related products or services to the Customer. DENC will provide this data on a nondiscriminatory basis to any other person or entity upon the Customer's authorization.

DOCKET NO. E-7, SUB 1162

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Carolinas, LLC, for Approval of Renewable Energy and Energy Efficiency Portfolio Standard Cost Recovery Rider Pursuant to N.C.G.S. § 62-133.8 and Commission Rule R8-67	)))))	ORDER APPROVING REPS AND REPS EMF RIDERS AND 2017 REPS COMPLIANCE REPORT

HEARD: Tuesday, June 5, 2018 at 9:30 a.m. in the Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding; Chairman Edward S. Finley, Jr., Commissioners Jerry C. Dockham, James G. Patterson, and Lyons Gray

APPEARANCES:

For Duke Energy Carolinas, LLC:

Kendrick C. Fentress, Associate General Counsel, Duke Energy Corporation, 410 South Wilmington Street, NCRH 20/P.O. Box 2551, Raleigh, North Carolina 27601

Robert W. Kaylor, Law Office of Robert W. Kaylor, P.A., 353 E. Six Forks Road, Suite 260, Raleigh, North Carolina 27609

For Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp, Page & Currin, LLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For North Carolina Sustainable Energy Association:

Peter H. Ledford, General Counsel, North Carolina Sustainable Energy Association, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

Benjamin Smith, Regulatory Counsel, North Carolina Sustainable Energy Association, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

For Southern Alliance for Clean Energy, North Carolina Justice Center, and Natural Resources Defense Council:

Gudrun Thompson, Senior Attorney, Southern Environmental Law Center, 601 West Rosemary Street, Suite 220, Chapel Hill, North Carolina 27516

David Neal, Senior Attorney, Southern Environmental Law Center, 601 West Rosemary Street, Suite 220, Chapel Hill, North Carolina 27516

For Carolina Industrial Group for Fair Utility Rates III:

Warren Hicks, Attorney, Bailey & Dixon, LLP, P.O. Box 1351, Raleigh, North Carolina, 27602

For the Using and Consuming Public:

Robert B. Josey, Jr., Staff Attorney, Public Staff-North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, NC, 27699

BY THE COMMISSION: On March 7, 2018, Duke Energy Carolinas, LLC (DEC or the Company) filed its 2017 REPS Compliance Report and application seeking an adjustment to its North Carolina retail rates and charges pursuant to N.C.G.S. § 62-133.8(h) and Commission Rule R8-67, which require the Commission to conduct an annual proceeding for the purpose of determining whether a rider should be established to permit the recovery of the incremental costs incurred to comply with the requirements of the Renewable Energy and Energy Efficiency Portfolio Standard (REPS), N.C.G.S. § 62-133.8(b), (d), (e) and (f), and to true up any under-recovery or over-recovery of compliance costs. DEC's application was accompanied by the testimony and exhibits of Megan W. Jennings, Renewable Compliance Manager, and Veronica I. Williams, Rates and Regulatory Strategy Manager. In its application and pre-filed testimony, DEC sought approval of its proposed REPS Rider, which incorporated the Company's proposed adjustments to its North Carolina retail rates.

On March 28, 2018, DEC filed supplemental testimony and exhibits of witnesses Jennings and Williams.

On March 29, 2018, the Commission issued an Order which set this matter for hearing, established deadlines for the submission of intervention petitions, intervenor testimony, and DEC's rebuttal testimony, required the provision of appropriate public notice, and mandated compliance with certain discovery guidelines.

The following parties filed petitions and were allowed to intervene in this proceeding: North Carolina Sustainable Energy Association, Carolina Utility Customers Association, Inc., Rutherford Electric Membership Corporation (Rutherford EMC), and Blue Ridge Electric Membership Corporation (Blue Ridge EMC). The intervention and participation by the Public Staff are recognized pursuant to N.C.G.S. § 62-15(d) and Commission Rule R1-19(e).

On May 21, 2018, DEC filed additional supplemental testimony and revised exhibits of witnesses Jennings and Williams.

On May 23, 2018, the Public Staff filed the affidavits of Sonja R. Johnson, an Accountant in the Accounting Division of the Public Staff, and Jay B. Lucas, an Engineer in the Electric Division of the Public Staff.

On May 29, 2018, DEC and the Public Staff filed a joint motion to excuse all witnesses from the evidentiary hearing, which the Commission granted by an Order issued June 1, 2018.

On June 4, 2018, DEC filed the required affidavits of publication, demonstrating that the public notice of the hearing was published as required by the Commission's March 29, 2018 Order.

This matter came on for hearing as scheduled on June 5, 2018. DEC moved the introduction of the pre-filed testimony and exhibits of DEC witnesses Jennings and Williams, and the Public Staff moved the introduction of the pre-filed affidavits of its witnesses Johnson and Lucas. All pre-filed testimony, exhibits, and affidavits from the DEC and Public Staff witnesses were received into evidence.

Based upon the foregoing, including the testimony, exhibits, and affidavits of the parties' witnesses, the records in the North Carolina Renewable Energy Tracking System (NC-RETS) and the entire record in this proceeding, the Commission makes the following:

FINDINGS OF FACT

1. DEC is a duly organized limited liability company existing under the laws of the State of North Carolina, is engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North Carolina, and is subject to the jurisdiction of the North Carolina Utilities Commission as a public utility. DEC is also an electric power supplier as defined in N.C.G.S. § 62-133.8(a)(3). DEC is lawfully before this Commission based upon its application filed pursuant to N.C.G.S. § 62-133.8 and Commission Rule R8-67.

2. For calendar year 2017, the Company was required to meet at least 6% of its previous year's North Carolina retail electric sales by a combination of renewable energy and energy reductions due to the implementation of energy efficiency measures. Also in 2017, energy in the amount of at least 0.14% of the previous year's total electric power sold by DEC to its North Carolina retail customers must have been supplied by solar energy resources.

3. Beginning in 2012, N.C.G.S. § 62-133.8(e) and (f) require DEC and the other electric suppliers of North Carolina, in the aggregate, to procure a certain portion of their renewable energy requirements from electricity generated from swine and poultry waste, based on each electric power supplier's respective pro-rata share derived from the ratio of its North Carolina retail sales as compared to total North Carolina retail sales. In its Order Modifying the Swine and Poultry Waste Set-Aside Requirements and Providing Other Relief (2017 Delay Order), issued on October 16, 2017, in Docket No. E-100, Sub 113, the Commission delayed for one year the Swine Waste Set-Aside requirement, directing that the Swine Waste Set-Aside requirements will commence in 2018. In addition, the 2017 Delay Order lowered the 2017 Poultry Waste Set-Aside Requirement to 170,000 MWh state-wide, maintaining the same level as the 2016 requirement, and delayed by one year the future increases in the Poultry Waste Set-Aside Requirements.

4. Section 62-133.8(h) of the North Carolina General Statutes authorizes an electric power supplier to recover the "incremental costs" of compliance with the REPS requirements through an annual REPS rider. The "incremental costs," as defined in N.C.G.S. § 62-133.8(h)(1), include the reasonable and prudent costs of compliance with REPS "that are in excess of the electric supplier's avoided costs other than those costs recovered pursuant to N.C.G.S § 62-133.9." The term "avoided costs" includes both avoided energy costs and avoided capacity costs.

5. Under Commission Rule R8-67(e)(2), the total costs reasonably and prudently incurred during the test period to purchase unbundled renewable energy certificates (RECs) constitute incremental costs. The projected costs to purchase such RECs during the billing period constitute forecasted incremental costs.

6. DEC has agreed to provide REPS compliance services, including the procurement of RECs, to the following electric power suppliers, pursuant to N.C.G.S. § 62-133.8(c)(2)(e): Blue Ridge EMC, the City of Concord, the Town of Dallas, the Town of Forest City, the Town of Highlands, the City of Kings Mountain, and Rutherford EMC (collectively the Wholesale Customers).

7. DEC has complied with the 2017 solar set-aside requirements, for itself and the Wholesale Customers for which DEC is providing compliance services, through the procurement or generation of 85,576 RECs from solar electric facilities and metered solar thermal energy facilities. DEC has also complied with the 2017 Poultry Waste Set-Aside requirements, for itself and the Wholesale Customers for which DEC is providing compliance services, through the procurement or generation of 77,443 RECs from poultry waste-to-energy facilities, including 20,076 Senate Bill 886 RECs, which are credited as 40,152 poultry waste RECs pursuant to S.L. 2010-195 (Senate Bill 886).

8. DEC and the seven electric power suppliers for which DEC is providing compliance services met their 2017 REPS requirements, including the set-aside requirements as modified by the Commission's Orders issued in Docket No. E-100, Sub 113.

9. DEC is uncertain whether it will be able to comply with the 2018 swine waste set-aside requirements or the 2018 poultry waste set-aside requirements.

10. DEC has RECs in its inventory that were earned by hydroelectric power facilities that are owned by DEC. DEC cannot use these RECs to meet its REPS requirements because DEC's hydroelectric power facilities are renewable energy facilities, but not new renewable energy facilities. DEC's proposal to exchange these RECs for RECs held in the inventory of the North Carolina Electric Membership Corporation (NCEMC) is reasonable and serves the public interest.

11. For purposes of DEC's annual rider established pursuant to N.C.G.S. § 62-133.8(h), the test period for this proceeding is the 16-month period beginning January 1, 2017, and ending April 30, 2018. The billing period for this proceeding is the 12-month period beginning September 1, 2018 and ending August 31, 2019.

12. The research activities funded by DEC during the test period are incremental costs reasonably and prudently incurred by DEC to fund research that encourages the development of

renewable energy, energy efficiency, or improved air quality, and are within the annual $1-million limit established pursuant to N.C.G.S. 62-133.8(h)(1)(b).

13. For purposes of establishing the REPS experience modification factor (EMF) rider in this proceeding, DEC's incremental costs for REPS compliance during the test period were $26,491,680, including the costs incurred for its Wholesale Customers, and these costs were reasonably and prudently incurred. The Company's projected incremental costs for REPS compliance for the billing period total $29,409,151, including the costs incurred for its Wholesale Customers.

14. DEC's sales of RECs reviewed in this proceeding are appropriate, and DEC has accounted for them correctly.

15. DEC appropriately calculated its avoided costs and incremental REPS compliance costs for the test period and billing period, including those avoided and incremental costs specifically related both to the Company's Solar Photovoltaic Distributed Generation (Solar DG) program and to DEC's other owned solar facilities as required by the following Orders: (1) Order Granting Certificate of Public Convenience and Necessity with Conditions, Docket No. E-7, Sub 856 (issued December 31, 2008), (2) Order on Reconsideration, Docket No. E-7, Sub 856 (issued May 8, 2009); (3) Order Transferring Certificate of Public Convenience and Necessity, Docket No. E-7, Sub 1079 (issued May 16, 2016); and (4) Order Transferring Certificate of Public Convenience and Necessity, Docket No. E-7, Sub 1098 (issued May 16, 2016).

16. It is appropriate to approve DEC's request to recover other incremental costs pursuant to N.C.G.S. § 62-133.8(h)(1)(b) as incremental costs reasonably and prudently incurred to comply with the REPS requirements.

17. DEC complied with Commission's Order in Docket No. E-7, Sub 1106 by filing in this proceeding a worksheet detailing its interconnection cost allocation process related to labor and other costs. It is appropriate to require DEC to continue to file a worksheet explaining the discrete costs that DEC includes as "other incremental costs" in all future REPS Rider proceedings.

18. DEC's test period REPS expense (over-) or under-collections were an (over-) collection, including interest, of $(13,250,561) for the residential class, $(7,730,438) for the general service class, and $(1,051,822) for the industrial class, excluding the North Carolina regulatory fee (regulatory fee). The Company appropriately credited to customers' accounts the amounts received from REC suppliers during the test period related to contract amendments, penalties, and other conditions of the supply agreements as follows: $568,919 for residential, $412,380 for general service, and $25,510 for industrial. Total credits to customers' accounts including over-collections and the contract-related credits were $13,819,480 for the residential class, $8,142,818 for the general service class, and $1,077,332 for the industrial class, excluding the regulatory fee.

19. DEC's North Carolina retail prospective billing period expenses for use in this proceeding are $15,315,696 for the residential class, $11,167,611 for the general service class, and $713,415 for the industrial class, excluding regulatory fee.

20. The appropriate monthly REPS EMF riders per customer account, excluding regulatory fee, to be credited to customers during the billing period are $(0.67) for residential accounts, $(2.79) for general service accounts, and $(19.04) for industrial accounts.

21. The appropriate monthly prospective REPS riders per customer account, excluding regulatory fee, to be collected during the billing period are $0.74 for residential accounts, $3.82 for general service accounts, and $12.61 for industrial accounts.

22. The combined monthly REPS and REPS EMF rider charges per customer account, excluding the regulatory fee, to be collected during the billing period are $0.07 for residential accounts, $1.03 for general service accounts, and $(6.43) for industrial accounts. Including the regulatory fee, the combined monthly REPS and REPS EMF rider charges per customer account to be collected during the billing period are $0.07 for residential accounts, $1.03 for general service accounts, and $(6.44) for industrial accounts.

23. DEC's REPS incremental cost rider, including the regulatory fee, to be charged to each customer account for the billing period is within the annual limits established for each class in N.C.G.S. § 62-133.8(h)(4).

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-6

These findings of fact are essentially informational, jurisdictional and procedural in nature and are not contested.

Section 62-133.8(b)(1) of the North Carolina General Statues establishes a REPS requirement for all electric power suppliers in the State. The statute requires each electric public utility to provide a certain percentage of its North Carolina retail sales from various renewable energy or EE resources which are listed in N.C.G.S. § 62-133.8(b)(2) as follows: (a) generating electric power at a new renewable energy facility; (b) using a renewable energy resource to generate electric power at a generating facility other than the generation of electric power from waste heat derived from the combustion of fossil fuel; (c) reducing energy consumption through the implementation of energy efficiency measures; (d) purchasing electric power from a new renewable energy facility; (e) purchasing RECs produced from in-State or out-of-state new renewable energy facilities; (f) using electric power that is supplied by a new renewable energy facility or saved due to the implementation of an EE measure that exceeds the requirements of the REPS in any calendar year as a credit toward the requirements of the REPS in the following calendar year; or (g) implementing electricity demand reduction measures. Each of these measures is subject to additional limitations and conditions. For 2017, DEC must have met a total REPS requirement equal to 6% of its previous year's North Carolina retail electric sales by a combination of these measures.

Section 62-133.8(d) requires a certain percentage of the total electric power sold to retail electric customers in the State, or an equivalent amount of energy, to be supplied by a combination of new solar electric facilities and new metered solar thermal energy facilities. The percentage requirement for solar resources in 2017 was 0.14%.

Section 62-133.8(e) and (f) require DEC and the other electric suppliers of North Carolina, in the aggregate, to procure a certain portion of their renewable energy requirements from electricity generated from swine and poultry waste. Pursuant to the Commission's Order on Pro-Rata Allocation of Aggregate Swine and Poultry Waste Set-Aside Requirements and Motion for Clarification issued on March 31, 2010, in Docket No. E-100, Sub 113, DEC's share of the aggregate State set-aside requirements for energy from swine and poultry waste is based on the ratio of its North Carolina retail kilowatt-hour sales for the previous year divided by the previous year's total North Carolina retail kilowatt-hour sales. Pursuant to the Commission's Order on Pro-Rata Allocation of Aggregate Swine and Poultry Waste Set-Aside Requirements and Motion for Clarification also issued on March 31, 2010, in Docket No. E-100, Sub 113, DEC's share of the aggregate State set-aside requirements for energy from swine and poultry waste is based on the ratio of its North Carolina retail kilowatt-hour sales for the previous year divided by the previous year's total North Carolina retail kilowatt-hour sales. In its 2017 Delay Order, the Commission further delayed for one year the Swine Waste Set-Aside requirement; accordingly, the Swine Waste compliance requirements will now commence in compliance year 2018. The Commission also modified the 2017 Poultry Waste Set-Aside requirements to remain at the same level as the 2016 requirement (an aggregate of 170,000 megawatt -hours of electricity generated via poultry waste divided amongst the electric power suppliers), and delayed by one year the scheduled increases in the requirement (the requirement is scheduled to increase to 700,000 megawatt-hours in the aggregate for all electric power suppliers).

Section 62-133.8(h)(4) requires the Commission to allow an electric power supplier to recover all of its incremental costs incurred to comply with N.C.G.S. § 62-133.8 though an annual rider. Section 62-133.8(h)(1) provides that "incremental costs" means all reasonable and prudent costs incurred by an electric power supplier to comply with the REPS requirements that are in excess of the electric power supplier's avoided costs other than those costs recovered pursuant to N.C.G.S. § 62-133.9. The term "avoided costs" includes both avoided energy and avoided capacity costs.

Commission Rule R8-67(e)(2) provides that the "cost of an unbundled renewable energy certificate to the extent that it is reasonable and prudently incurred is an incremental cost and has no avoided cost component."

Commission Rule R8-67(e)(5) provides that "the REPS EMF rider will reflect the difference between reasonable and prudently incurred incremental costs and the revenues that were actually realized during the test period under the REPS rider then in effect."

In its 2017 compliance report, DEC stated that it provided energy resources and compliance reporting services for Blue Ridge EMC, the City of Concord, the Town of Dallas, the Town of Forest City, the Town of Highlands, the City of Kings Mountain, and Rutherford EMC, as allowed by N.C.G.S. § 62-133.8(c)(2)(e).

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 7-9

The evidence supporting these findings of fact is found in the testimony and exhibits of DEC witnesses Jennings and Williams, and in the affidavit of Public Staff witness Lucas. In addition, the Commission takes judicial notice of the information contained in the North Carolina Renewable Energy Tracking System (NC-RETS). DEC's 2017 REPS Compliance Report, as revised in DEC's filings of March 28, 2018 in this docket, was admitted into evidence as Revised Jennings Exhibit No. 1.

DEC witness Jennings testified that DEC submitted its 2017 REPS compliance report as Jennings Exhibit No. 1, as revised in DEC's filing on March 28, 2018 in this docket, and that the report provided the information required by Commission Rule R8-67(c) in the aggregate for DEC and the Wholesale Customers for which DEC has agreed to provide REPS compliance services.

Witness Jennings further testified that DEC has submitted for retirement 3,627,191 RECs to meet its total requirement for 2017. She defined the "total requirement" as DEC's overall REPS requirement. Within this total, the Company has submitted for retirement 85,576 RECs to meet the Solar Set-Aside requirements, and 37,291 RECs, along with 20,076 SB 886 RECs (which count as 40,152 Poultry Waste RECs) to meet the Poultry Waste Set-Aside requirements. The billing period for this Application covers two separate compliance reporting periods with different requirements for each period. In 2018, the Company estimates that it will be required to submit for retirement 5,951,836 RECs to meet the requirements of N.C.G.S. § 62-133.8(b), or its total requirement. Within this total, the Company is also required to retire the following to comply with the requirements of N.C.G.S. § 62-133.8(d), (e) and (f), respectively: 119,038 solar RECs, 41,664 swine waste RECs, and 318,866 poultry waste RECs. In 2019, the Company estimates that it will be required to submit for retirement a total of 6,102,936 RECs to meet its total REPS requirements. Within this total, the Company projects that it will be required to retire approximately 122,062 solar RECs, 42,725 swine waste RECs, and 403,218 poultry waste RECs to meet the requirements set out in N.C.G.S. § 62-133.8(d), (e), and (f), respectively.

Witness Jennings testified that DEC has met its Solar Set-Aside requirement for the test period by procuring and producing 85,576 solar RECs and that, pursuant to NC-RETS Operating Procedures, the Company has submitted these RECs for retirement by transferring them from the Duke Energy Electric Power Supplier Account to the Duke Energy Compliance Sub-Account and the Sub-Accounts of its Wholesale Customers.

Witness Jennings further testified that the Company has complied with its general REPS requirement for 2017. Pursuant to NC-RETS Operating Procedures, the Company submitted for retirement 3,504,324 RECs to meet the general REPS requirement (DEC's total requirement, net of the Solar, Swine Waste and Poultry Waste Set-Aside requirements). Specifically, the RECs to be used for 2017 compliance have been transferred from the NC-RETS Duke Energy Electric Power Supplier account to the Duke Energy Compliance Sub-Account and the Sub-Accounts of the Wholesale Customers.

In her direct testimony, Company witness Jennings testified that compliance with both the Poultry Waste Set-Aside requirement and the Swine Waste Set-Aside requirement is dependent on the performance of energy developers on current contracts and new waste-to-energy projects scheduled to come online. Two poultry waste facilities that were operational in 2017 encountered operational issues and had to shut down to perform plant modifications. Both facilities are expected to be on-line in late 2018, but 2018 production will be lower than originally expected. Witness Jennings additionally reported that, as part of efforts to comply with the swine waste requirements, DEC entered into contracts to purchase directed biogas from swine waste in the Midwest for generating electric power at its Dan River combined cycle facility. DEC began to receive biogas from one of the Midwest projects beginning in the summer of 2017. However, the other Midwest project encountered extreme weather in the summer of 2017 that caused significant damage, leading the project to declare force majeure and terminate its contract with DEC. Witness Jennings further testified that the current swine waste projects have encountered difficulties in achieving the full REC output of their contracts due to issues including local opposition to siting of the facilities, the inability to secure firm and reliable sources of swine waste feedstock from waste producers in North Carolina, and technological challenges encountered in ramping up production.

Public Staff witness Lucas recommended that the Commission approve DEC's 2017 REPS compliance report. Specifically, he testified that for 2017 compliance, DEC needed to obtain a sufficient number of RECs and energy efficiency certificates (EECs) derived from any eligible sources so that the total equaled 6% of the total 2016 North Carolina retail electricity sales made by DEC and the Wholesale Customers. Witness Lucas additionally stated that DEC needed to obtain sufficient solar RECs to equal 0.14% of the total 2016 North Carolina retail electricity sales made by DEC and the Wholesale Customers, and to obtain sufficient RECs equal to DEC and the Wholesale Customers' pro-rata share of the 170,000 poultry waste RECs required by N.C.G.S. § 62-133.8(f), and as modified pursuant to the Commission's 2017 Delay Order. The 2017 Delay Order also delayed the 2017 swine waste set-aside requirements under N.C.G.S. § 62-133.8(e) for an additional year.

No party disputed that DEC had fully complied with the applicable REPS requirements, or argued that DEC's REPS compliance report should not be approved.

Based on the foregoing and the entire record herein, the Commission finds that DEC and the seven Wholesale Customers for which it is providing REPS compliance services have complied with the REPS requirements for 2017, as modified by the Commission's 2017 Delay Order. Therefore, the Commission concludes that DEC's 2017 REPS compliance report should be approved, and that the RECs and EECs in the related NC-RETS compliance sub-accounts for 2017 should be permanently retired. Finally, the Commission finds that DEC is uncertain whether it will be able to comply with the poultry waste and swine waste set-aside requirements for 2018 and that the Company is committed to satisfying these requirements by continuing to pursue procurement of these resources in a reasonable and prudent manner.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 10

The evidence supporting this finding of fact is found in the testimony of DEC witness Jennings and in the affidavit of Public Staff witness Lucas.

Witness Jennings testified that DEC has RECs in its inventory that it cannot use for its own REPS compliance because the RECs were earned by hydroelectric power facilities owned by DEC that are renewable energy facilities, not new renewable energy facilities.[1] Witness Jennings further testified that DEC has discussed with NCEMC exchanging a portion of these RECs for an equal number of RECs in NCEMC's inventory that DEC could use for its REPS compliance. She noted

[1] See Order Accepting Registration of Renewable Energy Facilities, Docket No. E-7, Subs 886, 887, 888, 900, 903, and 904 (issued July 31, 2009) (July 31, 2009 Order); and Order Accepting Registration of Renewable Energy Facilities, Docket Nos. E-7, Subs 942, 943, 945 and 946 (issued December 9, 2010).

that, unlike DEC, NCEMC could use the RECs earned by the hydroelectric power facilities for its REPS compliance because N.C.G.S. § 62-133.8(c)(2)(d) allows EMCs and municipalities to meet their REPS requirements through the purchase of RECs derived from renewable energy facilities (as opposed to new renewable energy facilities). Witness Jennings further testified that this exchange would benefit DEC's customers because it would allow DEC to meet part of its general REPS requirements through the RECs exchanged with NCEMC at no cost to DEC's customers rather than purchase additional RECs from new renewable energy facilities. In addition, NCEMC's customers would be held harmless in the transaction as this exchange would simply replace RECs in NCEMC's inventory with different RECs that NCEMC could use to meet its REPS compliance requirements.

Public Staff witness Lucas testified that the Public Staff recommends that the Commission allow the proposed exchange of RECs between DEC and NCEMC because it would benefit both parties and would not harm the customers of either electric power supplier.

Based on the foregoing and the entire record herein, the Commission finds that the proposed exchange of RECs between DEC and NCEMC is reasonable and serves the public interest. Therefore, the Commission concludes that the proposed exchange of RECs should be approved, and that DEC and NCEMC should be authorized to implement the proposed exchange.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 11

The evidence supporting this finding is procedural in nature, found in the testimony DEC witness Williams and the affidavits of Public Staff witnesses Johnson and Lucas, and is not contested.

Commission Rule R8-67(e)(3) provides that the test period for REPS rider proceedings shall be the same as that used by the utility in its fuel charge adjustment proceedings, which is specified in Commission Rule R8-55(c) for DEC to be the 12 months ending December 31 of each year. Commission Rule R8-67(e)(5) provides that "[t]he REPS EMF rider will reflect the difference between reasonable and prudently incurred incremental costs and the revenues that were actually realized during the test period under the REPS rider then in effect." Therefore Company witness Williams initially testified that the test period or EMF period used for this proceeding was the twelve months beginning on January 1, 2017, and ending December 31, 2017. Commission Rule R8-67(e)(5) further provides" and that "[u]pon request of the electric public utility, the Commission shall also incorporate in this determination the experienced over-recovery or under-recovery of the incremental costs up to thirty (30) days prior to the date of the hearing, provided that the reasonableness and prudence of these costs shall be subject to review in the utility's next annual REPS cost recovery proceeding." Commission Rule R8-67(e)(4) also directs that the REPS and REPS EMF riders shall be in effect for a fixed period, which "shall coincide, to the extent practical, with the recovery period for the cost of fuel and fuel-related cost rider established pursuant to Rule R8-55." In its current fuel charge adjustment proceeding, Docket No. E-7, Sub 1163, and in this proceeding, DEC proposed that its rate adjustments take effect on September 1, 2018, and remain in effect for a 12-month period. This period is referred to as the billing period.

In her Additional Supplemental Testimony, DEC witness Williams requested to update the EMF period so that DEC's over-recovery of costs experienced in the months of January through April, 2018, can be incorporated into DEC's proposed EMF rider. This would result in an EMF period from January 1, 2017 through April 30, 2018 (Updated EMF Period). Witness Williams explained that the over-recovery resulted from significantly lower actual poultry REC purchases than originally projected and incorporated into the REPS riders billed and resulting revenues collected during the Updated EMF Period.

In his affidavit, Public Staff witness Lucas stated that the Public Staff has reviewed DEC's proposed Updated EMF Period and the costs incurred during that period. He further stated that the Public Staff agrees with DEC's requested Updated EMF period, but noted that the Public Staff had not been able to fully audit the additional expenses and revenues included in the Updated EMF Period. Therefore, he recommended that the test period for DEC's REPS cost recovery rider filed in 2019 remain as January 1, 2018 through December 31, 2018, to allow for the Public Staff's complete review of revenues and expenses for the first four months of 2018.

Based on the foregoing and the entire record herein, the Commission finds that DEC's Updated EMF Period is appropriate for use in this proceeding. Therefore, the Commission finds that the test period for use in this proceeding is the 16-month period beginning January 1, 2017, and ending April 30, 2018. Further, as recommended by the Public Staff, the Commission finds that it is appropriate to make clear that the Updated EMF Period authorized by this Order does not alter the test period to be used in DEC's application for REPS cost recovery that will be filed in 2019, which shall remain as the period January 1, 2018 through December 31, 2018, allowing for a complete review of the revenues and expenses incurred during that test period.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 12

The evidence supporting this finding of fact is found in the testimony and exhibits of DEC witnesses Jennings and Williams.

Witness Jennings sponsored Confidential Revised Jennings Exhibit No. 3 as an exhibit to her testimony, wherein she identified the "Research," "Solar Rebate Program" and "Other Incremental" costs that the Company has incurred or projects to incur in association with REPS compliance. With respect to research costs, witness Williams demonstrated that the research costs are under the $1 million per year cap established in N.C.G.S. § 62-133.8(h)(1)(b). Revised Williams Exhibit No. 1.

Consistent with the Commission's orders in prior REPS proceedings, witness Jennings provided testimony and exhibits on the results and status of various studies, the costs of which DEC is including for recovery in its incremental REPS cost for the calendar year 2017 test period. Specifically, her testimony provided detailed information on the following research and development costs incurred by the Company associated with the REPS riders:

- CAPER, PV Synchronous Generator (PVSG) – In 2017, the Company worked with North Carolina State University (NC State) and Clemson University, through the Center for Advanced Power Engineering Research, on a project to develop and demonstrate a

40 kW PVSG system. The results of this project can be found in Jennings Exhibit No. 5. This project will continue in 2018.

- CAPER, Distributed Generation Valuation – In 2017, the Company worked with NC State and the University of North Carolina at Charlotte (UNCC) through CAPER, on a project to properly value the distributed generation in relation to its impacts on the grid, and to determine the best practices for the southeast region. The first phase of the project aims to review recently conducted studies on the value of distributed generation. The phase one results can be found in Jennings Exhibit No. 6. This project will continue in 2018.
- Closed Loop Biomass – The Company continues to support a closed-loop biomass research project to better understand yield potential for various woody crops, including Loblolly Pine, Hybrid Poplar, Hybrid Aspen, Sweetgum, Willow and Cottonwood trees. Crop production levels may take several years to reach full maturity. American Forest Management (AFM) provides project management support and periodic updates to the Company, as seen in Jennings Exhibit No. 7. In addition to its regular crop assessments, AFM started collecting woody biomass samples from various plots in 2017, which were provided to Mineral Labs so that the lab could perform Ultimate Analysis on each woody biomass sample. The results of these analyses as well as a sample report from Mineral Labs are shown in Jennings Exhibit No. 8.
- Coalition for Renewable Natural Gas – The Company joined the Coalition for Renewable Natural Gas in 2017 to add a valuable resource of knowledge and public policy advocacy in this growing sector of potential animal waste supply. The Coalition for Renewable Natural Gas provides its members with exclusive whitepapers, support on model pipeline gas specifications and access to other members for discussions on current and future projects.
- Electric Power Research Institute (EPRI) – In 2017, the Company subscribed to the following EPRI programs and seeks to recover their costs via the REPS rider: Program 193 – Renewable Generation, which includes Program PS193C – Solar. EPRI designates such study results as proprietary or as trade secrets and licenses such results to EPRI members, including DEC. As such, the Company may not disclose the information publicly. Non-members may access these studies for a fee. Information regarding access to this information can be found at http://www.epri.com/Pages/Default.aspx.
- NC State University's Future Renewable Electric Energy Delivery and Management (FREEDM) Systems Center – Duke Energy supports NC State's FREEDM Center through annual membership dues. The FREEDM partnership provides Duke Energy with the ability to influence and focus research on materials, technology, and

products that will enable the utility industry to transform the electric grid into a 2-way power flow system supporting distributed generation.

- Institute for Electrical and Electronics Engineers (IEEE) 1547 Conformity Assessment – The IEEE 1547 Conformity Assessment Steering Committee has been working to develop industry standard tools and methodologies to assure consistent and comprehensive compliance prior to utility grid interconnection sign off. IEEE and the Company share a common goal to accelerate and broaden industry adoption through the development and publication of well-designed and managed conformity assessment and certification programs. This project was about establishment and execution of an IEEE 1547 Commissioning Test demonstration for solar installation within the eGRid laboratory located at Clemson University. The project formally commissioned the operation of a 50 kW inverter, established an operational test bed for more advanced interconnection evaluation. The results of this project can be found in Jennings Confidential Exhibit No. 9.
- Distributed Energy Resource – Islanding Detection and Control (DER-IDC) – There is growing consensus in the industry that as DER grows in its penetration levels, the effectiveness of anti-islanding schemes currently in use in inverters and protective relaying schemes will degrade, and that future schemes will likely need to involve some sort of communications. Accordingly, DEC has engaged in an initial study to look at wide-scale communications methods that could be used to solve this growing concern. DEC contracted with Northern Plains Power Technologies (NPPT), an engineering consulting firm, to study data collected from Duke Energy facilities and research potential algorithms and communications methods that would be effective for communications-based Islanding Detection and Control methods. In 2017, NPPT helped the Company thoroughly evaluate the feasibility of the first desired communication technology called eLoran. There are further phases planned for this project in 2017. As part of the data collection effort, protection/control/monitoring equipment was purchased and installed at the Company's Marshall, McAlpine, and Rankin R&D sites. This equipment included several satellite clocks and a real-time automation controller. The Company also contracted with Xtensible Solutions, an information technology and services company, to develop the use-case requirements and data model for microgrids. The results of this feasibility study can be found in Jennings Confidential Exhibit No. 10. In addition, DEC contracted with Green Energy Corp, which developed the data translator for local access and filtering of streaming phasor measurement unit at distribution measurement equipment back to a phaser data

concentrator in the back-office. A status report for this project can be found in Jennings Exhibit No. 11.

- Loyd Ray Farms – The Company partnered with Duke University to develop a pilot-scale, sixty-five kilowatt (kW) swine waste-to-energy facility, which initiated operation and began producing renewable energy in 2011. Jennings Exhibit No. 12 summarizes the project's progress through December 31, 2017.
- Marshall Solar Site Algorithm – In 2017, the Company continued to work with UNCC on a project to utilize the operational data to design and implement an autonomous active and reactive power dispatch algorithm with PV farms and/or Battery Energy Storage system on any feeder considering DMS coordination. The results of this project can be found in Jennings Confidential Exhibit No. 13.
- Mini-DVAR Project – In 2016, the Company started a project to investigate a new technology manufactured by American Superconductor Corporation which makes a device called Mini-DVAR. This device can potentially be used for voltage stability/VAR support for renewable energy applications such as voltage compliance, grid reliability, efficiency, energy savings and grid integration of distributed PV. The project also included engineering design of a protection scheme with Schweitzer Engineering Laboratories, and the procurement of switch gear from ABB. In 2017, the Company completed the following tasks of the project: (1) power quality meter installation for base line data collection; (2) design and implementation of the direct transfer trip for the mini-DVAR device; (3) mini-DVAR device field installation and commissioning; and (4) test run of the mini-DVAR to verify it is fully functional. This project will continue in 2018.
- Rocky Mountain Institute (RMI) – The Company participates in eLab, a forum sponsored by RMI, composed of a number of North Carolina and nationally based entities, and organized to overcome barriers to economic deployment of distributed energy resources in the U.S. electric sector. Specifically, the Company seeks to gauge customer desires related to distributed resources and provide ideas of potential long-term solutions for distributed energy resources and microgrids.
- Swine Extrusion/Poultry Mortality – The Animal and Poultry Waste Management Center (APWMC) at NC State University – In 2017, the Company began support of the various projects being undertaken by the APWMC. The initial work is centered on drying swine lagoon solids and poultry mortalities at a farm- based level to create a higher MMBtu fuel that can be safely and easily transported to a central plant for combustion. A detailed description of the project along with future testing plans can be found in Jennings Confidential Exhibit No. 14.

The Commission finds that the costs incurred to fund the foregoing research activities during the test period are costs reasonably and prudently incurred to fund research that encourages the development of renewable energy efficiency, or improved air quality, and that these costs are incremental costs recoverable pursuant to N.C.G.S. § 62-133.8(h)(1)(b). The Commission further finds that the total costs incurred to fund these research activities during the test period are within the $1 million annual limit provided in N.C.G.S. § 62-133.8(h)(1)(b). In addition, the Commission finds that the Company has complied with the requirement to file study results or information about how to access study results for research conducted with REPS rider funds and that it is appropriate to require DEC to continue to include that information in future REPS rider applications. Therefore, the Commission concludes that DEC should be allowed to recover these incremental costs through the REPS rider charges authorized by this order.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 13-16

The evidence supporting these findings of fact is found in the testimony and exhibits of DEC witnesses Jennings and Williams, as well as in the affidavits of Public Staff witnesses Johnson and Lucas.

DEC witness Williams testified regarding the calculation of DEC's avoided costs and its incremental costs of compliance with REPS requirements, based on incurred and projected costs provided by witness Jennings. Consistent with Commission Rule R8-67(e)(2), which provides that the cost of an unbundled REC is an incremental cost with no avoided cost component, witness Williams included in incremental costs the total amount of costs incurred during the test period for unbundled REC purchases. Witness Williams identified the total retail and wholesale incremental costs incurred during the test period as $ 26,491,680, 2nd Revised Williams Exhibit No. 1, p. 1, and the projected incremental costs for the billing period as $ 29,409,151. Williams Exhibit No. 1, p. 2. Further, the projected costs of unbundled REC purchases discussed by witness Jennings during the billing period are included as estimated billing period incremental costs.

Witness Williams testified that, consistent with Commission Rule R8-67(a)(2), DEC's approved avoided cost rates are set forth in Rate Schedule PP-N, Purchased Power Non-Hydroelectric, and Rate Schedule PP-H, Purchased Power Hydroelectric, and Schedule PP rate schedules (collectively, Schedule PP). For executed purchased power agreements, where the price of the REC and energy are bundled, the Company used annualized combined capacity and energy rates shown on the Company's Exhibit No. 3, filed in Docket No. E-100, Sub 106; Exhibit No. 3 in Docket No. E-100, Sub 117; Exhibit No. 3 in Docket No. E-100, Sub 127; Exhibit No. 3 in Docket No. E-100, Sub 136; Exhibit No. 3 in Docket No. E-100, Sub 140; or Attachment H in Docket No. E-100, Sub 148 (depending on the dates the contracts were executed). For those purchased power agreements with terms that did not correspond with the durational terms for which rates were established in the avoided cost proceeding (i.e., two, five, ten, or fifteen-year durations), DEC computed avoided cost rates for the particular term of the purchased power agreements using the same inputs and methodology used for the Schedule PP rates approved in Docket No. E-100, Subs 106, 117, 127, 136, 140, and Sub 148, respectively. Witness Williams also stated that the estimated avoided cost components of energy and REC purchased power agreements effective during the prospective billing period were calculated in the same manner.

DEC's Solar Programs and Facilities

With respect to DEC's Solar DG program, witness Williams testified that DEC determined the avoided cost using a process similar to that described for a purchased power agreement with a non-standard duration. The inputs and methodology used for the Schedule PP rates approved in Docket No. E-100, Sub 117 were used to determine the annualized combined capacity and energy rates for the twenty-year term, corresponding to the expected life of the solar facilities. DEC similarly estimated its avoided cost and incremental cost for its new Solar PV facilities.

Regarding the Company's other owned solar facilities, orders approving the transfers of Certificates of Public Convenience and Necessity (CPCN) were issued by the Commission on May 16, 2016 for both the Mocksville (Docket No. E-7, Sub 1098) and the Monroe (Docket No. E-7, Sub 1079) facilities, and the order approving the CPCN for construction of the Woodleaf Solar Facility was issued on June 16, 2016 (DEC Solar PV Orders). The 15 MW Mocksville Solar Facility was placed in service in December 2016, and the 60 MW Monroe Solar Facility was placed in service in April 2017. An annual revenue requirement, including capital and operations and maintenance costs, was calculated for each project for all years of the expected service life of the project. The present value of the total project revenue requirement was levelized over the project life to produce a level annual revenue requirement, which was compared to avoided cost to determine any annual incremental cost subject to recovery through the REPS rider. The Woodleaf Solar Facility is expected to be in service by year-end 2018. The Company also calculated an estimated annual levelized revenue requirement for the Woodleaf Solar Facility applicable to the billing period.

The avoided cost for these projects is determined in similar fashion to the method used to determine avoided cost for the Company's Solar DG program. The total annual revenue requirements per megawatt hour (MWh) for the facilities, computed based on updated tax benefit assumptions and actual completed project costs as available, were greater than the applicable avoided costs per MWh, as was the case when the projects were submitted for approval in the CPCN proceedings. The Commission in its DEC Solar PV Orders limited cost recovery for these projects in the Company's REPS riders to the equivalent of the standard REC offer price that DEC was offering to qualifying facilities at the time the purchase agreements were executed for the facilities. The current annual levelized total revenue requirement per MWh for each facility, computed based on updated tax benefit assumptions and actual completed project cost, as available, is greater than the applicable levelized avoided cost per MWh, as was the case when each project was submitted for approval in the applicable CPCN proceeding. Company witness Williams testified that the Company included for cost recovery in this REPS rider only the percentage of annual levelized cost equivalent to the standard REC offer price as approved by the Commission in its DEC Solar PV Orders.

The DEC Solar PV Orders also required in the appropriate REPS rider and general rate case proceedings that DEC itemize the actual monetization of all the following tax benefits included in the Company's revenue requirement analysis of each facility:

(a) the federal Section 199 deduction;
(b) the federal Investment Tax Credit (ITC) of 30% of the cost of eligible property;

(c) the five-year Modified Accelerated Cost Recovery System (MACRS) tax depreciation; and
(d) a property tax abatement of 80% on solar property.

Company witness Williams testified that the Company analyzed the monetization of the estimated tax benefits associated with the DEC Solar PV facilities to comply with the conditions in the DEC Solar PV Orders. For the Mocksville and Monroe Solar Facilities, the Company updated its original models of estimated annual revenue requirements to reflect its actual experience to date and estimated future timing of the realization of tax benefits. She explained that, in performing these updates, the original estimated project costs were retained and the tax benefit assumptions were updated to isolate the impact of the revenue requirements of the change in tax benefits achieved or expected to be achieved. Because the Woodleaf Solar Facility is not yet under construction, a complete analysis of tax benefit assumptions specific to that project was not available. Therefore, according to witness Williams, the Company only included a forecast of levelized cost limited to the approved avoided cost plus the incremental cost calculated at the cap specified by the Commission in its DEC Solar PV Orders.

Company Witness Williams also discussed the impacts of the Federal Tax Cuts and Jobs Act (the Tax Act), which was enacted on December 22, 2017, on the revenue requirement calculations for the DEC Solar PV Facilities. The Tax Act reduced the corporate federal income tax rate to 21% from 35% and eliminated the federal Section 199 manufacturing deduction, both of which affected the revenue requirement calculations for the DEC Solar PV Facilities. With respect to the Mocksville and Monroe Solar Facilities, the Company originally assumed that they would qualify for five-year MACRS tax depreciation. Witness Williams testified that at the time the applications for CPCNs for the Monroe and Mocksville Solar Facilities were made federal bonus depreciation was not available for these solar facilities. She further stated that in late 2015, however, Congress extended bonus depreciation such that both DEC-owned solar projects qualified for it. Thus, she explained that the Company expects to take the five-year MACRS depreciation on an adjusted basis of the solar asset after first taking the 50% bonus depreciation. Taking the bonus depreciation in conjunction with the five-year MACRS depreciation results in a decrease in total project cost per MWh. Witness Williams testified that realizing the tax benefit of the bonus depreciation, however, results in creating tax net operating losses, which in turn delays the Company's ability to monetize ITC and alters the basis on which MACRS is calculated. As she explained in the previous DEC REPS recovery proceeding, separately identifying the monetary effect of any delay in realizing any of the other tax benefits is not useful because the delay is linked to and results from the ability to utilize favorable bonus depreciation.

Witness Williams further explained that beginning in 2018, the Tax Act eliminates the Section 199 tax deduction, and therefore the associated reduction is removed from the composite tax rate utilized in the revenue requirement calculations. Federal ITC benefits were originally assumed to be realized in 2018 for the Mocksville Solar Facility and in 2021 for the Monroe Solar Facility, but DEC now expects to experience a delay in realizing the federal ITC benefits because it anticipates lacking sufficient taxable income against which it can take the tax credit. The Company's ability to take bonus depreciation related to many of its assets placed in service prior to the deadline established by the Tax Act, combined with the updated forecast timing of utilization of the other tax credits, contribute to the estimated lack of taxable income for utilization of the

ITC. Finally, witness Williams testified that the Company expects to realize the 80% property tax abatement as originally assumed in its estimated revenue requirements analysis.

Witness Williams also testified that the reduction in the corporate federal income tax rate from 35% to 21% affected the calculation of deferred taxes and the rates used to calculate the return on rate base as well as the levelization of the annual revenue requirement. These effects are reflected in the revenue requirement calculations beginning in year 2018. Furthermore, the accumulated deferred income tax (ADIT) balances as of year-end 2017 are reduced in the revenue requirement calculations by an estimate of the excess associated with the reduction in the federal income tax; the revenue requirement calculations beginning in year 2018 incorporate the adjusted ADIT balance.

Other Incremental and Solar Rebate Program Costs

In addition to costs incurred or projected to be incurred for bundled or unbundled RECs, witness Williams identified the "Other Incremental," "Solar Rebate Program," and "Research" costs that DEC has incurred or projects to incur in association with REPS compliance. 2nd Revised and Revised Williams Exhibit No. 1, p. 1-2. Likewise, witness Jennings identified "Other Incremental Cost," "Solar Rebate Program Costs and "Research Cost" related to REPS compliance. Revised Jennings Confidential Exhibit Nos. 2 and 3. Witness Jennings testified that "Other Incremental Costs" include labor costs associated with REPS compliance activities and non-labor costs associated with administration of REPS compliance. Witness Jennings also listed the labor costs by activity, as directed by the Commission in its August 16, 2016, Order Approving REPS Rider and REPS EMF Rider and 2015 REPS Compliance, in Docket No. E-7, Sub 1106, and witness Jennings confirmed that all internal interconnection-related labor costs and non-labor costs have not been included for recovery in this filing, per the Commission's Order in Docket No. E-2, Sub 1109. Jennings Confidential Exhibit No. 3 and Revised Confidential Exhibit No. 3. Witness Williams included the other incremental and research costs that were incurred in 2017 in the EMF calculation. She explained that these costs are estimated for the billing period and included in the proposed REPS rider. She also testified that an amount equal to the annual amortization of Solar Rebate Program costs incurred pursuant to N.C.G.S. § 62-155(f) applicable to the billing period is also included for recovery in the proposed REPS rider.

Witness Jennings provided additional detail on the inclusion of Solar Rebate Program costs for recovery in the proposed REPS rider. As required by N.C.G.S. § 62-155(f), DEC filed an application for approval of its Solar Rebate Program in Docket Nos. E-7, Sub 1166 and E-2, Sub 1167. On April 3, 2018, in Docket Nos. E-7, Sub 1166 and E-2 Sub 1167, the Commission issued an Order Modifying and Approving the Solar Rebate Program. Through the Solar Rebate Program, DEC offers reasonable incentives to residential and nonresidential customers for the installation of small customer-owned or leased solar energy facilities participating in the Company's net metering tariff. Witness Jennings explained that, consistent with N.C.G.S. §§ 62-155(f) and 62-133.8(h), the Company had included labor and non-labor costs projected to be incurred in the billing period related to implementation of the Solar Rebate Program. Witness Jennings detailed these costs, which include the annual amortization of incentives paid to customers and program administration costs, including labor, information technology, and marketing costs. Jennings Confidential Exhibit No. 3 and Revised Confidential Exhibit No. 3.

DEC witness Jennings also reported that DEC sold poultry waste RECs during the test period to other electric suppliers in North Carolina to enable the state's electric power suppliers to comply with the aggregate Poultry Waste Set-Aside requirement. Witness Jennings confirmed that the sales did not negatively impact compliance and that the proceeds were credited back to the Company's retail and wholesale REPS customers.

Public Staff witness Johnson also testified that after its review of the Company's filings and numerous responses to both written and verbal data requests, the Public Staff had "a high confidence level" that the Company had removed all interconnection-related labor costs from its request for recovery in accordance with Company guidelines and that the Company's efforts to remove interconnection-related costs were reasonable.

Conclusions

Based on the foregoing and the entire record in this proceeding, the Commission finds that DEC appropriately calculated its avoided costs and incremental REPS compliance costs for the test period and the billing period. Public Staff witnesses Johnson and Lucas both confirmed that, as part of its investigation, the Public Staff had reviewed the REPS compliance costs included in DEC's proposed REPS rider, and recommended that the Commission approve the proposed rider amounts. No party disputed DEC's methodology for calculating its avoided costs or its incremental costs incurred during the test period or projected to be incurred during the billing period, or DEC's accounting for its sales of RECs.

The Commission notes that this is the first REPS rider proceeding in which DEC has included costs associated with its Solar Rebate Program for recovery through the REPS rider. Section 62-155(f) authorizes DEC to recover all reasonable and prudent costs of incentives provided to customers and program administrative costs by amortizing the total program incentives distributed during a calendar year and administrative costs over a 20-year period, including a return component adjusted for income taxes at the utility's overall weighted average cost of capital established in its most recent general rate case, which shall be included in the costs recoverable by the public utility pursuant to N.C.G.S.§ 62-133.8(h). Additionally, N.C.G.S. § 62-133.8(h), as amended by House Bill 589, provides that an electric power supplier's cost recovery and customer charges under the REPS rider may include incremental costs incurred to "provide incentives to customers, including program costs, incurred pursuant to N.C.G.S. § 62-155(f)." Therefore, the Commission finds that DEC's inclusion of its Solar Rebate Program costs for recovery through the billing period is appropriate in this proceeding.

In addition, the Commission finds that DEC's sale of poultry RECs appropriately offset costs incurred during the Updated EMF Period. Accordingly, the Commission finds that, for purposes of establishing the REPS EMF rider in this proceeding, DEC's reasonably and prudently incurred costs for REPS compliance during the test period were $26,491,680, including the costs incurred for its Wholesale Customers. Further, the Commission finds that the Company appropriately projected incremental costs for REPS compliance during the billing period totaling $29,409,151, including the incremental costs projected to be incurred for the Wholesale Customers. Finally, the Commission finds that DEC appropriately calculated the costs of its Solar DG program and DEC's other owned solar projects for inclusion in the REPS rider. Therefore, the Commission concludes that, for the purposes of establishing the REPS rider charges in this proceeding, DEC should be authorized to recover the foregoing expenses as incremental costs reasonably and prudently incurred to comply with the REPS requirements.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 17-23

The evidence supporting these findings of fact is found in the testimony and exhibits of DEC witnesses Jennings and Williams, and in the affidavits of Public Staff witnesses Johnson and Lucas.

DEC Witness Williams demonstrated that DEC's total North Carolina retail test period over-collections (including interest) of $13,250,561 for the residential class, $7,730,438 for the general service class, and $1,051,822 for the industrial class. 2nd Revised Williams Exhibit No.2. Witness Williams further demonstrated that additional credits for contract receipts by customer class are $568,919 for residential, $412,380 for general service, and $25,510 for industrial. 2nd Revised Williams Exhibit No. 4. Total over-collections and contract-related credits by class for the EMF period are $13,819,480 for residential, $8,142,818 for general service, and $1,077,332 for industrial. Witness Williams calculated the proposed North Carolina retail monthly per-account REPS EMF credits (excluding regulatory fee) as $(0.67) for residential accounts, $(2.79) for general service accounts, and $(19.04) for industrial accounts. 2nd Revised Williams Exhibit No. 4. She also testified that she calculated the projected North Carolina retail REPS costs for the billing period of $15,315,696 for the residential class, $11,167,611 for the general service class, and $713,415 for the industrial class. See 2nd Revised Williams Exhibit No. 4. Witness Williams demonstrated that the proposed monthly prospective REPS riders per customer account, excluding the regulatory fee, to be collected during the billing period are $0.74 for residential accounts, $3.82 for general service accounts, and $12.61 for industrial accounts. 2nd Revised Williams Exhibit No. 4. The combined monthly REPS and REPS EMF rider charges per customer account, excluding regulatory fee, to be collected during the billing period are thus $0.07 for residential accounts, $1.03 for general service accounts, and $(6.43) for industrial accounts. Including the regulatory fee, the combined monthly REPS and REPS EMF rider charges per customer account to be collected during the billing period are $0.07 for residential accounts, $1.03 for general service accounts, and $(6.44) for industrial accounts. Company witness Williams also demonstrated that the Company's REPS incremental cost rider to be charged to each customer account for the billing period is within the annual cost cap established for each customer class in N.C.G.S. § 62-133.8(h)(4). 2nd Revised Williams Exhibit No. 4.

Public Staff witness Johnson stated in her affidavit that as a result of its investigation, the Public Staff recommended that the Company's proposed annual REPS EMF increment/(decrement) amounts and monthly EMF riders for each customer class be approved. Witness Johnson also stated that, excluding the regulatory fee, the annual decrement REPS EMF riders are $(8.06), $(33.44) and $(228.49) and the monthly decrement REPS EMF riders are $(0.67), $(2.79), and $(19.04), per retail customer account, for residential, general service, and industrial customers, respectively.

Public Staff witness Lucas stated in his affidavit that the Public Staff had reviewed the costs that are included in the proposed, revised rates and that the Public Staff took no issue with them. He recommended that the Commission approve DEC's proposed prospective monthly, per customer account REPS rider amounts in the following amounts: $0.74 for residential accounts, $3.82 for general service accounts, and $12.61 for industrial accounts, excluding regulatory fee.

Based upon the foregoing and the entire record herein, the Commission finds that DEC's calculations of its over collection during the test period, its incremental costs projected to be incurred during the billing period, and the resulting REPS and REPS EMF rider charges for each customer class are reasonable and appropriate. The Commission further finds that the REPS and REPS EMF rider charges are below the following annual per-account limits established in N.C.G.S. § 62-133.8(h)(4): $27.00 for residential, $150.00 for general service/commercial, and $1,000.00 for industrial. Finally, the Commission finds that the total incremental costs authorized to be recovered from DEC's customers in this proceeding are below the annual limit established in N.C.G.S. 62-133.8(h)(3) and (4). Therefore, the Commission concludes that DEC should be authorized to recover the total incremental costs incurred during the test period and projected to be incurred during the billing period, through the REPS and REPS EMF rider charges in the amounts described herein.

IT IS, THEREFORE, ORDERED as follows:

1. That DEC shall establish a REPS rider as described herein, in the amounts approved herein, and that this rider shall remain in effect for a 12-month period beginning on September 1, 2018, and expiring on August 31, 2019;

2. That DEC shall establish an REPS EMF rider as described herein, in the amounts approved herein, and that this rider shall remain in effect for a 12-month period beginning on September 1, 2018, and expiring on August 31, 2019;

3. That DEC shall file the appropriate rate schedules and riders with the Commission in order to implement the provisions of this Order as soon as practicable, but not later than ten (10) days after the date that the Commission issues orders in both this docket and in Docket No. E-7, Sub 1163;

4. That DEC shall work with the Public Staff to prepare a joint notice to customers of the rate changes ordered by the Commission in this docket, as well as in Docket No. E-7, Sub 1163, and the Company shall file such notice for Commission approval as soon as practicable, but not later than ten (10) days of the date of this order;

5. That DEC's 2017 REPS compliance report shall be, and hereby is, approved, and the RECs in DEC's 2017 compliance sub-accounts in NC-RETS and those of the Wholesale Customers shall be retired;

6. That DEC shall file in all future REPS rider applications the results of studies the costs of which were, or are proposed to be, recovered through the REPS EMF rider and REPS rider charges and, for those studies that are subject to confidentiality agreements, information regarding whether and how parties can access the results of those studies; and

7. That DEC shall continue to file a worksheet explaining the discrete costs that DEC includes as "other incremental costs" in all future REPS Rider proceedings.

ISSUED BY ORDER OF THE COMMISSION.
This the 17th day of August, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. E-7, SUB 1163

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Duke Energy Carolinas, LLC Pursuant to N.C. Gen. Stat. § 62-133.2 and NCUC Rule R8-55 Relating to Fuel and Fuel-Related Charge Adjustments for Electric Utilities	)	ORDER APPROVING FUEL CHARGE ADJUSTMENT

HEARD: Tuesday, June 5, 2018, at 9:30 a.m. in the Commission Hearing Room, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Chairman Edward S. Finley, Jr., Presiding; Commissioner ToNola D. Brown-Bland, Commissioner Jerry C. Dockham, Commissioner James G. Patterson, and Commissioner Lyons Gray

APPEARANCES:

For Duke Energy Carolinas, LLC:

Jack Jirak, Associate General Counsel, Duke Energy Corporation, NCRH 20/P.O. Box 1551, Raleigh, North Carolina 27602-1551

Robert W. Kaylor, Law Office of Robert W. Kaylor, P.A., 353 Six Forks Road, Suite 260, Raleigh, North Carolina 27609

For Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For North Carolina Sustainable Energy Association:

Peter Ledford, Benjamin Smith, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

For Sierra Club:

Gudrun Thompson, David Neal, Southern Environmental Law Center, 601 West Rosemary Street, Suite 220, Chapel Hill, North Carolina 27516

For Carolina Industrial Group for Fair Utility Rates III:

Warren Hicks, Bailey & Dixon, LLP, P. O. Box 1351, Raleigh, North Carolina 27602

For the Using and Consuming Public:

Dianna W. Downey, Staff Attorney, Robert B. Josey, Staff Attorney, Public Staff, North Carolina Utilities Commission, 430 N. Salisbury Street, 4326 MSC. Raleigh, North Carolina 27699-4300

BY THE COMMISSION: On March 7, 2018, Duke Energy Carolinas, LLC (Duke Energy Carolinas, DEC, or the Company) filed an application pursuant to N.C. Gen. Stat. § 62-133.2 and Commission Rule R8-55 regarding fuel and fuel-related cost adjustments for electric utilities, along with the testimony and exhibits of Kimberly D. McGee, Eric S. Grant, Joseph A. Miller, Jr., Scott L. Batson, and Kevin Y. Houston.

Petitions to intervene were filed by the North Carolina Sustainable Energy Association (NCSEA) on March 16, 2018; by Carolina Utility Customers Association, Inc. (CUCA) on April 10, 2018; by Carolina Industrial Group for Fair Utility Rates III (CIGFUR) on May 17, 2018; and by the Sierra Club on May 21, 2018. The Commission granted NCSEA's petition to intervene on March 23, 2018, CUCA's petition to intervene on April 11, 2018, CIGFUR's petition to intervene on May 18, 2018, and the Sierra Club's petition on May 30, 2018.

On March 26, 2018, the Commission issued an Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines, and Requiring Public Notice (Scheduling Order) in which the Commission set this matter for hearing; established deadlines for the submission of intervention petitions, intervenor testimony, and DEC rebuttal testimony; required the provision of appropriate public notice; and mandated compliance with certain discovery guidelines.

The intervention of the Public Staff is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e).

On May 15, 2018, DEC filed the supplemental testimony, exhibits and work papers of Kimberly D. McGee, which reflected an increase in the amount requested in the original application.

On May 18, 2018, DEC filed a request for expedited review and approval of the proposed Second Public Notice. On May 21, 2018, the Commission issued an Order Requiring Publication of Second Public Notice.

On May 21, 2018, the Public Staff filed the testimony and exhibits of Darlene P. Peedin and Dustin Metz, which was subsequently corrected on May 22, 2018.

On May 30, 2018, DEC filed a motion to excuse Scott L. Batson and to allow Steven D. Capps to adopt Mr. Batson's pre-filed testimony. On May 31, 2018, the Commission granted the motion.

On May 31, 2018, DEC filed the rebuttal testimony of Steven D. Capps and Forest W. Rogers.

On May 31, 2018, DEC and the Public Staff filed a joint motion requesting that certain witnesses be excused from appearance at the expert witness hearing. On June 1, 2018, the Commission issued an Order excusing DEC witnesses McGee, Grant, Miller, and Houston, and Public Staff witness Peedin from appearing at the expert witness hearing.

On June 4, 2018, DEC filed affidavits of publication indicating that the initial public notice had been provided in accordance with the Commission's Scheduling Order dated March 26, 2018. On June 6, 2018, DEC filed affidavits of publication indicating that the second public notice had been provided in accordance with the Commission's Order dated May 21, 2018.

The case came on for hearing as scheduled on June 5, 2018. The prefiled direct and supplemental testimony of DEC's witnesses and the prefiled affidavits of the Public Staff's witnesses were received into evidence. No public witnesses appeared at the hearing.

On July 19, 2018, DEC and the Public Staff filed proposed orders.

Based upon the Company's verified application, the testimony, affidavits, and exhibits received into evidence at the hearing, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

1. Duke Energy Carolinas is a duly organized corporation existing under the laws of the State of North Carolina, is engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North Carolina, and is subject to the jurisdiction of the Commission as a public utility. Duke Energy Carolinas is lawfully before this Commission based upon its application filed pursuant to N.C. Gen. Stat. § 62-133.2.

2. The test period for purposes of this proceeding is the 12 months ended December 31, 2017 (test period).

3. In its application and direct and supplemental testimony including exhibits in this proceeding, DEC requested a total increase of approximately $58.3 million as revised to its North Carolina retail revenue requirement associated with fuel and fuel-related costs, excluding the regulatory fee. The fuel and fuel-related cost factors requested by DEC included Experience Modification Factor (EMF) riders to take into account fuel and fuel-related cost under-recoveries and over-recoveries experienced during the test period and through March 2018, with an overall under-recovery of approximately $73.3 million.

4. For the test year, DEC achieved an actual nuclear capacity factor equal to 95.87% that exceeded the NERC five-year weighted industry average nuclear capacity factor of 88.76%.

5. The nuclear capacity factor of DEC during the test year avoided the rebuttable presumption of imprudence in Commission Rule R8-55.

6. The Company's baseload plants were managed prudently and efficiently during the test period so as to minimize fuel and fuel-related costs.

7. The Company's fuel and reagent procurement and power purchasing practices during the test period were reasonable and prudent.

8. The test period per book system sales are 85,087,285 megawatt-hours (MWh). The test period per book system generation (net of auxiliary use and joint owner generation) and purchased power is 91,830,315 MWh and is categorized as follows:

Net Generation Type	MWh
Coal	25,573,401
Natural Gas, Oil and Biomass	10,964,809
Nuclear	44,387,125
Hydro – Conventional	1,517,922
Hydro Pumped Storage	(868,059)
Solar DG	125,812
Purchased Power – subject to economic dispatch or curtailment	7,355,868
Other Purchased Power	2,100,330
Catawba Interchange	673,107
Total Net Generation	91,830,315

9. The appropriate nuclear capacity factor for use in this proceeding is 93.31%.

10. The North Carolina retail test period sales, adjusted for customer growth and weather, for use in calculating the EMF are 56,823,684 MWh. The adjusted North Carolina retail customer class MWh sales are as follows:

N.C. Retail Customer Class	Adjusted MWh Sales
Residential	21,099,293
General Service/Lighting	23,106,793
Industrial	12,617,598
Total	56,823,684

11. The projected billing period (September 2018-August 2019) sales for use in this proceeding are 86,966,251 MWh on a system basis and 57,030,345 MWh on a North Carolina retail basis. The projected billing period North Carolina retail customer class MWh sales are as follows:

N.C. Retail Customer Class	Projected MWh Sales
Residential	21,325,336
General Service/Lighting	23,055,058
Industrial	12,649,951
Total	57,030,345

12. The projected billing period system generation and purchased power for use in this proceeding in accordance with projected billing period system sales is 92,085,162 MWh and is categorized as follows:

Generation Type	MWh
Coal	24,506,235
Gas Combustion Turbine (CT) and Combined Cycle (CC)	15,192,940
Nuclear	43,840,571
Hydro	4,927,068
Net Pumped Storage Hydro	(3,999,271)
Solar Distributed Generation (DG)	162,037
Purchased Power	7,455,582
Total	92,085,162

13. The appropriate fuel and fuel-related prices and expenses for use in this proceeding to determine projected system fuel expense are as follows:

a. The coal fuel price is $24.75/MWh.
b. The gas CT and CC fuel price is $25.32/MWh.
c. The appropriate expense for ammonia, lime, limestone, urea, dibasic acid, sorbents, and catalysts consumed in reducing or treating emissions (collectively, "Reagents") is $34,275,781.
d. The total nuclear fuel price (including Catawba Joint Owners generation) is $6.53/MWh.

e. The total system purchased power cost (including the impact of Joint Dispatch Agreement (JDA) Savings Shared) is \$35.61/MWh.
f. System fuel expense recovered through intersystem sales is \$35,970,078.

14. The projected fuel and fuel-related costs for the North Carolina retail jurisdiction for use in this proceeding are \$1,013,394,952.

15. The Company's North Carolina retail jurisdictional fuel and fuel-related expense under-collection for purposes of the EMF was approximately \$73.3 million, consisting of an under-recovery for the residential, general service/lighting, and industrial classes of approximately \$20.7 million, \$24.7 million and \$27.9 million, respectively.

16. The increase in customer class fuel and fuel-related cost factors from the amounts approved in Docket No. E-7, Sub 1129, should be allocated between the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology that was approved by the Commission in that docket.

17. The appropriate prospective fuel and fuel-related cost factors for this proceeding for each of DEC's rate classes, excluding the regulatory fee, are as follows: 1.7003¢/kilowatt-hour (kWh) for the Residential class; 1.8314¢/kWh for the General Service/Lighting class; and 1.8020¢/kWh for the Industrial class.

18. The appropriate EMF increments established in this proceeding, excluding the regulatory fee, are as follows: 0.0980¢/kWh for the Residential class; 0.1068¢/kWh for the General Service/Lighting class; and 0.2213¢/kWh for the Industrial class.

19. The total net fuel and fuel-related costs factors for this proceeding for each of DEC's rate classes, excluding the regulatory fee, are as follows: 1.7983¢/kWh for the Residential class; 1.9382¢/kWh for the General Service/Lighting class; and 2.0233¢/kWh for the Industrial class.

20. The base fuel and fuel-related costs as approved in Docket No. E-7, Sub 1146 of 1.7828¢/kWh, 1.9163¢/kWh, and 2.0207¢/kWh for the Residential, General Service/Lighting, and Industrial customer classes, respectively will be adjusted by amounts equal to (0.0825)¢/kWh, (0.0849)¢/kWh, and (0.2187)¢/kWh for the Residential, General Service/Lighting, and Industrial customer classes, respectively. The resulting approved fuel and fuel-related costs will be further adjusted by EMF increments totaling 0.0980¢/kWh, 0.1068¢/kWh, and 0.2213¢/kWh for the Residential, General Service/Lighting, and Industrial customer classes, respectively.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 1

This finding of fact is essentially informational, procedural, and jurisdictional in nature and is uncontroverted.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 2

N.C. Gen. Stat. § 62-133.2(c) sets out the verified, annualized information that each electric utility is required to furnish to the Commission in an annual fuel and fuel-related cost adjustment proceeding for a historical 12-month test period. Commission Rule R8-55(b) prescribes the 12 months ending December 31 as the test period for DEC. The Company's filing in this proceeding was based on the 12 months ended December 31, 2017.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 3

The evidence for this finding of fact is contained in the Application, the direct and supplemental testimony of Company witness McGee, and the entire record in this proceeding. This finding is not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 4-6

The evidence for these findings of fact is contained in the direct testimony of Company witnesses Batson and Miller, the rebuttal testimony of Company witnesses Capps and Rogers and the direct testimony of Public Staff witness Metz.

Pursuant to N.C. Gen. Stat. § 62-133.2(d) and Commission Rule R8-55, the burden of proof, as to the correctness and reasonableness of any charge and as to whether the test year fuel costs were reasonable and prudently incurred, is on the utility. For purposes of determining the EMF rider, a utility must achieve either (a) an actual system-wide nuclear capacity factor in the test year that is at least equal to the national average capacity factor for nuclear production facilities based on the most recent five-year period available as reflected in the most recent NERC Generating Availability Report, appropriately weighted for size and type of plant, the NERC average, or (b) an average system-wide nuclear capacity factor, based upon a two-year simple average of the system-wide capacity factors actually experienced in the test year and the preceding year, that is at least equal to the NERC average. in order to avoid a presumption that the utility imprudently incurred the increased fuel costs and that disallowance of those costs is appropriate.

Company witness Batson[1] testified that the most recently published NERC Generating Unit Statistical Brochure (NERC Brochure) indicates an average capacity factor of 88.76% for the period 2012 through 2016 for comparable units (pressurized water reactors on a capacity-rated basis with capacity ratings at and above 800 MWs).

Company witness Batson testified that the Company's seven nuclear units operated at a system average capacity factor of 95.87% during the test period. Tr., pp. 59-60. This capacity factor, as well as the Company's 2-year average capacity factor of 96.13%, exceeded the NERC five-year industry weighted average capacity factor of 88.76%.

[1] By motion filed on May 30, 2018, DEC moved to excuse witness Batson from appearing at the evidentiary hearing and to allow witness Capps to adopt witness Batson's testimony. The Commission granted the motion by order dated May 31, 2018.

Witness Batson also testified that for the 18th consecutive year, DEC's seven nuclear units achieved a system average capacity factor exceeding 90%, ending the year, which included four refueling outages. In addition, he testified that DEC's nuclear units achieved the second best annual generation in the Company's history, falling just below the record output achieved in 2016. Id. McGuire Unit 1 established a new breaker-to-breaker run of 523.86 days leading into the unit's fall refueling outage. Id. Both McGuire units completed refueling outages during 2017, with both units setting new refueling outage duration records. Id. With a continuous cycle run of just over 715 days, Oconee Unit 2 also established a new breaker-to-breaker record leading into its fall refueling outage. The Catawba station established a new annual generation record during 2017. Id. Catawba Unit 1 established new monthly generation records during 7 of the 12 months in 2017, and Unit 1's spring refueling outage duration of 24.2 days was the second best in the unit's history. Id. Catawba Unit 2's annual generation of just over 10,377 GWHs was the second highest output in the unit's history. Id.

Company witness Miller testified concerning the performance of DEC's fossil/hydro assets. He stated that the primary objective of the Company's fossil/hydro generation department is to safely provide reliable and cost-effective electricity to DEC's customers. Tr. at 46-48. Witness Miller further stated that DEC achieves compliance with all applicable environmental regulations and maintains station equipment and systems in a cost-effective manner to ensure reliability. The Company also takes action in a timely manner to implement work plans and projects that enhance the safety and performance of systems, equipment, and personnel, consistent with providing low-cost power for its customers.

Company witness Miller testified that the Company's generating units operated efficiently and reliably during the test period. He explained that several key measures are used to evaluate operational performance, depending on the generator type: (1) equivalent availability factor (EAF), which refers to the percent of a given time period a facility was available to operate at full power, if needed (EAF is not affected by the manner in which the unit is dispatched or by the system demands; it is impacted, however, by planned and unplanned (i.e., forced outage time); (2) net capacity factor (NCF), which measures the generation that a facility actually produces against the amount of generation that theoretically could be produced in a given time period, based upon its maximum dependable capacity (NCF is affected by the dispatch of the unit to serve customer needs); (3) equivalent forced outage rate (EFOR), which represents the percentage of unit failure (unplanned outage hours and equivalent unplanned derated hours); a low EFOR represents fewer unplanned outage and derated hours, which equates to a higher reliability measure; and, (4) starting reliability (SR), which represents the percentage of successful starts. Tr., pp. 49-50.

Company witness Miller presented the following chart, which shows operation results, as well as results from the most recently published NERC Generating Availability Brochure for the period 2012 through 2016, and is categorized by generator type:

Generator Type	Measure	Review Period DEC Operational Results	2012-2016 NERC Average	Nbr of Units
Coal-Fired Test Period	EAF	78.5%	79.5%	789
	NCF	42.7%	57.6%	
	EFOR	4.8%	8.0%	
Coal-Fired Summer Peak	EAF	95.9%	n/a	n/a
Total CC Average	EAF	92.3%	84.8%	301
	NCF	81.4%	53.0%	
	EFOR	0.07%	5.5%	
Total CT Average	EAF	84.7%	87.6%	826
	SR	99.4%	98.1%	
Hydro	EAF	88.8%	81.1%	1,120

Witness Miller testified that Marshall Unit 3 completed a major turbine overhaul in Spring 2017, which included main turbine and boiler feed pump rotor maintenance. Allen Unit 3 completed an outage in Spring 2017 to replace the low pressure turbine rotor. Marshall Unit 1 completed an outage in Fall 2017. Tr. at 51. The primary purpose of this outage was to replace the HP and LP turbine rotors. Belews Creek Unit 1 completed major boiler maintenance in Fall 2017, which included secondary super heat inlet and outlet header replacements.

Witness Miller also testified that the CC fleet performed planned outages at Dan River CC and Buck CC in Spring 2017. The primary purpose of the Dan River CC outage was to perform a boroscope and heat recovery steam generator inspection. The primary purpose of the Buck CC outage was to perform a boroscope inspection on each combustion turbine. Within the hydro fleet, Cowans Ford Unit 1 had a major generator overhaul, controls upgrade, and installed a dissolved oxygen system.

Public Staff witness Metz testified that the Company met the standard of nuclear performance in Commission Rule R8-55(k) with an actual system-wide nuclear capacity factor during the test year that exceeded the NERC weighted average nuclear capacity factor. Additionally, he agreed that the Company's two-year simple average of its system-wide nuclear capacity factor exceeded the NERC average nuclear capacity factor. He testified that had DEC not met this standard, a rebuttable presumption would have been created that DEC imprudently incurred increased fuel costs during the test year. He stated that in the Public Staff's opinion, meeting the standard in Commission Rule R8-55(k) does not mean that the Company has met the burden of proving that all of its fuel costs were reasonable and were prudently incurred. It simply overcomes the presumption of imprudence. He stated that a utility can meet or exceed the NERC average overall, but still be shown to have had substandard performance at one or more individual units during the test year that could have reasonably been prevented based on what was reasonably known or reasonably should have been known at that time. In this case, while DEC avoided the presumption of imprudence under the Rule, an investigation of specific actions, decisions, and performance during specific events was still warranted to determine whether the increased fuel costs associated with replacement power should be excluded. Tr., pp. 106-107.

Witness Metz testified that there was one outage during the test year at Oconee Unit 3 that began on July 24, 2017, and lasted approximately 30 hours that was within the Company's control and could have reasonably been avoided. But for the outage, the fuel costs incurred to serve DEC's customers would have been lower and the proposed EMF to customers in this case would have been less. Therefore, he recommended that the resulting replacement power costs of $433,911, on a North Carolina retail basis, was not reasonably and prudently incurred and should not be borne by ratepayers. Tr., p. 107.

Witness Metz testified that he arrived at his recommendation after reviewing the Company's application, testimony, Root Cause Evaluation (RCE) reports or the equivalent, data request responses, and participating in a teleconference with the Company to make sure he fully understood the pertinent facts. Tr., pp. 108, 127-128.

Witness Metz testified that the Oconee outage resulted from:

> [p]reventive maintenance [taking place in the Relay House on a Power Circuit Breaker (PCB) Breaker Failure Relay (BFR) that] was inadvertently actuated.
>
> ...
>
> The Apparent Cause Evaluation (ACE) team identified two Apparent Causes for the PCB-58 BFR actuation and associated U3 [Oconee Unit 3] reactor trip. The first Apparent Cause is a lack of rigor by the Transmission technicians to utilize appropriate Human Performance Tools for ensuring actions are performed on the intended components. The second Apparent Cause is a lack of coordination between the Transmission and Nuclear organizations in implementation of the NSIA/NSOG interface.[1]

Tr., pp. 108-109.

Witness Metz testified that, in summary, Relay Technicians (RTs) from the Company's Transmission organization were performing routine maintenance immediately outside of the plant (i.e., the switchyard area where the power generation output of the plant is interconnected with the transmission system). This involved connecting test equipment to a breaker failure relay (PCB-57). During the course of their work, a RT lost orientation of the location of the PCB-57 relay on which the tests were being conducted. This loss of orientation led the RT to misidentify the relay that was under test. As a result, the RT connected to and then tested the wrong relay (PCB-58, located directly below PCB-57), causing PCB-58 to operate. In other words, the RT connected test equipment to an operational, in-service relay, causing it to perform an unintended operation. This operation caused Oconee Unit 3 to "trip" offline, thus shutting down the unit. Tr., pp. 108-110.

Witness Metz testified that the purpose of the test was to ensure the proper operation of the power circuit breaker (PCB) relay for a transmission line. The test should have caused PCB-57 to actuate, changing its electrical state from either closed to open or vice versa. The transmission

[1] Metz Confidential Exhibit 3, ACE Report, p. 3.

line (Asbury line) associated with PCB-57 was already out of service, so the actuation from the test should have only been a simulation. However, because the test was performed in error on the wrong relay (PCB-58), the test caused Oconee Unit 3 to experience a load rejection-like event, initiating the safety/shutdown systems within the generation plant. The outage lasted approximately 29.52 hours before the unit was back online. Tr., p. 110.

Witness Metz described the factors or contributing events that resulted in the outage. The first factor or contributing event was an organizational weakness that led to a communication breakdown between two intra-Company organizations, Nuclear and Transmission (referred to within Metz Confidential Exhibit 3, the ACE Report, as NSIA and NSOG). Prior to this forced outage event, the Nuclear organization identified single point vulnerabilities (critical components that could cause a trip of, or equivalent detrimental function to, a unit) as per the station [Oconee] applicable plant procedures. The Nuclear organization placed labels on the single point vulnerabilities, or SPVs, to alert others to their location. The Nuclear organization also required a work order and specific risk screening for any work performed within two feet of any SPV. Witness Metz testified that the SPV "two feet limit" procedure was about six months old at the time of the unit trip and had not been delivered to the Transmission organization, even though Transmission personnel worked on or near equipment designated as SPVs. Witness Metz stated that the failure of the Nuclear organization to properly inform the Transmission organization prevented the RTs (who were members of the Transmission organization) from understanding the potential ramifications or risks of working on or near equipment designated as SPVs. Thus, as discussed in the ACE Report, the RTs did not understand the meaning of the single point vulnerability signage posting that was placed by the Nuclear organization in the relay house/building and specifically on PCB-58. In addition, because the RTs were not familiar with the procedure, the work order and special risk assessment required under station procedure was not performed. Witness Metz asserted that had the procedure been understood and followed, or had the RTs taken the time to question the existence and purpose of the special signage, it is reasonable to presume that the risks associated with working near PCB-58 would have been identified and steps taken to avoid erroneously actuating PCB-58, thus preventing the Unit 3 outage from occurring. Tr., pp. 110-112, 135-136.

According to witness Metz, a second contributing factor was a failure to properly risk screen the work to be performed by the RTs. According to Company procedures, all work within two feet of an SPV required a work order and specific risk screening. However, prior to the RTs performing the test or work on PCB-57, the "station did not identify and properly risk screen this work," as it was within two feet of PCB-58, a labeled SPV. (See Metz Confidential Exhibit 3, p. 14 showing PCB-58 and PCB-59 labeled SPV and their proximity to PCB-57). Station personnel failed to follow these prescribed procedures. The Company acknowledged this failure in a response to a Public Staff data request, attached as Exhibit 4 to witness Metz's testimony. Station personnel should have briefed and then worked with the RTs to prevent interaction with other components in the electrical cabinet. Tr., pp. 110-111,128-129. In his summary, witness Metz characterized these failures as organizational mismanagement.

Witness Metz further testified that the lack of understanding regarding SPVs was compounded by a third factor or contributing event. He stated that multiple indicators demonstrate that the RTs did not fully appreciate the risk associated with their task and they failed to use required Human Performance (HP) procedures and practices to effectively mitigate risk. The ACE Report indicates that the RTs should have used HP barriers to mitigate risk, and more importantly, the RTs acknowledged in interviews that they knew that they should have been using them. "[T]he technicians did understand that they were working near the generator breakers (trip sensitive components as indicated on the label) and that a BFR on a generator breaker would open both Unit 3 generator breakers. It is expected that additional barriers would have been used to ensure the correct component was worked. This was not done."[1] Further, an excerpt from the Cause Analysis (CA) Report states as follows (emphasis added):[2]

> Incomplete pre-job brief
>
> > Did not capture crew make-up (RT 2 typically works with different crew).
> > Subsequent pre-job briefs were not documented/performed (RT3 left and returned no pre-job brief documented, no pre-job brief to refocus when asked to re-test relay).
> > <u>Roles and responsibilities were not defined</u>.
> > <u>Had "N/A" under inadvertent operation section</u>.
> > No additional Hazards were identified on form.
>
> Critical Thinking/Protection Circuit Procedure form was filled out the morning of the job.
>
> Critical Thinking/Protection Circuit Procedure form was <u>not properly filled out</u>, the front page was not completed. <u>The critical thinking questions, critical thinking checklist, and identify additional traps section were left blank</u>.
>
> Critical thinking/Protection Circuit Procedure was vague and lacked detail. The procedure did not have the critical steps identified. The Relay Technicians were not using circle and slash for place keeping (they were using an electronic version of circle and slash) nor were there time stamps on their activities.
>
> <u>Peer check was not used (crew stated they used it during the day on this job, just not at the time the error occurred). It was a known expectation to use it</u>.
>
> <u>HP Toolkit was not used-crew discussed and decided it was more of a hindrance than (sic) a help (barriers would be in the way, clips could pull wires out). Crew felt the HP Toolkit was not applicable.</u>
> <u>Self-check was not used by RT3 placing the test leads</u>.
> Improper 3-way communication was utilized.

---

[1] Metz Confidential Exhibit 3, ACE Report, p. 14.

[2] Metz Confidential Exhibit 2, CA Report, pp. 5-6.

> There was no questioning attitude from the crew on what "Single Point of Vulnerability" meant on the front of the panel below the relay they were working on.
>
> The crew had an inaccurate risk perception of the importance of correction component identification. They were working above the BF relay for a Unit 3 breaker.
>
> Human Performance Factors
>
> Assumptions:
>
> > RT3 assumed he was on the correct relay.
> > The crew assumed HP tools were a hazard and decided not to utilize them.
>
> Roles and responsibilities were not clearly defined in the pre-job brief. They also changed. RT2 made the test lead connections the first time and RT3 made the test connections the second time.
>
> Delays: There were delays in the work due to the relay not testing properly.
>
> Inaccurate risk perception: The Relay Crew did not see the risk in getting on the wrong component and that the wrong component could be the Unit breaker BF relay.
>
> Relay Technicians did not stop the job when the commissioner asked them to continue testing late in the day after they removed the test leads from the relay they were testing.[1]
>
> The rear of the PCB58 and PCB59 BF relays in panel MF3 are not labeled with Single Point of Vulnerability labels.

Tr., pp. 112-114.

Witness Metz explained the importance of HP tools or practices. HP tools or practices are actions taken to mitigate known or identified risks prior to performing work in areas that are known to have vulnerabilities. Such risk mitigation can include: (1) creating unified procedures; (2) a positive culture and work environment; (3) identifying appropriate tools for use on a particular job; (4) generalized and risk specific personal protective equipment; and (5) implementation of a feedback loop for improving the overall process. Each step in the risk mitigation process is equivalent to creating an additional layer of protection. It is critical to determine if and when there are enough steps in place to prevent certain unintended actions or consequences, or to determine

---

[1] "The crew did not hold a pre-job brief to refocus. ... RT3 did not allow enough time for confirmation of the 3 way communication before placing the test leads on the incorrect terminal points." Metz Confidential Exhibit 2, CA Report, p. 3.

if any barriers already in place make the overall task or job either overly burdensome, or create new risks. In summary, the intent of Human Performance tools is to create a sufficient number of barriers to prevent discrete events from causing unwanted or unrecoverable actions (e.g., in this particular instance, connecting test leads to the wrong piece of equipment and causing Oconee Unit 3 to trip). Tr., pp. 116-117.

Witness Metz testified that in this case, just one week prior to the actions that resulted in the forced outage, two of the three RTs attended a meeting where "HP tool use being mandatory was discussed... The Relay Technicians stated that they knew it was an expectation to use the toolkit."[1] [emphasis added] According to witness Metz, it is not reasonable to have attended a meeting emphasizing the "mandatory" use of HP tools, and then arrive at a conclusion that "HP toolkit [use] was not applicable"[2] through self- or group-determination absent a minimum of supervisory notification and on-site representation to peer check or independently assess the risks involved. He testified that the RTs deliberately and knowingly failed to use DEC's human performance tools and that in his opinion, had these important tools been used properly, the outage could have reasonably been avoided. Tr., pp. 117-118.

Duke Energy's Human Performance Standard Tools were stipulated into evidence at the hearing as Public Staff Metz Exhibit 5. Tr., p. 133; Official Exhibits, p. 131. This exhibit lists Duke's 13 human performance tools, what they are for, and how and when they are to be applied. According to this list, the "Pre-Job Brief" is a "[d]eliberate meeting of job participants that focuses on everyone's understanding of job scope, requirements, hazards, risks and defenses." As described above and on page 9 of the CA Report, the Oconee outage Pre-Job Brief was vague, and several sections were not filled out or were improperly filled out. According to the HP Incident Form located on page 22 of the CA Report, the RTs did not use nine of Duke's 13 standard HP tools, including: 2-minute drill, self-check, 3-way communication, peer check, concurrent verification, independent verification, procedure use and adherence, qualify, validate, verify, and stop when unsure. The reviewers of the RTs' actions concluded that those nine HP tools were needed and represented a latent organizational weakness in procedures and documents.

Witness Metz testified that the evidence shows that the RTs understood there were risks associated with their work and knowingly disregarded the human performance tools that would have mitigated that risk. The Company acknowledged in response to a Public Staff data request that RTs understood they were working near generator breakers and that the breakers could impact unit operations. However, the RTs discussed the human performance tools and did not use human performance barriers because they had performed the work before and discounted the risk, and "because they were afraid they would be in the way of their work."[3] Tr., p. 118.

---

1 Metz Confidential Exhibit 2, CA Report, pp. 5-6.

2 Metz Confidential Exhibit 2, CA Report, p. 5.

3 Metz Confidential Exhibit 2 CA Report, p. 2. The CA Report specifically states, "The wire identifying clips were not used because they were afraid they would pull the wires out of the crimped connection if they did not open the clip all the way when removing them."

Witness Metz asserted that while the work area[1] could be somewhat disorienting to an untrained individual or someone not familiar with internal cabinet wiring, based on his experience and professional opinion, neither the wiring nor the configuration layout of the terminal blocks and wire terminations is uncommon, but are typical of an industry norm. According to witness Metz, the Company confirmed in response to a data request that it is common practice for breaker failure relays to be in the same cabinet for multiple PCBs. In other words, the presentation of the equipment under test was not extraordinary and should not have caused particular confusion for the Company's experienced RTs. Witness Metz asserted that irrespective of worker experience, it is without question that in circumstances similar to the pictures shown in Metz Confidential Exhibit 2, the CA Report, pages 14-15, care must be taken to ensure that the planned and necessary work is being performed on the correct equipment without interfering with other equipment. He asserted that the failure of the RTs to exercise proper care by using human performance practices to ensure that they were working on the correct relay (in the absence of labeling on the rear of the cabinet) is not consistent with fundamentally sound work practices. He reiterated that in his opinion, the outage could have reasonably been avoided had the Company personnel utilized the human performance systems and practices put in place to prevent errors. Tr., pp. 118-119.

Witness Metz testified that it is not the Public Staff's position that all human performance errors are preventable or that the Company should be held accountable for anything less than perfection in the operation of its nuclear plants. During the test year for this proceeding, just as with any fuel proceeding, planned and unplanned outages occurred. Witness Metz stated that as someone with significant experience working in not only the nuclear industry, but in industrial environments in general, he fully understands that operational events happen and that perfection cannot occur as long as the human element is involved. On the other hand, some events, when Company management or personnel do not follow required procedures or do not use due diligence, are clearly preventable. He asserted that the outage at Oconee Unit 3 is one such outage. As stated in the ACE Report, "<u>The human performance practices by the Transmission Personnel were a last line of defense. The failure of this last line of defense allowed the event to occur</u>. However, station defenses that were either missing, inadequate or not used also failed to prevent this event." [emphasis added] Intra-Company organizations did not properly communicate, coordinate, or take notice of Company procedures put in place for the very purpose of mitigating risks associated with SPVs that could cause the shutdown of a generation unit. He asserted that the Company is ultimately responsible for (1) ensuring that its employees are properly trained and made aware of Company policies and procedures and (2) that its employees perform work that properly accounts for known risks that may result in a plant shutdown or damage. Not holding DEC accountable for these types of outages results in ratepayers bearing the full cost of more expensive replacement power. According to witness Metz, the Company's failure to notify the Transmission organization of procedures related to SPVs and to risk screen the RTs' work is Company mismanagement.. In addition, there were breakdowns of Company procedures on several levels; moreover, there was a deliberate failure to use established human performance practices to mitigate risk. Therefore, this was a reasonably preventable outage, and as between the Company and ratepayers, the Company should be responsible for the additional costs. Tr., pp. 115-116.

[1] Metz Confidential Exhibit 2, CA Report, pp. 14-15.

During Commission questioning, witness Metz was asked about several hypothetical examples of exemplary actions of Company personnel that resulted in preventing an outage and asked whether it would be appropriate to offset the Oconee outage costs at issue in this case with the costs avoided due to the hypothetical actions of the employees. Witness Metz testified that he would still recommend that the Commission exclude the replacement power costs of the Oconee outage. Tr., pp. 138-139, 142. He testified that even if the facts were to show generally that the capacity factor for DEC's plants were well above the NERC average and that DEC's plants are better constructed, better maintained and were able to avoid forced outages better than anybody else, he would still recommend a disallowance for the Oconee outage costs. He stated that based on the General Statutes and Commission Rules, if the costs are imprudent or unreasonable, they should be disallowed and the ratepayers should not have to pay for them. Tr., pp. 139-140. He also testified that based upon his personal experience of working in electrical control cabinets, it is more likely than not that had the RT's used the HP Toolkit, the incident would not have happened. He also stated that if he were a team or group leader for the relay technician group performing work in this particular case, a level of management oversight for him would be reasonable and likely as he planned for and then delegated work activities, and that he would expect to be held accountable for the workers and the work actions that take place under his oversight. Tr., pp. 143-144.

DEC witnesses Capps and Rogers, from the Nuclear and Transmission organizations within the Company, respectively, testified on rebuttal regarding witness Metz's testimony that the outage at Oconee 3 was "reasonably avoidable" and that the resulting replacement power costs should be disallowed. They testified that the evidence shows that the outage resulted from an isolated incident in which well-trained and seasoned employees made errors in judgment despite reasonable and prudent training and processes implemented by Company management. They noted that witness Metz testified that he is not holding the Company to a standard of perfection. However, they testified that witness Metz's recommended disallowance of replacement power costs arising from an isolated, non-recurring outage that was the result of reasonable but ultimately flawed judgment, despite the fact that witness Metz has identified no evidence of flaws in the Company's overall policies and procedures and despite the fact that the performance of DEC's nuclear fleet has far exceeded industry average, effectively does hold the Company to a standard of perfection. Tr., pp. 15-151.

Witnesses Capps and Rogers stated that witness Metz appears to base his recommendation on the fact that the outage was "reasonably avoidable". In their view, witness Metz's standard for disallowance is not in accord with Commission precedent. Instead, they testified that the Commission's prior decisions have established that the key issue is whether management decisions were made in a reasonable manner at an appropriate time on the basis of what was reasonably known or should have been known at the time. They believe that Commission precedent establishes that the focus of the Commission's review should be on the decisions of management and not on the decision of a particular employee in performing a particular task. Tr., pp. 150-151.

Witnesses Capps and Rogers stated that in this case, witness Metz fails to offer evidence sufficient to establish that the Company's management decisions were unreasonable given what was known at the time. To the contrary, the quality of the Company's management is demonstrated first and foremost by the overall performance of its nuclear fleet and this level of performance is simply not achievable without an overall culture of excellence. The training, standards and practices put in place by DEC management are reasonable and have directly resulted in exceptional overall performance that has benefited all customers. Tr., p. 151.

More specifically, witnesses Capps and Rogers testified that the Company's ongoing implementation of the SPV program is a prime example of its focus on continued improvements and the Company is proud of the program as implemented to date. The focus on the SPV program from its inception has been on the Nuclear organization and the Company has continued to evolve and develop the program – moving from an initial focus on equipment reliability programs to a more broad focus on reliability of components and eventually expanding beyond the plant property into the switchyard. However, they contend that penalizing DEC for not implementing the SPV program into the Transmission organization would serve as a disincentive to the principles of continual improvement that have always guided the Company. Moreover, they testified that the Company has been productive in addressing switchyard interface issues through other avenues and has a demonstrated track record of success in this area, working with industry organizations like the Electric Power Research Institute, the Institute of Nuclear Power Operations (INPO), and the North American Transmission Forum. Tr., pp. 151-152.

Witnesses Capps and Rogers cited the use of the HP tools in the Transmission organization as another example of continual improvement. They stated that Company management has implemented an HP program that is in line with industry best practices and has contributed to the overall successful performance of its nuclear fleet. Further, they testified that even if the Commission chooses to look past the actions of management and specifically examines the particular decisions of the individual employees in this instance, they contended that the evidence shows that witness Metz oversimplifies the use of HP tools and ignores the "on the ground" reality that the Company's personnel are expected to utilize discretion in applying the HP tools based on each situation. In this case, witnesses Capps and Rogers testified that the RTs in question did utilize certain HP tools but also exercised discretion in the use of the HP tools in a manner that was not without basis in experience, but ultimately not in accord with the standards set by management. In their own opinion, this incident highlights the fact that, from time to time, errors in judgment will occur on the part of the individual employees despite adequate training and standards. However, such errors do not equate to imprudent management that would serve as a basis for cost disallowance in accordance with the Commission's precedents. They testified that the Company's management made reasonable decisions in a reasonable manner and at an appropriate time based on what was reasonably known or should have been reasonably known at the time, and the isolated, non-recurring errors in judgment of certain employees should not serve as a basis for disallowance. Tr., pp. 152-153.

Witnesses Capps and Rogers noted that witness Metz expressly acknowledged that he is not alleging that DEC has inadequate policies or cultures, which they believe is obvious given the excellent operational performance of DEC's nuclear fleet that is not achievable without efficient and prudent management. They explained that DEC's exemplary performance is attributable to DEC's dedicated and highly trained workforce. In the Nuclear organization, formal training programs are established and accredited by the INPO and the National Nuclear Accrediting Board. When performance fails to meet expectations, the Nuclear organization completes rigorous self-critical investigations to identify enhancements to reduce and minimize future challenges.

Every opportunity to learn from internal and external events is embraced as the Nuclear organization strives for continuous improvement. Similarly, in the Transmission organization, RTs attend a rigorous technical program that includes a four-year initial training program consisting of 200 plus hours of classroom, online, and field training, annually. RTs are also required to attend a minimum of 20 hours each year of continuing education to maintain and improve technical and human performance skills. Tr., pp. 153-154.

Witnesses Capps and Rogers testified that the Company is continually engaged in efforts to improve its operations and maintenance practices in order to achieve even greater levels of safety and reliability. As the Company identifies avenues of improvement, it seeks to implement such improvements in a disciplined and thoughtful manner. However, considering the breadth and complexity of the work performed within the Nuclear and Transmission organizations, identified areas of improvement cannot, in every instance, be addressed immediately or in a comprehensive manner. They contended that penalizing the Company for implementing an identified improvement incrementally serves as a disincentive for continual improvement and, instead, encourages the Company to implement improvements only when it can be sure that it is ready to do so comprehensively across every organization. The interest of customers is best served when the Company is encouraged to pursue continual improvement even where such improvements can, over time, be more efficiently and comprehensively implemented. Tr., pp. 154-156.

They noted that witness Metz focuses repeatedly on whether the outage could have "reasonably been avoided", but witness Metz himself indicated that he had not identified any "inadequate policies" or any failure of DEC to "promote and encourage operational excellence overall." They testified that virtually all outages that involve some form of human error could, in some sense, have "reasonably been avoided." However, they contended the evidence shows that the Company's overall management of the nuclear fleet during the test period was reasonable and prudent. Tr., pp. 156-157.

Witnesses Capps and Rogers addressed the challenges of human error in the context of nuclear operations and maintenance activities and noted that, on a daily basis, highly skilled and trained technicians perform thousands of challenging technical tasks to ensure safety and reliability of the nuclear fleet. While management puts structures and methodologies in place to guide and inform the performance of such tasks, it is ultimately the Company's personnel that must execute each task. They stated that "on the ground" reality is that humans will occasionally make error in judgment despite even the most prudent and vigilant management efforts, a fact that was acknowledged by witness Metz. However, they testified that does not mean that DEC expects forced outages caused by human error. To prevent human errors, witnesses Capps and Rogers explained that both the Nuclear and Transmission organizations have formal human performance training curriculum and human performance standards that are reinforced and verified by formal peer and management observations. Lower level human performance challenges, often classified as "near misses," are aggressively reported, tracked, and shared across these organizations. Working with industry groups, both these organizations leverage not only internal learnings, but learnings across the industry. Procedures and processes are designed with a keen focus on identifying and mitigating human error traps. Id.

ELECTRIC – MISCELLANEOUS

Witnesses Capps and Rogers testified that the Company's number one priority in every instance is safety. However, the Company also continually seeks to balance two additional primary objectives: (1) achieving extremely high levels of reliability and (2) minimizing costs for customers. Witnesses Capps and Rogers noted there is an unavoidable relationship between costs and reliability. Pouring more resources and processes into plant operations will, all things being equal, generally lead to higher levels of reliability. In spending more money, the Company could deploy even more resources and processes that would likely allow the Company to limit even further the already small number of human errors that could occur at its nuclear facilities. However, in their opinions, the Company's performance metrics, combined with its low operating costs, demonstrates that the Company is striking the right balance. Tr., pp. 158-159.

Regarding witness Metz's heavy reliance on the Company's RCA and ACE reports, witnesses Capps and Rogers stated that such reports are, by design, hindsight-based and highly self-critical in nature and are intended to identify every direct and contributing cause of an incident, along with all potential avenues for improvement. These reports are not designed to assess whether the actions of management were reasonable and prudent given what was known at the time. However, in relying heavily on these reports, witness Metz is not necessarily able to obtain or appreciate the broader context of the outage and decisions and events that lead to the particular outage. For example, witnesses Capps and Rogers explained that this outage involved so-called switchyard interface issues. Such challenges arise where two distinct, highly skilled Nuclear and Transmission organizations are working in a physical location in which their respective assets overlap. Each organization has their own practices, policies, and procedures. Switchyard interface issues challenge utilities across the industry and there are industry working groups and other resources that specifically focus attention on how to best anticipate and solve switchyard interface issues. The RCA and ACE reports are not intended to give the larger, industry context for these outages and therefore do not always provide detail regarding these broader industry challenges. But the fact that the industry as a whole is facing these issues is an important piece of evidence that should be considered is assessing whether Company management's actions were reasonable. Had witness Metz explored this issue further and looked beyond these reports, he would have discovered that the Company's switchyard interface structures and practices have been specifically reviewed by an industry working group and found to be extremely high quality relative to the industry. In the opinion of witnesses Capps and Rogers, it is unreasonable to make an assessment of the prudence of the Company's management actions without understanding the context of the issue and the larger state of the industry as it relates to switchyard interface issues. They stated that the Commission should consider that the Company has implemented structures and processes that are found to be exemplary relative to the industry when assessing the reasonableness of Company management actions. Tr., pp. 159-161.

With respect to the two RTs involved in this incident, witness Rogers stated that they had completed every aspect of the Company's specially tailored training program for Transmission RTs. This comprehensive technical training includes both theoretical and application-specific training and is conducted in a variety of settings over the first few years of employment. RTs also participate in a weekly meeting that is designed to ensure the latest policies and programs are communicated in a timely manner and that applicable training is provided to foster continual improvement. Field supervisors are expected to spend a significant portion of time observing and coaching technicians in the field. RTs are typically paired such that one senior technician can bring the benefit of practical, real world experience to each task and provide continuous training specific to the work at hand. The senior technician on this Preventive Maintenance team, which was specifically focused on performing this type of work, had over four years experience as a transmission relay technician and had performed tasks similar in nature more than two hundred times. The other technician has received similar training and had performed similar tasks over one hundred times. During the twelve months prior to the outage incident, these two RTs had completed approximately 350 work orders and no adverse trends or findings had been detected and there was no history of performance challenges. Tr., pp. 161-162.

Witnesses Capps and Rogers also testified that the Company does not have any history of repeated errors involving work in the switchyard and noted that witness Metz made no such allegation. In fact, there has not been another outage at a DEC nuclear plant involving switchyard interface issues in over a decade, despite countless maintenance tasks occurring in the switchyard. Witness Capps testified that it was his understanding that the Commission has expressly held that a repeated error is a key indicator of imprudent management. Tr., pp. 163-163.

Witnesses Capps and Rogers also explained that an SPV is a critical component whose failure would directly cause an automatic or manual trip of a reactor or turbine. Noting that witness Metz alleges that the failure of the Nuclear organization to properly inform the Transmission organization of SPV procedures prevented the RTs from understanding the potential ramification or risks of working equipment designated as SPVs, witnesses Capps and Rogers stated that the implementation of the SPV program has been an evolving process in which the Company has gradually expanded the scope of the program while continually refining the specific processes and methodologies. Most recently, following a 2016 event, the Company developed a procedure to guide work requirements within two feet of equipment identified as a SPV. Efforts to implement the SPV program in the Nuclear organization was reasonable and they again contended that it would not be a good regulatory policy to require that such improvement be implemented perfectly or not at all. In their opinion, DEC's implementation of the SPV program was reasonable. Tr., pp. 163-164.

Regarding the role of the Switchyard Coordinator, they stated that this position is responsible for coordination of transmission maintenance activities with the nuclear plant for work affecting the nuclear switchyard, which includes providing oversight, as required, of transmission field work activities to ensure that plant work requirements and good work practices are being maintained. In this case, witnesses Capps and Rogers stated that there were a number of factors that influenced the Switchyard Coordinator's assessment of risk and decision including the facts that the particular RTs involved in this incident were well-trained and experienced and that similar relay testing has been performed successfully many times. In light of these factors, the Switchyard Coordinator prioritized other responsibilities over providing oversight to the relay work. They justified that the reality is that plant personnel must make judgment calls regarding how best to allocate available resources and such decisions are inevitable as the Company balances the goals of minimizing costs and maximizes reliability. The Switchyard Coordinator was in fact expressly charged with providing oversight only as required. The error in judgment of the Switchyard Coordinator was based upon the fact that an SPV was within the area of work to be performed, but again highlights the fact that this outage resulted from less than optimal, though not wholly unreasonable, judgments of particular employees. Tr., pp. 165-167.

Witnesses Capps and Rogers also testified that the Nuclear cause analyses typically assesses whether internal or external operating experience (OE) was available that if utilized could have allowed the Company to avoid the event. The Nuclear ACE concluded that his event was not OE Preventable. They stated that this suggests that this event was somewhat unique and therefore not foreseeable. Id.

Witness Rogers testified that "HP tools" is a general term that refers to a whole suite of tools and techniques. In the Transmission organization, HP tools consist of physical HP barriers and HP techniques. The physical HP barriers include various markers and flags that can be utilized to physically identify specific work areas for various purposes. HP techniques are more general principles and practices used to ensure quality work. He stated that DEC's efforts to implement HP programs in the Transmission organization are actually on the forefront of the industry. However, there is not a standard set of HP tools that must be utilized on every assignment. Both the physical tools and techniques must be adapted to the specifics of each scenario. It is the expectation within the Transmission organization that the technicians assess each situation to determine what HP tools are appropriate for the task at hand in light of the specific tasks being performed and the strengths and weaknesses of the technicians performing the tasks. Witness Rogers stated that these RTs had been trained in use of the HP tools; however, the HP toolkit of physical barriers provided to the RTs was relatively new at the time of the event. Therefore, the RTs were likely still adapting to the toolkits and determining how to use the tools most effectively. Regarding witness Metz's allegation that the RTs "failed to use required HP procedures and practices to effectively mitigate risk", witness Rogers stated that this allegation oversimplifies the use of HP tools by implying the use of each and every one of the HP tools is mandatory in each and every case. The RTs did understand that, in general, use of the HP tools is mandatory, but also understand that use of the HP tools is not a rote process and requires the use of discretion and judgment on the part of employees. Therefore, he contended that it is an overstatement for witness Metz to assert that the RTs "deliberately and knowingly failed to use DEC's human performance tools." Further, witness Metz's testimony does not make clear that the RTs did actually utilize a number of HP tools at the time of the incident, including: , pre-job brief, procedure use, place keeping techniques, stop when unsure, and three way communication. The fact that the RTs used some but not all of the HP tools is significant in witness Rogers' opinion because it demonstrates that these employees were trained in the HP tools and understood their importance. Tr., pp. 166-168.

Witness Rogers noted that the RTs could have used flagging or identifying clips to identify the correct relay but choose not to do so. He noted that witness Metz specifically highlights this failure as a part of the basis for his recommendation. According to witness Rogers, the RTs elected not to utilize the physical HP barriers due to fear of inducing an inadvertent trip or outage when placing or removing the clips. Witness Rogers stated that it was not completely unreasonable for the RTs to conclude that use of the clips was risky because there are many examples of incidents arising from inadvertent bumping or disturbance of a relay including while installing HP barriers. Utilizing the clips could have heightened the potential for just such an occurrence. Ultimately, witness Rogers believed that that the RTs should have used the clips, but their decision was grounded in a true risk. In his opinion, it is not possible for prudent management to completely prevent mistakes like this from happening, even when Company management establishes adequate training and related protocols. However, he stated that such isolated instances should not be equated to imprudent management that would give rise to a disallowance, particularly in this context where customers have received immense benefit in the form of lower fuel costs from superior performance resulting from Company management's efforts. Tr., pp. 168-169.

Witness Rogers added that these employees had performed tasks similar in nature many times without previous error. In fact, these RTs had performed the relay test on the correct relay several times during the same day. While management strenuously encourages employees to follow established protocols no matter how familiar a task is or how many times it has been successfully completed in the past, the reality is that recurring tasks can often lead employees to human error. However, he stated that the occurrence of such incidents from time to time does not indicate any imprudent management. Tr., pp. 169-170.

According to witness Rogers, other factors impacted the RTs and contributed to the error. The RTs encountered a technical hurdle while completing the relay testing that they did not expect. As trained and in accordance with HP tools, the RTs stopped and called technical support to seek further guidance. Witness Rogers stated that the frequent starting and stopping of the work, the additional mental distraction and the unexpected duration of the task contributed to the circumstances resulting in the error. Tr., pp. 170-171.

Finally, witnesses Capps and Rogers commented on witness Metz's statement that DEC is "ultimately responsible for (1) ensuring that its employees are properly trained and made aware of Company policies and procedures and (2) that its employees perform work that properly accounts for known risks that may result in a plant shutdown or damage." They stated that DEC agrees with the first portion of witness Metz's statement and they believe that in this instance, the employees were properly trained in all aspects as set forth in their testimony. However, witnesses Capps and Rogers testified that the second portion of witness Metz's statement once again mischaracterizes the Commission's standard and appears to impose a standard that is more akin to one of perfection. According to them, the Commission's prudence standard focuses on the decisions of management and not on the discrete, individual decisions of each employee. Furthermore, they stated that the Commission has expressly stated that perfection is not the applicable standard. Yet, witness Metz's standard – that all employees at all times should perform work in every instance in a manner that "accounts for known risks" – is in essence a "back door" perfection standard. Tr., p. 171.

COMMISSION DISCUSSION

The fuel adjustment statute, N.C. Gen. Stat. § 62-133.2(d), provides that the burden of proof as to the correctness and reasonableness of the charge and as to whether the cost of fuel and fuel-related costs were reasonably and prudently incurred is on the utility, and the Commission shall allow only that portion of fuel costs prudently incurred under efficient management and economic operations. Under N.C.G.S. § 62-133.2(d1), the Commission is required to establish standards with which to measure management efficiency in minimizing fuel costs. Commission Rule R8-55(k) provides that for purposes of determining the EMF rider, a utility must achieve either (a) an actual system-wide nuclear capacity factor in the test year that is at least equal to the national average capacity factor for nuclear production facilities based on the most recent 5-year period available as reflected in the most recent NERC Generating Availability Report, appropriately weighted for size and type of plant or (b) an average system-wide nuclear capacity factor, based upon a two-year simple average of the system-wide capacity factors actually experienced in the test year and the preceding year, that is at least equal to the national average capacity factor for nuclear production facilities based on the most recent 5-year period available as reflected in the most recent NERC Generating Availability Report, appropriately weighted for size and type of plant. If a utility does not achieve either standard, a presumption is created that the utility incurred the increased cost of fuel and fuel-related costs imprudently, and a disallowance of the increased costs is appropriate.

As previously noted, the Company's nuclear fleet achieved a capacity factor above the NERC average, rendering the rebuttable presumption of imprudence under Commission Rule R8-55(k) inapplicable. Thus, based upon the provisions of the fuel adjustment statute, the question before the Commission is whether the Company has met its burden of proving that the replacement power costs resulting from the Oconee Unit 3 outage in July 2017 were reasonable and were prudently incurred under efficient management and economic operations.

The Commission has stated the general prudency standard as follows:

> ...the standard for determining the prudence of the Company's actions should be whether management decisions were made in a reasonable manner and at an appropriate time on the basis of what was reasonably known or reasonably should have been known at that time. The Commission agrees that this is the appropriate standard to be used in judging the various claims of imprudence that have been put forth in this proceeding...and adopts it as the standard to be applied herein. The Commission notes that this standard is one of reasonableness that must be based on a contemporaneous view of the action or decision under question. Perfection is not required. Hindsight analysis -- the judging of events based on subsequent developments — is not permitted.

78 North Carolina Utilities Commission Report, 238 at 251-52 (1988). In its Order Deciding Contested Issues and Requiring Compliance Filing (DENC Order) entered January 25, 2018, in Docket No. E-22, Sub 546, the Commission set forth three general guidelines for determining whether a utility's actions or omissions were imprudent:

1. Whether the utility's actions were reasonable based on the information known to the utility at the time.

2. Whether the utility's actions were reasonable based on the information that the utility reasonably should have known at the time.

3. Whether there were repeated errors that the utility failed to discover due to inaccurate record keeping or other deficiencies, or failed to correct in a reasonable time or manner.

DENC Order, p. 9. In determining whether the utility's actions or omissions were imprudent, the Commission in the DENC Order looked at whether the outages could have reasonably been prevented by the Company given the information it knew at the time, and whether the outages resulted from unreasonable or imprudent management. DENC Order, p. 13. The Commission also considered whether applicable procedures were followed. DENC Order, pp. 14-15. In the DENC Order, the Commission undertook a review of the specific facts underlying the outages at issue. In investigating the prudence of DENC's actions that led to the outages, Root Cause Evaluations, or reports that document a utility's investigation of the causes of and contributing factors to specific outages, were considered. DENC Order, p. 12. The Commission ultimately concluded that the DENC outages could not have reasonably been prevented, and the replacement power costs associated with the outages were reasonably and prudently incurred under efficient management and economic operations. DENC Order, pp. 13-17. However, the Commission encouraged the Public Staff to continue presenting its concerns about utility operations to the Commission. DENC Order, p. 19. In the Commission's June 22, 2018 Order Accepting Stipulation Deciding Contested Issues, and Requiring Revenue Reduction in Docket No. E-7, Sub 1146, (DEC Order), the Commission found that challenging prudence "requires a detailed and fact intensive analysis." DEC Order, p. 258.

The Oconee Unit 3 July 2017 outage lasting approximately 30 hours resulted in approximately $434,000 of additional purchased power costs on a North Carolina retail jurisdictional basis. The issue in this case resulted from a negligently conducted test in the plant's switchyard. Overall, during the test year and in years prior to the test year, DEC's nuclear fleet has performed well in excess of the NERC average capacity performance metrics against which the Commission and the nuclear industry assess performance of nuclear units. In fact, the evidence shows that during the test year, DEC's nuclear fleet achieved the second best annual generation in the Company's history. The Public Staff argues that irrespective of the level of overall performance of DEC's nuclear fleet, the Commission should impose a $434,000 replacement power cost disallowance for the Oconee outage. DEC argues that the negligently performed test should not be attributable to mismanagement, constituting imprudent management, and any outage in the nature of the one at issue, no matter the duration, no matter the amount of additional purchase power costs, and irrespective of the level of overall performance at the nuclear fleet, should be borne by the ratepayer.

The Commission finds both positions flawed in the context of the facts of this case. The unrefuted evidence is that DEC's employees performing the testing tasks made mistakes. Further, the task was not one performed by a lineman on a distribution transformer resulting in a temporary outage of a homeowner or two. The test was to ensure proper operation of the power circuit breaker relay for a transmission line in the nuclear plant switchyard. The test was performed on the wrong relay, resulting in the shutdown of the generation unit. On the other hand, the Company has implemented structures and processes that are found to be exemplary relative to the industry when assessing the reasonableness of Company management actions and the training, standards and practices put in place by DEC management have directly resulted in exceptional overall performance that has benefited all customers. The overall sound practices and good management performance demonstrated by DEC is a fact the Commission cannot ignore.

The Commission determines based on the particular facts of this case not to accept the Public Staff recommended adjustment. DEC's overall nuclear performance in comparison to the NERC nuclear average performance was such that the Commission concludes, as discussed more fully below, that the errors of DEC's employee are outweighed and offset by DEC's overall operational decisions that on balance worked to the advantage of the ratepayer. If, hypothetically, DEC's performance would have been no better than the NERC average and the outage would have lasted longer and the purchased power costs would have been at the multimillion dollar level, with a material impact on customers' bills, or other factors affected the outcome, the Commission's decision very well could be different. A nuclear plant outage resulting from negligent testing by a DEC employee within the plant's switchyard cannot result in significant purchase power costs to be borne fully by ratepayers based solely on DEC having in place procedures that, if appropriately followed, would have avoided the outage. DEC's management bears responsibility for hiring employees who can follow instructions when performing important tasks.

As discussed below, the gravity of the conduct, the level and sufficiency of management supervision and procedures, the qualifications of employees, the findings in the reports assessing the contributing factors to the outage, the extent to which overzealous use of RCEs might impede thorough use of them, the overall nuclear capacity factors and extraneous factors contributing to them, for example, are all relevant. In rendering this decision, the Commission is not saying that every time the Company's nuclear fleet performance exceeds the NERC average by eight percentage points and the excess purchased power costs are only $434,000, no disallowance will be approved. Each case must be decided on its own merits. The Commission observes that the facts with respect to each usage period and each outage tend to be *sui generis* and must be analyzed and addressed independently. In establishing fuel charge adjustments, the Commission is exercising its legislative, ratemaking authority. As such, its decisions are not *stare decisis*.

The Commission determines that in cases such as these excessive emphasis easily can be devoted to presumptions and burden of proof. Seldom, if ever, will they be decided on an absence in the record of evidence of what the Company at issue did, the reasons for its actions and the context in which its actions were taken. Usually, as here, the cases are decided on the merits after a careful review of substantial evidence produced on behalf of parties filing direct and responsive testimony. While the Company would be remiss in relying solely on the fact that its performance exceeded the nuclear average during the period in question, when evidence of negligence or imprudence is presented, the statutes in Chapter 62 and Commission Rule R8-55 are not a "heads, I win, tails, you lose," so that failure to meet the NERC average is probative but exceedance of the nuclear average is not. The utility always has the ultimate burden of proof and persuasion, and intervening parties must support their allegations with affirmative evidence. Just as evidence of failure to meet the NERC average is probative, however, evidence of performance exceeding the average along with other probative evidence of record is evidence that the Commission should consider in making its decision.

DEC concedes that the RT conducting the test in the Oconee switchyard made a mistake when he attached testing equipment to a relay on a live transmission line, rather than attaching the testing equipment to the relay that was intended to be tested, which was on a line not in use. However, DEC takes the position that there was no management imprudence because the RT was properly trained, and was provided with reasonable safety guidelines, but nonetheless failed to perform his job correctly.

The Public Staff takes the position that the RT failed to follow appropriate safety procedures, that DEC failed to properly ensure that it had communicated its safety procedures to the RT, and that the RTs' actions were negligence that constitutes imprudence by DEC. The Public Staff relies heavily on DEC's RCA and ACE reports. The Commission agrees that such reports are probative evidence, and the Commission gives them some weight. However, the Commission also notes that the RCA and ACE reports are made in hindsight, and that their main purpose is to assist management in identifying every possible contributing cause of an outage, and the ways in which it can be prevented in the future. As witnesses Capps and Rogers testified, the reports are not designed to assess whether the actions of management were reasonable and prudent based on what was known at the time.

Witness Metz described the test being performed and the cause of the Oconee outage as follows:

> [T]his involved connecting test equipment to a breaker failure relay (PCB-57). During the course of their work, a RT lost orientation of the location of the PCB-57 relay on which the tests were being conducted. This loss of orientation led the RT to misidentify the relay that was under test. As a result, the RT connected to and then tested the wrong relay (PCB-58, located directly below PCB-57), causing PCB-58 to operate. In other words, the RT connected test equipment to an operational, in-service relay, causing it to perform an unintended operation. This operation caused Oconee Unit 3 to "trip" offline, thus shutting down the unit.

Tr., pp. 109-110.

In essence, DEC's employee made a mistake. Employees sometimes fail to follow proper procedures that have been communicated to them in a reasonable manner, and, consequently, they make mistakes. However, every employee mistake resulting in a plant outage does not necessarily signify imprudence on the part of the utility. In the present case, the Commission gives substantial weight to the testimony of DEC witnesses Capps and Rogers regarding DEC's implementation of its safety guidelines and procedures. In particular, they testified that in the Transmission organization RTs attend a rigorous technical program that includes a four-year initial training program consisting of 200 plus hours of classroom, online, and field training. In addition, RTs are required to attend a minimum of 20 hours each year of continuing education to maintain and improve technical and human performance skills. With regard to DEC's Nuclear organization, they testified that formal training programs are established and accredited by the INPO and the National Nuclear Accrediting Board. In addition, the Commission notes that Public Staff witness Metz generally concurred that DEC had created training, safety procedures and HP tools sufficient to prevent the RT's mistake had they been fully utilized.

Further, the Commission gives substantial weight to the testimony of witnesses Capps and Rogers that DEC has implemented an HP program that is in line with industry best practices. They also testified that witness Metz oversimplified the use of HP tools and ignored the "on the ground" reality that the Company's personnel are expected to use discretion in applying the HP tools based on each situation. According to witnesses Capps and Rogers, in the present situation the RTs utilized certain HP tools, but also exercised discretion in the use of the HP tools in a manner that was not without basis in experience, though ultimately not in accord with the standards set by management. They attributed this to the fact that, from time to time, errors in judgment will occur on the part of the individual employees despite adequate training and standards. They further testified that the Company's management made reasonable decisions in a reasonable manner and at an appropriate time based on what was reasonably known or should have been reasonably known at the time. The Commission is not persuaded by the evidence that there was some reasonable additional training or safety measure that DEC could have employed that would have prevented the RT from making this mistake in identifying the proper relay to be tested.

Finally, as noted above, the Commission gives some weight to the fact that during the test year, and in years prior to the test year, DEC's nuclear fleet has performed well in excess of the NERC average capacity performance metrics against which the Commission and the nuclear industry assess performance of nuclear units. In fact, the evidence shows that during the test year, DEC's nuclear fleet achieved the second best annual generation in the Company's history. This record of high performance is probative evidence of DEC's prudence in operating its nuclear fleet in a reasonable and safe manner.

The Commission appreciates the detailed investigation of the Public Staff in evaluating the Oconee outage and encourages the Public Staff to continue investigating and presenting its concerns about utility operations so that the Commission might remain the ultimate decision-maker with respect to these types of issues. . However, in this instance the Commission declines to order the replacement cost disallowance as recommended by the Public Staff. Based on a preponderance of the evidence in this docket, the Commission finds and concludes that DEC implemented reasonable and adequate safety procedures to prevent the RT mistakes that were made at Oconee, and that DEC's actions were prudent based on the information that DEC knew, or reasonably should have known, at the time. As a result, the Commission concludes that the replacement power costs associated with this outage were reasonably and prudently incurred under efficient management and economic operations.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 7

Commission Rule R8-52(b) requires each electric utility to file a Fuel Procurement Practices Report at least once every 10 years and each time the utility's fuel procurement practices change. The Company's updated fuel procurement practices were filed with the Commission in Docket No. E-100, Sub 47A in December 2014, and were in effect throughout the 12 months ending December 31, 2017. In addition, the Company files monthly reports of its fuel and fuel-related costs pursuant to Commission Rule R8-52(a). Further evidence for this finding of fact is contained in the testimony of Company witnesses McGee, Grant, Miller, and Houston.

Company witness McGee testified that DEC's fuel procurement strategies that mitigate volatility in supply costs are a key factor in DEC's ability to maintain lower fuel and fuel-related rates. Tr., pp. 27-28. Other key factors include DEC's diverse generating portfolio mix of nuclear, coal, natural gas, and hydro; lower natural gas prices; the capacity factors of its nuclear fleet; the combination of DEP's and DEC's respective skills in procuring, transporting, managing and blending fuels and procuring reagents; the increased and broader purchasing ability of the combined Company; and the joint dispatch of DEP's and DEC's generation resources.

Company witness Grant described DEC's fossil fuel procurement practices, set forth in Grant Exhibit 1. Tr., pp. 36-40. Those practices include computing near and long-term consumption forecasts, determining and designing inventory targets, inviting proposals from all qualified suppliers, awarding contracts based on the lowest evaluated offer, monitoring delivered coal volume and quality against contract commitments, conducting short-term and spot purchases to supplement term supply, and obtaining natural gas transportation for the generation fleet through a mix of long term firm transportation agreements, and shorter term pipeline capacity purchases.

According to witness Grant, the Company's average delivered cost of coal per ton for the test period was $74.90 per ton, compared to $82.54 per ton in the prior test period, representing a decrease of approximately 9%. Tr., pp. 36-37. This includes an average transportation cost of $26.46 per ton in the test period, compared to $24.92 per ton in the prior test period, representing an increase of approximately 6%. Witness Grant further testified that the Company's average price of gas purchased for the test period was $3.65 per Million British Thermal Units (MMBtu), compared to $3.34 per MMBtu in the prior test period, representing an increase of approximately 9%.

Witness Grant stated that DEC's coal burn for the test period was 9.7 million tons, compared to a coal burn of 9.8 million tons in the prior test period, representing a decrease of approximately 1%. Tr., pp. 36-37. The Company's natural gas burn for the test period was 80.8 MMBtu, compared to a gas burn of 89.0 MMBtu in the prior test period, representing a decrease of approximately 9%. The primary contributing factors were changes in (1) weather driven demand, and (2) commodity prices.

Witness Grant stated that DEC's current coal burn projection for the billing period is 8.1 million tons, compared to 9.7 million tons consumed during the test period. Tr., p. 38. DEC's billing period projections for coal generation may be impacted due to changes from, but not limited to, the following factors: (1) delivered natural gas prices versus the average delivered cost of coal; (2) volatile power prices; and (3) electric demand. Combining coal and transportation costs, DEC projects average delivered coal costs of approximately $73.12 per ton for the billing period compared to $74.90 per ton in the test period.

Witness Grant testified that this cost, however, is subject to change based on, but not limited to, the following factors: (1) exposure to market prices and their impact on open coal positions; (2) the amount of non-Central Appalachian coal DEC is able to consume; (3) performance of contract deliveries by suppliers and railroads which may not occur despite DEC's strong contract compliance monitoring process; (4) changes in transportation rates; and (5) potential additional costs associated with suppliers' compliance with legal and statutory changes, the effects of which can be passed on through coal contracts.

Witness Grant further testified that DEC's current natural gas burn projection for the billing period is approximately 138.1 MMBtu, which is an increase from the 80.8 MMBtu consumed during the test period. Tr., p. 39. The net increase in DEC's overall natural gas burn projections for the billing period versus the test period is driven by (1) the new Lee combined cycle facility, which is scheduled to become commercially available in early 2018, and (2) the inclusion of natural gas generation at Cliffside as a result of the dual fuel conversion becoming commercial available in late 2018. The current average forward Henry Hub price for the billing period is $2.98 per MMBtu, compared to $3.11 per MMBtu in the test period. Projected natural gas burn volumes will vary based on factors such as, but not limited to, changes in actual delivered fuel costs and weather driven demand.

ELECTRIC – MISCELLANEOUS

According to witness Grant, DEC continues to maintain a comprehensive coal and natural gas procurement strategy that has proven successful over the years in limiting average annual fuel price changes while actively managing the dynamic demands of its fossil fuel generation fleet in a reliable and cost effective manner. Tr., pp. 39-40. Aspects of this procurement strategy include having an appropriate mix of contract and spot purchases for coal, staggering coal contract expirations which thereby limit exposure to market price changes, diversifying coal sourcing as economics warrant, as well as working with coal suppliers to incorporate additional flexibility into their supply contracts. The Company expects to address any spot and long-term coal requirements throughout this year with any potential competitively bid purchases, if made, taking into account projected coal burns, as well as coal inventory levels.

Witness Grant also testified that the Company has implemented natural gas procurement practices that include periodic Request for Proposals and shorter-term market engagement activities to procure and actively manage a reliable, flexible, diverse, and competitively priced natural gas supply that includes contracting for volumetric optionality in order to provide flexibility in responding to changes in forecasts.

According to witness Grant, DEC continues to maintain a short-term financial natural gas hedging plan to manage fuel cost risk for customers via a disciplined, structured execution approach. Tr., p. 40.

Section 62-133.2(a1)(3) of the North Carolina General Statutes permits DEC to recover the cost of "ammonia, lime, limestone, urea, dibasic acid, sorbents, and catalysts consumed in reducing or treating emissions." Company witness Miller testified that the Company has installed pollution control equipment in order to meet various current federal, state, and local reduction requirements for nitrogen oxide (NO_X) and sulphur oxide (SO_X) emissions. The selective non-catalytic reduction technology (SCR) that DEC currently operates on the coal-fired units uses ammonia or urea for NO_x removal. Tr., p. 45. The SNCR technology employed at Allen station and Marshall Units 1, 2 and 4 injects urea into the boiler for NO_x removal. All DEC coal units have wet scrubbers installed which use crushed limestone for sulfur dioxide (SO_2) removal. Cliffside Unit 6 has a state-of-the-art SO_2 reduction system which couples a wet scrubber (e.g., limestone) and dry scrubber (e.g., quicklime). SCR equipment is also an integral part of the design of the Buck and Dan River CC's, in which aqueous ammonia (19% solution of NH_3) is introduced for NO_x removal.

Company witness Miller further testified that overall, the type and quantity of chemicals used to reduce emissions at the Company's plants varies depending on the generation output of the unit, the chemical constituents in the fuel burned, and the level of emissions reduction required. Tr., p. 52. He stated that the Company is managing the impacts, favorable or unfavorable, as a result of changes to the fuel mix and/or changes in coal burn due to competing fuels and utilization of non-traditional coals. He also stated that the goal is to effectively comply with emissions regulations and provide the most efficient total-cost solution for operation of the unit.

Company witness Houston testified as to DEC's nuclear fuel procurement practices, which include computing near and long-term consumption forecasts, establishing nuclear system inventory levels, projecting required annual fuel purchases, requesting proposals from qualified suppliers, negotiating a portfolio of long-term contracts from diverse sources of supply, and monitoring deliveries against contract commitments. Tr., pp. 73-74. Witness Houston explained that for uranium concentrates as well as conversion and enrichment services, long-term contracts are used extensively in the industry to cover forward requirements and ensure security of supply. He also stated that throughout the industry, the initial delivery under new long-term contracts commonly occurs several years after contract execution. For this reason, DEC relies extensively on long-term contracts to cover the largest portion of its forward requirements. By staggering long-term contracts over time for these components of the nuclear fuel cycle, DEC's purchases within a given year consist of a blend of contract prices negotiated at many different periods in the markets, which has the effect of smoothing out the Company's exposure to price volatility. He further stated that diversifying fuel suppliers reduces the Company's exposure to possible disruptions from any single source of supply. Due to the technical complexities of changing fabrication services suppliers, DEC generally sources these services to a single domestic supplier on a plant-by-plant basis, using multi-year contracts.

Pursuant to N.C.G.S. §§ 62-133.2(a1)(4), (5), (6), and (7), DEC can recover the cost of non-capacity power purchases subject to economic dispatch or economic curtailment; capacity costs of power purchases associated with qualifying facilities subject to economic dispatch; certain costs associated with power purchases from renewable energy facilities; and the fuel costs of other power purchases. Company witness Grant testified that DEC considers the latest forecasted fuel prices, transportation rates, planned maintenance and refueling outages at generating units, generating unit performance parameters, and expected market conditions, in order to determine the most economic and reliable means of serving their customers. Tr., p. 36.

No party presented or elicited testimony contesting the Company's fuel and reagent procurement and power purchasing practices. Based upon the fuel procurement practices report, the evidence in the record, and the absence of any direct testimony to the contrary, the Commission concludes that these practices were reasonable and prudent during the test period.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 8

The evidence supporting this finding of fact is contained in the testimony and exhibits of Company witness McGee.

According to the exhibits sponsored by Company witness McGee, the test period per book system sales were 85,087,285 MWh, and test period per book system generation and purchased power amounted to 91,830,315 MWh (net of auxiliary use and joint owner generation). The test period per book system generation and purchased power are categorized as follows (McGee Exhibit 6):

Net Generation Type	MWh
Coal	25,573,401
Natural Gas, Oil and Biomass	10,964,809
Nuclear	44,387,125
Hydro – Conventional	1,517,922
Hydro Pumped Storage	(868,059)

Solar DG	125,812
Purchased Power – subject to economic dispatch or curtailment	7,355,868
Other Purchased Power	2,100,330
Catawba Interchange	673,107
Total Net Generation	91,830,315

The evidence presented regarding the operation and performance of the Company's baseload generation facilities is discussed in the Evidence and Conclusions for Finding of Fact Nos. 4-6.

No party took issue with the portions of witness McGee's exhibits setting forth per books system sales, generation by fuel type, and purchased power. Therefore, based on the evidence presented and noting the absence of evidence presented to the contrary, the Commission concludes that the per books levels of test period system sales of 85,087,285 MWh and system generation and purchased power of 91,830,315 MWh are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 9

The evidence supporting this finding of fact is contained in the direct testimony and exhibits of Company witness Batson.

Commission Rule R8-55(d)(1) provides that capacity factors for nuclear production facilities will be normalized based generally on the national average for nuclear production facilities as reflected in the most recent NERC Generating Availability Report, adjusted to reflect the unique, inherent characteristics of the utility's facilities and any unusual events. The Company proposed using a 93.31% capacity factor in this proceeding based on the operational history of the Company's nuclear units and the number of planned outage days scheduled during the billing period. Tr., p. 67. This proposed capacity factor exceeds the five-year industry weighted average capacity factor of 88.76% for the period 2011-2015 as reported in the NERC Brochure during the period of 2012 to 2016.

Based upon the requirements of Commission Rule R8-55(d)(1), the historical and reasonably expected performance of the DEC system, and the fact that the Public Staff did not dispute the Company's proposed capacity factor, the Commission concludes that the 93.31% nuclear capacity factor, and its associated generation of 58,688,771 MWh, are reasonable and appropriate for determining the appropriate fuel and fuel-related costs in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 10-12

The evidence supporting these findings of fact is contained in the testimony and exhibits of Company witness McGee.

On her Exhibit 4, Company witness McGee set forth the test year per books North Carolina retail sales, adjusted for weather and customer growth, of 56,823,684 MWh, comprised of Residential class sales of 21,099,293 MWh, General Service/Lighting class sales of 23,106,793 MWh, and Industrial class sales of 12,617,598 MWh.

Witness McGee used projected billing period system sales, generation, and purchased power to calculate the proposed prospective component of the fuel and fuel-related cost rate. The projected system sales level used, as set forth on Revised McGee Exhibit 2, Schedule 1, is 86,966,251 MWh. The projected level of generation and purchased power used was 92,085,162 MWh (calculated using the 93.31% capacity factor found reasonable and appropriate above), and was broken down by witness McGee as follows, as set forth on that same schedule:

Generation Type	MWh
Coal	24,506,235
Gas Combustion Turbine (CT) and Combined Cycle (CC)	15,192,940
Nuclear	43,840,571
Hydro	4,927,068
Net Pumped Storage Hydro	(3,999,271)
Solar Distributed Generation (DG)	162,037
Purchased Power	7,455,582
Total	92,085,162

As part of her Workpaper 7, Company witness McGee also presented an estimate of the projected billing period North Carolina retail Residential, General Service/Lighting, and Industrial MWh sales. The Company estimates billing period North Carolina retail MWh sales to be as follows:

N.C. Retail Customer Class	Projected MWh Sales
Residential	21,325,336
General Service/Lighting	23,055,058
Industrial	12,649,951
Total	57,030,345

These class totals were used in McGee Exhibit 2, Schedule 1, in calculating the total fuel and fuel-related cost factors by customer class.

Based on the evidence presented by the Company, the Public Staff's acceptance of the amounts presented by the Company, and the absence of evidence presented to the contrary, the Commission concludes that the projected North Carolina retail levels of sales set forth in the Company's exhibits (normalized for customer growth and weather), as well as the projected levels of generation and purchased power, are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSION FOR FINDING OF FACT NO. 13

The evidence supporting this finding of fact is contained in the testimony and exhibits of Company witnesses McGee and Grant and the affidavit of Public Staff witness Metz.

Company witness McGee recommended fuel and fuel-related prices and expenses, for purposes of determining projected system fuel expense, as follows:

A. The coal fuel price is $24.75/MWh.
B. The gas CT and CC fuel price is $25.32/MWh.
C. The appropriate expense for ammonia, lime, limestone, urea, dibasic acid, sorbents, and catalysts consumed in reducing or treating emissions (collectively, Reagents) is $34,275,781.
D. The total nuclear fuel price (including Catawba Joint Owners generation) is $6.53/MWh.
E. The total system purchased power cost (including the impact of Joint Dispatch Agreement (JDA) Savings Shared) is $35.61/MWh.
F. System fuel expense recovered through intersystem sales is $35,970,078.

These amounts are set forth on or derived from Revised McGee Exhibit 2, Schedule 1. The total adjusted system fuel and fuel-related expense, based in part on the use of these amounts, is utilized to calculate the prospective fuel and fuel-related cost factors recommended by the Company and the Public Staff.

In his testimony, Public Staff witness Metz stated that, based upon the investigation of Public Staff, the projected fuel and reagent costs set forth in the Company's testimony are reasonable and were calculated appropriately.

No other party presented evidence on the level of DEC's fuel and fuel-related prices and expenses.

Based upon the evidence in the record as to the appropriate fuel and fuel-related prices and expenses, the Commission concludes that the fuel and fuel-related prices recommended by Company witness McGee and accepted by the Public Staff for purposes of determining projected system fuel expense are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 14

The evidence supporting this finding of fact is contained in the testimony and exhibits of Company witness McGee and the affidavit of Public Staff witness Metz.

Consistent with N.C.G.S. § 62-133.2(a2), McGee Workpaper 10 shows that the annual increase in the aggregate amount of fuel-related expenses associated with non-capacity purchased power costs, qualifying facility capacity costs, and renewable energy costs does not exceed two and one half percent of DEC's total North Carolina jurisdictional gross revenues for 2017.

According to McGee Exhibit 2, Schedule 1, the projected fuel and fuel-related costs for the North Carolina retail jurisdiction for use in this proceeding are $1,013,394,952. Public Staff witness Metz did not take issue with her calculation.

Aside from the Company and the Public Staff, no other party presented or elicited testimony contesting the Company's projected fuel and fuel-related costs for the North Carolina retail jurisdiction. Based upon the evidence in the record and the absence of any direct testimony to the contrary, the Commission concludes that the Company's projected total fuel and fuel-related cost for the North Carolina retail jurisdiction of $1,013,394,952 is reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 15-19

The evidence supporting these findings of fact is contained in the testimony and exhibits of Company witness McGee and the affidavits of Public Staff witnesses Metz and Peedin.

Company witness McGee presented DEC's original fuel and fuel-related expense under-collection and prospective fuel and fuel-related cost factors. Company witness McGee's supplemental testimony and revised exhibits set forth the final and revised projected fuel and fuel-related costs, the amount of under-collection for purposes of the EMF, the method for allocating the increase in fuel and fuel-related costs, the composite fuel and fuel-related cost factors, and the EMFs along with exhibits and workpapers to correct an error in the wholesale weather normalization adjustment and updating the EMF to incorporate the fuel and fuel related cost recovery balance for January through March 2018, pursuant to Commission Rule R8-55(d)(3).

DEC witness McGee Revised Exhibit 3 shows that the EMF riders proposed by DEC are based on DEC's calculated and reported North Carolina retail fuel and fuel-related cost under-recoveries of $20.7 million, $24.7 million, and $27.9 million for the Residential, General Service/Lighting, and Industrial classes, respectively. She recommended that DEC's EMF riders for each customer class be based on these net fuel and fuel-related cost under-recovery amounts and on the Company's proposed normalized North Carolina retail sales of 21,099,293 MWh for the residential class, 23,106,793 MWh for the general service/lighting class, and 12,617,598 MWh for the industrial class, as proposed by the Company. These amounts produce EMF increment riders for each North Carolina retail customer class as follows, excluding the regulatory fee:

Residential	0.0980 cents per kWh
General Service/Lighting	0.1068 cents per kWh
Industrial	0.2213 cents per kWh

Company witness McGee calculated the Company's proposed fuel and fuel-related cost factors using a uniform bill adjustment method. She stated that the increase in fuel costs from the amounts approved in Docket No. E-7, Sub 1129, should be allocated between the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology utilized in past DEC fuel cases approved by this Commission. No party opposed the use of this allocation method.

Public Staff witnesses Peedin and Metz presented the under-collection amounts, EMF increments, and prospective fuel and fuel-related cost factors recommended by the Public Staff, which included the $433,911 adjustment to replacement power costs recommended by witness Metz. However, as discussed above in the Evidence and Conclusions for Finding of Fact Nos. 4-6, the Commission finds that DEC's baseload plants were managed prudently and efficiently during the test period.

Based upon the testimony and exhibits in the record, the Commission concludes that DEC's projected fuel and fuel-related cost of $1,013,394,952 for the North Carolina retail jurisdiction for use in this proceeding is reasonable. The Commission also concludes that (1) DEC's EMFs proposed in this proceeding, excluding the regulatory fee and (2) DEC's prospective fuel and fuel-related cost factors proposed in this proceeding for each of DEC's rate classes are appropriate. Additionally, the Commission concludes that DEC's increase in fuel and fuel-related costs from the amounts approved in Docket No. E-7, Sub 1129 should be allocated between the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology approved by this Commission in DEC's past fuel cases.

The following tables summarize the impact of the rates approved in this case and the rates approved in Docket No. E-7 Sub 1129 (excluding regulatory fee).

Approved in Docket No. E-7, Sub 1129 (excluding regulatory fee):

Description	Residential cents/kWh	General cents/kWh	Industrial cents/kWh
Base Fuel	2.3182	2.3182	2.3182
Prospective Component	(0.5354)	(0.4019)	(0.2975)
EMF Component	(0.1081)	(0.0764)	(0.0711)
Total Fuel Factor	1.6747	1.8399	1.9496

Approved in this Docket No. E-7, Sub 1163 (excluding regulatory fee):

Description	Residential cents/kWh	General cents/kWh	Industrial cents/kWh
Base Fuel	1.7828	1.9163	2.0207
Prospective Component	(0.0825)	(0.0849)	(0.2187)
EMF Component	0.0980	0.1068	0.2213
Total Fuel Factor	1.7983	1.9382	2.0233

Summary of Differences Sub 1163 — 1129 (excluding regulatory fee):

Description	Residential cents/kWh	General cents/kWh	Industrial cents/kWh
Base Fuel	(0.5354)	(0.4019)	(0.2975)
Prospective Component	0.4529	0.3170	0.0788
EMF Component	0.2061	0.1832	0.2924
Total Fuel Factor	0.1236	0.0983	0.0737

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 20

The evidence for this finding of fact is contained in the testimony of Company witness McGee and in the affidavits of Public Staff witnesses Peedin and Metz and is discussed in more detail in Evidence and Conclusions for Finding of Fact No. 5.

The Commission has carefully reviewed the evidence and record in this proceeding. The test period and projected fuel and fuel-related costs, and the proposed factors, including the EMF, are not opposed by any party except for the Public Staff's proposed adjustment to DEC's replacement power costs for the Oconee outage discussed above. Accordingly, the overall fuel and fuel-related cost calculation, incorporating the conclusions reached herein, results in net fuel and fuel-related cost factors of 1.7983¢/kWh for the Residential class, 1.9382¢/kWh for the General Service/Lighting class, and 2.0233¢/kWh for the Industrial class, excluding regulatory fee, consisting of the prospective fuel and fuel-related cost factors of 1.7003¢/kWh, 1.8314¢/kWh, and 1.8020¢/kWh, EMF increments of 0.0980¢kWh, 0.1068¢kWh, and 0.2213¢/kWh, all respectively, excluding the regulatory fee.

IT IS, THEREFORE, ORDERED:

1. That, effective for service rendered on and after September 1, 2018, DEC shall adjust the base fuel and fuel-related costs in its North Carolina retail rates of 1.7828¢/kWh, 1.9163¢/kWh, and 2.0207¢/kWh for the Residential, General Service/Lighting, and Industrial classes, respectively as approved in Docket No. E-7, Sub 1146, by amounts equal to (0.0825)¢/kWh, (0.0849)¢/kWh, and (0.2187)¢/kWh for the Residential, General Service/Lighting, and Industrial classes, respectively, and further, that DEC shall adjust the resulting approved fuel and fuel-related costs by EMF increments of 0.0980¢/kWh for the Residential class, 0.1068¢/kWh for the General Service/Lighting class, and 0.2213¢/kWh for the Industrial class (excluding the regulatory fee). The EMF increments are to remain in effect for service rendered through August 31, 2019.

2. That DEC shall file appropriate rate schedules and riders with the Commission in order to implement these approved rate adjustments as soon as practicable.

3. That DEC shall work with the Public Staff to prepare a notice to customers of the rate changes ordered by the Commission in this docket, as well as in Docket No. E-7, Sub 1162, and the Company shall file such notice for Commission approval as soon as practicable, but not later than ten (10) days after the Commission issues orders in both dockets.

ISSUED BY ORDER OF THE COMMISSION.
This the 20th day of August, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-7, SUB 1164

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Carolinas, LLC, for Approval of Demand-Side Management and Energy Efficiency Cost Recovery Rider Pursuant to N.C. Gen. Stat. § 62-133.9 and Commission Rule R8-69	)))))	ORDER APPROVING DSM/EE RIDER AND REQUIRING FILING OF CUSTOMER NOTICE

HEARD: On Tuesday, June 5, 2018, in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding; Chairman Edward S. Finley, Jr.; Commissioners Jerry C. Dockham; James G. Patterson; and Lyons Gray

APPEARANCES:

For Duke Energy Carolinas, LLC:

Kendrick C. Fentress, Duke Energy Carolinas, LLC, P.O. Box 1551, Raleigh, North Carolina 27602

Molly McIntosh Jagannathan, Troutman Sanders LLP, 301 South College Street, Suite 3400, Charlotte, North Carolina 28202

For the North Carolina Sustainable Energy Association:

Benjamin Smith and Peter H. Ledford, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

For the Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For the North Carolina Justice Center, Natural Resources Defense Council, and the Southern Alliance for Clean Energy:

David Neal and Gudrun Thompson, Southern Environmental Law Center, 601 West Rosemary Street, Suite 220, Chapel Hill, North Carolina 27516

For The Carolina Industrial Group for Fair Utility Rates III:

Warren Hicks, Bailey & Dixon, LLP, Post Office Box 1351, Raleigh, North Carolina 27602

For the Using and Consuming Public:

Lucy E. Edmondson, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

BY THE COMMISSION: Pursuant to N.C. Gen. Stat. § 62-133.9(d) the North Carolina Utilities Commission (Commission) is authorized to approve an annual rider to the rates of electric public utilities, outside of a general rate case, for recovery of all reasonable and prudent costs incurred for adoption and implementation of new demand-side management (DSM) and energy efficiency (EE) measures. The Commission is also authorized to award incentives to electric companies for adopting and implementing new DSM/EE measures, including, but not limited to, appropriate rewards based on (1) the sharing of savings achieved by the DSM and EE measures and/or (2) the capitalization of a percentage of avoided costs achieved by the measures. Commission Rule R8-69(b) provides that every year the Commission will conduct a proceeding for each electric public utility to establish an annual DSM/EE rider to recover the reasonable and prudent costs incurred by the electric utility in adopting and implementing new DSM/EE measures previously approved by the Commission pursuant to Commission Rule R8-68. Further, Commission Rule R8-69(b) provides for the establishment of a DSM/EE experience modification factor (EMF) rider to allow the electric public utility to collect the difference between reasonable and prudently incurred costs and the revenues that were actually realized during the test period under the DSM/EE rider then in effect. Commission Rule R8-69(c) permits the utility to request the inclusion of utility incentives (the rewards authorized by the statute), including net lost revenues (NLR), in the DSM/EE rider and the DSM/EE EMF rider.

In the present proceeding, Docket No. E-7, Sub 1164, on March 7, 2018, Duke Energy Carolinas, LLC (DEC or the Company), filed an application for approval of its DSM/EE rider (Rider EE[1] or Rider 10) for 2019[2] (Application) and the direct testimony and exhibits of Carolyn T. Miller, Manager, Rates and Regulatory Strategy for DEC, and Robert P. Evans, Senior Manager – Strategy and Collaboration for the Carolinas in the Company's Market Solutions Regulatory Strategy and Evaluation group.

On March 29, 2018, the Commission issued an Order scheduling a hearing for June 5, 2018, establishing discovery guidelines, providing for intervention and testimony by other parties, and requiring public notice.

The intervention of the Public Staff – North Carolina Utilities Commission (Public Staff) is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e). On March 16, 2018, the North Carolina Sustainable Energy Association (NCSEA) filed a petition to intervene, which was granted on March 23, 2018. On April 10, 2018, the Carolina Utility

[1] DEC refers to its DSM/EE Rider as "Rider EE"; however, this rider includes charges intended to recover both DSM and EE revenue requirements.

[2] The Rider EE proposed in this proceeding is the Company's tenth Rider EE and includes components that relate to Vintages 2014, 2015, 2016, 2017, 2018, and 2019 of the Revised Mechanism. For purposes of clarity, the aggregate rider is referred to in this Order as "Rider 10" or the proposed "Rider EE." Rider 10 is proposed to be effective for the rate period January 1, 2019, through December 31, 2019.

Customers Association, Inc. (CUCA) filed a petition to intervene, which was granted on April 11, 2018. On May 1, 2018, the North Carolina Justice Center (NC Justice Center) and the Southern Alliance for Clean Energy (SACE), filed a petition to intervene, and on May 21, 2018, Natural Resources Defense Council (NRDC, collectively, NC Justice Center) filed a petition to intervene. These petitions were granted on May 2 and 30, 2018, respectively. The Carolina Industrial Group for Fair Utility Rates III (CIGFUR) filed a petition to intervene on May 17, 2018, which was granted on May 18, 2018.

On May 21, 2018, the Public Staff and NC Justice Center filed a motion for an extension of time in which to file intervenor testimony to May 22, 2018, and to file rebuttal testimony to June 1, 2018. The motion was granted by the Commission on May 21, 2018.

On May 22, 2018, NC Justice Center filed the testimony of Chris Neme, co-founder and Principal of Energy Futures Group; and the Public Staff filed the testimony and exhibits of Michael C. Maness, Director of the Accounting Division; David M. Williamson, Engineer in the Electric Division; and Eric L. Williams, Financial Analyst in the Economic Research Division.

On June 1, 2018, DEC filed the joint rebuttal testimony of Timothy J. Duff, General Manager of Customer Regulatory Strategy and Evaluation at Duke Energy Business Services LLC, and Richard G. Stevie, Ph.D., Vice President of Forecasting at Integral Analytics, Inc.; and the rebuttal testimony and exhibits of witnesses Miller and Evans.

On June 1, 2017, DEC filed a motion to excuse witness Miller and NC Justice Center filed a motion to excuse witness Neme from appearing at the June 5, 2018, expert witness hearing. On June 4, 2017, the Commission issued an order granting both motions.

The case came on for hearing as scheduled on June 5, 2018. No public witnesses appeared at the hearing.

On July 13, 2018, DEC filed a late-filed exhibit containing information relating to the My Home Energy Report Program that was requested by Presiding Commissioner Brown-Bland during the expert witness hearing.

On July 19, 2018, the Public Staff filed a letter indicating that it had completed its review of DEC's 2017 DSM/EE program costs and had found no exceptions.

On July 20, 2018, the parties filed briefs or proposed orders, as allowed by the Commission.

<u>Other Pertinent Proceedings:</u>
<u>Docket Nos. E-7, Subs 831, 938, 979, 1032, and 1130, and E-100, Sub 148</u>

On February 9, 2010, the Commission issued an Order Approving Agreement and Joint Stipulation of Settlement Subject to Certain Commission-Required Modifications and Decisions on Contested Issues in DEC's first DSM/EE rider proceeding, Docket No. E-7, Sub 831 (Sub 831 Order). In the Sub 831 Order, the Commission approved, with certain modifications, the

Agreement and Joint Stipulation of Settlement (Sub 831 Settlement) between DEC, the Public Staff, SACE, the Environmental Defense Fund (EDF), National Resources Defense Council (NRDC), and the Southern Environmental Law Center (SELC), which described the modified save-a-watt mechanism (Sub 831 Mechanism), pursuant to which DEC calculated, for the period from June 1, 2009 until December 31, 2013, the revenue requirements underlying its DSM/EE riders based on percentages of avoided costs, plus compensation for NLR resulting from EE programs only. The Sub 831 Mechanism was approved as a pilot (Sub 831 Pilot) with a term of four years, ending on December 31, 2013.

On February 15, 2010, the Company filed an Application for Waiver of Commission Rule R8-69(a)(4) and R8-69(a)(5) in Docket No. E-7, Sub 938 (Sub 938 Waiver Application), requesting waiver of the definitions of "rate period" and "test period." Under the Sub 831 Mechanism, customer participation in the Company's DSM and EE programs and corresponding responsibility to pay Rider EE are determined on a vintage year basis. A vintage year is generally the 12-month period in which a specific DSM or EE measure is installed for an individual participant or group of participants.[1] For purposes of the modified save-a-watt portfolio of programs, the Company applied the vintage year concept on a calendar-year basis for administrative ease for the Company and its customers. Pursuant to the Sub 938 Waiver Application, "test period" is defined as the most recently completed vintage year at the time of the Company's DSM/EE rider application filing date.[2]

On February 24, 2010, in Docket No. E-7, Sub 938, the Commission issued an Order Requesting Comments on the Company's Sub 938 Waiver Application. After receiving comments and reply comments, the Commission entered an Order Granting Waiver, in Part, and Denying Waiver, in Part (Sub 938 Waiver Order) on April 6, 2010. In this Order, the Commission approved the requested waiver of R8-69(d)(3) in part, but denied the Company's requested waiver of the definitions of "rate period" and "test period."

On May 6, 2010, DEC filed a Motion for Clarification or, in the Alternative, for Reconsideration, asking that the Commission reconsider its denial of the waiver of the definitions of "test period" and "rate period," and that the Commission clarify that the EMF may incorporate adjustments for multiple test periods. In response, the Commission issued an Order on Motions for Reconsideration on June 3, 2010 (Sub 938 Second Waiver Order), granting DEC's Motion. The Sub 938 Second Waiver Order established that the rate period for Rider EE would align with the 12-month calendar year vintage concept utilized in the Commission-approved save-a-watt approach (in effect, the calendar year following the Commission's order in each annual DSM/EE cost recovery proceeding), and that the test period for Rider EE would be the most

[1] Vintage 1 is an exception in terms of length. Vintage 1 is a 19-month period beginning June 1, 2009, and ending December 31, 2010, as a result of the approval of DSM/EE programs prior to the approval of the Sub 831 Mechanism.

[2] In the Sub 938 Second Waiver Order issued June 3, 2010, the Commission concluded that DEC should true up all costs during the save-a-watt pilot through the EMF rider provided in Commission Rule R8-69(b)(1). The modified save-a-watt approach approved in the Sub 831 Order required a final calculation after the completion of the four-year program, comparing the cumulative revenues collected related to all four vintage years to amounts due the Company, taking into consideration the applicable earnings cap.

recently completed vintage year at the time of the Company's Rider EE cost recovery application filing date.

On February 8, 2011, in Docket No. E-7, Sub 831, the Commission issued its Order Adopting "Decision Tree" to Determine "Found Revenues" and Requiring Reporting in DSM/EE Cost Recovery Filings in Docket No. E-7, Sub 831 (Sub 831 Found Revenues Order), which included, in Appendix A, a "Decision Tree" to identify, categorize, and net possible found revenues against the NLR created by the Company's EE programs. Found revenues may result from activities that directly or indirectly result in an increase in customer demand or energy consumption within the Company's service territory.

On November 8, 2011, in Docket No. E-7, Sub 979, the Commission issued its Order Approving DSM/EE Rider and Requiring Filing of Proposed Customer Notice (Sub 979 Order), in which it approved the Evaluation, Measurement, and Verification (EM&V) agreement (EM&V Agreement) reached by the Company, SACE, and the Public Staff. Pursuant to the EM&V Agreement, for all EE programs, with the exception of the Non-Residential Smart $aver Custom Rebate program and the Low-Income EE and Weatherization Assistance program, actual EM&V results are applied to replace all initial impact estimates back to the beginning of the program offering. For the purposes of the vintage true-ups, these initial EM&V results are considered actual results for a program until the next EM&V results are received. The new EM&V results are then considered actual results going forward and will be applied prospectively for the purposes of truing up vintages from the first day of the month immediately following the month in which the study participation sample for the EM&V was completed. These EM&V results will then continue to apply and be considered actual results until superseded by new EM&V results, if any. For all new programs and pilots, the Company will follow a consistent methodology, meaning that initial estimates of impacts will be used until DEC has valid EM&V results, which will then be applied back to the beginning of the offering and will be considered actual results until a second EM&V is performed.

On February 6, 2012, in the Sub 831 docket, the Company, SACE, and the Public Staff filed a proposal regarding revisions to the program flexibility requirements (Flexibility Guidelines). The proposal divided potential program changes into three categories based on the magnitude of the change, with the most significant changes requiring regulatory approval by the Commission prior to implementation; less extensive changes requiring advance notice prior to making such program changes; and minor changes being reported on a quarterly basis to the Commission. The Commission approved the joint proposal in its July 16, 2012 Order Adopting Program Flexibility Guidelines.

On October 29, 2013, the Commission issued its Order Approving DSM/EE Programs and Stipulation of Settlement in Docket No. E-7, Sub 1032 (Sub 1032 Order), which approved a new cost recovery and incentive mechanism for DSM/EE programs (Sub 1032 Mechanism) and a portfolio of DSM and EE programs to be effective January 1, 2014, to replace the cost recovery mechanism and portfolio of DSM and EE programs approved in Docket No. E-7, Sub 831. In the Sub 1032 Order, the Commission approved an Agreement and Stipulation of Settlement, filed on August 19, 2013, and amended on September 23, 2013, by and between DEC, NCSEA, EDF, SACE, the South Carolina Coastal Conservation League, NRDC, the Sierra Club, and the Public Staff, which incorporates the Sub 1032 Mechanism (Sub 1032 Stipulation).

Under the Sub 1032 Stipulation, as approved by the Commission, the portfolio of DSM and EE programs filed by the Company was approved with no specific duration (unlike the programs approved in Sub 831, which explicitly expired on December 31, 2013). Additionally, the Sub 1032 Stipulation also provided that the Company's annual DSM/EE rider would be determined according to the Sub 1032 Stipulation and the terms and conditions set forth in the Sub 1032 Mechanism, until otherwise ordered by the Commission. Under the Sub 1032 Stipulation, the Sub 1032 Mechanism was to be reviewed in four years. Pursuant to the Sub 1032 Stipulation, any proposals for revisions to the Sub 1032 Mechanism were to be filed by parties along with their testimony in the annual DSM/EE rider proceeding.

The overall purpose of the Sub 1032 Mechanism is to (1) allow DEC to recover all reasonable and prudent costs incurred for adopting and implementing new DSM and EE measures; (2) establish certain requirements, in addition to those of Commission Rule R8-68, for requests by DEC for approval, monitoring, and management of DSM and EE programs; (3) establish the terms and conditions for the recovery of NLR (net of found revenues) and a Portfolio Performance Incentive (PPI) to reward DEC for adopting and implementing new DSM and EE measures and programs; and (4) provide for an additional incentive to further encourage kilowatt-hour (kWh) savings achievements. The Sub 1032 Mechanism includes the following provisions, among several others: (a) the mechanism shall continue until terminated pursuant to Commission Order; (b) modifications to Commission-approved DSM/EE programs will be made using the Flexibility Guidelines; (c) treatment of opted-out and opted-in customers will continue to be guided by the Commission's Orders in Docket No. E-7, Sub 938, with the addition of an additional opt-in period during the first week in March of each year; (d) the EM&V Agreement shall continue to govern the application of EM&V results; and (e) the determination of found revenues will be made using the Decision Tree approved in the Sub 831 Found Revenues Order. Like the Sub 831 Mechanism, the Sub 1032 Mechanism also employs a vintage year concept based on the calendar year.[1]

On August 23, 2017, in Docket No. E-7, Sub 1130 (Sub 1130), the Commission approved certain revisions to the Sub 1032 Mechanism effective January 1, 2018 (Revised Mechanism). The Sub 1032 Mechanism was revised to (1) set out how the avoided costs are determined for purposes of calculating the PPI, (2) specify the avoided costs to be used for purposes of program approval, and (3) specify the avoided costs to be used in calculating ongoing cost-effectiveness, as well as setting out a procedure for modification or closure of programs that are no longer cost-effective.

Specifically in Sub 1130, paragraph 69 of the Sub 1032 Mechanism, which describes how avoided costs are determined for purposes of calculating the PPI, was revised such that for Vintage 2019 and beyond, the program-specific avoided capacity benefits and avoided energy benefits will be derived from the underlying resource plan, production cost model, and cost inputs that generated the avoided capacity and avoided energy credits reflected in the most recent

[1] Each vintage under the Sub 1032 Mechanism and the Revised Mechanism is referred to by the calendar year of its respective rate period (e.g., Vintage 2018).

Commission-approved Biennial Determination of Avoided Cost Rates as of December 31 of the year immediately preceding the annual DSM/EE rider filing date. For the calculation of the underlying avoided energy credits to be used to derive the program-specific avoided energy benefits, the calculation will be based on the projected EE portfolio hourly shape, rather than the assumed 24x7 100-megawatt (MW) reduction typically used to represent a qualifying facility (QF).

Additionally, Paragraph 19 of the Sub 1032 Mechanism was revised to specify that the avoided costs used for purposes of program approval filings would also be determined using the method outlined in revised Paragraph 69. The specific Biennial Determination of Avoided Cost Rates used for each program approval filing would be derived from the rates most recently approved by the Commission as of the date of the program approval filing. Paragraph 23 of the Sub 1032 Mechanism was revised, and Paragraphs 23A-D were added, to specify which avoided costs should be used for determining the continuing cost-effectiveness of programs and actions to be taken based on the results of those tests. Pursuant to Paragraph 23, each year the Company files an analysis of the current cost-effectiveness of each of its DSM/EE programs as part of the DSM/EE rider filing. New Paragraph 23A requires the use of the same method for calculating the avoided costs outlined in the revisions to Paragraph 69 to determine the continued cost-effectiveness for each program. Like revised Paragraph 69, Paragraph 23A specifies that the avoided capacity and energy costs used to calculate cost-effectiveness will be derived from the avoided costs underlying the most recent Commission-approved Biennial Determination of Avoided Cost Rates as of December 31 of the year immediately preceding the annual DSM/EE rider filing date. New Paragraphs 23B through 23D address the steps that will be taken if specific DSM/EE programs continue to produce Total Resource Cost (TRC) test results less than 1.00 for an extended period. For any program that initially demonstrates a TRC of less than 1.00, the Company shall include in its annual DSM/EE rider filing a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program. If a program demonstrates a prospective TRC of less than 1.00 in a second DSM/EE rider proceeding, the Company shall include a discussion of what actions it has taken to improve cost-effectiveness. If a program demonstrates a prospective TRC of less than 1.00 in a third DSM/EE rider proceeding, the Company shall terminate the program effective at the end of the year following the DSM/EE rider order, unless otherwise ordered by the Commission.

The Sub 1032 Mechanism, as revised by the Sub 1130 Order, is set forth in Public Staff witness Maness Exhibit II and referred to herein as the "Mechanism."

<u>Docket No. E-7, Sub 1164</u>

Based upon consideration of DEC's Application, the pleadings, the testimony and exhibits received into evidence at the hearing, the parties' briefs and the record as a whole, the Commission now makes the following

FINDINGS OF FACT

1. DEC is a public utility with a public service obligation to provide electric utility service to customers in its service area in North Carolina and is subject to the jurisdiction of the Commission.

2. The Commission has jurisdiction over this Application pursuant to the Public Utilities Act. A utility may petition the Commission for approval of an annual rider to recover all reasonable and prudent costs incurred for the adoption and implementation of new DSM and EE measures pursuant to N.C. Gen Stat. § 62-133.9 and Commission Rules R8-68 and R8-69. The Commission finds that it has the authority to consider and approve the relief the Company is seeking in this docket.

3. For purposes of this proceeding, DEC has requested approval of costs and incentives related to the following DSM/EE programs to be included in Rider 10: Energy Assessments program; EE Education program; Energy Efficient Appliances and Devices; Residential Smart $aver EE program; Multi-Family EE program; My Home Energy Report (MyHER); Income-Qualified EE and Weatherization program; Power Manager; Non-Residential Smart $aver Energy Efficient Food Service Products program; Non-Residential Smart $aver Energy Efficient HVAC Products program; Non-Residential Smart $aver Energy Efficient IT Products program; Non-Residential Smart $aver Energy Efficient Lighting Products program; Non-Residential Smart $aver Energy Efficient Process Equipment Products program; Non-Residential Smart $aver Energy Efficient Pumps and Drives Products program; Non-Residential Smart $aver Custom program; Non-Residential Smart $aver Custom Energy Assessments program; PowerShare; PowerShare Call Option (canceled effective January 31, 2018); Small Business Energy $aver; Smart Energy in Offices (canceled effective June 30, 2018); EnergyWise for Business; and Non-Residential Smart $aver Performance Incentive.

4. Pursuant to Paragraph 19 of the Mechanism, the Income-Qualified EE and Weatherization program is not required to pass the TRC or UCT tests in order to be eligible for inclusion in the Company's portfolio. No further action by the Company is required with respect to this program.

5. The Non-Residential Smart $aver Custom Energy Assessments and EnergyWise for Business programs are cost-effective under DEC's calculation of avoided capacity costs.

6. The Residential Smart $aver EE program should not be suspended at this time. The Company should propose modifications to this program no later than October 31, 2018, with the goal of restoring the TRC score to 1.0 or greater. The Company should include a discussion of the impact of these modifications and other actions it has taken to improve cost-effectiveness in next year's DSM/EE rider proceeding.

7. Due to both the short amount of time it has been in place and the anticipated increase in cost-effectiveness, the Non-Residential Smart $aver Performance Incentive Program does not require additional scrutiny at this time. If the program does not project cost-effectiveness for Vintage 2020, pursuant to Paragraph 23B of the Mechanism, the Company should provide a

discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program in its next DSM/EE rider proceeding.

8. For purposes of inclusion in Rider 10, the Company's portfolio of DSM and EE programs is cost-effective.

9. The EM&V reports filed as Evans Exhibits A, D, E, F, G, H, I, J, K, and L are acceptable for purposes of this proceeding and should be considered complete for purposes of calculating program impacts.

10. The EM&V report for the Non-Residential Smart $aver Custom program (Evans Exhibit B) should be revised as discussed by Public Staff witness Williamson and refiled in the next DSM/EE rider proceeding.

11. The acceptance of the EM&V report for the MyHER program (Evans Exhibit C) should be postponed and addressed in next year's proceeding pending completion of the Public Staff's review.

12. Pursuant to the Commission's Sub 938 Second Waiver Order and the Sub 1032 Order, the rate period for the purposes of this proceeding is January 1, 2019 through December 31, 2019.

13. Rider 10 includes EMF components for Vintage 2017 DSM and EE programs. Consistent with the Sub 938 Second Waiver Order, the test period for these EMF components is the period from January 1, 2017, through December 31, 2017 (Vintage 2017).

14. DEC's proposed rates for Rider 10 are comprised of both prospective and EMF components. The prospective components include factors designed to collect program costs and the PPI for the Company's Vintage 2019 DSM and EE programs, as well as the first year of NLR for the Company's Vintage 2019 EE programs; the second year of NLR for Vintage 2018 EE programs; and the third year of NLR for Vintage 2017 EE programs. The EMF components include true-ups of Vintage 2017 program costs, NLR, and PPI, as well as true-ups for PPI and NLR for Vintages 2014, 2015 and 2016.

15. It is appropriate to reduce the Company's proposed level of 2019 estimated kWh sales for each Non-Residential vintage/factor combination by 3.90%, to hold open the true-up process for Rider 10 until the total actual amount of Rider 10 revenues collected can be reflected in the rate calculation process, and to allow the Company to recover carrying costs on any understatement of Rider 10 billing factors due to the 3.90% reduction. It is also appropriate to limit the portion of the understatement eligible for recovery to the difference between the Public Staff's recommended levels of participating Rider 10 kWh sales and the Company's initially proposed levels of such sales in this proceeding.

16. It is inappropriate to calculate the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs under the assumption that capacity avoided prior to year 2023 be assigned a zero dollar value. The Public Staff's

recommendation of such, and the corresponding reduction to the Company's Vintage 2019 PPI, is rejected.

17. The components of Rider 10, as reflected in the testimony and exhibits of Company witnesses Miller and Evans, have been calculated in a manner that appropriately reflects the Commission's findings and conclusions in this Order, as well as the Commission's findings and conclusions as set forth in the Sub 831 Order, the Sub 831 Found Revenues Order, the Sub 938 Waiver Order, the Sub 938 Second Waiver Order, the Sub 979 Order, the Sub 1032 Order, and the Commission's Order in Docket No. E-7, Sub 1130 (Sub 1130 Order).

18. The reasonable and prudent Rider 10 billing factor for residential customers[1] is 0.5320 cents per kWh, which, as is the case for all the other billing factors stated in these findings of fact, includes the regulatory fee.

19. The reasonable and prudent Rider 10 Vintage 2019 EE prospective billing factor for non-residential customers who do not opt out of Vintage 2019 of the Company's EE programs is 0.3158 cents per kWh.

20. The reasonable and prudent Rider 10 Vintage 2019 DSM prospective billing factor for non-residential customers who do not opt out of Vintage 2019 of the Company's DSM programs is 0.0877 cents per kWh.

21. The reasonable and prudent Rider 10 Vintage 2018 prospective EE billing factor for non-residential customers who participated in Vintage 2018 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2018 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.0695 cents per kWh.

22. The reasonable and prudent Rider 10 Vintage 2018 DSM prospective billing factor for non-residential customers who participated in Vintage 2018 of the Company's DSM programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2018 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.0030 cents per kWh.

23. The reasonable and prudent Rider 10 Vintage 2017 prospective EE billing factor for non-residential customers who participated in Vintage 2017 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2017 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.0801 cents per kWh.

24. The reasonable and prudent Rider 10 Vintage 2017 EE EMF billing factor for non-residential customers who participated in Vintage 2017 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2017 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.2924 cents per kWh.

[1] The residential billing factor applicable to all residential customers is the sum of the residential prospective and residential true-up factors for the applicable vintage years.

25. The reasonable and prudent Rider 10 Vintage 2017 DSM EMF billing factor for non-residential customers who participated in Vintage 2017 of the Company's DSM programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2017 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.0005 cents per kWh.

26. The reasonable and prudent Rider 10 Vintage 2016 EE EMF billing factor for non-residential customers who participated in Vintage 2016 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2016 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is (0.0126) cents per kWh.

27. The reasonable and prudent Rider 10 Vintage 2016 DSM EMF billing factor for non-residential customers who participated in Vintage 2016 of the Company's DSM programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2016 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is (0.0015) cents per kWh.

28. The reasonable and prudent Rider 10 Vintage 2015 EE EMF billing factor for non-residential customers who participated in Vintage 2015 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2015 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is 0.0024 cents per kWh.

29. The reasonable and prudent Rider 10 Vintage 2015 DSM EMF billing factor for non-residential customers who participated in Vintage 2015 of the Company's DSM programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2015 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is (0.0024) cents per kWh.

30. The reasonable and prudent Rider 10 Vintage 2014 EE EMF billing factor for non-residential customers who participated in Vintage 2014 of the Company's EE programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2014 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is (0.0061) cents per kWh.

31. The reasonable and prudent Rider 10 Vintage 2014 DSM EMF billing factor for non-residential customers who participated in Vintage 2014 of the Company's DSM programs (or who did not so participate, but neither (a) explicitly opted out of Vintage 2014 during the annual enrollment period for that vintage, nor (b) opted out of Vintage 2019) is (0.0002) cents per kWh.

32. DEC should leverage its collaborative stakeholder meetings (Collaborative) to discuss the EM&V issues and program design issues raised in the testimony of NC Justice Center witness Neme and report the results of those discussions in the Company's 2019 DSM/EE rider filing.

33. Beginning in 2019, the Company should increase the frequency of the Collaborative meetings so that the combined DEC/Duke Energy Progress, LLC (DEP) Collaborative meets every two months.

EVIDENCE AND COCLUSIONS FOR FINDINGS OF FACT NOS. 1-2

The evidence and legal bases in support of these findings and conclusions can be found in the Application, the pleadings, the testimony, and the exhibits in this docket, as well as in the statutes, case law, and rules governing the authority and jurisdiction of this Commission. These findings are informational, procedural, and jurisdictional in nature.

Pursuant to N.C. Gen. Stat. § 62-133.9 the Commission has the authority to approve an annual rider, outside of a general rate case, for recovery of reasonable and prudent costs incurred in the adoption and implementation of new DSM and EE measures, as well as appropriate rewards for adopting and implementing those measures. Similarly, Commission Rule R8-68 provides, among other things, that reasonable and prudent costs of new DSM or EE programs approved by the Commission shall be recovered through the annual rider described in N.C. Gen. Stat. § 62-133.9 and Commission Rule R8-69. The Commission may also consider in the annual rider proceeding whether to approve any utility incentive (reward) pursuant to N.C.G.S. § 62-133.9(d)(2)a through c.

Commission Rule R8-69 outlines the procedure whereby a utility applies for and the Commission establishes an annual DSM/EE rider. Commission Rule R8-69(a)(2) defines a DSM/EE rider as

> a charge or rate established by the Commission annually pursuant to N.C. Gen. Stat. § 62-133.9(d) to allow the electric public utility to recover all reasonable and prudent costs incurred in adopting and implementing new demand-side management and energy efficiency measures after August 20, 2007, as well as, if appropriate, utility incentives, including net lost revenues.

Commission Rule R8-69(c) allows a utility to apply for recovery of incentives for which the Commission will determine the appropriate ratemaking treatment.

Section 62-133.9 of the North Carolina General Statutes, along with Commission Rules R8-68 and Rule R8-69, establish a procedure whereby an electric public utility files an application in a separate docket for the Commission's approval of an annual rider for recovery of reasonable and prudent costs of approved DSM and EE programs as well as appropriate utility incentives, potentially including "[a]ppropriate rewards based on capitalization of a percentage of avoided costs achieved by demand-side management and energy efficiency measures." Consistent with this provision, as well as the Commission-approved Revised Sub 1032 Mechanism, the Company filed an application for approval of such annual rider (Rider 10) and the cost recovery and utility incentives the Company seeks through Rider 10 are based on the Company recovering DSM/EE program costs, NLR (net of found revenues), and a PPI incentive related to the DSM and EE programs approved in the Sub 1032 Order and those approved following the Sub 1032 Order.[1] Recovery of these costs and utility incentives is also consistent with N.C. G.S. § 62-133.9,

[1] The programs approved by the Commission following the Sub 1032 Order are as follows: Smart Energy in Offices (formerly, the Smart Energy Now Pilot), which was approved in Docket No. E-7, Sub 961 on August 13, 2014; Small Business Energy $aver, which was approved on August 13, 2014 in Docket No.-E-7, Sub 1055; the

Rule R8-68, and Rule R8-69. Therefore, the Commission concludes that it has the authority to consider and approve the relief the Company is seeking in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 3

The evidence for this finding can be found in DEC's Application, the testimony and exhibits of Company witnesses Evans and Miller, the testimony of Public Staff witness Williamson, and various Commission orders.

DEC witness Miller's testimony and exhibits show that the Company's request for approval of Rider 10 is associated with the Sub 1032 portfolio of programs, as well as the programs approved by the Commission after the Sub 1032 Order. The direct testimony and exhibits of DEC witness Evans listed the applicable DSM/EE programs as follows: Energy Assessments; EE Education; Energy Efficient Appliances and Devices; Residential Smart $aver EE; Multi-Family EE; MyHER; Income-Qualified EE and Weatherization; Power Manager; Non-Residential Smart $aver Energy Efficient Food Service Products; Non-Residential Smart $aver Energy Efficient HVAC Products; Non-Residential Smart $aver Energy Efficient IT Products; No-Residential Smart $aver Energy Efficient Lighting Products; Non-Residential Smart $aver Energy Efficient Process Equipment Products; Non-Residential Smart $aver Energy Efficient Pumps and Drives Products; Non-Residential Smart $aver Custom; Non-Residential Smart $aver Custom Energy Assessments; PowerShare; PowerShare Call Option (canceled effective January 31, 2018); Small Business Energy $aver; Smart Energy in Offices (canceled effective June 30, 2018); EnergyWise for Business; and Non-Residential Smart $aver Performance Incentive.

In his testimony, Public Staff witness Williamson also listed the DSM/EE programs and pilots for which the Company seeks cost recovery and noted that each of these programs and pilots has received approval as a new DSM or EE program and is eligible for cost recovery in this proceeding under N.C.G.S. § 62-133.9.

Thus, the Commission finds and concludes that each of the programs and pilots listed by witnesses Evans and Williamson has received Commission approval as a new DSM or EE program, or pilot and is, therefore, eligible for cost recovery in this proceeding under N.C.G.S. § 62-133.9.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 4 – 8

The evidence in support of these findings can be found in the testimony and exhibits of DEC witness Evans and Public Staff witness Williamson, and the testimony of NC Justice Center witness Neme.

Business Energy Report Pilot, which was approved in Docket No. E-7, Sub 1081 on August 19, 2015; EnergyWise for Business, which was approved in Docket No. E-7, Sub 1093 on October 27, 2015; and Smart Energy in Healthcare, which was approved in Docket No. E-7, Sub 1141 on July 25, 2017. The Company's Energy Management Information Services Pilot, Business Energy Report Pilot, Residential Appliance Recycling program, PowerShare CallOption, Smart Energy in Healthcare program, and Smart Energy in Offices have since been discontinued.

DEC witness Evans testified that the Company performed prospective analyses of each of its programs and the aggregate portfolio for the Vintage 2019 period, the results of which are incorporated in Evans Exhibit No. 7. DEC's calculations indicate that, with the exception of the Income-Qualified EE and Weatherization program (which was not cost-effective at the time it was approved by the Commission), the Non-Residential Smart $aver Performance Incentive, and the Residential Smart $aver EE programs, the programs within the portfolio continue to be cost-effective. Evans Exhibit 7 shows that the projected portfolio cost-effectiveness is 2.46 under the Utility Cost (UC) test and 1.98 under the TRC.

Public Staff witness Williamson stated in his testimony that he reviewed DEC's calculations of cost-effectiveness under each of the four standard cost-effectiveness tests -- the UC, TRC, Participant, and Ratepayer Impact Measure (RIM) tests. He indicated that under DEC's calculations, each program was cost-effective under both the UC and the TRC tests, with the exception of the Income-Qualified EE and Weatherization program (TRC of 0.83 and UC of 0.19), the Residential Smart $aver EE program (formerly, HVAC EE) (TRC of 0.59 and UC of 0.94), the EnergyWise for Business program (TRC of 1.21 and UC of 0.83), and the Non-Residential Smart $aver Performance Incentive (TRC of 0.81 and UC of 2.70). Witness Williamson noted that while many programs continue to be cost effective, the TRCs calculated by the Company for all programs have decreased since the 2017 DSM/EE rider proceeding, mainly due to the changes in avoided cost rates. Witness Williamson stated that the decreasing cost-effectiveness is also partially attributable to anticipated unit savings being lower than expected as determined through EM&V of the programs. Also, as programs mature, baseline standards increase, or avoided cost rates decrease, and it becomes more difficult for a program to produce cost-effective savings.

Company Witness Evans also testified that the avoided cost rates used in the 2019 portfolio projection were significantly lower than those employed in the Sub 1130 proceeding. Witness Evans further noted that the reductions in avoided costs lowered cost-effectiveness of all of the Company's DSM and EE programs, as well as DEC's portfolio as a whole.

NC Justice Center witness Neme testified that DEC's DSM/EE portfolio was very cost-effective, producing $2.46 in supply-cost savings for every dollar spent. He noted that cost-effectiveness tests are dependent on avoided cost rates and would need to be updated as avoided costs change.

Public Staff witness Williamson testified that the Public Staff's calculations of cost-effectiveness provide no capacity value for years in which DEC's underlying IRP shows zero capacity need. Using this specification, witness Williamson determined that in addition to the Income-Qualified EE and Weatherization, Residential Smart $aver EE, and the Non-Residential Smart $aver Performance Incentive programs, the Non-Residential Smart $aver Custom/Assessments and EnergyWise for Business programs are also not projected to be cost-effective under the TRC test. However, witness Williamson stated that the portfolio of programs seems generally to be performing satisfactorily.

NC Justice Center witness Neme testified that DEC's DSM/EE portfolio is very cost-effective, demonstrating that DSM/EE programs are a least cost resource for meeting consumers' electricity needs. Based on DEC's estimated UCT benefit-cost ratio, he stated that for every dollar that DEC spends on its programs, it is eliminating the need to spend $2.46 on new power plants, the fuel to run those power plants, new power lines, and other investments otherwise needed to supply electricity to homes and businesses. DEC's analysis also suggests that the programs are very cost-effective under the TRC test, with a benefit cost-ratio of approximately 2 to 1. Witness Neme added that since 2014, DEC's programs have saved enough energy at the time of system peak to eliminate the need for the equivalent of more than four natural gas peaker power plants.

As a whole, the Commission concludes that DEC's portfolio of DSM and EE programs is cost-effective and eligible for inclusion in Rider 10. The Commission makes specific findings and conclusions as to the individual programs that DEC and/or the Public Staff have identified as not being cost-effective and discusses each below.

Income-Qualified EE and Weatherization Program

Witness Williamson testified that the Company's Income-Qualified EE and Weatherization Program - Low-Income was hit with a major decrease in cost-effectiveness due largely to the update of the avoided cost sources. However, witness Williamson explained that, as a matter of policy, low-income programs are not required to meet the cost-effectiveness test thresholds that other programs must meet in order to be considered for continuation, because they are intended to provide EE measures to a sector of customers who would not otherwise participate in an EE program on their own.

Pursuant to Paragraph 19 of the Mechanism (which provides an exception for low-income programs and other non-cost-effective programs with similar societal benefits), the Income-Qualified EE and Weatherization Program is not required to pass the TRC or UCT tests in order to be eligible for inclusion in the Company's portfolio. Therefore, based on the foregoing, the Commission finds and concludes that no further action by the Company is required with respect to this program.

EnergyWise for Business and Non-Residential Smart $aver Custom Energy Assessments

Witness Williamson testified that DEC's EnergyWise for Business Program is a DSM program that draws the majority of its avoided cost benefits from capacity and transmission and distribution (T&D) reductions. He acknowledged that using the Company's application of avoided capacity costs, this program is cost-effective under the TRC test. However, when using the Public Staff's methodology, this program is no longer cost-effective. Thus, according to witness Williamson, pursuant to Paragraph 23B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program. He recommended further that pursuant to Paragraph 23C of the Mechanism, if this program shows a prospective TRC of less than 1.00 in next year's DSM/EE rider proceeding, the Company should include a discussion of what actions it has taken to improve cost-effectiveness.

Witness Williamson explained that the Non-Residential Smart $aver Custom Energy Assessments and Non-Residential Smart $aver Custom programs were filed separately in the last proceeding, but since then, the Company has decided to combine these two programs for purposes of program performance due to their similarities, including target participants. Under the combined efforts, the cost-effectiveness of these two programs shows a TRC greater than 1.00; however, when applying the Public Staff's methodology, the combined program is no longer cost-effective. As a result, witness Williamson recommended that, pursuant to Paragraph 23B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program. He recommended further that, pursuant to Paragraph 23C of the Mechanism, if the combined program shows a prospective TRC of less than 1:00 in next year's DSM/EE rider proceeding, the Company should include a discussion of the actions taken to improve cost-effectiveness.

In his rebuttal testimony, witness Evans made it clear that the Company does not agree with the application of zero avoided capacity cost values proposed by the Public Staff for the determination of program cost-effectiveness. He reiterated that while use of the Public Staff's proposed zero avoided capacity cost values would render the Non-Residential Smart $aver Custom Energy Assessments and EnergyWise for Business programs non-cost-effective, these programs are considered to be cost-effective under the avoided cost rates applied by the Company. He concluded that because these programs are cost-effective under the Company's methodology, Paragraph 23B of the Mechanism does not apply.

The Commission finds and concludes, based on all of the evidence in the record, that the Non-Residential Smart $aver Custom Energy Assessments and EnergyWise for Business programs are cost-effective under DEC's calculation of avoided capacity costs. Consistent with the Commission's findings regarding the determination of avoided capacity costs, the Commission further finds and concludes that these programs are cost-effective, and no further action is required by the Company.

<u>Residential Smart $aver EE Program</u>

The Company's Residential HVAC EE – Air Conditioning Program (HVAC EE) was originally approved as a new EE program in the Sub 1032 Order. It includes EE measures associated with duct insulation and sealing, attic insulation and air sealing, tune-up of existing HVAC systems, and replacement of existing central air conditioning and heat pump HVAC systems with more efficient units. The program replaced the original Residential Smart $aver program that was approved in the Sub 831 Order and included many of the same measures.

On October 2, 2015, DEC filed an application seeking approval of modifications to the HVAC EE Program, including changes to the incentive structure and addition of a referral channel to guide interested customers to one or more DEC-approved HVAC contractors who have paid DEC a fee to be on the referral list. In its comments, the Public Staff raised the concern that the program as a whole, and some of the individual measures, were not projecting cost-effectiveness under the TRC test. The Company responded that the cost-effectiveness results were due to elevated participant costs due to the high upfront cost of efficient HVAC equipment; DEC predicted that, as the cost of HVAC equipment declined, the TRC result would improve. The Public Staff and DEC reached an agreement that the Public Staff would support approval of the modifications, as amended by the Public Staff, with the exception that if the program did not have a projected TRC greater than 1.0 by March 1, 2017, then the program would terminate effective March 31, 2017. The Company also agreed that if the projected TRC was lower than 1.0 as of March 1, 2017, or if the actual TRC for 2016 and the early part of 2017 was below 1.0, DEC would refund any Vintage 2016 and 2017 incentives associated with the program (i.e., PPI or net lost revenues) that DEC had collected in rates. The Commission approved the agreed-to program modifications with these conditions on February 9, 2016.

In the Sub 1130 proceeding, the projected TRC score for the HVAC EE Program in Vintage 2018 was 0.99. Public Staff witness Jack L. Floyd testified that approximately 99% of the participation in the HVAC replacement measures of the program was through the non-referral channel. He recommended that the Company either terminate the program or modify it to transition away from non-referral channel measures that are not cost-effective under the TRC and instead focus more on cost-effective referral measures. The Company agreed with this recommendation.

On July 20, 2017, the Company filed an application seeking approval of modifications to the HVAC EE Program and the Residential EE Appliances and Devices Program. (*See* Public Staff Evans Cross Examination Ex. 7, p. 1.) The proposed modifications included the removal of measures that were not cost-effective, restructuring the incentives for several of the measures that would remain, and generally aligning the program with a similar program offered by DEP. DEC proposed to consolidate the surviving measures from both programs into the Residential Smart $aver EE Program. The projected TRC for the Residential Smart $aver EE Program at the time of the filing was 1.08. The Public Staff stated that the program overall appeared to be cost-effective, but also noted that measures offered through the non-referral channel were not cost-effective. The Public Staff also acknowledged the Company's concerns related to the perception of discrimination and that the program would be considered a "pay for play" by HVAC contractors if the non-referral channel were eliminated. However, the Public Staff observed that as long as the Company continued to offer measures through the non-referral channel, the program would continue to be marginally cost-effective. The Commission approved the proposed modifications on September 11, 2017.

In his direct testimony in this proceeding, witness Evans testified that despite several modifications, the Residential Smart $aver EE Program continues to struggle to maintain cost-effectiveness. More specifically, he explained that during 2016 and 2017, the Company made a number of changes to the program to address the erosion in the program's cost-effectiveness caused by advancement in efficiency standards and the associated lower incremental savings associated with exceeding the new standards. These program changes, which included redesign of the program to include a referral channel that reduced program costs, proved successful in returning the program to cost-effectiveness in 2017 and 2018. Unfortunately, with the application of the new lower avoided costs in 2019, the program is again projecting to no longer be cost-effective. According to witness Evans, the Company is actively working to evaluate additional programmatic changes, such as the Public Staff's recommendation to transition to referral channel measures, that would offset the decline in avoided costs and make the program cost-effective in 2019 and beyond.

Witness Williamson testified that the Residential Smart $aver EE program has struggled to achieve cost-effectiveness for several years because of (1) higher efficiency standards mandated by the federal government, which have increased baselines against which savings impacts have been measured, and (2) the need for large participant incentives to overcome the upfront out-of-pocket costs to participants. He asserted that the two sets of program modifications approved by the Commission have only made marginal improvements to cost-effectiveness. He explained that the main drivers decreasing cost-effectiveness continue to be the tighter efficiency standards and decreases in the avoided cost benefits.

Witness Williamson noted that DEC has expressed a strong desire to continue offering a residential HVAC replacement program. With HVAC being one of the largest energy-consuming appliances in the home, witness Williamson agreed that an EE program that encourages adoption of high efficiency HVAC equipment is a fundamental program for a utility's EE portfolio. He also acknowledged that is it critical to maintain a good vendor network that provides customers with accurate, reliable information on HVAC energy consumption and other assistance.

Witness Williamson stated that while this program has continually struggled to maintain cost-effectiveness, a residential HVAC program is a cornerstone program for any electric utility. He testified that he thinks it is preferable that the Company suspend rather than terminate the program until it can determine what is necessary for this program to achieve and maintain cost-effectiveness. His recommendation is that the program be suspended effective December 31, 2018.

Witness Neme encouraged the Company to focus on promoting longer-lived major measures, such as those included in the Residential Smart $aver EE Program. He suggested that the Company make efforts to increase participation in rebate offers for high-efficiency heat pumps, central air conditioners, heat pump water heaters, pool pumps, attic insulation, air sealing, and duct sealing. He stated that there should be significant savings potential from these measures as they address the largest electricity end-uses in homes.

In his rebuttal testimony, witness Evans responded to witness Williamson's recommendation that the Residential Smart $aver Program be suspended. He testified that the Company believes that suspending the only program that offers assistance for making the largest single energy user in the home, a customer's HVAC system, more energy efficient does not seem reasonable, especially when the decision to make an investment in HVAC equipment only comes around once every fifteen years. Furthermore, witness Evans pointed out that the recommended suspension of the program does not take into consideration the Company's relationships with HVAC contractors. He anticipates that the proposed suspension would likely erode trust and engagement, making it more like a termination than a suspension and also making it difficult to offer similar types of programs that would require trade ally support in the future.

In the past, when the program's cost-effectiveness has struggled due to efficiency standard changes, the Company has demonstrated the ability to effectively modify the program to restore cost-effectiveness and should have the opportunity to attempt to restore the cost-effectiveness of the program that was eroded by a reduction in avoided costs. As Witness Evans testified, "We have been resilient with attempts to make changes to keep that program viable. We have had one thing after another and that's just the nature of things with the [decrease in] avoided cost... [and increase in] incremental prices associated with the enhanced energy efficient equipment, so it's been difficult...but we continue to try."

The Company is currently investigating several opportunities to increase the cost-effectiveness of the program, including the following:

1. While the Company does have some concerns with respect to the Public Staff's recommendation to move the program to an all referral structure, the Company is not opposed to adopting this proposal so long as the Commission deems it appropriate;
2. Performing updated studies of the incremental costs actually being paid by customers to adopt higher efficiency equipment, in order to ensure these costs are reflective of the current market; and
3. Updating the measure mix, measure designs, and requirements that may be able to be removed/altered, thus lowering product cost to customers and increasing the TRC score.

Witness Evans concluded that the Company is confident that there is a solution available that will lead to a cost-effective program and that shutting down the current operations without an appropriate time frame for planning and adjustment is not the best answer for DEC's customers. In response to questioning from counsel for NC Justice Center, witness Evans explained the importance of the Company's trade ally network to the success of a residential HVAC EE program. He noted that while trade allies provide advice to customers relating to energy efficient HVAC systems, non-trade allies tend to provide less emphasis on high efficiency equipment. He testified that the Company's trade allies go through a certification process to ensure customer satisfaction and quality. The Company also uses feedback from customers to "make sure [DEC has] a high quality group of folks making those installations and again be assured that they are at least providing customers with information related to high efficiency options." Witness Evans emphasized that DEC wants to maintain trust with these contractors so that they will remain available to do HVAC EE upgrades in the future: "if you were to drop our Trade Ally Network and then try to reestablish it a year later, I think that would be very difficult."

Witness Evans also testified that the Company is in the process of beginning a new analysis of the incremental price of higher efficiency equipment in the marketplace. The Company expects that as higher efficiency equipment becomes more available in the marketplace and there is additional competition, prices will go down. As such, a more updated detailed cost-effectiveness analysis that takes into account these anticipated price decreases would likely result in an increase in the program's TRC score.

In response to cross-examination from counsel for the Public Staff, witness Evans acknowledged that in the Sub 1130 rider proceeding, witness Floyd recommended that the Company modify the program to transition from non-referral channel measures to be more heavily focused on referred measures. He also acknowledged that, in the same proceeding, the Company agreed to modify the program design to improve the ratio of customers participating in referral measures.

While the Company did file modifications to the program shortly after the Sub 1130 proceeding designed to improve cost-effectiveness, DEC did not completely eliminate the non-referral channel. Witness Evans explained that while the Company does not object to witness Floyd's recommendation and is focused on increasing participation in the referral channel, it has concerns with eliminating the non-referral channel altogether: "We are concentrating on referred measures with trade allies;" "however, we did not go to complete referral."

As DEC stated in response to a Public Staff data request:

> While the Company does not disagree with the changes proposed by the Public Staff in the last case, Docket No. E-7, Sub 1130, regarding the elimination of the non-referral channel provided in the Residential Smart $aver EE program, the Company did have concerns regarding the broader trade ally network response to such a drastic programmatic change. As the Program's cost-effectiveness is of an ongoing concern for both the Public Staff and the Company, the Company is not adverse [sic] to adopting the Public Staff's recommendation to eliminate the non-referral channel. The Company would prefer that the Public Staff, in the context of the current proceeding, request that the Commission order the Company to make this Program change. If the Commission approves the Public Staff's request, which the Company does not plan to object to, the Company will file the changes, in the form of a compliance tariff within 60 days of the Commission's Order.

Witness Evans clarified that the "concerns" about the impact on trade allies that the Company referred to in this data request response are the same as those stated in the Commission's Order approving the 2017 program modifications:

> DEC indicated to the Public Staff that the Company will continue to provide incentives for measures installed outside of the referral channel because of concerns that converting the [Residential Smart $aver EE Program] to a 'referral only' program would create a 'pay for play' environment. DEP [sic] believes the proposed modifications will increase participation in the referral-based delivery channel.

The 2017 modifications have, in fact, improved the ratio of customers participating in referral measures, as promised by witness Duff and as stated above. According to witness Williamson, new data provided by the Company in this proceeding suggest that participation is shifting from the non-referral to the referral channel, with approximately 70% of the current participation coming through the referral channel (versus only 1% of the participation coming through the referral channel as of last year's proceeding).

In response to questions relating to who bears the risk with respect to the Residential Smart $aver EE Program, witness Evans acknowledged that while ratepayers do receive benefits from the program, they do bear some risk if the program continues to struggle with cost-effectiveness. However, he pointed out that this is a shared risk – if the program is not cost-effective, the Company's PPI is adversely impacted. He testified that if the Company were looking at incentives in isolation, the motivation would perhaps be to remove it from the portfolio. However, the Company has faith in the program in the long run and continues to believe it is a critical piece of its overall portfolio.

Witness Evans concluded his testimony relating to the Residential Smart $aver Program by explaining why the Company thinks it is important to offer a residential HVAC program:

> Again, it's the largest energy user in a domicile. It lasts 15 years. A customer can make a decision today to go baseline or to go to a higher efficiency unit. We're talking about long life benefits and this is the opportunity to do it now ... it's very important because it impacts so many homes and we have an opportunity here to provide long lasting energy efficiency benefits, thus our desire to maintain the program.

The Commission agrees with witnesses Evans, Neme, and Williamson that a residential HVAC program is an important program for an electric utility to offer as part of its DSM/EE portfolio. All three witnesses testified that the HVAC is one of the largest – if not, the largest – energy-consuming appliances in the home. In addition, as stated by witnesses Neme and Evans, the long measure life of an HVAC unit makes it particularly important to maintain this program as part of the Company's portfolio. A rebate for a high-efficiency HVAC unit could lead to savings for many years to come.

Both witnesses Evans and Williamson also recognize that DEC's relationship with its trade ally network – i.e., the HVAC contractors that service participants in the Residential Smart $aver EE Program – is crucial to maintaining a viable HVAC program. The Commission agrees with witness Evans that a suspension of the program would put those relationships at risk, which could jeopardize the entire program. Accordingly, the Commission finds and concludes that the Residential Smart $aver EE Program should not be suspended at this time. That said, the Commission is mindful of the Public Staff's concerns that ratepayers not pay for non-cost-effective programs. Based on the Company's persistent efforts to maintain the viability of the program through program modifications, as well as the negative impact on the Company's PPI if the program continues to struggle to maintain cost-effectiveness, the Commission believes that DEC is highly motivated to continue to find ways to improve cost-effectiveness.[1] To that end, witness Evans outlined a number of ways in which the Company could modify the Residential Smart $aver EE Program to improve cost-effectiveness. Thus, the Commission directs the Company (1) to propose modifications to this program no later than October 31, 2018, with the goal of restoring the TRC score to 1.0 or greater, and (2) to include a discussion of the impact those modifications and other actions it has taken to improve cost-effectiveness in next year's DSM/EE rider proceeding.

Non-Residential Smart $aver Performance Incentive Program

Witness Evans testified that the forecasted 2019 TRC score for DEC's Non-Residential Smart $aver Performance Incentive Program is 0.81 and the UCT score is 2.70. He explained that while the TRC score may be viewed as less than optimal in isolation, it is important to note that this program is largely an extension of the custom portion of the Non-Residential Smart $aver Program. In particular, the Performance Incentive Program encompasses energy saving measures related to new technologies, unknown building conditions and system constraints, as well as uncertain operating circumstances, occupancy, or production schedules. Witness Evans testified

[1] Counsel for the Public Staff suggested that in order to show the faith that it has in the future of this program, the Company should agree to pick up a portion of the program costs and the net lost revenues to the extent that the program is not cost-effective. The Commission finds that because failing cost-effectiveness results in a hit to the Company's PPI, DEC already has "skin in the game" and there is no need to apply additional financial pressure to motivate the Company to pursue program modifications to improve cost-effectiveness.

that, as a result, energy savings are difficult to project with any level of accuracy. In addition, the Company believes that if this program were no longer offered as part of the Company's EE portfolio, additional opt-out eligible customers may elect to opt out of the EE portion of Rider EE as a result. Witness Evans also noted that, due to the nature of the program, the risk of overcompensating participants at the expense of other customers or, conversely, undercompensating participants for their EE improvements, is limited. He concluded that the Company believes that this program is an essential element of its EE portfolio and that its cost-effectiveness results will improve.

Witness Williamson testified that the Non-Residential Smart $aver Performance Incentive Program was approved in the fall of 2016 and launched in January 2017. In the Sub 1130 proceeding, this program was not cost-effective but was still too new to assess its full potential. This year, it is again not cost-effective, but because of its status last year, witness Williamson considers this program to fall under paragraph 23B of the Mechanism. Thus, he recommended that in its rebuttal or supplemental testimony in this proceeding, the Company provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program. Further, if this program is again not cost-effective at the time of the next rider filing, he recommended that the Company should include a discussion in that proceeding of the actions taken to improve cost-effectiveness pursuant to Paragraph 23C of the Mechanism.

In his rebuttal testimony, witness Evans explained that the Non-Residential Smart $aver Performance Incentive Program was intended to encompass large EE-related projects with uncertainty relative to their performance – for example, projects that employ new technologies. Related program incentives are provided in installments based on actual savings. In this manner, participants are properly incentivized for their EE-related investments and other customers are shielded from the impacts of overstated performance. That said, very few projects are appropriate for participation in the program. The 0.81 TRC test score reflected in Evans Exhibit 7 was based upon participation forecasts and costs used in the Company's 2016 program filing. During 2017, only two projects were involved. Currently, there are 12 projects underway in the Company's North Carolina service territory. The Company's estimated TRC score for this program, based on these and other projects under review, will exceed 1.75.

Based upon the foregoing, the Commission finds and concludes that this program does not require additional scrutiny at this time, due to both the short time it has been in place and the anticipated improvement in cost-effectiveness results. Nevertheless, if the program does not project cost-effectiveness for Vintage 2020, pursuant to Paragraph 23B of the Mechanism, the Company shall provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program in its next DSM/EE rider proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 9-11

The evidence in support of these findings can be found in the testimony and exhibits of DEC witness Evans and the testimony of Public Staff witness Williamson.

DEC witness Evans testified regarding the EM&V process, activities, and results presented in this proceeding. He explained that the EMF component of Rider 10 incorporates actual customer participation and evaluated load impacts determined through EM&V and applied pursuant to the EM&V Agreement. In addition, actual participation and evaluated load impacts are used prospectively to update estimated NLR. In this proceeding, the Company submitted, as exhibits to witness Evans' testimony, detailed completed EM&V reports or updates for the following programs: PowerShare 2016; Non-Residential Smart $aver Energy Efficient Products and Assessment - Custom 2014-2015; MyHER 2015-2016; Power Manager Load Control Service 2016; Small Business Energy $aver 2014-2016; Non-Residential Smart $aver Energy Efficient Products and Assessment - Assessment 2014-2016; EnergyWise for Business 2016; Multi-Family EE 2014-2016; Non-Residential Smart $aver Energy Efficient Products and Assessment - Prescriptive 2013-2015; Residential Energy Efficient Appliances and Devices - Save Energy and Water Kit: 2016; Energy Efficient Appliances and Devices - Free LED 2016-2017; and Smart Energy in Offices 2014-2016.

In his testimony, Public Staff witness Williamson testified that to the extent recommendations made by the Public Staff regarding EM&V in prior DSM/EE rider proceedings were applicable to the EM&V reports filed in this proceeding, the reports incorporated those recommendations and that it was his understanding that future reports would incorporate those recommendations as well. He stated that with the exception of the EM&V reports for the Non-Residential Smart $aver Custom and MyHER programs, the program vintages for which EM&V reports were filed in this proceeding should be considered complete and do not require any adjustment to the impacts at this time. Witness Williamson recommended that acceptance of the report for the Non-Residential Smart $aver Custom program be postponed until a revised report containing an adjusted net-to-gross scoring scale is filed in the next rider proceeding. He also recommended that acceptance of the report for the MyHER program be postponed until DEC's 2019 DSM/EE rider proceeding so that the Public Staff can complete its review of the savings estimates. Public Staff witness Williamson noted that the EM&V reports for the Multifamily EE, Non-Residential Smart $aver Prescriptive Incentive, and Small Business Energy $aver programs, which had previously been filed in the 2017 DSM/EE rider proceeding, had appropriately incorporated the Public Staff's previous recommendations.

NC Justice Center witness Neme testified that the EM&V framework used by DEC is well-conceived and that his review of the EM&V reports suggests that studies have been conducted professionally.

With the exception of the recommendations made by Public Staff witness Williamson regarding the EM&V for the Non-Residential Smart $aver Custom and MyHER programs (none of which were disputed by DEC), no party contested the EM&V information submitted by the Company. The Commission therefore finds that the EM&V reports filed as Evans Exhibits A, D, E, F, G, H, I, J, K, and L are acceptable for purposes of this proceeding and should be considered complete for purposes of calculating program impacts; that the EM&V report for the Non-Residential Smart $aver Custom program (Evans Exhibit B) be revised as recommended by witness Williamson and filed in the next rider proceeding; and that acceptance of the EM&V for the MyHER program (Evans Exhibit C) be postponed until DEC's 2019 DSM/EE rider proceeding so that the Public Staff can complete its review of the savings estimates.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 12-13

The evidence in support of these findings can be found in the Sub 938 Second Waiver Order; the Sub 1032 Order; the testimony of Company witnesses Miller and Evans; and the testimony of Public Staff witness Maness. The rate period and the scope of the EMF components of Rider 10 are consistent with the Commission's ruling in the Sub 938 Second Waiver Order and the Sub 1032 Order, and are uncontroverted by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 14-31

The evidence in support of these findings and conclusions can be found in the Sub 831 Order, Sub 831 Found Revenues Order, Sub 938 Waiver Order, Sub 938 Second Waiver Order, Sub 979 Order, Sub 1032 Order, and Sub 1130 Order; as well as in the Company's Application; the direct and rebuttal testimony and exhibits of Company witnesses Miller, Evans, Duff and Stevie; and the testimony and exhibits of Public Staff witnesses Maness, Williams and Williamson.

On March 7, 2018, DEC filed its Application seeking approval of Rider 10, which includes the formula for calculation of Rider EE, as well as the proposed billing factors to be effective for the 2019 rate period. Company witness Miller and Public Staff witness Maness testified that the methods by which DEC has calculated its proposed Rider EE are those provided by the Sub 1032 Stipulation, the Sub 1032 Mechanism approved in the Sub 1032 Order, and the Revised Mechanism approved in Sub 1130. Witness Miller provided an overview of the Revised Mechanism, which is designed to allow the Company to collect revenue equal to its incurred program costs[1] for a rate period, plus a PPI based on shared savings achieved by the Company's DSM and EE programs, and to recover NLR for EE programs only. She explained that the PPI is calculated by multiplying the net dollar savings achieved by the system portfolio of DSM and EE programs by a factor of 11.5%. The system amount of PPI is then allocated to North Carolina retail customer classes in order to derive customer rates. Company witness Evans explained that the calculation of the PPI is based on avoided cost savings, net of program costs, achieved through the implementation of the Company's DSM and EE programs. Witness Miller noted the revisions to the Sub 1032 Mechanism approved in Sub 1130, i.e., provisions related to the source of the avoided cost inputs used for calculating the PPI and cost-effectiveness, and requirements for programs that appear not to be cost-effective on an ongoing basis.

The Company is allowed to recover NLR associated with a particular vintage for a maximum of 36 months or the life of the measure, or until the implementation of new rates in a general rate case to the extent that the new rates are set to recover NLR. DEC witness Miller testified that for the prospective components of Rider EE, NLR are estimated by multiplying the portion of the Company's tariff rates that represents the recovery of fixed costs by the estimated North Carolina retail kilowatt (kW) and kWh reductions applicable to EE programs by rate schedule, and reducing this amount by estimated found revenues. The fixed cost portion of the tariff rates is calculated by deducting the recovery of fuel and variable operation and maintenance costs from the tariff rates. The NLR totals for residential and non-residential customers are then

[1] Rule R8-68(b)(1) defines "program costs" as all reasonable and prudent expenses expected to be incurred by the electric public utility, during a rate period, for the purpose of adopting and implementing new DSM and EE measures previously approved pursuant to Rule R8-68.

reduced by North Carolina retail found revenues computed using the weighted average lost revenue rates for each customer class. Lost revenues associated with vintages through the test period of the Company's current general rate case proceeding in Docket No. E-7, Sub 1146 were removed from the prospective period as of May 1, 2018, assuming the NLR would be recovered through new base rates. All amounts will be trued up during the next EMF period. For the EMF components of Rider EE, NLR are calculated by multiplying the fixed cost portion of the tariff rates by the actual and verified North Carolina retail kW and kWh reductions applicable to EE programs by rate schedule, and reducing this amount by actual found revenues.

Witness Evans described how, in accordance with the Commission's Sub 831 Found Revenues Order and the Sub 1032 Stipulation, DEC reduces NLR by net found revenues. Additionally, he stated that the Company has continued the practice the Commission approved in Docket No. E-7, Sub 1073 for purposes of that proceeding of reducing net found revenues by the monetary impact (negative found revenues) caused by reductions in consumption resulting from the Company's current initiative to replace Mercury Vapor lights with Light Emitting Diode (LED) fixtures.

In each of its annual rider filings, DEC performs an annual true-up process for the prior calendar year vintages. The true-up will reflect actual participation and verified EM&V results for the most recently completed vintage, applied in accordance with the EM&V Agreement. The Company expects that most EM&V will be available in the period needed to true-up each vintage in the following calendar year. If any EM&V results for a vintage are not available in time for inclusion in DEC's annual rider filing, however, the Company will make an appropriate adjustment in the next annual filing.

Under the Sub 1032 Stipulation, as witness Miller explained, deferral accounting may be used for over- and under-recoveries of costs eligible for recovery through the annual DSM/EE rider. The balance in the deferral accounts, net of deferred income taxes, may accrue a return at the net-of-tax rate of return approved in the Company's then most recent general rate case. She testified that the methodology used for the calculation of interest shall be the same as that typically utilized for the Company's Existing DSM Program Rider proceedings. Pursuant to Commission Rule R8-69(c)(3), the Company will not accrue a return on NLR or the PPI.

Under the Sub 1032 Stipulation, as with the Sub 938 First Waiver Order and the Sub 831 Pilot, qualifying non-residential customers may opt out of the DSM and/or EE portion of Rider EE during annual election periods. Rider EE will be charged to all customers who have not elected to opt out during an enrollment period and who participate in any vintage year of programs, and these customers will be subject to all true-up provisions of the approved Rider EE for any vintage in which the customers participate. Company witness Miller explained that the Revised Mechanism affords an additional opportunity for participation, whereby qualifying customers may opt in to the Company's EE and/or DSM programs during the first five business days of March. Customers who elect to begin participating in the Company's DSM and/or EE programs during the special "opt-in period" during March of each year will be retroactively billed the applicable Rider EE amounts back to January 1 of the vintage year, such that they will pay the appropriate Rider EE amounts for the full rate period.

Witness Miller explained that the billing factors are computed separately for DSM and EE measures by dividing the revenue requirements for each customer class, residential and non-residential, by the forecasted sales for the rate period for the customer class. For non-residential rates, the forecasted sales exclude the estimated sales to customers who have elected to opt-out of paying Rider EE. The non-residential billing factors are separately computed for each vintage.

Company witness Miller testified that program costs and incentives for EE programs targeted at retail residential customers across North Carolina and South Carolina are allocated to the North Carolina retail jurisdiction based on the ratio of North Carolina retail kWh sales (grossed up for line losses) to total retail kWh sales (grossed up for line losses), and then recovered only from North Carolina retail residential customers. Revenue requirements related to EE programs targeted at retail non-residential customers across North Carolina and South Carolina are allocated to the North Carolina retail jurisdiction based on the ratio of North Carolina retail kWh sales (grossed up for line losses) to total retail kWh sales (grossed up for line losses), and then recovered from only North Carolina retail non-residential customers. The portion of revenue requirements related to NLR is computed based on the kW and kWh savings of North Carolina retail customers.

For DSM programs, witness Miller noted, the aggregated revenue requirement for all retail DSM programs targeted at both residential and non-residential customers across North Carolina and South Carolina is allocated to the North Carolina retail jurisdiction based on the North Carolina retail contribution to total retail peak demand. Both residential and non-residential customer classes are allocated a share of total system DSM revenue requirements based on each group's contribution to total retail peak demand.

The allocation factors used in DSM/EE EMF true-up calculations for each vintage are based on the Company's most recently filed Cost of Service studies at the time that the Rider EE filing incorporating the true-up is made. If there are subsequent true-ups for a vintage, the allocation factors used will be the same as those used in the original DSM/EE EMF true-up calculations.

Witness Miller explained that DEC calculates one integrated (prospective) DSM/EE rider and one integrated DSM/EE EMF rider for the residential class, to be effective each rate period. The integrated residential DSM/EE EMF rider includes all true-ups for each applicable vintage year. Given that qualifying non-residential customers can opt-out of EE and/or DSM programs, DEC calculates separate DSM and EE billing factors for the non-residential class. Additionally, the non-residential DSM and EE EMF billing factors are determined separately for each applicable vintage year, so that the factors can be appropriately charged to non-residential customers based on their opt-in/out status and participation for each vintage year.

Prospective Components of Rider 10

DEC witness Miller testified that Rider 10 consists of four components: (1) a prospective Vintage 2019 component designed to collect program costs and the PPI for DEC's 2019 vintage of DSM programs; (2) a prospective Vintage 2019 component to collect program costs, the PPI, and the first year of NLR for DEC's 2019 vintage of EE programs; (3) a prospective Vintage 2018 component designed to collect the second year of estimated NLR for DEC's 2018 vintage of

EE programs; and (4) a prospective Vintage 2017 component designed to collect the third year of estimated NLR for DEC's 2017 vintage of EE programs.

Pursuant to the Sub 938 Second Waiver Order and the Sub 1032 Order, the rate period for the prospective components of Rider 10 is January 1, 2019, through December 31, 2019.

DEC witness Miller noted that lost revenues associated with Vintage 2016 were not included in the prospective component based on the assumption that new base rates would go into effect May 1, 2018.

The prospective revenue requirements for Vintage 2017 are determined separately for residential and non-residential customer classes and are based on the third year of estimated NLR for the Company's Vintage 2017 EE programs. The amounts are based on estimated North Carolina retail kW and kWh reductions and the rates approved in Docket No. E-7, Sub 1026 (Sub 1026 Rates). These rates will be trued up during the EMF period to reflect the rates approved in Sub 1146.

The prospective revenue requirements for Vintage 2018 are determined separately for residential and non-residential customer classes and are based on the second year of estimated NLR for the Company's Vintage 2018 EE programs. The amounts are based on estimated North Carolina retail kW and kWh reductions and the Sub 1026 Rates. These rates will be trued up during the EMF period to reflect the rates approved in Sub 1146.

The prospective revenue requirements for Vintage 2019 EE programs include estimates of program costs, the PPI, and the first year of NLR determined separately for residential and non-residential customer classes. The program costs and shared savings incentive are computed at the system level and allocated to North Carolina retail operations. The NLR for EE programs are based on estimated North Carolina retail kW and kWh reductions and the Sub 1026 Rates. These rates will be trued up during the EMF period to reflect the rates approved in Sub 1146.

In her direct testimony, DEC witness Miller filed testimony and exhibits reflecting a residential prospective billing factor for Rider 10 of 0.4229 cents per kWh. On June 1, 2018, DEC witness Miller filed rebuttal testimony and exhibits reflecting revised non-residential prospective billing factors[1] for Rider 10 of 0.3158 cents per kWh for non-residential Vintage 2019 EE participants, 0.0877 cents per kWh for non-residential Vintage 2019 DSM participants, 0.0695 cents per kWh for non-residential Vintage 2018 EE participants, 0.0030 cents per kWh for non-residential Vintage 2018 DSM participants, and 0.0801 cents per kWh for non-residential Vintage 2017 EE participants.

<u>EMF Components of Rider 10</u>

Rider 10 includes the following EMF components: (1) an EMF component which consists of the true-up of program participation in the Company's 2017 vintage of DSM and EE programs, updated load impacts, NLR updated for actual participation, updated found revenues, and updates to include costs for new programs approved prior to estimated filing; (2) an EMF component

[1] The non-residential billing factors were revised based on an agreement made between the Company and the Public Staff to adjust the proposed non-residential participating sales, which is addressed supra.

which consists of the true-up of Vintage 2016 avoided costs and NLR for the Company's 2016 vintage of DSM and EE programs; (3) an EMF component which consists of the true-up of Vintage 2015 avoided costs and NLR for the Company's 2015 vintage of DSM and EE programs; and (4) an EMF component which consists of the true-up of avoided costs and NLR for the Company's 2014 vintage of DSM and EE programs.

Company witness Miller testified that pursuant to the Sub 938 Second Waiver Order and the Sub 1032 Order, the "test period" for the Vintage 2017 EMF component is January 1, 2017, through December 31, 2017. As the Sub 938 Second Waiver Order allows the EMF to cover multiple test periods, the test period for the Vintage 2016 EMF component is January 1, 2016, through December 31, 2016, the test period for the Vintage 2015 EMF component is January 1, 2015, through December 31, 2015, and the test period for the Vintage 2014 EMF component is January 1, 2014, through December 31, 2014.

Witness Miller explained the updates to the Vintage 2017 estimate filed in 2016 that comprise the Vintage 2017 EMF component of Rider 10. Estimated participation for Vintage 2017 was updated for actual participation for the period January through December 2017. With regard to NLR, estimated participation for the Year 1 Vintage 2017 estimate assumed a January 1, 2017, sign-up date and used a half-year convention, while the NLR Year 1 Vintage 2017 true-up was updated for actual participation for the period January through December 2017 and actual 2017 lost revenue rates. Found revenues for Year 1 of Vintage 2017 were trued up according to Commission-approved guidelines. To reflect the results of EM&V, Vintage 2017 initial assumptions of load impacts were updated pursuant to the EM&V Agreement. Finally, while the Vintage 2017 estimate included only the programs approved prior to the filing of the estimated Vintage 2017 revenue requirement, the Vintage 2017 true-up was updated for new programs and pilots approved and implemented during Vintage 2017. For DSM programs, the Vintage 2017 true-up reflects the actual quantity of demand reduction capability for the Vintage 2017 period.

Actual year one (2017) NLR for Vintage 2017 were calculated using actual kW and kWh savings by North Carolina retail participants by customer class in 2017, based on actual participation and load impacts applied according to the EM&V Agreement. The rates applied to the kW and kWh savings are those in effect for 2017, reduced by fuel and variable operation and maintenance costs. NLR were then offset by actual found revenues for Year 1 NLR of Vintage 2017. NLR were calculated by rate schedule within the residential and non-residential customer classes.

DEC witness Miller also described the basis for the Vintage 2016 EMF component of Rider 10. She explained that avoided costs and NLR for Vintage 2016 EE programs were trued-up based on updated EM&V participation results. Avoided costs for Vintage 2016 DSM were also trued-up to correct participation results. She explained that the actual kW and kWh savings were as experienced during the period January 1, 2016, through December 31, 2016. The rates applied to the kW and kWh savings are the retail rates that were in effect during each period the lost revenues were earned, reduced by fuel and other variable costs.

DEC witness Miller explained the basis for the Vintage 2015 EMF component of Rider 10. She explained that avoided costs and NLR for Vintage 2015 EE programs were trued-up based on updated EM&V participation results. She explained that the actual kW and kWh savings were as experienced during the period January 1, 2015, through December 31, 2015. The rates applied to the kW and kWh savings are the retail rates that were in effect during each period the lost revenues were earned, reduced by fuel and other variable costs.

DEC witness Miller explained the basis for the Vintage 2014 EMF component of Rider 10. She explained that avoided costs and NLR for Vintage 2014 EE programs were trued-up based on updated EM&V participation results. She explained that the actual kW and kWh savings were as experienced during the period January 1, 2014, through December 31, 2014. The rates applied to the kW and kWh savings are the retail rates that were in effect during each period the lost revenues were earned, reduced by fuel and other variable costs.

Overall, as set forth on Miller Rebuttal Exhibit 1, the Company proposed an EMF of 0.1091 cents per kWh for its North Carolina retail residential customers, 0.2924 cents per kWh for non-residential Vintage 2017 EE participants, 0.0005 cents per kWh for non-residential Vintage 2017 DSM participants, (0.0126) cents per kWh for non- residential Vintage 2016 EE participants, (0.0015) cents per kWh for non-residential Vintage 2016 DSM participants, 0.0024 cents per kWh for non- residential Vintage 2015 EE participants, (0.0024) cents per kWh for non-residential Vintage 2015 DSM participants, (0.0061) cents per kWh for non- residential Vintage 2014 EE participants, and (0.0002) cents per kWh for non-residential Vintage 2014 DSM participants.

Public Staff's Review of Company Rider 10 Calculations

As discussed above, Public Staff witness Williamson filed testimony in this proceeding discussing several EM&V-related issues related to the Company's filing, none of which necessitates an adjustment to the Company's billing factor calculations. Public Staff witness Maness testified that his investigation of DEC's filing in this proceeding focused on whether the Company's proposed DSM/EE billing factors (a) were calculated in accordance with the Sub 1032 Settlement, the Sub 1130 Order, and the Revised Mechanism, and (b) otherwise adhered to sound ratemaking concepts and principles.

Public Staff witness Maness testified that as part of its investigation in this proceeding, the Public Staff performed a review of the DSM/EE program costs incurred by DEC during the 12-month period ended December 31, 2017. To accomplish this, the Public Staff selected and reviewed a sample of source documentation for test year costs included by the Company for recovery through the DSM/EE riders. Review of this sample was intended to test whether the costs included by the Company in the DSM/EE riders are valid costs of approved DSM and EE programs. As of the date of filing of the Public Staff testimony, Witness Maness indicated that the Public Staff had not completed its review[1]. With the exception of the two issues discussed below, witness Maness found that the Company calculated the Rider 10 billing factors in a manner consistent with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, the Sub 1032 Settlement, the Sub 1130 Order, the Revised Mechanism, and other relevant Commission Orders.

[1] In its June 19, 2018, letter, the Public Staff indicated that it had found no further exceptions or necessary adjustments to test year (Vintage Year 2017) DSM/EE program costs.

Kilowatt Hour Sales used to Calculate Non-Residential Billing Factors

Public Staff witness Maness testified that during his review of the Company's rate calculations, he noted that for each Non-Residential vintage/factor combination for Vintage Years 2014-2018, there has been a significant decrease in the level of estimated participating kWh sales from 2018 to 2019 of approximately 12%. He explained that this decrease was attributable to a decrease in the overall non-residential kWh sales forecast of 3.90%, as well as a 6.92% increase in the Company's estimate of opt-out sales. Public Staff witness Maness testified that the net effect of these two dynamics was a substantial increase in the non-residential billing factors. He believed that the estimated participating Rider kWh sales may be understated, and recommended that the Company's proposed level of 2019 estimated kWh sales for each Non-Residential vintage/factor combination be reduced by 3.90%. Additionally, witness Maness recommended that the true-up process for Rider 10 be held open until the total actual amount of Rider 10 revenues collected can be reflected in the rate calculation process, and that the Company be allowed to recover carrying costs on any understatements of Rider 10 billing factors caused by use of the Public Staff's recommended levels of participating Rider 10 kWh sales versus the actual levels of such kWh sales, but with the understatement eligible for carrying charges limited to the difference between the Public Staff's recommended levels of participating Rider 10 kWh sales and the Company's initially proposed levels of such sales in this proceeding.

Regarding the adjustment proposed by Public Staff witness Maness to adjust non-residential participating kWh sales, DEC witness Miller indicated in her rebuttal testimony that the Company has seen an increase in the number of opt-outs each year, so it does not believe a decline is probable. She also noted that using actual opt-out sales from the test period to determine projected opt-out sales has consistently resulted in under-collections for prior Vintage Years. However, the Company would agree to the adjustment, as it would be made whole with the collection of any under-recovery and carrying charges as described by witness Maness. Witness Miller noted that this adjustment is unique and should not be used as precedent. Attached to DEC witness Miller's rebuttal testimony were exhibits incorporating this adjustment.

Witness Maness also noted that the Company has continued to use its net-of-tax rate of return to calculate the interest amount on over-recoveries in this DSM/EE Rider 10 proceeding, rather than the 10% rate normally used by the Commission for over recoveries in certain other rider proceedings. However, Witness Maness found the impact of this rate differential to be immaterial to the DSM/EE billing factors. The Public Staff reserved the right to raise this issue in the future.

Commission Conclusions Concerning kWh Sales

Based upon the foregoing, the Commission finds and concludes that the Public Staff's adjustment to non-residential participating kWh sales, as agreed to by DEC, is reasonable. The Commission concludes that it is appropriate to reduce the Company's proposed level of 2019 estimated kWh sales for each Non-Residential vintage/factor combination by 3.90%, to hold open the true-up process for Rider 10 until the total actual amount of Rider 10 revenues collected can be reflected in the rate calculation process, and to allow the Company to recover carrying costs on any understatement of Rider 10 billing factors due to the 3.90% reduction, but limit the portion of the understatement eligible for recovery to the difference between the Public Staff's recommended levels of participating Rider 10 kWh sales and the Company's initially proposed levels of such sales in this proceeding.

Avoided Costs Used in Calculating the PPI

The second issue raised by the Public Staff, as noted previously, is the appropriate level of avoided costs to be used in the determination of the PPI and calculations of cost-effectiveness. The Public Staff contends that DEC is required by the revised mechanism and the Sub 148 Order to use zero as the input when calculating the avoided capacity values for DSM/EE until 2023, when DEC's IRP shows a capacity need. As discussed by Public Staff witness Williams, under the Sub 148 Order, "new" Qualified Facilities (QFs) seeking to sell their energy and capacity to DEC will not be paid capacity payments until new capacity is needed in 2023, as identified in the Company's 2016 IRP. He pointed out that in the Sub 148 Order, the Commission noted that besides setting rates for QFs, the avoided costs are used for determining cost-effectiveness of and performance incentives for DSM/EE programs.[1] Witness Williams stated that to be consistent with the Sub 148 Order and the Revised Mechanism, determinations of cost-effectiveness and utility incentives for new and existing programs should be based on avoided capacity rates that reflect zero avoided capacity value in years prior to the identified need for new capacity in the Company's IRP (2023).

Background

Paragraphs 68 and 69 of the cost recovery mechanism, which sets out the determination of the avoided capacity costs, approved by the Commission in Sub 1032, state as follows:

> 68. For the PPI for Vintage Year 2014, the per kW avoided capacity costs used to calculate avoided cost savings shall be those reflected in the filing by Duke Energy Carolinas in Docket No. E-100, Sub 136. The per kWh avoided energy costs shall be those reflected in or underlying the most recently filed integrated resource plan (IRP)...
>
> 69. For the PPI for Vintage Years 2015, 2016, and 2017, the presumptive per kW avoided capacity costs and per kWh avoided energy costs used to calculate avoided cost savings shall be those determined pursuant to paragraph 68 above. However, if at the time of initial estimation of the PPI for each of those years, either (a) the Company's per kWh avoided energy costs calculated for the purposes of the Company's annual IRP or resource plan update filings have increased or decreased by 20% or more or (b) the Company's per kW avoided capacity costs reflected in the rates approved in the biennial avoided cost proceedings have increased or decreased by 15% or more, the avoided costs (both energy and capacity) will be updated for purposes of the DSM/EE rider proceeding.

The parties sometimes referred to the method for updating avoided costs under Paragraph 69 of the Sub 1032 Mechanism as the "trigger" or "ratchet" method, in that avoided

[1] Sub 148 Order, p. 69.

costs would remain the same unless and until the specified thresholds were met - either a change in avoided energy costs of at least 20% or a change in avoided capacity costs of at least 15% – which would then trigger an update of both avoided energy and avoided capacity costs. In addition, under Paragraph 69 of the Sub 1032 Mechanism, avoided energy costs and avoided capacity costs were derived from two different sources: the annual IRP or resource plan update filings for avoided energy and the biennial avoided cost proceedings for avoided capacity.

In the previous year's DSM/EE proceeding, Sub 1130, the Public Staff and DEC discovered that they had differing interpretations as to the appropriate avoided costs to be used in calculating Rider 9 pursuant to Paragraph 69 of the Sub 1032 Mechanism. The Public Staff believed that the "ratchet" that would cause avoided capacity and energy costs to be updated for purposes of the DSM/EE rider proceeding had been triggered for purposes of the PPI to be calculated for Vintage 2018. The Company maintained that the ratchet had not been triggered. Had avoided cost rates been updated in a manner consistent with the Public Staff's interpretation of Paragraph 69, the Vintage 2018 PPI would have been reduced by approximately $9.5 million.

The Company and the Public Staff eventually reached a comprehensive agreement (the Sub 1130 Agreement or Agreement) resolving their differences which consisted of (1) a monetary adjustment which reduced the Vintage 2018 PPI by $6,750,000 million; and (2) certain revisions to the Sub 1032 Mechanism, including the method by which avoided costs would be updated for purposes of the PPI and DSM/EE program cost-effectiveness. The Commission approved the Sub 1130 Agreement and the resulting revisions to the Sub 1032 Mechanism in Sub 1130.

Revised Paragraph 69 states as follows:

> 69. For the PPI for Vintage Years 2019 and afterwards, the program-specific per kW avoided capacity benefits and per kWH avoided energy benefits used for the initial estimate of the PPI and any PPI true-up will be derived from the underlying resource plan, production cost model, and cost inputs that generated the avoided capacity and avoided energy credits reflected in the most recent Commission-approved Biennial Determination of Avoided Cost Rates for Electric Utility Purchases from Qualifying Facilities as of December 31 of the year immediately preceding the date of the annual DSM/EE rider filing. However, for the calculation the underlying avoided energy credits to be used to derive the program-specific avoided energy benefits, the calculation will be based on the projected EE portfolio hourly shape, rather than the assumed 24x7 100 MW reduction typically used to represent a qualifying facility.

Paragraphs 19 and 23 (which govern the calculation of cost-effectiveness for program approval filings and continuing cost-effectiveness for existing programs, respectively) were also revised to reflect the same method for determining avoided costs.[1]

---

[1] The Public Staff refers to the method for calculating avoided cost rates pursuant to the revised Paragraphs 19, 23, and 69 as the "PURPA method."

In the most recent Biennial Determination of Avoided Cost Rates for Electric Utility Purchases from Qualifying Facilities (Avoided Cost Proceeding) in Sub 148, the Commission was faced with whether certain changes to the previously-approved methods used to calculate avoided cost rates and to the current framework for implementing Section 210 of the Public Utility Regulatory Policies Act of 1978 (PURPA) were warranted given the amount and pace of the development of QFs, and in particular solar-powered QFs, in North Carolina. The issue arose as to whether utilities should have to pay QFs for capacity in years in which they do not have a capacity need. Witnesses in the proceeding described significant growth in solar production in the State resulting in over-supply, operational challenges, and artificially high costs passed on to North Carolina residents, businesses, and industries. Both DEP and DEC proposed, and a number of parties, including the Public Staff, agreed, that a utility should include zeros in the calculation of capacity rates for the years in which the utility does not have a capacity need.

While the case was pending, N.C. Gen. Stat. § 62-156(b)(3) was amended by the General Assembly to provide, with respect to power sales by small power producers to public utilities:

> A future capacity need shall only be avoided in a year where the utility's most recent biennial integrated resource plan filed with the Commission pursuant to G.S. 62- 110.1(c) has identified a projected capacity need to serve system load and the identified need can be met by the type of small power producer resource based upon its availability and reliability of power, other than swine or poultry waste for which a need is established consistent with G.S. 62-133.8(e) and (f).

In its Order in Sub 148, the Commission concluded that with regard to QFs that are small power producers, N.C.G.S. § 62-156(b)(3) requires that when calculating avoided capacity rates using the peaker method, it is appropriate to require a payment for capacity in years of a utility's IRP forecast period only when a capacity need is demonstrated during that period. Sub 148 Order, p. 48. The Commission found that providing a levelized capacity payment over the term of the standard offer contract is a reasonable means of implementing this capacity payment. The Commission also determined that this avoided capacity payment methodology is appropriate with regard to the standard offer to purchase available to QFs that are not small power producers. The Commission based this change in methodology upon the "changed economic and regulatory circumstances facing QFs and utilities" – namely, the increasing amount of solar powered QF development activity and its impact on utilities' systems and rates.

The underlying IRP for purposes of the Sub 148 proceeding – DEC's 2016 IRP – does not show a capacity need until 2023. As such, the Commission's ruling in Sub 148 results in avoided capacity rates that use a zero value for capacity for the years 2019 to 2022. However, that ruling does not apply to QFs that established a legally enforceable obligation (LEO) prior to the date the Company made its avoided cost filing in Sub 148. As a result, QFs establishing a LEO after November 15, 2016 (new QFs) receive a capacity value that is zero in years 2019 through 2022[1];

[1] New QFs under the standard offer tariff will receive capacity payments in years prior to the utilities' first capacity need because the new QFs will receive a levelized capacity rate reflecting a lower annual payment to account for those initial years in which there are no avoidable capacity costs. Sub 148 Order, pp. 40, 48.

QFs that established LEOs prior to November 15, 2016 (legacy QFs) receive a capacity value that is not zero in years 2019 through 2022.

Parties Discussion of the Issue

In this proceeding, the parties agree that the applicable Avoided Cost Proceeding for Rider 10 is Sub 148. The key issue in dispute between the Company and the Public Staff is whether because the Company does not show a capacity need until 2023, the Company is required by the Sub 1130 Agreement and the Sub 148 Order to use zero as the input when calculating its avoided capacity values for DSM/EE for years 2019 through 2022.

Public Staff witness Williams testified that the Public Staff interprets the Sub 1130 Order and the Sub 148 Order to mean that the Company's avoided capacity rates for DSM/EE should reflect zero avoided capacity value in years prior to the identified need for new capacity in the Company's IRP. He explained that as a result of the Commission ruling in the Sub 148 Order, "new" QFs seeking to sell their energy and capacity to DEC will not be paid capacity payments until new capacity is needed in 2023, as identified in the Company's 2016 IRP.

Witness Williams pointed out that the Commission noted in Sub 148 that "in addition to providing the basis for electric power purchases from QFs by a utility, the Commission determined avoided costs are utilized in, among other applications, the determination of the cost-effectiveness of DSM/EE programs and the calculation of the performance incentives for such programs..." He also asserted that witness Hinton's testimony in Sub 1130 explicitly linked the PURPA-based avoided capacity and energy costs to the savings and financial incentives of the Company's DSM/EE programs. As a result, he concluded that "in order to be consistent with the Sub 148 Order and the Revised Mechanism, "determinations of ongoing cost-effectiveness and utility incentives of both new DSM/EE programs and new vintages of existing DSM/EE programs starting in vintage 2019 should be based on avoided capacity rates that reflect zero avoided capacity value in years prior to the identified need for new capacity in the Company's IRP (2023)."

Witness Williams testified that the Public Staff believes that the Company was not consistent with Sub 148 and the Mechanism in how it applied avoided capacity value with respect to its DSM/EE programs.[1] He stated that, in assessing the ongoing cost-effectiveness of its DSM/EE programs and the appropriate level of utility incentives, the Company used avoided cost rates that reflected a "full capacity value," based on the peaker method, beginning in year one.

Witness Williams noted that in response to data requests, the Company contended DSM/EE is distinct from QFs in that without DSM/EE in the IRP, there would be a more immediate need for new capacity. As such, witness Williams stated, the Company's position is that the DSM/EE within the IRP has capacity value and should receive "full avoided capacity benefits" in all years. Witness Williams disagreed. First, he stated that in the context of the IRP, on a MW to MW basis, the contribution to peak provided by DSM/EE is functionally equivalent to the contribution to peak

[1] Witness Williams concluded that the avoided energy and T&D costs that DEC used to evaluate ongoing cost-effectiveness of its DSM/EE programs are reasonable and are based on the approved Sub 148 proceeding and the agreed methodology of the Mechanism, as revised in Sub 1130. The Company's calculation of avoided energy and avoided T&D were not disputed by any party.

provided by QF contracts. Therefore, he concluded that DSM/EE capacity is not distinct from QF capacity in this context and should not be treated differently.

In response to the Company's argument that DSM/EE value is derived from its usefulness in delaying new capacity need until 2023, witness Williams argued that only the DSM/EE actually needed to delay new capacity need would have any value.[1] According to witness Williams' calculations, from 2019 through 2022, only 40%, 49%, 63%, and 74% of the DSM/EE capacity is needed to maintain a 17% reserve margin. He stated that DSM programs alone can meet this need through 2021 and can meet 95% of the need in 2022. As such, he maintained that any new EE program or EE vintage would contribute effectively no capacity value and should, thus, be ineligible to receive capacity payments that are greater than zero.

Public Staff witness Maness testified that he concurs with witness Williams' recommendation that the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs be calculated under the assumption that capacity avoided prior to year 2023 be assigned a zero dollar value. Since the Company did not apply this method to calculate the estimated PPI for Vintage 2019, witness Maness recommended that the estimated Vintage 2019 PPI proposed by DEC in this case be adjusted to reflect this assumption. He testified that the Public Staff asked the Company to provide a calculation of estimated avoided cost benefits related to Vintage Year 2019 under the assumption that avoided capacity kW occurring prior to year 2023 is assigned a zero dollar value. According to the Company's calculation, making this assumption reduces the estimated Vintage 2019 system-level PPI from $25,050,064 to $16,055,813, a decrease of $8,994,251. Witness Maness incorporated this reduction into the billing factors set forth on Maness Exhibit 1. He also recommended that the $8,994,251 reduction in the system PPI be included in all future true-ups of the Vintage 2019 DSM/EE revenue requirement and billing factors.

Public Staff witness Williamson discussed the impact to the cost-effectiveness of the Company's DSM/EE portfolio that would result from applying zero capacity value for years prior to 2023, in accordance with the Public Staff's recommendation. Williamson Exhibit 2 shows the decrease in cost-effectiveness scores for each program when no capacity value is given for years that DEC's 2016 IRP does not show a capacity need. As mentioned above, in addition to the programs that were not cost-effective under the TRC test according to the Company's calculations, DEC's Non-Residential Smart $aver Custom/Assessments Program and EnergyWise for Business Program would no longer be cost-effective under the Public Staff's methodology.

In their rebuttal testimony, DEC witnesses Duff and Stevie explained that the Company strongly disagrees with the Public Staff's recommendation that the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs be calculated under the assumption that capacity avoided prior to year 2023 be assigned a zero dollar value.

[1] DEC witness Williams characterized the DSM/EE programs included in the DSM/EE IRP block as "fluid," because they are based on projections of participation and savings associated with approved programs, as well as the Company's market potential study. However, he acknowledged that the DSM programs in the DSM/EE IRP block are stable and expected to continue for the foreseeable future.

Witness Duff described the Sub 1130 Agreement and explained why the Company believes that the Agreement does not support the Public Staff's position. According to witness Duff, one of the primary purposes for the Sub 1130 revisions to the mechanism was to eliminate the previous "trigger" approach for updating avoided costs, so that avoided energy and capacity costs are updated essentially every two years instead of waiting for certain thresholds to be met. The second primary purpose of the agreement is that it changed the source and methodology for calculating avoided energy costs which previously had been based on the IRP, so that like avoided capacity costs, they would now be derived from the biennial avoided cost proceeding. He noted that the revisions to the mechanism approved by the Commission in Sub 1130 did not change the data source or methodology by which the Company was to calculate avoided capacity costs.

Witness Duff, described how, consistent with the revisions to DEC's DSM/EE cost recovery mechanism that the Commission approved in the Sub 1130 Order, the Company derived both the avoided energy and avoided capacity using the rates approved in the Company's most recent biennial avoided cost proceeding, which in this case is Sub 148. In particular, he noted that the Company utilized the avoided capacity value calculated using the Peaker Method consistent with the Company's understanding of the Sub 1130 Agreement, which, in the Company's view, did not modify the approach used in past DSM/EE proceedings.

He explained how the Company's application of avoided capacity values for its DSM/EE programs is also consistent with his testimony in last year's DSM/EE proceeding (which, he stated, witness Williams mischaracterized and took out of context), as well as that of Public Staff witness Hinton. In fact, the Company agrees with Public Staff witness Hinton's testimony that the rates paid QFs are generally linked to the avoided cost rates utilized for DSM/EE; however, that does not mean the rates are the same.

Witness Duff also testified about how the Company's application of values for avoided capacity for DSM/EE is also consistent with calculations the Company provided the Public Staff when the parties reached the Sub 1130 agreement, which showed what the change in Vintage 2019 PPI would be under the proposed revisions to the mechanism if the avoided costs rates pending before the Commission in E-100, Sub 148 were approved. This analysis clearly reflected avoided capacity values in the years 2019 through 2022, rather than the zero value advocated by witness Williams.

Witness Duff also disagreed with the Public Staff's argument that the Sub 148 Order dictates that the Company must use zero values instead of capacity values for existing DSM/EE programs. He explained how witness Williams quoted the Sub 148 Order out of context, and that the language witness William's referenced does not support the Public Staff's position. He also noted that witness Williams appears to imply that EE is the first capacity resource that should be cut out of the Company's resource plan, which would be inconsistent with the policy articulated by the North Carolina legislature in Senate Bill 3 to promote energy efficiency in this state.

Witness Stevie explained why DEC believes the Public Staff's approach is inappropriate and underestimates the value of the Company's DSM/EE programs. Witness Stevie testified that the Public Staff's adjustment would remove the avoided capacity value of DSM/EE in the years

2019 to 2022 for purposes of evaluating cost-effectiveness and PPI, a removal of capacity value for 1,119 MW of DSM impacts and 220 MW of EE impacts of summer capability from DEC's portfolio of DSM/EE programs.

In regard to DSM programs, DEC witness Stevie contended that the Public Staff had ignored the legacy aspect of DSM programs, which are not incremental programs. He stated that the Company's DSM programs had been established over a number of years and were a useful resource. He pointed to Public Staff witness William's testimony that by year 2022, 95% of the DSM programs' capacity would be needed to defer the need for new capacity in 2023. DEC witness Stevie contended that the legacy DSM programs should be treated similarly to QFs that had established legally enforceable obligations (LEOs) or had signed purchased power agreements (PPAs) prior to November 15, 2016. These QFs are entitled to capacity values for every year of their contracts. As the Commission or House Bill 589 did not retroactively end those capacity payments, Company witness Stevie argued that the Commission should not discontinue attributing capacity value to legacy DSM programs.

Further, DEC witness Stevie observed that, with respect to the Company's EE programs, the Company's MyHER program is effectively in the same position as the legacy DSM programs. The MW capability provided by the MyHER EE program was created in the past, prior to the establishment of the new avoided cost rates. All that is required is the expenditure of funds to maintain the impacts, just like the Company must do to maintain the availability of the impacts from the legacy DSM programs. Accordingly, he determined that the MyHER program impacts are also not incremental or new after November 2016; they are embedded in the resource plan, and like legacy QFs with LEOs existing prior to November 15, 2016, should receive a capacity value in the 2019 to 2022 timeframe.

Additionally, Company witness Stevie testified that it makes sense to recognize the capacity value of the Company's other EE programs during the 2019 to 2022 period in order to be consistent with the underlying resource plan and because it would not be realistic or advisable to suspend these programs until a capacity need arises.

In its Post-Hearing Brief, DEC stated that the Public Staff's interpretation of the issue is (1) contrary to the plain language and intent of the current Mechanism, (2) underestimates the value of DEC's DSM/EE programs, and (3) is contrary to the State's public policy.

In that brief, DEC explained that with regard to the parties' intent, the avoided capacity rate used for DSM/EE and the avoided capacity rate paid to a QF are not identical. DEC emphasized the language in the Sub 1032 Mechanism stating that the per kW avoided capacity costs reflected in avoided cost proceeding are "used to calculate avoided cost savings" for purposes of the PPI, and the revised paragraphs of the Mechanism stating that the program-specific per kW avoided capacity benefits shall be "derived from the underlying resource plan, production cost model, and cost inputs that generated the avoided capacity and avoided energy credits reflected in the most recent Commission-approved Biennial Determination of Avoided Cost Rates for Electric Utility Purchases from Qualifying Facilities." According to DEC, the avoided capacity cost reflected in the avoided cost proceeding has always been an input to the calculation of avoided capacity benefits for purposes of DSM/EE, but was never intended to be the same value. Further, DEC maintains that if the parties had intended for the avoided capacity rate the Company pays QFs to be equivalent to the avoided capacity rate calculated for DSM/EE, they would have said so in the plain language of the Mechanism. DEC discusses the details of the testimony of several witnesses that it contends support its plain language interpretation of Paragraph 69 of the Mechanism. With respect to DEC's argument regarding the effect on estimating the value of DEC's DSM/EE programs, the Company noted that the Public Staff's interpretation of Paragraph 69 ignores the legacy aspect of the Company's DSM programs. DEC maintains that the DSM programs included in its IRP are stable and are expected to continue for the foreseeable future. Therefore, these programs are treated as a dispatchable resource in the Company's IRP. According to DEC, it defies logic for a resource such as the legacy DSM programs not to receive a capacity valuation.

In addition, DEC contends that its MyHER EE program is effectively in the same position as its legacy DSM programs because the MyHER program impacts are embedded in the IRP, and, therefore, should receive a capacity value in the 2019 to 2022 time period. DEC acknowledges that its other EE programs, aside from MyHER, are in some respects different than the DSM programs in that most represent incremental new impacts in the IRP. However, DEC states that the Company's inputs to the IRP for the cost of the DSM and EE programs include not just the implementation cost, but also the estimate of the utility's PPI, which contains a capacity value for the years 2019 through 2022. As a result, to be consistent with the underlying IRP, including the cost inputs, DEC contends that the PPI should include the avoided capacity value of these EE programs as well for the years 2019 to 2022. Regarding public policy, DEC stated that DSM and EE programs are a desirable resource that is not only encouraged but mandated by the State, citing language from Senate Bill 3 that was incorporated into N.C. Gen. Stat. § 62-2(10). DEC notes that the stated goals of the legislation are to diversify the resources used to reliably meet the energy needs of consumers in the State, provide greater energy security through the use of indigenous energy resources available within the State, encourage private investment in renewable energy and EE, and provide improved air quality and other benefits to energy consumers and citizens of the State. In addition, DEC notes that Senate Bill 3 provides that the utilities shall be compensated for their DSM/EE efforts, and allows incentives to be awarded, including rewards based upon shared savings and avoided costs achieved by DSM/EE measures. N.C. Gen. Stat. § 62-133.9. DEC maintains that the Public Staff's interpretation of Paragraph 69 would eliminate a substantial portion of the incentive payments for those DSM/EE programs that help avoid capacity additions.

Finally, DEC argues that if the Commission had intended for DSM/EE to receive zero capacity payments, it would have said so in the Sub 148 Order. Yet, according to DEC, nowhere in the Commission's discussion of either the changed circumstances, mostly related to solar QFs, warranting the change in avoided cost methodology (Finding of Fact No. 1), or in its discussion of the adoption of the approach that new QFs should not receive payments for capacity in years in which there is no capacity need (Finding of Fact Nos. 5 and 6), does the Commission mention DSM/EE. See Sub 148 Order, pp. 9-19, 39-50. Further, DEC states that in concluding that QFs should only receive capacity payments in years in which the utility has a capacity need, the Commission noted that the operating characteristics of a QF must be considered in evaluating whether a QF resource can help to avoid the utility's planned capacity addition. In considering these characteristics and other factors, the Commission concluded that the capacity value provided by additional solar PV does not necessarily help the utilities offset or avoid their next capacity need. However, DEC contends that DSM/EE is different from solar QFs, and that none of the policy reasons behind the Commission's shift in avoided costs methodology articulated in the Sub 148 Order apply to DSM/EE. DEC states, for example, that there is no evidence in this proceeding that there is an over-supply of DSM/EE programs that customers are paying artificially high prices for DSM/EE, or that DSM/EE is burdening the system. Finally, DEC submits that there is a fundamental difference between DEC's customers paying for capacity in the form of additional QF generation that the Company does not need, compared to the Company's implementation of DSM/EE programs to encourage customers to use less energy and capacity in accordance with State policy, as expressed in Senate Bill 3 and elsewhere in the Public Utilities Act.

In its Post-Hearing Brief, NCSEA states that eliminating proper compensation for avoided capacity costs could have a dire effect on the cost effectiveness of DSM/EE programs, and could discourage DEC from maintaining or increasing its deployment of DSM/EE resources. NCSEA cites the testimony of Public Staff witness Williams that the removal of avoided capacity costs when measuring the cost effectiveness of programs whose useful lives do not extend to periods when DEC's IRP shows a capacity need would cause certain programs, including the Non-Residential Smart $aver Custom Assessments program, not to be cost effective for vintage 2019. NCSEA submits that the Commission should reject the Public Staff's position that the avoided capacity benefits used for program approval, PPI, and review of on-going cost effectiveness of DEC's DSM/EE programs should include zero capacity value in years prior to 2023.

In their Post-Hearing Brief, NC Justice, SACE and NRDC agree with DEC's calculation of avoided capacity costs for purposes of establishing the PPI and calculating cost effectiveness. They further contend that assigning a zero-capacity value to DEC's suite of cost-effective DSM/EE programs that carry on from year to year would discourage the Company from making investments that save ratepayers money in part because of the avoided capacity.

Commission Discussion

Based on the foregoing and the plain language of Paragraph 69 of the Mechanism, the Commission concludes that the appropriate avoided capacity benefits and per kWh avoided energy benefits to be used for the initial estimate of the PPI and any PPI true-up should be derived from DEC's IRP, production cost model, and cost inputs that generated the avoided capacity and avoided energy credits approved in the Sub 148 Order. In particular, the Commission is persuaded that if DEC and the Public Staff had achieved a meeting of the minds on simply using the avoided costs adopted in the Sub 148 Order and subsequent avoided cost proceedings, then they would have simply stated that in Paragraph 69. They did not do so. Furthermore, based on the record in this proceeding, as well as the record in Sub 1130, the Commission finds and concludes that the Company's calculation of Rider 10 is consistent with the language and intent of the Sub 1130 Agreement. As DEC witness Duff testified, the Sub 1130 Agreement was intended to eliminate the trigger method, so that avoided costs would be updated more frequently, and to change the source of avoided energy costs, so that avoided energy and avoided capacity rates for DSM/EE would be derived from the same proceeding. The revisions to Paragraphs 19, 23, and 69 resulting from the Sub 1130 Agreement did not alter the source or manner in which the avoided capacity costs are to be derived for the purpose of calculating cost-effectiveness and incentives associated with DSM/EE programs. The Commission generally agrees with the testimony of DEC's witnesses and DEC's arguments that evaluating the contributions that DSM/EE measures make to a utility avoiding future capacity needs to determine cost-effectiveness is inherently different than the evaluation undertaken to determine the capacity costs avoided through the purchase of the electric output from a QF[1]. In addition, the Commission is persuaded by the arguments of DEC, NCSEA and NC Justice Center that assigning a zero capacity value to DSM programs would under-value the contributions of those programs and send the wrong pricing signal. The Commission, therefore, declines to accept the Public Staff's downward adjustment to the Vintage 2019 PPI, and, instead, accepts the cost-effectiveness calculations performed by the Company for purposes of Rider 10, and approves the Company's calculation of the DSM/EE rates for Vintage 2019, as reflected in the rebuttal testimony and exhibits of DEC witness Miller.

The Commission further finds and concludes that the components of Rider 10, as shown in the testimony and exhibits of Company witnesses Miller and Evans, are appropriately in compliance with the Commission's findings and conclusions herein, as well as the Commission's findings and conclusions as set forth in the Sub 831 Found Revenues Order, the Sub 938 First Waiver Order, the Sub 938 Second Waiver Order, the Sub 979 Order, the Sub 1032 Order, and the Sub 1130 Order.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 32-33

The evidence in support of these findings and conclusions can be found in the testimony of DEC witness Evans, Public Staff witness Williamson, and NC Justice Center witness Neme.

Company witness Evans noted that Vintage 2017 of the Company's DSM and EE programs produced over 907 million kWh of energy savings and over 1,022 megawatts MW of capacity savings, which produced net present value avoided cost savings of over $586 million. During Vintage 2017, DEC's portfolio of DSM/EE programs was able to deliver energy and capacity savings that yielded avoided costs that were 162% of its target, while expending only 147% of targeted program costs.

Witness Evans testified that opt-outs by qualifying industrial and commercial customers have had a negative effect on the Company's overall non-residential impacts. For Vintage 2017, 4,075 eligible customer accounts opted out of participating in DEC's non-residential portfolio of EE programs, and 4,863 eligible customer accounts opted out of participating in the Company's non-residential DSM programs. While only 78 eligible customers that were opted out of the

---

[1] However, the Commission is not prepared to agree wholly with those arguments, because in the Sub 148 Order the Commission distinguished between "small power producers" colloquially referred to as "renewable QFs," and those QFs that are not "small power producers," such as combined heat and power QFs. See N.C.G.S. 62-3(27a); Sub 148 Order at 18. With regard to small power producers, and the subset of QFs who DEC refers to as Solar QFs, the changes in capacity payments that the Commission approved in the Sub 148 Order were required pursuant to amended N.C.G.S. 62-156(b)(3). Sub 148 Order at 48. Much of the discussion cited by DEC in its proposed order was related to evidence that supported the Commission's findings and conclusions that the same changes would be appropriate with regard to the standard offer to purchase that is available to QFs that are not small power producers. Id.

Vintage 2015 EE Rider opted in to the Vintage 2016 DSM Rider, 199 eligible customers that were previously opted out chose to opt in to the Vintage 2017 EE Rider.

Witness Evans stated that to reduce opt-outs, the Company continues to evaluate and revise its non-residential portfolio of programs to accommodate new technologies, eliminate product gaps, remove barriers to participation, and make its programs more attractive to opt-out eligible customers. It also continues to leverage its Large Account Management Team to make sure customers are informed about product offerings and their ability to opt into the Company's DSM and/or EE offerings during the March opt-in window.

NC Justice Center witness Neme testified that DEC delivered its highest DSM/EE portfolio savings in 2017, 1.07% of prior year sales. In regard to the proposed 2019 portfolio, he noted with approval the forecast of new annual savings of about 0.95% of total forecast sales, and 1.38% of sales to non-opt-out customers, as well as the projected portfolio cost-effectiveness of 2.46%.

Witness Neme also pointed out the wide array of efficiency measures and programs, as wells as some state-of-the-art program design features. However, he noted his concern that DEC was achieving 70% of its residential savings and 40% of its total portfolio savings from MyHER, which has short-lived savings. Witness Neme testified that DEC was inadequately promoting programs with longer-lived major measures such as the Residential Smart $aver EE program that comprehensively treat buildings. He also pointed out that as DEC's calculations assume that the annual savings produced by a residential LED light bulb installed as a result of its EE programs will be realized in each of the next 12 years at the same level experienced in the first year despite the new federal efficiency standards imposed by the Energy Independence and Security Act for most residential light bulbs. Witness Neme also contended that DEC needed to increase its investment in lower-income communities and programs that reached rental units. In particular, he recommended that DEC:

> (1) endeavor to improve participation in its Residential Smart $aver program significantly through establishment of a midstream channel for promoting some of the measures through equipment distributors (and possibly retailers and/or other parts of the supply chain), increasing incentives, enhancing marketing, and/or other means to reach more customers.
>
> (2) consider greater promotion of whole-building retrofits, including support for both (A) improvements to building envelopes (e.g. insulation and air leakage reduction); and (B) retrofitting single-family and multi-family buildings that currently have electric-resistance heating with high-efficiency heat pumps.
>
> (3) build on recent success and progress-in promoting efficiency measures for business customers through the midstream channel of its non-residential Smart $aver prescriptive rebate program.
>
> (4) assess the potential to reduce the number of customers who opt out of its programs by improving business customers' understanding of its programs and/or

improving the designs of its programs to make them more attractive to such customers.

Witness Neme recommended that these issues be referred to the collaborative for discussion, and that DEC report back on them in its 2019 rider filing. He also suggested that it would be less burdensome to conduct EM&V if DEC or the State as whole used a TRM, and discussed a number of factors that allow collaboration, such as the EE Collaborative conducted by DEC, to function well.

Public Staff witness Williamson also discussed his concerns regarding the fact that the EE lighting market is being transformed and that non-specialty LED lighting will likely become the baseline standard for general service bulb technologies by January 2020, thereby decreasing savings from EE lighting programs. He indicated that it appears that the lighting market may be close to adopting EE lighting technologies as a baseline and that further incentives for certain EE lighting measures for certain customers may not be necessary after January 1, 2020. Witness Williamson recommended that the Company include in its 2019 rider filing its plans to incorporate the impacts identified in its lighting shelving study, including any baseline changes for non-specialty LED bulb lighting technology in its EE programs.

Witness Williamson also testified that the Company was in the process of installing Advanced Metering Infrastructure (AMI) meters and new customer information systems, and there may be some redundancy in the information available through these new systems and the information provided through the MyHER program. He stated that the EM&V for the MyHER program will need to clearly isolate any savings associated with enhanced access to customer data provided through AMI and customer information systems from the Impacts solely attributable to the customized suggestions for the home provided by the MyHER program.

In his rebuttal testimony, DEC witness Evans did not disagree with considering the items recommended by NC Justice Center witness Neme to be discussed in the DEC Collaborative, but suggested that a combined DEC and Duke Energy Progress, LLC (DEP) collaborative would be more efficient given the commonality between DEC's and DEP's programs. Witness Evans suggested that a combined collaborative meet every two months rather than quarterly and that working groups be employed when deemed beneficial by the Collaborative. He did not object to initiating a working group to review the use of a TRM, but noted that the working group should include, at a minimum, representation by the Public Staff, Electric Membership Cooperatives, impacted municipalities, and investor owned-utilities, as well as South Carolina utilities.

In its Post-Hearing Brief, NC Justice Center stated that it generally supports DEC'sapplication, and applauds DEC for the energy savings achieved by the Company's portfolio of DSM/EE programs. Nonetheless, NC Justice Center stated that it continues to have concerns about the Company's: (1) over reliance on short-lived measures, particularly its residential behavioral program; (2) inadequate promotion of longer-lived measures and comprehensive treatment of buildings; (3) insufficient planning to offset a significant loss of lighting savings once the 2020 federal EISA efficiency standards go into effect; and (4) need to reach more lower-income communities and deliver programs that reach rental units. NC Justice Center reiterated the testimony of its witness, Neme, on each of these points. In addition, NC Justice Center discussed Neme's recommendations for overall improvements to DEC's programs, and changes to more accurately calculate savings from the Company's major residential behavioral and lighting programs. NC Justice Center stated that the Commission should order DEC to take up these issues in the Collaborative over the course of the next year.

Further, NC Justice Center stated that in order for the Collaborative to make progress on these substantive issues the Commission should adopt the recommendations put forward by witness Neme to make the Collaborative function more effectively. Moreover, NC Justice Center stated that it agrees with the Company's plan to continue offering the Residential Energy $aver program, even though DEC is still working on making the program cost effective.

NCSEA, in its Post-Hearing Brief, supported the recommendations made by NC Justice Center. In summary, NCSEA stated that a TRM could be used to streamline the regulatory process for DEC's DSM/EE programs by, among other things, providing baseline energy usage, data for use in calculating energy savings, algorithms for calculating energy savings, and a process for updating deemed savings for existing measures, as well as determining deemed savings for new measures. Further, NCSEA submitted that a TRM would create greater certainty as to the savings to be produced by DEC's DSM/EE measures, thereby reducing regulatory risk and regulatory costs.

In addition, NCSEA noted that DEC is currently deploying AMI meters throughout its territory, and that the data provided by AMI meters can be utilized to reduce energy consumption. NCSEA agreed with Public Staff witness Williams' suggestion that the incremental data collected by AMI meters should be leveraged to improve the MyHER program and integrate these two technologies in a way that reduces the "redundancy in the information available through these new systems and the information provided through the MyHER program[.]"

Moreover, NCSEA supported witness Neme's suggestions for modifying DEC's portfolio of programs, and shared witness Neme's concern that DEC places too much relative emphasis on programs that deliver only short-lived savings. Further, NCSEA stated that DEC should continue its investigation, as discussed at past Collaborative meetings, into on-bill financing programs to support retrofits and provide greater access to efficiency for low-income customers.

NCSEA also agreed with witness Neme's suggestions for improving DEC's Collaborative, and agreed that examples from other states' collaboratives should be discussed at future Collaborative meetings. In addition, NCSEA stated that full participation in the Collaborative by experts in energy efficiency and regulatory policy may be hampered by the exclusion of attorneys from the meetings, and it requested that the Commission direct the Collaborative to discuss whether to remove this informal restriction and allow attorneys to attend Collaborative meetings.

Finally, NCSEA disagreed with Public Staff witness Williamson's suggestion that DEC's HVAC EE program should be suspended. It contended that suspension of the program would eliminate important financial incentives for increasing the efficiency of the largest component of energy use in a residence, and eliminate a primary source of long-term residential energy efficiency opportunities. Further, NCSEA contended that suspending the program would create a severe market disruption for both customers and HVAC contractors, and would unfairly eliminate this long-term energy efficiency opportunity for DEC residential customers who need to replace qualifying HVAC equipment in the upcoming program year. NCSEA submitted that by working closely with stakeholders, trade allies, and investigating lessons learned from other states and utilities, DEC can again make this critical program cost effective. Instead of program suspension, NCSEA supported the Public Staff's suggestion that DEC show faith in the program by "agreeing to pick up a portion of the program costs and the net loss revenues to the extent the program is not cost-effective."

The Commission is of the opinion that the Collaborative is the appropriate forum for consideration of the recommendations made and concerns expressed by witness Neme regarding improving participation in the Residential Smart $aver program, promoting whole-building retrofits, building on recent success and progress in promoting efficiency measures for business customers through the midstream channel of its non-residential Smart $aver prescriptive rebate program, assessing the potential to reduce the number of customers who opt out of DEC's non-residential programs, considering implementation of a TRM, improving the effectiveness of the Collaborative, the amount and persistence of the savings from the MyHER program, and the impact on DEC's DSM/EE portfolio of upcoming changes in lighting standards. The Collaborative should also consider the issues raised by Public Staff witness Williamson regarding the MyHER program and the impact of upcoming lighting standards. Further, the Commission does not object to DEC's combining its collaborative with that of DEP and meeting on a more frequent basis. Finally, the Commission agrees that if the Collaborative determines that a TRM working group should be established, electric power suppliers and other stakeholders from both North Carolina and South Carolina should be invited to participate. DEC should report on the outcome of all these matters referred to the Collaborative in its 2019 rider filing.

IT IS, THEREFORE, ORDERED as follows:

1. That the Commission hereby approves the billing factors as set forth in Miller Rebuttal Exhibit 1, to go into effect for the rate period January 1, 2019, through December 31, 2019, subject to appropriate true-ups in future cost recovery proceedings consistent with the Sub 1032 and Sub 1130 Orders, and other relevant orders of the Commission.

2. That DEC shall work with the Public Staff to prepare a proposed Notice to Customers of the rate changes approved herein. Within 30 days from the date of this Order, the Company shall file said notice and the proposed time for service of such notice for Commission approval.

3. That the Company shall propose modifications to the Residential Smart $aver EE Program no later than October 31, 2018, with the goal of restoring the TRC score to 1.0 or greater, and the Company shall include a discussion of impact of these modifications and any other actions it has taken to improve cost-effectiveness in next year's DSM/EE rider proceeding.

4. That in its next rider application, DEC shall address the continuing cost-effectiveness of the Non-Residential Smart $aver Performance Incentive Program and if it is not cost-effective, provide details of plans to modify or close the program.

5. That the EM&V report for the Non-Residential Smart $aver Custom program (Evans Exhibit B) shall be revised as discussed by Public Staff witness Williamson and refiled in the next rider.

6. That the results of the EM&V report for the My Home Energy Report program (Evans Exhibit C) are accepted conditionally for purposes of this proceeding. The Public Staff may continue to review this report and offer further recommendations for the Company's consideration in the next DSM/EE rider proceeding.

7. That DEC shall leverage its Collaborative to discuss the EM&V issues and program design issues raised in the testimony of NC Justice Center witness Neme as discussed herein. The results of these discussions shall be reported to the Commission in the Company's 2019 DSM/EE rider filing.

8. That beginning in 2019, the combined DEC/DEP Collaborative shall meet every other month.

ISSUED BY ORDER OF THE COMMISSION.
This the 11th day of September, 2018.

DOCKET NO. E-2, SUB 1095A
DOCKET NO. E-7, SUB 1100A
DOCKET NO. G-9, SUB 682A

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Motion of Duke Energy Corporation, Duke Energy Carolinas, LLC, Duke Energy Progress, LLC, and Piedmont Natural Gas Company, Inc. to Amend Regulatory Conditions	)))))	ORDER GRANTING MOTION TO AMEND REGULATORY CONDITIONS

BY THE COMMISSION: On March 2, 2018, Duke Energy Corporation (Duke Energy), Duke Energy Carolinas, LLC (DEC), Duke Energy Progress, LLC (DEP) and Piedmont Natural Gas Company (Piedmont) (collectively the Companies and Applicants) filed a Motion to Amend Regulatory Conditions, the most recently adopted in the Matter of Application for Duke Energy Corporation and Piedmont Natural Gas Company, Inc. to Engage in a Business Combination Transaction and Address Regulatory Conditions and Code of Conduct in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682. In the motion, the Companies provide the following Company backgrounds:

Duke Energy is a corporation organized and existing under the laws of Delaware and is headquartered in Charlotte, North Carolina. DEC, DEP, and Piedmont are wholly-owned subsidiaries of Duke Energy.

DEC is in the business of generating, transmitting, distributing and selling electricity to approximately 2.5 million retail customers in a service area located in portions of central and western North Carolina and western South Carolina. DEC also sells electricity in the wholesale market to various municipal, cooperative and investor-owned electric utilities.

DEP is in the business of generating, transmitting, distributing and selling electricity to approximately 1.5 million retail customers in a service area located in portions of eastern, central, and western North Carolina and eastern South Carolina. DEP also sells electricity in the wholesale market to various municipal, cooperative and investor-owned electric utilities.

Piedmont is a natural gas utility authorized to distribute natural gas services to customers in its service territory in North Carolina, South Carolina, and Tennessee. Piedmont provides natural gas services to approximately 1 million customers in the three states in which it provides distribution services.

DEC, DEP, and Piedmont are all public utilities pursuant to Chapter 62 of the North Carolina General Statutes and are subject to the Commission's jurisdiction.

Comments of the Companies

In the motion, the Companies provide a summary of events prompting the filing of the motion. The Companies indicate that as a result the Commission's approval of past mergers involving Duke Energy, including its 2006 merger with Cinergy Corp. (Cinergy Merger), its 2012 merger with Progress Energy, Inc. (Duke/Progress Merger) and, recently, its 2016 merger with Piedmont (Piedmont Merger), Duke Energy, DEC, DEP, and Piedmont are subject to more than 95 Regulatory Conditions, relating to almost every aspect of their operations in North Carolina and beyond. Specific to this motion, Sections II and III of the Regulatory Conditions include Regulatory Conditions that were intended "to protect the jurisdiction of the Commission against the risk of federal preemption .... " Order Approving Merger Subject to Regulatory Conditions and Code of Conduct, Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682 at Appendix A, p. 5. The Companies posit that these Regulatory Conditions include the Companies and their affiliates waiving certain federal rights and numerous requirements and "gatekeeping" procedures imposed upon DEC, DEP and Piedmont, before they may enter into or file an affiliate agreement at the NCUC, enter into certain wholesale agreements, or file affiliate agreements or other matters at the Federal Energy Regulatory Commission (FERC) subject to the FERC's jurisdiction under the Federal Power Act.

The Companies identify two recent decisions, one by the D.C. Circuit Court of Appeals and the other by the FERC, that have raised questions on the validity of some of the Regulatory Conditions pertaining to assertion of the NCUC's jurisdiction over certain wholesale and affiliate agreements and other filings made at the FERC. The Companies state that the subject matters of the decisions are different, but the legal issues addressed are similar. In the D.C. Circuit, the City of Orangeburg, South Carolina (Orangeburg) challenged the FERC's approval of the Joint Dispatch Agreement (JDA) as part of the Duke/Progress merger. Orangeburg v. FERC, 862 F.3d 1071 (D.C. Cir. 2017) (Orangeburg). The D.C. Circuit vacated the FERC's approval of the JDA and remanded the case to the FERC. Following that decision, the FERC rejected DEC's and DEP's petition for approval of an affiliate As-Available Capacity Sales Agreement. Order Rejecting As-Available Capacity Sales Agreement, 161 FERC ¶ 61,029, October 10, 2017.

The Companies explain that both the D.C. Circuit and the FERC expressed concerns that the Regulatory Conditions infringed upon federal jurisdiction, and the D.C. Circuit and the FERC signaled that FERC may preempt those Regulatory Conditions currently in effect. Furthermore, the Companies are concerned that the Order Rejecting As-Available Capacity Sales Agreement indicates that the D.C. Circuit's opinion in Orangeburg has given the FERC a greater sense of urgency in addressing the issues pertaining to certain Regulatory Conditions raised by Orangeburg. Therefore, the Companies opine the FERC will reject their filings due to their required references to, or inclusion of, these Regulatory Conditions. The Companies believe that requesting the NCUC, which has more familiarity and expertise with these Regulatory Conditions, to address this issue at this time is preferable to risking more pervasive preemptive action of NCUC authority by the FERC. For these reasons, the Companies submit for approval the attached proposed revisions to the Regulatory Conditions pertaining to federal preemption. The Companies are not at this time proposing changes to the majority of the Regulatory Conditions. The Companies state that the proposed revisions strike a balance between preserving the NCUC's jurisdiction as intended by

Sections II and III of the Regulatory Conditions and mitigating the risk of pervasive preemptive action by the FERC.

1. The Orangeburg Decision

The Companies indicate that this case arose following Orangeburg's challenge to the FERC's approval of the Duke/Progress merger. The dispute itself dates back to 2008, when Orangeburg contracted with DEC to provide wholesale power to the city for 10 years. Under the agreement, DEC would have treated Orangeburg as a native load customer, which would allow Orangeburg to purchase power at lower system average costs instead of higher incremental costs. The agreement, however, required consideration of certain Regulatory Conditions imposed on DEC as a result of the Cinergy merger. Under these Regulatory Conditions, DEC was required to provide their lowest cost power to its retail native load customers in North Carolina and plan their respective systems with that goal. In addition, DEC was required to provide the NCUC with notice if the utility intended to treat any new wholesale customer as a native load customer, and the NCUC reserved the right to decide for itself whether to recognize native-load status when it came to its own retail ratemaking, accounting, and reporting. After DEC provided the NCUC 30-days advance notice of its agreement with Orangeburg, the Commission issued a declaratory ruling stating that it would set DEC's retail rates as if DEC received the incremental costs of its power in its sales to Orangeburg. Order on Advance Notice and Joint Petition for Declaratory Ruling, Docket No. E-7, Sub 858, March 30, 2009. In 2009, Orangeburg filed an Application and Petition for Declaratory Order and Request for Expedition And Summary Disposition of the City of Orangeburg, Docket No. EL09-63-000 (July 2, 2009), with the FERC challenging the NCUC's ruling and its "gatekeeping" provisions, which the FERC rejected in 2015 as moot because the agreement between DEC and Orangeburg was terminated. Order Dismissing Petition/or Declaratory Order, 151 FERC ¶ 61,241 (June 18, 2015).

The Companies assert that as part of FERC's review of the subsequent Duke-Progress merger, the FERC reviewed the JDA. Orangeburg intervened in the FERC proceeding, arguing that section 3.2 of the JDA "effectively incorporated the NCUC regulatory regime" and resulted in usurpation of the FERC's exclusive jurisdiction over wholesale power rates. Orangeburg, 862 F.3d at 1076. Additionally, Orangeburg argued that the JDA contained Regulatory Conditions that allowed Duke Energy, Progress Energy, and the NCUC to unduly discriminate against wholesale customers by arbitrarily dividing wholesale sales into native load and non-native load. The FERC rejected both arguments by Orangeburg, relying on FERC Order No. 2000, affirming a state's authority to accord preferential treatment to native load customers. Orangeburg appealed to the D.C. Circuit, which vacated the FERC's decision and remanded the case back to the FERC. Orangeburg, 862 F.3d 1071.

In pertinent part, the Court determined Orangeburg suffered an injury-in-fact caused by the FERC approval of the JDA, which is redressable by the Court. The Companies highlight that one important note is the D.C. Circuit's criticism of FERC's "acquiescence" to the NCUC. The Court stated that the FERC was offering a view on NCUC's authority: contrary to Orangeburg's protest, the FERC concluded that the provisions incorporating the state regulatory regime "pertain[ed] fundamentally to retail ratemaking." Id. at 1081. Furthermore, the Court stated, "FERC's approach to the JDA fits within a pattern of acquiescence." Id. The D.C. Circuit noted that shortly after the

2008 Duke Orangeburg deal was frustrated by the 2009 NCUC Declaratory Ruling, Orangeburg had filed a petition with the FERC requesting that the Commission find that NCUC's ruling was preempted by federal law. Id.

According to the Companies, in vacating the FERC's ruling, the Court focused on the obligations of the FERC to avoid disparate rate treatment. "We accept disparate treatment between ratepayers only if FERC offers a valid reason for the disparity. Unless the FERC offers such a valid reason, its decision to approve disparate treatment of wholesale ratepayers is arbitrary and capricious." Id. at 1084. The Court determined Orangeburg suffers disparate rate treatment under the JDA, and stated in regards to the FERC's Order, "On its face, the Order does not supply a reason for the JDA's disparate treatment of native-load and non-native-load interstate wholesale customers, especially in light of NCUC's alleged control over which customers enjoy native-load status." Id. at 1085.

The Companies further explain that the Court determined Order No. 2000, on which the FERC based its entire decision, was insufficient authority as Order No. 2000 dealt with regional transmission authorities and the power of the states to require retail sales of its lowest cost power to state customers. Orangeburg's petition, however, concerned wholesale rates.

> The cited passage from Order No. 2000 appears to stand for the proposition that, for example, the NCUC may require Duke to sell its lowest cost power to retail native-load customers in North Carolina. But that proposition is uncontested: Orangeburg protests the NCUC's control over wholesale native-load customers, not the state commission's imposition of requirements for retail native-load customers.

Id. at 1086. Additionally, the Court stated that Order No. 2000, as interpreted by the FERC, appears to be in conflict with Order No. 888, which bars regulatory obligations requiring utilities to treat certain wholesale customers as native load, because the Commission's interpretation of Order No. 2000 authorizes the NCUC to require DEC to serve the "lowest cost power" to native-load wholesale customers. Finally, the Companies state that the Court determined that the FERC's interpretation of Order No. 2000 suggests the NCUC has the authority to regulate interstate wholesale power sales which plainly intrudes on FERC authority. The D.C. Circuit concluded that, "insofar as the Commission attempts to justify disparate treatment of interstate wholesale customers by invoking a state commission's authority, the FERC's interpretation of Order No. 2000 is unsound." Id. at 1087.

2. Order Rejecting As-Available Capacity Sales Agreement

The Companies state that on May 17, 2017, after an extended advance notice review period at the NCUC, DEC and DEP filed an As-Available Capacity Sales Agreement (the Agreement) with the FERC for approval. This affiliate Agreement permitted the sale of excess short-term capacity between DEC and DEP. According to the Companies, without approval of the Agreement, DEP and DEC would be forced to procure short-term energy at higher prices or commit generation resources that would otherwise be left offline. Therefore, the Companies contend that this Agreement benefitted customers through the purchase of short-term capacity between DEC and DEP at lesser cost than if they went to procure capacity in the marketplace. As part of the terms and conditions of the Agreement, DEC and DEP included the required provisions of Regulatory Condition 3.1(b).

Upon review, the Companies note that the FERC recognized the benefits of the Agreement but denied approval. In its determination the FERC wrote, "While we recognize the benefits that can be achieved by the (Agreement), the applicants have not met their burden of demonstrating the capacity agreement is just and reasonable and not unduly discriminatory or preferential." The decision continued, "Article XI of the (Agreement) includes provisions that pertain fundamentally to retail ratemaking. We find the inclusion of such provisions not appropriate in a Commission-jurisdictional wholesale agreement." Order Rejecting As-Available Capacity Sales Agreement, 161 FERC 61,029 at P. 12 (2017). The FERC denied approval without prejudice, allowing DEP and DEC to refile in the future to address the concerns of the FERC. The Companies contend that the FERC did not indicate it had any concerns with the Agreement other than the inclusion of these provisions.

The Companies posit that currently two different legal authorities have expressed serious concerns with certain Regulatory Conditions as infringing on federal jurisdiction. The Companies outline that the D.C. Circuit ruled FERC's reasoning for the approval of the JDA to be arbitrary and capricious, in part due to the inclusion of provisions required by the Regulatory Conditions. The Companies contend that the D.C. Circuit appears highly skeptical of the NCUC's required inclusion of provisions under certain Regulatory Conditions. Additionally, the Companies point out that the FERC expressed similar skepticism concerning the legality of these Regulatory Conditions. While the FERC did not preempt these Regulatory Conditions outright, the issue of preemption was not before the FERC at that time. According to the Companies, the timing of both decisions suggests that the FERC may have been reacting to the D.C. Circuit in issuing its Order denying approval of the Capacity Sales Agreement. The Companies highlight that both decisions included references to the Regulatory Conditions creating disparate or discriminatory treatment without reasonable justification.

3. The D.C. Circuit's Decision and the FERC Decision Warrant a Review and Modification of Certain Regulatory Conditions

The Companies conclude that these Regulatory Conditions as they now exist are unlikely to survive continued FERC review. The Companies believe that requesting the NCUC to address these potentially concerning Regulatory Conditions that it has reviewed and approved in previous merger dockets is preferable and more advantageous to the Companies' ratepayers than risking more pervasive preemption of NCUC authority by the FERC. The Companies contend that the FERC's rejection of the As-Available Capacity Sales Agreement due to the inclusion of the provisions required by the Regulatory Conditions already has deprived ratepayers of benefits that they would have received under the Agreement. The Companies have identified those Regulatory Conditions that appear to be the most ripe for preemption by the FERC; however, to minimize potential changes to the Regulatory Conditions, the Companies have limited their proposed amendments to the Regulatory Conditions that are most impacted by the two decisions.

ELECTRIC – MISCELLANEOUS

The Companies propose the following amendments to the Regulatory Conditions:

1. Regulatory Condition 2.1 - Waiver of Certain Federal Rights – The Companies argue that given the recent FERC Order and the D.C. Circuit's Orangeburg decision, it is questionable whether the Commission can require the Companies to waive a right that is given by Federal Law if waiving that right limits federal jurisdiction.

2. Regulatory Condition 3.1(a) - Advance Notice of Affiliate Contracts to be Filed with the FERC – The Companies note that this provision is at the core of the gatekeeping criticism voiced by the D.C. Circuit. The Companies argue that the last sentence of this provision seems particularly troublesome. It enables the Commission to serve as gatekeeper to the FERC by enacting provision 3.1(c) and sets up a specific procedure to deal with filings that are subject to FERC jurisdiction.

3. Regulatory Condition 3.1(b)(i)-(iv) - Required Provisions in Affiliate Contracts –The Companies state that these provisions require the Companies to include specific language in affiliate contracts. This language was included in both the JDA and in the Order Rejecting As-Available Capacity Sales Agreement. The Companies state that Regulatory Condition 3.1(b)(i) has been subject to waivers by the NCUC because it effectively creates an illusory contract. <u>See e.g.</u> Order Accepting Affiliate Agreement and Allowing Limited Waiver of Regulatory Condition, Docket Nos. E-2, Sub 1118 and E-7, Sub 1120 (Nov. 21, 2016); see also, <u>Bowman v. Hill</u>, 45 N.C. App. 116, 117,262 S.E.2d 376, 377 (N.C. Ct. App. 1979) ("An apparent promise, according to its terms, makes performance optional with the promiser no matter what may happen, ... is in fact no promise. Such an expression is often called an illusory promise."). Additionally, note the Companies, these provisions were removed from the JDA upon the request of the FERC. The Companies state the FERC did not opine on the Commission's authority to impose such requirements, but the focus on the FERC occasioned by the D.C. Circuit's decision may change FERC's review.

4. Regulatory Condition 3.1(c)(i)-(ii) - Authority over Affiliate Contracts Required or Intended to Be Filed with the FERC – The Companies state that these provisions are fundamental to the accusations that the Commission is inappropriately serving as gatekeeper to the FERC. The Companies reiterate that the D.C. Circuit and the FERC have indicated that they are reluctant to allow the Commission to have first approval over matters involving federal jurisdiction.

5. Regulatory Condition 3.1(d) & (e) – According to the Companies, similar to the previous provisions, these sections give the Commission authority over federal jurisdiction and may be preempted by the FERC and the D.C. Circuit. The Companies argue that sub-section (e) is almost a reverse preemption of the State over the FERC.

6. Regulatory Condition 3.3(c)(ii) – The Companies state that this provision effectively allows the Commission to invalidate federal law. The Companies argue that it infringes on federal jurisdiction and appears to reverse the Supremacy Clause of the Constitution. The Companies state that if an issue arises as to transfer value that is a matter of federal law, it would appear that any concerns should be addressed by a petition to the FERC.

7. Regulatory Condition 3.3(d) – The Companies offer that this provision effectively allows the Commission to control the contents of Applications filed with the FERC.

8. Regulatory Condition 3.7 (b)-(d) - Wholesale Power Contracts Granting Native Load Priority – The Companies contend that this provision requires 30-day advance notice to the Commission of DEC's or DEP's intention to grant Native Load Priority to a wholesale customer (other than those historically served, as listed in Regulatory Conditions 3.7 (b)-(c)). Again, the Companies opine that this restricts priority of native load to retail customers, and infringes on the FERC's power to give native load status to wholesale customers. The Companies concede that a simple notice provision for information may be acceptable, but argue that setting the process up under the detailed procedures of Regulatory Condition 13.2 clearly amounts to a gatekeeping function.

9. Regulatory Condition 3.8(b)-(e) - Additional Provisions Regarding Wholesale Contracts Entered Into by DEC or DEP as Sellers – The Companies state that these provisions provide that the NCUC retains the right to assign, allocate, impute and make pro-forma adjustments with respect to the revenues and costs associated with both DEC's and DEP's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes; and that DEC and DEP (or affiliates) shall not assert that the Commission's authority to do so is subject to preemption. The Companies contend that this language appears to be contrary to law and that the Commission cannot simply ignore the actions by the FERC related to wholesale ratemaking matters. The Companies argue that to the extent that the Commission or Public Staff believes that a FERC decision impinges on State retail ratemaking authority, the proper remedy is to file a petition with the FERC.

10. Regulatory Condition 3.9 (a)-(c), (g) & (g)(vii) - Other Provisions – The Companies state that these provisions allow the Commission to intrude on federal jurisdiction by requiring the Companies not to assert that FERC approval preempts the Commission's authority and are likely to be preempted. Sections (c) and (d) specifically amount to another gatekeeping function. Section (g)(vii) attempts to prevent the FERC from implementing decisions that could affect North Carolina ratepayers.

11. Regulatory Condition 3.10 - FERC Filings and Orders – The Companies contend that this provision has been edited in accordance with the regulatory compact to require the Companies to keep the Commission appropriately informed of their activities. Regulatory Condition 13.2 - Advance Notice Filings - which is essentially a procedural provision. According to the Companies, although this provision could be defined as the Commission serving as gatekeeper to Federal Jurisdiction, the proposed changes to Regulatory Conditions 3.1, 3.3, and 3.9 effectively remove the gatekeeper role of the Commission for the purposes outlined in those sections. Therefore, it may be unnecessary to change this procedural provision.

The Companies conclude by arguing that the best course of action is for the Commission to address the gatekeeping issues that have been questioned as opposed to waiting for FERC to take preemptive action.

Comments of the Public Staff

On July 12, 2018, the Public Staff – North Carolina Utilities Commission (Public Staff) filed Comments Regarding Motion to Amend Regulatory Conditions. The Public Staff largely agrees with the Companies' analysis regarding the D.C. Circuit's opinion in Orangeburg, and the FERC's Order Rejecting As-Available Capacity Sales Agreement. Further, the Public Staff does not object to most of the revisions to the Regulatory Conditions proposed by the Companies, indicating that most of the revisions will reduce or eliminate the risk of more pervasive preemption of the Commission's authority by FERC.

However, the Public Staff does oppose certain proposed revisions as being unnecessary to address the federal jurisdictional issues raised by FERC and the D.C. Circuit. The Public Staff contends that any revisions to the Regulatory Conditions should be narrowly tailored to achieve the overall goals of reducing potential violations of federal law and avoiding a more pervasive preemption of Commission authority. The Public Staff states that this is "best achieved by (1) eliminating the "gatekeeping" provisions that require advance Commission proceedings to approve, reject or modify the Companies' filings at FERC and (2) eliminating provisions that prohibit the Companies from waiving certain federal rights that might limit FERC's ability to exercise its jurisdiction under federal law."

The Public Staff attached Attachment A, labeled Revised Appendix A, to its filing which is a redlined version of the Regulatory Conditions identifying the revisions to the Regulatory Conditions proposed by the Companies, as modified by the revisions proposed by the Public Staff.

In its Comments the Public Staff provides the following specifics regarding revisions to various provisions of the Regulatory Conditions:

1. Regulatory Condition 3.1(c) – While the Public Staff does not object to deleting the language in this condition, the Companies should continue to file, for informational purposes, proposed Affiliate Contracts or proposed amendments to existing Affiliate Contracts that are required to be filed with FERC, with the Commission at least 15 days prior to filing with FERC. The Public Staff has added a new regulatory condition, which is numbered as Regulatory Condition 3.1(b), to address this issue.

2. Regulatory Condition 3.7(d) – The Public staff indicates that there is considerable value in obtaining written advance notice of any contract wherein DEC or DEP intend to grant Native Load Priority to wholesale customers, and to the extent such contracts raise issues that may impact DEC's or DEP's customers, advance notice provides transparency. The Public Staff disagrees with the Companies' proposal to delete this regulatory condition in its entirety. The Public Staff notes that simply requiring DEC and DEP to provide advance notice prior to the execution of any contract that grants Native Load Priority to a wholesale customer does not infringe upon FERC's jurisdiction over wholesale contracts. The Public Staff contends that the jurisdictional issues arise out of the procedure set forth in Regulatory Condition 13.2, which subjects proposed contracts to the approval of, or modification by, the Commission prior to execution and filing with FERC. The Public Staff asserts those issues can be addressed by deleting the second sentence that subjects such

contracts to the provisions set forth in Regulatory Condition 13.2, thus leaving in place the advance notice provision. The Public Staff notes that while Regulatory Conditions 3.5, 3.6, and 4.5 are referenced in Regulatory Condition 3.7(d), none of those regulatory conditions are implicated in the D.C. Circuit opinion, recent FERC orders, or the Companies' proposed revisions. The Public Staff does not oppose deleting the second sentence of Regulatory Condition 3.7(d), but recommends that DEC and DEP be required to provide the Public Staff with at least 15 days' written advance notice for informational purposes.

3. Regulatory Condition 3.8(c) – The Public Staff agrees that this regulatory condition, as currently drafted, raises jurisdictional issues that may conflict with federal law. While the Public Staff does not object to some of the Companies' proposed revisions to this condition, the Public Staff objects to the deletion of language that reaffirms the Commission's authority under Chapter 62 to disallow uneconomic sunk costs and the language that describing "used and useful" capacity. The Public Staff argues that this language does not constitute gatekeeping language that might deprive FERC of the ability to exercise its federal jurisdiction. The Public Staff asserts that the language merely reaffirms established Chapter 62 ratemaking principles and ensures that retail customers are not on the hook for imprudent decisions made with respect to DEC and DEP wholesale operations. The Public Staff does not object to the deletion of the final sentence of this section, which raises federal jurisdictional issues.

4. Regulatory Condition 3.9(c) – The Public Staff does not oppose the deletion of the last sentence that removes the approval procedures set forth in Regulatory Condition 13.2. However, the Public Staff asserts that the requirement to file notice "at least 15 days prior to filing with the FERC" should remain in the first sentence. The Public Staff states that the removal of the procedures set forth in Regulatory Condition 13.2 renders the advance notice an informational filing, which does not present federal jurisdictional issues and does not limit FERC's authority in any way. The Public Staff recommends the Commission leaves the 15 day filing requirement in place as an informational filing, and language was added to clarify that notices are for informational purposes.

5. Regulatory Condition 3.9(g)(vii) – The Public Staff does not oppose the deletion of the last sentence that removes language obligating the Companies to take actions that may infringe upon federal law. The Public Staff argues that the remaining language should not be deleted as it underscores the allocation of risk between the Companies and North Carolina retail customers; it also directs the Companies to take action to protect North Carolina ratepayers against any adverse effects from preemption. The Public Staff contends that the Companies should be obligated to take reasonably necessary and appropriate actions to protect North Carolina retail ratepayers. The Public Staff posits that if FERC deems such actions to be inappropriate, it retains the jurisdictional authority to modify or nullify them. The Public Staff states that the remaining language in this section does not constitute issue gatekeeping, does not obligate the Companies to take action that may infringe on federal jurisdiction, and does not limit FERC's authority in any way. Lastly, the Public Staff states that the remaining language was edited to be an acknowledgment of the risk of any possible preemptive effects of Federal Law, and that this Regulatory Condition was relabeled as 3.9(h).

Response by the Companies

On July 17, 2018, the Companies filed a letter indicating that the Companies agree with the Public Staff and support the changes to the Regulatory Conditions as submitted in Revised Appendix A. The Companies further state that they have been authorized by counsel for Orangeburg to represent that the changes in Revised Appendix A are also acceptable to Orangeburg and that Orangeburg is prepared to notify the FERC that they are satisfied with the resolution of the issues at this Commission provided that the amendments are approved as outlined in Revised Appendix A.

Commission Determination

The Commission agrees with the Companies and the Public Staff that in light of the decision in Orangeburg v. FERC, 862 F.3d 1071 (D.C. Cir. 2017) (Orangeburg) in which the D.C. Circuit vacated the FERC's approval of the JDA and remanded the case to the FERC, and the FERC's order in which the FERC rejected DEC's and DEP's petition for approval of an affiliate As-Available Capacity Sales Agreement, Order Rejecting As-Available Capacity Sales Agreement, 161 FERC ¶ 61,029, October 10, 2017, the Commission should revise the Regulatory Conditions. The Commission agrees with the Public Staff that the proposed revisions to the Regulatory Conditions should be narrowly tailored to achieve the overall goals of reducing potential violations of federal law and avoiding a more pervasive preemption of Commission authority. The Commission finds that this balance is best achieved by (1) eliminating the "gatekeeping" provisions that require advance Commission proceedings to approve, reject or modify the Companies' filings at FERC, and (2) eliminating provisions that require the Companies to waive certain federal rights, including provisions prohibiting the Companies from taking any action or making any assertion that the NCUC's actions are preempted by Federal Law or are otherwise not within the NCUC's jurisdiction.

The Commission concludes that by eliminating said aforementioned provisions from the Regulatory Conditions, the Commission will be resolving the issues and concerns presented by the D.C. Circuit and the FERC's order regarding As-Available Capacity Sales surrounding preferential treatment, violations of the Federal Power Act, preemption, and the Commerce Clause. As a result, the Commission finds it appropriate to revise and amend the Regulatory Conditions approved in the Duke Energy/Piedmont Merger as set forth in Revised Appendix A attached to the Public Staff's July 12, 2018 filing. The Companies indicated agreement with the Public Staff's revisions to the Company's proposed amendments and further indicated that Orangeburg finds the amendments acceptable and that Orangeburg is prepared to notify the FERC that Orangeburg would be satisfied with the resolution of the issues at this Commission if such amendments are made. No other party has filed comments or opposed the proposed amendments to the Regulatory Conditions.

IT IS, THEREFORE, ORDERED as follows:

1. That the Regulatory Conditions approved in the Duke Energy/Piedmont Merger are amended as set forth in Revised Appendix A attached to the Public Staff's July 12, 2018 filing and as agreed to by the Companies in its July 17, 2018 filing.

2. That a strike-through and underlined version of the revisions of the Regulatory Conditions is attached to this order as Appendix A and a clean version is attached as Appendix B.

ISSUED BY ORDER OF THE COMMISSION.
This the 24th day of August, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner James G. Patterson and Commissioner Daniel G. Clodfelter did not participate in this decision.

DOCKET NO. G-9, SUB 682

REGULATORY CONDITIONS AND CODE OF CONDUCT

TABLE OF CONTENTS

ELECTRIC – MISCELLANEOUS

DOCKET NO. E-2, SUB 1095
DOCKET NO. E-7, SUB 1100
DOCKET NO. G-9, SUB 682

REGULATORY CONDITIONS

These Regulatory Conditions set forth commitments made by Duke Energy Corporation (Duke Energy) and its public utility subsidiaries, Duke Energy Carolinas, LLC (DEC), Duke Energy Progress, LLC (DEP), and Piedmont Natural Gas Company, Inc. (Piedmont), as a precondition of approval of the application by Duke Energy and Piedmont pursuant to G.S. 62-111(a) for authority to engage in their proposed business combination transaction. These Regulatory Conditions, which become effective only upon closing of the Merger, shall apply jointly and severally to Duke Energy, DEC, DEP, and Piedmont, and shall be interpreted in the manner that most effectively fulfills the Commission's purposes as set forth in the preamble to Section II of these Regulatory Conditions.

SECTION I
DEFINITIONS

For the purposes of these Regulatory Conditions, capitalized terms shall have the meanings set forth below. If a capitalized term is not defined below, it shall have the meaning provided elsewhere in this document or as commonly used in the electric or natural gas utility industry.

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of these Regulatory Conditions, Duke Energy and each business entity so controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Affiliate Contract: (a) Any contract or agreement between or among DEC, DEP, and Piedmont or between or among DEC, DEP, or Piedmont and any other Affiliate or proposed Affiliate, and (b) any contract or agreement between such other Affiliate or proposed Affiliate and another Affiliate that is related to the same subject matter and is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service. Such contracts and agreements include, but are not limited to, service, operating, interchange, pooling, wholesale power sales agreements and agreements involving financings and asset transfers and sales, and the Joint Dispatch Agreement.

Catawba Joint Owners: The North Carolina Electric Membership Corporation, North Carolina Municipal Power Agency No. 1, and Piedmont Municipal Power Agency. For purposes of these Regulatory Conditions, DEC is not included in the definition of Catawba Joint Owners.

Code of Conduct: The minimum guidelines and rules approved by the Commission that govern the relationships, activities, and transactions between and among the public utility operations of DEC, DEP, and Piedmont, Duke Energy, the other Affiliates of DEC, DEP, and

Piedmont, and the Nonpublic Utility Operations of DEC, DEP, and Piedmont, as those guidelines and rules may be amended by the Commission from time to time.

Commission: The North Carolina Utilities Commission.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress. LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, which is the current holding company parent of DEC, DEP, and Piedmont, and any successor company.

Effect on DEC's, DEP's, or Piedmont's Rates or Service: When used with reference to the consequences to DEC, DEP, or Piedmont of actions or transactions involving an Affiliate or Nonpublic Utility Operation, this phrase has the same meaning that it has when the Commission interprets G.S. 62-3(23)(c) with respect to the affiliation covered therein.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Federal Law: Any federal statute or legislation, or any regulation, order, decision, rule or requirement promulgated or issued by an agency or department of the federal government.

FERC: The Federal Energy Regulatory Commission.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by or from DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding, (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by or from DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Native Load Priority: Power supply service being provided or electricity otherwise being sold with a priority of service equivalent to that planned for and provided by DEC or DEP to their respective Retail Native Load Customers.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Non-Native Load Sales: DEC's or DEP's sales of energy at wholesale, not including transactions between DEC and DEP pursuant to the JDA and not including service to customers served at Native Load Priority.

Nonpublic Utility Operations: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP and is a subsidiary of Duke Energy, and any successors.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

PUHCA 2005: The Public Utility Holding Company Act of 2005.

Purchased Power Resources: Purchases of energy by DEC or DEP at wholesale from sellers other than each other, the contract terms for which are one year or longer.

Retail Native Load Customers: The captive retail Customers of DEC and DEP in North Carolina for which DEC and DEP have the obligation under North Carolina law to engage in long-term planning and to supply all Electric Services, including installing or contracting for capacity, if needed, to reliably meet their electricity needs.

Retained Earnings: The retained earnings currently required to be listed on page 112, line 11, of the pre-Merger DEC FERC Form 1, the pre-Merger DEP FERC Form 1, and page 112, line 11 of the pre-Merger Piedmont FERC Form 2.

Shared Services: The services that meet the requirements of these Regulatory Conditions and that the Commission has explicitly authorized DEC, DEP, and Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and these Regulatory Conditions.

Utility Affiliates: The regulated public utility operations of Duke Energy Indiana, LLC (Duke Indiana), Duke Energy Kentucky, Inc. (Duke Kentucky), Florida Power Corporation, d/b/a Duke Energy Florida, LLC (DEF), and Duke Energy Ohio, Inc. (Duke Ohio).

SECTION II
AUTHORITY, SCOPE, AND EFFECT

These Regulatory Conditions are based on the general power and authority granted to the Commission in Chapter 62 of the North Carolina General Statutes to control and supervise the public utilities of the State. The Regulatory Conditions ~~(a) constitute~~address specific exercises of the Commission's authority~~, (b)~~ and provide mechanisms that enable the Commission to determine ~~in advance~~ the extent of its authority and jurisdiction over proposed activities of, and transactions involving, DEC, DEP, Piedmont, Duke Energy, other Affiliates or Nonpublic Utility Operations~~, and (c) protect the Commission's jurisdiction from federal preemption and its effects~~. The purpose of these Regulatory Conditions is to ensure that DEC's and DEP's Retail Native Load Customers and Piedmont's Customers (a) are protected from any known adverse effects from the Merger, (b) are protected as much as possible from potential costs and risks resulting from the Merger, and (c) receive sufficient known and expected benefits to offset any potential costs and risks resulting from the Merger. These Regulatory Conditions are not intended to impose legal obligations on entities in which Duke Energy does not directly or indirectly have a controlling voting interest, or to affect any rights of any party to participate in subsequent proceedings.

2.1 ~~Waiver of Certain~~ Commission Authority Over Certain Transactions~~Federal Rights~~. ~~Pursuant to these conditions,~~ DEC, DEP, Piedmont, Duke Energy, and other Affiliates acknowledge that the Commission has authority over intra-company transactions ~~waive certain of their federal rights as specified in these Regulatory Conditions, but do not otherwise agree that the Commission has authority other than~~ as provided for in Chapter 62.

2.2 Limited Right to Challenge Commission Orders. Other than as provided for, or explicitly prohibited, in these conditions, Duke Energy, DEC, DEP, Piedmont, and other Affiliates retain the right to challenge the lawfulness of any Commission order issued pursuant to or relating to these Regulatory Conditions on the basis that such order exceeds the Commission's statutory authority under North Carolina or Federal law or the other grounds listed in G.S. 62-94(b).

2.3 Waiver Request. DEC, DEP, Piedmont, Duke Energy, and other Affiliates may seek a waiver of any aspect of these Regulatory Conditions in a particular case or circumstance for good cause shown by filing a such request with the Commission.

SECTION III
PROTECTION OF RIGHTS~~FROM PREEMPTION~~

The following Regulatory Conditions are intended to protect the jurisdiction of the Commission ~~against the risk of federal preemption~~ as a result of the Merger, including risks related to agreements and transactions between and among DEC, DEP, Piedmont, and any of their Affiliates; financing transactions involving Duke Energy, DEC, DEP, or Piedmont, and any other Affiliate; and the ownership, use, and disposition of assets by DEC, DEP, or Piedmont~~; participation in the wholesale market by DEC or DEP; and filings with federal regulatory agencies~~.

3.1 Transactions between DEC, DEP, Piedmont, and Other Affiliates~~; Affiliate Contract Provisions; Advance Notice of Affiliate Contracts to be Filed with the FERC; Annual Certification;~~ Notice of Affiliate Contracts to be Filed with the FERC.

(a) DEC, DEP, and Piedmont shall not engage in any transactions with Affiliates or proposed Affiliates without first filing the proposed contracts or agreements memorializing such transactions pursuant to G.S. 62-153 and taking such actions and obtaining from the Commission such determinations and authorizations as may be required under North Carolina law. DEC, DEP, or Piedmont, as applicable, shall submit each proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract to the Public Staff for informal review at least 15 days before filing it with the Commission. If DEC, DEP, or Piedmont and the Public Staff agree within the 15-day period that the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract does not require any action by the Commission, DEC, DEP, or Piedmont may proceed to execute the agreement subject to later disapproval and voidance by the Commission pursuant to G.S. 62-153(a). Otherwise, the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract shall not be executed until the agreement has been filed and payment of compensation has been approved by the Commission pursuant to G.S. 62-153(b). ~~No formal advance notice pursuant to Regulatory Condition 13.2 is required for such agreements unless the agreements are to be filed with the FERC, in which case subsection (c) applies.~~

~~(b) All Affiliate Contracts to which DEC, DEP, or Piedmont is a party shall contain the following provisions:~~

~~(i) DEC's, DEP's, or Piedmont's participation in the agreement is voluntary, DEC, DEP, or Piedmont is not obligated to take or provide services or make any purchases or sales pursuant the agreement, and DEC, DEP, or Piedmont may elect to discontinue its participation in the agreement at its election after giving any required notice;~~

~~(ii) DEC, DEP, or Piedmont may not make or incur a charge under the agreement except in accordance with North Carolina law and the rules, regulations and orders of the Commission promulgated thereunder;~~

~~(iii) DEC, DEP, or Piedmont may not seek to reflect in rates any (A) costs incurred under the agreement exceeding the amount allowed by the Commission or (B) revenue level earned under the agreement less than the amount imputed by the Commission; and~~

~~(iv) DEC, DEP, or Piedmont shall not assert in any forum—whether judicial, administrative, federal, state, local or otherwise—either on its own initiative or in support of another entity's assertions, that the Commission's authority to assign, allocate, impute, make pro forma adjustments to, or disallow revenues and costs for retail ratemaking and regulatory accounting and reporting purposes is, in whole or in part, (A) preempted by Federal Law or (B) not within the Commission's power, authority or jurisdiction; DEC, DEP, and Piedmont will bear the full risk of any preemptive effects of Federal Law with respect to the agreement.~~

~~(c) To enable the Commission to determine and exercise its lawful authority and jurisdiction over a proposed Affiliate Contract or amendment to an existing Affiliate Contract that involves costs that will be assigned to DEC, DEP, or Piedmont and that is required or intended to be filed with the FERC, the following procedures shall apply:~~

~~(i) DEC DEP, or Piedmont shall file advance notice and a copy of the proposed Affiliate Contract, a contract with a proposed Affiliate, or an amendment to an existing Affiliate Contract with the Commission at least 30 days prior to a filing with the FERC. All Affiliate Contracts, contracts with a proposed Affiliate, or amendments to existing Affiliate Contracts filed with the advance notice under Regulatory Condition 3.1(c) shall be unexecuted at the time of filing and remain unexecuted for the duration of the advance notice period. If, consistent with Regulatory Condition 13.2(h), the Commission extends the advance notice period, the Affiliate Contract, contract with a Proposed Affiliate, or~~

~~amendments to existing Affiliate Contracts shall remain unexecuted until the Commission issues an order on the advance notice or the extension of the advance notice period expires without a Commission order, procedural or substantive, being issued. A copy shall be provided to the Public Staff at the time of the filing. The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.~~

~~(ii) If an objection to DEC, DEP, or Piedmont proceeding with the filing with the FERC is filed pursuant this Regulatory Condition, the proposed filing shall not be executed and made with the FERC until the Commission issues an order resolving the objection.~~

~~(iii) Filings of advance notices and copies of proposed Affiliate Contracts, a contract with a proposed Affiliate, and amendments to existing Affiliate Contracts pursuant to this subsection shall be in addition to filings required by G.S. 62-153, and the burden of proof as to those filings shall be as provided by statute.~~

~~(d) DEC, DEP, and Piedmont shall each certify in a filing with the Commission that (i) it has not made any filing with the FERC or any other federal regulatory agency inconsistent with the foregoing and (ii) Duke Energy, any other Affiliate and any Nonpublic Utility Operation has not made any such filing. Such certification shall be repeated annually on the anniversary of the first certification.~~

~~(e) In the event the FERC or any other federal regulatory agency requires modification of a proposed Affiliate Contract to omit any of the provisions of Regulatory Condition 3.1(b) as a condition of acceptance or approval by that agency, DEC, DEP or Piedmont shall remain bound by those provisions for state regulatory purposes.~~

<u>(b) In addition to the requirements of Regulatory Condition 3.1(a), for any contract requiring filing with FERC, DEC, DEP, or Piedmont shall file, for informational purposes, a copy of a proposed Affiliate Contract, a contract with a proposed Affiliate, or an amendment to an existing Affiliate Contract with the Commission at least 15 days prior to filing with FERC.</u>

3.2 <u>Financing Transactions Involving DEC, DEP, Piedmont, Duke Energy, or Other Affiliates</u>.

(a) With respect to any financing transaction between or among DEC, DEP, or Piedmont and Duke Energy or any one or more other Affiliates, any contract memorializing such transaction shall expressly provide that DEC, DEP, or Piedmont shall not enter into any such financing transaction except in accordance with North Carolina law and the rules, regulations and orders of the Commission promulgated thereunder; and

(b) With respect to any financing transaction (i) between or among any of the Affiliates if such contracts are reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, or (ii) between or among DEC, DEP, and Piedmont or between DEC, DEP, or Piedmont and any other Affiliate, any contract memorializing such transaction shall expressly provide that DEC, DEP, or Piedmont shall not include the effects of any capital structure or debt or equity costs associated with such financing transaction in its North Carolina retail cost of service or rates except as allowed by the Commission.

3.3 Ownership and Control of Assets Used by DEC, DEP, and Piedmont to Supply Electric Power or Natural Gas Services to North Carolina Customers; Transfer of Ownership or Control.

(a) DEC, DEP, and Piedmont shall own and control all assets or portions of assets used for the generation, transmission, and distribution of electric power or the transmission, storage, or distribution of natural gas to their respective Customers (with the exception of assets solely used to provide power purchased by DEC or DEP at wholesale).

(b) With respect to the transfer by DEC, DEP, or Piedmont to any entity, affiliated or not, of the control of, operational responsibility for, or ownership of generation, transmission, or distribution assets with a gross book value in excess of ten million dollars ($10 million), DEC, DEP, or Piedmont shall provide written notice to the Commission at least 30 days in advance of the proposed transfer. The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.

(c) Any contract memorializing such a transfer shall include the following language:

(i) DEC, DEP, or Piedmont may not commit to or carry out the transfer except in accordance with applicable law, and the rules, regulations and orders of the Commission promulgated thereunder; and

(ii) DEC, DEP, or Piedmont may not include in its North Carolina cost of service or rates the value of the transfer, ~~whether or not subject to federal law,~~ except as allowed by the Commission in accordance with North Carolina law.

~~(d) Any application filed with the FERC in connection with any transfer of control, operational responsibility, or ownership that involves or potentially affects DEC, DEP, or Piedmont shall include the language set forth in subdivisions (c)(i) and (ii), above.~~

3.4 Purchases and Sales of Electricity and Natural Gas between DEC, DEP, Piedmont, and Duke Energy, Other Affiliates, or Nonpublic Utility Operations. Subject to additional restrictions set forth in the Code of Conduct, neither DEC, DEP, nor Piedmont shall purchase electricity (or related ancillary services) or natural gas from Duke Energy, another Affiliate, or a Nonpublic Utility Operation under circumstances where the total all-in costs, including generation, transmission, ancillary costs, distribution, taxes and fees, and delivery point costs, incurred (whether directly or through allocation), based on information known, anticipated, or reasonably available at the time of purchase, exceed fair Market Value for comparable service, nor shall DEC, DEP, or Piedmont sell electricity (or related ancillary services) or natural gas to Duke Energy, another

Affiliate, or a Nonpublic Utility Operation for less than fair Market Value; provided, however, that such restrictions shall not apply to emergency transactions. This condition shall not apply to transactions between DEC and DEP that are governed by the JDA.

3.5 Least Cost Integrated Resource Planning and Resource Adequacy. This Regulatory Condition does not apply to Piedmont. DEC and DEP shall retain the obligation to pursue least cost integrated resource planning for their respective Retail Native Load Customers and remain responsible for their own resource adequacy subject to Commission oversight in accordance with North Carolina law. DEC and DEP shall determine the appropriate self-built or purchased power resources to be used to provide future generating capacity and energy to their respective Retail Native Load Customers, including the siting considered appropriate for such resources, on the basis of the benefits and costs of such siting and resources to those Retail Native Load Customers.

3.6 Priority of Service.

(a) This Regulatory Condition does not apply to Piedmont.
(b) The planning and joint dispatch of DEC's system generation and Purchased Power Resources shall ensure that DEC's Retail Native Load Customers receive the benefits of that generation and those resources, including priority of service, to meet their electricity needs consistent with the JDA. DEC shall continue to serve its Retail Native Load Customers with the lowest-cost power it can reasonably generate or obtain as Purchase Power Resources before making power available for sales to customers that are not entitled to the same level of priority as Retail Native Load Customers.
(c) The planning and joint dispatch of DEP's system generation and Purchase Power Resources shall ensure that DEP's Retail Native Load Customers receive the benefits of that generation and those resources, including priority of service, to meet their electricity needs consistent with the JDA. DEP shall continue to serve its Retail Native Load Customers with the lowest-cost power it can reasonably generate or obtain as Purchase Power Resources before making power available for sales to customers that are not entitled to the same level of priority as Retail Native Load Customers.

3.7 Wholesale Power Contracts Granting Native Load Priority.

(a) This Regulatory Condition does not apply to Piedmont.
(b) DEC is not required to ~~file an advance notice with~~notify the Commission ~~or receive its approval prior to entering~~when it enters into wholesale power contracts that grant Native Load Priority to the following historically served customers: the City of Concord, North Carolina; the City of Kings Mountain, North Carolina; the Town of Dallas, North Carolina; the Town of Forest City, North Carolina; Lockhart Power Company; the Public Works Commission of the Town of Due West, South Carolina; the Town of Prosperity, South Carolina; the City of Greenwood, South Carolina; the Town of Highlands; North Carolina; Western Carolina University

(WCU); the electric membership cooperatives (EMCs) within DEC's control area; North Carolina Municipal Power Agency No. 1; Piedmont Municipal Power Agency; New River Light & Power Company; and the South Carolina distribution cooperatives historically served by Saluda River Electric Cooperative, Inc., and currently served by Central Electric Power Cooperative, Inc. (which are Blue Ridge Electric Cooperative, Inc., Broad River Electric Cooperative Inc., Laurens Electric Cooperative, Inc., Little River Electric Cooperative, Inc., and York Electric Cooperative, Inc.). Subject to the conditions set out in Regulatory Condition 3.8, the retail native loads of these historically served wholesale customers shall be considered DEC's Retail Native Load Customers for purposes of Regulatory Conditions 3.5, 3.6, and 4.5; provided, however, that this subsection applies only to the same types of supplemental load and backstand requirements services that were historically provided to the Catawba Joint Owners under the Catawba Interconnection Agreements between DEC and the Catawba Joint Owners prior to 2001, which, for the North Carolina Electric Membership Corporation, only includes the EMCs within DEC's control area.

(c) DEP is not required to ~~file an advance notice with~~notify the Commission ~~or receive its approval prior to entering~~when it enters into wholesale power contracts that grant Native Load Priority to the Public Works Commission of the City of Fayetteville, North Carolina; the Town of Waynesville, North Carolina; the City of Camden, South Carolina; the French Broad Electric Membership Corporation; the North Carolina Eastern Municipal Power Agency; the electric membership cooperatives (EMCs) within DEP's control area, whether served through the North Carolina Electric Membership Corporation (NCEMC) or individually; the Town of Black Creek, North Carolina; the Town of Lucama, North Carolina; the Town of Stantonsburg, North Carolina; the Town of Sharpsburg, North Carolina; and the Town of Winterville, North Carolina. Subject to the conditions set out in Regulatory Condition 3.8, the retail native loads of these historically served wholesale customers shall be considered DEP's Retail Native Load Customers for purposes of Regulatory Conditions 3.5, 3.6, and 4.5.

~~(d) Before either DEC or DEP executes any contract that grants Native Load Priority to a wholesale customer (other than as set forth in subdivisions (a) and (b) above) or to one or more retail customers of another entity, it must provide the Commission with at least 30 days' written advance notice of its intent to grant Native Load Priority and to treat the retail native load of a proposed wholesale customer as if it were DEC's or DEP's retail native load pursuant to Regulatory Conditions 3.5, 3.6, and 4.5. The provisions set forth in Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.~~

(d) Before either DEC or DEP executes any contract that grants Native Load Priority to a wholesale customer (other than as set forth in subdivisions (a) and (b) above) or to one or more retail customers of another entity, it shall, for informational purposes, provide the Public Staff with at least 15 days' written advance notice of its intent to grant Native Load Priority and to treat the retail native load of a proposed wholesale customer as if it were DEC's or DEP's retail native load pursuant to Regulatory Conditions 3.5, 3.6, and 4.5.

3.8 Additional Provisions Regarding Wholesale Contracts Entered into by DEC or DEP as Sellers.

(a) This Regulatory Condition does not apply to Piedmont.

(b) The Commission retains the right to assign, allocate, impute, and make pro-forma adjustments with respect to the revenues and costs ~~associated with both DEC's or DEP's wholesale contracts~~ for retail ratemaking and regulatory accounting and reporting purposes.

(c) DEC and DEP acknowledge that when either DEC or DEP enters ~~Entry~~ into wholesale contracts that grant Native Load Priority or otherwise obligate DEC or DEP to construct generating facilities or make commitments to purchase capacity and energy to meet those contractual commitments such action constitutes acceptance by DEC, DEP, Duke Energy, and other Affiliates or Nonpublic Utility Operations thereof of the risks that investments in generating facilities or commitments to purchase capacity and energy to meet such contractual commitments and maintain an adequate reserve margin throughout the term of such contracts may become uneconomic sunk costs that ~~are~~may not be ~~not~~ recoverable from DEC's or DEP's respective Retail Native Load Customers. In a future Commission retail proceeding in which cost recovery is at issue, neither DEC nor DEP shall claim that it does not bear this risk, and both DEC and DEP shall acknowledge that the Commission retains full authority under Chapter 62 to ascertain whether such costs are used and useful. For purposes of this condition, capacity will be considered used and useful and not excess capacity to the extent the Commission determines such capacity is needed by DEC or DEP to meet the expected peak loads of DEC's or DEP's respective Retail Native Load Customers in the near term future plus a reserve margin comparable to that currently being used or otherwise considered appropriate by the Commission~~, and both DEC and DEP shall acknowledge that the Commission retains full authority under Chapter 62 to disallow such costs as not used and useful and to allocate, impute, or assign such costs away from Retail Native Load Customers. For purposes of this condition, capacity will be considered used and useful and not excess capacity to the extent the Commission determines such capacity is needed by DEC or DEP to meet the expected peak loads of DEC's or DEP's respective Retail Native Load Customers in the near term future plus a reserve margin comparable to that currently being used or otherwise considered appropriate by the Commission. Neither DEC, DEP, Duke Energy, nor any other Affiliate shall assert in any forum —whether judicial, administrative, federal, state, local or otherwise—either on its own initiative or in support of any other entity's assertions that the Commission is preempted from taking the actions contemplated in this subsection~~.

~~(d) Neither DEC, nor DEP, nor Duke Energy, nor other Affiliate shall assert in any forum—whether judicial, administrative, federal, state, local or otherwise—either on its own initiative or in support of any other entity's assertions that (i) transactions entered into pursuant to DEC's or DEP's cost- or market-based rate authority or (ii) the filing with, or acceptance for filing by, the FERC of any wholesale power contract to which either is a party establishes or implies a cost allocation methodology that is binding on the Commission, requires the pass-~~

~~through of any costs or revenues under the filed rate doctrine, or preempts the Commission's authority to assign, allocate, impute, make pro forma adjustments to, or disallow the revenues and costs associated with, DEC's or DEP's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes.~~

~~(e)~~ ~~Neither DEC, nor DEP, nor Duke Energy, nor other Affiliate shall assert in any forum—whether judicial, administrative, federal, state, local or otherwise—either on its own initiative or in support of any other entity's assertions that the exercise of authority by the Commission to assign, allocate, impute, make pro forma adjustments to, or disallow the costs and revenues associated with DEC's or DEP's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes in itself constitutes an undue burden on interstate commerce or otherwise violates the Commerce Clause of the United States Constitution. DEC and DEP, however, retain the right to argue that a specific exercise of authority by the Commission violates the Commerce Clause based upon specific evidence of undue interference with interstate commerce.~~

(~~f~~d) Except as provided in the foregoing conditions, DEC and DEP retain the right to challenge the lawfulness of any order issued by the Commission in connection with the assignment, allocation, imputation, pro-forma adjustments to, or disallowances of the revenues and costs associated with DEC's or DEP's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes on any other grounds, including but not limited to the right outlined in G.S. 62-94(b).

3.9 Other Protections.

(a) DEC, DEP, Piedmont, Duke Energy, another Affiliate, and a Nonpublic Utility Operation shall not assert in any forum – whether judicial, administrative, federal, state, local or otherwise – ~~either on its own initiative or in support of any other entity's assertions that approval by the FERC of market-based rates, transfers of generating facilities, or any matter that involves Affiliates in any way preempts~~ that the Commission's authority to determine the reasonableness or prudence of DEC's, DEP's, or Piedmont's decisions with respect to supply-side resources, demand-side management, or any other aspect of resource adequacy is limited.

(b) No agreement shall be entered into~~, nor shall any filing be made with the FERC,~~ by or on behalf of DEC or DEP, that (i) commits DEC or DEP to, or involves either of them in, joint planning, coordination, dispatch or operation of generation, transmission, or distribution facilities with each other or with one or more other Affiliates, or (ii) otherwise alters DEC's or DEP's obligations with respect to these Regulatory Conditions, absent explicit approval of the Commission.

(c) DEC, DEP, Duke Energy, the other Affiliates, and the Nonpublic Utility Operations shall file notice with the Commission for informational purposes ~~at least 30 days prior to filing with the FERCof~~ at least 15 days prior to filing with the FERC any agreement, tariff, or other document or any proposed amendments, modifications, or supplements to any such document that has the potential to (i) affect DEC's or DEP's retail cost of service for system power supply resources or transmission system; (ii) reduce the Commission's jurisdiction with respect to transmission planning or any other aspect of the Commission's planning authority; (iii) be interpreted as involving DEC or DEP in joint planning, coordination, dispatch, or operation of generation or transmission facilities with one or more Affiliates; or (iv) otherwise have an Effect on DEC's or DEP's Rates or Service. ~~The provisions set forth in Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition; provided, however, that, to the extent the filing with the FERC is not to be made by DEC or DEP, the advance notice procedures shall be for the purpose of a determination by the Commission as to whether the filing is reasonably likely to have an Effect on DEC's or DEP's Rates or Service.~~

(d) Any contract or filing regarding DEC's or DEP's membership in or withdrawal from an RTO or comparable entity must be contingent upon state regulatory approval. This Regulatory Condition does not apply to Piedmont.

(e) DEC, DEP, and Piedmont shall obtain Commission approval before DEBS is sold, transferred, merged with any other entities, has any ownership interest therein changed, or otherwise changed so that a change of control could occur. This requirement does not apply to any movement of DEBS within the Duke Energy holding company system that does not constitute a change of control.

(f) DEC, DEP, and Piedmont may participate in joint comments and other joint filings with Affiliates only when such participation fully complies with both the letter and the spirit of the Regulatory Conditions. Any filing made by DEBS on behalf of DEC, DEP, or Piedmont must clearly identify DEBS as an agent of DEC, DEP, or Piedmont for purposes of making the filing.

(g) Neither DEC, DEP, Piedmont, Duke Energy, another Affiliate, nor a Nonpublic Utility Operation shall make any assertion or argument either on its own initiative or in support of any other entity's assertions in any forum – whether judicial, administrative, federal, state, or otherwise – with respect to any contract, transaction, or other matter in which DEC, DEP, or Piedmont is involved or proposes to be involved or any contract, transaction, or matter involving or proposed to involve Duke Energy, any other Affiliate, or any Nonpublic Utility Operation that may have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, that any of the following actions ~~by the Commission are preempted, in whole or in part, by Federal Law or~~ exceed the Commission's power, authority or jurisdiction under North Carolina law:

(i) reviewing the reasonableness of any Affiliate commitment entered into or proposed to be entered into by DEC, DEP, or Piedmont, or disallowing the costs of, or imputing revenues related to such commitment to, DEC, DEP, or Piedmont;

(ii) exercising its authority over financings or setting rates based on the capital structure, corporate structure, debt costs, or equity costs that it finds to be appropriate for retail ratemaking purposes;

(iii) reviewing the reasonableness of any commitment entered into or proposed to be entered into by DEC, DEP, or Piedmont to transfer an asset;

(iv) mandating, approving, or otherwise regulating a transfer of assets;

(v) scrutinizing and establishing the value of any asset transfers for the purpose of determining the rates for services rendered to DEC's or DEP's Retail Native Load Customers or Piedmont's Customers; or

(vi) exercising any other lawful authority it may have.

Should any other entity so assert, neither DEC, DEP, Piedmont, Duke Energy, other Affiliates, nor the Nonpublic Utility Operations shall support any such assertion and shall, promptly upon learning of such assertion, advise and consult with the Commission and the Public Staff regarding such assertion.

~~(vii) DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall (A) bear the full risk of any preemptive effects of Federal Law with respect to any contract, transaction, or commitment entered into or made or proposed to be entered into or made by DEC, DEP, or Piedmont, or which may otherwise affect DEC's, DEP's, or Piedmont's operations, service, or rates and (B) shall take all actions as may be reasonably necessary and appropriate to hold North Carolina ratepayers harmless from rate increases, foregone opportunities for rate decreases or any other adverse effects of such preemption. Such actions include, but are not limited to, filing with and making reasonable efforts to obtain approval from the FERC or other applicable federal entity of such commitments as the Commission deems reasonably necessary to prevent such preemptive effects.~~

(h) DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall (A) acknowledge the risk of any possible preemptive effects of Federal Law with respect to any contract, transaction, or commitment entered into or made or proposed to be entered into or made by DEC, DEP, or Piedmont, or which may otherwise affect DEC's, DEP's, or Piedmont's operations, service, or rates and (B) shall take all actions as may be reasonably necessary and appropriate to hold North Carolina ratepayers harmless from rate increases, foregone opportunities for rate decreases or any other adverse effects of such preemption.

3.10 FERC Filings and Orders. In addition to the filing requirements of Commission Rule R8-27 and all other applicable statutes and rules, and to keep the Commission informed of their activities, DEC and DEP shall, on a quarterly basis, file with the Commission the following: (a) a list of all active dockets at the FERC, including a sufficient description to identify the type of proceeding, in which DEC, DEP, Duke Energy, or DEBS is a party, with new information in each quarterly filing tracked; and (b) a list of the periodic reports filed by DEC, DEP, Duke Energy, or DEBS with the FERC, including sufficient information to identify the subject matter of each report and how each report can be accessed. These filings shall be made in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, as appropriate, and updated regularly. In addition, DEC and DEP shall serve on the Public Staff all filed cost-based and market-based wholesale agreements and amendments; all filings related to their Joint Open Access Transmission Tariff;

interconnection agreements and amendments; and any other filings made with the FERC, to the extent these other filings are reasonably likely to have an Effect on DEC's or DEP's Rates or Service. This Regulatory Condition does not apply to Piedmont, as relevant FERC-related information is required to be filed with the Commission in annual gas cost prudence reviews.

SECTION IV
JOINT DISPATCH

The Regulatory Conditions in Section IV do not apply to Piedmont. They are intended to prevent the jurisdiction and authority of the Commission from being preempted as a result of the JDA, to ensure that DEC's and DEP's Retail Native Load Customers receive adequate benefits from the JDA, and to ensure that both joint dispatch costs and the sharing of cost savings can be appropriately audited. The Regulatory Conditions set forth in Section III and the Regulatory Conditions in Section V to the extent they are relevant to Affiliate Contracts also apply to the JDA.

4.1 Conditional Approval and Notification Requirement. DEC and DEP acknowledge that the Commission's approval of the merger between Duke Energy and Progress Energy, and the transfer of dispatch control from DEP to DEC for purposes of implementing the JDA and any successor document is conditioned upon the JDA or successor document never being interpreted as providing for or requiring: (a) a single integrated electric system, (b) a single BAA, control area or transmission system, (c) joint planning or joint development of generation or transmission, (d) DEC or DEP to construct generation or transmission facilities for the benefit of the other, (e) the transfer of any rights to generation or transmission facilities from DEC or DEP to the other, or (f) any equalization of DEC's and DEP's production costs or rates. If, at any time, DEC, DEP or any other Affiliate learns that any of the foregoing interpretations are being considered, in whatever forum, they shall promptly notify and consult with the Commission and the Public Staff regarding appropriate action.

4.2 Advance Notice Required. To the extent that DEC and DEP desire to engage in any of items (a) through (f) listed in Regulatory Condition 4.1, above, DEC and DEP shall file advance notice with the Commission at least 30 days prior to taking any action to amend the JDA or a successor document or to enter into a separate agreement. The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.

4.3 Function in DEC or DEP. The joint dispatch function, as provided in the JDA or in a successor document, shall be performed by employees of either DEC or DEP.

4.4 No Limitation on Obligations. DEC and DEP acknowledge that nothing in the JDA or any successor document is intended to alter DEC's and DEP's public utility obligations under North Carolina law or to provide for joint dispatch in a fashion that is inconsistent with those obligations, including, without limitation, the following: (a) DEC's obligation to plan for and provide least cost electric service to its Retail Native Load Customers and DEP's obligation to plan for and provide least cost electric service to its Retail Native Load Customers; (b) DEC's obligation to serve its Retail Native Load Customers with the lowest cost power it can reasonably generate or purchase from other sources, before making power available for Non-Native Load Sales; and (c) DEP's obligation to serve its Retail Native Load Customers with the lowest cost power it can reasonably generate or purchase from other sources, before making power available for Non-Native Load Sales.

4.5 Protection of Retail Native Load Customers. All joint dispatch and other activities pursuant to the JDA or successor document shall be performed in such a manner as to (a) ensure the reliable fulfillment of DEC's and DEP's respective service obligations to their Retail Native Load Customers, (b) fulfill each utility's obligation to serve its own Retail Native Load Customers with its lowest cost generation; and (c) minimize the total costs incurred by DEC and DEP to fulfill their respective obligations to their Retail Native Load Customers. In no event shall any Non-Native Load Sales be made if, based upon information known, anticipated, or reasonably available at the time a sale is made, any such sale results in higher fuel and fuel-related costs or non-fuel O&M costs, on a replacement cost basis, than would otherwise have been incurred unless the revenues credited from each such sale more than offset the higher costs.

4.6 Treatment of Costs and Savings. DEC's and DEP's respective fuel and fuel-related costs and non-fuel O&M costs, and the treatment of savings for retail ratemaking purposes, shall be calculated as provided in the JDA, unless explicitly changed by order of the Commission.

4.7 Required Records. DEC and DEP shall keep records related to the JDA or any successor document as prescribed by the Commission and in such detail as may be necessary to enable the Commission and the Public Staff to audit both the actual joint dispatch costs and the sharing of cost savings.

4.8 Auditing of Negative Margins. DEC and DEP also shall keep records that provide such detail as may be necessary to enable the Commission and the Public Staff to audit the circumstances that cause any negative margin on a Non-Native Load Sale or a negative transfer payment made pursuant to Section 7.5(a)(ii) of the JDA.

4.9 Protection of Commission's Authority. Neither DEC, DEP, nor any Affiliate shall assert in any forum – whether judicial, administrative, federal, state, local or otherwise – either on its own initiative or in support of any other entity's assertions that any aspect of the JDA or successor document is intended to diminish or alter the jurisdiction or authority of the Commission over DEC or DEP, including, among other things, the jurisdiction and authority of the Commission to do the following: (a) establish the retail rates on a bundled basis for DEC or DEP, (b) to impose regulatory accounting and reporting requirements, (c) impose service quality standards, (d) require DEC and DEP to engage separately in least cost integrated resource planning, and (e) issue certificates of public convenience and necessity for new generating and transmission resources.

4.10 Preventive Action Required. DEC, DEP, Duke Energy, and other Affiliates shall take all necessary actions to prevent the generating facilities owned or controlled by DEC or DEP from being considered by the FERC to be (a) part, or all, of a power pool, (b) sufficiently integrated to be one integrated system, or (c) otherwise fully subject to the FERC's jurisdiction, as the result of DEC's and DEP's participation in the JDA or any successor document.

4.11 Modification and Termination. DEC and DEP shall modify or terminate the JDA if at any time following consummation of the Merger the Commission finds, after notice and opportunity to be heard, that the JDA does not produce overall cost savings for, or is otherwise not in the best interests of, the North Carolina ratepayers of both DEC and DEP.

4.12 Hold Harmless Commitment. DEC and DEP shall take all actions as may be reasonably appropriate and necessary to hold North Carolina retail ratepayers harmless from any adverse rate impacts related to the JDA, including any trapped costs resulting from actions taken or required by the FERC with respect to the JDA.

SECTION V
TREATMENT OF AFFILIATE COSTS AND RATEMAKING

The following Regulatory Conditions are intended to ensure that the costs incurred by DEC, DEP, and Piedmont are properly incurred, accounted for, and directly charged, directly assigned, or allocated to their respective North Carolina retail operations and that only costs that produce benefits for DEC's and DEP's respective Retail Native Load Customers and Piedmont's Customers are included in DEC's, DEP's, and Piedmont's North Carolina cost of service for ratemaking purposes. The procedures set forth in Regulatory Condition 13.2 do not apply to an advance notice filed pursuant to this section.

5.1 Access to Books and Records. In accordance with North Carolina law, the Commission and the Public Staff shall continue to have access to the books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations.

5.2 Procurement or Provision of Goods and Services by DEC, DEP, or Piedmont from or to Affiliates or Nonpublic Utility Operations. Except as to transactions between and among DEC, DEP, and Piedmont pursuant to filed and approved service agreements and lists of services, and subject to additional provisions set forth in the Code of Conduct, DEC, DEP, and Piedmont shall take the following actions in connection with procuring goods and services for their respective utility operations from Affiliates or Nonpublic Utility Operations and providing goods and services to Affiliates or Nonpublic Utility Operations:

(a) DEC, DEP, and Piedmont each shall seek out and buy all goods and services from the lowest cost qualified provider of comparable goods and services, and shall have the burden of proving that any and all goods and services procured from their Utility Affiliates, Non-Utility Affiliates, and Nonpublic Utility Operations have been procured on terms and conditions comparable to the most favorable terms and conditions reasonably available in the relevant market, which shall include a showing that comparable goods or services could not have been procured at a lower price from qualified non-Affiliate sources or that DEC, DEP, or Piedmont could not have provided the services or goods for itself on the same basis at a lower cost. To this end, no less than every four years DEC, DEP, and Piedmont shall perform comprehensive non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services they receive from a Utility Affiliate, DEBS, another Non-Utility Affiliate, and a Nonpublic Utility Operation, including periodic testing of services being provided internally or obtained individually through outside providers. To the extent the Commission approves the procurement or provision of goods and services between or among DEC, DEP, Piedmont, and the Utility Affiliates, those goods and services may be provided at the supplier's Fully Distributed Cost.

(b) To the extent they are allowed to provide such goods and services, DEC, DEP, and Piedmont shall have the burden of proving that all goods and services provided by any one of them to Duke Energy, a Non-Utility Affiliate, any other Affiliate, or a Nonpublic Utility Operation have been provided on the terms and conditions comparable to the most favorable terms and conditions reasonably available in the market, which shall include a showing that such goods or services have been provided at the higher of cost or market price. To this end, no less than every four years DEC, DEP, and Piedmont shall perform comprehensive, non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services provided by either of them to a Utility Affiliate, DEBS, another Non-Utility Affiliate, any other Affiliate, and a Nonpublic Utility Operation.

(c) The periodic assessments required by subdivisions (a) and (b) of this subsection may take into consideration qualitative as well as quantitative factors. To the extent that comparable goods or services provided to DEC, DEP or Piedmont, or by DEC, DEP or Piedmont are not commercially available, this Regulatory Condition shall not apply.

5.3 Location of Core Utility Functions.

(a) This Regulatory Condition does not apply to Piedmont.

(b) Core utility functions are those functions related to Electric Services. The employees performing these core utility functions will be DEC or DEP employees and not service company employees of DEBS. Core utility functions do not include services of a governance or corporate type nature that have been traditionally provided by a service company, the specific services listed on the service company agreement services list for DEC and DEP filed with the Commission pursuant to Regulatory Condition 5.4(a), and roles that provide oversight to the enterprise and are not jurisdiction-specific (Excluded Functions).

(c) All core utility functions employees charging 50% or more of their time to DEC and DEP (separately or combined) should be in the payroll company of either DEC or DEP and not on the payroll of an Affiliate such as DEBS. If it is not readily determinable that a particular function is related to the provision of Electric Services or is an Excluded Function, the appropriate payroll company decision will be governed by whether 50% or more of the affected group or individual employee's time is charged to DEC or DEP.

(d) DEC and DEP shall annually review core utility function employees charging more than 50% of their time to DEC and DEP (separately or combined) over a six-month period from January 1 to June 30. If DEC and DEP determine that an employee performing a core utility function is direct charging 50% or more of his or her time to DEC or DEP, that employee should be transferred to DEC or DEP (if not already on the DEC or DEP payroll). Conversely, if a DEC or DEP employee is charging less than 50% of his or her time to DEC or DEP (separately or combined), and the employee is not otherwise charging the larger portion of their time to DEC or DEP, that employee should not be on the payroll of DEC or DEP.

(e) DEC and DEP shall annually file, at least 90 days prior to January 1, a report containing the results of the annual review and advance notice of any transfers from DEC to DEP to another entity based on direct charging results (Employee Payroll Transfer Report). New organizations and reorganizations will be reflected in the Employee Payroll Transfer Reports.

(f) If an employee transfer from DEC or DEP occurs during the middle of the year, and that transfer involves the transfer of a core utility function to the service company, the provisions of Regulatory Condition 10.1 will apply.

(g) DEC and DEP may file a list of employees at the higher levels of management (not including those levels of management that report directly to the Chief Executive Officer for Duke Energy) for their core utility functions that they propose to be DEBS employees in their annual filing.

5.4 Service Agreements and Lists of Services.
