(a) DEC, DEP, and Piedmont shall file pursuant to G.S. 62-153 final proposed service agreements that authorize the provision and receipt of non-power goods or services between and among DEC, DEP, Piedmont, their Affiliates or Nonpublic Utility Operations, the list(s) of goods and services that DEC, DEP, and Piedmont each intend to take from DEBS, the list(s) of goods and services DEC, DEP, and Piedmont intend to take from each other and the Utility Affiliates, and the basis for the determination of such list(s) and the elections of such services. All such lists that involve payment of fees or other compensation by DEC, DEP, or Piedmont shall require acceptance and authorization by the Commission, and shall be subject to any other Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) DEC, DEP, and Piedmont shall take goods and services from an Affiliate only in accordance with the filed service agreements and approved list(s) of services. DEC, DEP, and Piedmont shall file notice with the Commission in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-6, Sub 682A, respectively, at least 15 days prior to making any proposed changes to the service agreements or to the lists of services.

5.5 Charges for and Allocations of the Costs of Affiliate Transactions. To the maximum extent practicable, all costs of Affiliate transactions shall be directly charged. When not practicable, such costs shall be assigned in proportion to the direct charges. If such costs are of a nature that direct charging and direct assignment are not practicable, they shall be allocated in accordance with Commission-approved allocation methods. The following additional provisions shall apply:

(a) DEC, DEP, and Piedmont shall keep on file with the Commission a cost allocation manual (CAM) with respect to goods or services provided by DEC, DEP, or Piedmont, any Utility Affiliate, DEBS, any other Non-Utility Affiliate, Duke Energy, any other Affiliates, or any Nonpublic Utility Operation to DEC, DEP, or Piedmont. Piedmont will adopt DEC's and DEP's CAM.

(b) The CAM shall describe how all directly charged, direct assignment, and other costs for each provider of goods and services will be charged between and among DEC, DEP, Piedmont, their Utility Affiliates, Non-Utility Affiliates, Duke Energy, any other Affiliates, and the Nonpublic Utility Operations, and shall include a detailed review of the common costs to be allocated and the allocation factors to be used.

(c) The CAM shall be updated annually, and the revised CAM shall be filed with the Commission no later than March 31 of the year that the CAM is to be in effect. DEC, DEP, and Piedmont shall review the appropriateness of the allocation bases every two years, and the results of such review shall be filed with the Commission. Interim changes shall be made to the CAM, if and when necessary, and shall be filed with the Commission, in accordance with Regulatory Condition 5.6.

(d) No changes shall be made to the procedures for direct charging, direct assigning, or allocating the costs of Affiliate transactions or to the method of accounting for such transactions associated with goods and services (including Shared Services provided by DEBS) provided to or by Duke Energy, other Affiliates, and the Nonpublic Utility Operations until DEC, DEP, or Piedmont has given 15 days' notice to the Commission of the proposed changes, in accordance with Regulatory Condition 5.6.

5.6 Procedures Regarding Interim Changes to the CAM or Lists of Goods and Services for which 15 Days' Notice Is Required. With respect to interim changes to the CAM or changes to lists of goods and services, for which the 15 day notice to the Commission is required, the following procedures shall apply: the Public Staff shall file a response and make a recommendation as to how the Commission should proceed before the end of the notice period. If the Commission has not issued an order within 30 days of the end of the notice period, DEC, DEP, or Piedmont may proceed with the changes but shall be subject to any fully adjudicated Commission order on the matter. The provisions of Regulatory Condition 13.2 do not apply to advance notices filed pursuant to Regulatory Condition 5.5(c) and (d). Such advance notices shall be filed in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

5.7 Annual Reports of Affiliate Transactions. DEC, DEP, and Piedmont shall file annual reports of affiliated transactions with the Commission in a format to be prescribed by the Commission in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A. The report shall be filed on or before May 30 of each year, for activity through December 31 of the preceding year. DEC, DEP, Piedmont, and other parties may propose changes to the required affiliated transaction reporting requirements and submit them to the Commission for approval, also in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

5.8 Third-party Independent Audits of Affiliate Transactions.

(a) No less often than every two years, a third-party independent audit shall be conducted related to the affiliate transactions undertaken pursuant to Affiliate agreements filed in accordance with Regulatory Condition 5.4 and of DEC's, DEP's, and Piedmont's compliance with all conditions approved by the Commission concerning Affiliate transactions, including the propriety of the transfer pricing of goods and services between or among DEC, DEP, Piedmont, other Affiliates, and all of the Nonpublic Utility Operations.

(i) The first audit shall begin two years from the date of the close of the Merger. It shall include whether DEC's, DEP's, and Piedmont's transactions, services, and other Affiliate dealings pursuant to the regulated utility-to-regulated utility service agreement and any other utility to utility agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DEC, DEP, and Piedmont have operated in accordance with those conditions and Code of Conduct.

(ii) The second audit shall begin two years from the date of the Commission's order on the independent auditor's final report on the first audit or, if no such order is issued, two years from the date of such final report. It shall include whether DEC's, DEP's, and Piedmont's transactions, services, and other Affiliate dealings pursuant to the Service Company Utility Service Agreement and other Affiliate transactions other than transactions undertaken pursuant to regulated utility to regulated utility service agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DEC, DEP, and Piedmont have operated in accordance with those conditions and Code of Conduct.

(iii) Thereafter, independent audits shall occur every two years from the date of the Commission's order on the immediately preceding auditor's final report or, if no such order is issued, two years from the date of such final report. The subject matter of these audits shall alternate between the subject matters for the first and second independent audits. DEC, DEP, and Piedmont may request a change in the frequency of the audit reports in future years, subject to approval by the Commission.

(b) The following further requirements apply:

(i) The independent auditor shall have sufficient access to the books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and all of the Nonpublic Utility Operations to perform the audits.

(ii) For each audit, the Public Staff shall propose one or more independent auditor(s). DEC, DEP, Piedmont, and other parties shall have an opportunity to comment and propose additional auditors. Selection of the independent auditor shall be made by the Commission. Any party proposing an independent auditor shall file such auditor's audit proposal with the Commission.

(iii) The independent auditor shall be supervised in its duties by the Public Staff, and the auditor's reports shall be filed with the Commission.

5.9 Ongoing Review by Commission.

(a) The services rendered by DEC, DEP, and Piedmont to their Affiliates and Nonpublic Utility Operations and the services received by DEC, DEP, or Piedmont from their Affiliates and Nonpublic Utility Operations pursuant to the filed service agreements, the costs and benefits assigned or allocated in connection with such services, and the determination or calculation of the bases and factors utilized to assign or allocate such costs and benefits, as well as DEC's, DEP's, and Piedmont's compliance with the Commission-approved Code of Conduct and all Regulatory Conditions, shall remain subject to ongoing review. These agreements shall be subject to any Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) The service agreements, the CAM(s) and the assignments and allocations of costs pursuant thereto, the biannual allocation factor reviews required by Regulatory Condition 5.5(c), the list(s) and the goods and services provided pursuant thereto, and any changes to these documents shall be subject to ongoing Commission review, and Commission action if appropriate.

5.10 Future Orders. For the purposes of North Carolina retail accounting, reporting, and ratemaking, the Commission may, after appropriate notice and opportunity to be heard, issue future orders relating to DEC's, DEP's, or Piedmont's cost of service as the Commission may determine are necessary to ensure that DEC's, DEP's, and Piedmont's operations and transactions with their Affiliates and Nonpublic Utility Operations are consistent with the Regulatory Conditions and Code of Conduct, and with any other applicable decisions of the Commission.

5.11 Review by the FERC. Notwithstanding any of the provisions contained in these Regulatory Conditions, to the extent the allocations adopted by the Commission when compared to the allocations adopted by the other State commissions with ratemaking authority as to a Utility Affiliate of DEC, DEP, or Piedmont result in significant trapped costs related to "non-power goods or administrative or management services provided by an associate company organized specifically for the purpose of providing such goods or services to any public utility in the same holding company system," including DEC, DEP, and Piedmont, DEC, DEP, or Piedmont may request pursuant to Section 1275(b) of Subtitle F in Title XII of PUHCA 2005 that the FERC "review and authorize the allocation of the costs for such goods and services to the extent relevant to that associate company." Such review and authorization shall have whatever effect it is determined to have under the law. The quoted language in this Regulatory Condition is taken directly from Section 1275(b) of Subtitle F in Title XII of PUHCA 2005. The terms "associate company" and "holding company system" are defined in Sections 1262(2) and 1262(9), respectively, of Subtitle F in Title XII of PUHCA 2005 and have the same meanings for purposes of this condition.

5.12 Biannual Review of Certain Transactions by Internal Auditors. Transactions between DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations, transactions between or among DEC, DEP, and Piedmont, and other transactions between or among Affiliates if such transactions are reasonably likely to have a significant Effect on DEC's, DEP's, or Piedmont's Rates or Service, shall be reviewed at least biannually by Duke Energy's internal auditors. To the extent external audits of the transactions are conducted, DEC, DEP, and Piedmont shall make available such audits for review by the Public Staff and the Commission. DEC, DEP, and Piedmont also shall make available for review by the Public Staff and the Commission all workpapers relating to internal audits and all other internal audit workpapers, if any, related to affiliate transactions, and shall not oppose Public Staff and Commission requests to review relevant external audit workpapers. The requirement to make internal audit workpapers available for review is subject to the assertion of the attorney-client privilege by attorneys for DEC, DEP, and Piedmont. Any dispute as to whether the privilege applies in a particular instance shall be resolved by the Commission in accordance with its regulations and North Carolina law, including the rules of the North Carolina State Bar.

5.13 Notice of Service Company and Non-Utility Affiliates FERC Audits. At such time as DEC, DEP, Piedmont, Duke Energy, or DEBS receives notice from the FERC related to an audit of any Affiliate of DEC, DEP, or Piedmont, DEC, DEP, or Piedmont shall promptly file a notice the Commission that such an audit will be commencing. Any initial report of the FERC's audit team shall be provided to the Public Staff, and any final report shall be filed with the Commission in Docket Nos. E-7, Sub 1100E, E-2, Sub 1095E, and G-9, Sub 682E, respectively.

5.14 Acquisition Adjustment. Any acquisition adjustment that results from the Merger shall be excluded from DEC's, DEP's, and Piedmont's utility accounts and treated for regulatory accounting, reporting, and ratemaking purposes so that it does not affect DEC's or DEP's North Carolina retail rates and charges for Electric Services or Piedmont's North Carolina rates and charges for Natural Gas Services.

5.15 Non-Consummation of Merger. If the Merger is not consummated, neither the cost, nor the receipt, of any termination payment between Duke Energy and Piedmont shall be allocated to DEC, DEP, or Piedmont or recorded on their books. DEC's, DEP's, or Piedmont's Customers shall not otherwise bear any direct expenses or costs associated with a failed merger.

5.16 Protection from Commitments to Wholesale Customers.

(a) This Regulatory Condition does not apply to Piedmont.
(b) For North Carolina retail electric cost of service/ratemaking purposes, DEC's and DEP's respective electric system costs shall be assigned or allocated between and among retail and wholesale jurisdictions based on reasonable and appropriate cost

causation principles. For cost of service/ratemaking purposes, North Carolina retail ratepayers shall be held harmless from any cost assignment or allocation of costs resulting from agreements between DEC and the Catawba Joint Owners, and between either DEC or DEP and any of their wholesale customers.

(c) To the extent commitments to DEC's or DEP's wholesale customers relating to the 2012 merger of Duke Energy and Progress Energy are made by or imposed upon DEC or DEP, the effects of which (i) decrease the bulk power revenues that are assigned or allocated to DEC's or DEP's North Carolina retail operations or credited to DEC's or DEP's jurisdictional fuel expenses, (ii) increase DEC's or DEP's North Carolina retail cost of service, or (iii) increase DEC's or DEP's North Carolina retail fuel costs under reasonable cost assignment and allocation practices approved or allowed by the Commission, those effects shall not be recognized for North Carolina retail cost of service or ratemaking purposes.

(d) To the extent that commitments are made by or imposed upon DEC, DEP, Duke Energy, another Affiliate, or a Nonpublic Utility Operation relating to the Merger, either through an offer, a settlement, or as a result of a regulatory order, the effects of which serve to increase the North Carolina retail cost of service or North Carolina retail fuel costs under reasonable cost allocation practices, the effects of these commitments shall not be recognized for North Carolina retail ratemaking purposes.

5.17 Joint Owner-Specific Issues. Assignment or allocation of costs to the North Carolina retail jurisdiction shall not be adversely affected by the manner and amount of recovery of electric system costs from the Catawba Joint Owners as a result of agreements between DEC and the Catawba Joint Owners. This Regulatory Condition does not apply to Piedmont.

5.18 Inclusion of Cost Savings in Future Rate Proceedings. Neither DEC, DEP, Piedmont, Duke Energy, any other Affiliate, nor a Nonpublic Utility Operation shall assert that any interested party is prohibited from seeking the inclusion in future rate proceedings of cost savings that may be realized as a result of any business combination transaction impacting DEC, DEP, and Piedmont.

5.19 Reporting of Costs to Achieve. The North Carolina portion of costs to achieve any business combination transaction savings shall be reflected in DEC's and DEP's North Carolina ES-1 Reports and Piedmont's North Carolina GS-1 Report, as recorded on their books and records under generally accepted accounting principles. DEC, DEP, and Piedmont shall include as a footnote in their ES-1 and GS-1 Reports, as applicable, the Merger-related costs to achieve that were expensed during the relevant period.

5.20 Accounting for Costs to Achieve Related to Historical Events Involving DEP. All costs of Carolina Power and Light Company's merger with North Carolina Natural Gas Company, the Formation of Progress Energy, and Progress Energy's merger with Florida Progress Corporation shall be excluded from DEP's utility accounts, and all direct or indirect corporate cost increases, if any, attributable to those three events shall be excluded from utility costs for all purposes that affect DEP's regulated retail rates and charges. For purposes of this condition, the term "corporate cost increases" means costs in excess of the level DEP would have (a) incurred using prudent business judgment, or (b) had allocated to it, had these transactions not occurred. "Corporate cost increases" also includes any payments made under change-of-control agreements, salary continuation agreements, and other severance- or personnel-type arrangements that are reasonably attributable to these transactions. This Regulatory Condition does not apply to DEC and Piedmont.

5.21 Liabilities of Cinergy Corp. and Florida Progress Corporation.

(a) DEC's and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all liabilities of Cinergy Corp. and its subsidiaries, including those incurred prior to and after Duke Energy's acquisition of Cinergy Corp. in 2006. These liabilities include, but are not limited to, those associated with the following: (i) manufactured gas plant sites, (ii) asbestos claims, (iii) environmental compliance, (iv) pensions and other employee benefits, (v) decommissioning costs, and (vi) taxes.

(b) DEC's and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all liabilities of Florida Progress Corporation and its subsidiaries, including those incurred prior to and after Progress Energy's acquisition of Florida Progress Corporation in 2000. These liabilities include, but are not limited to, those associated with the following: (i) any outages at and repairs of Crystal River 3, (ii) manufactured gas plant sites, (iii) asbestos claims, (iv) environmental compliance, (v) pensions and other employee benefits, (vi) decommissioning costs, and (vii) taxes.

(c) DEC's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all current and prospective liabilities of DEP, and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all current and prospective liabilities of DEC.

5.22 Hold Harmless Commitment. DEC, DEP, Piedmont, Duke Energy, the other Affiliates, and all of the Nonpublic Utility Operations shall take all such actions as may be reasonably necessary and appropriate to hold North Carolina Customers harmless from the effects of the Merger, including rate increases or foregone opportunities for rate decreases, and other effects otherwise adversely impacting Customers.

5.23 Cost of Service Manuals. Within six months after the closing date of the Merger, DEC and DEP shall each file with the Commission revisions to its electric cost of service manual to reflect any changes to the cost of service determination process made necessary by the Merger, any subsequent alterations in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations, or other circumstances that necessitate such changes. These filings shall be made in Docket Nos. E-7, Sub 1100A, and E-2, Sub 1095A, respectively. This Regulatory Condition does not apply to Piedmont.

5.24 Direct Charging and Positive Time Reporting for Piedmont. For purposes of distributing the costs of services provided between and among Affiliates, Piedmont will use direct charging and positive time reporting to at least the same extent as DEC and DEP.

5.25 Piedmont Corporate Cost Allocations Among State Jurisdictions. Piedmont will notify the Commission and Public Staff of any plans to modify its corporate cost allocation procedures at least 90 days prior to implementation of the change.

5.26 Allocation of Fully-distributed Costs to Piedmont's Nonpublic Utility Operations. Piedmont shall direct charge or allocate fully distributed costs to its Nonpublic Utility Operations. The fully distributed costs shall include an overhead component for the cost of shared services provided to these non-regulated businesses and equity investments by Piedmont corporate, DEC, DEP, and DEBS employees.

SECTION VI
CODE OF CONDUCT

These Regulatory Conditions include a Code of Conduct in Appendix A. The Code of Conduct governs the relationships, activities and transactions between or among the public utility operations of DEC, DEP, Piedmont, Duke Energy, the Affiliates of DEC, DEP, and Piedmont, and the Nonpublic Utility Operations of DEC, DEP, and Piedmont.

6.1 Obligation to Comply with Code of Conduct. DEC, DEP, Piedmont, Duke Energy, the other Affiliates, and the Nonpublic Utility Operations shall be bound by the terms of the Code of Conduct set forth in Appendix A and as it may subsequently be amended.

SECTION VII
FINANCINGS

The following Regulatory Conditions are intended to ensure (a) that DEC's, DEP's, and Piedmont's capital structures and cost of capital are not adversely affected through their affiliation with Duke Energy, each other, and other Affiliates and (b) that DEC, DEP, and Piedmont have sufficient access to equity and debt capital at a reasonable cost to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their Customers.

These conditions do not supersede any orders or directives of the Commission regarding specific securities issuances by DEC, DEP, Piedmont, or Duke Energy. The approval of the Merger by the Commission does not restrict the Commission's right to review, and by order to adjust, DEC's, DEP's, or Piedmont's cost of capital for ratemaking purposes for the effect(s) of the securities-related transactions associated with the Merger.

7.1 Accounting for Equity Investment in Holding Company Subsidiaries. Duke Energy shall maintain its books and records so that any net equity investment in Cinergy Corp. and Progress Energy, their subsidiaries, or their successors, by Duke Energy or any Affiliates can be identified and made available on an ongoing basis. This information shall be provided to the Public Staff upon its request.

7.2 Accounting for Capital Structure Components and Cost Rates. Duke Energy , DEC, DEP, and Piedmont shall keep their respective accounting books and records in a manner that will allow all capital structure components and cost rates of the cost of capital to be identified easily and clearly for each entity on a separate basis. This information shall be provided to the Public Staff upon its request.

7.3 Accounting for Equity Investment in DEC, DEP, and Piedmont. DEC, DEP, and Piedmont shall keep their respective accounting books and records so that the amount of Duke Energy's equity investment in DEC, DEP, and Piedmont can be identified and made available upon request on an ongoing basis. This information shall be provided to the Public Staff upon request.

7.4 Reporting of Capital Contributions. As part of their Commission ES-1 and GS-1 Reports, DEC, DEP, and Piedmont shall include a schedule of any capital contribution(s) received from Duke Energy in the applicable calendar quarter.

7.5 Identification of Long-term Debt Issued by DEC, DEP, or Piedmont. DEC, DEP, and Piedmont shall each identify as clearly as possible long-term debt (of more than one year's duration) that they issue in connection with their regulated utility operations and capital requirements or to replace existing debt.

7.6 Procedures Regarding Proposed Financings.

(a) For all types of financings for which DEC, DEP, or Piedmont (or their subsidiaries) are the issuers of the respective securities, DEC, DEP, or Piedmont (or their subsidiaries) shall request approval from the Commission to the extent required by G.S. 62-160 through G.S. 62-169 and Commission Rule R1-16. Generally, the format of these filings should be consistent with past practices. A "shelf registration" approach (similar to Docket No. E-7, Sub 727) may be requested.

(b) For all types of financings by Duke Energy, other than short-term debt as described in G.S. 62-167, the following shall apply:

(i) On or before January 15 of each year, Duke Energy shall file with the Commission and serve on the Public Staff an advance confidential plan of all securities issuances that it anticipates to occur during that calendar year. The annual confidential plan shall include a description of all financings that Duke Energy reasonably believes may occur during the applicable calendar year. A description for each financing shall include the best estimates of the following: type of security; estimate of cost rate (e.g., interest rate for debt); amount of proceeds; brief description of the purpose/reason for issue; and amount of proceeds, if any, that may flow to DEC, DEP, or Piedmont.

(ii) If at any time material changes to the financing plans included in the filed plan appear likely, Duke Energy shall file a revised 30-day advance confidential plan that specifically addresses such changes with the Commission and serve such notice on the Public Staff.

(iii) At the time of the confidential plan filings identified above, Duke Energy shall also file a non-confidential notice that states that a confidential plan has been filed in compliance with this Regulatory Condition 7.6(b).

(iv) Duke Energy may proceed with equity issuances upon the filing of the confidential plan. However, actual debt issuances shall not occur until 30 days after the advance confidential plan or revised plans are filed. In the event it is not feasible for Duke Energy to file a revised advance confidential plan for a material change 30 days in advance, such plan shall be filed by a date that allows adequate time for review or a debt issuance shall be delayed to allow such review. Prior to the Commission's action on the confidential plan for the year in which the plan is filed, Duke Energy may issue securities authorized under the previous year's plan to the extent such securities were not issued during the previous year.

(v) Within 15 days after the filing of an advance confidential plan or revised plan, the Public Staff shall file a confidential report with the Commission with respect to whether any debt issuances require approval pursuant to G.S. 62-160 through G.S. 62-169 and Commission Rule R1-16 and shall recommend that the Commission issue an order deciding how to proceed. Duke Energy shall have seven days in which to respond to the report. If the Commission determines that any debt issuance requires approval, the Commission shall issue an order requiring the filing of an application and no such issuance shall occur until the Commission approves the application. If the Commission determines that no debt issuance requires approval, the Commission shall issue an order so ruling. At the end of the notice period, Duke Energy may proceed with the debt issuance, but shall be subject to any fully adjudicated Commission order on the matter; provided, however, that nothing herein shall affect the applicability of G.S. 62-170 or other similar provision to such securities or obligations.

(vi) On or before April 15 of each year, Duke Energy shall file with the Commission a report on all financings that were executed for the previous calendar year. The actual reports should include the same information as required above for the advance plans plus the actual issuance costs.

(c) If a filing with the Securities and Exchange Commission or other federal agency will be made in connection with a securities issuance, the notice shall describe such filing(s) and indicate the approximate date on which it would occur.

(d) Securities issuances or financings that are associated with a merger, acquisition, or other business combination shall be filed in conjunction with the information requirements and deadlines stated in Regulatory Conditions 9.1 and 9.2, and this Condition 7.6 shall not apply to such securities issuances or financings.

7.7 Money Pool Agreement. Subject to the limitations imposed in Regulatory Condition 8.5, DEC, DEP, and Piedmont may borrow through Duke Energy's "Utility Money Pool Agreement" (Utility MPA), provided as follows: (a) participation in the Utility MPA is limited to the parties to the Utility MPA filed with the Commission on December 1, 2011, in Docket Nos. E-7, Sub 986A, and E-2, Sub 998A, plus Piedmont and with the exception of the Progress Energy Service Company; and (b) the Utility MPA continues to provide that no loans through the Utility MPA will be made to, and no borrowings through the Utility MPA will be made by, Duke Energy, Progress Energy, and Cinergy Corp.

7.8 Borrowing Arrangements. Subject to the limitations imposed in Regulatory Condition 8.5, DEC, DEP, and Piedmont may borrow short-term funds through one or more joint external debt or credit arrangements (a Credit Facility), provided that the following conditions are met:

(a) No borrowing by DEC, DEP, or Piedmont under a Credit Facility shall exceed one year in duration, absent Commission approval;
(b) No Credit Facility shall include, as a borrower, any party other than Duke Energy, DEC, DEP, Duke Indiana, Duke Kentucky, DEF, Duke Ohio, and Piedmont; and
(c) DEC's, DEP's, and Piedmont's participation in any Credit Facility shall in no way cause either of them to guarantee, assume liability for, or provide collateral for any debt or credit other than its own.

7.9 Long-Term Debt Fund Restrictions. DEC, DEP, and Piedmont shall acquire their respective long-term debt funds through the financial markets, and shall neither borrow from, nor lend to, on a long-term basis, Duke Energy or any of the other Affiliates. To the extent that either DEC, DEP, or Piedmont borrows on short-term or long-term bases in the financial markets and is able to obtain a debt rating, its debt shall be rated under its own name.

SECTION VIII
CORPORATE GOVERNANCE/RING FENCING

The following Regulatory Conditions are intended to ensure the continued viability of DEC, DEP, and Piedmont and to insulate and protect DEC, DEP, and their Retail Native Load Customers and Piedmont and its Customers from the business and financial risks of Duke Energy and the Affiliates within the Duke Energy holding company system, including the protection of utility assets from liabilities of Affiliates.

8.1 Investment Grade Debt Rating. DEC, DEP, and Piedmont shall manage their respective businesses so as to maintain an investment grade debt rating on all of their rated debt issuances with all of the debt rating agencies on all of their rated debt issuances. If DEC's, DEP's, or Piedmont's debt rating falls to the lowest level still considered investment grade at the time, DEC, DEP, or Piedmont shall file written notice to the Commission and the Public Staff within five (5) days of such change and an explanation as to why the downgrade occurred. Within 45 days of such notice, DEC, DEP, or Piedmont shall provide the Commission and the Public Staff with a specific plan for maintaining and improving its debt rating. The Commission, after notice and hearing, may then take whatever action it deems necessary consistent with North Carolina law to protect the interests of DEC's or DEP's Retail Native Load Customers and Piedmont's Customers in the continuation of adequate and reliable service at just and reasonable rates.

8.2 Protection Against Debt Downgrade. To the extent the cost rates of any of DEC's, DEP's, or Piedmont's long-term debt (more than one year) or short-term debt (one year or less) are or have been adversely affected through a ratings downgrade attributable to the Merger, a replacement cost rate to remove the effect shall be used for all purposes affecting any of DEC's North Carolina retail rates and charges, DEP's North Carolina retail rates and charges, and Piedmont's North Carolina rates and charges. This replacement cost rate shall be applicable to all financings, refundings, and refinancings taking place following the change in ratings. This procedure shall be effective through DEC's, DEP's and Piedmont's next respective general rate cases. As part of DEC's, DEP's and Piedmont's next respective general rate cases, any future procedure relating to a replacement cost calculation will be determined. This Regulatory Condition does not indicate a preference for a specific debt rating or preferred stock rating for DEC, DEP, or Piedmont on current or prospective bases.

8.3 Distributions from DEC, DEP, and Piedmont to Holding Company. DEC, DEP, and Piedmont shall limit cumulative distributions paid to Duke Energy subsequent to the Merger to (a) the amount of Retained Earnings on the day prior to the closure of the Merger, plus (b) any future earnings recorded by DEC, DEP, and Piedmont subsequent to the Merger.

8.4 Debt Ratio Restrictions. To the extent any of Duke Energy's external debt or credit arrangements contain covenants restricting the ratio of debt to total capitalization on a consolidated basis to a maximum percentage of debt, Duke Energy shall ensure that the capital structures of both DEC, DEP, and Piedmont individually meet those restrictions.

8.5 Limitation on Continued Participation in Utility Money Pool Agreement and Other Joint Debt and Credit Arrangements with Affiliates. DEC, DEP, and Piedmont may participate in the Utility MPA and any other authorized joint debt or credit arrangement as provided in Regulatory Conditions 7.7 and 7.8 only to the extent such participation is beneficial to DEC's and DEP's respective Retail Native Load Customers and Piedmont's Customers and does not negatively affect DEC's, DEP's, or Piedmont's ability to continue to provide adequate and reliable service at just and reasonable rates.

8.6 Notice of Level of Non-Utility Investment by Holding Company System. In order to enable the Commission to determine whether the cumulative investment by Duke Energy in assets, ventures, or entities other than regulated utilities is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service so as to warrant Commission action (pursuant to Regulatory Condition 8.8 or other applicable authority) to protect DEC's or DEP's Retail Native Load Customers or Piedmont's Customers, Duke Energy shall notify the Commission within 90 days following the end of any fiscal year for which Duke Energy reports to the Securities and Exchange Commission assets in its operations other than regulated utilities that are in excess of 22% of its consolidated total assets. The following procedures shall apply to such a notice:

(a) Any interested party may file comments within 45 days of the filing of Duke Energy's notice.

(b) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall make a recommendation as to how the Commission should proceed. If the Commission determines that the percentage of total assets invested in Duke Energy's its operations other than regulated utilities is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service so as to warrant action by the Commission to protect DEC's and DEP's Retail Native Load Customers and Piedmont's Customers, the Commission shall issue an order setting the matter for further consideration. If the Commission determines that the percentage threshold being exceeded does not warrant action by the Commission, the Commission shall issue an order so ruling.

8.7 Notice by Holding Company of Certain Investments. Duke Energy shall file a notice with the Commission subsequent to Board approval and as soon as practicable following any public announcement of any investment in a regulated utility or a non-regulated business that represents five (5) percent or more of Duke Energy's book capitalization.

8.8 Ongoing Review of Effect of Holding Company Structure. The operation of DEC, DEP, and Piedmont under a holding company structure shall continue to be subject to Commission review. To the extent the Commission has authority under North Carolina law, it may order modifications to the structure or operations of Duke Energy, DEBS, another Affiliate, or a Nonpublic Utility Operation, and may take whatever action it deems necessary in the interest of Retail Native Load Customers and Piedmont's Customers to protect the economic viability of DEC, DEP, and Piedmont, including the protection of DEC's, DEP's, and Piedmont's public utility assets from liabilities of Affiliates.

8.9 Investment by DEC, DEP, or Piedmont in Non-regulated Utility Assets and Non-utility Business Ventures. Neither DEC, DEP, nor Piedmont shall invest in a non-regulated utility asset or any non-utility business venture exceeding $50 million in purchase price or gross book value to DEC, DEP, or Piedmont unless it provides 30 days' advance notice. Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition. Purchases of assets, including land that will be held with a definite plan for future use in providing Electric Services in DEC's or DEP's franchise area or Natural Gas Services in Piedmont's franchise area, shall be excluded from this advance notice requirement.

8.10 Investment by Holding Company in Exempt Wholesale Generators. By April 15 of each year, Duke Energy shall provide to the Commission and the Public Staff a report summarizing Duke Energy's investment in exempt wholesale generators (EWGs) and foreign utility companies (FUCOs) in relation to its level of consolidated retained earnings and consolidated total capitalization at the end of the preceding year. Exempt wholesale generator and foreign utility company are defined in Section 1262(6) of Subtitle F in Title XII of PUHCA 2005 and have the same meanings for purposes of this condition.

8.11 Notice by DEC, DEP, or Piedmont of Default or Bankruptcy of Affiliate. If an Affiliate of DEC, DEP, or Piedmont experiences a default on an obligation that is material to Duke Energy or files for bankruptcy, and such bankruptcy is material to Duke Energy, DEC, DEP, or Piedmont shall notify the Commission in advance, if possible, or as soon as possible, but not later than ten days from such event.

8.12 Annual Report on Corporate Governance. No later than March 31 of each year, DEC, DEP, and Piedmont shall file a report including the following:

(a) A complete, detailed organizational chart (i) identifying DEC, DEP, Piedmont, and each Duke Energy financial reporting segment, and (ii) stating the business purpose of each Duke Energy financial reporting segment. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.

(b) A list of all Duke Energy financial reporting segment that are considered to constitute non-regulated investments and a statement of each segment's total capitalization and the percentage it represents of Duke Energy's non-regulated investments and total investments. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.

(c) An assessment of the risks that each unregulated Duke Energy financial reporting segment could pose to DEC, DEP, or Piedmont based upon current business activities of those affiliates and any contemplated significant changes to those activities.

(d) A description of DEC's, DEP's, Piedmont's and each significant Affiliate's actual capital structure. In addition, describe Duke Energy's, DEC's, DEP's, and Piedmont's respective capital structures and plans for achieving such goals.

(e) A list of all protective measures (other than those provided for by the Regulatory Conditions adopted in Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682) in effect between DEC, DEP, Piedmont, and any of their Affiliates, and a description of the goal of each measure and how it achieves that goal, such as mitigation of DEC's, DEP's, and Piedmont's exposure in the event of a bankruptcy proceeding involving any Affiliate(s).

(f) A list of corporate executive officers and other key personnel that are shared between DEC, DEP, Piedmont, and any Affiliate, along with a description of each person's position(s) with, and duties and responsibilities to each entity.

(g) A calculation of Duke Energy's total book and market capitalization as of December 31 of the preceding year for common equity, preferred stock, and debt.

SECTION IX
FUTURE MERGERS AND ACQUISITIONS

The following Regulatory Conditions are intended to ensure that the Commission receives sufficient notice to exercise its lawful authority over proposed mergers, acquisitions, and other business combinations involving Duke Energy, DEC, DEP, Piedmont, other Affiliates, or the Nonpublic Utility Operations. The advance notice provisions set forth in Regulatory Condition 13.2 do not apply to these conditions.

9.1 Mergers and Acquisitions by or Affecting DEC, DEP, or Piedmont. For any proposed merger, acquisition, or other business combination by DEC, DEP, or Piedmont that would have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, DEC, DEP, or Piedmont shall file in a new Sub docket an application for approval pursuant to G S. 62-111(a) at least 180 days before the proposed closing date for such merger, acquisition, or other business combination.

9.2 Mergers and Acquisitions Believed Not to Have an Effect on DEC's, DEP's, or Piedmont's Rates or Service. For any proposed merger, acquisition, or other business combination that is believed not to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, but which involves Duke Energy, other Affiliates, or the Nonpublic Utility Operations and which has a transaction value exceeding $1.5 billion, the following shall apply:

(a) Advance notification shall be filed with the Commission in a new Sub docket by the merging entities at least 90 days prior to the proposed closing date for such proposed merger, acquisition or other business combination. The advance notification is intended to provide the Commission an opportunity to determine whether the proposed merger, acquisition, or other business combination is reasonably likely to affect DEC, DEP, or Piedmont so as to require approval pursuant to G S. 62-111(a). The notification shall contain sufficient information to enable the Commission to make such a determination. If the Commission determines that such approval is required, the 180-day advance filing requirement in Regulatory Condition 9.1 shall not apply.

(b) Any interested party may file comments within 45 days of the filing of the advance notification.

(c) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall recommend that the Commission issue an order deciding how to proceed. If the Commission determines that the merger, acquisition, or other business combination requires approval pursuant to G.S. 62-111(a), the Commission shall issue an order requiring the filing of an application, and no closing can occur until and unless the Commission approves the proposed merger, acquisition, or business combination. If the Commission determines that the merger, acquisition, or other business combination does not require approval pursuant to G.S. 62-111(a), the Commission shall issue an order so ruling. At the end of the notice period, if no order has been issued, Duke Energy, any other Affiliate, or the Nonpublic Utility Operation may proceed with the merger, acquisition, or other business combination but shall be subject to any fully-adjudicated Commission order on the matter.

SECTION X
STRUCTURE/ORGANIZATION

The following Regulatory Conditions are intended to ensure that the Commission receives adequate notice of, and opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Duke Energy, DEC, DEP, Piedmont, and other Affiliates, and Nonpublic Utility operations as they may affect Customers.

10.1 Transfer of Services, Functions, Departments, Rights, Assets, or Liabilities. DEC, DEP, and Piedmont shall file notice with the Commission 30 days prior to the initial transfer or any subsequent transfer of any services, functions, departments, rights, obligations, assets, or liabilities from DEC, DEP, or Piedmont to DEBS that (a) involves services, functions, departments, rights, obligations, assets, or liabilities other than those of a governance or corporate type nature that traditionally have been provided by a service company or (b) potentially would have a significant effect on DEC's, DEP's, or Piedmont's public utility operations. The provisions of Regulatory Condition 13.2 apply to an advance notice filed pursuant to this Regulatory Condition.

10.2 Notice and Consultation with Public Staff Regarding Proposed Structural and Organizational Changes. Upon request, DEC, DEP, and Piedmont shall meet and consult with, and provide requested relevant data to, the Public Staff regarding plans for significant changes in DEC's, DEP's, Piedmont's or Duke Energy's organization, structure (including RTO developments), and activities; the expected or potential impact of such changes on Customer rates, operations and service; and proposals for assuring that such plans do not adversely affect DEC's or DEP's Retail Native Load Customers or Piedmont's Customers. To the extent that proposed significant changes are planned for the organization, structure, or activities of an Affiliate or Nonpublic Utility Operation and such proposed changes are likely to have an adverse impact on DEC's, DEP's, or Piedmont's Customers, then DEC's, DEP's, and Piedmont's plans and proposals for assuring that those plans do not adversely affect their Customers must be included in these meetings. DEC, DEP, and Piedmont shall inform the Public Staff promptly of any such events and changes.

SECTION XI
SERVICE QUALITY

The following Regulatory Conditions are intended to ensure that DEC, DEP, and Piedmont continue to implement and further their commitment to providing superior public utility service by meeting recognized service quality indices and implementing the best practices of each other and their Utility Affiliates, to the extent reasonably practicable.

11.1 Overall Service Quality. Upon consummation of the Merger, DEC, DEP, and Piedmont each shall continue their commitment to providing superior public utility service and shall maintain the overall reliability of Electric Services and Natural Gas Services at levels no less than the overall levels it has achieved in the past decade.

11.2 Best Practices. DEC, DEP, and Piedmont shall make every reasonable effort to incorporate each other's best practices into its own practices to the extent practicable.

11.3 Quarterly Reliability Reports. DEC and DEP shall each provide quarterly service reliability reports to the Public Staff on the following measures: System Average Interruption Duration Index (SAIDI) and System Average Interruption Frequency Index (SAIFI).

11.4 Notice of NERC Audit. This Regulatory Condition does not apply to Piedmont. At such time as either DEC or DEP receives notice that the North American Electric Reliability Corporation (NERC) or the SERC Reliability Corporation will be conducting a non-routine compliance audit with respect to DEC's or DEP's compliance with mandatory reliability standards, DEC or DEP shall notify the Public Staff.

11.5 Right-of-Way Maintenance Expenditures (DEC and DEP). DEC and DEP shall budget and expend sufficient funds to trim and maintain their lower voltage line rights-of-way and their distribution rights-of-way in a manner consistent with their internal right-of-way clearance practices and Commission Rule R8-26. In addition, DEC and DEP shall track annually, on a major category basis, departmental or division budget requests, approved budgets and actual expenditures for right-of-way maintenance.

11.6 Right-of-Way Maintenance Expenditures (Piedmont). Piedmont shall budget and expend sufficient funds to maintain its pipeline rights-of-way so as to allow ready access by personnel and vehicles for the purpose of responding to pipeline damage, conducting leak and corrosion surveys, performing maintenance activities, and ensuring system integrity, safety, and reliability.

11.7 Right-of-Way Clearance Practices (DEC and DEP). DEC and DEP shall each provide a copy of their internal right-of-way clearance practices to the Public Staff, and shall promptly notify the Public Staff of any significant changes or modifications to the practices or maintenance schedules.

11.8 Right-of-Way Clearance Practices (Piedmont). Piedmont shall provide a copy of its Operating and Maintenance Manual to the Public Staff and shall promptly notify the Public Staff in writing of any substantive changes to Section 9, "Right-of-Way Management Program."

11.9 Meetings with Public Staff.

(a) DEC, DEP, and Piedmont shall each meet annually with the Public Staff to discuss service quality initiatives and results, including (i) ways to monitor and improve service quality, (ii) right-of-way maintenance practices, budgets, and actual expenditures, and (iii) plans that could have an effect on customer service, such as changes to call center operations.

(b) DEC, DEP, and Piedmont shall each meet with the Public Staff at least annually to discuss potential new tariffs, programs, and services that enable its customers to appropriately manage their energy bills based on the varied needs of their customers.

11.10 Customer Access to Service Representatives and Other Services. DEC, DEP, and Piedmont shall continue to have knowledgeable and experienced customer service representatives available 24 hours a day to respond to service outage calls and during normal business hours to handle all types of customer inquiries. DEC, DEP, and Piedmont shall also maintain up-to-date and user-friendly online services and automated telephone service

24 hours a day to perform routine customer interactions and to provide general billing and customer information.

11.11 Customer Surveys. DEC, DEP, and Piedmont shall continue to survey their customers regarding their satisfaction with public utility service and shall incorporate this information into their processes, programs, and services.

SECTION XII
TAX MATTERS

The following Regulatory Conditions are intended to ensure that DEC's, DEP's, and Piedmont's North Carolina Customers do not bear any additional tax costs as a result of the Merger and receive an appropriate share of any tax benefits associated with the service company Affiliates.

12.1 Costs under Tax Sharing Agreements. Under any tax sharing agreement, DEC, DEP, and Piedmont shall not seek to recover from North Carolina Customers any tax costs that exceed DEC's, DEP's, or Piedmont's tax liability calculated as if it were a stand-alone, taxable entity for tax purposes.

12.2 Tax Benefits Associated with Service Companies. The appropriate portion of any income tax benefits associated with DEBS shall accrue to the North Carolina retail operations of DEC, DEP, and Piedmont, respectively, for regulatory accounting, reporting, and ratemaking purposes.

SECTION XIII
PROCEDURES

The following Regulatory Conditions are intended to apply to all filings made pursuant to these Regulatory Conditions unless otherwise expressly provided by, Commission order, rule, or statute.

13.1 Filings that Do Not Involve Advance Notice. Regulatory Condition filings that are not subject to Regulatory Condition 13.2 shall be made in sub dockets of Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682, as follows:

(a) Filings related to affiliate matters required by Regulatory Conditions 5.4, 5.5, 5.6, 5.7, and 5.23 and the filing permitted by Regulatory Condition 5.3 shall be made by DEC, DEP, and Piedmont in Subs 1100A, 1095A, and 682A, respectively;

(b) Filings related to financings required by Regulatory Condition 7.6, and the filings required by Regulatory Conditions 8.6, 8.7, 8.10, 8.11 and 8.12 shall be made by DEC, DEP, and Piedmont in Subs 1100B, 1095B, and 682B, respectively;

(c) Files related to compliance as required by Regulatory Conditions~~ 3.1(d) and~~ 14.4 and filings required by Sections III.A.2(k), III.A.3(e), (f), and (g), III.D.5, and III.D.8 of the Code of Conduct shall be made by DEC, DEP, and Piedmont in Subs 1100C, 1095C, and 682C, respectively;

(d) Filings related to the independent audits required by Regulatory Condition 5.8 shall be made in Subs 1100D, 1095D, and 682D, respectively; and

(e) Filings related to orders and filings with the FERC, as required by Regulatory Condition 3.1(d), 3.10 and 5.13 shall be made by DEC, DEP, and Piedmont in Subs 1100E, 1095E, and 682E, respectively.

13.2 Advance Notice Filings. Advance notices filed pursuant to Regulatory Conditions ~~3.1(e)~~, 3.3(b), ~~3.7(e), 3.9(e),~~ 4.2, ~~5.3,~~ 8.9, and 10.1 shall be assigned a new, separate Sub docket. Such a filing shall identify the condition and notice period involved and state whether other regulatory approvals are required and shall be in the format of a pleading, with a caption, a title, allegations of the activities to be undertaken, and a verification. Advance notices may be filed under seal if necessary. The following additional procedures apply:

(a) Advance notices of activities to be undertaken shall not be filed until sufficient details have been decided upon to allow for meaningful discovery as to the proposed activities.

(b) The Chief Clerk shall distribute a copy of advance notice filings to each Commissioner and to appropriate members of the Commission Staff and Public Staff.

(c) DEC, DEC, or Piedmont shall serve such advance notices on each party to Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682, respectively, that has filed a request to receive them with the Commission within 30 days of the issuance of an order approving the Merger in this docket. These parties may participate in the advance notice proceedings without petitioning to intervene. Other interested persons shall be required to follow the Commission's usual intervention procedures.

(d) To effectuate this Regulatory Condition, DEC, DEP, or Piedmont shall serve pertinent information on all parties at the time it serves the advance notice. During the advance notice period, a free exchange of information is encouraged, and parties may request additional relevant information. If DEC, DEP, or Piedmont objects to a discovery request, DEC, DEP, or Piedmont and the requesting party shall try to resolve the matter. If the parties are unable to resolve the matter, DEC, DEP, or Piedmont may file a motion for a protective order with the Commission.

(e) The Public Staff shall investigate and file a response with the Commission no later than 15 days before the notice period expires. Any other interested party may also file a response or objection within 15 days before the notice period expires. DEC, DEP, or Piedmont may file a reply to the response(s).

(f) The basis for any objection to the activities to be undertaken shall be stated with specificity. The objection shall allege grounds for a hearing, if such is desired.

(g) If neither the Public Staff nor any other party files an objection to the activities within 15 days before the notice period expires, no Commission order shall be issued, and the Sub docket in which the advance notice was filed may be closed.

(h) If the Public Staff or any other party files a timely objection to the activities to be undertaken by DEC, DEP, or Piedmont, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than two weeks after the objection is filed, and shall recommend that the Commission issue an order deciding how to proceed as to the objection. The Commission reserves the right to extend an advance notice period by order should the Commission need additional time to deliberate or investigate any issue. At the end of the notice period, if no objection has been filed by the Public Staff and no order, whether procedural or substantive, has been issued, DEC, DEP, Piedmont, Duke Energy, any other Affiliate, or the Nonpublic Utility Operation may execute the proposed agreement, proceed with the activity to be undertaken, or both, but shall be subject to any fully-adjudicated Commission order on the matter.

(i) If the Commission schedules a hearing on an objection, the party filing the objection shall bear the burden of proof at the hearing.

(j) The precedential effect of advance notice proceedings, like most issues of res judicata, will be decided on a fact-specific basis.

(k) If some other Commission filing or Commission approval is required by statute, notice pursuant to a Regulatory Condition alone does not satisfy the statutory requirement.

SECTION XIV
COMPLIANCE WITH CONDITIONS AND CODE OF CONDUCT

The following Regulatory Conditions are intended to ensure that Duke Energy, DEC, DEP, Piedmont, and all other Affiliates establish and maintain the structures and processes necessary to fulfill the commitments expressed in all of the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner.

14.1 Ensuring Compliance with Regulatory Conditions and Code of Conduct. Duke Energy, DEC, DEP, Piedmont, and all other Affiliates shall devote sufficient resources into the creation, monitoring, and ongoing improvement of effective internal compliance programs to ensure compliance with all Regulatory Conditions and the DEC/DEP/Piedmont Code of Conduct, and shall take a proactive approach toward correcting any violations and reporting them to the Commission. This effort shall include the implementation of systems and protocols for monitoring, identifying, and correcting possible violations, a management culture that encourages compliance among all personnel, and the tools and training sufficient to enable employees to comply with Commission requirements.

14.2 Designation of Chief Compliance Officer. DEC, DEP, and Piedmont shall designate a chief compliance officer who will be responsible for compliance with the Regulatory Conditions and Code of Conduct. This person's name and contact information must be posted on DEC's, DEP's, and Piedmont's Internet Websites.

14.3 Annual Training. DEC, DEP, and Piedmont shall provide annual training on the requirements and standards contained within the Regulatory Conditions and Code of Conduct to all of their employees (including service company employees) whose duties in any way may be affected by such requirements and standards. New employees must receive such training within the first 60 days of their employment. Each employee who has taken the training must certify electronically or in writing that s/he has completed the training.

14.4 Report of Violations. If DEC, DEP, or Piedmont discover that a violation of their requirements or standards contained within the Regulatory Conditions and Code of Conduct has occurred then DEC, DEP, or Piedmont shall file a statement with the Commission in Docket Nos. E-7, Sub 1100C, E-2, Sub 1095C, and G-9, Sub 682C, respectively, describing the circumstances leading to that violation of DEC's, DEP's, or Piedmont's requirements or standards, as contained within the Regulatory Conditions and Code of Conduct, and the mitigating and other steps taken to address the current or any future potential violation.

SECTION XV
PROCEDURES FOR DETERMINING LONG-TERM SOURCES OF PIPELINE CAPACITY AND SUPPLY

The following Regulatory Conditions are intended to ensure the continued practices of DEC, DEP, and Piedmont for determining long-term sources of pipeline capacity and supply.

15.1 Cost-benefit Analysis. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by DEC and DEP on the basis of the benefits and costs of such source(s) specific to their respective electric customers. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by Piedmont on the basis of the specific benefits and costs of such source(s) specific to its natural gas customers, including electric power generating customers.

15.2 Ownership and Control of Contracts. Piedmont shall retain title, ownership, and management of all gas contracts necessary to ensure the provision of reliable Natural Gas Services consistent with Piedmont's best cost gas and capacity procurement methodology.

CODE OF CONDUCT
GOVERNING THE RELATIONSHIPS, ACTIVITIES, AND TRANSACTIONS BETWEEN AND AMONG THE PUBLIC UTILITY OPERATIONS OF DEC, THE PUBLIC UTILITY OPERATIONS OF DEP, THE PUBLIC UTILITY OPERATIONS OF PIEDMONT, DUKE ENERGY CORPORATION, OTHER AFFILIATES, AND THE NONPUBLIC UTILITY OPERATIONS OF DEC, DEP, AND PIEDMONT

I. DEFINITIONS

For the purposes of this Code of Conduct, the terms listed below shall have the following definitions:

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of this Code of Conduct, Duke Energy and any business entity controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Commission: The North Carolina Utilities Commission.

Confidential Systems Operation Information or CSOI: Nonpublic information that pertains to Electric Services provided by DEC or DEP, including but not limited to information concerning electric generation, transmission, distribution, or sales, and nonpublic information that pertains to Natural Gas Services provided by Piedmont, including but not limited to information concerning transportation, storage, distribution, gas supply, or other similar information.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

Customer Information: Non-public information or data specific to a Customer or a group of Customers, including, but not limited to, electricity consumption, natural gas consumption, load profile, billing history, or credit history that is or has been obtained or compiled by DEC, DEP, or Piedmont in connection with the supplying of Electric Services or Natural Gas Services to that Customer or group of Customers.

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress. LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, which is the current holding company parent of DEC, DEP, and Piedmont, and any successor company.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Fuel and Purchased Power Supply Services: All fuel for generating electric power and purchased power obtained by DEC or DEP from sources other than DEC or DEP for the purpose of providing Electric Services.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding; (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Non-affiliated Gas Marketer: An entity, not affiliated with DEC, DEP, or Piedmont, engaged in the unregulated sale, arrangement, brokering or management of gas supply, pipeline capacity, or gas storage.

Nonpublic Utility Operations: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Personnel: An employee or other representative of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation, who is involved in fulfilling the business purpose of that entity.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP and is a subsidiary of Duke Energy, and any successors.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Regulatory Conditions: The conditions imposed by the Commission in connection with or related to the Merger.

Shared Services: The services that meet the requirements of the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, or subsequent orders of the Commission and that the Commission has explicitly authorized DEC, DEP, and Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

Shipper: A Non-affiliated Gas Marketer, a municipal gas customer, or an end-user of gas.

Utility Affiliates: The regulated public utility operations of Duke Energy Indiana, LLC (Duke Indiana), Duke Energy Kentucky, Inc. (Duke Kentucky), Florida Power Corporation, d/b/a Progress Energy Florida, LLC (DEF), and Duke Energy Ohio, Inc. (Duke Ohio).

II. GENERAL

This Code of Conduct establishes the minimum guidelines and rules that apply to the relationships, transactions, and activities involving the public utility operations of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, and Piedmont, to the extent such relationships, activities, and transactions affect the public utility operations of DEC, DEP, and Piedmont in their respective service areas. DEC, DEP, Piedmont, and the other Affiliates are bound by this Code of Conduct pursuant to Regulatory Condition 6.1 approved by the Commission in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682. This Code of Conduct is subject to modification by the Commission as the public interest may require, including, but not limited to, addressing changes in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations; changes in the structure of the electric industry or natural gas industry; or other changes that warrant modification of this Code.

DEC, DEP, or Piedmont may seek a waiver of any aspect of this Code of Conduct by filing a request with the Commission showing that circumstances in a particular case justify such a waiver.

III. STANDARDS OF CONDUCT

A. Independence and Information Sharing

1. Separation - DEC, DEP, Piedmont, Duke Energy, and the other Affiliates shall operate independently of each other and in physically separate locations to the maximum extent

practicable; however, to the extent that the Commission has approved or accepted a service company-to-utility or utility-to-utility service agreement or list, DEC, DEP, Piedmont, Duke Energy, and the other Affiliates may operate as described in the agreement or list on file at the Commission. DEC, DEP, Piedmont, Duke Energy, and each of the other Affiliates shall maintain separate books and records. Each of DEC's, DEP's, and Piedmont's Nonpublic Utility Operations shall maintain separate records from those of DEC's, DEP's, and Piedmont's public utility operations to ensure appropriate cost allocations and any arm's-length-transaction requirements.

2. Disclosure of Customer Information:

(a) Upon request, and subject to the restrictions and conditions contained herein, DEC, DEP, and Piedmont may provide Customer Information to Duke Energy or another Affiliate under the same terms and conditions that apply to the provision of such information to non-Affiliates. In addition, DEC and DEP may provide Customer Information to their respective Nonpublic Utility Operations under the same terms and conditions that apply to the provision of such information to non-Affiliates.

(b) Except as provided in Section III.A.2.(f), Customer Information shall not be disclosed to any Affiliate or non-affiliated third party without the Customer's consent, and then only to the extent specified by the Customer. Consent to disclosure of Customer Information to Affiliates of DEC, DEP, and Piedmont or to DEC's or DEP's Nonpublic Utility Operations may be obtained by means of written, electronic, or recorded verbal authorization upon providing the Customer with the information set forth in Attachment A; provided, however, that DEC, DEP, and Piedmont retain such authorization for verification purposes for as long as the authorization remains in effect. Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

(c) If the Customer allows or directs DEC, DEP, or Piedmont to provide Customer Information to Duke Energy, another Affiliate, or to DEC's or DEP's Nonpublic Utility Operations, then DEC, DEP, or Piedmont shall ask if the Customer would like the Customer Information to be provided to one or more non-Affiliates. If the Customer directs DEC, DEP, or Piedmont to provide the Customer Information to one or more non-Affiliates, the Customer Information shall be disclosed to all entities designated by the Customer contemporaneously and in the same manner.

(d) Section III.A.2.shall be permanently posted on DEC's, DEP's and Piedmont's website(s).

(e) No DEC, DEP, or Piedmont employee who is transferred to Duke Energy or another Affiliate shall be permitted to copy or otherwise compile any Customer Information for use by such entity except as authorized by the Customer pursuant to a signed Data Disclosure Authorization. DEC, DEP, and Piedmont shall not transfer any employee to Duke Energy or another Affiliate for the purpose of disclosing or providing Customer Information to such entity.

(f) Notwithstanding the prohibitions in this Section III.A.2.:

(i) DEC, DEP, and Piedmont may disclose Customer Information to DEBS, any other Affiliate, or a non-affiliated third party without Customer consent to the extent necessary for the Affiliate or non-affiliated third party to provide goods or services to DEC, DEP, or Piedmont and upon the written agreement of the other Affiliate or non-affiliated third-party to protect the confidentiality of such Customer Information. To the extent the Commission approves a list of services to be provided and taken pursuant to one or more utility-to-utility service agreements, then Customer Information may be disclosed pursuant to the foregoing exception to the extent necessary for such services to be performed.

(ii) DEC and DEP may disclose Customer Information to their Nonpublic Utility Operations without Customer consent to the extent necessary for the Nonpublic Utility Operations to provide goods and services to DEC or DEP and upon the written agreement of the Nonpublic Utility Operations to protect the confidentiality of such Customer Information.

(iii) DEC, DEP, and Piedmont may disclose Customer Information to a state or federal regulatory agency or court of competent jurisdiction if required in writing to do so by the agency or court.

(g) DEC, DEP, and Piedmont shall take appropriate steps to store Customer Information in such a manner as to limit access to those persons permitted to receive it and shall require all persons with access to such information to protect its confidentiality.

(h) DEC, DEP, and Piedmont shall establish guidelines for its employees and representatives to follow with regard to complying with this Section III.A.2.

(i) No DEBS employee may use Customer Information to market or sell any product or service to DEC's, DEP's, or Piedmont's Customers, except in support of a Commission-approved rate schedule or program or a marketing effort managed and supervised directly by DEC, DEP, or Piedmont.

(j) DEBS employees with access to Customer Information must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the Customer Information by employees of DEBS that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC and DEP.

(k) Should any inappropriate disclosure of DEC, DEP, or Piedmont Customer Information occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission describing the circumstances of the disclosure, the Customer information disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

3. The disclosure of Confidential Systems Operation Information of DEC, DEP, and Piedmont shall be governed as follows:

(a) Such CSOI shall not be disclosed by DEC, DEP, or Piedmont to an Affiliate or a Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates contemporaneously and in the same manner. Disclosure to non-Affiliates is not required under the following circumstances:

(i) The CSOI is provided to employees of DEC or DEP for the purpose of implementing, and operating pursuant to, the JDA in accordance with the Regulatory Conditions approved in Docket Nos. E-7, Sub 986, and E-2, Sub 998.

(ii) The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.

(iii) A state or federal regulatory agency or court of competent jurisdiction over the disclosure of the CSOI requires the disclosure.

(iv) The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.

(v) The CSOI is provided to employees of DEC's, DEP's, or Piedmont's Utility Affiliates for the purpose of sharing best practices and otherwise improving the provision of regulated utility service.

(vi) The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.

(vii) Disclosure is otherwise essential to enable DEC or DEP to provide Electric Services to their Customers or for Piedmont to provide Natural Gas Services to its Customers.

(viii) Disclosure of the CSOI is necessary for compliance with the Sarbanes-Oxley Act of 2002.

(b) Any CSOI disclosed pursuant Section III.A.3.(a)(i)-(viii) shall be disclosed only to employees that need the CSOI for the purposes covered by those exceptions and in as limited a manner as possible. The employees receiving such CSOI must be prohibited from acting as conduits to pass the CSOI to any Affiliate(s) and must have explicitly agreed to protect the confidentiality of such CSOI.

(c) For disclosures pursuant to Section III.A.3.(a)(vii) and (viii), DEC, DEP, and Piedmont shall include in their annual affiliated transaction reports the following information:

(i) The types of CSOI disclosed and the name(s) of the Affiliate(s) to which it is being, or has been, disclosed;

(ii) The reasons for the disclosure; and

(iii) Whether the disclosure is intended to be a one-time occurrence or an ongoing process.

To the extent a disclosure subject to the reporting requirement is intended to be ongoing, only the initial disclosure and a description of any processes governing subsequent disclosures need to be reported.

(d) DEC, DEP, Piedmont, and DEBS employees with access to CSOI must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the CSOI by employees that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC, DEP, and Piedmont.

(e) Should the handling or disclosure of CSOI by DEBS, or another Affiliate or Nonpublic Utility Operation, or its respective employees, result in (i) a violation of DEC's or DEP's FERC Statement of Policy and Code of Conduct (FERC Code), 18 CFR 358 - Standards of Conduct for Transmission Providers (Transmission Standards), or any other relevant FERC standards or codes of conduct, (ii) the posting of such data on an Open Access Same-Time Information System (OASIS) or other Internet website, or (iii) other public disclosure of the data, DEC or DEP shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, and E-2, Sub 1095C, respectively, describing the circumstances leading to such violation, posting, or other public disclosure describing the circumstances leading to such violation, posting, or other public disclosure, any data required to be posted or otherwise publicly disclosed, and the steps taken to mitigate the effects of the current and prevent any future potential violation, posting, or other public disclosure.

(f) Should any inappropriate disclosure of CSOI occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, E-2, Sub 1095C, or G-9, Sub 682C, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(g) Unless publicly noticed and generally available, should the FERC Code, the Transmission Standards, or any other relevant FERC standards or codes of conduct be eliminated, amended, superseded, or otherwise replaced, DEC and DEP shall file a letter with the Commission in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, describing such action within 60 days of the action, along with a copy of any amended or replacement document.

B. Nondiscrimination

1. DEC's, DEP's, and Piedmont's employees and representatives shall not unduly discriminate against non-Affiliated entities.

2. In responding to requests for Electric Services, Natural Gas Services, or both, DEC, DEP, and Piedmont shall not provide any preference to Duke Energy, another Affiliate, or a Nonpublic Utility Operation, or to any customers of such an entity, as compared to non-Affiliates or their customers. Moreover, neither DEC, DEP, Piedmont, Duke Energy, nor any other Affiliates shall represent to any person or entity that Duke Energy, another Affiliate, or a Nonpublic Utility Operation will receive any such preference.

3. DEC, DEP, and Piedmont shall apply the provisions of their respective tariffs equally to Duke Energy, the other Affiliates, the Nonpublic Utility Operations, and non-Affiliates.

4. DEC, DEP, and Piedmont shall process all similar requests for Electric Services, Natural Gas Services, or both, in the same timely manner, whether requested on behalf of Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity.

5. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, or another Affiliate shall indicate, represent, or otherwise give the appearance to another party that Duke Energy or another Affiliate speaks on behalf of DEC, DEP, or Piedmont; provided however, that this prohibition shall not apply to employees of DEBS providing Shared Services or to employees of another Affiliate to the extent explicitly provided for in an affiliate agreement that has been accepted by the Commission. In addition, no personnel or representatives of a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that they speak on behalf of DEC's or DEP's regulated public utility operations.

6. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that any advantage to that party with regard to Electric Services or Natural Gas Services exists as the result of that party dealing with Duke Energy, another Affiliate, or a Nonpublic Utility Operation, as compared with a non-Affiliate.

7. DEC, DEP, and Piedmont shall not condition or otherwise tie the provision or terms of any Electric Services or Natural Gas Services to the purchasing of any goods or services from, or the engagement in business of any kind with, Duke Energy, another Affiliate, or a Nonpublic Utility Operation.

8. When any employee or representative of DEC or DEP receives a request for information from or provides information to a Customer about goods or services available from Duke Energy, another Affiliate, or a Nonpublic Utility Operation, the employee or representative shall advise the Customer that such goods or services may also be available from non-Affiliated suppliers.

9. Disclosure of Customer Information to Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity shall be governed by Section III.A.2. of this Code of Conduct.

10. Unless otherwise directed by order of the Commission, electric generation shall not receive a priority of use from Piedmont that would supersede or diminish Piedmont's provision of service to its human needs firm residential and commercial customers.

11. Piedmont shall file an annual report with the Commission summarizing all requests or inquiries for Natural Gas Services made by a non-utility generator, Piedmont's response to the request, and the status of the inquiry.

C. **Marketing**

1. The public utility operations of DEC, DEP, and Piedmont may engage in joint sales, joint sales calls, joint proposals, or joint advertising (a joint marketing arrangement) with their Affiliates and with their Nonpublic Utility Operations, subject to compliance with other provisions of this Code of Conduct and any conditions or restrictions that the Commission may hereafter establish. DEC, DEP, and Piedmont shall not otherwise engage in such joint activities without making such opportunities available to comparable third parties.

2. Neither Duke Energy nor any of the other Affiliates shall use the names or logos of DEC, DEP, or Piedmont in any communications without the following disclaimer:

(a) "[Duke Energy Corporation/Affiliate) is not the same company as [DEC/DEP/Piedmont], and [Duke Energy Corporation/Affiliate) has separate management and separate employees";
(b) "[Duke Energy Corporation/Affiliate] is not regulated by the North Carolina Utilities Commission or in any way sanctioned by the Commission";
(c) "Purchasers of products or services from [Duke Energy Corporation/Affiliate] will receive no preference or special treatment from [DEC/DEP/Piedmont]"; and
(d) "A customer does not have to buy products or services from [Duke Energy Corporation/Affiliate] in order to continue to receive the same safe and reliable electric service from [DEC/DEP] or natural gas service from Piedmont."

3. Nonpublic Utility Operations may not use the names or logos of DEC, DEP, or Piedmont in communications without the following disclaimer:

"[Name of product or service being offered by Nonpublic Utility Operation] is not part of the regulated services offered by [DEC/DEP/Piedmont] and is not in any way sanctioned by the North Carolina Utilities Commission."

4. In addition, DEC's and DEP's Nonpublic Utility Operations may not use the names or logos of DEC or DEP in any communications without the following disclaimers:

(a) "Purchasers of [name of product or service being offered by Nonpublic Utility Operation] from [Nonpublic Utility Operation] will receive no preference or special treatment from [DEC/DEP]"; and
(b) "A customer does not have to buy this product or service from [Nonpublic Utility Operation] in order to continue to receive the same safe and reliable electric service from [DEC/DEP]."

The required disclaimers in this Section III.C.4. must be sized and displayed in a way that is commensurate with the name and logo so that the disclaimer is at least the larger of one-half the size of the type that first displays the name and logo or the predominant type used in the communication.

D. Transfers of Goods and Services, Transfer Pricing, and Cost Allocation

1. Cross-subsidies involving DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations are prohibited.

2. All costs incurred by personnel or representatives of DEC, DEP, or Piedmont for or on behalf of Duke Energy, other Affiliates, or the Nonpublic Utility Operations shall be charged to the entity responsible for the costs.

3. The following conditions shall apply as a general guideline to the transfer prices charged for goods and services, including the use or transfer of personnel, exchanged between and among DEC, DEP, or Piedmont, and Duke Energy, the other Non-Utility Affiliates, and the Nonpublic Utility Operations, to the extent such prices affect DEC's, DEP's, or Piedmont's operations or costs of utility service:

(a) Except as otherwise provided for in this Section III.D., for untariffed goods and services provided by DEC, DEP, or Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer price paid to DEC, DEP, or Piedmont shall be set at the higher of Market Value or DEC's, DEP's, or Piedmont's Fully Distributed Cost.

(b) Except as otherwise provided for in this Section III.D., for goods and services provided, directly or indirectly, by Duke Energy, a Non-Utility Affiliate other than DEBS, or a Nonpublic Utility Operation to DEC, DEP, or Piedmont, the transfer price(s) charged by Duke Energy, the Non-Utility Affiliate, and the Nonpublic Utility Operation to DEC, DEP, or Piedmont shall be set at the lower of Market Value or Duke Energy's, the Non-Utility Affiliate's, or the Nonpublic Utility Operation's Fully Distributed Cost(s). If DEC, DEP, or Piedmont do not engage in competitive solicitation and instead obtain the goods or services from Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, DEC, DEP, and Piedmont shall implement adequate processes to comply with this Code provision and related Regulatory Conditions and ensure that in each case DEC's, DEP's, and Piedmont's Customers receive service at the lowest reasonable cost, unless otherwise directed by order of the Commission. For goods and services provided by DEBS to DEC, DEP, Piedmont, and Utility Affiliates, the transfer price charged shall be set at DEBS' Fully Distributed Cost.

(c) Tariffed goods and services provided by DEC, DEP, and Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services under the applicable tariff.

(d) With the exception of gas supply transactions, transportation transactions, or both, between DEC and Piedmont or DEP and Piedmont, untariffed non-power, non-generation, or non-fuel goods and services provided by DEC, DEP, or Piedmont to DEC, DEP, Piedmont, or the Utility Affiliates or by the Utility Affiliates to DEC, DEP, or Piedmont, shall be transferred at the supplier's Fully Distributed Cost, unless otherwise directed by order of the Commission.

(e) All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.

(f) All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC, DEP, and Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.

(g) All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its Order Approving Stipulation, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.

4. To the extent that DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations receive Shared Services from DEBS (or its successor), these Shared Services may be jointly provided to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations on a fully distributed cost basis, provided that the taking of such Shared Services by DEC, DEP, and Piedmont is cost beneficial on a service-by-service (e.g., accounting management, human resources management, legal services, tax administration, public affairs) basis to DEC, DEP, and Piedmont. Charges for such Shared Services shall be allocated in accordance with the cost allocation manual filed with the Commission pursuant to Regulatory Condition 5.5, subject to any revisions or other adjustments that may be found appropriate by the Commission on an ongoing basis.

5. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of goods and services (excluding the purchase of electricity or ancillary services

intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement), if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas, if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's, and Piedmont's affiliated transaction reports filed with the Commission.

6. All permitted transactions between DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be recorded and accounted for in accordance with the cost allocation manual required to be filed with the Commission pursuant to Regulatory Condition 5.5 and with Affiliate agreements accepted by the Commission or otherwise processed in accordance with North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

7. Costs that DEC, DEP, and Piedmont incur in assembling, compiling, preparing, or furnishing requested Customer Information or CSOI for or to Duke Energy, other Affiliates, Nonpublic Utility Operations, or non-Affiliates (other than the Customer or the Customer's designated representative or agent) shall be recovered from the requesting party pursuant to Section III.D.3. of this Code of Conduct.

8. Any technology or trade secrets developed, obtained, or held by DEC, DEP, or Piedmont in the conduct of regulated operations shall not be transferred to Duke Energy, another Affiliate, or a Nonpublic Utility Operation without just compensation and the filing of 60-days prior notification to the Commission. DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other and may request a waiver of this requirement from the Commission with respect to such transfers to Duke Energy, a Utility Affiliate, a Non-Utility Affiliate, or a Nonpublic Utility Operation. In no case, however, shall the notice period requested be less than 20 business days.

9. DEC, DEP, and Piedmont shall receive compensation from Duke Energy, other Affiliates, and the Nonpublic Utility Operations for intangible benefits, if appropriate.

E. Regulatory Oversight

1. The requirements regarding affiliate transactions set forth in G.S. 62-153 shall continue to apply to all transactions between DEC, DEP, Piedmont, Duke Energy, and the other Affiliates.

2. The books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be open for examination by the Commission, its staff, and the Public Staff as provided in G.S. 62-34, 62-37, and 62-51.

3. If Piedmont supplies any Natural Gas Services, with the exception of Natural Gas Services provided pursuant to Commission-approved contracts or service agreements, used by either DEC or DEP to generate electricity, DEC or DEP, as applicable, shall file a report with the

Commission in its annual fuel and fuel-related cost recovery case demonstrating that the purchase was prudent and the price was reasonable.

4. To the extent North Carolina law, the orders and rules of the Commission, and the Regulatory Conditions permit Duke Energy, an Affiliate, or a Nonpublic Utility Operation to supply DEC, DEP, or Piedmont with Natural Gas Services or other Fuel and Purchased Power Supply Services used by DEC or DEP to provide Electric Services to Customers, and to the extent such Natural Gas Services or other Fuel and Purchased Power Supply Services are supplied, DEC or DEP, as applicable, shall demonstrate in its annual fuel adjustment clause proceeding that each such acquisition was prudent and the price was reasonable.

F. Utility Billing Format

To the extent any bill issued by DEC, DEP, Piedmont, Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party includes charges to Customers for Electric Services or Natural Gas Services and non-Electric Services, non-Natural Gas Services, or any combination of such services, from Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party, the charges for Electric Services and Natural Gas Services shall be separated from the charges for any other services included on the bill. Each such bill shall contain language stating that the Customer's Electric Services and Natural Gas Services will not be terminated for failure to pay for any other services billed.

G. Complaint Procedure

1. DEC, DEP, and Piedmont shall establish procedures to resolve potential complaints that arise due to the relationship of DEC, DEP, and Piedmont with Duke Energy, the other Affiliates, and the Nonpublic Utility Operations. The complaint procedures shall provide for the following:

(a) Verbal and written complaints shall be referred to a designated representative of DEC, DEP, or Piedmont.
(b) The designated representative shall provide written notification to the complainant within 15 days that the complaint has been received.
(c) DEC, DEP, or Piedmont shall investigate the complaint and communicate the results or status of the investigation to the complainant within 60 days of receiving the complaint.
(d) DEC, DEP, and Piedmont shall each maintain a log of complaints and related records and permit inspection of documents (other than those protected by the attorney/client privilege) by the Commission, its staff, or the Public Staff.

2. Notwithstanding the provisions of Section III.G.1., any complaints received through Duke Energy's EthicsLine (or successor), which is a confidential mechanism available to the employees of the Duke Energy holding company system, shall be handled in accordance with procedures established for the EthicsLine.

3. These complaint procedures do not affect a complainant's right to file a formal complaint with the Commission or otherwise communicate with the Commission or the Public Staff regarding a complaint.

H. Natural Gas/Electricity Competition

DEC, DEP and Piedmont shall continue to compete against all energy providers, including each other, to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DEC or DEP and Piedmont shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DEC, DEP and Piedmont shall maintain the following minimum standards:

1. Piedmont will make all reasonable efforts to extend the availability of natural gas to as many new customers as possible.

2. In determining where and when to extend the availability of natural gas, Piedmont will at a minimum apply the same standards and criteria that it applied prior to the Merger.

3. In determining where and when to extend the availability of natural gas, Piedmont will make decisions in accordance with the best interests of Piedmont, rather than the best interest of DEC or DEP.

4. To the extent that either the natural gas industry or the electricity industry is further restructured, DEC, DEP, and Piedmont will undertake to maintain the full level of competition intended by this Code of Conduct subject to the right of DEC, DEP, Piedmont or the Public Staff to seek relief from or modifications to this requirement by the Commission.

CODE OF CONDUCT
ATTACHMENT A

DEC/DEP/PIEDMONT CUSTOMER INFORMATION DISCLOSURE AUTHORIZATION

For Disclosure to Affiliates:

DEC's/DEP's/Piedmont's Affiliates offer products and services that are separate from the regulated services provided by DEC/DEP/Piedmont. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP/Piedmont to provide any data associated with the Customer account(s) residing in any DEC/DEP/Piedmont files, systems or databases **[or specify specific types of data]** to the following Affiliate(s) ________________. DEC/DEP/Piedmont will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

For Disclosure to Nonpublic Utility Operations:

DEC/DEP offers optional, market-based products and services that are separate from the regulated services provided by DEC/DEP. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP to use any data associated with the Customer account(s) residing in any DEC/DEP files, systems or databases **[or specify types of data]** for the purpose of offering and providing energy-related products or services to the Customer. DEC/DEP will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

DOCKET NO. G-9, SUB 682

REGULATORY CONDITIONS AND CODE OF CONDUCT

TABLE OF CONTENTS

ELECTRIC – MISCELLANEOUS

DOCKET NO. E-2, SUB 1095
DOCKET NO. E-7, SUB 1100
DOCKET NO. G-9, SUB 682

REGULATORY CONDITIONS

These Regulatory Conditions set forth commitments made by Duke Energy Corporation (Duke Energy) and its public utility subsidiaries, Duke Energy Carolinas, LLC (DEC), Duke Energy Progress, LLC (DEP), and Piedmont Natural Gas Company, Inc. (Piedmont), as a precondition of approval of the application by Duke Energy and Piedmont pursuant to G.S. 62-111(a) for authority to engage in their proposed business combination transaction. These Regulatory Conditions, which become effective only upon closing of the Merger, shall apply jointly and severally to Duke Energy, DEC, DEP, and Piedmont, and shall be interpreted in the manner that most effectively fulfills the Commission's purposes as set forth in the preamble to Section II of these Regulatory Conditions.

SECTION I
DEFINITIONS

For the purposes of these Regulatory Conditions, capitalized terms shall have the meanings set forth below. If a capitalized term is not defined below, it shall have the meaning provided elsewhere in this document or as commonly used in the electric or natural gas utility industry.

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of these Regulatory Conditions, Duke Energy and each business entity so controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Affiliate Contract: (a) Any contract or agreement between or among DEC, DEP, and Piedmont or between or among DEC, DEP, or Piedmont and any other Affiliate or proposed Affiliate, and (b) any contract or agreement between such other Affiliate or proposed Affiliate and another Affiliate that is related to the same subject matter and is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service. Such contracts and agreements include, but are not limited to, service, operating, interchange, pooling, wholesale power sales agreements and agreements involving financings and asset transfers and sales, and the Joint Dispatch Agreement.

Catawba Joint Owners: The North Carolina Electric Membership Corporation, North Carolina Municipal Power Agency No. 1, and Piedmont Municipal Power Agency. For purposes of these Regulatory Conditions, DEC is not included in the definition of Catawba Joint Owners.

Code of Conduct: The minimum guidelines and rules approved by the Commission that govern the relationships, activities, and transactions between and among the public utility operations of DEC, DEP, and Piedmont, Duke Energy, the other Affiliates of DEC, DEP, and Piedmont, and the Nonpublic Utility Operations of DEC, DEP, and Piedmont, as those guidelines and rules may be amended by the Commission from time to time.

ELECTRIC – MISCELLANEOUS

Commission: The North Carolina Utilities Commission.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress. LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, which is the current holding company parent of DEC, DEP, and Piedmont, and any successor company.

Effect on DEC's, DEP's, or Piedmont's Rates or Service: When used with reference to the consequences to DEC, DEP, or Piedmont of actions or transactions involving an Affiliate or Nonpublic Utility Operation, this phrase has the same meaning that it has when the Commission interprets G.S. 62-3(23)(c) with respect to the affiliation covered therein.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Federal Law: Any federal statute or legislation, or any regulation, order, decision, rule or requirement promulgated or issued by an agency or department of the federal government.

FERC: The Federal Energy Regulatory Commission.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by or from DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding, (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by or from DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Native Load Priority: Power supply service being provided or electricity otherwise being sold with a priority of service equivalent to that planned for and provided by DEC or DEP to their respective Retail Native Load Customers.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Non-Native Load Sales: DEC's or DEP's sales of energy at wholesale, not including transactions between DEC and DEP pursuant to the JDA and not including service to customers served at Native Load Priority.

Nonpublic Utility Operations: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP and is a subsidiary of Duke Energy, and any successors:

Public Staff: The Public Staff of the North Carolina Utilities Commission.

PUHCA 2005: The Public Utility Holding Company Act of 2005.

Purchased Power Resources: Purchases of energy by DEC or DEP at wholesale from sellers other than each other, the contract terms for which are one year or longer.

Retail Native Load Customers: The captive retail Customers of DEC and DEP in North Carolina for which DEC and DEP have the obligation under North Carolina law to engage in long-term planning and to supply all Electric Services, including installing or contracting for capacity, if needed, to reliably meet their electricity needs.

Retained Earnings: The retained earnings currently required to be listed on page 112, line 11, of the pre-Merger DEC FERC Form 1, the pre-Merger DEP FERC Form 1, and page 112, line 11 of the pre-Merger Piedmont FERC Form 2.

Shared Services: The services that meet the requirements of these Regulatory Conditions and that the Commission has explicitly authorized DEC, DEP, and Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and these Regulatory Conditions.

Utility Affiliates: The regulated public utility operations of Duke Energy Indiana, LLC (Duke Indiana), Duke Energy Kentucky, Inc. (Duke Kentucky), Florida Power Corporation, d/b/a Duke Energy Florida, LLC (DEF), and Duke Energy Ohio, Inc. (Duke Ohio).

SECTION II
AUTHORITY, SCOPE, AND EFFECT

These Regulatory Conditions are based on the general power and authority granted to the Commission in Chapter 62 of the North Carolina General Statutes to control and supervise the public utilities of the State. The Regulatory Conditions address specific exercises of the Commission's authority and provide mechanisms that enable the Commission to determine the extent of its authority and jurisdiction over proposed activities of, and transactions involving, DEC, DEP, Piedmont, Duke Energy, other Affiliates or Nonpublic Utility Operations. The purpose of these Regulatory Conditions is to ensure that DEC's and DEP's Retail Native Load Customers and Piedmont's Customers (a) are protected from any known adverse effects from the Merger, (b) are protected as much as possible from potential costs and risks resulting from the Merger, and (c) receive sufficient known and expected benefits to offset any potential costs and risks resulting from the Merger. These Regulatory Conditions are not intended to impose legal obligations on entities in which Duke Energy does not directly or indirectly have a controlling voting interest, or to affect any rights of any party to participate in subsequent proceedings.

2.1 Commission Authority Over Certain Transactions. DEC, DEP, Piedmont, Duke Energy, and other Affiliates acknowledge that the Commission has authority over intra-company transactions as provided for in Chapter 62.

2.2 Limited Right to Challenge Commission Orders. Other than as provided for, or explicitly prohibited, in these conditions, Duke Energy, DEC, DEP, Piedmont, and other Affiliates retain the right to challenge the lawfulness of any Commission order issued pursuant to or relating to these Regulatory Conditions on the basis that such order exceeds the Commission's statutory authority under North Carolina or Federal law or the other grounds listed in G.S. 62-94(b).

2.3 Waiver Request. DEC, DEP, Piedmont, Duke Energy, and other Affiliates may seek a waiver of any aspect of these Regulatory Conditions in a particular case or circumstance for good cause shown by filing a such request with the Commission.

SECTION III
PROTECTION OF RIGHTS

The following Regulatory Conditions are intended to protect the jurisdiction of the Commission as a result of the Merger, including risks related to agreements and transactions between and among DEC, DEP, Piedmont, and any of their Affiliates; financing transactions involving Duke Energy, DEC, DEP, or Piedmont, and any other Affiliate; and the ownership, use, and disposition of assets by DEC, DEP, or Piedmont.

3.1 Transactions between DEC, DEP, Piedmont, and Other Affiliates; Notice of Affiliate Contracts to be Filed with the FERC.

(a) DEC, DEP, and Piedmont shall not engage in any transactions with Affiliates or proposed Affiliates without first filing the proposed contracts or agreements memorializing such transactions pursuant to G.S. 62-153 and taking such actions and obtaining from the Commission such determinations and authorizations as may be required under North Carolina law. DEC, DEP, or Piedmont, as applicable, shall submit each proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract to the Public Staff for informal review at least 15 days before filing it with the Commission. If DEC, DEP, or Piedmont and the Public Staff agree within the 15-day period that the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract does not require any action by the Commission, DEC, DEP, or Piedmont may proceed to execute the agreement subject to later disapproval and voidance by the Commission pursuant to G.S. 62-153(a). Otherwise, the proposed Affiliate Contract or substantive amendment to an existing Affiliate Contract shall not be executed until the agreement has been filed and payment of compensation has been approved by the Commission pursuant to G.S. 62-153(b).

(b) In addition to the requirements of Regulatory Condition 3.1(a), for any contract requiring filing with FERC, DEC, DEP, or Piedmont shall file, for informational purposes, a copy of a proposed Affiliate Contract, a contract with a proposed Affiliate, or an amendment to an existing Affiliate Contract with the Commission at least 15 days prior to filing with FERC.

3.2 Financing Transactions Involving DEC, DEP, Piedmont, Duke Energy, or Other Affiliates.

(a) With respect to any financing transaction between or among DEC, DEP, or Piedmont and Duke Energy or any one or more other Affiliates, any contract memorializing such transaction shall expressly provide that DEC, DEP, or Piedmont shall not enter into any such financing transaction except in accordance with North Carolina law and the rules, regulations and orders of the Commission promulgated thereunder; and

(b) With respect to any financing transaction (i) between or among any of the Affiliates if such contracts are reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, or (ii) between or among DEC, DEP, and Piedmont or between DEC, DEP, or Piedmont and any other Affiliate, any contract memorializing such transaction shall expressly provide that DEC, DEP, or Piedmont shall not include the effects of any capital structure or debt or equity costs associated with such financing transaction in its North Carolina retail cost of service or rates except as allowed by the Commission.

3.3 Ownership and Control of Assets Used by DEC, DEP, and Piedmont to Supply Electric Power or Natural Gas Services to North Carolina Customers; Transfer of Ownership or Control.

(a) DEC, DEP, and Piedmont shall own and control all assets or portions of assets used for the generation, transmission, and distribution of electric power or the transmission, storage, or distribution of natural gas to their respective Customers (with the exception of assets solely used to provide power purchased by DEC or DEP at wholesale).

(b) With respect to the transfer by DEC, DEP, or Piedmont to any entity, affiliated or not, of the control of, operational responsibility for, or ownership of generation, transmission, or distribution assets with a gross book value in excess of ten million dollars ($10 million), DEC, DEP, or Piedmont shall provide written notice to the Commission at least 30 days in advance of the proposed transfer. The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.

(c) Any contract memorializing such a transfer shall include the following language:

(i) DEC, DEP, or Piedmont may not commit to or carry out the transfer except in accordance with applicable law, and the rules, regulations and orders of the Commission promulgated thereunder; and

(ii) DEC, DEP, or Piedmont may not include in its North Carolina cost of service or rates the value of the transfer, except as allowed by the Commission in accordance with North Carolina law.

3.4 Purchases and Sales of Electricity and Natural Gas between DEC, DEP, Piedmont, and Duke Energy, Other Affiliates, or Nonpublic Utility Operations. Subject to additional restrictions set forth in the Code of Conduct, neither DEC, DEP, nor Piedmont shall purchase electricity (or related ancillary services) or natural gas from Duke Energy, another

Affiliate, or a Nonpublic Utility Operation under circumstances where the total all-in costs, including generation, transmission, ancillary costs, distribution, taxes and fees, and delivery point costs, incurred (whether directly or through allocation), based on information known, anticipated, or reasonably available at the time of purchase, exceed fair Market Value for comparable service, nor shall DEC, DEP, or Piedmont sell electricity (or related ancillary services) or natural gas to Duke Energy, another Affiliate, or a Nonpublic Utility Operation for less than fair Market Value; provided, however, that such restrictions shall not apply to emergency transactions. This condition shall not apply to transactions between DEC and DEP that are governed by the JDA.

3.5 Least Cost Integrated Resource Planning and Resource Adequacy. This Regulatory Condition does not apply to Piedmont. DEC and DEP shall retain the obligation to pursue least cost integrated resource planning for their respective Retail Native Load Customers and remain responsible for their own resource adequacy subject to Commission oversight in accordance with North Carolina law. DEC and DEP shall determine the appropriate self-built or purchased power resources to be used to provide future generating capacity and energy to their respective Retail Native Load Customers, including the siting considered appropriate for such resources, on the basis of the benefits and costs of such siting and resources to those Retail Native Load Customers.

3.6 Priority of Service.

(a) This Regulatory Condition does not apply to Piedmont.
(b) The planning and joint dispatch of DEC's system generation and Purchased Power Resources shall ensure that DEC's Retail Native Load Customers receive the benefits of that generation and those resources, including priority of service, to meet their electricity needs consistent with the JDA. DEC shall continue to serve its Retail Native Load Customers with the lowest-cost power it can reasonably generate or obtain as Purchase Power Resources before making power available for sales to customers that are not entitled to the same level of priority as Retail Native Load Customers.
(c) The planning and joint dispatch of DEP's system generation and Purchase Power Resources shall ensure that DEP's Retail Native Load Customers receive the benefits of that generation and those resources, including priority of service, to meet their electricity needs consistent with the JDA. DEP shall continue to serve its Retail Native Load Customers with the lowest-cost power it can reasonably generate or obtain as Purchase Power Resources before making power available for sales to customers that are not entitled to the same level of priority as Retail Native Load Customers.

3.7 Wholesale Power Contracts Granting Native Load Priority.

(a) This Regulatory Condition does not apply to Piedmont.
(b) DEC is not required to notify the Commission when it enters into wholesale power contracts that grant Native Load Priority to the following historically served customers: the City of Concord, North Carolina; the City of Kings Mountain, North Carolina; the Town of Dallas, North Carolina; the Town of Forest City, North

Carolina; Lockhart Power Company; the Public Works Commission of the Town of Due West, South Carolina; the Town of Prosperity, South Carolina; the City of Greenwood, South Carolina; the Town of Highlands; North Carolina; Western Carolina University (WCU); the electric membership cooperatives (EMCs) within DEC's control area; North Carolina Municipal Power Agency No. 1; Piedmont Municipal Power Agency; New River Light & Power Company; and the South Carolina distribution cooperatives historically served by Saluda River Electric Cooperative, Inc., and currently served by Central Electric Power Cooperative, Inc. (which are Blue Ridge Electric Cooperative, Inc., Broad River Electric Cooperative Inc., Laurens Electric Cooperative, Inc., Little River Electric Cooperative, Inc., and York Electric Cooperative, Inc.). Subject to the conditions set out in Regulatory Condition 3.8, the retail native loads of these historically served wholesale customers shall be considered DEC's Retail Native Load Customers for purposes of Regulatory Conditions 3.5, 3.6, and 4.5; provided, however, that this subsection applies only to the same types of supplemental load and backstand requirements services that were historically provided to the Catawba Joint Owners under the Catawba Interconnection Agreements between DEC and the Catawba Joint Owners prior to 2001, which, for the North Carolina Electric Membership Corporation, only includes the EMCs within DEC's control area.

(c) DEP is not required to notify the Commission when it enters into wholesale power contracts that grant Native Load Priority to the Public Works Commission of the City of Fayetteville, North Carolina; the Town of Waynesville, North Carolina; the City of Camden, South Carolina; the French Broad Electric Membership Corporation; the North Carolina Eastern Municipal Power Agency; the electric membership cooperatives (EMCs) within DEP's control area, whether served through the North Carolina Electric Membership Corporation (NCEMC) or individually; the Town of Black Creek, North Carolina; the Town of Lucama, North Carolina; the Town of Stantonsburg, North Carolina; the Town of Sharpsburg, North Carolina; and the Town of Winterville, North Carolina. Subject to the conditions set out in Regulatory Condition 3.8, the retail native loads of these historically served wholesale customers shall be considered DEP's Retail Native Load Customers for purposes of Regulatory Conditions 3.5, 3.6, and 4.5.

(d) Before either DEC or DEP executes any contract that grants Native Load Priority to a wholesale customer (other than as set forth in subdivisions (a) and (b) above) or to one or more retail customers of another entity, it shall, for informational purposes, provide the Public Staff with at least 15 days' written advance notice of its intent to grant Native Load Priority and to treat the retail native load of a proposed wholesale customer as if it were DEC's or DEP's retail native load pursuant to Regulatory Conditions 3.5, 3.6, and 4.5.

3.8 Additional Provisions Regarding Wholesale Contracts Entered into by DEC or DEP as Sellers.

(a) This Regulatory Condition does not apply to Piedmont.

(b) The Commission retains the right to assign, allocate, impute, and make pro-forma adjustments with respect to the revenues and costs for retail ratemaking and regulatory accounting and reporting purposes.

(c) DEC and DEP acknowledge that when either DEC or DEP enters into wholesale contracts that grant Native Load Priority or otherwise obligate DEC or DEP to construct generating facilities or make commitments to purchase capacity and energy to meet those contractual commitments such action constitutes acceptance by DEC, DEP, Duke Energy, and other Affiliates or Nonpublic Utility Operations thereof of the risks that investments in generating facilities or commitments to purchase capacity and energy to meet such contractual commitments and maintain an adequate reserve margin throughout the term of such contracts may become uneconomic sunk costs that may not be recoverable from DEC's or DEP's respective Retail Native Load Customers. In a future Commission retail proceeding in which cost recovery is at issue, neither DEC nor DEP shall claim that it does not bear this risk, and both DEC and DEP shall acknowledge that the Commission retains full authority under Chapter 62 to ascertain whether such costs are used and useful. For purposes of this condition, capacity will be considered used and useful and not excess capacity to the extent the Commission determines such capacity is needed by DEC or DEP to meet the expected peak loads of DEC's or DEP's respective Retail Native Load Customers in the near term future plus a reserve margin comparable to that currently being used or otherwise considered appropriate by the Commission.

(d) Except as provided in the foregoing conditions, DEC and DEP retain the right to challenge the lawfulness of any order issued by the Commission in connection with the assignment, allocation, imputation, pro-forma adjustments to, or disallowances of the revenues and costs associated with DEC's or DEP's wholesale contracts for retail ratemaking and regulatory accounting and reporting purposes on any other grounds, including but not limited to the right outlined in G.S. 62-94(b).

3.9 Other Protections.

(a) DEC, DEP, Piedmont, Duke Energy, another Affiliate, and a Nonpublic Utility Operation shall not assert in any forum – whether judicial, administrative, federal, state, local or otherwise – that the Commission's authority to determine the reasonableness or prudence of DEC's, DEP's, or Piedmont's decisions with respect to supply-side resources, demand-side management, or any other aspect of resource adequacy is limited.

(b) No agreement shall be entered into by or on behalf of DEC or DEP, that (i) commits DEC or DEP to, or involves either of them in, joint planning, coordination, dispatch or operation of generation, transmission, or distribution facilities with each other or with one or more other Affiliates, or (ii) otherwise alters DEC's or DEP's obligations with respect to these Regulatory Conditions, absent explicit approval of the Commission.

(c) DEC, DEP, Duke Energy, the other Affiliates, and the Nonpublic Utility Operations shall file notice with the Commission for informational purposes at least 15 days prior to filing with the FERC any agreement, tariff, or other document or any proposed amendments, modifications, or supplements to any such document that has the potential to (i) affect DEC's or DEP's retail cost of service for system power supply resources or transmission system; (ii) reduce the Commission's jurisdiction with respect to transmission planning or any other aspect of the Commission's planning authority; (iii) be interpreted as involving DEC or DEP in joint planning, coordination, dispatch, or operation of generation or transmission facilities with one or more Affiliates; or (iv) otherwise have an Effect on DEC's or DEP's Rates or Service.

(d) Any contract or filing regarding DEC's or DEP's membership in or withdrawal from an RTO or comparable entity must be contingent upon state regulatory approval. This Regulatory Condition does not apply to Piedmont.

(e) DEC, DEP, and Piedmont shall obtain Commission approval before DEBS is sold, transferred, merged with any other entities, has any ownership interest therein changed, or otherwise changed so that a change of control could occur. This requirement does not apply to any movement of DEBS within the Duke Energy holding company system that does not constitute a change of control.

(f) DEC, DEP, and Piedmont may participate in joint comments and other joint filings with Affiliates only when such participation fully complies with both the letter and the spirit of the Regulatory Conditions. Any filing made by DEBS on behalf of DEC, DEP, or Piedmont must clearly identify DEBS as an agent of DEC, DEP, or Piedmont for purposes of making the filing.

(g) Neither DEC, DEP, Piedmont, Duke Energy, another Affiliate, nor a Nonpublic Utility Operation shall make any assertion or argument either on its own initiative or in support of any other entity's assertions in any forum – whether judicial, administrative, federal, state, or otherwise – with respect to any contract, transaction, or other matter in which DEC, DEP, or Piedmont is involved or proposes to be involved or any contract, transaction, or matter involving or proposed to involve Duke Energy, any other Affiliate, or any Nonpublic Utility Operation that may have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, that any of the following actions exceed the Commission's power, authority or jurisdiction under North Carolina law:

(i) reviewing the reasonableness of any Affiliate commitment entered into or proposed to be entered into by DEC, DEP, or Piedmont, or disallowing the costs of, or imputing revenues related to such commitment to, DEC, DEP, or Piedmont;

(ii) exercising its authority over financings or setting rates based on the capital structure, corporate structure, debt costs, or equity costs that it finds to be appropriate for retail ratemaking purposes;

(iii) reviewing the reasonableness of any commitment entered into or proposed to be entered into by DEC, DEP, or Piedmont to transfer an asset;

(iv) mandating, approving, or otherwise regulating a transfer of assets;

(v) scrutinizing and establishing the value of any asset transfers for the purpose of determining the rates for services rendered to DEC's or DEP's Retail Native Load Customers or Piedmont's Customers; or

(vi) exercising any other lawful authority it may have.

Should any other entity so assert, neither DEC, DEP, Piedmont, Duke Energy, other Affiliates, nor the Nonpublic Utility Operations shall support any such assertion and shall, promptly upon learning of such assertion, advise and consult with the Commission and the Public Staff regarding such assertion.

(h) DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall (A) acknowledge the risk of any possible preemptive effects of Federal Law with respect to any contract, transaction, or commitment entered into or made or proposed to be entered into or made by DEC, DEP, or Piedmont, or which may otherwise affect DEC's, DEP's, or Piedmont's operations, service, or rates and (B) shall take all actions as may be reasonably necessary and appropriate to hold North Carolina ratepayers harmless from rate increases, foregone opportunities for rate decreases or any other adverse effects of such preemption.

3.10 FERC Filings and Orders. In addition to the filing requirements of Commission Rule R8-27 and all other applicable statutes and rules, and to keep the Commission informed of their activities, DEC and DEP shall, on a quarterly basis, file with the Commission the following: (a) a list of all active dockets at the FERC, including a sufficient description to identify the type of proceeding, in which DEC, DEP, Duke Energy, or DEBS is a party, with new information in each quarterly filing tracked; and (b) a list of the periodic reports filed by DEC, DEP, Duke Energy, or DEBS with the FERC, including sufficient information to identify the subject matter of each report and how each report can be accessed. These filings shall be made in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, as appropriate, and updated regularly. In addition, DEC and DEP shall serve on the Public Staff all filed cost-based and market-based wholesale agreements and amendments; all filings related to their Joint Open Access Transmission Tariff; interconnection agreements and amendments; and any other filings made with the FERC, to the extent these other filings are reasonably likely to have an Effect on DEC's or DEP's Rates or Service. This Regulatory Condition does not apply to Piedmont, as relevant FERC-related information is required to be filed with the Commission in annual gas cost prudence reviews.

SECTION IV
JOINT DISPATCH

The Regulatory Conditions in Section IV do not apply to Piedmont. They are intended to prevent the jurisdiction and authority of the Commission from being preempted as a result of the JDA, to ensure that DEC's and DEP's Retail Native Load Customers receive adequate benefits from the JDA, and to ensure that both joint dispatch costs and the sharing of cost savings can be appropriately audited. The Regulatory Conditions set forth in Section III and the Regulatory Conditions in Section V to the extent they are relevant to Affiliate Contracts also apply to the JDA.

4.1 Conditional Approval and Notification Requirement. DEC and DEP acknowledge that the Commission's approval of the merger between Duke Energy and Progress Energy, and the transfer of dispatch control from DEP to DEC for purposes of implementing the JDA and any successor document is conditioned upon the JDA or successor document never being interpreted as providing for or requiring: (a) a single integrated electric system, (b) a single

BAA, control area or transmission system, (c) joint planning or joint development of generation or transmission, (d) DEC or DEP to construct generation or transmission facilities for the benefit of the other, (e) the transfer of any rights to generation or transmission facilities from DEC or DEP to the other, or (f) any equalization of DEC's and DEP's production costs or rates. If, at any time, DEC, DEP or any other Affiliate learns that any of the foregoing interpretations are being considered, in whatever forum, they shall promptly notify and consult with the Commission and the Public Staff regarding appropriate action.

4.2 Advance Notice Required. To the extent that DEC and DEP desire to engage in any of items (a) through (f) listed in Regulatory Condition 4.1, above, DEC and DEP shall file advance notice with the Commission at least 30 days prior to taking any action to amend the JDA or a successor document or to enter into a separate agreement. The provisions of Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition.

4.3 Function in DEC or DEP. The joint dispatch function, as provided in the JDA or in a successor document, shall be performed by employees of either DEC or DEP.

4.4 No Limitation on Obligations. DEC and DEP acknowledge that nothing in the JDA or any successor document is intended to alter DEC's and DEP's public utility obligations under North Carolina law or to provide for joint dispatch in a fashion that is inconsistent with those obligations, including, without limitation, the following: (a) DEC's obligation to plan for and provide least cost electric service to its Retail Native Load Customers and DEP's obligation to plan for and provide least cost electric service to its Retail Native Load Customers; (b) DEC's obligation to serve its Retail Native Load Customers with the lowest cost power it can reasonably generate or purchase from other sources, before making power available for Non-Native Load Sales; and (c) DEP's obligation to serve its Retail Native Load Customers with the lowest cost power it can reasonably generate or purchase from other sources, before making power available for Non-Native Load Sales.

4.5 Protection of Retail Native Load Customers. All joint dispatch and other activities pursuant to the JDA or successor document shall be performed in such a manner as to (a) ensure the reliable fulfillment of DEC's and DEP's respective service obligations to their Retail Native Load Customers, (b) fulfill each utility's obligation to serve its own Retail Native Load Customers with its lowest cost generation; and (c) minimize the total costs incurred by DEC and DEP to fulfill their respective obligations to their Retail Native Load Customers. In no event shall any Non-Native Load Sales be made if, based upon information known, anticipated, or reasonably available at the time a sale is made, any such sale results in higher fuel and fuel-related costs or non-fuel O&M costs, on a replacement cost basis, than would otherwise have been incurred unless the revenues credited from each such sale more than offset the higher costs.

4.6 Treatment of Costs and Savings. DEC's and DEP's respective fuel and fuel-related costs and non-fuel O&M costs, and the treatment of savings for retail ratemaking purposes, shall be calculated as provided in the JDA, unless explicitly changed by order of the Commission.

4.7 Required Records. DEC and DEP shall keep records related to the JDA or any successor document as prescribed by the Commission and in such detail as may be necessary to enable the Commission and the Public Staff to audit both the actual joint dispatch costs and the sharing of cost savings.

4.8 Auditing of Negative Margins. DEC and DEP also shall keep records that provide such detail as may be necessary to enable the Commission and the Public Staff to audit the circumstances that cause any negative margin on a Non-Native Load Sale or a negative transfer payment made pursuant to Section 7.5(a)(ii) of the JDA.

4.9 Protection of Commission's Authority. Neither DEC, DEP, nor any Affiliate shall assert in any forum – whether judicial, administrative, federal, state, local or otherwise – either on its own initiative or in support of any other entity's assertions that any aspect of the JDA or successor document is intended to diminish or alter the jurisdiction or authority of the Commission over DEC or DEP, including, among other things, the jurisdiction and authority of the Commission to do the following: (a) establish the retail rates on a bundled basis for DEC or DEP, (b) to impose regulatory accounting and reporting requirements, (c) impose service quality standards, (d) require DEC and DEP to engage separately in least cost integrated resource planning, and (e) issue certificates of public convenience and necessity for new generating and transmission resources.

4.10 Preventive Action Required. DEC, DEP, Duke Energy, and other Affiliates shall take all necessary actions to prevent the generating facilities owned or controlled by DEC or DEP from being considered by the FERC to be (a) part, or all, of a power pool, (b) sufficiently integrated to be one integrated system, or (c) otherwise fully subject to the FERC's jurisdiction, as the result of DEC's and DEP's participation in the JDA or any successor document.

4.11 Modification and Termination. DEC and DEP shall modify or terminate the JDA if at any time following consummation of the Merger the Commission finds, after notice and opportunity to be heard, that the JDA does not produce overall cost savings for, or is otherwise not in the best interests of, the North Carolina ratepayers of both DEC and DEP.

4.12 Hold Harmless Commitment. DEC and DEP shall take all actions as may be reasonably appropriate and necessary to hold North Carolina retail ratepayers harmless from any adverse rate impacts related to the JDA, including any trapped costs resulting from actions taken or required by the FERC with respect to the JDA.

SECTION V
TREATMENT OF AFFILIATE COSTS AND RATEMAKING

The following Regulatory Conditions are intended to ensure that the costs incurred by DEC, DEP, and Piedmont are properly incurred, accounted for, and directly charged, directly assigned, or allocated to their respective North Carolina retail operations and that only costs that produce benefits for DEC's and DEP's respective Retail Native Load Customers and Piedmont's Customers are included in DEC's, DEP's, and Piedmont's North Carolina cost of service for ratemaking purposes. The procedures set forth in Regulatory Condition 13.2 do not apply to an advance notice filed pursuant to this section.

5.1 Access to Books and Records. In accordance with North Carolina law, the Commission and the Public Staff shall continue to have access to the books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations.

5.2 Procurement or Provision of Goods and Services by DEC, DEP, or Piedmont from or to Affiliates or Nonpublic Utility Operations. Except as to transactions between and among DEC, DEP, and Piedmont pursuant to filed and approved service agreements and lists of services, and subject to additional provisions set forth in the Code of Conduct, DEC, DEP, and Piedmont shall take the following actions in connection with procuring goods and services for their respective utility operations from Affiliates or Nonpublic Utility Operations and providing goods and services to Affiliates or Nonpublic Utility Operations:

(a) DEC, DEP, and Piedmont each shall seek out and buy all goods and services from the lowest cost qualified provider of comparable goods and services, and shall have the burden of proving that any and all goods and services procured from their Utility Affiliates, Non-Utility Affiliates, and Nonpublic Utility Operations have been procured on terms and conditions comparable to the most favorable terms and conditions reasonably available in the relevant market, which shall include a showing that comparable goods or services could not have been procured at a lower price from qualified non-Affiliate sources or that DEC, DEP, or Piedmont could not have provided the services or goods for itself on the same basis at a lower cost. To this end, no less than every four years DEC, DEP, and Piedmont shall perform comprehensive non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services they receive from a Utility Affiliate, DEBS, another Non-Utility Affiliate, and a Nonpublic Utility Operation, including periodic testing of services being provided internally or obtained individually through outside providers. To the extent the Commission approves the procurement or provision of goods and services between or among DEC, DEP, Piedmont, and the Utility Affiliates, those goods and services may be provided at the supplier's Fully Distributed Cost.

(b) To the extent they are allowed to provide such goods and services, DEC, DEP, and Piedmont shall have the burden of proving that all goods and services provided by any one of them to Duke Energy, a Non-Utility Affiliate, any other Affiliate, or a Nonpublic Utility Operation have been provided on the terms and conditions comparable to the most favorable terms and conditions reasonably available in the market, which shall include a showing that such goods or services have been provided at the higher of cost or market price. To this end, no less than every four years DEC, DEP, and Piedmont shall perform comprehensive, non-solicitation based assessments at a functional level of the market competitiveness of the costs for goods and services provided by either of them to a Utility Affiliate, DEBS, another Non-Utility Affiliate, any other Affiliate, and a Nonpublic Utility Operation.

(c) The periodic assessments required by subdivisions (a) and (b) of this subsection may take into consideration qualitative as well as quantitative factors. To the extent that comparable goods or services provided to DEC, DEP or Piedmont, or by DEC, DEP or Piedmont are not commercially available, this Regulatory Condition shall not apply.

5.3 Location of Core Utility Functions.

(a) This Regulatory Condition does not apply to Piedmont.

(b) Core utility functions are those functions related to Electric Services. The employees performing these core utility functions will be DEC or DEP employees and not service company employees of DEBS. Core utility functions do not include services of a governance or corporate type nature that have been traditionally provided by a service company, the specific services listed on the service company agreement services list for DEC and DEP filed with the Commission pursuant to Regulatory Condition 5.4(a), and roles that provide oversight to the enterprise and are not jurisdiction-specific (Excluded Functions).

(c) All core utility functions employees charging 50% or more of their time to DEC and DEP (separately or combined) should be in the payroll company of either DEC or DEP and not on the payroll of an Affiliate such as DEBS. If it is not readily determinable that a particular function is related to the provision of Electric Services or is an Excluded Function, the appropriate payroll company decision will be governed by whether 50% or more of the affected group or individual employee's time is charged to DEC or DEP.

(d) DEC and DEP shall annually review core utility function employees charging more than 50% of their time to DEC and DEP (separately or combined) over a six-month period from January 1 to June 30. If DEC and DEP determine that an employee performing a core utility function is direct charging 50% or more of his or her time to DEC or DEP, that employee should be transferred to DEC or DEP (if not already on the DEC or DEP payroll). Conversely, if a DEC or DEP employee is charging less than 50% of his or her time to DEC or DEP (separately or combined), and the employee is not otherwise charging the larger portion of their time to DEC or DEP, that employee should not be on the payroll of DEC or DEP.

(e) DEC and DEP shall annually file, at least 90 days prior to January 1, a report containing the results of the annual review and advance notice of any transfers from DEC to DEP to another entity based on direct charging results (Employee Payroll Transfer Report). New organizations and reorganizations will be reflected in the Employee Payroll Transfer Reports.

(f) If an employee transfer from DEC or DEP occurs during the middle of the year, and that transfer involves the transfer of a core utility function to the service company, the provisions of Regulatory Condition 10.1 will apply.

(g) DEC and DEP may file a list of employees at the higher levels of management (not including those levels of management that report directly to the Chief Executive

Officer for Duke Energy) for their core utility functions that they propose to be DEBS employees in their annual filing.

5.4 Service Agreements and Lists of Services.

(a) DEC, DEP, and Piedmont shall file pursuant to G.S. 62-153 final proposed service agreements that authorize the provision and receipt of non-power goods or services between and among DEC, DEP, Piedmont, their Affiliates or Nonpublic Utility Operations, the list(s) of goods and services that DEC, DEP, and Piedmont each intend to take from DEBS, the list(s) of goods and services DEC, DEP, and Piedmont intend to take from each other and the Utility Affiliates, and the basis for the determination of such list(s) and the elections of such services. All such lists that involve payment of fees or other compensation by DEC, DEP, or Piedmont shall require acceptance and authorization by the Commission, and shall be subject to any other Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) DEC, DEP, and Piedmont shall take goods and services from an Affiliate only in accordance with the filed service agreements and approved list(s) of services. DEC, DEP, and Piedmont shall file notice with the Commission in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-6, Sub 682A, respectively, at least 15 days prior to making any proposed changes to the service agreements or to the lists of services.

5.5 Charges for and Allocations of the Costs of Affiliate Transactions. To the maximum extent practicable, all costs of Affiliate transactions shall be directly charged. When not practicable, such costs shall be assigned in proportion to the direct charges. If such costs are of a nature that direct charging and direct assignment are not practicable, they shall be allocated in accordance with Commission-approved allocation methods. The following additional provisions shall apply:

(a) DEC, DEP, and Piedmont shall keep on file with the Commission a cost allocation manual (CAM) with respect to goods or services provided by DEC, DEP, or Piedmont, any Utility Affiliate, DEBS, any other Non-Utility Affiliate, Duke Energy, any other Affiliates, or any Nonpublic Utility Operation to DEC, DEP, or Piedmont. Piedmont will adopt DEC's and DEP's CAM.

(b) The CAM shall describe how all directly charged, direct assignment, and other costs for each provider of goods and services will be charged between and among DEC, DEP, Piedmont, their Utility Affiliates, Non-Utility Affiliates, Duke Energy, any other Affiliates, and the Nonpublic Utility Operations, and shall include a detailed review of the common costs to be allocated and the allocation factors to be used.

(c) The CAM shall be updated annually, and the revised CAM shall be filed with the Commission no later than March 31 of the year that the CAM is to be in effect. DEC, DEP, and Piedmont shall review the appropriateness of the allocation bases every two years, and the results of such review shall be filed with the Commission.

Interim changes shall be made to the CAM, if and when necessary, and shall be filed with the Commission, in accordance with Regulatory Condition 5.6.

(d) No changes shall be made to the procedures for direct charging, direct assigning, or allocating the costs of Affiliate transactions or to the method of accounting for such transactions associated with goods and services (including Shared Services provided by DEBS) provided to or by Duke Energy, other Affiliates, and the Nonpublic Utility Operations until DEC, DEP, or Piedmont has given 15 days' notice to the Commission of the proposed changes, in accordance with Regulatory Condition 5.6.

5.6 Procedures Regarding Interim Changes to the CAM or Lists of Goods and Services for which 15 Days' Notice Is Required. With respect to interim changes to the CAM or changes to lists of goods and services, for which the 15 day notice to the Commission is required, the following procedures shall apply: the Public Staff shall file a response and make a recommendation as to how the Commission should proceed before the end of the notice period. If the Commission has not issued an order within 30 days of the end of the notice period, DEC, DEP, or Piedmont may proceed with the changes but shall be subject to any fully adjudicated Commission order on the matter. The provisions of Regulatory Condition 13.2 do not apply to advance notices filed pursuant to Regulatory Condition 5.5(c) and (d). Such advance notices shall be filed in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

5.7 Annual Reports of Affiliate Transactions. DEC, DEP, and Piedmont shall file annual reports of affiliated transactions with the Commission in a format to be prescribed by the Commission in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A. The report shall be filed on or before May 30 of each year, for activity through December 31 of the preceding year. DEC, DEP, Piedmont, and other parties may propose changes to the required affiliated transaction reporting requirements and submit them to the Commission for approval, also in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

5.8 Third-party Independent Audits of Affiliate Transactions.

(a) No less often than every two years, a third-party independent audit shall be conducted related to the affiliate transactions undertaken pursuant to Affiliate agreements filed in accordance with Regulatory Condition 5.4 and of DEC's, DEP's, and Piedmont's compliance with all conditions approved by the Commission concerning Affiliate transactions, including the propriety of the transfer pricing of goods and services between or among DEC, DEP, Piedmont, other Affiliates, and all of the Nonpublic Utility Operations.

(i) The first audit shall begin two years from the date of the close of the Merger. It shall include whether DEC's, DEP's, and Piedmont's transactions, services, and other Affiliate dealings pursuant to the regulated utility-to-regulated utility service agreement and any other utility to utility agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DEC, DEP, and Piedmont have operated in accordance with those conditions and Code of Conduct.

(ii) The second audit shall begin two years from the date of the Commission's order on the independent auditor's final report on the first audit or, if no such order is issued, two years from the date of such final report. It shall include whether DEC's, DEP's, and Piedmont's transactions, services, and other Affiliate dealings pursuant to the Service Company Utility Service Agreement and other Affiliate transactions other than transactions undertaken pursuant to regulated utility to regulated utility service agreements are consistent with all of the conditions related to affiliate dealings and the Code of Conduct and whether DEC, DEP, and Piedmont have operated in accordance with those conditions and Code of Conduct.

(iii) Thereafter, independent audits shall occur every two years from the date of the Commission's order on the immediately preceding auditor's final report or, if no such order is issued, two years from the date of such final report. The subject matter of these audits shall alternate between the subject matters for the first and second independent audits. DEC, DEP, and Piedmont may request a change in the frequency of the audit reports in future years, subject to approval by the Commission.

(b) The following further requirements apply:

(i) The independent auditor shall have sufficient access to the books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and all of the Nonpublic Utility Operations to perform the audits.

(ii) For each audit, the Public Staff shall propose one or more independent auditor(s). DEC, DEP, Piedmont, and other parties shall have an opportunity to comment and propose additional auditors. Selection of the independent auditor shall be made by the Commission. Any party proposing an independent auditor shall file such auditor's audit proposal with the Commission.

(iii) The independent auditor shall be supervised in its duties by the Public Staff, and the auditor's reports shall be filed with the Commission.

5.9 Ongoing Review by Commission.

(a) The services rendered by DEC, DEP, and Piedmont to their Affiliates and Nonpublic Utility Operations and the services received by DEC, DEP, or Piedmont from their Affiliates and Nonpublic Utility Operations pursuant to the filed service agreements, the costs and benefits assigned or allocated in connection with such services, and the determination or calculation of the bases and factors utilized to assign or allocate such costs and benefits, as well as DEC's, DEP's, and Piedmont's compliance with the Commission-approved Code of Conduct and all Regulatory Conditions, shall remain subject to ongoing review. These agreements shall be subject to any Commission action required or authorized by North Carolina law and the Rules and orders of the Commission.

(b) The service agreements, the CAM(s) and the assignments and allocations of costs pursuant thereto, the biannual allocation factor reviews required by Regulatory

Condition 5.5(c), the list(s) and the goods and services provided pursuant thereto, and any changes to these documents shall be subject to ongoing Commission review, and Commission action if appropriate.

5.10 Future Orders. For the purposes of North Carolina retail accounting, reporting, and ratemaking, the Commission may, after appropriate notice and opportunity to be heard, issue future orders relating to DEC's, DEP's, or Piedmont's cost of service as the Commission may determine are necessary to ensure that DEC's, DEP's, and Piedmont's operations and transactions with their Affiliates and Nonpublic Utility Operations are consistent with the Regulatory Conditions and Code of Conduct, and with any other applicable decisions of the Commission.

5.11 Review by the FERC. Notwithstanding any of the provisions contained in these Regulatory Conditions, to the extent the allocations adopted by the Commission when compared to the allocations adopted by the other State commissions with ratemaking authority as to a Utility Affiliate of DEC, DEP, or Piedmont result in significant trapped costs related to "non-power goods or administrative or management services provided by an associate company organized specifically for the purpose of providing such goods or services to any public utility in the same holding company system," including DEC, DEP, and Piedmont, DEC, DEP, or Piedmont may request pursuant to Section 1275(b) of Subtitle F in Title XII of PUHCA 2005 that the FERC "review and authorize the allocation of the costs for such goods and services to the extent relevant to that associate company." Such review and authorization shall have whatever effect it is determined to have under the law. The quoted language in this Regulatory Condition is taken directly from Section 1275(b) of Subtitle F in Title XII of PUHCA 2005. The terms "associate company" and "holding company system" are defined in Sections 1262(2) and 1262(9), respectively, of Subtitle F in Title XII of PUHCA 2005 and have the same meanings for purposes of this condition.

5.12 Biannual Review of Certain Transactions by Internal Auditors. Transactions between DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations, transactions between or among DEC, DEP, and Piedmont, and other transactions between or among Affiliates if such transactions are reasonably likely to have a significant Effect on DEC's, DEP's, or Piedmont's Rates or Service, shall be reviewed at least biannually by Duke Energy's internal auditors. To the extent external audits of the transactions are conducted, DEC, DEP, and Piedmont shall make available such audits for review by the Public Staff and the Commission. DEC, DEP, and Piedmont also shall make available for review by the Public Staff and the Commission all workpapers relating to internal audits and all other internal audit workpapers, if any, related to affiliate transactions, and shall not oppose Public Staff and Commission requests to review relevant external audit workpapers. The requirement to make internal audit workpapers available for review is subject to the assertion of the attorney-client privilege by attorneys for DEC, DEP, and Piedmont. Any dispute as to whether the privilege applies in a particular instance shall be resolved by the Commission in accordance with its regulations and North Carolina law, including the rules of the North Carolina State Bar.

5.13 Notice of Service Company and Non-Utility Affiliates FERC Audits. At such time as DEC, DEP, Piedmont, Duke Energy, or DEBS receives notice from the FERC related to an audit of any Affiliate of DEC, DEP, or Piedmont, DEC, DEP, or Piedmont shall promptly file a notice the Commission that such an audit will be commencing. Any initial report of the FERC's audit team shall be provided to the Public Staff, and any final report shall be filed with the Commission in Docket Nos. E-7, Sub 1100E, E-2, Sub 1095E, and G-9, Sub 682E, respectively.

5.14 Acquisition Adjustment. Any acquisition adjustment that results from the Merger shall be excluded from DEC's, DEP's, and Piedmont's utility accounts and treated for regulatory accounting, reporting, and ratemaking purposes so that it does not affect DEC's or DEP's North Carolina retail rates and charges for Electric Services or Piedmont's North Carolina rates and charges for Natural Gas Services.

5.15 Non-Consummation of Merger. If the Merger is not consummated, neither the cost, nor the receipt, of any termination payment between Duke Energy and Piedmont shall be allocated to DEC, DEP, or Piedmont or recorded on their books. DEC's, DEP's, or Piedmont's Customers shall not otherwise bear any direct expenses or costs associated with a failed merger.

5.16 Protection from Commitments to Wholesale Customers.

(a) This Regulatory Condition does not apply to Piedmont.

(b) For North Carolina retail electric cost of service/ratemaking purposes, DEC's and DEP's respective electric system costs shall be assigned or allocated between and among retail and wholesale jurisdictions based on reasonable and appropriate cost causation principles. For cost of service/ratemaking purposes, North Carolina retail ratepayers shall be held harmless from any cost assignment or allocation of costs resulting from agreements between DEC and the Catawba Joint Owners, and between either DEC or DEP and any of their wholesale customers.

(c) To the extent commitments to DEC's or DEP's wholesale customers relating to the 2012 merger of Duke Energy and Progress Energy are made by or imposed upon DEC or DEP, the effects of which (i) decrease the bulk power revenues that are assigned or allocated to DEC's or DEP's North Carolina retail operations or credited to DEC's or DEP's jurisdictional fuel expenses, (ii) increase DEC's or DEP's North Carolina retail cost of service, or (iii) increase DEC's or DEP's North Carolina retail fuel costs under reasonable cost assignment and allocation practices approved or allowed by the Commission, those effects shall not be recognized for North Carolina retail cost of service or ratemaking purposes.

(d) To the extent that commitments are made by or imposed upon DEC, DEP, Duke Energy, another Affiliate, or a Nonpublic Utility Operation relating to the Merger, either through an offer, a settlement, or as a result of a regulatory order, the effects of which serve to increase the North Carolina retail cost of service or North Carolina retail fuel costs under reasonable cost allocation practices, the effects of these commitments shall not be recognized for North Carolina retail ratemaking purposes.

5.17 Joint Owner-Specific Issues. Assignment or allocation of costs to the North Carolina retail jurisdiction shall not be adversely affected by the manner and amount of recovery of electric system costs from the Catawba Joint Owners as a result of agreements between DEC and the Catawba Joint Owners. This Regulatory Condition does not apply to Piedmont.

5.18 Inclusion of Cost Savings in Future Rate Proceedings. Neither DEC, DEP, Piedmont, Duke Energy, any other Affiliate, nor a Nonpublic Utility Operation shall assert that any interested party is prohibited from seeking the inclusion in future rate proceedings of cost savings that may be realized as a result of any business combination transaction impacting DEC, DEP, and Piedmont.

5.19 Reporting of Costs to Achieve. The North Carolina portion of costs to achieve any business combination transaction savings shall be reflected in DEC's and DEP's North Carolina ES-1 Reports and Piedmont's North Carolina GS-1 Report, as recorded on their books and records under generally accepted accounting principles. DEC, DEP, and Piedmont shall include as a footnote in their ES-1 and GS-1 Reports, as applicable, the Merger-related costs to achieve that were expensed during the relevant period.

5.20 Accounting for Costs to Achieve Related to Historical Events Involving DEP. All costs of Carolina Power and Light Company's merger with North Carolina Natural Gas Company, the Formation of Progress Energy, and Progress Energy's merger with Florida Progress Corporation shall be excluded from DEP's utility accounts, and all direct or indirect corporate cost increases, if any, attributable to those three events shall be excluded from utility costs for all purposes that affect DEP's regulated retail rates and charges. For purposes of this condition, the term "corporate cost increases" means costs in excess of the level DEP would have (a) incurred using prudent business judgment, or (b) had allocated to it, had these transactions not occurred. "Corporate cost increases" also includes any payments made under change-of-control agreements, salary continuation agreements, and other severance- or personnel-type arrangements that are reasonably attributable to these transactions. This Regulatory Condition does not apply to DEC and Piedmont.

5.21 Liabilities of Cinergy Corp. and Florida Progress Corporation.

(a) DEC's and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all liabilities of Cinergy Corp. and its subsidiaries, including those incurred prior to and after Duke Energy's acquisition of Cinergy Corp. in 2006. These liabilities include, but are not limited to, those associated with the following: (i) manufactured gas plant sites, (ii) asbestos claims, (iii) environmental compliance, (iv) pensions and other employee benefits, (v) decommissioning costs, and (vi) taxes.

(b) DEC's and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all liabilities of Florida Progress Corporation and its subsidiaries, including those incurred prior to and after Progress Energy's acquisition of Florida Progress Corporation in 2000. These liabilities include, but are not limited to, those associated with the following: (i) any outages at and repairs of Crystal River 3, (ii) manufactured gas plant sites, (iii) asbestos claims, (iv) environmental compliance, (v) pensions and other employee benefits, (vi) decommissioning costs, and (vii) taxes.

(c) DEC's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all current and prospective liabilities of DEP, and DEP's Retail Native Load Customers and Piedmont's Customers shall be held harmless from all current and prospective liabilities of DEC.

5.22 Hold Harmless Commitment. DEC, DEP, Piedmont, Duke Energy, the other Affiliates, and all of the Nonpublic Utility Operations shall take all such actions as may be reasonably necessary and appropriate to hold North Carolina Customers harmless from the effects of the Merger, including rate increases or foregone opportunities for rate decreases, and other effects otherwise adversely impacting Customers.

5.23 Cost of Service Manuals. Within six months after the closing date of the Merger, DEC and DEP shall each file with the Commission revisions to its electric cost of service manual to reflect any changes to the cost of service determination process made necessary by the Merger, any subsequent alterations in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations, or other circumstances that necessitate such changes. These filings shall be made in Docket Nos. E-7, Sub 1100A, and E-2, Sub 1095A, respectively. This Regulatory Condition does not apply to Piedmont.

5.24 Direct Charging and Positive Time Reporting for Piedmont. For purposes of distributing the costs of services provided between and among Affiliates, Piedmont will use direct charging and positive time reporting to at least the same extent as DEC and DEP.

5.25 Piedmont Corporate Cost Allocations Among State Jurisdictions. Piedmont will notify the Commission and Public Staff of any plans to modify its corporate cost allocation procedures at least 90 days prior to implementation of the change.

5.26 Allocation of Fully-distributed Costs to Piedmont's Nonpublic Utility Operations. Piedmont shall direct charge or allocate fully distributed costs to its Nonpublic Utility Operations. The fully distributed costs shall include an overhead component for the cost of shared services provided to these non-regulated businesses and equity investments by Piedmont corporate, DEC, DEP, and DEBS employees.

SECTION VI
CODE OF CONDUCT

These Regulatory Conditions include a Code of Conduct in Appendix A. The Code of Conduct governs the relationships, activities and transactions between or among the public utility operations of DEC, DEP, Piedmont, Duke Energy, the Affiliates of DEC, DEP, and Piedmont, and the Nonpublic Utility Operations of DEC, DEP, and Piedmont.

6.1 Obligation to Comply with Code of Conduct. DEC, DEP, Piedmont, Duke Energy, the other Affiliates, and the Nonpublic Utility Operations shall be bound by the terms of the Code of Conduct set forth in Appendix A and as it may subsequently be amended.

SECTION VII
FINANCINGS

The following Regulatory Conditions are intended to ensure (a) that DEC's, DEP's, and Piedmont's capital structures and cost of capital are not adversely affected through their affiliation with Duke Energy, each other, and other Affiliates and (b) that DEC, DEP, and Piedmont have sufficient access to equity and debt capital at a reasonable cost to adequately fund and maintain their current and future capital needs and otherwise meet their service obligations to their Customers.

These conditions do not supersede any orders or directives of the Commission regarding specific securities issuances by DEC, DEP, Piedmont, or Duke Energy. The approval of the Merger by the Commission does not restrict the Commission's right to review, and by order to adjust, DEC's, DEP's, or Piedmont's cost of capital for ratemaking purposes for the effect(s) of the securities-related transactions associated with the Merger.

7.1 Accounting for Equity Investment in Holding Company Subsidiaries. Duke Energy shall maintain its books and records so that any net equity investment in Cinergy Corp. and Progress Energy, their subsidiaries, or their successors, by Duke Energy or any Affiliates can be identified and made available on an ongoing basis. This information shall be provided to the Public Staff upon its request.

7.2 Accounting for Capital Structure Components and Cost Rates. Duke Energy , DEC, DEP, and Piedmont shall keep their respective accounting books and records in a manner that will allow all capital structure components and cost rates of the cost of capital to be identified easily and clearly for each entity on a separate basis. This information shall be provided to the Public Staff upon its request.

7.3 Accounting for Equity Investment in DEC, DEP, and Piedmont. DEC, DEP, and Piedmont shall keep their respective accounting books and records so that the amount of Duke Energy's equity investment in DEC, DEP, and Piedmont can be identified and made available upon request on an ongoing basis. This information shall be provided to the Public Staff upon request.

7.4 Reporting of Capital Contributions. As part of their Commission ES-1 and GS-1 Reports, DEC, DEP, and Piedmont shall include a schedule of any capital contribution(s) received from Duke Energy in the applicable calendar quarter.

7.5 Identification of Long-term Debt Issued by DEC, DEP, or Piedmont. DEC, DEP, and Piedmont shall each identify as clearly as possible long-term debt (of more than one year's duration) that they issue in connection with their regulated utility operations and capital requirements or to replace existing debt.

7.6 Procedures Regarding Proposed Financings.

(a) For all types of financings for which DEC, DEP, or Piedmont (or their subsidiaries) are the issuers of the respective securities, DEC, DEP, or Piedmont (or their subsidiaries) shall request approval from the Commission to the extent required by G.S. 62-160 through G.S. 62-169 and Commission Rule R1-16. Generally, the format of these filings should be consistent with past practices. A "shelf registration" approach (similar to Docket No. E-7, Sub 727) may be requested.

(b) For all types of financings by Duke Energy, other than short-term debt as described in G.S. 62-167, the following shall apply:

(i) On or before January 15 of each year, Duke Energy shall file with the Commission and serve on the Public Staff an advance confidential plan of all securities issuances that it anticipates to occur during that calendar year. The annual confidential plan shall include a description of all financings that Duke Energy reasonably believes may occur during the applicable calendar year. A description for each financing shall include the best estimates of the following: type of security; estimate of cost rate (e.g., interest rate for debt); amount of proceeds; brief description of the purpose/reason for issue; and amount of proceeds, if any, that may flow to DEC, DEP, or Piedmont.

(ii) If at any time material changes to the financing plans included in the filed plan appear likely, Duke Energy shall file a revised 30-day advance confidential plan that specifically addresses such changes with the Commission and serve such notice on the Public Staff.

(iii) At the time of the confidential plan filings identified above, Duke Energy shall also file a non-confidential notice that states that a confidential plan has been filed in compliance with this Regulatory Condition 7.6(b).

(iv) Duke Energy may proceed with equity issuances upon the filing of the confidential plan. However, actual debt issuances shall not occur until 30 days after the advance confidential plan or revised plans are filed. In the event it is not feasible for Duke Energy to file a revised advance confidential plan for a material change 30 days in advance, such plan shall be filed by a date that allows adequate time for review or a debt issuance shall be delayed to allow such review. Prior to the Commission's action on the confidential plan for the year in which the plan is filed, Duke Energy may issue securities authorized under the previous year's plan to the extent such securities were not issued during the previous year.

(v) Within 15 days after the filing of an advance confidential plan or revised plan, the Public Staff shall file a confidential report with the Commission with respect to whether any debt issuances require approval pursuant to G.S. 62-160 through G.S. 62-169 and Commission Rule R1-16 and shall recommend that the Commission issue an order deciding how to proceed. Duke Energy shall have seven days in which to respond to the report. If the Commission determines that any debt issuance requires approval, the Commission shall issue an order requiring the filing of an application and no such issuance shall occur until the Commission approves the application. If the Commission determines that no debt issuance requires approval, the Commission shall issue an order so ruling. At the end of the notice period, Duke Energy may proceed with the debt issuance, but shall be subject to any fully adjudicated Commission order on the matter; provided, however, that nothing herein shall affect the applicability of G.S. 62-170 or other similar provision to such securities or obligations.

(vi) On or before April 15 of each year, Duke Energy shall file with the Commission a report on all financings that were executed for the previous calendar year. The actual reports should include the same information as required above for the advance plans plus the actual issuance costs.

(c) If a filing with the Securities and Exchange Commission or other federal agency will be made in connection with a securities issuance, the notice shall describe such filing(s) and indicate the approximate date on which it would occur.

(d) Securities issuances or financings that are associated with a merger, acquisition, or other business combination shall be filed in conjunction with the information requirements and deadlines stated in Regulatory Conditions 9.1 and 9.2, and this Condition 7.6 shall not apply to such securities issuances or financings.

7.7 Money Pool Agreement. Subject to the limitations imposed in Regulatory Condition 8.5, DEC, DEP, and Piedmont may borrow through Duke Energy's "Utility Money Pool Agreement" (Utility MPA), provided as follows: (a) participation in the Utility MPA is limited to the parties to the Utility MPA filed with the Commission on December 1, 2011, in Docket Nos. E-7, Sub 986A, and E-2, Sub 998A, plus Piedmont and with the exception of the Progress Energy Service Company; and (b) the Utility MPA continues to provide that no loans through the Utility MPA will be made to, and no borrowings through the Utility MPA will be made by, Duke Energy, Progress Energy, and Cinergy Corp.

7.8 Borrowing Arrangements. Subject to the limitations imposed in Regulatory Condition 8.5, DEC, DEP, and Piedmont may borrow short-term funds through one or more joint external debt or credit arrangements (a Credit Facility), provided that the following conditions are met:

(a) No borrowing by DEC, DEP, or Piedmont under a Credit Facility shall exceed one year in duration, absent Commission approval;

(b) No Credit Facility shall include, as a borrower, any party other than Duke Energy, DEC, DEP, Duke Indiana, Duke Kentucky, DEF, Duke Ohio, and Piedmont; and

(c) DEC's, DEP's, and Piedmont's participation in any Credit Facility shall in no way cause either of them to guarantee, assume liability for, or provide collateral for any debt or credit other than its own.

7.9 Long-Term Debt Fund Restrictions. DEC, DEP, and Piedmont shall acquire their respective long-term debt funds through the financial markets, and shall neither borrow from, nor lend to, on a long-term basis, Duke Energy or any of the other Affiliates. To the extent that either DEC, DEP, or Piedmont borrows on short-term or long-term bases in the financial markets and is able to obtain a debt rating, its debt shall be rated under its own name.

SECTION VIII
CORPORATE GOVERNANCE/RING FENCING

The following Regulatory Conditions are intended to ensure the continued viability of DEC, DEP, and Piedmont and to insulate and protect DEC, DEP, and their Retail Native Load Customers and Piedmont and its Customers from the business and financial risks of Duke Energy and the Affiliates within the Duke Energy holding company system, including the protection of utility assets from liabilities of Affiliates.

8.1 Investment Grade Debt Rating. DEC, DEP, and Piedmont shall manage their respective businesses so as to maintain an investment grade debt rating on all of their rated debt issuances with all of the debt rating agencies on all of their rated debt issuances. If DEC's, DEP's, or Piedmont's debt rating falls to the lowest level still considered investment grade at the time, DEC, DEP, or Piedmont shall file written notice to the Commission and the Public Staff within five (5) days of such change and an explanation as to why the downgrade occurred. Within 45 days of such notice, DEC, DEP, or Piedmont shall provide the Commission and the Public Staff with a specific plan for maintaining and improving its debt rating. The Commission, after notice and hearing, may then take whatever action it deems necessary consistent with North Carolina law to protect the interests of DEC's or DEP's Retail Native Load Customers and Piedmont's Customers in the continuation of adequate and reliable service at just and reasonable rates.

8.2 Protection Against Debt Downgrade. To the extent the cost rates of any of DEC's, DEP's, or Piedmont's long-term debt (more than one year) or short-term debt (one year or less) are or have been adversely affected through a ratings downgrade attributable to the Merger, a replacement cost rate to remove the effect shall be used for all purposes affecting any of DEC's North Carolina retail rates and charges, DEP's North Carolina retail rates and charges, and Piedmont's North Carolina rates and charges. This replacement cost rate shall be applicable to all financings, refundings, and refinancings taking place following the change in ratings. This procedure shall be effective through DEC's, DEP's and Piedmont's next respective general rate cases. As part of DEC's, DEP's and Piedmont's next respective general rate cases, any future procedure relating to a replacement cost calculation will be determined. This Regulatory Condition does not indicate a preference for a specific debt rating or preferred stock rating for DEC, DEP, or Piedmont on current or prospective bases.

8.3 Distributions from DEC, DEP, and Piedmont to Holding Company. DEC, DEP, and Piedmont shall limit cumulative distributions paid to Duke Energy subsequent to the Merger to (a) the amount of Retained Earnings on the day prior to the closure of the Merger, plus (b) any future earnings recorded by DEC, DEP, and Piedmont subsequent to the Merger.

8.4 Debt Ratio Restrictions. To the extent any of Duke Energy's external debt or credit arrangements contain covenants restricting the ratio of debt to total capitalization on a consolidated basis to a maximum percentage of debt, Duke Energy shall ensure that the capital structures of both DEC, DEP, and Piedmont individually meet those restrictions.

8.5 Limitation on Continued Participation in Utility Money Pool Agreement and Other Joint Debt and Credit Arrangements with Affiliates. DEC, DEP, and Piedmont may participate in the Utility MPA and any other authorized joint debt or credit arrangement as provided in Regulatory Conditions 7.7 and 7.8 only to the extent such participation is beneficial to DEC's and DEP's respective Retail Native Load Customers and Piedmont's Customers and does not negatively affect DEC's, DEP's, or Piedmont's ability to continue to provide adequate and reliable service at just and reasonable rates.

8.6 Notice of Level of Non-Utility Investment by Holding Company System. In order to enable the Commission to determine whether the cumulative investment by Duke Energy in assets, ventures, or entities other than regulated utilities is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service so as to warrant Commission action (pursuant to Regulatory Condition 8.8 or other applicable authority) to protect DEC's or DEP's Retail Native Load Customers or Piedmont's Customers, Duke Energy shall notify the Commission within 90 days following the end of any fiscal year for which Duke Energy reports to the Securities and Exchange Commission assets in its operations other than regulated utilities that are in excess of 22% of its consolidated total assets. The following procedures shall apply to such a notice:

(a) Any interested party may file comments within 45 days of the filing of Duke Energy's notice.

(b) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall make a recommendation as to how the Commission should proceed. If the Commission determines that the percentage of total assets invested in Duke Energy's its operations other than regulated utilities is reasonably likely to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service so as to warrant action by the Commission to protect DEC's and DEP's Retail Native Load Customers and Piedmont's Customers, the Commission shall issue an order setting the matter for further consideration. If the Commission determines that the percentage threshold being exceeded does not warrant action by the Commission, the Commission shall issue an order so ruling.

8.7 Notice by Holding Company of Certain Investments. Duke Energy shall file a notice with the Commission subsequent to Board approval and as soon as practicable following any public announcement of any investment in a regulated utility or a non-regulated business that represents five (5) percent or more of Duke Energy's book capitalization.

8.8 Ongoing Review of Effect of Holding Company Structure. The operation of DEC, DEP, and Piedmont under a holding company structure shall continue to be subject to Commission review. To the extent the Commission has authority under North Carolina law, it may order modifications to the structure or operations of Duke Energy, DEBS, another Affiliate, or a Nonpublic Utility Operation, and may take whatever action it deems necessary in the interest of Retail Native Load Customers and Piedmont's Customers to protect the economic viability of DEC, DEP, and Piedmont, including the protection of DEC's, DEP's, and Piedmont's public utility assets from liabilities of Affiliates.

8.9 Investment by DEC, DEP, or Piedmont in Non-regulated Utility Assets and Non-utility Business Ventures. Neither DEC, DEP, nor Piedmont shall invest in a non-regulated utility asset or any non-utility business venture exceeding $50 million in purchase price or gross book value to DEC, DEP, or Piedmont unless it provides 30 days' advance notice. Regulatory Condition 13.2 shall apply to an advance notice filed pursuant to this Regulatory Condition. Purchases of assets, including land that will be held with a definite plan for future use in providing Electric Services in DEC's or DEP's franchise area or Natural Gas Services in Piedmont's franchise area, shall be excluded from this advance notice requirement.

8.10 Investment by Holding Company in Exempt Wholesale Generators. By April 15 of each year, Duke Energy shall provide to the Commission and the Public Staff a report summarizing Duke Energy's investment in exempt wholesale generators (EWGs) and foreign utility companies (FUCOs) in relation to its level of consolidated retained earnings and consolidated total capitalization at the end of the preceding year. Exempt wholesale generator and foreign utility company are defined in Section 1262(6) of Subtitle F in Title XII of PUHCA 2005 and have the same meanings for purposes of this condition.

8.11 Notice by DEC, DEP, or Piedmont of Default or Bankruptcy of Affiliate. If an Affiliate of DEC, DEP, or Piedmont experiences a default on an obligation that is material to Duke Energy or files for bankruptcy, and such bankruptcy is material to Duke Energy, DEC, DEP, or Piedmont shall notify the Commission in advance, if possible, or as soon as possible, but not later than ten days from such event.

8.12 Annual Report on Corporate Governance. No later than March 31 of each year, DEC, DEP, and Piedmont shall file a report including the following:

(a) A complete, detailed organizational chart (i) identifying DEC, DEP, Piedmont, and each Duke Energy financial reporting segment, and (ii) stating the business purpose of each Duke Energy financial reporting segment. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.
(b) A list of all Duke Energy financial reporting segment that are considered to constitute non-regulated investments and a statement of each segment's total capitalization and the percentage it represents of Duke Energy's non-regulated investments and total investments. Changes from the report for the immediately preceding year shall be summarized at the beginning of the report.
(c) An assessment of the risks that each unregulated Duke Energy financial reporting segment could pose to DEC, DEP, or Piedmont based upon current business activities of those affiliates and any contemplated significant changes to those activities.

(d) A description of DEC's, DEP's, Piedmont's and each significant Affiliate's actual capital structure. In addition, describe Duke Energy's, DEC's, DEP's, and Piedmont's respective capital structures and plans for achieving such goals.

(e) A list of all protective measures (other than those provided for by the Regulatory Conditions adopted in Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682) in effect between DEC, DEP, Piedmont, and any of their Affiliates, and a description of the goal of each measure and how it achieves that goal, such as mitigation of DEC's, DEP's, and Piedmont's exposure in the event of a bankruptcy proceeding involving any Affiliate(s).

(f) A list of corporate executive officers and other key personnel that are shared between DEC, DEP, Piedmont, and any Affiliate, along with a description of each person's position(s) with, and duties and responsibilities to each entity.

(g) A calculation of Duke Energy's total book and market capitalization as of December 31 of the preceding year for common equity, preferred stock, and debt.

SECTION IX
FUTURE MERGERS AND ACQUISITIONS

The following Regulatory Conditions are intended to ensure that the Commission receives sufficient notice to exercise its lawful authority over proposed mergers, acquisitions, and other business combinations involving Duke Energy, DEC, DEP, Piedmont, other Affiliates, or the Nonpublic Utility Operations. The advance notice provisions set forth in Regulatory Condition 13.2 do not apply to these conditions.

9.1 <u>Mergers and Acquisitions by or Affecting DEC, DEP, or Piedmont</u>. For any proposed merger, acquisition, or other business combination by DEC, DEP, or Piedmont that would have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, DEC, DEP, or Piedmont shall file in a new Sub docket an application for approval pursuant to G S. 62-111(a) at least 180 days before the proposed closing date for such merger, acquisition, or other business combination.

9.2 <u>Mergers and Acquisitions Believed Not to Have an Effect on DEC's, DEP's, or Piedmont's Rates or Service</u>. For any proposed merger, acquisition, or other business combination that is believed not to have an Effect on DEC's, DEP's, or Piedmont's Rates or Service, but which involves Duke Energy, other Affiliates, or the Nonpublic Utility Operations and which has a transaction value exceeding $1.5 billion, the following shall apply:

(a) Advance notification shall be filed with the Commission in a new Sub docket by the merging entities at least 90 days prior to the proposed closing date for such proposed merger, acquisition or other business combination. The advance notification is intended to provide the Commission an opportunity to determine whether the proposed merger, acquisition, or other business combination is reasonably likely to affect DEC, DEP, or Piedmont so as to require approval pursuant to G S. 62-111(a). The notification shall contain sufficient information to enable the Commission to make such a determination. If the Commission determines that such approval is required, the 180-day advance filing requirement in Regulatory Condition 9.1 shall not apply.

(b) Any interested party may file comments within 45 days of the filing of the advance notification.

(c) If timely comments are filed, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than 15 days after the comments are filed, and shall recommend that the Commission issue an order deciding how to proceed. If the Commission determines that the merger, acquisition, or other business combination requires approval pursuant to G.S. 62-111(a), the Commission shall issue an order requiring the filing of an application, and no closing can occur until and unless the Commission approves the proposed merger, acquisition, or business combination. If the Commission determines that the merger, acquisition, or other business combination does not require approval pursuant to G.S. 62-111(a), the Commission shall issue an order so ruling. At the end of the notice period, if no order has been issued, Duke Energy, any other Affiliate, or the Nonpublic Utility Operation may proceed with the merger, acquisition, or other business combination but shall be subject to any fully-adjudicated Commission order on the matter.

SECTION X
STRUCTURE/ORGANIZATION

The following Regulatory Conditions are intended to ensure that the Commission receives adequate notice of, and opportunity to review and take such lawful action as is necessary and appropriate with respect to, changes to the structure and organization of Duke Energy, DEC, DEP, Piedmont, and other Affiliates, and Nonpublic Utility operations as they may affect Customers.

10.1 Transfer of Services, Functions, Departments, Rights, Assets, or Liabilities. DEC, DEP, and Piedmont shall file notice with the Commission 30 days prior to the initial transfer or any subsequent transfer of any services, functions, departments, rights, obligations, assets, or liabilities from DEC, DEP, or Piedmont to DEBS that (a) involves services, functions, departments, rights, obligations, assets, or liabilities other than those of a governance or corporate type nature that traditionally have been provided by a service company or (b) potentially would have a significant effect on DEC's, DEP's, or Piedmont's public utility operations. The provisions of Regulatory Condition 13.2 apply to an advance notice filed pursuant to this Regulatory Condition.

10.2 Notice and Consultation with Public Staff Regarding Proposed Structural and Organizational Changes. Upon request, DEC, DEP, and Piedmont shall meet and consult with, and provide requested relevant data to, the Public Staff regarding plans for significant changes in DEC's, DEP's, Piedmont's or Duke Energy's organization, structure (including RTO developments), and activities; the expected or potential impact of such changes on Customer rates, operations and service; and proposals for assuring that such plans do not adversely affect DEC's or DEP's Retail Native Load Customers or Piedmont's Customers. To the extent that proposed significant changes are planned for the organization, structure, or activities of an Affiliate or Nonpublic Utility Operation and such proposed changes are likely to have an adverse impact on DEC's, DEP's, or Piedmont's Customers, then DEC's, DEP's, and Piedmont's plans and proposals for assuring that those plans do not adversely affect their Customers must be included in these meetings. DEC, DEP, and Piedmont shall inform the Public Staff promptly of any such events and changes.

SECTION XI
SERVICE QUALITY

The following Regulatory Conditions are intended to ensure that DEC, DEP, and Piedmont continue to implement and further their commitment to providing superior public utility service by meeting recognized service quality indices and implementing the best practices of each other and their Utility Affiliates, to the extent reasonably practicable.

11.1 Overall Service Quality. Upon consummation of the Merger, DEC, DEP, and Piedmont each shall continue their commitment to providing superior public utility service and shall maintain the overall reliability of Electric Services and Natural Gas Services at levels no less than the overall levels it has achieved in the past decade.

11.2 Best Practices. DEC, DEP, and Piedmont shall make every reasonable effort to incorporate each other's best practices into its own practices to the extent practicable.

11.3 Quarterly Reliability Reports. DEC and DEP shall each provide quarterly service reliability reports to the Public Staff on the following measures: System Average Interruption Duration Index (SAIDI) and System Average Interruption Frequency Index (SAIFI).

11.4 Notice of NERC Audit. This Regulatory Condition does not apply to Piedmont. At such time as either DEC or DEP receives notice that the North American Electric Reliability Corporation (NERC) or the SERC Reliability Corporation will be conducting a non-routine compliance audit with respect to DEC's or DEP's compliance with mandatory reliability standards, DEC or DEP shall notify the Public Staff.

11.5 Right-of-Way Maintenance Expenditures (DEC and DEP). DEC and DEP shall budget and expend sufficient funds to trim and maintain their lower voltage line rights-of-way and their distribution rights-of-way in a manner consistent with their internal right-of-way clearance practices and Commission Rule R8-26. In addition, DEC and DEP shall track annually, on a major category basis, departmental or division budget requests, approved budgets and actual expenditures for right-of-way maintenance.

11.6 Right-of-Way Maintenance Expenditures (Piedmont). Piedmont shall budget and expend sufficient funds to maintain its pipeline rights-of-way so as to allow ready access by personnel and vehicles for the purpose of responding to pipeline damage, conducting leak and corrosion surveys, performing maintenance activities, and ensuring system integrity, safety, and reliability.

11.7 Right-of-Way Clearance Practices (DEC and DEP). DEC and DEP shall each provide a copy of their internal right-of-way clearance practices to the Public Staff, and shall promptly notify the Public Staff of any significant changes or modifications to the practices or maintenance schedules.

11.8 Right-of-Way Clearance Practices (Piedmont). Piedmont shall provide a copy of its Operating and Maintenance Manual to the Public Staff and shall promptly notify the Public Staff in writing of any substantive changes to Section 9, "Right-of-Way Management Program."

11.9 Meetings with Public Staff.

(a) DEC, DEP, and Piedmont shall each meet annually with the Public Staff to discuss service quality initiatives and results, including (i) ways to monitor and improve service quality, (ii) right-of-way maintenance practices, budgets, and actual expenditures, and (iii) plans that could have an effect on customer service, such as changes to call center operations.

(b) DEC, DEP, and Piedmont shall each meet with the Public Staff at least annually to discuss potential new tariffs, programs, and services that enable its customers to appropriately manage their energy bills based on the varied needs of their customers.

11.10 Customer Access to Service Representatives and Other Services. DEC, DEP, and Piedmont shall continue to have knowledgeable and experienced customer service representatives available 24 hours a day to respond to service outage calls and during normal business hours to handle all types of customer inquiries. DEC, DEP, and Piedmont shall also maintain up-to-date and user-friendly online services and automated telephone service 24 hours a day to perform routine customer interactions and to provide general billing and customer information.

11.11 Customer Surveys. DEC, DEP, and Piedmont shall continue to survey their customers regarding their satisfaction with public utility service and shall incorporate this information into their processes, programs, and services.

SECTION XII
TAX MATTERS

The following Regulatory Conditions are intended to ensure that DEC's, DEP's, and Piedmont's North Carolina Customers do not bear any additional tax costs as a result of the Merger and receive an appropriate share of any tax benefits associated with the service company Affiliates.

12.1 Costs under Tax Sharing Agreements. Under any tax sharing agreement, DEC, DEP, and Piedmont shall not seek to recover from North Carolina Customers any tax costs that exceed DEC's, DEP's, or Piedmont's tax liability calculated as if it were a stand-alone, taxable entity for tax purposes.

12.2 Tax Benefits Associated with Service Companies. The appropriate portion of any income tax benefits associated with DEBS shall accrue to the North Carolina retail operations of DEC, DEP, and Piedmont, respectively, for regulatory accounting, reporting, and ratemaking purposes.

SECTION XIII
PROCEDURES

The following Regulatory Conditions are intended to apply to all filings made pursuant to these Regulatory Conditions unless otherwise expressly provided by, Commission order, rule, or statute.

13.1 Filings that Do Not Involve Advance Notice. Regulatory Condition filings that are not subject to Regulatory Condition 13.2 shall be made in sub dockets of Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682, as follows:

(a) Filings related to affiliate matters required by Regulatory Conditions 5.4, 5.5, 5.6, 5.7, and 5.23 and the filing permitted by Regulatory Condition 5.3 shall be made by DEC, DEP, and Piedmont in Subs 1100A, 1095A, and 682A, respectively;
(b) Filings related to financings required by Regulatory Condition 7.6, and the filings required by Regulatory Conditions 8.6, 8.7, 8.10, 8.11 and 8.12 shall be made by DEC, DEP, and Piedmont in Subs 1100B, 1095B, and 682B, respectively;
(c) Files related to compliance as required by Regulatory Condition 14.4 and filings required by Sections III.A.2(k), III.A.3(e), (f), and (g), III.D.5, and III.D.8 of the Code of Conduct shall be made by DEC, DEP, and Piedmont in Subs 1100C, 1095C, and 682C, respectively;
(d) Filings related to the independent audits required by Regulatory Condition 5.8 shall be made in Subs 1100D, 1095D, and 682D, respectively; and
(e) Filings related to orders and filings with the FERC, as required by Regulatory Condition 3.1(d), 3.10 and 5.13 shall be made by DEC, DEP, and Piedmont in Subs 1100E, 1095E, and 682E, respectively.

13.2 Advance Notice Filings. Advance notices filed pursuant to Regulatory Conditions 3.3(b), 4.2, 8.9, and 10.1 shall be assigned a new, separate Sub docket. Such a filing shall identify the condition and notice period involved and state whether other regulatory approvals are required and shall be in the format of a pleading, with a caption, a title, allegations of the activities to be undertaken, and a verification. Advance notices may be filed under seal if necessary. The following additional procedures apply:

(a) Advance notices of activities to be undertaken shall not be filed until sufficient details have been decided upon to allow for meaningful discovery as to the proposed activities.
(b) The Chief Clerk shall distribute a copy of advance notice filings to each Commissioner and to appropriate members of the Commission Staff and Public Staff.

(c) DEC, DEC, or Piedmont shall serve such advance notices on each party to Docket Nos. E-7, Sub 1100, E-2, Sub 1095, and G-9, Sub 682, respectively, that has filed a request to receive them with the Commission within 30 days of the issuance of an order approving the Merger in this docket. These parties may participate in the advance notice proceedings without petitioning to intervene. Other interested persons shall be required to follow the Commission's usual intervention procedures.

(d) To effectuate this Regulatory Condition, DEC, DEP, or Piedmont shall serve pertinent information on all parties at the time it serves the advance notice. During the advance notice period, a free exchange of information is encouraged, and parties may request additional relevant information. If DEC, DEP, or Piedmont objects to a discovery request, DEC, DEP, or Piedmont and the requesting party shall try to resolve the matter. If the parties are unable to resolve the matter, DEC, DEP, or Piedmont may file a motion for a protective order with the Commission.

(e) The Public Staff shall investigate and file a response with the Commission no later than 15 days before the notice period expires. Any other interested party may also file a response or objection within 15 days before the notice period expires. DEC, DEP, or Piedmont may file a reply to the response(s).

(f) The basis for any objection to the activities to be undertaken shall be stated with specificity. The objection shall allege grounds for a hearing, if such is desired.

(g) If neither the Public Staff nor any other party files an objection to the activities within 15 days before the notice period expires, no Commission order shall be issued, and the Sub docket in which the advance notice was filed may be closed.

(h) If the Public Staff or any other party files a timely objection to the activities to be undertaken by DEC, DEP, or Piedmont, the Public Staff shall place the matter on a Commission Staff Conference agenda as soon as possible, but in no event later than two weeks after the objection is filed, and shall recommend that the Commission issue an order deciding how to proceed as to the objection. The Commission reserves the right to extend an advance notice period by order should the Commission need additional time to deliberate or investigate any issue. At the end of the notice period, if no objection has been filed by the Public Staff and no order, whether procedural or substantive, has been issued, DEC, DEP, Piedmont, Duke Energy, any other Affiliate, or the Nonpublic Utility Operation may execute the proposed agreement, proceed with the activity to be undertaken, or both, but shall be subject to any fully-adjudicated Commission order on the matter.

(i) If the Commission schedules a hearing on an objection, the party filing the objection shall bear the burden of proof at the hearing.

(j) The precedential effect of advance notice proceedings, like most issues of res judicata, will be decided on a fact-specific basis.

(k) If some other Commission filing or Commission approval is required by statute, notice pursuant to a Regulatory Condition alone does not satisfy the statutory requirement.

SECTION XIV
COMPLIANCE WITH CONDITIONS AND CODE OF CONDUCT

The following Regulatory Conditions are intended to ensure that Duke Energy, DEC, DEP, Piedmont, and all other Affiliates establish and maintain the structures and processes necessary to fulfill the commitments expressed in all of the Regulatory Conditions and the Code of Conduct in a timely, consistent, and effective manner.

14.1 Ensuring Compliance with Regulatory Conditions and Code of Conduct. Duke Energy, DEC, DEP, Piedmont, and all other Affiliates shall devote sufficient resources into the creation, monitoring, and ongoing improvement of effective internal compliance programs to ensure compliance with all Regulatory Conditions and the DEC/DEP/Piedmont Code of Conduct, and shall take a proactive approach toward correcting any violations and reporting them to the Commission. This effort shall include the implementation of systems and protocols for monitoring, identifying, and correcting possible violations, a management culture that encourages compliance among all personnel, and the tools and training sufficient to enable employees to comply with Commission requirements.

14.2 Designation of Chief Compliance Officer. DEC, DEP, and Piedmont shall designate a chief compliance officer who will be responsible for compliance with the Regulatory Conditions and Code of Conduct. This person's name and contact information must be posted on DEC's, DEP's, and Piedmont's Internet Websites.

14.3 Annual Training. DEC, DEP, and Piedmont shall provide annual training on the requirements and standards contained within the Regulatory Conditions and Code of Conduct to all of their employees (including service company employees) whose duties in any way may be affected by such requirements and standards. New employees must receive such training within the first 60 days of their employment. Each employee who has taken the training must certify electronically or in writing that s/he has completed the training.

14.4 Report of Violations. If DEC, DEP, or Piedmont discover that a violation of their requirements or standards contained within the Regulatory Conditions and Code of Conduct has occurred then DEC, DEP, or Piedmont shall file a statement with the Commission in Docket Nos. E-7, Sub 1100C, E-2, Sub 1095C, and G-9, Sub 682C, respectively, describing the circumstances leading to that violation of DEC's, DEP's, or Piedmont's requirements or standards, as contained within the Regulatory Conditions and Code of Conduct, and the mitigating and other steps taken to address the current or any future potential violation.

SECTION XV
PROCEDURES FOR DETERMINING LONG-TERM SOURCES OF PIPELINE CAPACITY AND SUPPLY

The following Regulatory Conditions are intended to ensure the continued practices of DEC, DEP, and Piedmont for determining long-term sources of pipeline capacity and supply.

ELECTRIC – MISCELLANEOUS

15.1 Cost-benefit Analysis. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by DEC and DEP on the basis of the benefits and costs of such source(s) specific to their respective electric customers. The appropriate source(s) for the interstate pipeline capacity and supply shall be determined by Piedmont on the basis of the specific benefits and costs of such source(s) specific to its natural gas customers, including electric power generating customers.

15.2 Ownership and Control of Contracts. Piedmont shall retain title, ownership, and management of all gas contracts necessary to ensure the provision of reliable Natural Gas Services consistent with Piedmont's best cost gas and capacity procurement methodology.

CODE OF CONDUCT

GOVERNING THE RELATIONSHIPS, ACTIVITIES, AND TRANSACTIONS BETWEEN AND AMONG THE PUBLIC UTILITY OPERATIONS OF DEC, THE PUBLIC UTILITY OPERATIONS OF DEP, THE PUBLIC UTILITY OPERATIONS OF PIEDMONT, DUKE ENERGY CORPORATION, OTHER AFFILIATES, AND THE NONPUBLIC UTILITY OPERATIONS OF DEC, DEP, AND PIEDMONT

I. DEFINITIONS

For the purposes of this Code of Conduct, the terms listed below shall have the following definitions:

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of this Code of Conduct, Duke Energy and any business entity controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Commission: The North Carolina Utilities Commission.

Confidential Systems Operation Information or CSOI: Nonpublic information that pertains to Electric Services provided by DEC or DEP, including but not limited to information concerning electric generation, transmission, distribution, or sales, and nonpublic information that pertains to Natural Gas Services provided by Piedmont, including but not limited to information concerning transportation, storage, distribution, gas supply, or other similar information.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

Customer Information: Non-public information or data specific to a Customer or a group of Customers, including, but not limited to, electricity consumption, natural gas consumption, load profile, billing history, or credit history that is or has been obtained or compiled by DEC, DEP, or Piedmont in connection with the supplying of Electric Services or Natural Gas Services to that Customer or group of Customers.

ELECTRIC – MISCELLANEOUS

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress. LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, which is the current holding company parent of DEC, DEP, and Piedmont, and any successor company.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Fuel and Purchased Power Supply Services: All fuel for generating electric power and purchased power obtained by DEC or DEP from sources other than DEC or DEP for the purpose of providing Electric Services.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding; (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Natural Gas Services: Commission-regulated natural gas sales and natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering and billing, and standby service.

Non-affiliated Gas Marketer: An entity, not affiliated with DEC, DEP, or Piedmont, engaged in the unregulated sale, arrangement, brokering or management of gas supply, pipeline capacity, or gas storage.

Nonpublic Utility Operations: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Personnel: An employee or other representative of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation, who is involved in fulfilling the business purpose of that entity.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP and is a subsidiary of Duke Energy, and any successors.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Regulatory Conditions: The conditions imposed by the Commission in connection with or related to the Merger.

Shared Services: The services that meet the requirements of the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, or subsequent orders of the Commission and that the Commission has explicitly authorized DEC, DEP, and Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

Shipper: A Non-affiliated Gas Marketer, a municipal gas customer, or an end-user of gas.

Utility Affiliates: The regulated public utility operations of Duke Energy Indiana, LLC (Duke Indiana), Duke Energy Kentucky, Inc. (Duke Kentucky), Florida Power Corporation, d/b/a Progress Energy Florida, LLC (DEF), and Duke Energy Ohio, Inc. (Duke Ohio).

II. GENERAL

This Code of Conduct establishes the minimum guidelines and rules that apply to the relationships, transactions, and activities involving the public utility operations of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, and Piedmont, to the extent such relationships, activities, and transactions affect the public utility operations of DEC, DEP, and Piedmont in their respective service areas. DEC, DEP, Piedmont, and the other Affiliates are bound by this Code of Conduct pursuant to Regulatory Condition 6.1 approved by the Commission in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682. This Code of Conduct is subject to modification by the Commission as the public interest may require, including, but not limited to, addressing changes in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations; changes in the structure of the electric industry or natural gas industry; or other changes that warrant modification of this Code.

DEC, DEP, or Piedmont may seek a waiver of any aspect of this Code of Conduct by filing a request with the Commission showing that circumstances in a particular case justify such a waiver.

III. STANDARDS OF CONDUCT

A. Independence and Information Sharing

1. Separation - DEC, DEP, Piedmont, Duke Energy, and the other Affiliates shall operate independently of each other and in physically separate locations to the maximum extent practicable; however, to the extent that the Commission has approved or accepted a service company-to-utility or utility-to-utility service agreement or list, DEC, DEP, Piedmont, Duke Energy, and the other Affiliates may operate as described in the agreement or list on file at the Commission. DEC, DEP, Piedmont, Duke Energy, and each of the other Affiliates shall maintain separate books and records. Each of DEC's, DEP's, and Piedmont's Nonpublic Utility Operations shall maintain separate records from those of DEC's, DEP's, and Piedmont's public utility operations to ensure appropriate cost allocations and any arm's-length-transaction requirements.

2. Disclosure of Customer Information:

   (a) Upon request, and subject to the restrictions and conditions contained herein, DEC, DEP, and Piedmont may provide Customer Information to Duke Energy or another Affiliate under the same terms and conditions that apply to the provision of such information to non-Affiliates. In addition, DEC and DEP may provide Customer Information to their respective Nonpublic Utility Operations under the same terms and conditions that apply to the provision of such information to non-Affiliates.

(b) Except as provided in Section III.A.2.(f), Customer Information shall not be disclosed to any Affiliate or non-affiliated third party without the Customer's consent, and then only to the extent specified by the Customer. Consent to disclosure of Customer Information to Affiliates of DEC, DEP, and Piedmont or to DEC's or DEP's Nonpublic Utility Operations may be obtained by means of written, electronic, or recorded verbal authorization upon providing the Customer with the information set forth in Attachment A; provided, however, that DEC, DEP, and Piedmont retain such authorization for verification purposes for as long as the authorization remains in effect. Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

(c) If the Customer allows or directs DEC, DEP, or Piedmont to provide Customer Information to Duke Energy, another Affiliate, or to DEC's or DEP's Nonpublic Utility Operations, then DEC, DEP, or Piedmont shall ask if the Customer would like the Customer Information to be provided to one or more non-Affiliates. If the Customer directs DEC, DEP, or Piedmont to provide the Customer Information to one or more non-Affiliates, the Customer Information shall be disclosed to all entities designated by the Customer contemporaneously and in the same manner.

(d) Section III.A.2.shall be permanently posted on DEC's, DEP's and Piedmont's website(s).

(e) No DEC, DEP, or Piedmont employee who is transferred to Duke Energy or another Affiliate shall be permitted to copy or otherwise compile any Customer Information for use by such entity except as authorized by the Customer pursuant to a signed Data Disclosure Authorization. DEC, DEP, and Piedmont shall not transfer any employee to Duke Energy or another Affiliate for the purpose of disclosing or providing Customer Information to such entity.

(f) Notwithstanding the prohibitions in this Section III.A.2.:

(i) DEC, DEP, and Piedmont may disclose Customer Information to DEBS, any other Affiliate, or a non-affiliated third party without Customer consent to the extent necessary for the Affiliate or non-affiliated third party to provide goods or services to DEC, DEP, or Piedmont and upon the written agreement of the other Affiliate or non-affiliated third-party to protect the confidentiality of such Customer Information. To the extent the Commission approves a list of services to be provided and taken pursuant to one or more utility-to-utility service agreements, then Customer Information may be disclosed pursuant to the foregoing exception to the extent necessary for such services to be performed.

(ii) DEC and DEP may disclose Customer Information to their Nonpublic Utility Operations without Customer consent to the extent necessary for the Nonpublic Utility Operations to provide goods and services to DEC or DEP and upon the written agreement of the Nonpublic Utility Operations to protect the confidentiality of such Customer Information.

(iii) DEC, DEP, and Piedmont may disclose Customer Information to a state or federal regulatory agency or court of competent jurisdiction if required in writing to do so by the agency or court.

(g) DEC, DEP, and Piedmont shall take appropriate steps to store Customer Information in such a manner as to limit access to those persons permitted to receive it and shall require all persons with access to such information to protect its confidentiality.

(h) DEC, DEP, and Piedmont shall establish guidelines for its employees and representatives to follow with regard to complying with this Section III.A.2.

(i) No DEBS employee may use Customer Information to market or sell any product or service to DEC's, DEP's, or Piedmont's Customers, except in support of a Commission-approved rate schedule or program or a marketing effort managed and supervised directly by DEC, DEP, or Piedmont.

(j) DEBS employees with access to Customer Information must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the Customer Information by employees of DEBS that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC and DEP.

(k) Should any inappropriate disclosure of DEC, DEP, or Piedmont Customer Information occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission describing the circumstances of the disclosure, the Customer information disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

3. The disclosure of Confidential Systems Operation Information of DEC, DEP, and Piedmont shall be governed as follows:

(a) Such CSOI shall not be disclosed by DEC, DEP, or Piedmont to an Affiliate or a Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates contemporaneously and in the same manner. Disclosure to non-Affiliates is not required under the following circumstances:

(i) The CSOI is provided to employees of DEC or DEP for the purpose of implementing, and operating pursuant to, the JDA in accordance with the Regulatory Conditions approved in Docket Nos. E-7, Sub 986, and E-2, Sub 998.

(ii) The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.

(iii) A state or federal regulatory agency or court of competent jurisdiction over the disclosure of the CSOI requires the disclosure.

(iv) The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.

(v) The CSOI is provided to employees of DEC's, DEP's, or Piedmont's Utility Affiliates for the purpose of sharing best practices and otherwise improving the provision of regulated utility service.

(vi) The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.

(vii) Disclosure is otherwise essential to enable DEC or DEP to provide Electric Services to their Customers or for Piedmont to provide Natural Gas Services to its Customers.

(viii) Disclosure of the CSOI is necessary for compliance with the Sarbanes-Oxley Act of 2002.

(b) Any CSOI disclosed pursuant Section III.A.3.(a)(i)-(viii) shall be disclosed only to employees that need the CSOI for the purposes covered by those exceptions and in as limited a manner as possible. The employees receiving such CSOI must be prohibited from acting as conduits to pass the CSOI to any Affiliate(s) and must have explicitly agreed to protect the confidentiality of such CSOI.

(c) For disclosures pursuant to Section III.A.3.(a)(vii) and (viii), DEC, DEP, and Piedmont shall include in their annual affiliated transaction reports the following information:

(i) The types of CSOI disclosed and the name(s) of the Affiliate(s) to which it is being, or has been, disclosed;

(ii) The reasons for the disclosure; and

(iii) Whether the disclosure is intended to be a one-time occurrence or an ongoing process.

To the extent a disclosure subject to the reporting requirement is intended to be ongoing, only the initial disclosure and a description of any processes governing subsequent disclosures need to be reported.

(d) DEC, DEP, Piedmont, and DEBS employees with access to CSOI must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the CSOI by employees that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC, DEP, and Piedmont.

(e) Should the handling or disclosure of CSOI by DEBS, or another Affiliate or Nonpublic Utility Operation, or its respective employees, result in (i) a violation of DEC's or DEP's FERC Statement of Policy and Code of Conduct (FERC Code), 18 CFR 358 - Standards of Conduct for Transmission Providers (Transmission Standards), or any other relevant FERC standards or codes of conduct, (ii) the posting of such data on an Open Access Same-Time Information System (OASIS) or other Internet website, or (iii) other public disclosure of the data, DEC or DEP shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, and E-2, Sub 1095C, respectively, describing the circumstances leading to such violation, posting, or other public disclosure describing the circumstances leading to such violation, posting, or other public disclosure, any data required to be posted or otherwise publicly disclosed, and the steps taken to mitigate the effects of the current and prevent any future potential violation, posting, or other public disclosure.

(f) Should any inappropriate disclosure of CSOI occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, E-2, Sub 1095C, or G-9, Sub 682C, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(g) Unless publicly noticed and generally available, should the FERC Code, the Transmission Standards, or any other relevant FERC standards or codes of conduct be eliminated, amended, superseded, or otherwise replaced, DEC and DEP shall file a letter with the Commission in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, describing such action within 60 days of the action, along with a copy of any amended or replacement document.

B. Nondiscrimination

1. DEC's, DEP's, and Piedmont's employees and representatives shall not unduly discriminate against non-Affiliated entities.

2. In responding to requests for Electric Services, Natural Gas Services, or both, DEC, DEP, and Piedmont shall not provide any preference to Duke Energy, another Affiliate, or a Nonpublic Utility Operation, or to any customers of such an entity, as compared to non-Affiliates or their customers. Moreover, neither DEC, DEP, Piedmont, Duke Energy, nor any other Affiliates shall represent to any person or entity that Duke Energy, another Affiliate, or a Nonpublic Utility Operation will receive any such preference.

3. DEC, DEP, and Piedmont shall apply the provisions of their respective tariffs equally to Duke Energy, the other Affiliates, the Nonpublic Utility Operations, and non-Affiliates.

4. DEC, DEP, and Piedmont shall process all similar requests for Electric Services, Natural Gas Services, or both, in the same timely manner, whether requested on behalf of Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity.

5. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, or another Affiliate shall indicate, represent, or otherwise give the appearance to another party that Duke Energy or another Affiliate speaks on behalf of DEC, DEP, or Piedmont; provided however, that this prohibition shall not apply to employees of DEBS providing Shared Services or to employees of another Affiliate to the extent explicitly provided for in an affiliate agreement that has been accepted by the Commission. In addition, no personnel or representatives of a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that they speak on behalf of DEC's or DEP's regulated public utility operations.

6. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that any advantage to that party with regard to Electric Services or Natural Gas Services exists as the result of that party dealing with Duke Energy, another Affiliate, or a Nonpublic Utility Operation, as compared with a non-Affiliate.

7. DEC, DEP, and Piedmont shall not condition or otherwise tie the provision or terms of any Electric Services or Natural Gas Services to the purchasing of any goods or services from, or the engagement in business of any kind with, Duke Energy, another Affiliate, or a Nonpublic Utility Operation.

8. When any employee or representative of DEC or DEP receives a request for information from or provides information to a Customer about goods or services available from Duke Energy, another Affiliate, or a Nonpublic Utility Operation, the employee or representative shall advise the Customer that such goods or services may also be available from non-Affiliated suppliers.

9. Disclosure of Customer Information to Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity shall be governed by Section III.A.2. of this Code of Conduct.

10. Unless otherwise directed by order of the Commission, electric generation shall not receive a priority of use from Piedmont that would supersede or diminish Piedmont's provision of service to its human needs firm residential and commercial customers.

11. Piedmont shall file an annual report with the Commission summarizing all requests or inquiries for Natural Gas Services made by a non-utility generator, Piedmont's response to the request, and the status of the inquiry.

C. Marketing

1. The public utility operations of DEC, DEP, and Piedmont may engage in joint sales, joint sales calls, joint proposals, or joint advertising (a joint marketing arrangement) with their Affiliates and with their Nonpublic Utility Operations, subject to compliance with other provisions of this Code of Conduct and any conditions or restrictions that the Commission may hereafter establish. DEC, DEP, and Piedmont shall not otherwise engage in such joint activities without making such opportunities available to comparable third parties.

2. Neither Duke Energy nor any of the other Affiliates shall use the names or logos of DEC, DEP, or Piedmont in any communications without the following disclaimer:

(a) "[Duke Energy Corporation/Affiliate) is not the same company as [DEC/DEP/Piedmont], and [Duke Energy Corporation/Affiliate) has separate management and separate employees";

(b) "[Duke Energy Corporation/Affiliate] is not regulated by the North Carolina Utilities Commission or in any way sanctioned by the Commission";

(c) "Purchasers of products or services from [Duke Energy Corporation/Affiliate] will receive no preference or special treatment from [DEC/DEP/Piedmont]"; and

(d) "A customer does not have to buy products or services from [Duke Energy Corporation/Affiliate] in order to continue to receive the same safe and reliable electric service from [DEC/DEP] or natural gas service from Piedmont."

3. Nonpublic Utility Operations may not use the names or logos of DEC, DEP, or Piedmont in communications without the following disclaimer:

"[Name of product or service being offered by Nonpublic Utility Operation] is not part of the regulated services offered by [DEC/DEP/Piedmont] and is not in any way sanctioned by the North Carolina Utilities Commission."

4. In addition, DEC's and DEP's Nonpublic Utility Operations may not use the names or logos of DEC or DEP in any communications without the following disclaimers:

(a) "Purchasers of [name of product or service being offered by Nonpublic Utility Operation] from [Nonpublic Utility Operation] will receive no preference or special treatment from [DEC/DEP]"; and

(b) "A customer does not have to buy this product or service from [Nonpublic Utility Operation] in order to continue to receive the same safe and reliable electric service from [DEC/DEP]."

The required disclaimers in this Section III.C.4. must be sized and displayed in a way that is commensurate with the name and logo so that the disclaimer is at least the larger of one-half the size of the type that first displays the name and logo or the predominant type used in the communication.

D. Transfers of Goods and Services, Transfer Pricing, and Cost Allocation

1. Cross-subsidies involving DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations are prohibited.

2. All costs incurred by personnel or representatives of DEC, DEP, or Piedmont for or on behalf of Duke Energy, other Affiliates, or the Nonpublic Utility Operations shall be charged to the entity responsible for the costs.

3. The following conditions shall apply as a general guideline to the transfer prices charged for goods and services, including the use or transfer of personnel, exchanged between and among DEC, DEP, or Piedmont, and Duke Energy, the other Non-Utility Affiliates, and the Nonpublic Utility Operations, to the extent such prices affect DEC's, DEP's, or Piedmont's operations or costs of utility service:

(a) Except as otherwise provided for in this Section III.D., for untariffed goods and services provided by DEC, DEP, or Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer price paid to

DEC, DEP, or Piedmont shall be set at the higher of Market Value or DEC's, DEP's, or Piedmont's Fully Distributed Cost.

(b) Except as otherwise provided for in this Section III.D., for goods and services provided, directly or indirectly, by Duke Energy, a Non-Utility Affiliate other than DEBS, or a Nonpublic Utility Operation to DEC, DEP, or Piedmont, the transfer price(s) charged by Duke Energy, the Non-Utility Affiliate, and the Nonpublic Utility Operation to DEC, DEP, or Piedmont shall be set at the lower of Market Value or Duke Energy's, the Non-Utility Affiliate's, or the Nonpublic Utility Operation's Fully Distributed Cost(s). If DEC, DEP, or Piedmont do not engage in competitive solicitation and instead obtain the goods or services from Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, DEC, DEP, and Piedmont shall implement adequate processes to comply with this Code provision and related Regulatory Conditions and ensure that in each case DEC's, DEP's, and Piedmont's Customers receive service at the lowest reasonable cost, unless otherwise directed by order of the Commission. For goods and services provided by DEBS to DEC, DEP, Piedmont, and Utility Affiliates, the transfer price charged shall be set at DEBS' Fully Distributed Cost.

(c) Tariffed goods and services provided by DEC, DEP, and Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services under the applicable tariff.

(d) With the exception of gas supply transactions, transportation transactions, or both, between DEC and Piedmont or DEP and Piedmont, untariffed non-power, non-generation, or non-fuel goods and services provided by DEC, DEP, or Piedmont to DEC, DEP, Piedmont, or the Utility Affiliates or by the Utility Affiliates to DEC, DEP, or Piedmont, shall be transferred at the supplier's Fully Distributed Cost, unless otherwise directed by order of the Commission.

(e) All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.

(f) All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC, DEP, and Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.

(g) All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its Order Approving Stipulation, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.

4. To the extent that DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations receive Shared Services from DEBS (or its successor), these Shared Services may be jointly provided to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations on a fully distributed cost basis, provided that the taking of such Shared Services by DEC, DEP, and Piedmont is cost beneficial on a service-by-service (e.g., accounting management, human resources management, legal services, tax administration, public affairs) basis to DEC, DEP, and Piedmont. Charges for such Shared Services shall be allocated in accordance with the cost allocation manual filed with the Commission pursuant to Regulatory Condition 5.5, subject to any revisions or other adjustments that may be found appropriate by the Commission on an ongoing basis.

5. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of goods and services (excluding the purchase of electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement), if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas, if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's, and Piedmont's affiliated transaction reports filed with the Commission.

6. All permitted transactions between DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be recorded and accounted for in accordance with the cost allocation manual required to be filed with the Commission pursuant to Regulatory Condition 5.5 and with Affiliate agreements accepted by the Commission or otherwise processed in accordance with North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

7. Costs that DEC, DEP, and Piedmont incur in assembling, compiling, preparing, or furnishing requested Customer Information or CSOI for or to Duke Energy, other Affiliates, Nonpublic Utility Operations, or non-Affiliates (other than the Customer or the Customer's designated representative or agent) shall be recovered from the requesting party pursuant to Section III.D.3. of this Code of Conduct.

8. Any technology or trade secrets developed, obtained, or held by DEC, DEP, or Piedmont in the conduct of regulated operations shall not be transferred to Duke Energy, another Affiliate, or a Nonpublic Utility Operation without just compensation and the filing of 60-days prior notification to the Commission. DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other and may request a waiver of this requirement from the Commission with respect to such transfers to Duke Energy, a Utility Affiliate, a Non-Utility Affiliate, or a Nonpublic Utility Operation. In no case, however, shall the notice period requested be less than 20 business days.

9. DEC, DEP, and Piedmont shall receive compensation from Duke Energy, other Affiliates, and the Nonpublic Utility Operations for intangible benefits, if appropriate.

E. Regulatory Oversight

1. The requirements regarding affiliate transactions set forth in G.S. 62-153 shall continue to apply to all transactions between DEC, DEP, Piedmont, Duke Energy, and the other Affiliates.

2. The books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be open for examination by the Commission, its staff, and the Public Staff as provided in G.S. 62-34, 62-37, and 62-51.

3. If Piedmont supplies any Natural Gas Services, with the exception of Natural Gas Services provided pursuant to Commission-approved contracts or service agreements, used by either DEC or DEP to generate electricity, DEC or DEP, as applicable, shall file a report with the Commission in its annual fuel and fuel-related cost recovery case demonstrating that the purchase was prudent and the price was reasonable.

4. To the extent North Carolina law, the orders and rules of the Commission, and the Regulatory Conditions permit Duke Energy, an Affiliate, or a Nonpublic Utility Operation to supply DEC, DEP, or Piedmont with Natural Gas Services or other Fuel and Purchased Power Supply Services used by DEC or DEP to provide Electric Services to Customers, and to the extent such Natural Gas Services or other Fuel and Purchased Power Supply Services are supplied, DEC or DEP, as applicable, shall demonstrate in its annual fuel adjustment clause proceeding that each such acquisition was prudent and the price was reasonable.

F. Utility Billing Format

To the extent any bill issued by DEC, DEP, Piedmont, Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party includes charges to Customers for Electric Services or Natural Gas Services and non-Electric Services, non-Natural Gas Services, or any combination of such services, from Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party, the charges for Electric Services and Natural Gas Services shall be separated from the charges for any other services included on the bill. Each such bill shall contain language stating that the Customer's Electric Services and Natural Gas Services will not be terminated for failure to pay for any other services billed.

ELECTRIC – MISCELLANEOUS

G. Complaint Procedure

1. DEC, DEP, and Piedmont shall establish procedures to resolve potential complaints that arise due to the relationship of DEC, DEP, and Piedmont with Duke Energy, the other Affiliates, and the Nonpublic Utility Operations. The complaint procedures shall provide for the following:

(a) Verbal and written complaints shall be referred to a designated representative of DEC, DEP, or Piedmont.
(b) The designated representative shall provide written notification to the complainant within 15 days that the complaint has been received.
(c) DEC, DEP, or Piedmont shall investigate the complaint and communicate the results or status of the investigation to the complainant within 60 days of receiving the complaint.
(d) DEC, DEP, and Piedmont shall each maintain a log of complaints and related records and permit inspection of documents (other than those protected by the attorney/client privilege) by the Commission, its staff, or the Public Staff.

2. Notwithstanding the provisions of Section III.G.1., any complaints received through Duke Energy's EthicsLine (or successor), which is a confidential mechanism available to the employees of the Duke Energy holding company system, shall be handled in accordance with procedures established for the EthicsLine.

3. These complaint procedures do not affect a complainant's right to file a formal complaint with the Commission or otherwise communicate with the Commission or the Public Staff regarding a complaint.

H. Natural Gas/Electricity Competition

DEC, DEP and Piedmont shall continue to compete against all energy providers, including each other, to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DEC or DEP and Piedmont shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DEC, DEP and Piedmont shall maintain the following minimum standards:

1. Piedmont will make all reasonable efforts to extend the availability of natural gas to as many new customers as possible.

2. In determining where and when to extend the availability of natural gas, Piedmont will at a minimum apply the same standards and criteria that it applied prior to the Merger.

3. In determining where and when to extend the availability of natural gas, Piedmont will make decisions in accordance with the best interests of Piedmont, rather than the best interest of DEC or DEP.

4. To the extent that either the natural gas industry or the electricity industry is further restructured, DEC, DEP, and Piedmont will undertake to maintain the full level of competition intended by this Code of Conduct subject to the right of DEC, DEP, Piedmont or the Public Staff to seek relief from or modifications to this requirement by the Commission.

CODE OF CONDUCT
ATTACHMENT A

DEC/DEP/PIEDMONT CUSTOMER INFORMATION DISCLOSURE AUTHORIZATION

<u>For Disclosure to Affiliates</u>:

DEC's/DEP's/Piedmont's Affiliates offer products and services that are separate from the regulated services provided by DEC/DEP/Piedmont. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP/Piedmont to provide any data associated with the Customer account(s) residing in any DEC/DEP/Piedmont files, systems or databases **[or specify specific types of data]** to the following Affiliate(s) ________________. DEC/DEP/Piedmont will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

<u>For Disclosure to Nonpublic Utility Operations</u>:

DEC/DEP offers optional, market-based products and services that are separate from the regulated services provided by DEC/DEP. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP to use any data associated with the Customer account(s) residing in any DEC/DEP files, systems or databases **[or specify types of data]** for the purpose of offering and providing energy-related products or services to the Customer. DEC/DEP will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

DOCKET NO. E-2, SUB 1106
DOCKET NO. E-7, SUB 1113

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of:		
Request of Duke Energy Carolinas, Inc., and	)	
Duke Energy Progress, Inc., for Approval of	)	ORDER APPROVING
Waiver of Certain Provisions of Commission	)	RIDER AND GRANTING
Rules R8-66 and R8-67 for Net Metering	)	WAIVER REQUEST
Non-TOU Customers	)	

BY THE COMMISSION: On April 13, 2016, Duke Energy Carolinas, LLC (DEC) and Duke Energy Progress, LLC (DEP), filed a request for approval of waivers of certain provisions of Commission Rules R8-66 and R8-67 for net metering non-TOU demand (NMNTD) customers, pursuant to the Commission's August 21, 2014, *Order Approving REPS And REPS EMF Riders And 2013 REPS Compliance* in Docket No. E-7, Sub 1052. Under the current Net Metering for Renewable Energy Facilities Rider offered by DEC (Rider NM) and DEP (Rider NM-4B), a customer receiving electric service under a schedule other than a time-of-use schedule with demand rates shall provide any Renewable Energy Certificates (RECs) or "green tags" to DEC and DEP at no cost.

On April 23, 2018, DEC and DEP filed a revised waiver request, noting that due to the passage of time, as well as changes resulting from the enactment of S.L. 2017-192, commonly referred to as House Bill 589, the Companies and the Public Staff agreed that it was appropriate to update and re-file this request for Commission consideration based on current information.

The purpose of the requested waiver is to create a mechanism by which RECs produced by NMNTD customers can be transferred or assigned to the utility. As the number of net-metered solar photovoltaic (PV) facilities has increased in recent years, and with the potential for the deployment of up to 50 MW of new net-metered solar PV over the next five years pursuant to HB 589's Solar Rebate provision, a larger number of RECs are being generated and are potentially available to DEC and DEP for compliance with the Renewable Energy and Energy Efficiency Portfolio Standard (REPS).

DEC and DEP propose waiving certain provisions of Commission Rules R8-66 and R8-67 to allow NMNTD customers be exempt from holding individual accounts in the North Carolina Renewable Energy Tracking System (NC-RETS). DEC and DEP will annually upload the total number of RECs provided by NMNTD customers into NC-RETS under two program designations, utilizing generator attributes that are collected and maintained by the respective utility that serves each customer. DEC and DEP request to report HB 589 RECs under a separate project designation, so one program designation will be for HB 589 solar rebate customers and the second program designation will be for non-rebate net-metered customers.

DEC and DEP propose the following specific waivers in order to facilitate this transfer of RECs without placing an undue burden on NMNTD customers:

ELECTRIC – MISCELLANEOUS

1) Requested waivers of Commission Rule R8-66 are:

   a. Registration as a New Renewable Energy Facility and annual registration updates be waived, and each utility will be permitted to retain relevant information on behalf of the NMNTD customers;
   b. Rule R8-66(b)(1): NMNTD customers not be required to file a Registration Statement, and that utilities will collect and maintain the relevant information in a single docket;
   c. Rule R8-66(b)(4) and (5): waive requirement that generation owner certify annually that their facility complies with all federal and state laws, regulations, and rules for the protection of the environment and natural resources. Under Rider NM or Rider NM-4B, DEC and DEP require the participant to verify that the generation complies with all such requirements. There will be a presumption of compliance for NMNTD customers, and the annual certification requirements will be waived;
   d. Rule R8-66(b)(6): Service under Rider NM and Rider NM-4B to NMNTD customers already complies with this section, which requires that RECs sold to an electric supplier not be remarketed or resold for any purpose; and
   e. Rule R8-66(b)(7) and (8): waive requirement that renewable facility owners consent to audits, verify registration statement, and signify that they have authority to submit information to the Commission. DEC and DEP will receive this signed and verified information and retain the right to inspect NMNTD customers' facilities for eligibility, while the Public Staff and the Commission will have full access to DEC's and DEP's records.

2) Requested waivers of Commission Rule R8-67 are:

   a. Rule R8-67(g)(2) and (h)(8): under this rule, solar PV system output with a nameplate capacity of 10 kW or less can be estimated using generally accepted analytical tools. DEC and DEP request that this limit be raised to 20 kW or less for residential NMNTD customers, to match the threshold established by the Commission in its March 31, 2009 Order in Docket No. E-100, Sub 83, related to additional standby and metering charges. For non-residential customers, DEC and DEP request that this limit be raised to 1,000 kW or less; and
   b. Rule R8-67(g)(2): allow the use of a scalable conversion factor for estimating annual generation from program participants, without needing to individually meter each generator for REC generation purposes. This scalable conversion factor will be based on the National Renewable Energy Laboratory's PVWATTS™ software, which provides the average output of solar PV generators in all North Carolina cities and has a suitable level of detail.

DEC and DEP propose applying this scalable conversion factor to estimate historical energy production data for REC issuance back up to two years from the date on which the Commission approves this request or to the date on which the facility came online, whichever is later, pursuant to Rule R8-67(g)(4). DEC and DEP request Commission approval to report the total number of RECs produced by NMNTD customers (either from meter readings or approved estimating tools) on an annual basis. These reports shall be filed with the utility's REPS compliance filings under Commission Rule R8-67(c), and the total number of RECs shall be imported directly to NC-RETS. DEC and DEP will maintain all supporting documentation to validate RECs, and will provide that information to the Public Staff or Commission for review upon request.

DEC and DEP also propose to conduct annual site visits to ensure the accuracy of the scalable conversion factor. These visits will be conducted to a statistically significant number of participating NMNTD customers, verifying that solar installations covered by this waiver request are still operating. A summary of these findings will be included in the REPS compliance filing, and will be used to adjust production estimates of all program participants. Based upon the results of the two years of site visits, DEC and DEP propose including a recommendation as to whether the visits should continue in the REPS compliance filing.

DEC and DEP discussed this report with the Public Staff before initially filing, and again after filing the revised version, to resolve issues and answer questions. The Public Staff is satisfied that the method DEC and DEP propose to select the sites visited annually, and to verify the solar installations continue to be operating, is sufficient. DEC and DEP indicated they will hire a third-party vendor to conduct the visits, and that the number of evaluations will be based upon the number of customers under Rider NM and NM-4B. The evaluations will further be geographically allocated based upon the percentage of participating NMNTD customers in each geographic area. Evaluations will rotate through customers each year, ensuring that if a customer passes a site evaluation, they will be excluded from future evaluations. The utilities provided the following estimates of the number of NMNTD customers as of April 2018.

NMNTD Customers	**DEC**		**DEP**	
Facility Capacity	# of Facilities	Total Capacity (kW AC)	# of Facilities	Total Capacity (kW AC)
<10 kw	2,787	12,566	1,702	8,055
10kW - 20kW	170	2,246	135	1,750
20kW - 100kW	60	2,734	39	1,815
100kW - 1MW	38	12,739	31	11,157
Total	*3,055*	*30,285*	*1,907*	*22,777*

In response to Public Staff data requests, DEC and DEP indicated that they do not have a means by which to measure actual solar production on net-metered customer sites, and that the meter tagged to the billing account is only able to measure net usage. DEC and DEP stated that if the utility had the ability to record or verify actual generation, the utility would rely on the actual production numbers rather than a scalable conversion factor.

The Public Staff noted that under the Commission's Rules and the NC-RETS Operating Procedures, each person or company that registers with NC-RETS for issuance of RECs must establish each renewable energy facility as a separate "project" within NC-RETS. The NC-RETS website provides a list of all such facilities, which helps protect the integrity of RECs issued in NC-RETS by precluding facilities from being registered in more than one registry at a time. If the owner of a facility that is being issued RECs in NC-RETS attempts to register that same facility in another tracking system, the administrator of that other tracking system can check the NC-RETS website to verify whether the facility is already participating in NC-RETS. DEC's and DEP's request for waiver would relieve Rider participants from registering in NC-RETS, thereby potentially reducing the transparency needed to prevent the double-issuance of RECs.

In the Commission's November 15, 2010, *Order Approving Rider and Granting Waiver Request* in Docket No. E-2, Sub 979, the Commission considered a similar waiver request, and in order to address the concern, required DEC and DEP provide certain details for each participating customer to NC-RETS. The Public Staff recommended in this case that DEC and DEP shall provide NC-RETS on a monthly basis with a list of participating customers, including facility location and size. NC-RETS shall post this information on its website in a manner that will facilitate its use by other registries seeking to preclude the double issuance of RECs.

DEC and DEP also noted that implementation of HB 589 has created two additional programs that bear mentioning here; first, *Petition for Approval of Solar Rebate Program* (Dockets E-2, Sub 1167, E-7 Sub 1166) (Solar Rebate Program); and second, DEC and DEP's *Petition for Approval of Community Solar Program* in Docket Nos.E-2, Sub 1169 and E-7, Sub 1168 (Community Solar Program).

Under the proposed Solar Rebate Program, any customer applying for the rebate must be on Rider NM or NM-4B. In addition, if the customer is receiving service under a NMNTD rate schedule, RECs would be retained by the utility. This waiver request would therefore be applicable to the RECs generated by customers participating in the Solar Rebate Program under a NMNTD rate schedule.

Under the proposed Community Solar Program, the Companies propose retiring RECs produced by community solar facilities on behalf of the participating customers. Therefore, the waiver requests in this order do not apply to the Community Solar program.

The Public Staff presented this matter to the Commission at its Regular Staff Conference on June 4, 2018. The Public Staff recommended that DEC's and DEP's request for waivers of certain provisions of Commission Rules R8-66 and R8-67 with regard to the registration and reporting requirements for installation of new rooftop-mounted solar PV electric generating systems be granted, as such waivers would reduce the burden of the reporting and compliance requirements pertaining to the generation and transfer of RECs between NMNTD customers and the utilities.

The Public Staff also noted that HB 589 established new G.S. 62-126.4, which directs each electric public utility to file for Commission approval revised net metering rates for electric customers that (i) own a renewable energy facility for that person's own primary use or (ii) are customer generator lessees, which are to be established "only after an investigation of the costs and benefits of customer-sited generation." As part of that revision of net metering rates, the allocation of RECs from net metered, customer-sited generation may be reconsidered and may impact the application of this waiver. The Public Staff further noted, however, that G.S. 62-126.4(c) provides:

> [U]ntil the rates have been approved by the Commission as required by this section, the rate shall be the applicable net metering rate in place at the time the facility interconnects. Retail customers that own and install an on-site renewable energy facility and interconnect to the grid prior to the date the Commission approves new metering rates may elect to continue net metering under the net metering rate in effect at the time of interconnection until January 1, 2027.

As such, this waiver may require modification upon the revision of the net metering rates offered by DEC and DEP.

No other party filed comments in this proceeding.

Based on the foregoing, the Commission is of the opinion that the requested waiver from portions of Commission Rules R8-66 and R8-67 should be granted, but that DEC and DEP should be required to provide NC-RETS with facility information necessary to maintain transparency as discussed above. The Commission will allow DEC and DEP to report into NC-RETS the estimated amount of energy produced by the participants' solar facilities. DEC and DEP shall maintain and make available for review by the Public Staff and the Commission supporting documentation to validate participation levels and its estimate of electricity produced. DEC and DEP shall include in their REPS compliance filings a summary of the results of site visits. In addition, DEC and DEP shall on a monthly basis provide NC-RETS with a list of participating customers, including facility location and size. NC-RETS shall post this information on its website in a manner that will facilitate its use by other registries seeking to preclude the double issuance of RECs.

The Commission agrees with the Public Staff that the revision of net metering rates pursuant to G.S. 62-126.4 may result in changes to the allocation of RECs from net-metered, customer-sited generation and impact the applicability of this waiver to some net-metered customers. Until those revised rates are before the Commission, however, it is appropriate for this waiver to be implemented to allow DEC and DEP to more efficiently utilize those RECs that are currently being allocated to them by their net-metered customers.

IT IS, THEREFORE, ORDERED as follows:

1. That participants in DEC Rider NM or DEP Rider NM-4B under a NMNTD schedule are exempt from the following requirements of Commission Rule R8-66:

(a) Filing a registration statement, and annual updates, pursuant to Rule R8-66(b);
(b) Annually filing certifications of compliance with all federal and state laws, regulations, and rules for the protection of the environment and conservation of natural resources, and annually filing certification that the facility is operated as a renewable energy facility pursuant to Rule R8-66(b)(4) and (5);
(c) Annually filing a compliance statement to certify that any RECs sold to an electric power supplier will not be remarketed or resold for any purpose and annually reporting whether it sold any RECs during the prior year pursuant to Rule R8-66(b)(6); and
(d) Annually consenting to audits and verify registration statement, pursuant to Rule R8-66(b)(7).

2. That DEP and DEC be granted a waiver from the 10kW threshold established in R8-67(g)(2) and (h)(8), and instead be permitted to estimate the electric power generated by a residential inverter-based solar PV system on a NMNTD rate schedule with a nameplate capacity of 20 kW or less using generally accepted analytical tools;

3. That DEP and DEC be permitted to estimate the electric power generated by a non-residential inverter-based solar PV system on a NMNTD rate schedule with a nameplate capacity of 1,000 kW or less using generally accepted analytical tools;

4. That DEC and DEP, as administrator of Rider NM and NM-4B, may forego metering each generator individually and may use the PVWatts™ Solar Calculator developed by the National Renewable Energy Laboratory for estimating the generation from participants' solar facilities, as permitted in Commission Rule R8-67(g)(2);

5. That DEC and DEP shall report the total amount of electricity produced by facilities under the Rider directly into NC-RETS in a separately identified generation project;

6. That DEC and DEP shall maintain all supporting documentation to validate participation levels for NMNTD customers, and shall provide it to the Commission and the Public Staff for review upon request;

7. That for two years from the date of this order, DEC and DEP shall verify via site visits to a statistically significant number of participating residences that the solar installations covered by this Rider continue to be operating. DEC and DEP shall include the findings of its site visits in its annual REPS compliance filing and use the findings to adjust the estimates of the electricity output of all of the Rider installations on a prospective basis. When DEC and DEP reports the results of the year-two site visits in its REPS compliance filing, it shall include a recommendation as to whether such site visits should continue; and

8. That DEC and DEP shall provide NC-RETS on a monthly basis with a list of participating customers, including the location and the kW capacity of their installations, to be made available on the NC-RETS website.

ISSUED BY ORDER OF THE COMMISSION.
This the 5th day of June, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Daniel G. Clodfelter did not participate in this decision.

DOCKET NO. E-2, SUB 1159
DOCKET NO. E-7, SUB 1156

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Joint Petition of Duke Energy Carolinas, LLC,	)	ORDER MODIFYING
and Duke Energy Progress, LLC, for	)	AND APPROVING
Approval of Competitive Procurement of	)	JOINT CPRE PROGRAM
Renewable Energy Program	)	

BY THE COMMISSION: On July 27, 2017, the Governor signed into law House Bill 589 (S.L. 2017-192). Part II of S.L. 2017-192, enacted as G.S. 62-110.8, requires Duke Energy Carolinas, LLC (DEC), and Duke Energy Progress, LLC (DEP) (together, Duke), to file for Commission approval, on or before November 27, 2017, a program for the competitive procurement of energy and capacity from renewable energy facilities with the purpose of adding renewable energy to the State's generation portfolio in a manner that allows the State's electric public utilities to continue to reliably and cost-effectively serve customers' future energy needs (CPRE Program). In addition, Section 2(c) of S.L. 2017-192 directs the Commission to issue an order to approve, modify, or deny the program no later than February 26, 2017.

Subsection G.S. 62-110.8(b) provides that DEC and DEP may jointly or individually implement the requirements of the CPRE Program. Subsection G.S. 62-110.8(h) requires the Commission to adopt rules to implement the requirements of the CPRE Program, including specifically addressing the following:

(1) Oversight of the competitive procurement program.

(2) To provide for a waiver of regulatory conditions or code of conduct requirements that would unreasonably restrict a public utility or its affiliates from participating in the competitive procurement process, unless the Commission finds that such a waiver would not hold the public utility's customers harmless.

(3) Establishment of a procedure for expedited review and approval of certificates of public convenience and necessity (CPCN), or the transfer thereof, for renewable energy facilities owned by the public utility and procured pursuant to this section. The Commission shall issue an order not later than 30 days after a petition for a certificate is filed by the public utility.

(4) Establishment of a methodology to allow an electric public utility to recover its costs pursuant to G.S. 62-110.8(g).

(5) Establishment of a procedure for the Commission to modify or delay implementation of the provisions of this section in whole or in part if the Commission determines that it is in the public interest to do so.

On November 6, 2017, in Docket No. E-100, Sub 150, after receiving comments and proposed rules from Duke, the Public Staff, and other interested parties, the Commission issued an Order (CPRE Rule Order) adopting Commission Rule R8-71 (CPRE Rule). Commission Rule R8-71(c) requires Duke to seek Commission approval of guidelines for the implementation of its CPRE Program and Commission Rule R8-71(g) requires Duke to file an initial CPRE Program plan. Commission Rule R8-71(c)(v) provides that Duke's CPRE Program guidelines shall include a copy of the pro forma contract(s) to be utilized in the CPRE Program. Commission Rule R8-71(c)(2) provides that Duke shall identify any regulatory conditions and/or code of conduct provisions that it seeks to waive for the duration of the CPRE Program Procurement Period.

On November 27, 2017, Duke filed a petition for approval of its proposed joint CPRE Program, seeking Commission approval of the program on behalf of DEC and DEP. Included with Duke's filing is its proposed initial CPRE Program guidelines, pro forma power purchase agreements (PPAs), initial CPRE Program plan, and requests for waivers of regulatory conditions and code of conduct requirements.

On December 1, 2017, the Commission issued an Order requiring the Public Staff to file a report with the Commission addressing whether Duke's proposed CPRE Program is reasonably designed to meet the requirements of G.S. 62-110.8 and Commission Rule R8-71. In addition, the Commission directed the Public Staff to include in its report a recommendation as to whether the Commission should approve Duke's proposed CPRE Program, accept the initial CPRE Program plan, grant Duke's requested waivers of regulatory conditions and code of conduct requirements, or take any other action in response to Duke's petition and related filings. That Order also allowed for intervention by interested persons and set a schedule for the filing of comments and reply comments.

The following filed petitions to intervene, which were granted by orders subsequently issued in this docket: the North Carolina Sustainable Energy Association (NCSEA), the North Carolina Clean Energy Business Alliance (NCCEBA), and Duke Energy Renewables, Inc. (Duke Renewables). Duke Renewables' petition to intervene was accompanied by its comments.

On or after January 2, 2018, the Commission received approximately 450 consumer statements of position, requesting that the Commission require solar electric generating facilities that are participating in the CPRE Program to be landscaped with native plants that serve as a habitat for pollinators.

On January 10, 2018, the Public Staff filed its report and initial comments.

On January 11, 2018, NCCEBA and NCSEA jointly filed comments.

On January 26, 2018, Duke, Duke Renewables, and the Public Staff filed reply comments.

Duke's Petition for Approval of CPRE Program and Associated Filings

In its petition, Duke argues that its proposed CPRE Program serves the public interest and will meet the objectives S.L. 2017-192. Duke's petition provides a detailed overview of its proposed CPRE Program, intended to identify how Duke will comply with the requirements of G.S. 62-110.8. First, Duke states that it will jointly issue CPRE RFP Solicitations, as allowed by G.S. 62-110.8(b), but DEC and DEP will otherwise maintain independent CPRE Program planning, reporting, and cost recovery. Second, Duke proposes allocating the total 2,660 MW required to be procured under the CPRE Program over the 45-month CPRE Program Procurement Period by conducting four CPRE RFP Solicitations (which Duke refers to as "Tranches"), with the first proposed to begin in May 2018 and the last to end in August 2021. Duke states that the schedule for future CPRE RFP Solicitations will be refined as Duke gains experience during the initial CPRE RFP Solicitation. Third, Duke states that it considered the statutory criteria in G.S. 62-110.8(c) in developing a proposed allocation of procured generating capacity between DEC and DEP for each of the four CPRE RFP Solicitations. Similar to its proposed schedule, Duke states the allocation between DEC and DEP may evolve in future CPRE Program plans based on the experience gained during the implementation of the CPRE Program. Fourth, to meet the cost-effectiveness requirements of G.S. 62-110.8(b)(2), and consistent with the requirements of Commission Rule R8-71(f)(2), Duke states that it plans to calculate and publish 20-year avoided cost rates for DEC and DEP using the peaker methodology at least 60 days prior to the planned issuance date of the first CPRE RFP Solicitation. Fifth, Duke outlines several provisions included in the pro forma PPA, noting specifically the inclusion of "control instructions" and emergency condition and force majeure system operator instructions.[1] Sixth, with respect to the 30% limit on utility-owned facilities provided in G.S. 62-110.8(b)(4), Duke seeks to clarify three issues for the Commission: 1) Duke states that it has voluntarily agreed to recognize both "self-developed proposals" and PPA proposals offered by any Affiliate as being subject to the 30% limit; 2) Duke states that it plans to apply the 30% limit to the total 2,660 MW over the CPRE Program Procurement Period, rather than applying the 30% limit to each CPRE RFP Solicitation; and 3) Duke states that it will not apply the 30% limit to "asset acquisition proposals." As proposed by

[1] The control instructions would allow Duke to dispatch, operate, and control renewable energy facilities under the CPRE Program in the same manner as it does DEC and DEP's own generating resources, as allowed by G.S. 62-110.8(b). These provisions would require payment for foregone output from a renewable energy facility only if the facility output is curtailed by more than 5% of the facility's expected annual output, if interconnected to DEC's system, and 10% of the facility's expected annual output, if interconnected to DEP's system. Duke also describes the system operator instructions, which would allow "full curtailment" during emergency conditions or force majeure conditions without compensation.

Duke, asset acquisition proposals include three proposal cost structures: renewable resource asset transfer plus EPC,[1] build own transfer, and renewable resource asset.

Duke then identifies how DEC and DEP plan to address generator interconnection-related issues under the CPRE Program. Duke first notes that its proposed CPRE Program guidelines would require a market participant to have submitted an interconnection request under the North Carolina Interconnection Procedures (NCIP) or the South Carolina Generator Interconnection Procedures (SC GIP) and received a queue number at the time of proposal submission. Duke then recognizes that existing interconnection customers seeking to interconnect to Duke's transmission systems may desire to offer their planned facility into the CPRE Program. To accommodate this possibility, Duke proposes allowing these interconnection customers to submit new NCIP or SC GIP interconnection requests, while retaining their queue number and position under the initial request. Duke then states that it has identified the need to rely on more efficient and coordinated "grouping studies" to evaluate potential system upgrade costs as part of step one of the proposal evaluation process. This proposed grouping study concept is included at Section 4.3 of Duke's proposed CPRE Program guidelines, and Duke states that it will propose any necessary revisions to the NCIP through the review process underway in Docket No. E-100, Sub 101. Duke next addresses its proposal that system upgrade costs on the utility-side of the point of interconnection be recovered through base rates. Duke states that while the cost of interconnection facilities between the generating facilities and the point of interconnection can be reasonably projected based upon the size of the generating facility and the voltage of the line to which the generator seeks to interconnect, the upgrade costs on the utility's side of the point of interconnection can vary dramatically depending on the grid's capability to integrate additional generation at the requested point of interconnection. To reduce the risk of unknown costs to the renewable energy facilities proposed in a CPRE RFP Solicitation, Duke proposes an evaluation methodology that segregates the "upgrade costs" from the "proposal costs." Under Duke's proposal, market participants will develop proposals that include only the generating facility and interconnection facilities costs, and DEC and DEP will seek recovery of upgrade costs through future general rate case proceedings. Under this proposal, Duke argues that its customers should benefit from lower proposal costs, or, at a minimum, be indifferent between higher CPRE proposal costs or recovery through base rates.

In conclusion, Duke argues that it has developed its proposed CPRE Program to meet the filing requirements of Commission Rule R8-71 and to achieve the mandates and objectives of G.S. 62-110.8. Therefore, Duke requests that the Commission issue an order 1) approving its proposed CPRE Program, including the CPRE Program guidelines, pro forma CPRE PPA, and related documents, as reasonable and appropriate for implementing the initial CPRE RFP Solicitation, 2) accepting the initial CPRE Program plan as reasonable for planning purposes, 3) granting the requested waivers of regulatory conditions and code of conduct requirements, and 4) granting such other and further relief as the Commission deems just and reasonable and in furtherance of the public interest.

---

[1] "EPC" refers to the "Engineering, Procurement, and Construction agreement offered by the third-party developer for execution by DEC and DEP," which, for this proposal cost structure, would be submitted in the CRPE RFP along with the proposal for the facility.

Comments of NCCEBA and NCSEA

Through their joint comments, NCCEBA and NCSEA first respond to Duke's petition for approval of the CPRE Program. NCCEBA and NCSEA next argue that the Commission should require Duke to make several changes to its proposed pro forma PPA. NCCEBA and NCSEA contend that the fact that Duke based its pro forma PPA on bilateral PPAs that Duke has previously negotiated with solar developers should not create a presumption of commercial reasonableness. Instead, NCCEBA and NCSEA state that Commission approval of the pro forma PPAs is required by statute and that the Commission should take this opportunity to ensure that the terms of the pro forma PPA are commercially reasonable. NCCEBA and NCSEA then agree with Duke's proposed approach to recovery of network upgrade costs, wherein CPRE market participants develop proposals that include only the generating facility and interconnection facilities costs, and Duke separately seeks to recover network upgrade costs in a future general rate case proceeding.

NCCEBA and NCSEA then respond to Duke's proposed CPRE Program guidelines stating that the primary purposes of the CPRE Program guidelines are to meet the requirements of G.S. 62-110.8 and Commission Rule R8-71. NCCEBA and NCSEA express concerns that the following specific sections of Duke's proposed CPRE Program guidelines do not meet those requirements:

- Section 1.3, planned CPRE allocation between DEC and DEP service territories: NCCEBA and NCSEA argue that Duke should not be allowed to introduce locational allocation designations within DEC and DEP's respective service territories because they failed to provide that information in the proposed CPRE Program guidelines. NCCEBA and NCSEA support their argument by citing to Commission Rule R8-71(g) and by arguing that ample notice and more granular locational data are necessary for transparency, proper planning by market participants, and elimination of any unfair advantage for Duke and its Affiliates. Therefore, NCCEBA and NCSEA further argue that Duke should be required to provide applicable locational guidance for Tranches 2 and 3 now, and for Tranche 4 in its 2018 CPRE Program plan, which is due to be filed on or before September 1, 2018.

- Section 2, CPRE Program RFP Solicitation timetable: NCCEBA and NCSEA argue that the contracting period for PPAs included in Duke's proposed CRPE RFP Solicitation schedule, is unnecessarily long and should be reduced from 90 to 30 days, given that the pro forma PPAs are reviewed and approved by the Commission. Further, NCCEBA and NCSEA argue that the date for the issuance of the Trache 4 RFP Solicitation should be accelerated to July 2020 from November 2020, so that market participants can reduce their proposal costs by taking advantage of the federal Solar Investment Tax Credit (ITC), which requires facility construction to begin before December 31, 2020.

- Section 3.2, market participant requirements:

    - Requirement No. 2: NCCEBA and NCSEA argue that Duke should not be allowed to change the generation capacity eligibility requirement from the range of 1.0-MW to 80-MW, as proposed for Tranche 1. They argue that a change in this requirement that is applied to Tranches 2, 3, and 4 would disadvantage market participants that submitted interconnection requests prior to the change in eligibility, resulting in the withdrawal of the project from the interconnection queue. NCCEBA and NCSEA further argue that requirement No. 2 is inconsistent with G.S. 62-110.8(a).

o Requirement No. 9(b): NCCEBA and NCSEA argue that Duke's proposed requirement No. 9(b) is inconsistent with Commission Rule R8-71(l)(4) in that the proposed requirement would require both utility and non-utility market participants to provide the Independent Administrator with revenue assumptions after the initial term. They argue that Rule R8-71(l)(4) only requires this assumption to be provided as related to utility-owned proposals.

o Requirement No. 10: NCCEBA and NCSEA argue that a proposal sponsor should be required to show "experience developing facilities of the same renewable energy type (rather than technology)."

o Deficient Proposals: NCCEBA and NCSEA argue that section 3.2 should include a "cure" period of five days in the event that the Independent Administrator finds a proposal to be deficient.

o Waiver: NCCEBA and NCSEA argue that the provision in section 3.2 requiring proposal sponsors to waive recourse against Duke and the Independent Administrator for certain acts taken in the execution of the CPRE Program should be deleted. In support of their argument, NCCEBA and NCSEA state that the Commission's rules do not eliminate the ability to seek remedy before the Commission for improper rejection of a bid or refusing to execute an agreement with a bidder selected by the Independent Administrator.

- Section 3.3, Proposal Types: NCCEBA and NCSEA argue that the Renewable Resource Asset Transfer, an asset acquisition proposal type, should be eliminated because partially developed facilities cannot be fairly priced and compared to other types of proposals. Further, they argue that it is impossible for a partially developed asset to be bid into a competitive solicitation because the developer does not have an "all-in price for the output of its project." NCCEBA and NCSEA further state that it appears that Duke is attempting to exclude these types of projects from the statutory 30% cap on utility self-developed projects, which they argue is not permitted under G.S. 62-110.8 or Commission Rule R8-71.

- Section 3.5.1, Avoided Cost Rate: NCCEBA and NCSEA state that they agree with Duke's approach to include DEC and DEP's respective 20-year avoided cost rates using the peaker methodology, and, for the Tranche 1 RFP Solicitation, to apply the peaker methodology to develop a generic large qualifying facility (QF) avoided cost profile. However, NCCEBA and NCSEA request additional details on "exactly how this will work in connection with the pricing and scoring of bids and how bids will be translated into rate structure."

- Section 3.5.2, Pro forma CPRE PPA: NCCEBA and NCSEA state that this section of the guidelines is confusing with respect to what Duke is proposing on the timing and approval of the initial pro forma PPA for use in the Tranche 1 CPRE RFP Solicitation. They further state that waiting until 30 days prior to the Tranche 1 CPRE RFP Solicitation to finalize the pro forma PPA does not give market participants sufficient notice of the terms and conditions on which their proposals must be based or sufficient opportunity to object to unreasonable terms and conditions.

In addition, they argue that there is no reason to delay review and finalization of the pro forma PPA for the Tranche 1 RFP Solicitation, and that Duke should be required to obtain Commission approval prior to making changes to the pro forma PPA in future tranches. Finally, NCCEBA and NCSEA state that Duke did not include MIPAs or EPC contracts in the guidelines or program plan, which NCCEBA and NCSEA believe also require Commission approval. In addition to these comments, NCCEBA and NCSEA included a redline markup of Duke's proposed pro forma PPA as a part of its reply comments.

- Section 4.4, Grid Upgrade Evaluation: NCCEBA and NCSEA state that they support Duke's proposal to conduct an expedited evaluation of the grid upgrade costs associated with all CPRE proposals. Further, they state that they have been "working cooperatively" with Duke to determine whether changes to the current interconnection procedures would better facilitate the CPRE Program and improve the interconnection process, and that they are awaiting receipt of Duke's most recent proposal on this subject. NCCEBA and NCSEA further state that they intend to supplement this filing with comments addressing potential changes to the interconnection procedures that could affect the CPRE Program.

- Section 7, CPRE Standards of Conduct: NCCEBA and NCSEA argue that part of this section related to Duke's Evaluation Team supporting the Independent Administrator's Step 1 evaluation and ranking process and evaluating proposals in Step 2 of the evaluation process is inconsistent with Commission Rule R8-71(f)(3).

NCCEBA and NCSEA then set out a number of comments on Duke's pro forma PPA, including provisions that NCCEBA and NCSEA believe should be revised. They describe these changes as the "most significant amendments," and include additional revisions in the redline markup filed with their comments. Finally, NCCEBA and NCSEA identify the following provisions in Duke's initial CPRE Program plan that they do not believe comply with G.S. 62-110.8 and Commission Rule R8-71: Section 2.3 (Planned RFP Solicitations), Section 2.4 (Allocation of Resources), and Section 2.5 (Locational Designation). In conclusion, NCCEBA and NCSEA request that the Commission consider the issues raised in their comments and their requested revisions and amendments to Duke's initial CPRE Program guidelines, pro forma PPA, and initial CPRE Program plan.

Duke Renewables

By its comments, Duke Renewables argues that market participant Requirement No. 9(b) included in Section 3.2 of Duke's proposed initial CPRE Program guidelines goes beyond the requirements of Commission Rule R8-71(l)(4) by requiring proposal sponsors for both utility owned and non-utility owned facilities to disclose trade secret information. Duke Renewables argues that this section of the guidelines should only require an electric public utility, and not non-utilities, to make available information related to assumptions about pricing after the initial term.

By its reply comments, Duke Renewables argues that there is a need for clarification in how the 30% limitation on the utility's self-development of projects in G.S. 62-110.8(b)(4) will be applied to certain commercial situations. Duke Renewables proposes the following guidance on which projects count toward the 30% limit with respect to an Affiliate of Duke: 1) the 30% limit should not apply to any project that is not controlled, directed or indirectly, by the Affiliate, and control should be akin to the definition used in Securities and Exchange Commission Rule 405; and 2) the 30% limit should not apply to any project in which an Affiliate obtains an ownership interest after the proposal is submitted in an RFP Solicitation. Finally, Duke Renewables argues that none of the regulatory conditions or code of conduct requirements waived with respect to the CPRE Program would apply as between a market participant and an Affiliate.

The Public Staff's Report and Comments

In the Public Staff's report and comments, the Public Staff states that it reviewed Duke's CPRE Program filing and agrees with Duke that the filing generally adheres to the requirements of Commission Rule R8-71. The Public Staff further states that it does not take issue with any of the proposals included in Duke's proposed CPRE Program guidelines. The Public Staff specifically noted Duke's planned allocation of capacity to be procured through the RFP Solicitation between DEC and DEP in Tranche 1, and agreed with Duke that the designated allocation may need to evolve over time to ensure that the CPRE Program requirements are being met in a manner that ensures continued reliable electric service to customers while procuring the most cost-effective renewable energy resource capacity available.

The Public Staff also addressed the pro forma PPA to be utilized in the Tranche 1 CPRE RFP Solicitation. The Public Staff states that it reviewed the pro forma PPA and compared the terms and conditions to the current negotiated PPA forms generally utilized by Duke in its negotiations with QFs that are not eligible for the Commission-approved standard contract. The Public Staff states that it does not take exception to the provisions in the pro forma PPA, but notes two key differences between the pro forma PPA and the "non-CPRE contracts" used by the utilities: 1) the pro forma PPA includes provisions related to the transfer of renewable energy and environmental attributes to the utility; and 2) the pro forma PPA includes the provisions designed to effectuate the requirements that renewable facilities participating in the CPRE Program commit to allow the procuring public utility rights to dispatch, operate, and control the solicited renewable energy facility in the same manner as the utility's own generating resources. These differences, the Public Staff states, are based on the requirements in G.S. 62-110.8(b). The Public Staff concludes that the first provisions are comparable to contract provisions currently used in securing renewable energy certificate (RECs) for compliance with the Renewable Energy and Energy Efficiency Portfolio Standard (REPS). Therefore, the Public Staff agrees that inclusion of these provisions is appropriate. With regard to the second provision, the Public Staff notes that this would allow curtailment of the electric generation from a renewable energy facility without compensation until output is curtailed by 5% of the facility's expected annual output if interconnected to DEC's electric system, and by 10% of the facility's expected annual output if interconnected to DEP's electric system. In addition to this curtailment provision, the Public Staff further notes that the pro forma PPA includes provisions allowing curtailment during emergency conditions or force majeure conditions without compensation. The Public Staff states that it does not take issue with these provisions; however, the Public Staff notes that these provisions further heighten the need for Duke to have and implement non-discriminatory and transparent curtailment procedures resulting from control instructions and system operator instructions.[1]

[1] On January 30, 2017, Duke filed these procedures in Docket No. E-100, Sub 148.

The Public Staff next addresses Duke's requested waivers of regulatory conditions and code of conduct requirements. The Public Staff notes that Duke requested that the Commission waive the following regulatory conditions and code of conduct requirements for the duration of the CPRE Program: 1) Regulatory Condition No. 3.4, restricting the purchase and sale of electricity between DEC, DEP, and their Affiliates; 2) Regulatory Conditions No. 5.2 and Section III, D. 3(a) and (b) of the Code of Conduct, related to the provision or transfer of goods and services, transfer pricing, and cost allocation with respect to DEC, DEP, and their Affiliates; 3) Section III, D. 8 of the Code of Conduct, related to the transfer of non-public information under G.S. 62-110.8(e); 4) Regulatory Condition Nos. 3.1(a), 3.1(b), and 3.1(c), pertaining to Affiliate contracts. The Public Staff states that it reviewed these proposed waivers and believes that they are reasonable and appropriate for the purposes of implementing the CPRE Program.

The Public Staff then addresses the following issues:

- Grid locational guidance: The Public Staff cites Section 3.5.3 of Duke's proposed Program guidelines, in which Duke identified the Tranche 1 allocation between DEC and DEP, and notes that Duke did not designate specific locations or zones where projects must be sited in order for market participants to bid proposals into the Tranche 1 Solicitation. The Public Staff further notes that Duke indicated its intention to release documentation in the pre-solicitation information that will provide guidance to market participants on areas that have known transmission and distribution limitations, which might be in the form of a map and/or table that shows circuits and/or substations that have "no availability." The Public Staff states that it agrees with Duke that the goal of the CPRE Program is to steer market participants to the most cost-effective interconnection locations, and that it supports Duke's proposal to provide grid locational guidance and estimated cost information. The Public Staff recommends that this information be as detailed as possible to help guide prospective bidders in identifying the most cost-effective locations to seek to interconnect. Finally, the Public Staff observes that non-public information may be used in developing grid locational guidance and that, to the extent that this information is made available to the Duke Proposal Team prior to the issuance of a Solicitation, the information should be provided to other market participants pursuant to G.S. 62-110.8(e) and Commission Rule R8-71(e)(5).

- Grouping Studies: The Public Staff cites Section 4.3 of Duke's proposed Program guidelines, and summarizes Duke's proposed "grouping study" approach to evaluating grid upgrade costs. This process would involve the Independent Administrator conducting an initial evaluation of quantitative and qualitative factors for each project, ranking these projects, and sending "groupings" to Duke's Study Team to determine the grid upgrade[1] values in $/MWh, which can be incorporated into the proposal price for final ranking of proposals. Further, the Public Staff notes that Duke indicates that treatment of existing queue positions, including cost responsibility for grid upgrades, will continue to follow the NCIP and the SC GIP in effect at the time of the RFP release and that grid upgrade costs will be used in the evaluation process to ensure least cost overall projects are selected and remain below avoided cost. In addition, the Public Staff notes Duke's proposed approach attempts to address a challenge in the timing of proposal submission in that Duke anticipates proposals submitted in a CPRE RFP Solicitation would

[1] As used by Duke the term "grid upgrades" refers to transmission network upgrades and distribution upgrades, but does not include interconnection facilities.

precede the System Impact Study and Facilities Study steps in the interconnection procedures. Because interconnection facility costs are reasonably predictable, but grid upgrade costs can vary dramatically, market participants would lack significant information on which to base their proposals. The Public Staff does not object to Duke's proposed grouping study approach, and agrees with Duke that this approach will reduce uncertainty for market participants. Further, the Public Staff states that as long as the Independent Administrator includes in its evaluation the grid upgrade costs associated with the project, only the lowest cost proposals that are below avoided cost should be selected.

- Cost Recovery of Grid Upgrades: The Public Staff notes that Duke's proposed CPRE Program guidelines propose calculate grid upgrade costs as part of its valuation of projects, but proposes recovering the grid upgrade costs through future adjustments to general cost of service, rather than assigning these costs to a specific CPRE proposal. The Public Staff states that this deviates from the Public Staff's original understanding of how the program would be implemented, and, to an extent, from the Public Staff's past recommendations, which the Commission accepted, regarding the direct assignment of interconnection costs to the interconnection customer. The Public Staff cites the 2016 proceedings on DEC and DEP's applications for cost recovery pursuant to G.S. 62-133.8(h) as examples. The Public Staff's fundamental concern with this approach is that it makes it more difficult to monitor compliance with the 1% cap on costs recovered through the CPRE Program rider established in G.S. 62 110.8(g). However, the Public Staff acknowledges that practical challenges in assigning these costs to a specific project would be time consuming and result in delays in proposal evaluation and selection, potentially impacting Duke's ability to comply with the CPRE procurement requirement within the 45-month initial period. The Public Staff further acknowledges that Duke's proposal may allow for a more expedited review, could expose market participants to less risk associated with grid upgrade costs, and, in any event, these costs would be subject to audit and prudency review in a general rate case. In summary, the Public Staff states that it prefers the traditional approach of assigning all interconnection costs to the interconnection customer; however, in light of these challenges, the Public Staff does not object to Duke's proposed cost recovery of grid upgrade costs. The Public Staff recommends requiring Duke to file reports detailing these costs as a part of the annual CPRE compliance report.

- Asset Acquisition Proposals: The Public Staff then addresses Duke's proposal to recognize not only utility self-developed proposals, but also third-party PPA proposals offered by any Duke Affiliate as counting toward the 30% limitation in G.S. 62-110.8(b)(4). The Public Staff notes that Duke proposes that Asset Acquisition proposals be sent to Duke for review to ensure that the proposals meet Duke's design requirements, and the Public Staff does not disagree with this process. However, the Public Staff recommends that the Commission require Duke to make its design requirements available to the Independent Administrator and market participants as early as possible to ensure that this information can be incorporated into proposal development. In addition, the Public Staff emphasizes the importance of ensuring that information is "masked" to ensure fairness in the review by Duke's Proposal Team.

- Curtailment Assumptions for utility self-developed and asset acquisition proposals: The Public Staff notes the importance that projects proposed as an asset acquisition or a utility self-developed proposal include curtailment estimates used in the evaluation of these projects that are comparable to those included in third-party PPA proposals. Because these projects could be subject to different dispatch characteristics than those owned by third parties, and the actual output of these facilities could be lower than those used in evaluating the projects, there is a risk that these projects would be less cost-effective for customers than other options selected in the CRPE RFP Solicitation.

In conclusion, the Public Staff states that it believes that Duke's CPRE Program filing complies with the requirements of Commission Rule R8-71, and recommends that the Commission approve Duke's proposed CPRE Program, accept the initial CPRE Program plan, and grant Duke's requested waivers of regulatory conditions and code of conduct requirements, subject to the additional considerations raised by the Public Staff.

By its reply comments, the Public Staff responds to NCCEBA and NCSEA's comments related to provisions in the pro forma PPA. In light of those comments, the Public Staff recognizes that some of these provisions may create challenges for market participants seeking to obtain financing for projects, and states that it is appropriate to further review these provisions to ensure that all the terms in the pro forma PPA are commercially reasonable. Specifically, the Public Staff agrees with NCCEBA and NCSEA's suggestions to 1) add a provision to the pro forma PPA that provides an opportunity to cure non-material breaches, 2) require that detailed grid locational information be provided to market participants as early as possible, 3) reduce the contracting period for PPA agreements from 90 to 30 days, 4) remove the limited recourse provision from section 3.2 of Duke's proposed CPRE Program guidelines, and 5) require Duke to provide additional information regarding how scoring of bids will be translated into a rate structure.

Duke's Reply Comments

By its reply comments, Duke recites a number of upcoming deadlines in the CPRE Program and future opportunities for market participant input prescribed by Commission Rule R8-71. Duke then states that it has attempted to address all issues raised by the Public Staff, as well as any "legal or significant policy issues" raised by the other parties that implicate statutory or regulatory requirements under Rule R8-71. However, Duke states that it is not responding to each recommendation made by NCCEBA and NCSEA and that given the "tight time frame" for developing the CPRE Program, it plans to consider these comments and recommendations through the pre-solicitation process. Based upon the Public Staff's report and comments and Duke's responses thereto, Duke submits that its filings meet the statutory requirements and those of Commission Rule R8-71. Duke, therefore, renews its request for approval of these filings and its requested waivers of the regulatory conditions and code of conduct provisions.

In response to the Public Staff's report and comments, Duke notes that the Public Staff found that Duke's proposed CPRE Program generally meets the requirements of Commission Rule R8-71. In addressing the Public Staff's suggestion that the curtailment procedures being developed at the Commission's direction include curtailment of facilities participating in the CPRE Program, Duke agrees to include the CPRE Program PPA assets that are curtailed for emergency conditions in its required quarterly report. However, Duke draws a distinction between "emergency condition curtailments" and the discretionary rights to control CPRE Program assets. Duke states that control actions taken over CPRE facilities are likely to be "more routinely issued (as needed for operational reasons)" up to the respective limits for DEC (5% of expected annual output) and DEP (10% of expected annual output), as those limits are proposed in Duke's CPRE Program PPAs. In response to the Public Staff's suggestion that curtailment estimates used in the evaluation of asset acquisition or utility self-developed proposals be comparable to those included in third-party PPA proposals, Duke states that it does not anticipate that this will be a material issue because Duke plans to dispatch or curtail all of these assets in a comparable manner.

In addressing the Public Staff's comments on the value of Duke providing "grid locational guidance" as early as possible, Duke states that it plans to develop and deliver initial grid locational guidance to the Independent Administrator in March 2018 as part of the Tranche 1 pre-solicitation information, and will refine this information for future Tranches. Duke also agrees that grid locational guidance should not and will not be made available to any Duke Proposal Team members prior to the issuance of the RFP documents as part of the pre-solicitation information sharing process.

In response to the Public Staff's recommendation that the Commission require Duke to make its design requirements for asset acquisition bids available to the Independent Administrator and prospective bidders as early in the process as possible, Duke cites Section 3.5.5 of the proposed guidelines. Duke states that in Section 3.5.5, it has committed to have its Proposal Team develop and deliver initial asset acquisition proposal design specifications to the Independent Administrator in March 2018 as part of the Tranche 1 pre-solicitation information. Further, Duke states that the Public Staff's recommendation to "mask" identifying information in asset acquisition bids would result in concealing information necessary to conduct due diligence and confirm that design specifications have been met. In addition, Duke states that "no competitive concerns" should arise in the Proposal Team's asset acquisition evaluation because this work occurs prior to the Independent Administrator's evaluation in step one and because the Evaluation Team and the Proposal Team are to be segregated from each other and are prohibited from communicating regarding any aspect of the RFP for its duration. In short, Duke believes that the Independent Administrator's role and the structure of the RFP effectively ensure that all bids will be treated equitably.

Finally, Duke addresses the Public Staff's comments that, while it does not object to Duke's plan to use grouping studies for interconnection study evaluation or proposed cost recovery, this proposal deviates from the Commission's traditional approach, and the approach that the Public Staff has recommended in other proceedings. Duke suggests that, in approving its proposed grouping study and cost recovery approaches, the Commission should explicitly state that such approval is based upon the unique "practical challenges" and circumstances of the CPRE Program, and that this approval is not precedential. In addition, Duke agrees to file information in DEC and DEP's annual CPRE compliance report identifying the grid upgrades resulting from each CPRE solicitation, along with the associated costs.

In addressing the other parties' comments, Duke first states that it has attempted to address the comments of NCCEBA and NCSEA that raise legal or policy questions under G.S. 62-110.8 and Commission Rule R8-71, and those comments that are "more preferential in nature" will be addressed during the Tranche 1 pre-solicitation process. Specifically, Duke addresses the following aspects of its proposed CPRE Program in response to these comments:

- Market participant eligibility: In response to NCCEBA and NCSEA's argument that Duke should not be allowed to change the maximum eligibility of 80 MW and the minimum eligibility of 1 MW, Duke states that it is not proposing and does not intend to reduce the maximum eligibility size, but may elect to increase the minimum size above 1 MW if the Tranche 1 experience suggests that those projects are not likely to be successful in the CPRE bidding process. Duke views a potential increase in minimum generation capacity as "fully consistent with" G.S. 62-110.8(a), and notice of such a change would be provided to market participants through the RFP pre-solicitation process.

- Schedule for Allocating procurement over 45 months: Duke objects to NCCEBA and NCSEA's request that the Commission require Duke to accelerate the Tranche 4 RFP to July 2020 so that market participants can qualify for the Solar ITC. First, Duke states that this change would compress the CPRE procurement to 40 months rather than the statutory 45 months. Second, Duke argues that NCCEBA and NCSEA do not provide a basis in statute or Commission rule for demonstrating that Duke's proposed schedule is unreasonable. Third, Duke notes that the CPRE Program is not limited to solar facilities so not all market participants would be relying on the availability of the Solar ITC, which, Duke observes, could be amended or extended by Congressional action. Fourth, Duke states that compressing the schedule could result in the procurement of more than the statutorily required 2,660 MW, given that G.S. 62-110.8(b)(1) allows for reduction of the total procurement if Duke executes PPAs and interconnection agreements representing more than 3,500 MW in generating capacity that is not subject to Duke's economic dispatch or curtailment. Finally, in response to NCCEBA and NCSEA's request that the Commission reduce the contracting period from 90 to 30 days, Duke states that 90 days is appropriate for the Tranche 1 RFP and could be revised in the future, that Duke will endeavor to expeditiously complete these contracts in a shorter time frame, and that the CPRE Program plan states that 90 days may be needed to finalize agreements for asset acquisition proposals.

- Evaluation of Renewable Resource Asset Transfer: Duke disagrees with NCCEBA and NCSEA's comments regarding the impossibility of evaluating the renewable resource asset transfer subcategory of asset acquisitions and their questions about how these facilities would count toward the 30% cap on utility self-developed proposals, if at all. Duke states that it plans to accept only asset acquisition proposals that are in advanced stages of development, and that this distinguishes these proposals from utility self-developed proposals in which Duke would complete the early stage development work. Duke further states that because the Tranche 1 CPRE RFP Solicitation requires that the renewable energy facility be placed into service prior to January 2, 2021, all projects proposed in Tranche 1 must be "reasonably advanced in their development." In addition, Duke states that the only difference in these types of proposals, from its perspective, is that the facility developer does not have an EPC contract at the time of the RFP, but that difference would not prevent the project from being bid into a CPRE RFP Solicitation and evaluated through the CPRE Program evaluation process. Duke cites Section 4.1 of its proposed CPRE Program guidelines for Duke's explanation of how asset acquisitions will be evaluated by Duke's Proposal Team prior to the Independent Administrator's Step 1 evaluation and ranking, and notes that the Public Staff reviewed this proposed approach and did not take issue with it. Finally, in addressing the 30% cap on utility self-developed proposals, Duke cites G.S. 62-110.8(b) and (b)(4) for support of its view that its proposed approach is consistent with these provisions and that, therefore, NCCEBA and NCSEA's arguments should be rejected.

- Pro forma PPAs: Duke responds to NCCEBA and NCSEA's concerns regarding the commercial reasonableness of the pro forma PPA included in Duke's petition as Attachment 2, and the redline version of the pro forma PPA that NCCEBA and NCSEA filed with their joint comments. In short, Duke rejects the notion that its pro forma PPA is not commercially reasonable, citing its acceptance by 15 counterparties for 28 projects, representing approximately 1,300 MW of new renewable energy capacity. Further, Duke states that all market participants, including Duke Renewables, will have the same opportunity to compete to receive the same pro forma PPA, and that this demonstrates that "no party will be unduly advantaged or disadvantaged" by Duke continuing to use the pro forma PPA. In addition, Duke cites G.S. 62-110.8(b)(3) and Commission Rule R8-71(f)(1)(ii-iii) as the appropriate process for providing notice of any material changes to the pro forma PPA, and the solicitation process itself as providing an opportunity to provide feedback on the terms of the pro forma PPA. Finally, Duke argues that commercial reasonableness should be left to the contracting parties rather than the Commission acting as "arbiter of the commercial reasonableness of each and every term" in the pro forma PPA and that NCCEBA and NCSEA have presented no compelling reasons why the pro forma PPA should deviate from PPAs used in other contexts. Nonetheless, Duke states that it will further evaluate whether specific revisions are appropriate for the Tranche 1 pro forma PPA and whether to allow for limited negotiation of PPA terms with third-party proposal sponsors during the RFP contracting period. Duke, therefore, commits to "transparently address these issues" during pre-solicitation process and to file the pro forma PPA at least 30 days prior to the RFP issuance date, as is required by G.S. 62-110.8(b)(3) and Commission Rule R8-71(f)(1)(iii).

- Curtailment Rights and Discretionary Control Instructions: Duke states that it reviewed NCCEBA and NCSEA's alternative methods of compensation when DEC and DEP call on a facility to curtail its output in the same manner that the utility system operator would issue dispatch down instructions to its own facilities. Duke disagrees with changing the percentages of discretionary controls from the 5% (for DEC) and the 10% (for DEP) proposed in Section 8.9 of the CPRE pro forma PPA, and argues that NCCEBA and NCSEA's alternative methods are unsupported and unacceptable for purposes of Tranche 1. Duke further argues that NCCEBA and NCSEA have not provided sufficient detail on how this proposal would work and, citing the Commission's October 11, 2017 Order issued in Docket No. E-100, Sub 148 (Avoided Cost Order), notes that the Commission rejected the idea of "take-or-pay" as inconsistent with the federal Public Utility Regulatory Policies Act of 1978 (PURPA).

- Sharing of Market Pricing Assumptions: In response to Duke Renewables comments that market participant Requirement 9.b is overly broad in its requirement that non-utility proposal sponsors would be required to share post-CPRE Program term pricing assumption, Duke agrees to amend guidelines Section 3.2.9.b prior to the Tranche 1 RFP such that the requirement would only apply to Duke. In response to the concerns expressed by Duke Renewables, NCCEBA, and NCSEA related to the disclosure of competitively sensitive information, Duke states that no market participant should be required to divulge the detailed post-term assumptions underlying their proposals and suggests that it might seek amendment to Rule R8-71(l)(4) to ensure that no market participant, including Duke, would be disadvantaged by this requirement. Alternatively, Duke proposes including an explanation in the updated Tranche 1 guidelines to reflect Duke's assumption that any utility self-developed or asset acquisition proposal would continue to receive market based revenues based upon a mechanism established by the Commission at the conclusion of the initial CPRE Program term. This, Duke argues, would meet the requirement of Rule R8-71(l), while ensuring reasonable protection of Duke's competitively sensitive and proprietary information.

• Grid Locational Guidance: In response to NCCEBA and NCSEA's comments questioning whether Duke complied with the requirement of Commission Rule R8-71(g)(2)(iv) to provide an explanation of locational allocation within DEC and DEP's respective balancing authority areas, Duke cites Section 2.5 of its proposed CPRE Program plan. In Section 2.5, Duke states that it has not designated specific locations or zones where projects must be sited for Tranche 1, and further describes the grid locational guidance that will be provided in the pre-solicitation information. In addition, Duke commits to evaluate this issue further and to update market participants when the next CPRE Program plan is filed in September 2018.

• Review of guidelines with Independent Administrator: In response to NCCEBA and NCSEA's comment that Section 7 of the proposed guidelines improperly involves Duke's Evaluation Team in the Independent Administrator's evaluation and ranking process in violation of Commission Rule R8-71(f)(3), Duke disagrees. However, Duke commits to review the guidelines with the Independent Administrator prior to the Tranche 1 RFP Solicitation to ensure compliance with the Step 1 and Step 2 evaluation processes established in Rule R8-71.

In conclusion, Duke requests that the Commission issue an order 1) approving its proposed CPRE Program guidelines, pro forma CPRE PPA, and related documents as reasonable and appropriate for implementing the Tranche 1 CPRE Program RFP Solicitation, 2) accepting Duke's initial CPRE Program plan as reasonable for planning purposes, and 3) granting Duke's requested waivers of regulatory conditions and code of conduct requirements.

Discussion and Conclusions

The Commission carefully reviewed Duke's November 27 filing and comments in support thereof, the Public Staff's report and comments, and the comments of all the parties in this proceeding. Based upon the foregoing and the entire record in this proceeding, the Commission agrees with the Public Staff that Duke's filing generally meets the requirements of Commission Rule R8-71, and that Duke's requested waivers of regulatory conditions and code of conduct requirements should be granted. However, Duke, the Public Staff, and the other parties have brought to the Commission's attention a number of disputed issues. The Commission will proceed to resolve these disputed issues, and, consistent with the conclusions reached herein, will require Duke to modify its initial CPRE Program guidelines and initial CPRE Program plan, and file revised versions of these documents as part of its required pre-solicitation filing. For reasons discussed below, Duke's proposed pro forma PPAs are approved as filed for use in the Tranche 1 CPRE RFP Solicitation only, and the Commission will require Duke to continue discussions with the Public Staff, NCCEBA, NCSEA, and other interested parties with the goal of reaching consensus on the provisions of the pro forma PPA for future CRPE RFP Solicitations.

The Commission identifies the following issues for decision:

Issue No. 1: Grid Locational Guidance

Commission Rule R8-71(g)(2) provides that, at a minimum, the CPRE Program plan shall, if designated by location, include an explanation of how the electric public utility has determined the location allocation within its balancing authority area. In its proposed guidelines, Duke states that for Tranche 1, it has not designated specific locations or zones where projects must be sited in order for market participants to bid proposals into the CPRE RFP Solicitation. However, Duke further states that it will release documentation in the pre-solicitation information intended to provide guidance to market participants on areas that have known transmission and distribution limitations. The goal of providing this information, as described by Duke, is to minimize the need for costly grid upgrades to integrate CPRE program renewable energy facilities and to provide information to market participants for use when planning development activities for renewable energy facility proposals.

NCCEBA and NCSEA argue that because Duke did not include any locational designation in its proposed guidelines or CPRE Program plan, Duke should not be allowed to introduce such considerations into the Tranche 1 CPRE RFP Solicitation. The Public Staff agreed with Duke on the overall goal of providing grid locational guidance and recommended that this information should be as detailed as possible to help guide prospective bidders in identifying the most cost-effective locations to interconnect to Duke's electric systems. The Public Staff further notes that Duke may rely on non-public information in developing grid locational guidance, and, if that information is provided to Duke's Proposal Team, then it should be provided to other market participants.

In its reply, Duke agreed that grid locational information should not be provided to Duke's Proposal Team prior to the pre-solicitation information sharing process. Duke further reiterated its commitment, as stated in Section 3.5.3 of the guidelines and Section 2.5 of the Program plan, to provide this information as part of the pre-solicitation documentation for Tranche 1, which will be transmitted to the Independent Administrator in March 2018.[1] Duke states that this information may be in the form of a map and/or table of circuits and/or substations that have "no availability" for the interconnection of additional renewable energy facilities. Finally, Duke states that it is committed to evaluate this issue further and to update market participants when the next CPRE Program plan is filed in September 2018.

The Commission concludes that Duke's failure to include the explanation contemplated by Commission Rule R8-71(g)(2)(iv) does not justify modifying or denying approval of Duke's proposed guidelines or Program plan. Rule R8-71(g)(2)(iv) requires this information to be included, "if designated by location." Duke has elected not to designate locational allocation within its balancing authority areas for Tranche 1, thus, this information is not required as part of the Program plan. Further, the Commission agrees with the Public Staff that this information should be as detailed as possible and made available to market participants as early as possible. In addition, while the Commission agrees with NCCEBA and NCSEA that the effect of Duke's failure to include this information in the CPRE Program plan is that grid locational guidance cannot be used to eliminate proposals in Tranche 1, the Commission takes a practical view: facilities proposed to be located in areas with "no availability" will require more expensive interconnection facilities and grid upgrades, making these proposals less competitive in the selection process. If, however, after accounting for the interconnection costs and grid upgrade costs, these proposals are below avoided cost and among the most competitive proposals, then the proposals should be selected. Finally, Duke shall continue to refine and update this information through its future CPRE Program plans for Tranches 2-4, as Duke committed to do in its reply comments, and to

---

[1] According to Duke's proposed schedule for Tranche 1, which is included in Section 3.4 of the guidelines, the pre-solicitation information will be issued by the Independent Administrator 60 days prior to the RFP release.

make this information as detailed as possible and available as early as possible to facilitate market participants' efforts to prepare and submit proposals.

Issue No. 2: Contracting Period

In Section 2 of Duke's proposed guidelines and Section 2.3 of Duke's proposed initial CPRE Program plan, Duke sets out a proposed planned CPRE RFP Solicitation Schedule, with a 90-day "contracting period" following each bid evaluation period for each tranche or RFP Solicitation. NCCEBA and NCSEA object to the length of the contacting period, suggesting that a 30-day period would be more appropriate given that contracts with CPRE facilities are based on the pro forma PPA. The Public Staff, in general, agreed with NCCEBA and NCSEA that 90 days is an unnecessarily long time period to sign a pro forma PPA contract, but noted that Duke distinguished between bid types in suggesting that asset acquisition proposals could take up to 90 days. In its reply comments, Duke recognizes that pro forma PPAs may be executed in less than 90 days and stated that it will endeavor to expeditiously complete these contracts during a shorter time period. Duke also states that it believes a 90-day contracting period is appropriate for purposes of the Tranche 1 CPRE RFP Solicitation, and stated that it will address whether this period should be shortened or extended for future RFPs in future CPRE Program plans.

The Commission is not persuaded that any modification to the 90-day contracting is justified at this time. The Commission expects Duke to move as expeditiously as possible to execute contracts with facility owners that submitted proposals selected through the RFP Solicitation, as Duke has committed to do in its reply comments.

Issue No. 3: Acceleration of Tranche 4 to July 2020

In Section 2 of Duke's proposed guidelines and Section 2.3 of Duke's proposed initial CPRE Program plan, Duke sets out a timetable for its proposed CPRE RFP Solicitations (Traches 1-4). NCCEBA and NCSEA argue that the issuance date for Tranche 4 should be accelerated by three months to July 2020 to allow projects to start construction in 2021 and thereby qualify for the Solar ITC, which is set to expire on December 31, 2021. This, they argue, will support the goal of the CPRE Program by producing the most cost-effective projects possible. The Public Staff agrees with the notion that it is in the public interest to minimize costs, but states that this consideration must be balanced with the need to maintain grid reliability. The Public Staff believes that the intent behind the statutory requirement that the total 2,660 MW be "reasonably allocated" over 45 months is to maintain grid reliability. The Public Staff also concludes that Duke's proposed 45-month timeline appears reasonable. In its reply comments, Duke states that NCCEBA and NCSEA's proposed acceleration of the Tranche 4 CPRE RFP Solicitation would compress the CPRE procurement to 40 months versus the statutorily required 45 months. Duke further states that it already considered the deadline for the solar ITC in that the proposed schedule forecasts that the Tranche 4 evaluation period to end in May or June 2021 – three months prior to the expiration of the Solar ITC. Finally, Duke notes that the CPRE Program is available to renewable energy facilities that are not solar powered (and, thus, not eligible for the Solar ITC), and cautions that accelerating Tranche 4 raises concerns that Duke would not be able to take into account the downward adjustment in the total 2,660 MW, which is required by G.S. 62-110.8(b)(1).

The Commission agrees with Duke and the Public Staff that Duke's proposed procurement schedule is reasonable and meets the requirements of G.S. 62-110.8(a). The Commission concludes that the concerns expressed by the Public Staff related to grid reliability, and by Duke related to the adjustment required by G.S. 62-110.8(b)(1), have merit and justify approval of the RFP Solicitation Schedule as proposed by Duke . The Commission notes that Duke committed to further evaluate this issue and adjust this schedule, as needed, in a future CPRE Program plan. Therefore, the Commission will remain open to adjustments in the timing of future RFP Solicitations in its review of Duke's future CPRE Program plans and guidelines.

Issue No. 4: Reasonableness of the Market Participant Requirements

In Section 3.2 of its proposed CPRE guidelines, Duke lists 12 "market participant requirements" and provides narrative description of other requirements for market participants. As summarized above, NCCEBA and NCSEA argue that several market participant requirements should be modified and that an additional provision allowing for a five-day cure period should be added to this section. In addition, Duke Renewables argues that Requirement No. 9(b) should be modified to make that requirement applicable to utility-owned facilities only.

NCCEBA and NCSEA argue that Duke should not be allowed to change the generation eligibility requirement from the range of 1 MW and 80 MW that is included in Requirement No. 2. In its reply comments, Duke recognizes that G.S. 62-110.8(a) imposes an upper limit of 80 MW for the generating capacity of a renewable energy facility, correlating to the maximum limit of a small power producer QF under PURPA. However, Duke argues that it should retain flexibility to increase the minimum size requirement of 1 MW if experience demonstrates that these projects are not likely to be successful in the bidding process.

The Commission will reserve judgment on the question of whether Duke is permitted to modify the minimum facility size requirement until such time that Duke proposes to do so.

Next, NCCEBA, NCSEA, and Duke Renewables, argue that Requirement No. 9(b), requiring both utility and non-utility market participants to disclose post-contract term revenue assumptions, is inconsistent with Commission Rule R8-71(l)(4). In response to these comments, Duke agrees to amend this requirement prior to the Tranche 1 CPRE RFP to limit its application only to Duke. To meet its own disclosure requirement, Duke proposes to include an explanation in the updated Tranche 1 guidelines presenting Duke's current assumption that any proposal submitted by Duke as either a self-developed proposal or asset acquisition proposal would continue to receive market based revenues based on a pricing mechanism to be established by the Commission at the conclusion of the initial CPRE Program term. This proposal, Duke argues, would provide the required disclosure while also ensuring reasonable protection of Duke's competitively sensitive proprietary information. The Commission agrees that this requirement should be modified as proposed by Duke in response to the comments of NCCEBA, NCSEA, and of Duke Renewables. The Commission further agrees that Duke can meet the disclosure requirements of Rule R7-71(l)(4) by its proposed modification to this requirement.

NCCEBA and NCSEA further argue that Requirement No. 10 should be revised to require experience developing facilities of the same "renewable energy type" rather than the same "renewable energy technology." Duke did not address this in its reply comments. The Commission concludes that this requirement should be clarified. While NCCEBA and NCSEA's proposed modification is an improvement, the Commission concludes that it also lacks precision. The Commission understands this requirement to mean that a proposal sponsor must show experience developing renewable energy facilities that use the same fuel source and/or electric generation technology as the facility that the proposal sponsor has proposed in the CPRE RFP. Assuming that the Commission's understanding reflects the intent of this requirement, then Duke shall clarify this requirement in its revised guidelines.

NCCEBA and NCSEA also argue that the narrative section following the list of market participant requirements should be modified to include a cure period of five days in the event that the Independent Administrator finds a proposal to be deficient. No other party addressed this issue. The Commission understands this proposed modification to be intended to allow for a limited opportunity to correct clerical errors rather than substantive changes in a proposal. NCCEBA and NCSEA's proposed modification is not entirely clear that the "deficiency" allowed to be corrected is a non-substantive deficiency. The Commission concludes that this proposal is appropriate for inclusion in the market participants requirements section, with modifications. Therefore, Duke shall modify Section 3.2 of the guidelines to include a revised version of the "cure period" provision proposed by NCSEA and NCCEBA. Duke should base its modification on NCCEBA and NCSEA's proposed revision, but make clear that this cure period is for correction of non-substantive deficiencies.

NCCEBA and NCSEA next argue that the provision in Section 3.2 requiring that any proposal sponsor waive any recourse against Duke or the Independent Administrator arising out of the conduct of the RFP is overbroad and should be deleted because a proposal sponsor's right to initiate a proceeding before the Commission should be preserved. The Public Staff agrees, stating that there is no evidence that G.S. 62-110.8 or Commission Rule R8-71 prohibits a bidder's ability to seek recourse for an improperly rejected bid. Duke did not address this issue in its reply comments. The Commission agrees with NCCEBA and NCSEA and the Public Staff and finds this conclusion consistent with the provisions of Commission Rule R8-71(d)(4), and the Commission's explanation of that provision in the CPRE Rule Order. Therefore, Duke shall either delete this provision or modify it to reflect that a market participant has a right to initiate a complaint proceeding before the Commission.

Finally, though not raised by the parties, the Commission addresses two additional issues raised in this section. First, the Commission recognizes the inclusion of Requirement No. 12, prohibiting discrimination based on race, religion, color, national origin, age, sex, or handicap. The Commission concludes this requirement, along with the evaluation factors that include promotion of opportunity for historically underutilized businesses, is appropriately responsive to the Commission's direction in the CPRE Rule Order. Second, the Commission notes that Duke uses the term "Proposal Team" in the narrative introduction to the enumerated requirements. In this context, Duke seems to contemplate one or more market participants partnering with other market participants to form a "Proposal Team," which would be able to meet the enumerated requirements where individually the market participants would not. The Commission determines that the use of the term "Proposal Team" in this context creates ambiguity because "Proposal Team" is defined in the CPRE Rule. Therefore, Duke shall modify this narrative section in a manner that clarifies the intent of this section, and, specifically, shall use a different term than "proposal team" to describe this concept unless Duke intended to use that term as it is defined in the CPRE Rule.

Issue No. 5: Elimination of Asset Transfer Proposal Cost Structure

In Section 3.3 of its proposed CPRE Program guidelines, Duke proposes and defines three "proposal types:" 1) Power Purchase Agreement; 2) Utility Self-developed Facilities; and 3) Asset Acquisition. The Asset Acquisition category includes three different "proposal cost structures:" 1) Renewable resource asset transfer plus EPC; 2) Build Own Transfer; and 3) Renewable Resource Asset.

For reasons summarized above, NCCEBA and NCSEA and Duke disagree about whether the Renewable Resource Asset Transfer proposal cost structure should be eliminated as an Asset Acquisition proposal type. The Commission concludes that Duke has distinguished this proposal cost structure from the other types sufficient to justify its inclusion in Section 3.3 of the guidelines, at least for the Tranche 1 RFP. The Commission will monitor this issue in future program filings and be open to proposals to revise this section in the future. The question of whether these facilities are appropriately included in the utility self-developed proposals that are subject to the 30% limit in G.S. 62-110.8(b)(4) is addressed below.

Issue No. 6: Clarification on how Avoided Cost Rate will be Used

NCCEBA and NCSEA agree with Duke's approach to include DEC and DEP's respective 20-year avoided cost rates using the peaker methodology for Tranche 1, but request additional details on how this will be translated into a rate structure. They argue that if the generic production profile is different from the one used to convert the time-differentiated standard offer tariff into a single all-in PPA price, then it should be included in the guidelines and made available for comment. The Public Staff agrees with this recommendation for Tranche 1, and further suggests that, for future solicitations, the use of more detailed production profiles that fully consider the value of on-peak and off-peak generation may help promote innovative proposals from developers, such as incorporating storage or other technologies to provide more cost-effective options. Duke did not address this issue in its reply comments, but the Commission notes that in Section 3.5.1 of Duke's proposed guidelines, Duke states that for Tranche 1, the avoided costs rates "will be presented in the same rate structure as the Companies' standard avoided cost rates."

The Commission agrees with the comments of the Public Staff, and NCCEBA and NCSEA. Therefore, Duke shall provide additional detail on how the Commission-approved avoided cost rates will be translated into a rate structure in its revised guidelines and in future guidelines and Program plans. Specifically, Duke shall include a similar statement as provided in Section 3.5.1 of the proposed guidelines, addressing whether the required 20-year avoided cost rates are to be presented in the same manner as in Duke's standard avoided cost rates and explain the production model used.

Issue No. 7: Clarification on Application of 30% Limit

The parties' seek guidance on, and raise questions related to, the application of the provisions of G.S. 62-110.8(b)(4), and its 30% limit on the utility's own development of renewable energy facilities. In its petition, Duke raises three issues: 1) voluntarily including PPA proposals offered by a Duke Affiliate as counting toward the 30% limit; 2) application of the 30% limit to the aggregate total obligation of 2,660 MW, rather than to individual RFP Solicitations; and 3) not counting any of the Asset Acquisition Proposals toward the 30% limit. As the Commission has determined that asset acquisition proposals are appropriate for inclusion as a proposal cost structure for the Tranche 1 RFP, the remaining question raised by NCCEBA and NCSEA is whether this proposal type should count toward the 30% limit. The Public Staff does not disagree with Duke's proposed approach to comply with the 30% limit, but recommends that Duke make its design requirements available to the Independent Administrator and prospective bidders as early in the process as possible.

Duke Renewables agreed that clarification of these issues is needed, but argued that NCCEBA and NCSEA's interpretation of these provisions is overly broad and Duke's expansion of the 30% limit may be inappropriate. Duke Renewables suggests that the 30% limit be clarified as follows: 1) the 30% limit should not apply to any project that is "not controlled, directly or indirectly, by the Affiliate," and control should be akin to that definition provided in Securities and Exchange Commission Rule 405 of the Securities Act of 1933; and 2) the only capacity which should count toward the 30% cap is that which is owned by the Affiliate at the time of submission of a bid into any tranche of the CPRE program.

The Commission concludes that, for the Tranche 1 CPRE RFP Solicitation, Duke's voluntary inclusion of PPA proposals offered by Duke's Affiliates as counting toward the 30% limit is appropriate, so long as this voluntary arrangement does not frustrate the goals of the CPRE Program. The Commission further determines that the appropriate time to determine whether a proposal counts toward the 30% limit is the time when the proposal is submitted. Therefore, if Duke or a Duke Affiliate has any ownership interest in a proposal project at the time the proposal is submitted, then the capacity represented by that proposal counts toward the 30% limit. This straightforward approach furthers one of the goals of the CPRE Program, which is to introduce competition into Duke's procurement of energy and capacity supplied by renewable energy facilities. The Commission considered, but declines to adopt Duke Renewables' definition of "control," as it is more complicated and would require additional tracking, reporting, and monitoring of facility ownership within the CPRE Program. The Commission will monitor this issue through its oversight of the CPRE Program, and will consider whether this arrangement remains appropriate in light of the progress Duke makes toward its total CPRE Program procurement obligation. Accordingly, Duke shall provide sufficient detail on facility ownership in its future CPRE Program filings to allow the Commission, the Public Staff, and interested parties to monitor compliance with the 30% limit.

The Commission further determines that Duke's proposal to apply the 30% limit to the total CPRE obligation, rather than to individual RFP Solicitations is appropriate as a more efficient means of monitoring compliance. Applying the 30% limit to the total CPRE obligation seems to make monitoring this limit more straightforward and was supported by the Public Staff. Consistent with the reporting requirements of Commission Rule R8-71, the Commission expects Duke to account for and update the Commission and market participants of the amount of generation that is appropriately included in the 30% limit.

Finally, the Commission finds persuasive Duke's arguments supporting its proposal that asset acquisition proposals should not count toward the 30% limit. The Commission agrees that the plain language of the statute supports this conclusion, because these proposals, as defined by Duke, do not represent procurement through the utility's "own development," but, instead, are "acquired by an electric public utility." See G.S. 62-110.8(b)(4). In short, the Commission determines that in an asset transfer plus EPC cost structure proposal is not utility self-development for purposes of the 30% limit, because the "development" is complete, and only construction, through the performance on the EPC, is required to bring the facility online. This result is consistent with the Commission's determination that the appropriate time to determine whether a proposal counts toward the 30% limit is the time when the proposal is submitted, as explained above.

Issue No. 8: Grouping Study Proposal

In its petition and in Section 4.3 of its proposed guidelines, Duke outlines the need for a "grouping study" process to evaluate potential network upgrade costs as part of Step 1 of the CPRE evaluation process. Duke explains that this process would be a more efficient and coordinated manner of identifying the grid upgrade costs associated with the group of proposals, while adhering to the applicable interconnection procedures.[1] The Public Staff states that it does not object to this proposed grouping study process, and agrees that it will reduce uncertainty, help avoid disputes between parties regarding how system upgrade cost responsibility is assigned, and ensure that the most cost-effective projects are selected. The Public Staff further states that, as long as the evaluation conducted by the Independent Administrator includes the grid upgrade costs associated with the project, only the lowest cost compliance resources that are below avoided cost should be selected.

The Commission disagrees with Duke and the Public Staff that Duke's grouping study proposal is an appropriate means of implementing the evaluation process set out in Commission Rule R8-71(f). Instead, the Commission will rely on its determination made in the CPRE Rule Order that a single track, two-step evaluation process is the appropriate approach. Therefore, Duke shall modify Section 4.3 of its proposed guidelines to be consistent with the Commission's resolution of this issue.

The Commission's starting point is the purpose of the CPRE Program: to add renewable energy to the State's generation portfolio in a manner that allows the State's electric public utilities to continue to reliability and cost-effectively serve customers' future needs. G.S. 62-110.8(a). The General Assembly determined that the appropriate means of achieving this goal is through the competitive procurement of renewable energy, in which Duke, its Affiliates, and other market participants are eligible to participate. The General Assembly also limited the price of a CPRE Program proposal to the utility's avoided costs, and granted Duke authority to manage the costs of adding renewable energy to the State's generation portfolio by designating portions of Duke's electric systems as unavailable to accommodate additional renewable energy facilities, and by controlling and dispatching the output from renewable energy facilities in the same manner it

[1] In its comments, Duke states that it will propose appropriate amendments to the NCIP, as necessary, to accommodate the CPRE Program, in Docket No. E-100, Sub 101.

does its own facilities. To ensure fairness in the bidding evaluation process, the General Assembly required that the program be independently administered by a third-party administrator.

On this background, the Commission determined that the Independent Administrator should conduct step one of the evaluation of proposals without the utility's involvement. In step two, Duke is permitted to eliminate proposals if the utility determines that interconnection and operation of a proposed facility, together with a facility or multiple facilities that were the subject of proposals already selected by the utility, would significantly undermine the utility's ability to provide adequate and reliable electric service to its customers. The Commission adopted Commission Rule R8-71(f)(3) to implement this two-step evaluation process.

The Commission is not persuaded that departure from the approach set out in Commission Rule R8-71(f)(3) is justified for the Tranche 1 CPRE RFP Solicitation. However, the Commission recognizes the difficulties posed by the task of assigning grid upgrade costs to a specific proposal. Therefore, the Commission will clarify its intent in structuring step two of the evaluation of proposals in one narrow aspect: Duke's consideration of system impact should incorporate consideration of grid upgrade costs and make a reasonable assignment of those costs to the proposals submitted, where possible. These costs should be assigned to proposals in a reasonable manner and the proposal price adjusted accordingly. Proposals that require substantial grid upgrade costs to address system impacts will likely be eliminated as being less cost-effective than those that do not (even if the price is below the utility's avoided costs), and those proposals that cannot be accommodated without jeopardizing adequate and reliable electric service to customers should be eliminated on that basis. If Duke determines to eliminate a proposal for either reason, it shall articulate its reasons in the explanation required to be delivered to the Independent Administrator. Thus, to an extent, the Commission is relying on Duke and the Independent Administrator to act in good faith and exercise sound business judgment in completing the difficult task of evaluating grid upgrade costs and assigning those costs to proposals. Within the construct of the Evaluation Team (or through a subset of that team that Duke describes as a "study team"), the evaluation of grid upgrade costs should be completed while maintaining the anonymity of the market participant that submitted the proposal, while preserving the goal of transparency and equity in the evaluation of proposals.

The Commission concludes that allowing Duke to consider grid upgrade costs within the evaluation of system impact is appropriate in light of the goals of the CPRE Program, practical considerations, and the Commission's intent in adopting the CPRE Rule. As Duke acknowledges in Section 4.3 of its guidelines, "the goal of the CPRE RFP Solicitation is to procure renewable energy facilities that are cost effective, which likely will entail having little to no upgrade costs associated with their size and location." The Commission agrees. Further, because Duke evaluates system impact in step two of the proposal evaluation process, this is also the appropriate time to identify grid upgrade costs. Introducing the evaluation of grid upgrade costs into step one, through the grouping study process Duke proposes, seems unnecessarily complex and likely to lead to delays in the ultimate award of proposals during the initial 45-month procurement period. For the Tranche 1 RFP, the Commission is prepared to move forward with the evaluation process established in Commission Rule R8-71(f), as clarified herein. Further, the Commission continues to recognize "that opportunities for improvements may arise or become apparent after there is a sufficient historical record of working through the process. Therefore, the Commission will remain open to these opportunities in the future." CPRE Rule Order at 17.

Therefore, Duke shall modify Section 4 of its guidelines to eliminate any utility involvement in step one of the evaluation process, and to add consideration of grid upgrade costs to step two of the evaluation process as a part of evaluating system impact. The grouping study process proposed by Duke and agreed to by the Public Staff would be an appropriate means of evaluating grid upgrade costs within Duke's responsibilities in step two of the proposal evaluation. These modifications should be consistent with Commission Rule R8-71(f)(3) and the Commission's discussion of that provision in the CPRE Rule Order. In addition to requiring Duke to address grid upgrade costs, as necessary, in its explanation of the elimination of proposals, Duke shall report on grid upgrade costs on a per-proposal basis in its future CPRE compliance reports.

Issue No. 9: Cost Recovery

Pursuant to subsection G.S. 62-110.8(g):

> An electric public utility shall be authorized to recover the costs of all purchases of energy, capacity, and environmental and renewable attributes from third-party renewable energy facilities and to recover the authorized revenue of any utility-owned assets that are procured pursuant to this section through an annual rider approved by the Commission and reviewed annually....The annual increase in the aggregate amount of these costs that are recoverable by an electric public utility pursuant to this subsection shall not exceed one percent (1%) of the electric public utility's total North Carolina retail jurisdictional gross revenues for the preceding calendar year.

The Commission adopted Commission Rule R8-71(j) to implement this provision.

In its petition, Duke states that it has determined that jointly issuing CPRE RFP Solicitations will be more efficient and will ensure consistency in the evaluation and contracting process. However, Duke further states that DEC and DEP will continue to independently meet their CPRE planning, reporting, and cost recovery obligations under the CPRE Rule. Specific to cost recovery, DEC and DEP will separately contract with the market participants that submit proposals that are selected and each utility will be independently responsible for the full cost of renewable energy resources procured within its service territory to comply with the CPRE Program requirements. The Commission determines that Duke's proposed approach is appropriate and should be approved.

Also included in Duke's petition is its description of a proposal to recover "network upgrade costs" through future adjustments to Duke's general rates. Duke supports this proposal by explaining that the goal of the CPRE RFP Solicitation is to competitively procure renewable energy facilities that are cost effective, and proposals selected through the RFP will likely entail little to no upgrade costs, depending on each proposal's size and location. Duke further explains that the timeframe for proposal submission will precede the System Impact Study and Facilities Study steps in the NCIP and SC GIP, through which Duke analyzes and determines the detailed cost of interconnection facilities and network upgrade costs. In addition, Duke states that while the cost of interconnection facilities between the generation facility and the point of interconnection can reasonably be predicted, network upgrade costs beyond the point of interconnection can vary dramatically depending on the grid's capability to integrate additional generation at the requested point of interconnection. Thus, this construct of the CPRE Program, Duke states, exposes market participants to unknown and potentially significant network upgrade costs. To mitigate this risk, Duke proposes segregation of network upgrade costs and proposal costs, with the market participant being required to include proposal costs in its proposal price and DEC and DEP separately applying to recover network upgrade costs through a future general rate case proceeding.

The Public Staff responded to Duke's proposed cost recovery method stating that it prefers the traditional approach where all interconnection costs are assigned to the interconnection customer, but, in light of the practical challenges with isolating grid upgrade costs for project assignment, the Public Staff does not object to Duke's proposal for use in the Tranche 1 CPRE RFP Solicitation. In addition, the Public Staff recommends that the Commission require DEC and DEP to file reports detailing all grid upgrades resulting from each CRPE Solicitation, along with the costs associated with grid upgrades, as a part of the annual CPRE compliance report.

NCCEBA and NCSEA expressed support for Duke's proposed cost recovery method.

In response to the Public Staff's comments, Duke suggests that the Commission approve its cost recovery method, but provide that the Commission base its decision on "unique 'practical challenges' and circumstances of the CRPE RFP and shall not be viewed as precedential for QFs seeking to sell" to Duke under PURPA.

The Commission appreciates the Public Staff's attention to this issue and its having noted the Commission's historical approach to cost recovery that emphasizes, to the extent possible, recovery of interconnection costs through the Commission-approved interconnection fees that are charged to a generation facility. In its prior orders addressing this subject, the Commission anticipated that some costs might be so diffuse, or because the costs were incurred after interconnection, assignment to an interconnection customer would be difficult or impossible. The Commission's prior orders have contemplated that these costs might be appropriately recovered through base rates. The Commission determines that the network upgrade costs, as defined by Duke in its CPRE filings, are exemplary of the types of costs that might be appropriately recovered through an adjustment in base rates. Further, as the Public Staff observed, a general rate case would allow an appropriate amount of time for the Public Staff to review these costs and the Commission to determine whether these costs were reasonably and prudently incurred. Finally, the Commission agrees with Duke that the unique circumstances of implementing the CPRE Program on the timeline that the General Assembly has directed the Commission to do, justify a unique approach. Therefore, the Commission concludes that Duke's proposed cost recovery is appropriate and should be approved.

Issue No. 10: Curtailment Provisions of the PPAs

In its Petition, Duke addresses the provisions of the pro forma PPA that include "control instructions," which allow Duke to dispatch, operate, and control the solicited renewable energy facilities in the same manner as Duke's own generating resources. These provision include an annual threshold for curtailment equivalent to 5% of expected annual output in DEC and 10% of expected annual output in DEP. Above these thresholds the CPRE PPA would require Duke to pay the facility owner at the full contract price for each MWh of energy that could have been generated, but was not due to the dispatch down control instruction. Duke argues that these provisions are reasonable and meet the CPRE Program objectives.

NCCEBA and NCSEA object to implementing different curtailment thresholds for DEC and DEP, and offer two alternative options that they argue provides more certainty for market participants, allows flexibility for Duke in curtailment, and results in lower costs for ratepayers. In the first alternative, NCCEBA and NCSEA suggest treating the CPRE facility as a rate-based utility asset, and, in the second alternative, curtailment would be treated as a service and the CPRE facility would be paid a curtailment service fee equal to the PPA rate.

The Public Staff states that it does not take issue with Duke's proposed dispatch and curtailment provisions, but emphasizes that this authority further heightens the need for Duke to have non-discriminatory and transparent procedures in place for curtailment resulting from control instructions. The Public Staff also recommended that curtailment of CPRE resources should be included in the quarterly reports that DEC and DEP must file as a result of the Commission's Avoided Cost Order. In addition, the Public Staff suggests that it is important that curtailment estimates used in evaluation of asset acquisition or utility self-developed proposals be comparable to those included in the third-party PPA proposals.

In response to the Public Staff's comments, Duke agrees to include the curtailment of CPRE facilities in its quarterly reports, for those CPRE facilities that are curtailed due to emergency conditions or force majeure events. Duke distinguishes these circumstances from the CPRE dispatch down instructions, which Duke states "are likely to be more routinely issued" as a part of normal system operations. Duke does not agree to include these curtailment instances in its quarterly reports addressing emergency condition curtailments. In response to the Public Staff's comments suggesting that there should be parity between the curtailment of asset acquisition or utility self-developed proposals and third-party PPA proposals, Duke states that this is not anticipated to be a material issue because Duke plans to impose the same dispatch priority on all generators selected through a CPRE RFP Solicitation, regardless of proposal type. Duke argues that this approach aligns with G.S. 62-110.8(b), which provides that the utility the "rights to dispatch, operate, and control the solicited renewable energy facilities in the same manner as the utility's own generating resources."

The Commission first determines that Duke's proposed curtailment thresholds included in its pro forma PPAs (5% for DEC and 10% for DEP) are appropriate for use in Tranche 1. Without revisiting the entirety of the Commission's 2016 biennial avoided cost proceeding (Docket No. E-100, Sub 148), the Commission determines that the disparity in the presence of distributed resources between DEC and DEP justifies the disparate curtailment thresholds. The Commission is not prepared to approve NCCEBA and NCSEA's alternative methods of dealing with curtailment and compensation on this record, but will monitor this issue and remain open to changes in the future, as is further discussed below in the context of considering the pro forma PPA. Finally, the Commission agrees with the Public Staff as to the importance of non-discriminatory and transparent procedures in place for curtailment of CPRE facilities. To facilitate the Commission's oversight of Duke's implementation of the CPRE Program, as required by G.S. 62-110.8, Duke shall submit reports on the curtailment of CPRE Program facilities as part of its reporting, and this report shall include a comparison with the curtailment of Duke's own facilities. Duke shall also include curtailment of CPRE facilities for emergency conditions or force majeure in its reports required by the Avoided Cost Order, as it agreed to do.

Issue No. 11: Waiver of Regulatory Conditions and Code of Conduct Requirements

In its petition and as Attachment 4 thereto, Duke requests that the Commission grant it a waiver of several Regulatory Conditions and Code of Conduct Requirements. Generally, and as summarized above, these provisions restrict Duke's ability to transfer payments, goods and services, cost allocation, and trade secret information between DEC and DEP (as electric public utilities) and affiliated companies.

In its report and comments, the Public Staff states that it reviewed these proposed waivers and believes that they are reasonable and appropriate for the purposes of implementing the CPRE Program.

No other party addressed Duke's requested waivers.

The Commission reviewed Duke's requested waivers in light of the provisions of the CPRE Program and the CPRE Rule, and agrees with Duke and the Public Staff that these waivers are reasonable and appropriate for the purpose of implementing the CPRE Program. Therefore, Duke's requested waivers should be approved.

Issue No. 12: Reasonableness of the Provisions of the pro forma PPA

Duke included as Attachment 2 to its Petition the pro forma PPA required to be filed for Commission approval pursuant G.S. 62-110.8(b)(3) and Commission Rule R8-71(c)(v). In support of its request for approval of the pro forma PPA, Duke states that the terms and conditions of the Tranche 1 CPRE PPA are commercially reasonable and are substantively the same as the current negotiated PPA utilized by Duke. Duke further states that over the past three years these terms and conditions have been accepted by 15 counterparties for 28 projects, representing 1,300 MW of renewable energy capacity. In addition, Duke alerts the Commission, as directed in the CPRE Rule Order, that Duke may seek to modify the terms and conditions prior to the initial CPRE RFP Solicitation date. Consistent with Commission Rule R8-71(f)(1)(iii), the Commission anticipates receipt of Duke's filing of the pro forma PPA as part of the pre-Solicitation filing, including identification of any such modifications, and that the Independent Administrator would include this document in the pre-solicitation information.

In their comments, NCCEBA and NCSEA object to a number of provisions included in the pro forma PPA, and included as attachments to its comments a redline version of the pro forma PPA. NCCEBA and NCSEA outline their arguments in support of their proposed changes, described as the "most significant amendments." NCCEBA and NCSEA urge the Commission not to apply any presumption of reasonableness based on Duke's statement that the pro forma PPA based on its past use in the negotiated contract setting. NCCEBA and NCSEA note that the Commission has a statutory mandate to review and approve the pro forma PPA and emphasize the importance of eliminating unnecessarily burdensome contract terms that may require market participants to increase their pricing to compensate for the impact of those terms.

In its reply comments the Public Staff states that its initial review of the pro forma PPA did not raise significant concerns; however, in light of NCCEBA and NCSEA's comments the Public Staff recognizes that some of the provisions in the PPA may create challenges for market participants seeking to obtain financing for projects. Specifically, the Public Staff agrees with the inclusion of a provision allowing a reasonable opportunity to cure non-material breaches. In addition, the Public Staff states that prior to including the pro forma PPA in the Tranche 1 pre-solicitation filings, further information sharing between NCCEBA, NCSEA, Duke, the Public Staff, and other parties regarding the additional concerns raised would help clarify and potentially resolve these concerns.

Duke responded to NCCEBA and NCSEA's objections to the terms and conditions of the pro forma PPA, by first disagreeing that the terms and conditions are commercially unreasonable. Duke reiterates that the pro forma PPA is based on a PPA that has been accepted by a number of counter parties, and argues that this demonstrates the reasonableness of the PPA. Duke next raises a general objection to "NCCEBA/NCSEA's attempt to negotiate almost 40 different clauses and terms of the CPRE PPA through the regulatory process" prior to the Tranche 1 CPRE RFP Solicitation, and suggested that if a specific term is viewed unfavorably then that feedback should be provided through the solicitation process managed by the Independent Administrator. Duke further objects to the Commission acting as arbiter of the commercial reasonableness of each and every term in the pro forma PPAs, arguing that commercial reasonableness of the PPA should be left to the contracting parties and that NCCEBA and NCSEA have failed to present any compelling reasons to deviate from the terms as proposed or the process used to inform market participants. Finally, Duke states that DEC and DEP have historically been amenable to minor negotiated revisions to their form PPAs, but, as provided in the proposed CPRE guidelines, Duke has proposed not considering amendments to the CPRE PPA to ensure all parties contract on the same terms. However, Duke nonetheless commits to further evaluate whether specific NCCEBA and NCSEA revisions are appropriate for Tranche 1, and whether to modify its approach to allow for limited negotiations. Duke also commits to "transparently address these issues through the CPRE pre-solicitation process," and then file the CPRE pro forma PPA with the Commission at least 30 days prior to the CPRE RFP Solicitation issuance date, as required by G.S. 62-110.8(b)(3) and Commission Rule R8-71(f)(1)(iii).

The Commission first rejects Duke's arguments that the Commission should not be the arbiter of the commercial reasonableness of the terms of the pro forma PPA. The Commission has a statutory mandate to review and approve the terms and conditions of the pro forma PPA. G.S. 62-110.8(b)(3). However, the Commission accepts Duke's representations that the pro forma PPA is similar to contracts that have been accepted in negotiations with owners of renewable energy facilities as supporting approval of the pro forma PPA. Likewise, the Commission accepts NCCEBA and NCSEA's representations that some provisions of the pro forma PPA may create challenges for market participants seeking to obtain financing as supporting modification to the pro forma PPA terms. Further, the Public Staff independently agreed with the validity of some of NCCEBA and NCSEA's concerns, and suggested that further conversations among the parties might be productive. Finally, the Commission appreciates Duke's willingness to further evaluate whether specific revisions or limited negotiations on the terms of CPRE PPAs are appropriate, and Duke's commitment to transparently address these issues within the CPRE pre-solicitation process.

The Commission determines that practical considerations related to the timing of the filings in this proceeding, the approaching Tranche 1 RFP Solicitation issuance date, and the relatively brief 45 months in which Duke must meet its total CPRE obligation, justify allowing Duke to proceed to the Tranche 1 CPRE RFP Solicitation issuance as proposed in its reply comments. In short, the Commission is not prepared to approve or reject NCCEBA and NCSEA's proposed revisions to the pro forma PPA on this timeframe or this record. Therefore, the Commission approves the use of the pro forma PPA as proposed by Duke for the purposes of the Tranche 1 CPRE RFP Solicitation only, and directs Duke to proceed toward the Tranche 1 CPRE RFP Solicitation issuance as proposed in its reply comments, including further evaluating whether specific revisions or limited negotiations are appropriate. Duke shall update the Commission, the Public Staff, and market participants through its pre-solicitation filings and its proposed information sharing process. In addition, as the Public Staff recommends, Duke, NCCEBA, NCSEA, the Public Staff, and other parties should continue to discuss the reasonableness of the provisions of the pro forma PPA with the goal of reaching consensus on revisions. Duke shall specifically address the result of these discussions in the September filings required under the CPRE Rule. As with other issues raised in this proceeding, the Commission will continue to monitor developments and expects the parties to alert the Commission if the terms and conditions of the pro forma PPA are a barrier to achieving the goals of the CPRE Program.

Conclusion

Based upon the foregoing and the entire record in this proceeding, the Commission concludes that Duke's initial CPRE Program guidelines and initial CPRE Program plan should be modified to conform with the conclusions reached in this order. With these modifications, the initial CPRE Program guidelines and initial CPRE Program plan meet the requirements of Commission Rule R8-71 and are reasonably designed to achieve the mandates and objectives of G.S. 62-110.8. Therefore, Duke shall file updated versions of the initial CPRE Program guidelines and initial CPRE Program plan as part of the established pre-Solicitation filing requirement and information sharing process. The Commission further concludes that Duke's requested waivers of regulatory conditions and code of conduct requirements are reasonable and, therefore, should be granted. Finally, the Commission concludes that Duke should be required to incorporate the additional reporting requirements discussed in this order as part of Duke's September 1, 2018, CPRE filings.

IT IS, THEREFORE, ORDERED as follows:

1. That Duke shall modify its initial CPRE Program guidelines and initial CPRE Program plan to conform to the conclusions reached in this order;

2. That Duke's initial CPRE Program guidelines, as modified in compliance with this order, shall be, and are hereby, approved for use in the Tranche 1 CPRE RFP Solicitation;

3. That Duke's initial CPRE Program plan, as modified in compliance with this order, shall be, and is hereby, accepted;

4. That Duke's proposed pro forma PPA shall be, and is hereby, approved for use in the Tranche 1 CPRE RFP Solicitation. Duke shall continue its discussions with NCCEBA, NCSEA, the Public Staff, and other interested parties regarding potential revisions to the pro forma PPA or limited opportunity for negotiations on terms and conditions, as Duke proposed in its reply comments filed in this proceeding;

5. That Duke's requested waivers of regulatory conditions and code of conduct requirements shall be, and are hereby, granted; and

6. That Duke shall incorporate into its future CPRE Program filings the additional reporting requirements required by this order.

ISSUED BY ORDER OF THE COMMISSION.
This the 21st day of February, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-2, SUB 1159
DOCKET NO. E-7, SUB 1156
DOCKET NO. E-100, SUB 157

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

Docket No. E-2, SUB 1159 Docket No. E-7, SUB 1156 In the Matter of Joint Petition of Duke Energy Carolinas, LLC and Duke Energy Progress, LLC, for Approval of Competitive Procurement of Renewable Energy Program Docket No. E-100, SUB 157 In the Matter of 2018 Biennial Integrated Resource Plans and Related 2018 REPS Compliance Plans	)	ORDER REQUIRING INTERIM CPRE PROGRAM REPORTS, ALLOWING INTERIM IMPLEMENTATION OF CPRE PROGRAM PLANS, AND ESTABLISHING SCHEDULE FOR FILING OF COMMENTS

BY THE COMMISSION: On September 5, 2018, in Docket No. E-100, Sub 157, Duke Energy Carolinas, LLC (DEC), and Duke Energy Progress, LLC (DEP) (together, Duke), filed updates to their Competitive Procurement of Renewable Energy (CPRE) Program Plan, as part of their 2018 biennial integrated resource planning (IRP) reports.

On October 5, 2018, in Docket Nos. E-100, Sub 101, E-2, Sub 1159, and E-7, Sub 1156, the Commission issued an Order Approving Interim Modifications to North Carolina Interconnection Procedures for Tranche 1 of CPRE RFP. Among other things, that Order allowed parties to file comments related to the timing of consideration of potential changes to the administration of the CPRE Program.

On November 5, 2018, Duke filed a letter in response to the Commission's request for comments. In its letter, commits to work with the Independent Administrator to identify "lessons learned" from the Tranche 1 CPRE RFP Solicitation and to provide the Commission with interim reports on a schedule detailed in the letter.[1]

Also on November 5, 2018, the Public Staff filed comments. The Public Staff states that it supports the schedule of reports proposed by Duke in its letter and further recommends that the initial interim report include price information, with appropriate treatment if that information is considered confidential.

Based upon the foregoing and the entire record herein, the Commission finds good cause to require the filing of the interim reports regarding the status and results of the Tranche 1 CPRE RFP Solicitation, as proposed by Duke, and to require the inclusion of the price information in those reports, as recommended by the Public Staff. In addition, it appears that there is uncertainty about which CPRE Program plan and Guidelines that Duke is, or should be, operating under at this time: the initial CPRE Program plan that the Commission approved in February 2018 for use in the Tranche 1 CPRE RFP Solicitation, or the proposed CPRE Program plan that Duke filed with its 2018 biennial IRP filing. Therefore, the Commission further finds good cause to resolve this uncertainty by allowing Duke to implement the CPRE Program plan filed with its 2018 biennial IRP filing on an interim basis while the Commission receives comments on that plan. Finally, the Commission finds good cause to direct the parties who desire to provide comments on Duke's proposed CPRE Program plans to do so in Docket Nos. E-2, Sub 1159, and E-7, Sub 1156, and not in Docket No. E-100, Sub 157.

IT IS, THEREFORE, ORDERED as follows:

1. That Duke Energy Carolinas, LLC and Duke Energy Progress, LLC shall file with the Commission interim reports regarding the status and results of the Tranche 1 CPRE RFP Solicitation on the schedule proposed in its letter filed with the Commission on November 5, 2018. These interim reports shall include the pricing information as recommended by the Public Staff in its comments that were also filed with the Commission on November 5, 2018;

2. That Duke Energy Carolinas, LLC and Duke Energy Progress, LLC shall be, and are hereby, authorized to implement the CPRE Program plans filed with the Commission on September 1, 2018, on an interim basis, including the scheduled opening of the Tranche 2 CPRE RFP Solicitation in July 2019 and other adjustments to the proposed schedule of RFP Solicitations. This authorization shall be without prejudice as to the right of any party to file comments with the

[1] On December 7, 2018, the first of these reports was filed with the Commission in Docket Nos. E-7, Sub 1159, and E-2, Sub 1156.

Commission regarding the CPRE Program plans, or the Commission to order changes in the CPRE Program plans;

3. That any party to these proceedings that desires to present comments to the Commission on the CPRE Program plans filed with the Commission on September 1, 2018, shall file their comments in Docket Nos. E-2, Sub 1159, and Docket No. E-7, Sub 1156, as follows:

a. On or before January 31, 2019, all parties may, and the Public Staff shall, file initial comments on the CPRE Program plans filed with the Commission on September 1, 2018, in Docket No. E-100, Sub 157. These comments may also address or respond to the interim reports required by Ordering Paragraph No. 1 of this Order;
b. On or before March 29, 2019, all parties may file reply comments addressing the other parties' initial comments on the CPRE Program plans filed with the Commission on September 1, 2018, in Docket No. E-100, Sub 157. These comments may also address or respond to the interim reports required by Ordering Paragraph No. 1 of this Order;
c. Upon receipt of the interim reports that are required by this Order and of the parties' initial comments, and reply comments, the Commission will proceed appropriately in considering the updates to the CPRE Program plans; and

4. That the Chief Clerk shall transmit a copy of this Order to the parties to the proceedings in Docket No. E-100, Subs 101.

ISSUED BY ORDER OF THE COMMISSION.
This the 17th day of December, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-2, SUB 1167
DOCKET NO. E-7, SUB 1166

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Progress, LLC,	)	ORDER MODIFYING AND
and Duke Energy Carolinas, LLC, Requesting	)	APPROVING RIDERS
Approval of Solar Rebate Program Pursuant to	)	IMPLEMENTING SOLAR
G.S. 62-155(f)	)	REBATE PROGRAM

BY THE COMMISSION: On July 27, 2017, House Bill 589 (S.L. 2017-192) was enacted into law. Part VIII of House Bill 589, enacted in part as G.S. 62-155(f), requires Duke Energy Progress, LLC (DEP), and Duke Energy Carolinas, LLC (DEC) (collectively, Duke or the Companies), to file with the Commission an application requesting approval of a program that offers reasonable incentives to residential and nonresidential customers for the installation of small customer-owned or leased solar energy facilities. Pursuant to G.S. 62-155(f), participants in an approved solar rebate program also will participate in the offering utility's net metering tariff, with an incentive limited to 10 kW_{AC} for residential solar installations and 100 kW_{AC} for nonresidential solar installations.

On January 22, 2018, prior to the 180-day filing deadline imposed by Section 8.(c) of House Bill 589, DEC and DEP jointly filed an application seeking approval of the Companies' proposed solar rebate program, made available through DEC's Solar Rebate Rider SRR and DEP's Solar Rebate Program Rider SRP (collectively, Solar Rebate Rider). Also included in the filing are forms for customers to apply for service under the Solar Rebate Rider.[1]

On January 26, 2018, the Commission issued an Order Establishing Proceeding to Review Duke's Proposed Solar Rebate Program. That Order recognized the participation of the Public Staff – North Carolina Utilities Commission (Public Staff), and set a schedule for receipt of petitions to intervene, initial comments, and reply comments.

Pursuant to G.S. 62-155(f), the incentives offered through a solar rebate program should comport with the following requirements:

(1) Shall be limited to 10,000 kW of installed capacity annually starting on January 1, 2018, and continuing until December 31, 2022, and shall provide incentives to participating customers based upon the installed alternating current nameplate capacity of the generators.

(2) Nonresidential installations will also be limited to 5,000 kW in aggregate for each of the years of the program.

(3) Of the capacity for nonresidential installations, 2,500 kW shall be set aside for use by nonprofit organizations; 50 kW of the set-aside shall be allocated to the NC Greenpower Solar Schools Pilot or a similar program. Any set-aside rebates that are not used by December 31, 2022, shall be reallocated for use by any customer who otherwise qualifies. For purposes of this section, "nonprofit organization" means an organization or association recognized by the Department of Revenue as tax exempt pursuant to G.S. 105-130.11(a), or any bona fide branch, chapter, or affiliate of that organization.

(4) If in any year a portion of the incentives goes unsubscribed, the utility may roll excess incentives over into a subsequent year's allocation.

On or after January 30, 2018, the Commission issued orders allowing North Carolina Sustainable Energy Association (NCSEA) and the Southern Alliance for Clean Energy (SACE) to intervene in this proceeding.

---

[1] As a preliminary matter, there is no material, substantive difference between DEC's Solar Rebate Rider SRR and DEP's Solar Rebate Program Rider SRP. The Commission, therefore, refers collectively and singularly throughout this Order to Duke's proposed Solar Rebate Rider.

On February 9, 2018, the Public Staff, SACE, and NCSEA filed initial comments. On February 16, 2018, Duke and SACE filed reply comments.

On March 14, 2018, Rishipal Bansode, Ph.D., filed a consumer statement of position stating that North Carolina residents who elected to install solar panels in 2017 are disadvantaged because they neither were able to avail themselves of the North Carolina renewable exergy tax credit, which expired on January 1, 2017, nor will they be eligible to apply for the Solar Rebate Rider. Dr. Bansode requests that the Commission require Duke to consider as eligible any qualifying system installed on or after January 1, 2017.

Duke's Application

Duke contends that its proposed solar rebate program, made available through its Solar Rebate Rider, offers reasonable incentives through one-time, upfront payments to eligible customers who install an approved solar energy facility. More specifically, Duke proposes that on or before April 1, 2019, and each calendar year thereafter, it will file with the Commission a report providing participation rates by customer class, the number of applications rejected, the number of applications canceled at year's end, and the program costs incurred to date. Second, Duke commits to publish on its website and file with the Commission a notice when prescribed participation levels in the Solar Rebate Rider reach capacity. Third, Duke reiterates the parameters imposed by G.S. 62-155(f)(1)-(4), as set forth above. Fourth, Duke proposes that any unsubscribed capacity, regardless of a prior set-aside requirement, will be available to any otherwise eligible customer beginning on January 1, 2023. Fifth, Duke proposes that it will retain the renewable energy certificates for any customer receiving service under a non-time of use demand rate schedule. To receive a rebate payment following approval of a customer's application and installation of a customer-owned or leased solar photovoltaic (PV) system, the customer must submit to Duke a certificate of completion indicating that the installation is complete and confirming that billing under an eligible rate schedule and net metering rider has commenced. Duke reserves the right to inspect and verify any solar PV system installation for which a rebate has been approved. Duke further proposes the following rebate amounts for each eligible participant class: (1) nonresidential customers will receive $0.50 per watt, (2) residential customers will receive $0.60 per watt, and (3) non-profit customers will receive $0.75 per watt. Sixth, Duke proposes a contract period of ten years for service under the Solar Rebate Rider, which could thereafter be renewed for successive one-year periods, unless terminated by Duke.[1] Absent "good cause as determined by [Duke]," early termination of service under the Solar Rebate Rider will result in a charge derived from the following calculation:

Early Termination Charge = (1 - (# of participating months / 120)) * rebate payment amount

Seventh, Duke reserves the right to terminate service under the Solar Rebate Rider at any time upon written notice to the customer if: (1) the customer violates any terms of service; (2) the service is detrimental to Duke or its customers; or (3) a customer is found to have misstated or misrepresented the information conveyed to Duke in the Solar Rebate Rider application process. Duke also reserves the right to request repayment of the solar rebate amount paid when a customer

[1] In its reply comments, Duke reports that it has agreed to strike this provision following discussions with the Public Staff.

is found to have intentionally misstated or misrepresented information in the Solar Rebate Rider application process. Eighth, Duke reserves the right, at its own cost, to install, operate, and monitor any special equipment or metering necessary to record 100% of the customer's generator output.

Next, Duke proposes the following Solar Rebate Rider application criteria, rules, and restrictions: (1) previously rejected applicants are eligible to reapply, subject to all other eligibility criteria; (2) all applications that remain pending at the end of a given calendar year will be rejected and cancelled; (3) applications for a given calendar year may be submitted no earlier than January 1 of the applicable year; (4) applications for a solar PV system installed in the previous calendar year will be accepted only to the extent that the installation occurred within 90 days preceding the submission date of the current application; (5) the nameplate capacity in alternating current constitutes the determinative capacity for which the rebate can be calculated; and (6) eligibility for service under the first year of the Solar Rebate Rider is limited, subject to Duke's discretion, to those solar PV systems installed on or after January 1, 2018. Customers also may apply for a rebate reservation in advance of installation. For residential customers who reserve a rebate, installation must be completed within 365 days after the date Duke issues such reservation. For nonresidential customers who reserve a rebate, installation must be completed within 365 days after the date Duke executes the interconnection agreement. Duke's proposed application forms require the applicant to provide the following information: (1) customer name, (2) customer account number, (3) e-mail address, (4) project identification, (5) facility address, (6) payment address, (7) installer name, (8) installer address, (9) projected/installed kW_{DC}/kW_{AC}, (10) kW_{AC} eligible for the solar rebate, (11) solar rebate calculation, (12) projected solar rebate payment, (13) the installer's name and dated signature, and (14) the customer's name and dated signature. Finally, the application forms contain sixteen standard contract terms and conditions, most of which already have been mentioned in this summary of proposed Solar Rebate Rider rules, but those which are specifically objected to by one or more of the intervening parties, are set forth below.

SUMMARY OF INITIAL AND REPLY COMMENTS

Public Staff

In its comments, the Public Staff states that it "agrees that [Duke's] application generally complies with the requirements of G.S. 62-155(f)," and "that the rebate structure and amounts proposed by the utilities for residential, nonresidential, and non-profit customers are reasonable and designed to incentivize" installation of customer-owned or customer-leased solar PV systems. The Public Staff also notes that it has requested from Duke information regarding total cost recovery of the rebates issued through, and administrative costs of, the Solar Rebate Rider, and will either continue those discussions in the instant proceeding or in the respective cost recovery proceedings for each utility pursuant to G.S. 62-133.8(h).

NCSEA

In its comments, NCSEA states that it generally supports the Solar Rebate Rider. NCSEA contends, however, that there exist some areas for improvement. First, NCSEA takes exception to Duke's proposal to "base the rebate on the nameplate capacity of the inverter and not on the generation capacity of the solar energy facility." NCSEA expresses concern that such a policy would allow a residential customer to pair, for example, a 1-kW_{DC} solar PV system with a 10-kW_{AC}

inverter and receive an artificially inflated rebate, specifically a $6,000 instead of a $600 rebate. To reduce the likelihood of such a scenario, NCSEA suggests that Duke should "use a fixed conversion factor for converting the DC generating capacity of installed solar panels to AC for purposes of rebate eligibility." NCSEA concedes that Duke in its proposal reserves the right to inspect or verify the accuracy of all information provided to it by the customer, with certain available recourse in the event of a misstatement or misrepresentation, including rejection of an application, termination of existing service under the Solar Rebate Rider, or a request for repayment of the rebate amount if a customer is found to have intentionally misstated or misrepresented information to Duke. Nonetheless, NCSEA contends that these remedies are insufficient to protect customers from some solar energy facility installers whose misdeeds could result in early termination of a customer's service under the Solar Rebate Rider, in addition to the imposition of a corresponding early termination charge.

Second, NCSEA suggests that the Solar Rebate Rider should allow for assignment to third parties of solar rebate payments. This, NCSEA contends, would put solar PV system installers "in a better position to 'float' the capital investment during the period of time between when a solar energy facility is installed and when the rebate payment is issued by Duke." NCSEA states that Duke appears to be capable of allowing such third-party assignment of rebate payments, given that Duke's South Carolina solar rebate program allows for the same. NCSEA further argues that Duke's proposal to remit payment of the solar rebate directly to the customer, even when the solar PV system is leased, is problematic because the lessee in such a scenario would receive the solar rebate payment, despite the lessor owning the system and having made the upfront capital expenditure. Instead, NCSEA suggests that Duke should remit the rebate payment directly to the owner of the system for which the solar rebate is issued.

Finally, NCSEA suggests that Duke's proposed Solar Rebate Rider application forms should provide better clarity regarding the methods by which applications can be submitted, including whether applications will be accepted electronically and if any supporting documentation is needed. NCSEA further suggests that Duke should provide customers "with a realistic expectation of how quickly Duke will issue rebate payments" and "clarify whether businesses that receive electric service at multiple locations are eligible for multiple rebates if they install solar energy facilities at more than one location." NCSEA proposes that Duke should make the rebate application process available online, preferably through its PowerClerk program that is used for interconnecting small solar energy facilities. In addition, NCSEA requests that information "about the quantity of rebates claimed and remaining on a close to real time basis" should be provided by Duke on its website on at least a monthly basis, as is the case with Duke's solar rebate program in South Carolina. Finally, NCSEA asks the Commission to "direct Duke to include in its annual report filing an examination of whether rebate values continue to be appropriate for market conditions in future years."

SACE

In its initial comments, SACE first takes issue with Duke's proposed eligibility requirement that a solar PV system must have been installed no more than 90 days prior to submission of an application for service under the Solar Rebate Rider (90-Day Rule). SACE more specifically objects to this eligibility requirement as it applies to those qualifying customers who have installed an otherwise eligible solar PV system, but who are required to reapply in a subsequent calendar year due to the annual participation limit already having been reached in the year in which the application was first submitted. For such applicants, suggests SACE, Duke should use the dates of the original application submission and project completion to determine compliance with the 90-Day Rule. Second, SACE contends that Duke should use the date of this Order as the installation date for any customers who installed a solar PV system after January 1, 2018, but prior to issuance of this Order.

SACE next expresses concern regarding House Bill 589's directive to Duke, pursuant to G.S. 62-126.4, that it shall file revised net metering rates for electric customers. SACE contends that a revision to existing net metering rates could affect the reasonableness and value of the incentives provided by Duke through the Solar Rebate Rider. Therefore, SACE suggests that any such future changes to net metering rates may warrant the Commission's re-evaluation of the Solar Rebate Rider.

Similar to NCSEA, SACE suggests that Duke should provide information on its website regarding progress made toward annual participation caps before such caps already have been reached. Specifically, SACE recommends that the Commission should require, as it does for progress made toward the capacity limits of electric generator lessors, incremental notice of 25%, 50%, 75%, and 100% of annual participation limits reached under the Solar Rebate Rider.[1] Alternatively, as NCSEA also suggests, SACE points out that Duke provides monthly status updates regarding the progress made toward participation caps as part of its administration of the South Carolina solar rebate program.

Also similar to NCSEA, SACE expresses concern regarding the inability for customers who lease a solar PV system to assign the solar rebate payment to the lessor. SACE contends that such a practice would "add unnecessary complexity" for customers and lessors, and is inconsistent with the directive of G.S. 62-126.2 to "encourage the leasing of solar energy facilities for retail customers." Like NCSEA, SACE references Duke's South Carolina solar rebate program, which allows for the assignability to third parties of solar rebate payments. SACE requests that the same be expressly allowed in Duke's proposed Solar Rebate Rider.

SACE further expresses concern that the Solar Rebate Rider terms and conditions grant Duke "significant discretion in accepting and/or approving applications for solar rebates without providing adequate parameters defining that discretion." SACE provides the following as examples: (1) "Participation under the program is available on a 'first-come-first-served' basis for systems installed on or after January 1, 2018, subject to the Company's discretion"; (2) Duke "in its sole and absolute discretion, may accept or reject any rebate application for good cause as determined by the Company"; (3) Duke's proposed imposition of an early termination charge, "unless early termination results from good cause as determined by the Company"; and (4) Duke's reservation of its right to terminate service under the Solar Rebate Rider if a customer "operates the generating system in a manner which is detrimental to the Company and/or its customers." For the purpose of ensuring fair access to and transparency surrounding participation in the Solar Rebate Rider, SACE requests that Duke more clearly delineate the narrow circumstances under which a customer's application may be rejected or service under the Solar Rebate Rider terminated. SACE further requests that Duke more specifically define "good cause," "event of early

[1] See Commission Rule R8-73(i)(2).

termination," and "manner which is detrimental to the Company and/or its customers," as those terms are used in Duke's Solar Rebate Rider leaflets.

In its reply comments, SACE agrees with NCSEA regarding both the concern that bad actors may abuse the system under Duke's proposed method for determining nameplate capacity, as well as the recommendation to instead use a fixed conversion factor for converting DC to AC to calculate more accurately the amount of the solar rebate to which the participant is entitled. SACE further agrees with NCSEA that Duke should be required to provide additional information regarding the application process and the methods by which an application may be submitted to Duke. Finally, SACE supports NCSEA's recommendation that the Commission should reserve the right in the future to re-evaluate, in the context of current market trends, the reasonableness of the incentives offered under the Solar Rebate Rider, particularly when Duke's revised net metering tariffs take effect.

Duke's Reply Comments

In its reply comments, Duke states that its discussions with the Public Staff concerning cost recovery of total Solar Rebate Rider incentives are ongoing, and will continue, to the extent necessary, in the Companies' respective cost recovery proceedings pursuant to G.S. 62-133.8(h). Duke also states that, as a result of its discussions with the Public Staff, the Company agrees to eliminate the proposed one-year renewal terms, at the Company's option, upon the conclusion of the ten-year contract period for service under the Solar Rebate Rider.[1]

In response to NCSEA's suggestion that Duke should be required to include in its proposed annual report an opinion regarding whether rebate values continue to be appropriate in the context of then-current market conditions, Duke states that it is willing to "commit to a stakeholder review process should trends in customer adoption rates warrant [the same]." It disagrees, however, with the suggestion advanced by both NCSEA and SACE that certain changing circumstances in the solar market should automatically necessitate further review or modification by the Commission of the Solar Rebate Rider.

Duke disagrees with SACE's recommendation that customers should be allowed to use the dates of initial application submission and installation, for purposes of determining compliance with the 90-Day Rule, if they are required to reapply the following year due to the annual program cap already having been reached in the year that the initial application was submitted. Duke contends that such a policy would increase both customer confusion and its own administrative burdens. Duke further contends that a customer can avoid this risk entirely by availing themselves of the option to obtain a rebate reservation prior to installing a solar PV system.

Duke agrees with SACE's recommendation that the date of this Order should be considered as the installation date for otherwise eligible solar facilities that are installed after January 1, 2018, but prior to the date of this Order.

[1] The Public Staff in its comments did not express a concern over this provision. Duke in its application did not explain the reason for its inclusion of this provision, nor did it explain in its reply comments why it agreed to strike this provision.

In response to the concerns of NCSEA and SACE, Duke agrees to post monthly updates on its website regarding progress made toward Solar Rebate Rider participation limits, and commits also to publishing on the Companies' websites a notice if and when the annual participation limit for any participant class is reached.

In response to NCSEA and SACE's arguments that rebates issued under Duke's proposed Solar Rebate Rider should be assignable to third parties, Duke contends this would not be in the best interest of customers. In addition, Duke contends that "[b]ased on high-level estimates, allowing a customer to assign the rebate payments to someone other than themselves would double the [information technology (IT)] cost, and would require IT security and legal involvement, as the Companies would be required to collect tax identification numbers and other information from third parties." Duke further contends that such a policy would lengthen the time necessary for the Companies to launch the Solar Rebate Rider.

In response to NCSEA and SACE's concerns regarding Duke's discretion in the administration of the Solar Rebate Rider, Duke states that "[a]llowing discretion in the decision-making is necessary to provide appropriate and fair service to the customer." In addition, Duke states that the Commission already has remedies through the consumer complaint process to address any instances in which someone may believe that Duke improperly asserted its discretion.

In response to NCSEA and SACE's concerns regarding the usage of the inverter's nameplate capacity to determine the rebate amount and the consequent potential for a bad actor to artificially inflate the rebate amount to which a customer is entitled, Duke states that the intervenors are asking it "to provide an anticipatory remedy in the event some participants may cheat." Duke contends that the scenario described by NCSEA is "highly uncommon," and that even if it did occur, it would not pose a risk to the Companies or the grid. Nevertheless, Duke states that it will review for future consideration any fixed conversion factor and supporting methodology provided to it by NCSEA.

With regard to the request that Duke should provide additional details about customer eligibility and the application process, Duke contends that it would not be prudent to do so until such time as the Commission first approves the Solar Rebate Rider. Duke does, however, clarify that it expects to issue solar rebate payments within 30-45 days of the later between the date of project completion and the date of application approval. Duke also clarifies that a business with multiple locations will be able to apply for multiple rebates, provided that each location has a different account number unique to it.

DISCUSSION AND CONCLUSIONS

The Commission has carefully reviewed Duke's filings, the comments of the Public Staff, NCSEA, and SACE, as well as the consumer statement of position. Based upon the foregoing and the entire record in this proceeding, the Commission agrees with the parties that Duke's proposed Solar Rebate Rider generally meets the requirements of G.S. 62-155(f). However, Duke and other parties to this proceeding have brought to the Commission's attention a number of suggestions for improvement to the Solar Rebate Rider. In addition, the Commission itself has concerns about a few terms and conditions of the Solar Rebate Rider that either were not mentioned or fully addressed by the parties. The Commission will proceed to resolve these issues, and, consistent with the conclusions reached herein, will require Duke to modify its Solar Rebate Rider, and to make a compliance filing accordingly within ten days from the date of this Order.

Future Review and Re-Evaluation of the Solar Rebate Rider

NCSEA suggests, and SACE agrees, that Duke should be required as part of its annual report to the Commission to opine whether solar market conditions have changed such that the reasonableness of the incentives offered through the Solar Rebate Rider are affected as a result. Specifically, SACE references the requirement in House Bill 589, codified as G.S. 62-126.4, for the Companies to file for approval by the Commission revised net metering rates. There is no deadline in G.S. 62-126.4 by which the Companies must propose such revisions, but NCSEA and SACE express concern that the same could affect negatively the value and reasonableness of solar rebate payment amounts. While the Companies express a willingness to commit to "a stakeholder review process should trends in customer adoption rates warrant [the same]," the Companies "find it unnecessary" to commit to further review by the Commission.

The Commission finds that Duke, in its reply comments, implicitly agrees with NCSEA and SACE that market changes conceivably could occur between the date of this Order and the conclusion of the Solar Rebate Rider program offering. The disagreement between the parties as to this issue then lies in determining the appropriate remedy in the event that such market changes rise to the level of warranting stakeholder review or Commission action. The Commission concludes that NCSEA and SACE raise a valid concern, and agrees that the reasonableness of the incentives offered through the Solar Rebate Rider could change due to future changes in the solar market. The Commission acknowledges that Duke's net metering rates, under which a Solar Rebate Rider participant must also receive service, will change at some future date uncertain as required by the passage of House Bill 589. However, the extent to which such revisions could affect the value of solar rebate payments remains to be seen. For reasons including the potential scenarios predicted herein, in addition to others that may not be foreseeable at present, the Commission concludes that there exists a compelling reason for it to continue to monitor the reasonableness of the incentives offered throughout the duration of the Solar Rebate Rider. Accordingly, the Commission directs Duke to include information about this issue in its annual report, as requested by NCSEA and SACE. The Commission will evaluate this issue during each proceeding to review the Companies' annual reports. That proceeding also will be the appropriate venue through which intervening parties can raise this or other issues for the Commission's review and decision.

Application Timeline

An applicant for service under the Solar Rebate Rider is required to apply no later than 90 days following the installation of a qualifying solar PV system (90-Day Rule). For customers who already have installed a solar PV system but are required to reapply during the next year as a result of program capacity already having been reached for the calendar year in which the application was first submitted, NCSEA and SACE object to Duke's use of the date of installation relative to the date of the second application submission for purposes of determining compliance with the 90-Day Rule. Instead, NCSEA and SACE suggest that for these customers, the dates of the initial application and project completion should be used. Duke contends that the method advanced by NCSEA and SACE could increase both customer confusion and the Companies' administrative costs. Duke further contends that customers are able to obtain a rebate reservation prior to installation, which would avoid the risk altogether of subsequent rebate ineligibility after the solar PV system already has been installed. The Commission agrees with Duke that its pre-installation reservation system is a sufficient safeguard for those customers whose circumstances are such that they need or want to reserve a rebate guarantee before purchasing or leasing a solar PV system. In order to ensure that prospective participants of the Solar Rebate Rider are informed of the reservation guarantee option, the Commission directs Duke to prominently display the process by which a customer can apply for such reservation on both the Companies' websites and Solar Rebate Rider leaflets.

At NCSEA and SACE's request, Duke agrees to use the date of this Order as the installation date for otherwise eligible solar facilities installed after January 1, 2018, but prior to the date of this Order. The Commission directs Duke to include this clarification in its compliance filing.

In response to Dr. Bansode's consumer statement of position asking the Commission to mandate a retroactive eligibility period for those solar PV systems installed between January 1, 2017, and December 31, 2017, the Commission refers to G.S. 62-155(f), which in part specifies that the incentives offered through the Solar Rebate Rider will be available for capacity installed "starting in January 1, 2018." Any changes to this beginning date as specified in House Bill 589 must come through legislation passed by the North Carolina General Assembly, not by Commission action. Accordingly, the Commission declines to adopt Dr. Bansode's recommendation.

<u>Reporting</u>

Duke proposes filing in this proceeding an annual report on April 1, 2019, and each calendar year thereafter, detailing participation rates by customer class, the number of applications rejected, the number of applications canceled at year-end, and the program costs incurred to date. Both NCSEA and SACE argue that more frequent reporting of the progress toward the annual program cap is needed, and suggest that Duke either report this progress on a monthly or an incremental basis until the cap has been fulfilled each year. In its comments, Duke agrees to publish on its website both monthly progress updates toward annual participation limits and notices when each year's annual limit is reached for any participant class. Duke also commits to file with the Commission a notice when any annual capacity limit is reached. The Commission agrees with the intervenors, and finds Duke's proposal in response sufficient to reasonably address the intervenors' concerns regarding this issue. Accordingly, the Commission directs Duke to publish on its website, in a conspicuous manner that is easy for both customers and installers to locate, the notices and monthly updates as offered in its reply comments. In addition, the Commission directs Duke to file with the Commission a notice when each year's annual limit is reached for any participant class.

As a related matter, the Commission notes that it presently is difficult for visitors to Duke's website to access information for service territories other than the one initially selected upon first visiting Duke's website. The Commission finds that ease of access to information about the different company-specific Solar Rebate Riders is important to help improve chances of maximum program participation. Accordingly, the Commission directs Duke to provide in its compliance filing the Uniform Resource Locators (URLs) at which information about the Solar Rebate Rider can be found for both DEC and DEP's respective service territories. Visitors to either of these URLs should be able to quickly ascertain details surrounding the application process, including the details contained in Duke's application, the details contained in Duke's reply comments not otherwise found in its application, and the information Duke is directed to provide by the Commission herein.

Assignment of Rebate Payment

Both NCSEA and SACE advocate for the assignability to third parties of solar rebate payments, particularly when a customer leases the solar PV system from an installer-lessor. Duke disagrees, and cites in support of its position the need for customer protection, increased IT and legal costs, and an increased time frame between Commission approval and the launch of the Solar Rebate Rider. The Commission agrees with Duke, and notes that G.S. 62-155(f) contemplates that the incentives offered through the Solar Rebate Rider will be provided "to [] customers." From a policy perspective, the Commission finds a compelling reason to ensure that whichever party who would be liable to pay an early termination charge in the event of cancellation of service under the Solar Rebate Rider before the conclusion of the 10-year contract term, also should be the same party who receives the solar rebate payment. Because the terms and conditions as proposed would hold the customer, and not the third-party installer or lessor responsible for paying an early termination charge, the Commission finds that it would be inappropriate at this time to require Duke to allow third-party assignability of solar rebate payments. However, the Commission reserves the right to reevaluate this issue through its annual review of the Solar Rebate Rider, and directs Duke to include in its first annual report information regarding whether the inability to assign solar rebate payments to third parties caused any issues for either customers or installers during the first year of the Solar Rebate Rider.

The Commission also notes that third-party installers and lessors are able to contract and negotiate directly with customers to ensure that installer-lessors receive payment for their services and equipment. The Commission further notes that such third parties may avail themselves of legal remedies for non-payment through the general courts of justice, should the need arise.

Program Discretion

Both NCSEA and SACE contend that a number of Duke's terms and conditions are ambiguous and leave the Companies with excessive discretion in the administration of the Solar Rebate Rider. Duke, on the other hand, contends that a certain level of discretion is necessary to ensure that the Solar Rebate Rider is administered properly, and notes that the Commission already has in place procedures through which a customer may complain about Duke if he or she believes that Duke has improperly applied such discretion.

The Commission finds legitimate the concerns expressed by NCSEA and SACE as to the ambiguity of certain terms and the amount of discretion Duke proposes to retain. Although the Commission acknowledges that a customer may file a complaint if he or she believes that Duke improperly applied its discretion, the Commission concludes that it is important to increase transparency and clarity of program rules and restrictions on the front end in order to reduce the possibility that a customer may need to file a complaint in the future. Accordingly, the Commission directs Duke to remove the language preserving its discretion when there are objective, clear criteria which obviate the need for such discretion. For example, the Commission finds no compelling reason for Duke to retain discretion to reject an application for participation under the Solar Rebate Rider when the customer and solar PV system satisfy the objective application and eligibility requirements, and no otherwise disqualifying event occurs, such as an intentional misstatement or misrepresentation to Duke during the application process. Accordingly, the Commission directs Duke in its compliance filing to modify its leaflets such that the Companies retain discretion only in instances when there do not exist objective, defined criteria, such as determining whether a customer qualifies, a solar PV system is eligible, or application requirements are satisfied. In addition, the Commission directs Duke to clarify that only a material and intentional misstatement or misrepresentation will result in early termination or request for repayment of the solar rebate.

For provisions in which such clear and objective criteria may not be as discrete, such as circumstances that may lead to termination of service, the Commission directs Duke in its compliance filing to clarify ambiguous terms. For example, the Commission notes that the Solar Rebate Rider leaflets do not define what constitutes "good cause," thus exempting a customer from having to pay an early termination charge if his or her electric service is disconnected prior to the conclusion of the Solar Rebate Rider contract term. Therefore, the Commission orders Duke to modify its Solar Rebate Rider terms and conditions, as requested by the intervenors, to clarify and better define such ambiguous terms.

In addition, the Commission directs Duke to add a term to its Solar Rebate Rider leaflets that informs the customer about the complaint process available before the Commission, to include the appropriate contact information for the Public Staff. Finally, to further alleviate this concern of the intervenors, the Commission directs the Companies to include in their respective annual report filings the reasons for any rejected applications and early terminations, in addition to the number of such rejections and early terminations. For early terminations, the Commission directs Duke also to include whether or not the customer was required to pay an early termination charge and, if so, the amount of such charge. The Commission, although not expressly disallowing the imposition of an early termination charge in this Order, hereby informs the parties that it has concerns that this charge could constitute a disincentive to participate in the Solar Rebate Rider. Accordingly, the Commission will monitor this closely during the annual review process, particularly if certain participant classes are undersubscribed in any year.

Calculation of Generating Capacity

NCSEA recommends, and SACE agrees, that the Companies should use a fixed conversion factor to convert the direct current generating capacity to alternating current for purposes of calculating the rebate amount for which the customer is eligible. Although the Companies disagree that this issue poses a large risk for abuse by installers or that it would be detrimental to the Companies or the grid in the unlikely event that it did occur, the Companies state that they are willing to review for future consideration a fixed conversion factor and supporting methodology provided to it by NCSEA. The Commission, therefore, directs Duke to include a statement in its first annual report to be filed in this proceeding on or before April 1, 2019, indicating whether NCSEA did in fact provide to Duke a conversion factor for direct current to alternating current for purposes of calculating the accurate amount of solar rebate to which the applicant is entitled. Duke also is directed in its first annual report to inform the Commission whether it proposes to use any such conversion factor provided to it and, if so, to provide any proposed revisions to the Solar Rebate Rider accordingly. Finally, the Commission expects Duke to identify and correct any potential instances of fraud in the rebate application process, and directs Duke to include a report of any such occurrences in its annual report.

Allocation of Installed Capacity Available and Differing Rebate Amounts

Although not an issue raised by the parties, the Commission notes that the Solar Rebate Rider seeks to limit to 5,000 kW both residential and nonresidential installations eligible for the rebate during any one calendar year. While G.S. 62-155(f) imposes a 5,000 kW maximum limit on nonresidential installations, there is no such limitation on residential installations. Similarly, while there are set-asides reserved in G.S. 62-155(f) for non-profit customers, there is no such set-aside for nonresidential customers in general. Duke's proposal to treat nonresidential participation as a set-aside and to impose a participation limit on residential participation, therefore, appears to be contrary to legislative intent. As a practical matter, the proposed residential cap also seems to be inconsistent with the Companies' own proposal to make the Solar Rebate Rider available on a "first-come-first-served" basis for otherwise eligible customers and solar PV systems, subject to the set-asides reserved by statute. Therefore, the Commission directs the Companies in their compliance filing to remove the proposed 5,000 kW cap on residential installations. Instead, applications should be processed in the order in which they are received by the Companies, subject only to the statutorily-mandated limitations and set-asides.

On a related note, the Commission notes that Duke proposes to include in its annual report the rates of participation by customer class. To be clear, the Commission expects that Duke will provide information regarding the amount of reserved and approved installed capacity for each participant class, including those for which a set-aside capacity is reserved. The Commission also expects Duke to include, in its first annual report filing on or before April 1, 2019, an explanation for why it elected to offer differing solar rebate payments amounts to each participant class.

Contract Term

Although not raised by the parties, the Commission has concerns that the 10-year contract term under the Solar Rebate Rider, particularly when combined with the penalty for early termination, could be a disincentive to participation. The Commission contrasts, for example, the proposal under the Solar Rebate Rider to the one-year contract term of DEC's current net metering rider, which provides for an early termination charge limited only to actual costs to the Company of such early cancellation. While the Commission acknowledges Duke's offer, after discussions with the Public Staff, to strike the optional one-year renewal periods following the conclusion of the initial 10-year contract term, the Commission puts the parties on notice that it may reevaluate this issue in the future. The Commission will monitor closely whether additional changes to the contract term are needed, particularly if any participation class is undersubscribed in any year. In the meantime, the Commission expects Duke to ensure that its imposition of any early termination charge under the Solar Rebate Rider is consistent with its North Carolina Service Regulations.

On a related note, the Commission directs Duke in its compliance filing to strike the one-year optional renewal provisions from the Solar Rebate Rider terms.

Conclusion

The Commission notes that the Solar Rebate Rider leaflets proposed by the Companies contain a number of typographical and grammatical errors, including the incorrect titling of DEC's proposed Solar Rebate Rider SRR application. The Commission directs the Companies to proofread the leaflets and corresponding application forms, and to correct these errors in their compliance filing.

Based upon the foregoing and the entire record in this proceeding, the Commission concludes that Duke's application for approval of its solar rebate program, made available through DEC's Solar Rebate Rider SRR and DEP's Solar Rebate Rider SRP, should be modified consistent with this Order. Once modified, the Commission finds that the Solar Rebate Rider is reasonably designed to achieve the mandates and objectives of G.S. 62-155(f). Therefore, the Commission finds that Duke's application should be approved, as modified, and orders Duke to submit a compliance filing within ten (10) days of the date of this Order.

IT IS, THEREFORE, ORDERED as follows:

1. That Duke's application for approval of its solar rebate program, made available through DEC's Solar Rebate Rider SRR and DEP's Solar Rebate Program Rider SRP is granted, subject to the modifications required by the Commission in this Order;

2. That Duke, within ten days from the date of this Order, shall make a compliance filing to include redlined revisions to its leaflets and corresponding application forms in conformance with this Order;

3. That Duke shall submit an annual report on or before April 1, 2019, and every calendar year thereafter, which shall include: (1) all information offered by the Companies to be included in the report; (2) all additional information directed by the Commission in this Order; and (3) any proposed changes to the Solar Rebate Rider; and

4. That Duke shall file with the Commission and publish conspicuously on its website a notice whenever an annual participation limit under the Solar Rebate Rider is reached. Duke also shall publish conspicuously on its website monthly updates of progress made toward such annual participation limits.

ISSUED BY ORDER OF THE COMMISSION.
This the 3rd day of April, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-2, SUB 1169
DOCKET NO. E-7, SUB 1168

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Petition of Duke Energy Progress, LLC,	)	ORDER ESTABLISHING
and Duke Energy Carolinas, LLC,	)	PROCEEDING TO REVIEW
Requesting Approval of Community Solar	)	PROPOSED COMMUNITY
Program Plan Pursuant to G.S. 62-126.8	)	SOLAR PROGRAM PLAN

BY THE CHAIRMAN: On December 19, 2017, in Docket No. E-100, Sub 155, the Commission issued an Order adopting Commission Rule R8-72. Commission Rule R8-72 provides for the implementation of G.S. 62-126.8, including the requirement that the Commission oversee and approve each community solar energy facility program plan.

On January 23, 2018, in Docket Nos. E-2, Sub 1169, and E-7, Sub 1168, Duke Energy Progress, LLC, and Duke Energy Carolinas, LLC (collectively Duke), jointly filed a proposed community solar program plan, consistent with the requirements of Section 6.(d) of House Bill 589 (S.L. 2017-192).

The Chairman, therefore, finds good cause to initiate this proceeding to review Duke's proposed community solar program plan. The Chairman invites interested persons to petition to intervene and to provide comments or suggestions to assist the Commission in its review of Duke's proposed community solar program plan.

IT IS, THEREFORE, ORDERED as follows:

1. That the participation of the Public Staff is recognized pursuant to G.S. 62-15(d) and Commission Rule R1-19(e);

2. That other interested persons wishing to become formal parties and participate in this proceeding may file petitions to intervene pursuant to Commission Rules R1-5 and R1-19 on or before March 23, 2018;

3. That the Public Staff and intervenors may file initial comments or suggestions, as provided herein, on or before March 23, 2018;

4. That all parties may file reply comments or suggestions, as provided herein, on or before April 13, 2018;

5. That, upon receipt of the parties' initial and reply comments, the Commission will proceed appropriately in deciding whether to approve Duke's proposed community solar program plan; and

6. That the Chief Clerk shall transmit a copy of this Order to all parties of record in Docket No. E-100, Sub 155.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of January, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Linnetta Threatt, Deputy Clerk

DOCKET NO. E-2, SUB 1172
DOCKET NO. E-7, SUB 1171

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Duke Energy Carolinas, LLC and Duke	)	ORDER ACCEPTING FILING OF
Energy Progress, LLC Advance Notice of	)	AFFILIATE AGREEMENT AND
Affiliate Agreement between Duke Energy	)	GRANTING LIMITED WAIVER
Carolinas, LLC and Duke Energy Progress, LLC	)	OF REGULATORY CONDITION

BY THE COMMISSION: On March 20, 2018, Duke Energy Carolinas, LLC (DEC) and Duke Energy Progress, LLC (DEP, collectively Duke) filed a Joint Advance Notice and Request for Acceptance of Affiliate Agreement under N.C. Gen. Stat. § 62-153 and for Limited Waiver of Regulatory Condition No. 3.1(b) (Advance Notice) in the above- captioned dockets. The Advance Notice was filed pursuant to G.S. 62-153 and Regulatory Condition Nos. 3.1(c) and 13.2. Regulatory Condition Nos. 3.1(c) and 13.2 are among those approved in the Commission's Order Approving Merger Subject to Regulatory Conditions and Code of Conduct in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, issued on September 29, 2016. In the Advance Notice, Duke describes an Agreement for Regional Equipment Sharing for Transmission Outage Restoration (RESTORE Agreement), and requests that the Commission (1) accept the RESTORE Agreement for information and filing under G.S. 62-153(a), (2) approve a limited waiver of Regulatory Condition No. 3.1(b), and (3) accept Duke's notice of intent to sign onto the RESTORE Agreement under Regulatory Condition Nos. 3.1(c) and 13.2.

Summary of the RESTORE Agreement

Duke explains that on December 13, 2017, the participants in the RESTORE Agreement (RESTORE Participants) filed a Joint Application for Prior Authorization for the Disposition and Acquisition of Jurisdictional Transmission Facilities of the Jurisdictional RESTORE Participants (Joint Application) at the Federal Energy Regulatory Commission (FERC) for pre-authorization under Sections 203(a)(1)(A) and 203(a)(1)(B) of the Federal Power Act for transactions that may occur under the RESTORE Agreement. The RESTORE Participants include affiliates of DEC and DEP, and the Joint Application indicates that DEC and DEP intend to execute the RESTORE Agreement as soon as applicable state utility commission requirements are satisfied. The Joint

Application was attached to Duke's Advance Notice as Attachment 1, and the RESTORE Agreement was attached as Exhibit A to the Joint Application.

Duke states that the RESTORE Agreement establishes a framework for the efficient and timely transfers of transmission-related equipment among the RESTORE Participants following a catastrophic emergency or natural disaster. According to Duke, the RESTORE Participants have agreed to form a group to share certain classes of spare transformers, along with less costly components such as circuit breakers (collectively, Qualifying Equipment). The sharing will occur under agreed-upon financial provisions during a Triggering Event, which is defined in Section I of the RESTORE AGREEMENT as a "catastrophic event creating an urgent grid need in which, for an extended period of time, a Participant loses its ability to serve significant load, is at imminent risk for losing significant load, or cannot maintain grid stability." Duke further states that the potential disruption to infrastructure and normal market conditions caused by a Triggering Event could be mitigated or avoided through the cooperative RESTORE Agreement, and that DEC and DEP desire to execute and participate in the RESTORE Agreement in order to extend its benefits to their customers. In addition, Duke explains that other affiliates of DEC and DEP are already RESTORE Participants, and, therefore, the RESTORE Agreement makes a future transfer between DEC or DEP and one or more of their other affiliates during a Triggering Event a possibility.

Duke explains that the purchase price of Qualifying Equipment is the replacement cost,, including transportation and other acquisition costs, plus any reasonable costs and expenses of the seller, including shipping costs if the seller decides to offer transportation services, and tax liability attributable to the sale. Duke states that its participation in the RESTORE Agreement can be done with existing assets and will not require the purchase of additional transformer stock beyond that which is otherwise maintained on hand for service to DEC's and DEP's native load customers. Further, if a spare transformer or component is sold by DEC or DEP after a Triggering Event, they anticipate that they will be able to obtain a replacement transformer or component from the market within a reasonable time period. In addition, Duke states that its participation in the RESTORE Agreement will not affect existing arrangements or regulatory commitments for transferring assets among DEC's and DEP's current affiliated entities. Finally, Duke states that DEC and DEP will not pay fees or compensation for services rendered by or to be rendered to any of the RESTORE Participants, and that if DEC, DEP or any of their operating company affiliates who are Participants make payments to one another the payments will be for the transfer of the Qualifying Equipment.

Request for Limited Waiver of Regulatory Condition

With regard to Duke's request for a limited waiver of Regulatory Condition (RC) No. 3.1(b), Duke notes that this RC requires that all affiliate contracts to which DEC or DEP are a party shall contain specified provisions, including the provision required by RC No. 3.1(b)(i):

> DEC's, DEP's, or Piedmont's participation in the agreement is voluntary, DEC, DEP, or Piedmont is not obligated to take or provide services or make any purchases or sales pursuant the agreement, and DEC, DEP, or Piedmont may elect to discontinue its participation in the agreement at its election after giving any required notice.

Duke states that if DEC or DEP agree to be RESTORE Participants but then indicate that they are not bound by the process of equipment sharing, the other RESTORE Participants might view DEC's and DEP's participation as an illusory commitment, and, therefore, might object to DEC's and DEP's participation. Further, Duke notes instances in which the Commission has previously allowed Duke to modify the language required by RC No. 3.1(b). As a result, Duke requests to modify RC No. 3(b)(i) by adding the underlined addition below:

> DEC's or DEP's participation in the agreement is voluntary, DEC or DEP is not obligated to take or provide services or make any purchases or sales pursuant to the agreement <u>except as expressly provided</u>, and DEC or DEP may elect to discontinue its participation in the agreement at its election after giving any required notice.

<u>Public Staff's Response</u>

On April 3, 2018, the Public Staff filed a Response to Duke's Advance Notice. The Public Staff states that Duke provided a draft of the RESTORE Agreement to the Public Staff for its review prior to filing the Advance Notice. With regard to RC Nos. 3.1(c) and 13.2, the Public Staff notes that these RCs include procedures for Duke to provide advance notice regarding affiliate contracts when such contracts are required or intended to be filed at FERC. The Public Staff states that in this instance the RESTORE Agreement has already been filed at FERC and the Joint Application remains pending, but that Duke intends to join the RESTORE Agreement at the end of the advance notice period, as defined by RC No. 13.2. Moreover, the Public Staff states that it does not believe that the RESTORE Agreement, if accepted by the FERC as filed, will adversely affect the Commission's jurisdiction. In addition, the Public Staff states that it has no objection to the Commission granting a limited waiver of RC No. 3.1(b), and to DEC and DEP signing the RESTORE Agreement. Further, the Public Staff recommends that the Commission accept the RESTORE Agreement for filing under G.S. 62-153(a) without prejudice to the right of any interested party to take issue with any provision of the RESTORE Agreement in a future proceeding.

Discussion and Conclusion

G.S. 62-153(a) requires public utilities to file with the Commission copies of certain contracts with affiliated companies. Affiliate agreements filed under G.S. 62-153(a) are filed for informational purposes and not for approval, although the contract remains subject to disapproval. In addition, G.S. 62-153(b) requires public utilities to file for Commission approval proposed affiliate agreements where the public utility will pay fees or compensation for services rendered or to be rendered. The scope of the Commission's review under G.S. 62-153 is to determine whether the contract is (1) just and reasonable, and (2) not made for the purpose of concealing, transferring or dissipating earnings of the public utility.

Based on the foregoing and the record, the Commission finds and concludes that DEC's and DEP's participation in the RESTORE Agreement is reasonably likely to benefit their customers if a Triggering Event impacts their service territories. Further, the Commission finds and concludes that DEC's and DEP's execution of and participation in the RESTORE Agreement is just, reasonable, and in the public interest, subject to the condition that any party may take issue with a provision of the RESTORE Agreement or payment made thereunder in a future proceeding. Finally, the Commission concludes that there is good cause to grant Duke a limited waiver of the requirements of Regulatory Condition No. 3.1(b).

IT IS, THEREFORE, ORDERED as follows:

1. That the RESTORE Agreement shall be, and is hereby, accepted for filing under G.S. 62-153(a).

2. That the Commission's acceptance of the RESTORE Agreement for filing is without prejudice to the right of any party to take issue with any provision of or payment under the RESTORE Agreement in an appropriate proceeding.

3. That Duke Energy Carolinas, LLC, and Duke Energy Progress, LLC shall be, and are hereby, granted a limited waiver of the requirements of Regulatory Condition No. 3.1(b)(i) with regard to the RESTORE Agreement, and may include their proposed revised Regulatory Condition No. 3.1(b)(i) in the RESTORE Agreement.

4. That the request of Duke Energy Carolinas, LLC, and Duke Energy Progress, LLC, to sign the RESTORE Agreement shall be, and is hereby, approved.

ISSUED BY ORDER OF THE COMMISSION.
This the 18th day of April, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-22, SUB 532

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina, for Adjustment of Rates and Charges Applicable to Electric Utility Service in North Carolina	)))))	ORDER APPROVING LED RATE SCHEDULE

BY THE COMMISSION: On December 22, 2016, the Commission issued an Order Approving Rate Increase and Cost Deferrals and Revising PJM Regulatory Conditions (Rate Order) in the above-captioned docket. The Rate Order, among other things, required Dominion Energy North Carolina (DENC) to file a proposed new light emitting diode (LED) schedule for North Carolina jurisdictional customers.

On February 1, 2018, DENC filed its proposed LED offering. DENC's LED offering is included in revised Schedule 26, Outdoor Lighting Service. In summary, DENC stated that the rates contained in revised Schedule 26 were developed based on DENC's goals of simplifying rates for outdoor lighting, serving its customers' interests in cost and energy savings, and incentivizing the conversion of outdoor lighting to LED technology. DENC explained that it proposed the LED offering as part of its existing Schedule 26, rather than a stand-alone schedule, as the most efficient way to offer outdoor lighting customers the opportunity to install new LED technology or convert existing older, less efficient lighting options to LED. According to DENC, revised Schedule 26 incorporated monthly rates for LED lighting fixtures, corresponding to 10 tiers of lumens ranging from 2,000 to 27,000. DENC further noted that the monthly rates contained in revised Schedule 26 were based on recently updated labor cost data and assumed a lower LED fixture cost compared to current market costs for LED fixtures, thereby reflecting the most current and cost-effective projections associated with LED technology. In addition, DENC stated that the proposed LED tariff included a conversion charge that would be applicable to existing mercury vapor (MV) and high pressure sodium (HPS) fixtures that are replaced with LED fixtures at the customer's request. The proposed conversion charge would be $117.40 for luminaries associated with basic fixtures, and $535.79 for luminaries associated with premium fixtures.

On February 15, 2018, the Commission issued an Order Requesting Comments and Reply Comments on DENC's proposed LED offering.

On March 5, 2018, the Public Staff filed comments. In summary, the Public Staff stated that it had reviewed DENC's proposed changes to Schedule 26, including the proposed structure and rates for LED, and concluded that the proposed rates were appropriately calculated using DENC's cost inputs from the Rate Order proceeding, as well as updated labor cost data. The Public Staff noted, however, that DENC did not include an update of federal taxes to reflect the tax changes that became effective on January 1, 2018, pursuant to the Federal Tax Cuts and Jobs Act of 2017. The Public Staff stated that in response to a Public Staff data request, DENC provided the Public Staff with recalculated rates on February 23, 2018, that incorporated the new federal tax rate.

With regard to the conversion charges proposed by DENC, the Public Staff stated that DENC's calculations were based on recovering its entire net book value of lighting assets over a 15-year conversion period, and that in discussions with the Public Staff DENC stated that it chose this approach because it did not have information regarding the amount of time certain fixtures had been in service. The Public Staff noted that DENC has effectively consolidated and socialized its entire lighting inventory, making it difficult to determine the length of time that a fixture has been in service. The Public Staff stated that this approach has the effect of depreciating a portion of the DENC's lighting inventory a second time, and could create a substantial barrier to the transition to LED lighting. However, even though DENC does not know how long a particular fixture has been in service, the Public Staff opined that DENC should know how long the customer has been paying for lighting service, and that with this knowledge DENC should be able to determine a reasonable proxy for the length of time that a fixture has been in service. The Public Staff obtained from DENC data on DENC's inventory of MV and HPS lighting fixtures, and reviewed the Form E-1, Item 42 revenue analysis filed with DENC's November 16, 2009 rate case in Docket No. E-22, Sub 459. The Public Staff noted that the production of MV ballasts has been prohibited by the Energy Policy Act of 2005 since 2008, thereby effectively rendering MV fixtures obsolete. Based on these facts, the Public Staff concluded that any fixture that has been in service for at least 20 years should be exempt from a conversion charge. It stated that this threshold for distinguishing the application of a conversion charge is based on similar fees and structures used by Duke Energy Progress, LLC (DEP) and Duke Energy Carolinas, LLC (DEC).

The Public Staff also noted that DENC's conversion rate calculations used a 27 year fixture depreciation rate. The Public Staff explained that assuming that 50% of DENC's net book value of lighting inventory (as represented in Appendix D to DENC's application) is fully depreciated, and using DENC's algorithm, the Public Staff recalculated the conversion fees to be $58.70 and $267.89 for basic and premium fixtures, respectively. The Public Staff stated that these amounts are more in line with the conversion fees charged by DEP and DEC.

According to the Public Staff, a conversion charge is necessary to avoid the potential for stranded lighting costs that would be recovered from other lighting customers, and to avoid an onslaught of requests by customers to convert to LED lighting. However, the Public Staff also states that Commission Rule R8-47 encourages utilities to provide customers with more efficient lighting technologies such as LED, and that a conversion charge approximately one-half of that proposed by DENC strikes the appropriate balance for achieving these objectives.

The Public Staff stated that it also reviewed the proposed tariff language included in Appendix A of the Company's application and noted that under Section I DENC offered to replace failed MV fixtures with HPS fixtures at no additional charge to the customer. The Public Staff recommended that the tariff language be changed to also give the customer the option of converting to LED when an MV or HPS fixture fails. The Public Staff acknowledged that this could present aesthetic issues for customers, particularly if the conversion results in a mix of LED, MV, or HPS in a small geographical area. However, the Public Staff opined that the customer should have the opportunity to convert to LED.

In addition, under Section III regarding conversion charges, the Public Staff recommended that language be added to affirmatively state that conversion charges are not applicable to any conversion of MV or HPS to LED upon failure of the MV or HPS fixture.

The Public Staff recommended that the Commission approve DENC's revised Schedule 26 after incorporating the Public Staff's above recommended changes.

On April 20, 2018, DENC filed reply comments. In summary, DENC stated that it had participated in several phone calls and email discussions with the Public Staff, and had provided additional information to the Public Staff to further explain its LED lighting proposal. DENC made the following comments in response to the Public Staff's recommended changes.

New Federal Tax Rate

DENC stated that it agrees that the LED rates provided in Schedule 26 should be updated to reflect the new federal tax rate that took effect on January 1, 2018. As the Public Staff noted in its comments, DENC provided recalculated rates through discovery in February 2018 that incorporated into the Schedule 26 LED rates the new federal tax rate. DENC further stated that this adjustment advantages the proposed LED rates over the rates for other types of fixtures, but that it does not object to this temporary result, mainly because in Docket No. M-100, Sub 148 DENC committed to filing a single-issue adjustment to its base rate cost of service on or before June 30, 2019, if the Company has not filed a general rate case as of that date. DENC stated that the recalculated rates are included in its proposed revised Schedule 26, which was appended to its reply comments as Attachment A, with its workpapers supporting the calculations appended as Attachment B.

Modification to Conversion Fee Structure

DENC stated that it agrees that LED conversion charges are appropriate for the reasons articulated by the Public Staff, and to effectuate the transition encouraged by Rule R8-47. It noted that the Public Staff described DENC's proposal as applying a conversion charge to all customer-requested replacements, regardless of the age of the fixture or the length of time the customer has received service under Schedule 26, and that based on the LED lighting structure and fees of DEP and DEC, the Public Staff contends that any fixture that has been in service for at least 20 years should be exempt from a conversion charge. DENC stated that it does not track MV and HPS fixtures separately, but, instead, employs mass item accounting. As a result, it calculated a single conversion fee, regardless of fixture type, for purposes of its initially proposed conversion fees. However, in response to the Public Staff's position on this issue DENC amended its calculation of the conversion charge to reflect the fact that MV fixtures are becoming obsolete, and based on this new calculation it proposed a conversion charge of $0.00 for MV fixtures (a total of 10,308 in North Carolina as of 12/31/2016), $131.00 for basic HPS fixtures (a total of 16,789 in North Carolina as of 12/31/2016), and $364.00 for premium fixtures (a total of 860 in North Carolina as of 12/31/2016). These changes are reflected in Attachment A to DENC's reply comments. DENC noted that the conversion period for its proposed charges is 16 years, as compared to DEC's most recent proposed conversion period of 44 years, and that this significant difference in conversion timeframe accounts for DENC's higher conversion charges as compared to DEC's charges.

No Conversion Fee for Older Technology Fixtures that Fail

DENC agrees with the Public Staff that Section I of Schedule 26 should be revised to contemplate the conversion to LED fixtures upon the failure of a MV or HPS fixture, and it reflected that change in Attachment A to its reply comments. However, DENC stated that the proposed revisions do not provide the customer a choice of whether or not to replace a failing older technology fixture with LED. According to DENC, allowing customer discretion in this regard would present difficulties for DENC in tracking which localities chose to convert and which localities chose to maintain older technology. Therefore, DENC proposed to revise Section I to provide that, after a six-month transition period, upon failure of any MV or HPS fixture the fixture will be replaced with an LED fixture. DENC submits that this approach is consistent with its goal of furthering the overall conversion to LED fixtures across its system. Further, DENC stated that because it also agrees with the Public Staff that Section III should be revised to clarify that conversion charges will not apply to conversions to LED fixtures that are precipitated by failures of MV or HPS fixtures, this approach will not result in any additional charges to these customers.

Correction to Rate of Return Calculation

DENC stated that the rate of return reflected in the LED rates proposed in its initial filing was calculated using an after-tax return on equity. Subsequent to making the filing, DENC discovered that the carrying charge used in its computation of the rates should have been calculated using a pre-tax rate of return on equity. DENC stated that it corrected this issue, resulting in an increased carrying charge and, thus, increased LED lighting rates, as reflected in Attachment A to its reply comments. DENC noted that the revised carrying charge was calculated using the new federal tax rate.

DENC further stated that in light of the overall price increase resulting from the increased carrying charge, it re-evaluated its allocation of non-fixture plant costs to the various lighting tiers. Based on that reevaluation, it developed a more detailed allocation methodology to account for large wattage fixtures having, on average, higher non-fixture plant costs associated with them. DENC stated that its initial formulation of the LED rates set the cost of non-fixture plant as equal for each of the 10 tiers of basic (and also equal, but higher than basic, for each of the 10 tiers of premium). This method socialized the cost of all non-fixture plant equally among the tiers. Under this methodology, the proposed LED rates had savings versus comparable rates at all levels, though the most significant savings were at the highest tiers. According to DENC, due to the price increase from the carrying charge correction, the corrected LED rates increased at the lower tiers, relative to existing rates, but continued to show savings at the higher tiers. DENC stated that its revised method for allocating non-fixture plant more fairly and evenly distributes rates among the tiers by allocating an average non-fixture plant cost to each tier of basic and premium lighting, based on average pole cost for each wattage of HPS light. DENC further stated that this methodology will help offset some of the rate increase at the lower LED tiers, maintaining some savings for those tiers when compared to existing MV and HPS rates, and is, therefore, consistent with the goal of offering efficient and economical lighting options to customers, as encouraged by Commission Rule R8-47.

In conclusion, DENC requested that the Commission accept and approve its revised Schedule 26 LED lighting offering.

No other party filed comments or reply comments.

Based on the foregoing and the record, the Commission finds and concludes that the LED rates proposed by DENC in its revised Schedule 26, as attached to its reply comments, are just and reasonable. The Commission further concludes that the revised LED rates are consistent with the goal of developing new and more efficient lighting systems. As a result, the Commission finds and concludes that DENC's revised Schedule 26 serves the public interest and should be approved.

IT IS, THEREFORE, ORDERED that DENC's revised Schedule 26 shall be, and is hereby, approved for service rendered on and after June 1, 2018.

ISSUED BY ORDER OF THE COMMISSION.
This the 23rd day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION

Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-7, SUB 1026

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Carolinas,	)	
LLC, for Adjustment of Rates and Charges	)	ORDER APPROVING RIDERS
Applicable to Electric Utility Service in	)	
North Carolina	)	

BY THE COMMISSION: On April 27, 2018, Duke Energy Carolinas, LLC (DEC or the Company), filed a proposed Bulk Power Marketing (BPM) True-up Rider (True-up Rider) and a BPM Prospective Rider (Prospective Rider), to be effective for the period July 1, 2018, through June 30, 2019. The purpose of the BPM Prospective Rider and the BPM True-up Rider is to flow back to DEC's North Carolina retail customers their jurisdictionally allocated share of 90% of the Company's BPM Net Revenues and 100% of its Non-Firm Point-to-Point Transmission (NFPTP) Revenues, on a prospective basis and subsequently a trued-up basis. As reflected in the April 27 filing, the proposed True-up Rider consists of a rate increment of 0.0068 cents per kWh,[1] based on a comparison of DEC's actual BPM Net Revenues and NFPTP Revenues earned in calendar year 2017 with the amounts credited to North Carolina retail customers during 2017 for those categories of Net Revenues and NFPTP Revenues. In the filing, DEC also proposed a Prospective Rider consisting of a rate decrement of (0.0078) cents per kWh[2] to replace the current Prospective Rider of (0.0079) cents per kWh[3] included in base rates.

On June 13, 2018, DEC filed a revised BPM true-up rider schedules to remove certain non-BPM employee expenses that are ineligible for recovery through the BPM True-up Rider. The revised increment True-up Rider of 0.0067 cents per kWh,[4] if approved, will replace the existing increment True-up Rider of 0.0237 cents per kWh[5] approved by the Commission in its Order issued June 20, 2017, in Docket No. E-7, Sub 1026. The sum of the proposed Prospective Rider and True-up Rider, including the regulatory fee, is a rate decrement of 0.0011 cents per kWh, which is a decrease of 0.0169 cents per kWh from the existing combined rider increment of 0.0158 cents per kWh, including the regulatory fee, approved in 2017.

A BPM/NFPTP Rider was first proposed in the Agreement and Stipulation of Partial Settlement (Stipulation) entered into by the Company and various parties in DEC's general rate case in Docket No. E-7, Sub 828. The Commission approved the Stipulation by Order issued on December 20, 2007, and continued to approve the BPM/NFPTP mechanism in subsequent general rate cases. Section 5 of the Stipulation provided that 90% of the allocated North Carolina retail portion of DEC's BPM Net Revenues and 100% of the similarly allocated NFPTP Revenues should be flowed through to the benefit of the Company's North Carolina retail customers. The Stipulation further provided that an annual rider would be established to true up the difference between the actual amounts calculated to be flowed through pursuant to those allocations and percentages and the amounts included in base rates for that purpose, as calculated for the then most recent calendar year.

In its 2013 general rate case order in Docket No. E-7, Sub 1026 (Sub 1026 Order), the Commission reaffirmed the 90% and 100% allocations, and also reaffirmed that the true-up process would continue. Additionally, the Sub 1026 Order directed that (1) in order to facilitate the gradual reduction of the current differential between the amount flowed back in base rates and the actual level of BPM and NFPTP Revenues, beginning with the effective date of the Sub 1026 Order, and continuing until the differential is eliminated, the decrement amounts recovered in base rates would be prospectively implemented in the form of a continuing decrement rider (BPM Prospective Rider), which would be subject to modification in each annual rider

[1] Excluding the North Carolina regulatory fee [0.0068 cents per kWh, including the regulatory fee].

[2] Excluding the regulatory fee [(0.0078) cents per kWh, including the regulatory fee].

[3] Excluding the regulatory fee [(0.0079) cents per kWh, including the regulatory fee].

[4] Excluding the regulatory fee [0.0067 cents per kWh, including the regulatory fee].

[5] Excluding the regulatory fee [0.0237 cents per kWh, including the regulatory fee].

adjustment proceeding; and (2) the return on any over- or under-recovery included as part of the BPM True-up Rider would be calculated using a rate of return equal to 50% of the after-tax rate of return then approved by the Commission. In the BPM Rider filing made in 2014, DEC proposed to reduce the differential over the next four years. The 2017 filing represented the fourth and final year of that process. For years 2018 and forward, the Prospective Rider is calculated annually based on the projected BPM and NFPTP transmission revenues and expected kWh sales. The Public Staff finds this approach reasonable for purposes of this proceeding.

According to DEC's June 13, 2018, revised filing, the proposed True-up Rider is calculated by dividing the North Carolina retail BPM and NFPTP Revenues Adjustment of $3,893,291 (the difference between 2017 actual BPM and NFPTP revenues and the collected 2017 Prospective Rider decrements) by projected North Carolina retail sales of 57,789,224,469 kWh for the period July 2018 - June 2019. The resulting True-up Rider amount is a rate increment of 0.0067 cents per kWh (excluding the regulatory fee).

This matter was presented at the Commission's Regular Staff Conference on June 25, 2018. The Public Staff stated that it had reviewed DEC's calculation of the proposed riders, including the supporting workpapers submitted with the filings and information provided by the Company in response to Public Staff data requests, and had concluded that the proposed revised riders are reasonable. Therefore, the Public Staff recommended that DEC's proposed revised riders be approved.

Based on its review of DEC's filing and the recommendation of the Public Staff, the Commission concludes that the proposed revised riders are reasonable and should be approved, effective on July 1, 2018.

IT IS, THEREFORE, ORDERED that the following riders for Bulk Power Marketing Net Revenues and Non-Firm Point-to-Point Transmission Revenues proposed by DEC in its filing of April 27, 2018, are approved effective during the period July 1, 2018, through June 30, 2019:

(1) a revised BPM True-up Rider, consisting of a rate increment of 0.0067 cents per kWh, excluding the regulatory fee [0.0067 cents per kWh, including the regulatory fee]; and

(2) a BPM Prospective Rider, consisting of a rate decrement of (0.0078) cents per kWh, excluding the regulatory fee [(0.0078) cents per kWh, including the regulatory fee].

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of June, 2018.

Schneider, Jr., General Manager, Advanced Metering Infrastructure (AMI) Program Management, DEBS; and Michael J. Pirro, Manager of Southeast Pricing & Regulatory Solutions, DEC, DEP, and Duke Energy Florida, LLC.

Petitions to intervene were filed by NCSEA on July 26, 2017; CIGFUR III on August 8, 2017; CUCA on August 9, 2017; the Rate-Paying Neighbors on August 23, 2017; EDF on August 25, 2017; NCFB on September 6, 2017; NC WARN on September 7, 2017; Sierra Club on September 18, 2017; Kroger on September 19, 2017; ASU on September 29, 2017; NCLM on October 3, 2017; Piedmont EMC, Rutherford EMC, Haywood EMC, and Blue Ridge EMC on October 16, 2017; the Commercial Group on October 31, 2017; Tech Customers on November 2, 2017; Concord and Kings Mountain on November 17, 2017; NC Justice Center, et al. on December 19, 2017; and Durham on January 3, 2018. Notice of intervention was filed by the Office of the Attorney General (AGO) on August 31, 2017.

The Commission entered orders granting the petitions of NCSEA on August 7, 2017; EDF on September 5, 2017; NC WARN on September 15, 2017; CUCA on September 18, 2017; CIGFUR III, the Rate-Paying Neighbors, and NCFB on September 19, 2017; Sierra Club on September 27, 2017; Kroger on September 28, 2017; NCLM on October 4, 2017; ASU on October 19, 2017; Piedmont EMC, Rutherford EMC, Haywood EMC, and Blue Ridge EMC on October 20, 2017; the Commercial Group and Tech Customers on November 8, 2017; Concord and Kings Mountain on December 14, 2017; and Durham and NC Justice Center, et al. on January 11, 2018. The AGO's intervention is recognized pursuant to N.C. Gen. Stat. § 62-20. The Public Staff's intervention is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19.

On September 19, 2017, the Commission issued its Order Establishing General Rate Case and Suspending Rates. On October 13, 2017, the Commission issued its Order Scheduling Investigation and Hearings, Establishing Intervention and Testimony Due Dates and Discovery Guidelines, and Requiring Public Notice, and on October 20, 2017, the Commission issued an Amended Order Scheduling Investigation and Hearings, Establishing Intervention and Testimony Due Dates and Discovery Guidelines, and Requiring Public Notice. On November 3, 2017, Sierra Club filed a Motion to Schedule Additional Public Hearing. On December 22, 2017, the Commission entered an Order Denying Sierra Club's Request for Public Hearing. On January 30, 2018, and February 23, 2018, the Commission issued orders revising the schedule for the expert witness hearing.

On July 10, 2017, the Commission issued an order consolidating DEC's request for deferral of coal ash costs in Docket No. E-7, Sub 1110 with this rate case. On October 18, 2017, the Commission issued an order consolidating the general rate proceeding in Docket No. E-7, Sub 1146 with DEC's request to implement a job retention rider in Docket No. E-7, Sub 1152 and

DEC's petition for approval to cancel the William States Lee III Nuclear Station (Lee Nuclear Project or Lee Nuclear) in Docket No. E-7, Sub 819.

DEC filed the supplemental testimony and exhibits of Company witness McManeus on December 15, 2017, and the second supplemental testimony and exhibits of Company witness McManeus on January 16, 2018.

On January 18, 2018, the AGO filed a motion for extension of time for intervenors to file testimony and exhibits. On January 20, 2018, the Commission entered an order granting an extension of time for intervenors to file testimony and exhibits until January 23, 2018, and for DEC to file rebuttal testimony and exhibits until February 6, 2018. On January 18, 2018, EDF filed the direct testimony of Paul J. Alvarez, President, Wired Group. On January 23, 2018, the Public Staff filed the direct testimony and exhibits of Jack L. Floyd, Engineer with the Electric Division of the Public Staff; L. Bernard Garrett, Secretary/Treasurer, Garrett and Moore, Inc.; John R. Hinton, Director of the Economic Research Division of the Public Staff; Michelle M. Boswell, Staff Accountant with the Accounting Division of the Public Staff; Charles Junis, Engineer with the Water, Sewer, and Communications Division of the Public Staff; Jay Lucas, Engineer with the Electric Division of the Public Staff; Michael C. Maness, Director of the Accounting Division of the Public Staff; Roxie McCullar, Consultant, William Dunkel and Associates; James S. McLawhorn, Director of Electric Division of the Public Staff; Dustin Ray Metz, Engineer with the Electric Division of the Public Staff; Vance F. Moore, President, Garrett and Moore, Inc.; David C. Parcell, Principal and Senior Economist, Technical Associates, Inc.; Scott J. Saillor, Engineer with the Electric Division of the Public Staff; and Tommy C. Williamson, Jr., Engineer with the Electric Division of the Public Staff. On January 23, 2018, the AGO filed the direct testimony and exhibits of J. Randall Woolridge, Professor of Finance, Pennsylvania State University, and Dan J. Wittliff, Managing Director of Environmental Services, GDS Associates, Inc.

On January 23, 2017, CUCA filed the direct testimony and exhibits of Kevin W. O'Donnell, President, Nova Energy Consultants, Inc.; the Tech Customers filed the direct testimony and exhibits of Kurt G. Strunk, Director of National Economic Research Associates (NERA), and Edward D. Kee, Expert Affiliate, NERA Economic Consulting; Kroger filed the direct testimony and exhibits of Kevin C. Higgins, Principal, Energy Strategies, LLC; NC Justice Center, et al. filed the direct testimony and exhibits of Satana Deberry, Executive Director, North Carolina Housing Coalition, John Howat, Senior Policy Analyst, National Consumer Law Center, and Jonathan F. Wallach, Vice President, Resource Insight, Inc.; Sierra Club filed the direct testimony and exhibits of Ezra D. Hausman, Ph.D., Consultant, Ezra Hausman Consulting, and Mark Quarles, Principal Scientist and Owner, Global Environmental, LLC; NCLM filed the direct testimony and exhibits of Brian W. Coughlan, President, Utility Management Services, Inc., F. Hardin Watkins, Jr., City Manager, City of Burlington, Maria S. Hunnicutt, General Manager, Broad River Water Authority, and Adam Fischer, Transportation Director, City of Greensboro; CIGFUR III filed the direct testimony and exhibits of Nicholas Phillips, Jr., Managing Principal, Brubaker & Associates, Inc.; and NCSEA filed the direct testimony and exhibits of Justin R. Barnes, Director of Research, EQ Research LLC, Caroline Golin, Southeast Regulatory Director, Vote Solar, and Michael E. Murray, President, Mission:data Coalition. On January 24, 2018, the Commercial Group filed the direct testimony and exhibits of Steve W. Chriss, Director, Energy Strategy and Analysis, Wal-Mart Stores, Inc. and Wayne Rosa, Energy and Maintenance Manager, Food Lion, LLC.

On January 25, 2018, DEC filed a motion to strike the direct testimony of NCSEA witness Murray. On February 1, 2018, NCSEA filed its response in opposition to DEC's motion to strike the testimony of witness Murray. The Commission issued an order on February 6, 2018, denying DEC's motion to strike the testimony of witness Murray.

On January 26, 2018, DEC filed a motion to strike the direct testimony of EDF witness Alvarez and a motion to strike the direct testimony of NC Justice Center, et al. witness Howat. On January 30, 2018, EDF filed its response in opposition to DEC's motion to strike the testimony of witness Alvarez. On February 2, 2018, NC Justice Center, et al. filed its response in opposition to DEC's motion to strike the testimony of witness Howat. On February 6, 2018, the Commission issued an order denying DEC's motion to strike the testimony of witness Alvarez and an order granting DEC's motion to strike the testimony of witness Howat. The Commission struck from the record NC Justice Center, et al. witness Howat's direct testimony from page 4, line 21, to page 5, line 7, from page 21, line 3, to page 32, line 5, and page 32, lines 9 to 19.

On February 6, 2018, DEC filed the rebuttal testimony and exhibits of Company witnesses: McManeus; Cowling; De May; Diaz; Doss; Fallon; Fountain; Hager; Hevert; Hunsicker; Kerin; Jeffrey T. Kopp, Manager, Burns & McDonnell Engineering Company, Inc.; McGee; Miller; Pirro; Schneider; Thomas Silinski, Vice President, Total Rewards and Human Resource Operations, DEBS; Simpson; John J. Spanos, Senior Vice President, Gannett Fleming Valuation and Rate Consultants, LLC; James Wells, Vice President, Environmental Health and Safety, Coal Combustion Products, DEBS; and Wright.

On February 20, 2018, the Public Staff filed supplemental testimony and exhibits of witnesses Boswell, Hinton, Junis, Maness, Moore, and Saillor. The Public Staff filed the second supplemental testimony and exhibits of witnesses Hinton and Boswell on March 19, 2018. On March 9, 2018, the AGO filed the supplemental testimony of witness Woolridge. On March 20, 2018, the Tech Customers filed the supplemental testimony of Dr. Sharon Brown-Hruska, Managing Director, NERA, and witness Strunk.

On February 28, 2018, DEC and the Public Staff entered into and filed an Agreement and Stipulation of Partial Settlement (the Stipulation). The Stipulation resolves some of the issues between the two parties in this docket. However, several unresolved issues still exist, including but not limited to: (1) the treatment of the Company's coal combustion residuals costs; (2) the amount of the Basic Facilities Charge (BFC); (3) whether it is appropriate to allow a return on the unamortized balance related to the Company's Lee Nuclear plant during the amortization period; (4) the status of the Company's Nuclear Decommissioning Trust Fund (NDTF) and the Public Staff's proposal to adjust nuclear decommissioning expense; (5) the manner in which the Federal Tax Cuts and Jobs Act (Tax Act) should be addressed in this case; (6) whether the Grid Reliability and Resiliency Rider (Grid Rider) should be adopted in this proceeding, and if so, which costs would be included in the Grid Rider and the structure of a Grid Rider; and (7) two discrete issues related to the Company's proposal for a Jobs Retention Rider (JRR), further described herein (collectively, the Unresolved Issues).

On March 1, 2018, the Public Staff filed settlement supporting testimony and exhibits of witnesses Boswell, Maness, and Parcell, and DEC filed settlement supporting testimony and exhibits of witnesses De May, Fountain, Hevert, McManeus, and Pirro. On February 28, 2018, DEC entered into and filed a Partial Settlement Agreement with NCLM, Concord, and Kings Mountain related to street lighting issues. On March 2, 2018, DEC entered into and filed an Amended Partial Settlement Agreement with NCLM, Concord, Kings Mountain, and Durham, which modified the original settlement related to certain street lighting issues and added Durham as a party (the Lighting Settlement).

The three public witness hearings were held as scheduled. The following public witnesses appeared and testified:

Franklin:	David Watters, Selma Sparks, The Honorable Kevin Corbin, Donn Erickson, Henry Horton, Fred Crawford, Virginia Bugash, Avram Friedman, Debra Lawley, Bob Boyd, Tamara Zwinak, Margaret Crownover, Janet Wilde, and Robert Smith
Greensboro:	Sharon Goodson, John Carter, Aaron Martin, Clarence Wright, Ruth Martin, Deborah Graham, Hester Petty, David Sevier, Joan Bass, John Merrell, Marta Concepcion, Gayle Tuch, August Preschle, Claudia Lange, Harry Phillips, Rexanne Bishop, Tim Stevenson, Taina Diaz-Reyes, Debbie Smith, Doug Ruder, Gladys Ellison, John Robins, Henry Fansler, Rachel Kriegsman, David Freeman, John Motsinger, Lib Hutchby, and Megan Longstreet
Charlotte:	Brian Kasher, Mary Anne Hitt, Yvette Baker, Melvina Williams, Lilly Taylor, Steve English, Nancy Nicholson, Sally Kneidel, Callina Satterfield, Amy Brown, Roger Hollis, Kent Crawford, Ritchie Johnson, Ernie McLaney, Willie Dawson, Pat Moore, Beth Henry, James Sprouse, Charles Talley, June Blotnick, Charles King, Meg Houlihan, Steve Copulsky, Elaine Jones, Christian Cano, Joel Segal, Kathy Sparrow, Rick Lauer, Nicholas Rose, Wells Eddleman, Walker Spruill, Violet Mitchell, and Holliday Adams

The matter came on for expert witness testimony on March 5, 2018. DEC presented the testimony of witnesses De May, Hevert, Fountain, McManeus, Spanos, Kopp, Fallon, Diaz, Doss, Wright, Kerin, Simpson, Hunsicker, Schneider, Pirro, Hager, and Wells. The Public Staff presented the testimony of witnesses McLawhorn, Moore, Garrett, Maness, Williamson, Hinton, Metz, and Floyd. The AGO presented the testimony of witnesses Woolridge and Wittliff. The Sierra Club presented the testimony of witness Quarles. NCSEA presented the testimony of witnesses Golin and Barnes. CUCA presented the testimony of witness O'Donnell. NCLM presented the testimony of witness Coughlan. Tech Customers presented the testimony of witness Kee. The pre-filed testimony of those witnesses who testified at the expert witness hearing, as well as all other witnesses filing testimony in this docket, was copied into the record as if given orally from the stand.

DEC filed various late-filed exhibits and responses to Commission requests on the following dates: March 28, 2018, March 29, 2018, April 2, 2018, April 3, 2018, April 4, 2018, April 5, 2018, April 6, 2018, April 19, 2018 and April 23, 2018.

On April 16, 2018, the AGO filed a Response to Commission Request and Motion to Admit AGO Late-Filed Exhibit, which was granted on April 24, 2018.

The parties submitted briefs and/or proposed orders on April 27, 2018.

On June 1, 2018, DEC filed a Stipulation and Settlement Agreement between DEC and the EDF, Sierra Club, and NCSEA and a Stipulation and Settlement Agreement between DEC and the Commercial Group relating to the Power Forward Carolinas program and the Grid Rider proposed by DEC in this case (collectively, the Grid Rider Settlement). In its cover letter transmitting the stipulations and settlement agreements, DEC indicated that in order to mitigate the impact of a rate adjustment on low income customers and to support job training, DEC will make a shareholder-funded contribution totaling $4 million to the following programs: $1.5 million to the Helping Home Fund program for income qualified customers, $1.5 million to the Share the Warmth energy assistance fund, and $1 million to the Duke Energy/Piedmont Natural Gas Community College Apprenticeship Grant Program.

Between June 1, 2018, and June15, 2018, the following parties filed opposition and/or concerns regarding the Grid Rider Settlement: NC Justice Center, NC WARN, Public Staff, CUCA, AGO, CIGFUR III, and Tech Customers.

On June 8, 2018, the North Carolina Clean Energy Business Alliance (NCCEBA) filed a Petition to Intervene which was denied as out-of-time on June 20, 2018.

Based upon consideration of the pleadings, testimony, and exhibits received into evidence at the hearings, the Stipulation, the Lighting Settlement, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

Jurisdiction

1. DEC is duly organized as a public utility operating under the laws of the State of North Carolina and is subject to the jurisdiction of this Commission. The Company is engaged in the business of generating, transmitting, distributing, and selling electric power to the public in the central and western portions of North Carolina and western South Carolina. DEC is a wholly-owned subsidiary of Duke Energy, and its office and principal place of business is located in Charlotte, North Carolina.

2. The Commission has jurisdiction over the rates and charges, rate schedules, classifications, and practices of public utilities operating in North Carolina, including DEC, under Chapter 62 of the General Statutes of North Carolina.

3. DEC is lawfully before the Commission based upon its Application for a general increase in its retail rates pursuant to N.C. Gen. Stat. §§ 62-133 and 62-134 and Commission Rule R1-17.

4. The appropriate test period for use in this proceeding is the 12 months ended December 31, 2016, adjusted for certain known changes in revenue, expenses, and rate base through December 31, 2017, and the costs for the W. S. Lee Combined Cycle (Lee CC) updated through February 28, 2018.

The Application

5. DEC, by its Application and initial direct testimony and exhibits, originally sought a net increase of approximately $611 million, or 12.8%, in its annual electric sales revenues from its North Carolina retail electric operations, including a rate of return on common equity of 10.75% and a capital structure consisting of 47% debt and 53% equity. The Company also requested a Grid Rider to recover an additional $35.2 million, which has the effect of an additional 0.8% increase. DEC filed supplemental filings and testimony after its initial Application and the effect of the Company's supplemental filings was to change its proposed annual revenue requirement increase to $700,645,000.

6. DEC submitted evidence in this case with respect to revenue, expenses, and rate base using a test period consisting of the 12 months ended December 31, 2016, adjusted for certain known changes in revenue, expenses, and rate base.

The Stipulation

7. On February 28, 2018, DEC and the Public Staff (the Stipulating Parties) entered into and filed the Stipulation resolving some of the issues in this proceeding between the two parties. Those issues that were not resolved by the Stipulation are referred to herein as the "Unresolved Issues."

8. The revenue requirement effect of the Stipulation is shown in Boswell Third Supplemental and Stipulation Exhibit 1 Corrected[1] and Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues,[2] which provide sufficient support for the annual revenue required on the issues agreed to in the Stipulation.

9. The Stipulation is the product of the give-and-take in settlement negotiations between the Stipulating Parties, is material evidence in this proceeding, and is entitled to be given appropriate weight in this proceeding, along with other evidence from the Company and intervenor

[1] On April 19, 2018, the Public Staff filed Boswell Third Supplemental and Stipulation Exhibit 1 Corrected, which: (1) corrects the Lee CC addition to plant in service; (2) corrects the Lee CC deferral calculation; (3) updates the Grid Rider amount; and (d) reflects the Company's position on each filed issue.

[2] On April 19, 2018, the Company filed Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues and Revised McManeus Workpapers – Updated for Post-Hearing Issues, which reflect the following updates: (1) updates to the salaries and wages adjustment to reflect the Company and Public Staff's resolution on how to quantify the agreement reached in the Stipulation; (2) updates to the Lee CC plant and expense related items to reflect final costing information for inclusion in this proceeding, including updates to plant investment, related deferred income taxes, depreciation, materials and supplies, and the deferral of those costs between the plant's operation date and the date rates are expected to become effective; and (3) updates to reflect the cash working capital amounts and income taxes that are affected by the adjustments made to salaries and wages, and Lee CC.

parties, and along with statements from customers of the Company as well as testimony of public witnesses concerning the Company's Application.

10. The Stipulation resolves only some of the disputed issues between the Stipulating Parties. The Unresolved Issues include the cost recovery of the Company's CCR costs, the recovery amortization period and return during the amortization period, allocation issues associated with CCR costs, the amount of ongoing CCR costs to be included in rates, or whether certain CCR costs are recoverable under N.C. Gen. Stat. § 62-133.2. Further Unresolved Issues include amount of project development costs to be recovered for the Lee Nuclear Plant and whether the unamortized balance should earn a return, whether the Nuclear Decommissioning Trust Fund is overfunded, the amount of the Basic Facilities Charge, Power Forward and the Grid Rider, the methodology for calculating customer usage, recovery of costs for AMI, issues surrounding the implementation of the Federal Tax Cuts and Jobs Act (the Tax Act), several issues related to the JRR, and the proper contingency factor related to depreciation. The Unresolved Issues are resolved by the Commission and are addressed later in this Order.

<u>**Capital Structure, Cost of Capital, and Overall Rate of Return**</u>

11. The Stipulating Parties agree that the revenue requirement approved in this Order is intended to provide DEC, through sound management, the opportunity to earn an overall rate of return of 7.35%. This overall rate of return is derived from applying an embedded cost of debt of 4.59% and a rate of return on equity of 9.9% to a capital structure consisting of 48% long-term debt and 52% members' equity. The Stipulation is material evidence entitled to appropriate weight in determining DEC's overall rate of return, cost of debt, rate of return on equity, and capital structure.

12. A 9.9% rate of return on equity for DEC is just and reasonable in this general rate case.

13. A 52% equity and 48% debt ratio is a reasonable capital structure for DEC in this case.

14. A 4.59% cost of debt for DEC is reasonable for the purposes of this case.

15. Notwithstanding the decrease in rates ordered herein, the rates approved in this case, which includes the approved rate of return on equity and capital structure, will be difficult for some of DEC's customers to pay, in particular DEC's low-income customers.

16. Continuous safe, adequate, and reliable electric service by DEC is essential to the support of businesses, jobs, hospitals, government services, and the maintenance of a healthy environment.

17. The rate of return on equity and capital structure approved by the Commission appropriately balances the benefits received by DEC's customers from DEC's provision of safe, adequate, and reliable electric service in support of businesses, jobs, hospitals, government services, and the maintenance of a healthy environment with the difficulties that some of DEC's customers will experience in paying the Company's rates.

18. The 9.9% rate of return on equity and the 52% equity financing approved by the Commission in this case result in a cost of capital that is as low as reasonably possible. They appropriately balance DEC's need to obtain equity financing and to maintain a strong credit rating with its customers' need to pay the lowest possible rates.

19. The authorized levels of overall rate of return and rate of return on equity set forth above are supported by competent, material, and substantial record evidence, are consistent with the requirements of N.C. Gen. Stat. § 62-133, and are fair to DEC's customers generally and in light of the impact of changing economic conditions.

Adjustments to Cost of Service

20. The agreed-upon accounting adjustments outlined in Boswell Third Supplemental and Stipulation Exhibit 1 Corrected and Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues are just and reasonable to all parties in light of all the evidence presented.

State EDIT

21. The Stipulation provides that the state excess deferred income taxes (State EDIT) the Company collected pursuant to the Commission's May 13, 2014 Order in Docket No. M-100, Sub 138 should be returned to customers through a levelized rider that will expire at the end of a four-year period. The Stipulating Parties provide that the appropriate level of State EDIT to be refunded to customers is $60,102,000 annually for the four years following the effective date of the rates approved in this proceeding. The four-year State EDIT rider as set forth in Section III.B of the Stipulation is just and reasonable to all parties in light of all the evidence presented.

Customer Connect

22. The Stipulation provides for the removal of the Company's incremental operating expenses for the Customer Connect project as recommended by the Public Staff. In accordance with Section III.C of the Stipulation, the Company is authorized to establish a regulatory asset to defer and amortize expenses associated with the Customer Connect project. As set forth in the Stipulation, the Company is allowed to accrue and recover Allowance for Funds Used During Construction (AFUDC) on the regulatory asset until the DEC Core Meter-to-Cash release (Releases 5-8) of the Customer Connect project goes into service or January 1, 2023, whichever is sooner, at which time a 15-year amortization shall begin. The parties agreed in the Stipulation that in order to provide the Commission and other interested parties with information concerning the status of development, spending, and the accomplishments to date, the Stipulating Parties will develop the reporting format and the content of that report within 90 days of this Order, with the reports to be filed in this docket for the next five years by December 31 of each year or until Customer Connect is fully implemented, whichever is later. This provision of the Stipulation is just and reasonable to all parties in light of all of the evidence presented. However, in order to allow sufficient time for the Company to complete its financial close process for the fiscal year, a critical step in obtaining the financial data needed to accurately report annual spend on Customer Connect, the Commission finds that the annual report required shall be filed by February 15, for the next five years.

Lee Combined Cycle

23. At the time the Stipulation was filed on February 28, 2018, the Company's Lee CC plant was almost complete, but not anticipated to come online until March 2018. Pursuant to the Stipulation, DEC withdrew its adjustment to include incremental operation and maintenance (O&M) expenses for the Lee CC, and the Public Staff withdrew its displacement adjustment for the Lee CC; the Stipulating Parties therefore agreed that the appropriate level of ongoing O&M expense to be included in rates is $0. The Stipulating Parties further agreed that the appropriate amortization period for the deferred expenses is four years. The Stipulation additionally requires that the Company provide the Public Staff and the Commission with the final cost amounts to be included in this proceeding for determining the impact of the Lee CC on the overall revenue adjustment approved by the Commission by March 23, 2018. The Stipulation provides that the Public Staff utilize these amounts to work with the Company to file with the Commission, on or before April 6, 2018, the Stipulating Parties' final recommendation with regard to the Lee CC-related revenue requirement, including Lee CC deferred costs, using the methodology recommended by the Public Staff in this proceeding, excluding the appropriate amortization period for Lee CC deferred costs. The Stipulating Parties further agreed that it would be appropriate to hold the record open until April 22, 2018, for the sole purpose of allowing the Company to file an affidavit indicating that the plant has closed to service for operational and accounting purposes and that it is used and useful for the benefit of customers. This provision of the Stipulation is just and reasonable to all parties in light of all of the evidence presented.

24. In accordance with Section III.L of the Stipulation, on March 23, 2018, DEC provided the Public Staff and the Commission with the final cost amounts to be included in this proceeding for determining the impact of the Lee CC on the overall revenue adjustment approved by the Commission. On April 10, 2018, the Public Staff filed its updated recommendations regarding Lee CC plant and expense-related items, as shown in Boswell Third Supplemental and Stipulation Exhibit 1. Also on April 10, 2018, the Company filed the Affidavit of Joseph A. Miller, Jr., indicating that as of April 5, 2018, the Lee CC plant closed to service for operational and accounting purposes. On April 19, 2018, DEC filed Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues, which, among other things, reflects updates to the Lee CC plant and expense-related items to reflect final cost information for inclusion in this proceeding, including updates to plant investment, related deferred income taxes, depreciation, materials and supplies, and the deferral of those costs between the plant's operation date and the date rates are expected to become effective. Also on April 19, 2018, the Public Staff filed Boswell Third Supplemental and Stipulation Exhibit 1 Corrected, which, among other things, corrects the Lee CC addition to plant in service and corrects the Lee CC deferral calculation. The Lee CC-related revenue requirement updated in the final recommendation of the Stipulating Parties, as shown in Boswell Third Supplemental and Stipulation Exhibit 1 Corrected and Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues is just and reasonable.

Requested Coal Combustion Residuals (CCR) Fuel Costs

25. Given the Commission's Findings of Fact Nos. 57-59 and associated conclusions in its Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase entered on February 23, 2018, in Docket No. E-2, Sub 1142 (2018 DEP Rate Order), in Section

III.P of the Stipulation DEC withdrew its request to recover certain coal combustion residuals (CCR) costs through the fuel adjustment clause related to the excavation and movement of CCRs from the Riverbend Plant in Gaston County, North Carolina to the Brickhaven facility in Chatham County, North Carolina. The Stipulation also provides that the recovery of these costs be left in the Company's deferred CCR balance for consideration of recovery in the Company's base rates. These costs should be excluded from recovery through the fuel adjustment clause, and should be included in the Company's deferred CCR balance for consideration of recovery in the Company's base rates. This provision of the Stipulation is just and reasonable to all parties in light of all of the evidence presented.

Base Fuel Factor

26. Section IV.B of the Stipulation provides that the base fuel and fuel-related cost factors, by customer class, will be as set forth in the following table (amounts are cents per kilowatt-hour (kWh), excluding regulatory fee):

	Residential	General Service/Lighting	Industrial
Total Base Fuel (matches approved fuel rate effective September 1, 2017 in Docket No. E-7, Sub 1129)	1.7828	1.9163	2.0207

The base fuel and fuel-related cost factors set forth in Section IV.B of the Stipulation are just and reasonable to all parties in light of all the evidence presented.

Coal Inventory

27. As set forth in Paragraph III.I. of the Stipulation, DEC shall reduce the amount of coal inventory included in working capital. An increment rider shall be established, effective on the same date as the new base rates approved in this Order, and continuing until inventory levels

reach a 35-day supply, to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $73.23 per ton). This rider shall terminate on the earlier of: (a) May 31, 2020, or (b) the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply on a sustained basis, as defined in the Stipulation. The reduction to coal inventory included in working capital and the establishment of the increment rider, as set forth in the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

Cost of Service Allocation Methodology

28. The Stipulation provides for the use of the Summer Coincident Peak (SCP) methodology for cost allocation between jurisdictions and among customer classes in this case. The Company may continue to use the SCP methodology for allocation between jurisdictions and among customer classes under the provisions of the Stipulation. The provisions of the Stipulation

regarding cost of service methodology are just and reasonable to all parties in light of all the evidence presented.

Lead-Lag Study

29. The Stipulation provides that DEC shall prepare and file a lead-lag study in its next general rate case. This provision of the Stipulation is just and reasonable.

Rate Design

30. Except for the amount of the Basic Facilities Charge which is discussed later in this Order, the Stipulation provides for the implementation of the rate design proposed by Company witness Pirro in his direct testimony, as set out in Section IV.E of the Stipulation. The Stipulating Parties also agreed that, to the extent possible, the Company shall assign the approved revenue requirement consistent with the principles regarding revenue apportionment described in the testimony of Public Staff witness Floyd. Moreover, the Company entered into the Lighting Settlement with NCLM, Concord, Kings Mountain, and Durham, which resolved all outdoor lighting issues raised by intervenors in this docket. Based on all of the evidence presented in this proceeding, the rate design provisions in Section IV.E of the Stipulation and the Lighting Settlement are just and reasonable to all parties in light of all the evidence presented. It is appropriate for the Company to implement the rate design proposed by witnesses Pirro and Cowling, consistent with the provisions in Section IV.E of the Stipulation and the Lighting Settlement.

Vegetation Management, Quality of Service, and Service Regulations

31. DEC's and the Public Staff's agreement relating to vegetation management, as set forth in Section III.A of the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

32. The overall quality of electric service provided by DEC is adequate.

33. The proposed amendments to DEC's Service Regulations are just and reasonable, serve the public interest, and should be approved.

Acceptance of Stipulation

34. The Stipulation and the Lighting Settlement will provide DEC and its retail ratepayers just and reasonable rates when combined with the rate effects of the Commission's decisions regarding the contested issues in this proceeding.

35. The provisions of the Stipulation and the Lighting Settlement are just and reasonable to all parties to this proceeding and serve the public interest. Therefore, the Stipulation and the Lighting Settlement should be approved in their entirety.

ELECTRIC – RATE INCREASE

Basic Facilities Charge (BFC)

36. The Company shall increase the monthly BFC for the residential rate class (Schedules RS, RT, RE, ES, and ESA) to $14.00. The increase in the BFC for the residential rate class schedules is just and reasonable. The BFC for other rate schedules shall be left unchanged from the current rates.

Customer Usage

37. The methodology for calculating customer usage set forth in the testimony of Public Staff witness Saillor, with the adjustments proposed by Company witness Pirro in his rebuttal testimony, is just and reasonable to all of the parties and should be employed by the Company in this case.

Advanced Metering Infrastructure (AMI)

38. DEC's AMI costs are reasonable and prudent, and DEC should be allowed to recover its AMI costs.

39. DEC should be required to design and propose new rate structures to capture the full benefits of AMI.

40. It is just and reasonable for DEC to recover the remaining book value of its Automated Meter Reading (AMR) meters over 15 years.

Customer Data

41. It is appropriate to address issues regarding access to customer usage data in Docket No. E-100, Sub 147.

Power Forward and the Grid Rider

42. DEC has failed to show that exceptional circumstances exist to justify the establishment of the Grid Rider for recovery of its Power Forward Carolinas (Power Forward) costs.

43. DEC has failed to show at this time that Power Forward costs qualify for deferral accounting treatment.

44. It is not necessary at this time for the Commission to open a separate proceeding to investigate grid modernization programs. For now, DEC should utilize existing proceedings, such as the Integrated Resource Planning and Smart Grid Technology Plan docket, to inform the Commission on and collaborate with stakeholders regarding grid modernization initiatives and the potential cost recovery mechanisms for such initiatives.

Lee Nuclear

45. In Docket No. E-7, Sub 819, which has been consolidated with this general rate case, the Company requests Commission approval of its decision to cancel the Lee Nuclear Project pursuant to N.C. Gen. Stat. § 62-110.7(d). The Company requests permission to move the adjusted balance of the Lee Nuclear Project development costs from construction work in progress (CWIP) Account 107 to regulatory asset Account 182.2 and to recover the project development costs in rates by amortizing such costs over a 12-year period. The Company also requests that the unamortized balance of such costs be included in rate base to recover a net-of-tax return on the unamortized balance.

46. DEC's actions in developing the Lee Nuclear Project have been reasonable and prudent and in compliance with the intent of the Commission's orders in Docket No. E-7, Sub 819.

47. DEC's decision to cancel the project is reasonable and prudent and in the public interest.

48. DEC's project development costs incurred for the Lee Nuclear Project, with the exception of costs relating to a Visitors' Center and the allowance for funds used during construction (AFUDC) for 2018, which were recommended for disallowance by the Public Staff and that the Company agreed to exclude,[1] are reasonable and prudent and should be amortized over a 12-year period, as requested by the Company.

49. It is not appropriate to permit the Company to earn a return on the unamortized balance of these project development costs during the amortization period, as requested. This rate treatment is consistent with Commission precedent and results in rates that are fair to both the Company and its ratepayers for the costs of the cancelled Lee Nuclear Project.

Nuclear Decommissioning Trust Fund (NDTF)

50. The Company proposes that the annual nuclear decommissioning expense be maintained at $0. The Public Staff has proposed that the Company's NDTF is overfunded and that the Company should be required to refund to customers $29 million per year. Because funds in the NDTF are to be used solely for decommissioning the Company's nuclear units, the Company is not permitted to withdraw funds from the NDTF for this purpose. Accordingly, the Public Staff proposes that the $29 million per year be refunded to customers through a "loan" from the Company's shareholders that would be repaid after decommissioning is complete.

51. It is premature at this time to find that the NDTF is overfunded and that refunds should be required.

[1] Excluding costs relating to the Visitors' Center and AFUDC for 2018, and extending the deferral period through April 2018, reduces the amount of the project development costs for Lee Nuclear from $353.2 million to $347.0 million. (See McManeus Rebuttal Ex. 3, p. 31, and Boswell Third Supplemental Ex. 1, p. 2 of 4.)

ELECTRIC – RATE INCREASE

Depreciation

52. Use of a 10% contingency for future "unknowns" in the estimate of future terminal net salvage costs is reasonable in this case.

53. It is just and reasonable to use the escalation of terminal net salvage cost and the straight-line method of depreciation in determining escalation as performed in DEC's Decommissioning Study.

54. Use of an interim net salvage percentage of zero for Accounts 342, 343, 344, 345, and 346 is reasonable in this case.

55. The depreciation rates proposed by DEC in this case, with the exception of the adjustments discussed above, as filed by the Company as Doss Exhibits 3 and 4, are just and reasonable and should be approved.

Tax Changes

56. In this docket, the Commission has been presented with two proposals for the implementation of the Tax Act, one by the Company and one by the Public Staff. The Company proposal would:

(a) Implement an immediate reduction in its revenue requirements to reflect collection of federal corporate income tax at the 21% rate instead of the 35% rate.

(b) Implement flow back of federal excess deferred income taxes (Federal EDIT) to customers, as follows:

  (i) For Federal EDIT protected under Internal Revenue Service (IRS) normalization rules, in accordance with those rules;
  (ii) For Federal EDIT not protected by normalization rules, but related to property, plant and equipment (PP&E), over a 20-year period; and

  (iii) For Federal EDIT not protected by normalization rules, but not related to PP&E, through a five-year rider (federal unprotected non-PP&E rider).

(c) As a cash flow mitigation measure, increase the revenue requirement by $200 million, through any of a variety of mechanisms.

57. The Public Staff proposal would implement the Tax Act by implementing the same immediate reduction in revenue requirements based upon the tax rate reduction, implement the IRS-prescribed flow back of protected Federal EDIT, and implement the flowback of all unprotected Federal EDIT through a five-year rider. The Public Staff proposal would not provide any cash flow mitigation measures.

58. It is appropriate to reflect the 21% Federal corporate income tax rate specified in the Tax Act in DEC's revenue requirement in this proceeding. It is further appropriate to deny

DEC's proposed $200 million cash flow mitigation measure and to require DEC to maintain all EDIT resulting from the Tax Act in a regulatory liability account pending flow back with interest reflected at the overall weighted cost of capital approved in this case of 7.35% in three years or in DEC's next general rate case proceeding, whichever is sooner.

Job Retention Rider (JRR)

59. The Company's proposed JRR is intended to allow the Company to prevent the loss of North Carolina jobs and the customer's related load.

60. Because gas pipelines are fixed investments that are not easily relocated, extending the benefits of a JRR to gas pipeline companies would not prevent the loss of North Carolina jobs. Companies involved in the "transportation or preservation of a raw material of a finished product" should not be eligible to participate in a JRR.

61. The Job Retention Tariff (JRT) Guidelines state that this tariff is intended to be temporary and to establish a maximum effective time of five years or a cap of five years. However, under the current economic circumstances, a shorter period of time, possibly one or two years, may achieve the intended result. Thus, a one-year pilot with the option of a renewal for a second year is an appropriate time frame for the current JRR.

62. The JRR proposed by the Company, as modified by the Stipulation and this Order, is not unduly discriminatory and is in the public interest.

63. Ratepayers, the Company, and its shareholders all benefit from the retention of North Carolina jobs and the load related to those jobs.

64. The Company's recovery of the JRR revenue credits should be reduced by $4.5 million each year the JRR is in effect, if more than one year, to recognize the benefit to shareholders of the JRR.

CCR Cost Deferral

65. In Docket Nos. E-2, Sub 1103 and E-7, Sub 1110, DEP and DEC jointly filed a request that the Commission issue an order authorizing them to defer in a regulatory asset account certain costs incurred in connection with compliance with federal and state environmental requirements regarding CCRs. By Order dated July 10, 2017, the Commission consolidated DEC's request with the present general rate case. DEC and the Public Staff supported the deferral in their testimony in this docket. The deferral request is reasonable and appropriate.

66. DEC expects to incur substantial costs related to CCRs in future years. It is just and reasonable to allow deferral of those costs, with a return at the net-of-tax overall cost of capital approved in this Order during the deferral period. Ratemaking treatment of such costs will be addressed in future rate cases.

67. It is reasonable and appropriate to add a return based on the net-of-tax overall cost of capital approved in DEC's last general rate case to the amount of deferred coal ash costs, as

approved in this proceeding, for the period through the effective date of rates approved in this proceeding. The federal tax rate appropriate to use for the 2018 portion of the carrying costs is 21%.

68. It is reasonable and appropriate to use a mid-month cash flow convention for calculation of the return on the principal amount of deferred CCR expenditures. Compounding should take place at the beginning of January of each year.

Recovery of CCR Costs

69. Since its last rate case, DEC has become subject to new legal requirements relating to its management of coal ash. These new legal requirements mandate the closure of the coal ash basins at all of the Company's coal-fired power plants. Since its last rate case, DEC has incurred significant costs to comply with these new legal requirements.

70. On a North Carolina retail jurisdiction basis, the actual coal ash basin closure costs DEC has incurred during the period from January 1, 2015, through December 31, 2017, amount to $545.7 million. DEC is eligible to recover these coal ash basin closure costs. The actual coal ash basin costs incurred by DEC are known and measurable, reasonable and prudent, and, to the extent capital in nature, used and useful in the provision of service to the Company's customers. Further, DEC proposes that these costs be amortized over a five-year period, and that it earn a return on the unamortized balance. Under normal circumstances, the five-year amortization period proposed by the Company is appropriate and reasonable, and absent any management penalty, should be approved, and under normal circumstances the Commission within its discretion would allow the Company to earn a return on the unamortized balance.

71. Under the present facts, a management penalty in the approximate sum of $70 million is appropriate with respect to DEC's CCR remediation expenses accounted for in the earlier established Asset Retirement Obligation (ARO) with respect to costs incurred through the end of the test year, as adjusted. Through its use of available ratemaking mechanisms, the Commission is effectively implementing an estimated $70 million penalty by amortizing the $545.7 million over five years with a return on the unamortized balance and then reducing the resulting annual revenue requirement by $14 million for each of the five years.

72. DEC further proposes that it recover on an ongoing basis $201 million in annual coal ash basin closure costs, subject to true-up in future rate cases. The amount sought by the Company is based upon its actual test year (2016) spend. The Company's proposal to recover these ongoing costs as a portion of the rates approved in this Order is not appropriate. Rather, it is appropriate to allow DEC to record its January 1, 2018, and future CCR costs in a deferral account until its next general rate case.

Provisional CCR Cost Recovery

73. DEC's recovery of the CCR costs approved in this proceeding should not be through provisional rates.

CCR Allocation Guidelines

74. It is reasonable and appropriate to allocate all system-level CCR costs using a comprehensive allocation factor that allocates the costs to the entire DEC system.

75. It is reasonable and appropriate to allocate all CCR expenditures by an energy allocation factor, rather than a demand-related production plant allocation factor.

Insurance Litigation

76. It is appropriate, even if this case is appealable to a higher court, to require that DEC, within ten days of the resolution by settlement, dismissal, judgment, or otherwise of the litigation entitled Duke Energy Carolinas, LLC, et al. v. AG Insurance SA/NV, et al., Case No. 17 CVS 5594, Superior Court (Business Court), Mecklenburg County, North Carolina (Insurance Case), file a report with the Commission explaining the result and stating the amount of insurance proceeds to be received or recovered by DEC.

77. It is appropriate to require DEC to place all insurance proceeds it receives or recovers in the Insurance Case in a regulatory liability account and to hold such proceeds until the Commission enters an order directing DEC regarding the appropriate disbursement of the proceeds. The regulatory liability account should accrue a carrying charge at the net-of-tax overall rate of return authorized for DEC in this Order.

78. If meritorious concerns are raised by any party to this docket, or by the Commission, regarding the reasonableness of DEC's efforts to obtain an appropriate amount of recovery in the Insurance Case, it is appropriate to require DEC to bear the burden of proving that it exercised reasonable care and made reasonable efforts to obtain the maximum recovery in the Insurance Case.

Accounting for Deferred Costs

79. The Company is authorized to receive a specific amount of revenue for each of the several deferred costs approved by this Order. If DEC receives revenue for any deferred cost for a longer period of time than the amortization period approved by the Commission for that deferred cost, the Company should continue to record all revenue received for that deferred cost in the specific regulatory asset account established for that deferred cost until its next general rate case.

Revenue Requirement

80. After giving effect to the approved Stipulation and the Commission's decision on contested issues, the annual revenue requirement for DEC will allow the Company a reasonable opportunity to earn the rate of return on its rate base that the Commission has found just and reasonable.

81. DEC should recalculate and file the annual revenue requirement with the Commission within ten days of the issuance of this Order, consistent with the findings and conclusions of this Order. The Company should work with the Public Staff to verify the accuracy

of the filing. DEC should file schedules summarizing the gross revenue and the rate of return that the Company should have the opportunity to achieve based on the Commission's findings and determinations in this proceeding.

82. The appropriate revenue requirement for the first four years should be reduced by the State EDIT Rider decrement of $60.102 million.

Just and Reasonable Rates

83. The base non-fuel and base fuel revenues approved herein are just and reasonable to the customers of DEC, DEC, and all parties to this proceeding, and serve the public interest.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-4

The evidence supporting these findings of fact and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding. These findings and conclusions are informational, procedural, and jurisdictional in nature, and are not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-6

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

On August 25, 2017, DEC filed its Application and initial direct testimony and exhibits, seeking a net increase of approximately $611 million, or 12.8%, in its annual electric sales revenues from its North Carolina retail electric operations. DEC is also proposing the Grid Rider to recover ongoing costs related to the modernization of the Company's electric grid, referred to as the Power Forward initiative. The Grid Rider brings the total impact of the Company's rate request in its Application to approximately $647 million, a 13.6% increase across all customer classes. DEC submitted evidence in this case with respect to revenue, expenses, and rate base using a test period consisting of the 12 months ended December 31, 2016, updated for certain known and actual changes. After rebuttal and supplemental filings, the amount of the Company's requested revenue requirement increased to $700 million. The Company also requested a Grid Rider to recover $35.2 million in its first year.

Company witness Fountain testified that major generating plant projects, nuclear development work, grid improvements and modernization, additions and plant-related expenses, improvements to the Company's Customer Information System (CIS), and additional funding for vegetation management account for the majority of the total additional requested annual revenue requirement. Tr. Vol. 6, p. 163. The remainder of the requested rate adjustment is to recover costs related to environmental requirements associated with the mandated closure of ash basins and other ongoing operational costs, offset by certain regulatory liabilities and decreases in rate base. Id. In addition, DEC proposes a Grid Rider to recover ongoing costs related to the modernization of the Company's electric grid, referred to as the Power Forward Carolinas initiative (Power Forward). Id. at 162.

ELECTRIC – RATE INCREASE

Witness Fountain detailed the Company's recent investments driving the Company's requested rate increase. Id. at 166-77. He described numerous nuclear, fossil, hydro, and solar projects that DEC has completed since its last rate case. Id. at 166. He explained that the Company has retired half of its older, less-efficient coal-fired generation units and is providing customers with increasingly clean energy from new gas-fueled generation, carbon-free nuclear plants, and utility scale solar projects. Id. at 165. For example, he described the Company's new Lee CC plant, which features state-of-the-art technology for increased efficiency and significantly reduced emissions. Id. at 167. In addition, the Company has added two solar facilities to DEC's generating mix and recently completed its relicensing effort for the Catawba-Wateree hydro project. Id.

Since the last rate case, the Company has also made investments designed to improve reliability and customer service. Id. at 168-69. Witness Fountain provided an overview of the Company's ongoing deployment of AMI, which will work in tandem with the Company's implementation of a new Customer Information System (CIS), called "Customer Connect," as well as the grid investments that make up Power Forward. Id. at 168-72. In addition, the Company has requested an increase in the pro forma for vegetation management to help improve grid reliability. Id. at 172-73.

Witness Fountain also outlined the coal ash basin closure costs the Company is seeking to recover in this case and emphasized that the Company is not seeking recovery of any costs incurred in response to the release of coal ash from the Dan River Steam Station in February 2014. Id. at 169-70, 173-77. The Company's Application also requests that the Commission permit DEC to cancel the Lee Nuclear Project as originally envisioned[1] and to recover costs for project development work completed for the project. Id. at 167-68. Finally, witness Fountain noted that the cost increases requested in this case are partially offset by the return of a deferred tax liability to customers. Id. at 170.

Witness Fountain explained that DEC's proposed rate adjustment means customers will still be paying lower rates today than they were in 1991 on an inflation-adjusted basis, and customers will continue to pay rates below the national average and competitive with other utilities in the region. Id. at 178. In addition, he pointed out that the typical residential customer's bill has declined from those approved in 2013 due, in part, to the Company prudently managing fuel costs and jointly dispatching the generation fleet to save $296 million. Id. at 177-78.

Witness Fountain also described the Company's ongoing efforts to mitigate customers' rate impacts. Id. at 180-85. He stated that to help customers reduce bills, the Company is continuing to expand and enhance its portfolio of DSM and EE programs. Id. at 182. According to witness Fountain, the Company offers customers more than a dozen energy-saving programs for every type of energy user and budget; EE programs currently save its customers in the Carolinas over 4.3 billion kWh annually, or over $357 million, which is about 5.4% of total retail kWh sales. Id. Combined, DEC's demand-side management (DSM) and Energy efficiency (EE) programs offset capacity requirements by the equivalent of over seven power plants. Id. Witness Fountain also described how the Company's Share the Warmth program helps low-income individuals and

[1] As discussed below, the Company seeks to retain the combined operating license (COL) granted by the Nuclear Regulatory Commission (NRC) in case circumstances change. Id. at 167.

families cover home energy bills. Id. at 183. Since its inception, the program has provided approximately $26 million in assistance to DEC customers in North Carolina. Id. He explained that the Company allows customers a bill management option that allows them to spread out the impacts of seasonal fluctuations into 12 equal monthly payments. Id. at 184. The Company also offers payment arrangements to eligible customers who are having difficulty paying their entire bill by the due date. Id.

Witness Fountain indicated that the Company's most important objective is to continue providing safe, reliable, affordable, and increasingly clean electricity to its customers with high quality customer service, both today and in the future. Id. at 63. He concluded that the request for a rate increase is made to support investments that benefit DEC customers, and the Company strives to ensure that those investments are made in a cost-effective manner that retains the Company's level of service and competitive rates. Id. at 64.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 7-10

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the testimony of DEC witnesses Fountain, McManeus, Hevert, De May, and Pirro, the testimony of Public Staff witnesses Boswell, Maness, and Parcell, the Stipulation, and the Lighting Settlement.

On February 28, 2018, DEC and the Public Staff entered into and filed an Agreement and Stipulation of Partial Settlement, which resolves some of the issues in this proceeding between these two parties and provides for a revenue requirement increase of approximately $537,500,000 based on the settled issues. The Stipulation is based upon the same test period as the Company's Application.

Witness Fountain explained that the Stipulation would resolve many, but not all, of the revenue requirement issues between the Company and the Public Staff.[1] Tr. Vol. 6, p. 218. He outlined the key aspects of the Stipulation as follows:

Cost of Capital – The Stipulating Parties have agreed to a rate of return on equity of 9.9%, based upon a capital structure containing 52% equity and 48% debt as described by Company

[1] Witness Fountain identified the Unresolved Issues as follows: (1) the Company's request to recover its deferred coal ash costs and its ongoing environmental compliance costs necessary to safely close the Company's coal ash basins, as well as the method by which the Company should allocate coal ash costs; (2) whether it is appropriate to allow a return on the unamortized balance of costs relating to the Lee Nuclear Project during the amortization period; (3) the status of the Company's Nuclear Decommissioning Trust Fund and the Public Staff's proposal to adjust nuclear decommissioning expense; (4) the final update month to be used for ratemaking in this case; (5) the methodology for calculating customer usage through December 2017; (6) the manner in which the Federal Tax Cuts and Jobs Act should be addressed in this case; (7) the amount of annual depreciation expense and associated accumulated depreciation to be used for ratemaking in this case; (8) whether a Grid Rider should be adopted in this proceeding, and if so, which costs would be included in the Grid Rider and the structure of the Grid Rider; (9) the amount of the Basic Facilities Charge; and (10) any other revenue requirement or non-revenue requirement issues other than those issues specifically addressed in the Stipulation or agreed upon in the testimony of the Stipulating Parties. Tr. Vol. 6, pp. 223-24. As addressed by witness Pirro, the Company also has a different view than the Public Staff on certain items related to the Job Retention Rider. Id. at 224.

witnesses Hevert and De May. Id. The Company's debt cost rate shall be set at 4.59%. Id. at 218-19. The resulting weighted average rate of return is 7.35%. Id. at 219.

Distribution Vegetation Management – The Public Staff and DEC have agreed on the amount of distribution vegetation management expenses in an annual amount of $62.6 million on a total system basis. Id. This amount reflects rising contractor rates that are affecting the Company's costs in effectuating its trim cycles. Id. The Stipulation also includes commitments for certain catch up miles and a plan for transparent reporting so that the Commission and interested parties can be informed of the Company's vegetation management plans and expenditures. Id.

Lee CC – The Public Staff and the Company have agreed upon the appropriate level of ongoing O&M and deferred expenses for Lee CC. Id. The Stipulating Parties noted in the Stipulation that Lee CC is not anticipated to come online until March, and the Stipulation contains a plan to hold the record open solely for the purpose of verifying the amounts to be included in rates and confirmation that the plant is operational. Id.

Customer Connect Expenses – The Public Staff and the Company have resolved issues related to this important initiative such that the Company, if the Stipulation is approved, would be allowed to accrue and recover AFUDC on costs during the implementation period to be captured in a regulatory asset. Id. at 219-20.

Other Adjustments – Revenue requirement adjustments were also agreed upon in the Stipulation for Aviation Expenses, Executive Compensation, Board of Directors, Lobbying, Sponsorships, and Donations for the U.S. Chamber of Commerce, Incentive Compensation, and Outside Services, as well as Duke Energy-Piedmont Natural Gas (Piedmont) merger costs to achieve, salaries and wages, and DEBS allocations. Id. at 220. The Stipulating Parties have also agreed to the implementation of a Coal Inventory Rider, and the Company has committed to study coal inventory levels and provide those results for review. Id. The Stipulating Parties also agreed on the return of the state excess deferred income taxes to customers through a four-year rider. Id.

Job Retention Rider – The Stipulating Parties have also agreed to resolve the Company's Job Retention Rider proposal, except for two remaining items to be decided upon by the Commission, as described in the Stipulation. Id.

Other Cost of Service and Rate Design Matters – The Stipulating Parties have also agreed upon rate design and cost of service study parameters as proposed by Company witnesses Pirro and Hager and Public Staff witness Floyd (aside from the amount of the Basic Facilities Charge, which is not resolved by the Stipulation). Id.

Recovery of CCR Costs Through the Fuel Adjustment Clause – The Company has agreed to withdraw its request to recover certain CCR costs through the fuel adjustment clause related to the excavation and movement of CCRs from the Company's Riverbend Plant to the Brickhaven Facility. Id. at 221. The effect of this provision of the Stipulation is that the Company and the Public Staff agree that these costs are left in DEC's deferred CCR balance for consideration of recovery in the Company's base rates. Id.

These accounting and ratemaking adjustments and the resulting revenue requirement effect of the Stipulation are shown in Boswell Third Supplemental and Stipulation Exhibit 1 Corrected and Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues, which provide sufficient support for the annual revenue required on the issues agreed to in the Stipulation. The Stipulating Parties' recommended revenue requirement increase after settled issues is approximately $541,117,000. However, the total adjustment in base rate revenues and the resulting average adjustment cannot be determined until the Commission resolves the Unresolved Issues.[1]

Witness Fountain testified that he attended public witness hearings held by the Commission in this matter and followed the consumer statement positions filed in this docket. Tr. Vol. 6, p. 221. He listened to customers' concerns about the impacts of any rate increase on their families and businesses and noted that the Company is very mindful of these concerns. Id. Witness Fountain believes that the concessions the Company made in the Stipulation fairly balance the needs of DEC's customers with the Company's need to recover substantial investments made in order to continue to comply with regulatory requirements and safely provide high quality electric service to its customers. Id. at 222. He added that the Company's rates need to be adjusted to reflect these investments. Id. Witness Fountain stated that given the size of the necessary capital and compliance expenditures the Company is facing, it is essential that DEC maintain its financial strength and credit quality, so that it will be in a position to finance these needs on reasonable terms for the benefit of its customers. Id. In his opinion, the Company has been able to strike that balance with the Stipulation. Id.

DEC witnesses McManeus, Hevert, De May, and Pirro also testified in support of the Stipulation. Witness De May testified that the Stipulation will support the Company's ability to achieve its financial objectives. Tr. Vol. 4, p. 89. Witness Hevert stated that although the stipulated rate of return on equity is somewhat below the lower bound of his recommended range, he understands the Company has determined that the terms of the Stipulation, in particular the stipulated return on equity and equity ratio, would be viewed by the rating agencies as constructive and equitable. Tr. Vol. 4 pp. 407-08. Witness Pirro testified concerning the effects of the partial settlement on DEC's proposed JRR and the Company's proposed reallocation of revenue resulting from the agreement among the Company, NCLM, and the Cities of Concord and Kings Mountain regarding lighting issues. Tr. Vol. 19, pp. 105-09. Witness McManeus presented exhibits showing the monetary effect of the various issues addressed in the Stipulation.

Public Staff witnesses Boswell, Maness, and Parcell also supported the Stipulation. Witness Boswell stated that the most important benefits of the Stipulation are an aggregate reduction in the increase of specific expense items requested in the Company's application and the avoidance of protracted litigation by the Stipulating Parties before the Commission and, possibly, the appellate courts. Tr. Vol. 26, p. 628. Witness Boswell also presented schedules showing the

[1] Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues shows DEC's revised requested increase incorporating the provisions of the Stipulation and the Company's position on the Unresolved Issues. The resulting proposed revenue requirement increase of the Company is $472,249,000. Boswell Third Supplemental and Stipulation Exhibit 1 Corrected shows the Public Staff's revised recommended change in revenue requirement incorporating the provisions of the Stipulation and a number of downward adjustments reflecting the Public Staff's position on the Unresolved Issues. The resulting proposed revenue requirement by the Public Staff is a decrease in the base rate revenue requirement of $101,230,000.

financial impact of the Stipulation. Witness Maness testified on the impact of the Stipulation on the unresolved CCR issues, and witness Parcell stated that the Stipulation reflects the result of good faith "give-and-take" and compromise-related negotiations among the parties. Tr. Vol. 26, p. 890.

As the Stipulation and the Lighting Settlement have not been adopted by all of the parties to this docket, its acceptance by the Commission is governed by the standards set out by the North Carolina Supreme Court in State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 348 N.C. 452, 500 S.E.2d 693 (1998) (CUCA I), and State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 351 N.C. 223, 524 S.E.2d 10 (2000) (CUCA II). In CUCA I the Supreme Court held that:

> [A] stipulation entered into by less than all of the parties as to any facts or issues in a contested case proceeding under Chapter 62 should be accorded full consideration and weighed by the Commission with all other evidence presented by any of the parties in the proceeding. The Commission must consider the nonunanimous stipulation along with all the evidence presented and any other facts the Commission finds relevant to the fair and just determination of the proceeding. The Commission may even adopt the recommendations or provisions of the nonunanimous stipulation as long as the Commission sets forth its reasoning and makes "its own independent conclusion" supported by substantial evidence on the record that the proposal is just and reasonable to all parties in light of all the evidence presented.

348 N.C. at 466, 500 S.E.2d at 703. However, as the Court made clear in CUCA II, the fact that fewer than all of the parties have adopted a settlement does not permit the Court to subject the Commission's order adopting the provisions of a nonunanimous stipulation to a "heightened standard" of review. 351 N.C. at 231, 524 S.E.2d at 16. Rather, the Court said that Commission approval of the provisions of a nonunanimous stipulation "requires only that the Commission ma[k]e an independent determination supported by substantial evidence on the record [and] ... satisf[y] the requirements of Chapter 62 by independently considering and analyzing all the evidence and any other facts relevant to a determination that the proposal is just and reasonable to all parties." Id. at 231-32, 524 S.E.2d at 16.

The Commission gives substantial weight to the testimony of the Company and Public Staff witnesses regarding the Stipulation and the Lighting Settlement, and finds and concludes that the Stipulation and the Lighting Settlement are the product of the "give-and-take" of the settlement negotiations between DEC and the Public Staff, as well as between DEC and NCLM, and the Cities of Concord, Kings Mountain, and Durham, in an effort to appropriately balance the Company's need for rate relief with the impact of such rate relief on customers. The Stipulation is, therefore, material evidence to be given appropriate weight in this proceeding.

Ample evidence exists in the record to support all of the provisions of the Stipulation, including those which have been contested by some intervenors other than the Stipulating Parties. Accordingly, the Commission is fully justified in adopting the Stipulation through the exercise of its own independent judgment, and finding and concluding through such independent judgment that the Stipulation "is just and reasonable to all parties in light of all the evidence presented."

CUCA I, 348 N.C. at 466, 500 S.E.2d at 703. The Commission hereby adopts the Lighting Settlement in its entirety, and its conclusions as to the individual provisions are discussed in the rate design section of this order. The Commission hereby adopts the Stipulation in its entirety, and its conclusions as to the individual provisions of the Stipulation are set forth more fully below.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 11-19

The evidence supporting these findings of fact and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the public witnesses, the testimony and exhibits of Company witnesses Hevert and De May, Public Staff witness Parcell, Commercial Group witnesses Chriss and Rosa, AGO witness Woolridge, CIGFUR III witness Phillips, Tech Customers witness Strunk and CUCA witness O'Donnell, and the entire record of this proceeding.

Rate of Return on Equity

In its Application, the Company requested approval for its rates to be set using a rate of return on equity of 10.75%. The Stipulation provides for a rate of return on equity of 9.9%, which is a decrease from the 10.2% level authorized by the Commission in the Company's last rate case. For the reasons set forth herein, the Commission finds that a rate of return on equity of 9.9% is just and reasonable.

Rate of return on equity, also referred to as the cost of equity capital, is often one of the most contentious issues to be addressed in a rate case, even in a case such as this one in which a Stipulation between the utility and the consumer advocate has been reached. In the absence of a settlement agreed to by all parties, the Commission must still exercise its independent judgment and arrive at its own independent conclusion as to all matters at issue, including the rate of return on equity. See, e.g., CUCA I, 348 N.C. at 466, 500 S.E.2d at 707. In order to reach an appropriate independent conclusion regarding the rate of return on equity, the Commission should evaluate the available evidence, particularly that presented by conflicting expert witnesses. State ex rel. Utils. Comm'n v. Cooper, 366 N.C. 484, 739 S.E.2d 541, 546-47 (2013) (Cooper I). In this case, the expert witness evidence relating to the Company's cost of equity capital was presented by Company witness Hevert, Public Staff witness Parcell, Commercial Group witnesses Chriss and Rosa, AGO witness Woolridge, CIGFUR III witness Phillips, Tech Customers witness Strunk, and CUCA witness O'Donnell. No rate of return on equity expert evidence was presented by any other party.

In addition to its evaluation of the expert evidence, the Commission must also make findings of fact regarding the impact of changing economic conditions on customers when determining the proper rate of return on equity for a public utility. Cooper I, 366 N.C. 484, 739 S.E.2d at 548. This was a factor newly announced by the Supreme Court in its Cooper I decision, and which was not previously required by the Commission, the Court of Appeals, or the Supreme Court as an element to be considered in connection with the Commission's determination of an appropriate rate of return on equity. The Commission's discussion of the evidence with respect to the findings required by Cooper I is set out in detail in this Order.

Cooper I was the result of the Supreme Court's reversal and remand of the Commission's approval of the agreement regarding the rate of return on equity in a stipulation between the Public Staff and DEC in DEC's 2011 Rate Case. The Commission has had occasion to apply both prongs of Cooper I in subsequent orders, specifically the following:

- Order Granting General Rate Increase in DEP's 2013 Rate Case, Docket No. E-2, Sub 1023 (May 30, 2013) (2013 DEP Rate Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 444, 761 S.E.2d 640 (2014) (Cooper III);[1]
- Order on Remand resulting from the Supreme Court's Cooper I decision, in Docket No. E-7, Sub 989 (October 23, 2013) (DEC Remand Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 644, 766 S.E.2d 827 (2014) (Cooper IV);
- Order Granting General Rate Increase in DEC's 2013 Rate Case, Docket No. E-7, Sub 1026 (September 24, 2013) (2013 DEC Rate Order), which was affirmed by the Supreme Court in State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 741, 767 S.E.2d 305 (2015) (Cooper V);
- Order on Remand resulting from the Supreme Court's Cooper II decision, in Docket No. E-22, Sub 479 (July 23, 2015) (DNCP Remand Order), which was not appealed to the Supreme Court;
- Order Approving Rate Increase and Cost Deferrals and Revising PJM Regulatory Conditions, in Docket No. E-22, Sub 532, dated December 22, 2016 (2016 DNCP Rate Order), which was not appealed to the Supreme Court; and
- Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase, in Docket No. E-2, Sub 1142, dated February 23, 2018 (2018 DEP Rate Order).

In order to give full context to the Commission's decision herein and to elucidate its view of the requirements of the General Statutes as they relate to rate of return on equity, as interpreted by the Supreme Court in Cooper I, the Commission deems it important to provide in this Order an overview of the general principles governing this subject.

A. Governing Principles in Setting the Rate of Return on Equity

First, there are, as the Commission noted in the 2013 DEP Rate Order, constitutional constraints upon the Commission's rate of return on equity decisions established by the United States Supreme Court decisions in Bluefield Waterworks & Improvement Co., v. Pub. Serv. Comm'n of W. Va., 262 U.S. 679 (1923) (Bluefield), and Fed. Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944) (Hope):

> To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting an ROE, the Commission must still provide the public utility with the opportunity, by sound management, to

[1] An intervening Cooper case, State ex rel. Utils. Comm'n v. Cooper, 367 N.C. 430, 758 S.E.2d 635 (2014) (Cooper II), arose from the 2012 Rate Case by Dominion North Carolina Power (DNCP) and resulted in a remand to the Commission, inasmuch as the Commission's Order in that case predated Cooper I.

> (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utils. Comm'n v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S.E.2d 705, 757 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return declared" in Bluefield and Hope. Id.

2013 DEP Rate Order, at 29.

Second, the rate of return on equity is, in fact, a cost. The return that equity investors require represents the cost to the utility of equity capital. In his dissenting opinion in Missouri ex rel. Southwestern Bell Tel. Co. v. Missouri Pub. Serv. Comm'n, 262 U.S. 276 (1923), Justice Brandeis remarked upon the lack of any functional distinction between the rate of return on equity (which he referred to as a "capital charge") and other items ordinarily viewed as business costs, including operating expenses, depreciation, and taxes:

> Each is a part of the current cost of supplying the service; and each should be met from current income. When the capital charges are for interest on the floating debt paid at the current rate, this is readily seen. But it is no less true of a legal obligation to pay interest on long-term bonds...and it is also true of the economic obligation to pay dividends on stock, preferred or common.

Id. at 306. (Brandeis, J. dissenting) (emphasis added). Similarly, the United States Supreme Court observed in Hope, "From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business...[which] include service on the debt and dividends on the stock." Hope, 320 U.S. at 591, 603.

Leading academic commentators also define rate of return on equity as the cost of equity capital. Professor Charles Phillips, for example, states that "the term 'cost of capital' may be defined as the annual percentage that a utility must receive to maintain its credit, to pay a return to the owners of the enterprise, and to ensure the attraction of capital in amounts adequate to meet future needs." Phillips, Charles F., Jr., The Regulation of Public Utilities (Public Utilities Reports, Inc. 1993), at 388. Professor Roger Morin approaches the matter from the economist's viewpoint:

> While utilities enjoy varying degrees of monopoly in the sale of public utility services, they must compete with everyone else in the free open market for the input factors of production, whether it be labor, materials, machines, or capital. The prices of these inputs are set in the competitive marketplace by supply and demand, and it is these input prices which are incorporated in the cost of service computation. This is just as true for capital as for any other factor of production. Since utilities must go to the open capital market and sell their securities in competition with every other issuer, there is obviously a market price to pay for the capital they require, for example, the interest on capital debt, or the expected return on equity.

* * *

> [T]he cost of capital to the utility is synonymous with the investor's return, and the cost of capital is the earnings which must be generated by the investment of that capital in order to pay its price, that is, in order to meet the investor's required rate of return.

Morin, Roger A., Utilities' Cost of Capital (Public Utilities Reports, Inc. 1984), at 19-21 (emphasis added). Professor Morin adds: "The important point is that the prices of debt capital and equity capital are set by supply and demand, and both are influenced by the relationship between the risk and return expected for those securities and the risks expected from the overall menu of available securities." Id. at 20 (emphasis added).

Changing economic circumstances as they impact DEC's customers may affect those customers' ability to afford rate increases. For this reason, customer impact weighs heavily in the overall rate setting process, including, as set out in detail elsewhere in this Order, the Commission's own decision of an appropriate authorized rate of return on equity. In addition, in the event of a settlement, customer impact no doubt influences the process by which the parties to a rate case decide to settle contested matters and the level of rates achieved by any such settlement.

However, a customer's ability to afford a rate increase has absolutely no impact upon the supply of or the demand for capital. The economic forces at work in the competitive capital market determine the cost of capital – and, therefore, the utility's required rate of return on equity. The cost of capital does not go down because some customers may find it more difficult to pay for an increase in electricity prices as a result of prevailing adverse economic conditions, any more than the cost of capital goes up because some customers may be prospering in better times.

Third, the Commission is and must always be mindful of the North Carolina Supreme Court's command that the Commission's task is to set rates as low as possible consistent with the dictates of the United States and North Carolina Constitutions. State ex rel. Utils. Comm'n v. Pub. Staff-N. Carolina Utils. Comm'n, 323 N.C. 481, 490, 374 S.E.2d 361, 370 (1988) (Public Staff). Further, and echoing the discussion above concerning the fact that rate of return on equity represents the cost of equity capital, the Commission must execute the Supreme Court's command "irrespective of economic conditions in which ratepayers find themselves." 2013 DEP Rate Order, at 37. The Commission noted in that Order:

> The Commission always places primary emphasis on consumers' ability to pay where economic conditions are difficult. By the same token, it places the same emphasis on consumers' ability to pay when economic conditions are favorable as when the unemployment rate is low. Always there are customers facing difficulty in paying utility bills. The Commission does not grant higher rates of return on equity when the general body of ratepayers is in a better position to pay than at other times, which would seem to be a logical but misguided corollary to the position the Attorney General advocates on this issue.

Id. Indeed, in Cooper I the Supreme Court emphasized "changing economic conditions" and their impact upon customers. Cooper I, 366 N.C. at 484, 739 S.E.2d at 548.

Fourth, while there is no specific and discrete numerical basis for quantifying the impact of economic conditions on customers, the impact on customers of changing economic conditions is embedded in the rate of return on equity expert witnesses' analyses. The Commission noted this in the 2013 DEP Rate Order: "This impact is essentially inherent in the ranges presented by the return on equity expert witnesses, whose testimony plainly recognized economic conditions – through the use of econometric models – as a factor to be considered in setting rates of return." 2013 DEP Rate Order, at 38.

Fifth, under long-standing decisions of the North Carolina Supreme Court, the Commission's subjective judgment is a necessary part of determining the authorized rate of return on equity. Public Staff, 323 NC 481, 490, 374 S.E.2d 361, 369. As the Commission also noted in the 2013 DEP Rate Order:

> Indeed, of all the components of a utility's cost of service that must be determined in the ratemaking process, the appropriate ROE [rate of return on equity] the one requiring the greatest degree of subjective judgment by the Commission. Setting an ROE [rate of return on equity] for regulatory purposes is not simply a mathematical exercise, despite the quantitative models used by the expert witnesses. As explained in one prominent treatise,
>
>> Throughout all of its decisions, the [United States] Supreme Court has formulated no specific rules for determining a fair rate of return, but it has enumerated a number of guidelines. The Court has made it clear that confiscation of property must be avoided, that no one rate can be considered fair at all times and that regulation does not guarantee a fair return. The Court also has consistently stated that a necessary prerequisite for profitable operations is efficient and economical management. Beyond this is a list of several factors the commissions are supposed to consider in making their decisions, but no weights have been assigned.
>>
>> The relevant economic criteria enunciated by the Court are three: financial integrity, capital attraction and comparable earnings. Stated another way, the rate of return allowed a public utility should be high enough: (1) to maintain the financial integrity of the enterprise, (2) to enable the utility to attract the new capital it needs to serve the public, and (3) to provide a return on common equity that is commensurate with returns on investments in other enterprises of corresponding risk. These three economic criteria are interrelated and have been used widely for many years by regulatory commissions throughout the country in determining the rate of return allowed public utilities.
>>
>> In reality, the concept of a fair rate of return represents a "zone of reasonableness." As explained by the Pennsylvania commission:

> There is a range of reasonableness within which earnings may properly fluctuate and still be deemed just and reasonable and not excessive or extortionate. It is bounded at one level by investor interest against confiscation and the need for averting any threat to the security for the capital embarked upon the enterprise. At the other level it is bounded by consumer interest against excessive and unreasonable charges for service.
>
> As long as the allowed return falls within this zone, therefore, it is just and reasonable. . . . It is the task of the commissions to translate these generalizations into quantitative terms.

Charles F. Phillips, Jr., The Regulation of Public Utilities, 3d ed. 1993, pp. 382. (notes omitted).

2013 DEP Rate Order, pp. 35-36.

Thus, the Commission must exercise its subjective judgment so as to balance two competing rate of return on equity-related factors – the economic conditions facing the Company's customers and the Company's need to attract equity financing in order to continue providing safe and reliable service.

The Supreme Court in Cooper V affirmed the 2013 DEC Rate Order, in which this framework was fully articulated. But to the framework the Commission can add additional factors based upon the Supreme Court's decisions in Cooper III, Cooper IV, and Cooper V. Specifically, the Supreme Court held that nothing in Cooper I requires the Commission to "quantify" the influence of changing economic conditions upon customers (see, e.g., Cooper V, 367 N.C. at 745-46, 767 S.E.2d at 308; Cooper IV, 367 N.C. at 650, 766 S.E.2d at 829; Cooper III, 367 N.C. at 450, 761 S.E.2d at 644), and, indeed, the Supreme Court reiterated that setting the rate of return on equity is a function of the Commission's subjective judgment: "Given th[e] subjectivity ordinarily inherent in the determination of a proper rate of return on common equity, there are inevitably pertinent factors which are properly taken into account but which cannot be quantified with the kind of specificity here demanded by [the appellant]." Cooper III, 367 N.C. at 450, 761 S.E.2d at 644, quoting Public Staff, 323 N.C. at 498; 374 S.E.2d at 370.

Finally, the Supreme Court discussed with approval the Commission's reference to and reliance upon expert witness testimony that used econometric models that the Commission had noted "inherently" contained the effects of changing economic circumstances upon customers, and also discussed with approval the Commission's reference to and reliance upon expert witness testimony correlating the North Carolina economy with the national economy. See, e.g., Cooper V, 367 N.C. at 747, 767 S.E.2d at 308; Cooper III, 367 N.C. at 451, 761 S.E.2d at 644.

It is against this backdrop of overarching principles that the Commission turns to the evidence presented in this case.

B. Application of the Governing Principles to the Rate of Return Decision

1. Evidence from Expert Witnesses on Cost of Equity Capital

Company witness Hevert recommended in his direct testimony a rate of return on equity of 10.75%, which was slightly above the midpoint of his recommended range of 10.25% to 11.00%. Witness Hevert's direct testimony explained the importance of a utility being allowed to earn a rate of return on equity that is adequate to attract capital at reasonable terms, under varying market conditions, and that will enable the utility to provide safe, reliable electric service while maintaining its financial integrity. Witness Hevert explained that unlike the cost of debt, the cost of equity is not observable and must be estimated based on market data. Witness Hevert noted that since all financial models are subject to various assumptions and constraints, equity analysts and investors tend to use multiple methods to develop their return recommendations. Witness Hevert used the Constant Growth and Multi-Stage forms of the Discounted Cash Flow (DCF) model; the Capital Asset Pricing Model (CAPM); and the Bond Yield Risk Premium. He testified that his recommendation also takes into consideration factors such as DEC's generation portfolio and the risks associated with environmental regulations, flotation costs, and DEC's planned capital investment program. Witness Hevert also provided extensive testimony concerning the capital market environment and addressed the effect those market conditions have on the return investors require in order to commit their capital to equity securities. Witness Hevert also focused upon capital market conditions as they affect the Company's customers in North Carolina.

To calculate the dividend yield for the DCF, witness Hevert used the average daily closing prices for the 30-trading days, 90-trading days, and 180-trading days as of June 16, 2017. He then calculated the DCF results using each of the following growth terms:

- The Zack's consensus long-term earnings growth estimates;
- The First Call consensus long-term earnings growth estimates; and
- The Value Line earnings growth estimates.

Witness Hevert testified that for each proxy company he calculated the mean, mean high, and mean low results. For the mean result, he combined the average of the EPS growth rate estimates reported by Value Line, Zacks, and First Call with the subject company's dividend yield for each proxy company and then calculated the average result for those estimates. His constant growth DCF results ranged from 7.91% to 9.83%.[1]

He testified with regard to his constant growth DCF that regardless of the method employed, an authorized rate of return on equity that is well below returns authorized for other utilities (1) runs counter to the Hope and Bluefield "comparable risk" standard, (2) would place DEC at a competitive disadvantage, and (3) makes it difficult for DEC to compete for capital at reasonable terms.

[1] Table 11 in the rebuttal testimony of witness Hevert contains updated analytical results for his DCF, CAPM, and Bond Yield Risk Premium analyses. However, in summarizing his rebuttal testimony, witness Hevert testified that "[n]one of their [opposing witnesses] arguments caused me to revise my conclusions or recommendations."

DEC witness Hevert testified that the Multi-Stage DCF model, which is an extension of the constant growth form, enables the analyst to specify growth rates over three distinct stages (i.e., time periods). As with the constant growth form of the DCF model, the Multi-Stage form defines the cost of equity as the discount rate that sets the current price equal to the discounted value of future cash flows. He testified in the first two stages, "cash flows" are defined as projected dividends. In the third stage, "cash flows" equal both dividends and the expected price at which the stock will be sold at the end of the period (i.e., the terminal price). He calculated the terminal price based on the Gordon model, which defines the price as the expected dividend divided by the difference between the cost of equity (i.e., the discount rate) and the long-term expected growth rate.

Witness Hevert testified that his Multi-Stage DCF long-term growth rate was 5.38% based on the real gross domestic product (GDP) growth rate of 3.22% from 1929 through 2016 and an inflation rate of 2.09%. He testified that the GDP growth rate is calculated as the compound growth rate in companies. Witness Hevert testified that his Multi-Stage DCF analysis produced a range of results from 8.70% to 9.31%. Using the proxy group price-to-earnings ratio to calculate a terminal valve, his Multi-Stage DCF produced a range of results from 9.52% to 11.05%.

Witness Hevert testified that for his CAPM analysis risk-free rate, he used the current 30-day average yield on 30-year Treasury bonds of 2.90% and the near-term projected 30-year Treasury yield of 3.40%. For the market risk premium, he calculated the market capitalization weighted average total return based on the constant growth DCF model for each of the Standard & Poor's (S&P) 500 companies using data from Bloomberg and Value Line. He then subtracted the current 30-year Treasury yield from that amount to arrive at the market DCF-derived forward looking market risk premium estimate. Witness Hevert used the beta coefficients reported by Bloomberg and Value Line. He testified that his CAPM analysis suggested a rate of return on equity range of 9.11% to 11.05%.

Witness Hevert testified that for his risk premium analysis, he estimated the cost of equity as the sum of the equity risk premium and the yield on a particular class of bonds. He testified that the equity risk premium is typically estimated using a variety of approaches, some of which incorporate ex-ante, or forward-looking, estimates of the cost of equity, and others that consider historical, or ex-post, estimates. An alternative approach is to use actual authorized returns for electric utilities to estimate the equity risk premium.

Witness Hevert testified that he first defined the risk premium as the difference between the authorized rate of return on equity and the then-prevailing level of the long-term 30-year Treasury yield. He then gathered data for 1,517 electric utility rate proceedings between January 1980 and June 16, 2017. In addition to the authorized rate of return on equity, he also calculated the average period between the filing of the case and the date of the final order (the "lag period"). In order to reflect the prevailing level of interest rates during the pendency of the proceedings, he calculated the average 30-year Treasury yield over the average lag period of approximately 201 days. He testified that to analyze the relationship between interest rates and the equity risk premium, he used regression analyses. Witness Hevert testified that based upon the regression coefficients, the implied rate of return on equity in his risk premium analysis is between 9.97% and 10.33%.

Public Staff witness Parcell performed three rate of return on equity analyses using the constant growth DCF, the CAPM, and comparable earnings.

Witness Parcell considered five indicators of growth in his DCF analyses:

- Years 2012-2016 (five-year average) earnings retention, or fundamental growth (per Value Line);
- Five-year average of historic growth in EPS, dividends per share (DPS), and book value per share (BVPS) (per Value Line);
- Years 2017, 2018, and 2020-2022 projections of earnings retention growth (per Value Line);
- Years 2014-2016 to 2020-2022 projections of EPS, DPS, and BVPS (per Value Line); and
- Five-year projections of EPS growth (per First Call).

Witness Parcell testified that investors do not always use one single indicator of growth. His analysis using these five dividend growth indicators materially differed from DEC witness Hevert's sole use of analysts' predictions of EPS growth to determine DCF dividend growth.

Witness Parcell performed his DCF analysis on his proxy group of 11 companies, where using only the high mean growth rate the cost of capital was 8.2%, and the Hevert proxy group of 20 companies, where using only the highest mean growth rate the cost of capital was 9.2%. He recommended a DCF rate of return on equity of 8.7% for DEC as the mid-point of the two highest mean growth rates.

Witness Parcell testified that the constant growth DCF model currently produced cost of equity results that are lower than has been the case in recent years. This is, in part, a reflection of the decline in capital costs (e.g., in terms of interest rates). He believed that the constant growth DCF model remains relevant and informative. It was also his personal experience that of all available cost equity models, this model is used the most by cost of capital witnesses. Nevertheless, in order to be conservative, he focused only on the highest of the DCF results in making his recommendations.

Witness Parcell testified that he did not perform a multi-stage DCF, as he did not believe that the results of a properly-constructed multi-stage DCF would materially differ from the results of his constant-growth DCF.

Public Staff witness Parcell also performed a CAPM analysis, which describes the relationship between a security's investment risk and its market rate of return. For his risk-free rate, he used the three-month average yield for 20-year Treasury bonds. For the beta, which indicates the security's variability of return relative to the return variability of the overall capital market, he used the most recent Value Line beta for each company in his proxy group. He calculated the risk premium by comparing the annual returns on equity of the S&P 500 with the actual yields of the 20-year Treasury bonds, by comparing the total returns (i.e., dividends/interest plus gains/losses) for the S&P 500 group as well as long-term government bonds, using both the arithmetic and geometric means. These analyses revealed the average expected risk premium to be 5.8%. His CAPM results collectively indicated a rate of return on equity of 6.3% to 6.7% for the Parcell and Hevert proxy groups.

However, witness Parcell did not directly consider his CAPM results. He testified that he has conducted CAPM studies in his cost of equity analyses for many years. He stated that it is apparent that the CAPM results are currently significantly less than the DCF and comparable earnings results. According to his testimony, there are two reasons for the lower CAPM results. First, risk premiums are lower currently than was the case in prior years. This is the result of lower equity returns that have been experienced beginning with the Great Recession and continuing over the past several years. This is also reflective of a decline in investor expectations of equity returns and risk premiums. Second, the level of interest rates on Treasury bonds (i.e., the risk free rate) has been lower in recent years. This is partially the result of the actions of the Federal Reserve System to stimulate the economy. This also impacts investor expectation of returns in a negative fashion.

Witness Parcell testified that, initially, investors may have believed that the decline in Treasury yields was a temporary factor that would soon be replaced by a rise in interest rates. However, this has not been the case, as interest rates have remained low and have continued to decline for the past six-plus years. As a result, he believes that it cannot be maintained that low interest rates (and low CAPM results) are temporary and do not reflect investor expectations.

Consequently, the CAPM results should be considered as one factor in determining the cost of equity for DEC. Even though witness Parcell did not factor the CAPM results directly into his cost of equity recommendation, he believed these lower results are indicative of the recent and continuing decline in utility costs of capital, including the cost of equity.

Witness Parcell also performed a comparable earnings analysis. He testified that the cost of capital is an opportunity cost: the prospective return available to investors from alternative investments of similar risk. He testified that the established legal standards are consistent with the opportunity cost principle. The two Supreme Court cases most frequently cited (Bluefield and Hope) hold that the return to the equity owners must be sufficient:

1. To maintain the credit of the enterprise and confidence in its financial integrity;
2. To permit the enterprise to attract required additional capital on reasonable terms; and
3. To provide the enterprise and its investors with an earnings opportunity commensurate with the returns available on investments in other enterprises having corresponding risks.

Witness Parcell further testified that the comparable earnings method normally examines the experienced and/or projected return on book common equity. The logic for examining returns on book equity follows from the use of original cost rate base regulation for public utilities, which uses a utility's book common equity to determine the cost of capital. This cost of capital is, in turn, used as the fair rate of return, which is then applied (multiplied) to the book value of rate base to establish the dollar level of capital costs to be recovered by the utility. This technique is thus consistent with the rate base rate of return methodology used to set utility rates. Witness Parcell applied the comparable earnings methodology by examining realized rates of return on equity for the Hevert and Parcell groups of proxy companies, as well as unregulated companies, and evaluated investor acceptance of these returns by reference to the resulting market-to-book ratios. Witness Parcell used the experienced rates of return on equity of the two proxy groups of utilities for the years 2002–2008 (the most recent business cycle) and 2009-2016 (the current business cycle), and projected return on equity for 2017, 2018, and 2020–2022 (the time periods estimated by Value Line). He testified that his results indicate that historic rates of return on equity of 9.7% to 11.0% have been adequate to produce market-to-book ratios of 145% to 159% for the groups of utilities. Furthermore, projected rates of return on equity for 2017, 2018, and 2020–2022 are within a range of 10.0% to 11.0% for the utility groups. These relate to market-to-book ratios of 178% or greater. He also noted that the rates of return on equity and market-to-book ratios of his proxy group, which all range over $20 billion in market value exceed those of witness Hevert's proxy group, which are not selected based upon size.

Witness Parcell also conducted a comparable earnings analysis examining the S&P's 500 Composite group. Over the same two business cycles, the group's average rates of return on equity ranged from 12.4% to 13.3%, with average market-to-books ranging between 233% and 275%. In order to apply the S&P 500 Composite rates of return on equity to the cost of equity for the proxy utilities, he compared the risk levels of the electric utilities and the competitive companies comparing the respective Value Line Safety Ranks, Value Line Betas, Value Line Financial Strengths, and S&P Stock Rankings, as shown on witness Parcell's direct testimony Exhibit DCP – 1, Schedule 12. Witness Parcell testified that based upon recent and prospective rates of return on equity and market-to-book analyses, his comparable earnings analysis indicates that the rate of return on equity for the proxy utilities is in the range of 9.0% to 10.0%.

Witness Parcell testified in support of the 9.9% rate of return on equity in the Stipulation. He explained that the Stipulation allows a 9.9% rate of return on equity and a capital structure of 52% equity and 48% long-term debt. Witness Parcell explained that the stipulated rate of return on equity is identical to the Commission's recent decisions in the 2016 DNCP Rate Order and the 2018 DEP Rate Order. The overall rate of return in the Stipulation is lower than the Company requested. Witness Parcell also explained that the 9.9% rate of return on equity falls within the range of his comparable earnings analysis.

Public Staff witness Parcell testified that in his experience, settlements are generally the result of good faith "give-and-take" and compromise-related negotiations among the parties of utility rate proceedings, involving the utility and other parties. He testified that it was also his understanding that settlements, as well as the individual components of the settlements, are often achieved by the respective parties' agreements to accept otherwise unacceptable individual aspects of individual issues in order to focus on other issues. He testified it was his understanding that the Stipulation is "global," except to the issues of Coal Ash (except for Coal Ash sales), Lee Nuclear return, nuclear decommissioning, updates, customer usage methodology, Federal income taxes, depreciation, Power Forward and the Grid Rider, and BFC.

Witness Parcell testified that it remains his position that should this be a fully litigated proceeding, he would continue to recommend a capital structure with 50% common equity and 50% long-term debt, a rate of return on equity of 9.10% (approximate mid-point of his range of 8.70% to 9.50%), and a cost of debt of 4.59%. However, given the benefits associated with entering into a settlement, it was his view that the cost of capital components of the Stipulation are a reasonable resolution to otherwise contentious issues.

Witness Parcell testified that each of the three cost of capital components - capital structure, rate of return on equity, and debt cost - can be considered as reasonable within the context of the Stipulation. He testified that DEC and the Public Staff, in their respective testimonies, proposed fundamentally different views on a number of issues, such as current market conditions and related current costs of common equity, as well as the appropriate capital structure. The Stipulation represents a compromise, or middle ground between their respective positions. He also testified that the cost of capital components of the Stipulation are reasonable within a broad negotiation and resolution of many of the issues in this proceeding.

With respect to the rate of return on equity component of the Stipulation, witness Parcell testified that DEC requested a rate of return on equity of 10.75%, which he noted in his direct testimony was well above industry norms in recent years. He recommended a 9.1% rate of return on equity (i.e., approximate mid-point of a rate of return on equity range of 8.70% to 9.50%, which was derived from his DCF model results of 8.7% and his comparable earnings results of 9.50%). Public Staff witness Parcell testified that while he continues to believe his specific 9.1% rate of return on equity recommendation is appropriate at this time, the upper end of his comparable earnings range of 9.0% to 10.0% contains the 9.9% Stipulation rate of return on equity level. He also stated that a 9.9% rate of return on equity is 0.80% above his 9.1% recommendation, and is 0.85% below DEC's 10.75% rate of return on equity request. As a result, the 9.9% rate of return on equity in the Stipulation is a "compromise" between DEC's and the Public Staff's respective proposals. The 9.9% rate of return on equity also reflects a reduction from the 10.2% authorized in DEC's last rate proceeding.

Witness Parcell testified that he had employed the comparable earnings method in virtually all of his cost of capital analyses going back to 1972. He testified that the comparable earnings analysis is based on the opportunity cost principle and is consistent with and derived from the Bluefield and Hope decisions of the U.S. Supreme Court, which are recognized as the primary standards for the establishment of a fair rate of return for a regulated public utility. The comparable earnings method is also consistent with the concept of rate base regulation for utilities, which employs the book value of both rate base and the capital financing rate base. He testified that his comparable earnings analyses consider the recent historic and prospective rates of return on equity for the groups of proxy utility companies utilized by himself and DEC witness Hevert. He testified that his conclusion of 9.0% to 10.0% reflects the actual rates of return on equity of the proxy companies, as well as the market-to-book ratios of these companies. Witness Parcell further testified that in the 2016 DNCP Rate Order, the Commission approved a settlement between DNCP and the Public Staff with a common equity ratio of 51.75% (versus the requested actual common equity ratio of 53.92%) and a rate of return on equity of 9.9% (versus the 10.5% requested), and in the 2018 DEP Rate Order, the Commission approved a common equity ratio of 52% versus the requested common equity ratio of 53%, and a rate of return on common equity of 9.9% versus the 10.75% DEP requested. The Commission approved the cost of capital components of both of those proposed settlements. Witness Parcell testified that the equity ratio and rate of return on equity in the Stipulation in the current DEC proceeding are consistent with those of the DNCP and DEP proceedings.

DEC witness Hevert also testified in support of the Stipulation on the agreed-upon rate of return on equity, capital structure, and overall rate of return contained in the Stipulation. He testified that although the stipulated rate of return on equity is below the lower bound of his recommended range of 10.25%, he recognized that the Stipulation represents negotiations among DEC and the Public Staff regarding otherwise contested issues. He testified that the Company has determined that the terms of the Stipulation, in particular the stipulated rate of return on equity and equity ratio, would be viewed by the rating agencies as constructive and equitable, and that he understands and respects that determination.

Witness Hevert testified that although the stipulated rate of return on equity falls below his recommended range, the low end of which is 10.25%, it is within the range of the analytical results presented in his direct and rebuttal testimonies. He testified that capital market conditions continue to evolve and as a consequence, the models used to estimate the cost of equity produce a wide range of estimates. Witness Hevert testified that he recognizes the benefits associated with DEC's decision to enter into the Stipulation and as such, it is his view that the 9.90% stipulated rate of return on equity is a reasonable resolution of an otherwise contentious issue.

Witness Hevert testified that he considered the stipulated rate of return on equity in the context of authorized returns for other vertically-integrated electric utilities. He testified that from January 2014 through February 2018, the average authorized rate of return on equity for vertically-integrated electric utilities was 9.81%, only nine basis points from the stipulated rate of return on equity. Of the 88 cases decided during that period, 33 included authorized returns of 9.90% or higher.

Witness Hevert testified that given DEC's need to access external capital and the weight rating agencies place on the nature of the regulatory environment, he believes it is important to consider the extent to which the jurisdictions that recently have authorized rates of return on equity for electric utilities are viewed as having constructive regulatory environments. Witness Hevert testified that North Carolina generally is considered to have a constructive regulatory environment. He testified that Regulatory Research Associates (RRA), which is a widely referenced source of rate case data, provides an assessment of the extent to which regulatory jurisdictions are constructive from investors' perspectives, or not. As RRA explains, less constructive environments are associated with higher levels of risk:

> RRA maintains three principal rating categories, Above Average, Average, and Below Average, with Above Average indicating a relatively more constructive, lower-risk regulatory environment from an investor viewpoint, and Below Average indicating a less constructive, higher-risk regulatory climate from an investor viewpoint, Within the three principal rating categories, the numbers 1, 2, and 3 indicate relative position. The designation 1 indicates a strong (more constructive) rating; 2, a mid-range rating; and 3, a weaker (less constructive) rating. We endeavor to maintain an approximate equal number of ratings above the average and below the average.[1]

[1] Source: RRA, accessed November 20, 2017.

Within RRA's ranking system, North Carolina is rated "Average/1," which witness Hevert testified falls in the top one-third of the 53 regulatory commissions ranked by RRA. Witness Hevert testified that the stipulated rate of return on equity falls ten to 12 basis points below the mean and median authorized rate of return on equity, respectively, for jurisdictions that are comparable to North Carolina's constructive regulatory environment, and 40 basis points above the median return authorized in less supportive jurisdictions. Taken from that perspective, the stipulated rate of return on equity is a reasonable, if not somewhat conservative, measure of DEC's cost of equity.

AGO witness Woolridge performed a DCF and CAPM for both his and witness Hervert's proxy groups of electric utilities. Witness Woolridge developed his DCF growth rate after reviewing 13 growth rate measures including historic and projected growth rate measures and evaluating growth in dividends, book value, EPS, and growth rate forecasts from Yahoo, Reuters, and Zack's. AGO witness Woolridge testified that it is well known that long-term EPS growth rate forecasts of Wall Street securities analysts are overly optimistic and upwardly biased. AGO witness Woolridge in his supplemental testimony revised his DCF equity cost rate to 8.80% for his proxy group, and 8.80% for the Hevert proxy group.

In witness Woolridge's CAPM, he used for the risk free interest rate the yield on 30-year U.S. Treasury bonds. He used the Value Line Investment Survey betas of 0.70 for his proxy group and 0.70 for witness Hevert's proxy group. Witness Woolridge's market risk premium was 5.5% based in part upon the September 2017 CFO survey conducted by CFO Magazine and Duke University, which included approximately 300 responses, in which the expected market risk premium was 4.32%. He testified thus, that his 5.5% value is a conservatively high estimate of the market risk premium. Witness Woolridge also testified that Duff & Phelps, a well-known valuation and corporate finance advisor that publishes extensively on cost of capital, recommended in 2017 using a 5.5% market risk premium, for the U.S. Witness Woolridge's CAPM equity cost rate was 7.9% for both his and witness Hevert's proxy groups. Witness Woolridge gave primary weight to his DCF results in both his direct and supplemental testimony.

CUCA witness O'Donnell testified that the most useful methodology to produce realistic rate of return on equity results relative to prevailing capital markets, when applied appropriately, is the DCF. To check the reasonableness of his DCF analysis and to gauge the proper rate of return on equity to recommend within the DCF range, he also performed a comparable earnings analysis and CAPM. Witness O'Donnell utilized a proxy group similar to DEC witness Hevert's, except witness O'Donnell eliminated SCANA and Dominion, as these companies are involved in ongoing merger discussions.

Witness O'Donnell calculated his DCF dividend growth rate using the historical retention of earnings, the historical ten-year and five-year compound annual EPS, DPS, and BVPS as reported by Value Line, the Value Line forecasted compound annual rate of change for EPS, DPS, and BVPS, and the forecasted rate of change for EPS that industry analysts supplied to Charles Schwab and Company. Witness O'Donnell's DCF growth rate range was 4.75% to 5.75%, and his calculated DCF range was 8.0% to 9.0%.

In his comparable earning analysis, CUCA witness O'Donnell examined the earned returns on equity for his proxy group and Duke Energy Corporation over the period 2015 through 2022, balancing historical and forecasted returns. The past and forecasted earned returns for the proxy group were 9.25% to 10.25%, and the past and forecasted earned returns for Duke Energy Corporation were 7.5% to 8.5%. His recommended rate of return on equity based upon his comparable earnings analysis ranged from 8.75% to 9.75%.

Witness O'Donnell testified that for his CAPM, he used for the risk-free rate and the current 30-year Treasury bond yields of 2.9%. He expected the current interest rate environment to remain relatively stable for many years to come, citing statements by Federal Reserve Chairperson Janice Yellen. "Yellen Says Forces Holding Down Rates May Be Long Lasting," Barrons, June 16, 2016. The beta used for his proxy group was 0.72 and the beta for Duke Energy Corporation was 0.60. To determine the risk premium in his CAPM, witness O'Donnell used the long-term geometric and arithmetic returns for both large company equities and fixed income Long-Term Government Bonds with the resulting risk premium ranging from 4.60% to 6.20%. He also evaluated the predicted total market returns by a group of market experts, which ranged from 4.5% to 8%. He concluded that his equity risk premium was in the range of 4% to 6% and his CAPM resulted in a return on equity range of 5.06% to 7.52%.

Commercial Group witnesses Chriss and Rosa testified that the average of 97 reported electric utility rate case rates of return on equity authorized by commissions to investor-owned utilities in 2015, 2016 and 2017 was 9.63%. Witnesses Chriss and Rosa further testified that for the group reported by SNL Financial in Commercial Group Exhibit CR-3, the average rate of return on equity for vertically integrated utilities authorized from 2015 through 2017 is 9.78%, which includes the significant outlier 11.95% approved for Alaska Electric Light Power in Docket No. U-16-086, Order dated November 15, 2017. Witnesses Chriss and Rosa testified the average rate of return on equity authorized for vertically integrated utilities was in 2015, 9.75%; in 2016, 9.77%; and in 2017, 9.78%.

Witnesses Chriss and Rosa testified that they know the rate of return on equity decisions of other state regulatory commissions are not binding on the Commission. They testified that each commission considers the specific circumstances in each case in its determination of the proper rate of return on equity. They provided information in their testimony to illustrate a national customer perspective on industry trends in authorized rates of return on equity. These witnesses testified that in addition to using recent authorized rates of return on equity as a general gauge of reasonableness for the various cost-of-equity analyses presented in this case, the Commission should consider how its authorized rate of return on equity impacts North Carolina customers relative to other jurisdictions.

CIGFUR III witness Phillips did not perform cost of capital analyses. He testified that DEC's requested rate of return on equity of 10.75% is excessive and should be rejected. He stated that DEC's current authorized rate of return on equity is 10.2%, which was authorized in the Commission's 2013 DEC Rate Order issued on September 24, 2013. Witness Phillips testified that costs of capital have declined since DEC's last rate case. Every quarter, RRA, an affiliate of SNL Financial, updates its Major Rate Case Decisions report that covers electric and natural gas utility rate case outcomes. Specifically, this report tracks the authorized rates of return on equity resulting from utility rate cases. The most recent report, updated through September 30, 2017, shows that the national average authorized rate of return on equity for electric utilities in the first nine months of this year is 9.63%, nearly 60 basis points below DEC's currently authorized rate of return on equity. Witness Phillips concluded that DEC's current approved rate of return on equity, and definitely DEC's requested rate of return on equity, are significantly above the current market cost of equity. Witness Phillips recommended that the Commission authorize a rate of return on equity that does not exceed the national average of 9.63%.

Tech Customers witness Strunk did not perform rate of return on equity analyses. Instead, his cost of capital testimony focused on criticism of DEC witness Hevert assigning a higher risk factor to DEC than the electric utilities in witness Hevert's proxy group.

Witness Strunk testified that witness Hevert has not done any quantitative analysis to support his testimony that DEC has a comparatively high level of capital expenditures, nor has DEC's witness Hevert done any comparative analysis to support his contention that DEC faces higher risks of environmental regulation than witness Hevert's proxy group. Witness Strunk also testified that DEC witness Hevert's upward risk adjustment for the regulatory environment in which DEC operates is not justified, as North Carolina's regulatory climate is favorable relative to other states.

2. Discussion of Rate of Return Evidence and Conclusions

In a fully contested rate case such as, for example, the 2012 DNCP rate case, there will almost inevitably be conflicting rate of return on equity expert testimony. Even in a partially settled case, the Commission may be faced with conflicting rate of return on equity expert witnesses whose testimony, in accordance with CUCA I and Cooper I, requires detailed consideration and, as necessary, evaluation by the Commission of competing methodologies, opinions, and recommendations. These were the circumstances in DEC's 2011 rate case, Docket No. E-7, Sub 989, which resulted in the Cooper I decision, as well as the 2013 DEP Rate Case. In both of those cases, rate of return on equity expert testimony from CUCA witness O'Donnell provided an alternate rate of return on equity analysis that pegged the utility's cost of capital at an amount lower than the settled rate of return on equity. The Supreme Court in Cooper I faulted the Commission for not making explicit its evaluation of this testimony, and, thus, the Commission in the 2013 DEP Rate Order made an express evaluation of witness O'Donnell's testimony in accordance with the Cooper I decision.

The Commission determines the appropriate rate of return on equity based upon the evidence and particular circumstances of each case. However, the Commission believes that the rate of return on equity trends and decisions by other regulatory authorities deserve some weight, as (1) they provide a check or additional perspective on the case-specific circumstances, and (2) the Company must compete with other regulated utilities in the capital markets, meaning that a rate of return on equity significantly lower than that approved for other utilities of comparable risk would undermine the Company's ability to raise necessary capital, while a rate of return on equity significantly higher than other utilities of comparable risk would result in customers paying more than necessary. In this connection, the analysis performed by Commercial Group witnesses Chriss and Rosa, as modified by witness Hevert, is instructive. Witnesses Chriss and Rosa noted that according to data from SNL Financial for 2015 through 2017, authorized rates of return on equity across the country for vertically-integrated electric utilities have been in the range of 9.10% to 10.55%, excluding the Alaska Electric Light and Power significant outlier at 11.95%. Witnesses Chriss and Rosa calculated the mean authorized rate of return on equity for vertically-integrated utilities like DEC to be 9.78%. Witness Hevert, in commenting upon and evaluating their testimony in his Rebuttal Testimony, refined their analysis and presented his findings in Exhibit RBH-R28 to add in jurisdictional rankings. Doing so results in a rate of return on equity range from 9.80% to 10.55%, with a median of 10.0%. Tr. Vol. 4, p. 393. The Stipulation rate of return on equity is, of course, within that range, and actually below the median of that range. As witness Hevert's settlement testimony notes, "since 2014, the average authorized Return on Equity for vertically integrated electric utilities has been 9.81%, only nine basis points from the Stipulation rate of return on equity. Among jurisdictions that, like North Carolina, are seen as having constructive regulatory environments, the average authorized ROE [rate of return on equity] was 10.02%, 12 basis points above the 9.90% Stipulation ROE [rate of return on equity]." Id. at 418. Accordingly, the evidence presented concerning other authorized rates of return on equity, when put into proper context, lends substantial support to the stipulated 9.9% rate of return on equity level.

Finally, as the Supreme Court made clear in CUCA I and CUCA II, the Commission should give consideration to the non-unanimous Stipulation as relevant evidence, along with all evidence presented by other parties, in determining whether the Stipulation's provisions should be accepted. In this case, insofar as expert rate of return on equity testimony is concerned, no expert witness presented credible or substantial evidence that the stipulated 9.9% rate of return on equity is not just or reasonable to all parties. Both witnesses Hevert and Parcell supported DEC's required rate of return on equity at that level, in the context of the Stipulation as a whole, and witness Hevert was subjected to extensive cross-examination. Thus, the Commission finds and concludes that the Stipulation, along with the expert testimony of witnesses Hevert (risk premium analysis), O'Donnell (comparable earnings), and Parcell (comparable earnings), are credible and substantial evidence of the appropriate rate of return on equity and are entitled to substantial weight in the Commission's determination of this issue.

3. Evidence of Impact of Changing Economic Conditions on Customers

As noted above, utility rates must be set within the constitutional constraints made clear by the United States Supreme Court in Bluefield and Hope. To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting a return on equity, the Commission must nonetheless provide the public utility with the opportunity, by sound management, to (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utils. Comm'n v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S.E.2d 705 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return declared" in Bluefield and Hope. Id.

a. Discussion and Conclusions Regarding Evidence Introduced During the Expert Witness Hearing

In this case, all parties had the opportunity to present the Commission with evidence concerning changing economic conditions as they affect customers. The testimony of witnesses Hevert and Parcell, which the Commission finds entitled to substantial weight, addresses changing economic conditions at some length. Witness Hevert provided detailed data concerning changing economic conditions in North Carolina as well as nationally, and concluded that the North Carolina-specific conditions are "highly correlated" with conditions in the broader nationwide economy. As such, witness Hevert testified that changing economic conditions, both nationally and specific to North Carolina, are reflected in his rate of return on equity estimates.

DEC witness Hevert testified extensively on economic conditions in North Carolina. He testified that unemployment has fallen substantially in North Carolina and the U.S. since late 2009 and early 2010, when the rates peaked at 10.00% and 11.30%, respectively. By May 2017, the unemployment rate had fallen to one-half of those peak levels: 4.30% nationally, and 4.50% in North Carolina. Since DEC's last rate filing in 2013, the unemployment rate in North Carolina has fallen from 8.70% to 4.50%.

Witness Hevert testified that with respect to GDP, there also has been a relatively strong correlation between North Carolina and the national economy (approximately 69.00%). Since the financial crisis, the national rate of growth at times (during portions of 2010 and 2012) outpaced North Carolina. Since the third quarter of 2015, however, North Carolina has consistently exceeded the national growth rate. He testified that as to median household income, the correlation between North Carolina and the U.S. is relatively strong (nearly 86.18% from 2005 through 2015). Since 2009 (that is, the years subsequent to the financial crisis), median household income in North Carolina has grown at a faster annual rate than the national median income.

Witness Hevert testified as to the seasonally unadjusted unemployment rates in the counties served by DEC. At the unemployment peak, which occurred in late 2009 into early 2010, the unemployment rate in those counties reached 13.80% (1.80 percentage points higher than the State-wide average); by April 2017 it had fallen to approximately 4.15% (0.15 percentage points lower than the State-wide average). Since DEC's last rate filing in 2013, these counties' unemployment rates have fallen by over 5.70 percentage points.

Witness Hevert testified that it is his opinion that, based on the indicators discussed above, North Carolina and the counties contained within DEC's service area continue to steadily emerge from the economic downturn that prevailed during DEC's previous rate case, and that they have experienced significant economic improvement during the last several years. He testified that this improvement is projected to continue.

Public Staff witness Parcell testified that he is aware of no clear numerical basis for quantifying the impact of changing economic conditions on customers in determining an appropriate rate of return on equity in setting rates for a public utility. He testified that the impact of changing economic conditions nationwide is inherent in the methods and data used in his study to determine the cost of equity for utilities that are comparable in risk to DEC.

Witness Parcell testified that DEC provides service in 44 counties, and that the 11 counties North Carolina Department of Commerce classified as Tier 1 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 4.5%, with a combined total of 6,177 persons unemployed, and a combined total labor force of 136,989 persons. The 21 Tier 2 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 4.6%, with a combined total of 54,552 persons unemployed and a combined total labor force of 1.193 million persons. The 12 Tier 3 counties had an August 2017 not-seasonally-adjusted combined unemployment rate of 4.0%, with a combined total of 80,066 persons unemployed, with a combined total labor force of 2.009 million persons. The August 2017 not-seasonally-adjusted North Carolina unemployment rate was 4.5%. He testified that all 44 counties experienced a drop in their not-seasonally-adjusted unemployment rates between August 2016 and August 2017, averaging a 0.8% decrease compared to the statewide decrease of 0.8%. Witness Parcell further testified that the North Carolina Department of Commerce in its December 2017 NC Today stated that North Carolina industry employment had an increase of 71,500 over the year, an increase in real taxable retail sales of $401.0 million over the year, an increase in residential building permits of 16.9% over the year, and an increase in job postings of 12.2% over the year. Witness Parcell testified that there are reasons to believe that the economic conditions in the nation and in North Carolina will continue to improve, which should provide a benefit for many DEC customers. He concluded by stating that the Commission's duty to set rates as low as reasonably possible consistent with constitutional requirements without jeopardizing adequate and reliable service is the same regardless of the customer's ability to pay.

b. Evidence Introduced During Public Witness Hearings and Further Conclusions

The Commission's review also includes consideration of the evidence presented, primarily by way of non-expert witness testimony, at three evening hearings held throughout DEC's North Carolina service territory to receive public witness testimony. The public witness hearings held in this proceeding afforded 75 public witnesses, most of whom are customers of DEC, the opportunity to be heard regarding their respective positions on DEC's application for a general rate increase. The testimony presented at the non-expert witness hearings illustrates in detail the difficult economic conditions facing many DEC customers, and the witnesses' general objection to DEC recovering costs related to coal ash cleanup. More than 20 witnesses testified that the rate increase was not affordable for many customers, including those on fixed incomes, the elderly, persons with disabilities, the under- and unemployed, and the poor. Notably, a number of customers also expressed the view that the Company should be required to revise its current grid modernization plans in favor of increased energy efficiency and renewable energy resources initiatives. A representative sample of the public witness testimony received is summarized below.

Summary of Testimony Received in Franklin

At the hearing in Franklin, witnesses Watters, Bugash, Friedman, and Corbin acknowledged that DEC provides reliable electric service, and is responsive when power outages occur, particularly those that are weather-related or caused by natural disasters. Notwithstanding their general satisfaction with electric service reliability, neither witness Watters nor witness Bugash supports DEC's requested rate increase. Witness Lawley, on the other hand, testified that DEC does not provide adequate or reliable electric service, particularly to those customers who live in the mountains, and that minor inclement weather can result in power outages that take DEC days or weeks to resolve. Witness Lawley testified that the power has gone out at her residence nearly 100 times during a two-year period. Witness Lawley testified that DEC claimed that the outages were caused by squirrels, but she opined that the outages actually were the result of a defective piece of equipment that DEC failed to timely fix. Witness Boyd testified that he also does not receive reliable electric service from DEC and opined that this is in part due to DEC's failure to adequately manage vegetation in the area. Witness Crownover testified that she was overcharged by DEC for many years due to having been listed incorrectly by DEC as a recipient of natural gas utility service. Chairman Finley directed DEC to investigate the service and billing complaints of these witnesses, and to report to the Commission the results thereof.

Witness Watters testified that it is unfair that the lowest energy users are charged a higher variable rate for energy than those customers who consume larger amounts of energy. Witnesses Watters, Friedman, and Smith testified that DEC should be doing more to transition from coal and natural gas to renewable energy, including solar and wind power.

Witnesses Sparks, Erickson, Horton, Crawford, Boyd, and Smith oppose a rate increase because, in their opinion, DEC's financial position is healthy enough such that a rate increase is unnecessary. Witnesses Sparks, Horton, Lawley, Zwinak, Wilde, Smith, and Corbin testified that customers living on a fixed or low income, including senior citizens and those living with disabilities, cannot afford a rate increase. Witness Wilde testified that "even [] a one cent increase in electric" costs would break the already stretched fixed-incomes of the elderly. Tr. Vol. 1, p. 64. After explaining that a number of counties across North Carolina face significant economic distress, witness Smith, a former Board Chair of the Jackson-Macon Conservation Alliance, expressed concern that the suggested rate hike would be "shared equally among all counties, despite enormous economic disparities." Id. at 66. Any rate increase, Mr. Smith concluded, would "translate to real sacrifices for working families" in those counties. Id. at 68. Witness Smith further testified that a rate increase would discourage energy efficiency and conservation measures.

Witnesses Sparks, Erickson, Crawford, Bugash, Friedman, Lawley, Zwinak, Crownover, Wilde, and Smith testified that DEC's shareholders, and not its ratepayers, should be required to bear the costs of DEC's mismanagement in failing to properly handle and dispose of coal ash. Witnesses Lawley and Smith testified that those customers directly affected by DEC's coal ash mismanagement have been drinking bottled water for a long time and have not received any reimbursement for their losses, but still would be subject to paying for a rate increase to remedy DEC's environmental non-compliance. Witnesses Friedman and Lawley also oppose the cost recovery for the canceled Lee nuclear plant.

Witness Lawley testified that, in his opinion, the infrastructure of DEC's electric grid is inadequate, and that DEC is not doing enough to improve redundancy. Witness Lawley also, however, opposes DEC's proposed grid modernization initiative because of its vagueness and cost.

In its March 29, 2018 Customer Inquiry Follow-up Report, DEC stated that it investigated and resolved the service complaints of witnesses Lawley and Crownover. DEC's March 29, 2018 Customer Inquiry Follow-up Report did not address the complaint of witness Boyd, however.

ELECTRIC – RATE INCREASE

Summary of Testimony Received in Greensboro

Witness Goodson, the Executive Director for the North Carolina Community Action Association, thanked DEC for its current programs designed to aid low-income individuals and requested that the Company increase its spending on such programs, including its energy efficiency weatherization program.

Witnesses Goodson, Wright, Bass, Merrell, Concepcion, Preschle, Phillips, Stevenson, Diaz-Reyes, Smith, Ruder, Ellison, Kriegsman, Freeman, Hutchby, and Longstreet testified that many ratepayers cannot afford a rate increase, particularly the under- and unemployed and those living on low or fixed incomes, including students, persons with disabilities, the elderly, and the poor. Witnesses Wright and Diaz-Reyes also testified that those who would have a difficult time paying for a rate increase also are the customers likely to use more energy due to living in older, more poorly insulated homes. Witness Sevier, a member of AARP, testified that homeless students, in addition to Social Security recipients, would not be able to pay for a rate increase. Witness Petty testified that the rate increase would disproportionately affect the budgets of low income individuals more so than those with disposable income. Witness Concepcion complained that her electric bill was unreasonably high for January 2018.

Witnesses Carter, Wright, Phillips, Stevenson, and Hutchby testified that, in their opinion, DEC's financial position is healthy enough such that a rate increase is unnecessary. Witness Stevenson testified that the recent federal tax cut should obviate the need for some or all of DEC's requested rate increase.

Witnesses A. Martin, R. Martin, Graham, Bass, Merrell, Concepcion, Tuch, Preschle, Lange, Phillips, Bishop, Diaz-Reyes, Smith, Robins, Fansler, Kriegsman, Motsinger, and Hutchby testified that DEC's shareholders, and not its ratepayers, should be required to bear the costs of DEC's mismanagement in failing to properly handle and dispose of coal ash. Witness Graham testified that she lives near a DEC coal ash pit and, as a result, has had to live on bottled water for over 1,000 days. Witnesses Graham, Fansler, and Hutchby testified that it is wrong to ask those who have been directly harmed by DEC's coal ash management practices to also pay more for their electric service.

Witnesses A. Martin and Tuch testified in support of DEC's efforts toward increasing renewable energy and contend they would be willing to pay a premium for their electric service to support those endeavors. Witness Tuch, the Chair of the North Carolina Climate Solutions Coalition, testified that Duke should be planning to transition to 100 percent cleaner, renewable energy by 2050. Witnesses Preschle and Diaz-Reyes testified that DEC should be more focused on cost-effective clean energy and sustainability practices, including offshore wind energy. Witness Freeman testified that the proposed increase to the basic customer charge is unfair to low-income customers and those who use the least amount of energy, including those customers who employ energy efficiency or have invested in renewable energy measures.

Witnesses Bishop and Fansler oppose the cost recovery for the canceled Lee nuclear plant. Witnesses Stevenson and Kriegsman testified in opposition to DEC's proposed grid modernization initiative, stating that the program lacks transparency and "detailed insight, given the recent failed nuclear ventures, also because the grid mods are future investment and the other issues are past failures." Tr. Vol. 2, p. 64. Witness Ruder opposes cost recovery for AMI smart meters and opines that they were "a very bad investment," about which customers have had a number of complaints. Id. at 71.

In its March 29, 2018 Customer Inquiry Follow-up Report, DEC stated that it investigated and resolved the billing complaint of witness Concepcion. DEC's March 29, 2018 Customer Inquiry Follow-up Report did not address the complaint of witness Graham.

Summary of Testimony Received in Charlotte

Witnesses Kasher, Taylor, English, Nicholson, Satterfield, Brown, Hollis, McLaney, Moore, Henry, Sprouse, Blotnick, Copulsky, Jones, Segal, Lauer, Eddleman, and Mitchell testified that DEC's shareholders, and not its ratepayers, should be required to bear the costs of DEC's mismanagement in failing to properly handle and dispose of coal ash. Witnesses English, Nicholson, and Satterfield testified that allowing DEC to charge its ratepayers for coal ash cleanup would set problematic precedent in the event of future environmental issues. Witnesses Brown and Lauer testified to the direct impacts that DEC's coal ash mismanagements have had on their lives, including their water supply, and opined that it is wrong to ask those who have been directly harmed by DEC's coal ash management practices to pay more for their electric service. Witness Eddleman testified that DEC has "always refused to line their coal ash pits." Tr. Vol. 3, p. 115.

Witnesses Nicholson, Dawson, Segal, and Eddleman testified that DEC's financial position is healthy enough such that a rate increase is unnecessary. Witnesses Kasher and Sparrow testified that the recent federal tax cut should obviate the need for some or all of DEC's requested rate increase.

Witnesses Kasher, English, Kneidel, Crawford, Blotnick, King, Houlihan, Jones, Eddleman, and Adams testified that DEC should be more focused on cleaner, cheaper renewable energy, including wind and solar. Witnesses Kneidel, Moore, Henry, King, Houlihan, Copulsky, Rose, and Adams testified that DEC's proposed grid modernization initiative is vague and will not do enough to connect more, clean, renewable energy to the grid. Witnesses Moore, Henry, Blotnick, King, and Houlihan testified that DEC has not justified its planned grid modernization spending, particularly since it will not help to lower bills or conserve electricity and does not involve actual modernization of the grid. Witness Henry also testified in opposition to DEC's proposed cost allocation for its grid modernization spending.

Witnesses Baker, Williams, Taylor, Nicholson, Hollis, Johnson, Dawson, Jones, Cano, Segal, and Mitchell testified that many ratepayers cannot afford a rate increase, particularly the under- and unemployed and those on low or fixed incomes, including the elderly, persons with disabilities, and the poor. Witnesses Satterfield, Hollis, Blotnick, and Eddleman oppose DEC's proposed basic customer charge increase because it disproportionately affects low-income individuals and those that use the least amount of energy or practice energy conservation measures.

Witnesses English, Nicholson, Satterfield, Henry, Sprouse, Copulsky, Eddleman, and Adams testified in opposition to cost recovery for the canceled Lee nuclear plant.

In its March 29, 2018 Customer Inquiry Follow-up Report, DEC stated that it investigated the complaint of witness Lauer and determined that the location at issue is served by Rutherford Electric Membership Corporation, not DEC. DEC's March 29, 2018 Customer Inquiry Follow-up Report did not address the complaint of witness Brown.

The Commission accepts as credible and probative the testimony of public witnesses, illustrating the economic strain felt by many North Carolina citizens, while also reflecting their interests in energy efficiency and renewable energy. The Commission also accepts as credible and probative the testimony of witness Hevert indicating that economic conditions in North Carolina are highly correlated with national conditions, and that such conditions are reflected in his econometric analyses and resulting rate of return on equity recommendations.

c. Commission's Decision Setting Rate of Return and Approving Rate Adjustment Takes Into Account and Ameliorates the Impact of Current Economic Conditions on Customers

As noted above, the Commission's duty under N.C. Gen. Stat. § 62-133 is to set rates as low as reasonably possible without impairing the Company's ability to raise the capital needed to provide reliable electric service and recover its cost of providing service. The Commission is especially mindful of this duty in light of the evidence in this case concerning the impact of current economic conditions on customers.

Chapter 62 in general, and N.C. Gen. Stat. § 62-133 in particular, set forth an elaborate formula the Commission must employ in establishing rates. The rate of return on cost of property element of the formula in N.C. Gen. Stat. § 62-133(b)(4) is a significant, but not independent one. Each element of the formula must be analyzed to determine the utility's cost of service and revenue requirement. The Commission must make many subjective decisions with respect to each element in the formula in establishing the rates it approves in a general rate case. The Commission must approve accounting and pro forma adjustments to comply with N.C. Gen. Stat. § 62-133(b)(3). The Commission must approve depreciation rates pursuant to N.C. Gen. Stat. § 62-133(b)(1). The decisions the Commission makes in each of these subjective areas have multiple and varied impacts on the decisions it makes elsewhere in establishing rates, such as its decision on rate of return on equity.

Economic conditions existing during the test year, at the time of the public hearings, and at the date of this Order affect not only the ability of DEC's customers to pay electric rates, but also the ability of DEC to earn the authorized rate of return during the period rates will be in effect. Pursuant to N.C. Gen. Stat. § 62-133, rates in North Carolina are set based on a modified historic test period.[1] A component of cost of service as important as return on investment is test year revenues.[2] The higher the level of test year revenues the lower the need for a rate increase, all else remaining equal. Historically, and in this case, test year revenues are established through resort to regression analysis, using historic rates of revenue growth or decline to determine end of test year revenues.

[2] N.C. Gen. Stat. § 62-133(b)(3).

ELECTRIC – RATE INCREASE

DEC is in a significant construction mode – adding new gas-fired plants, retrofitting nuclear units, and investing in transmission and distribution facilities. Much of this investment is responsive to environmental regulatory requirements. New gas units will replace older, less efficient, higher polluting coal units. These units do little to meet new growth.

When costs and expenses grow at a faster pace than revenues during the period when rates will be in effect, the utility will experience a decline in its realized rate of return on investment to a level below its authorized rate of return. Differences exist between the authorized return and the earned, or realized, return. Components of the cost of service must be paid from the rates the utility charges before the equity investors are paid their return on equity. Operating and administrative expenses must be paid, depreciation must be funded, taxes must be paid, and the utility must pay interest on the debt it incurs. To the extent revenues are insufficient to cover the entire cost of service, the shortfall reduces the return to the equity investor, last in line to be paid. When this occurs, the utility's realized, or earned, return is less than the authorized return.

This phenomenon, caused by incurrence of higher costs prior to the implementation of new rates to recover those higher costs, is commonly referred to as regulatory lag. Just as the Commission confronts constitutional and statutory restrictions in making discrete decrements to rate of return on equity to mitigate the impact of rates on consumers, it also confronts statutory constraints on its ability to adjust test year revenues to mitigate for regulatory lag. The Commission, in its expert experience and judgment and based on evidence in the record, is aware of the effects of regulatory lag in the existing economic environment. However, just as the Commission is constrained to address difficult economic times on customers' ability to pay for service by establishing a lower rate of return on equity in isolation from the many subjective determinations that must be made in a general rate case, it likewise does not address the effect of regulatory lag on the Company by establishing a higher rate of return on equity. Instead, in setting the rate of return, the Commission considers both of these negative impacts in its ultimate decision fixing DEC's rates. The Commission keeps all factors affected by current economic conditions in mind in the many subjective decisions it makes in establishing rates. In doing so in the case at hand, the Commission has accepted the stipulated 9.9% rate of return on equity in the context of weighing and balancing numerous factors and making many subjective decisions. When these decisions are viewed as a whole, including the decision to establish the rate of return on equity at 9.9%, the Commission's overall decision fixing rates in this general rate case results in lower rates to consumers in the existing economic environment.

Consumers pay rates, a charge in cents per kWh or per kW for the electricity they consume. Investors are compensated by earning a return on the capital they invest in the business. Consumers do not pay a rate of return on equity. Investors are paid in dollars. In this case, DEC filed rate schedules that would have produced additional annual revenues of $612,647,000. This is the amount ratepayers would pay. These additional revenues, pursuant to the Application and according to DEC's initial calculations, would have produced $5,340,499,000 in total electric operating revenues and $1,093,549,000 in return on investment. Of this amount, $786,153,000 was the return that would have been paid to equity investors, the "return on equity." According to the Application, the "rate of return on equity" financed portion of the investment (as distinguished from the "return on equity") would have been 10.75%.

All of the scores of adjustments the Commission approves reduce the revenues to be recovered from ratepayers and the return to be paid to equity investors. Some adjustments reduce the authorized rate of return on investment financed by equity investors. The noted adjustments are made solely to reduce rates and provide rate stability to consumers (and return to equity investors) to recognize the difficulty for consumers to pay in the current economic environment. While the equity investor's cost was calculated by resort to a rate of return on equity of 9.9% instead of 10.75%, this is only one approved adjustment that reduced ratepayer responsibility and equity investor reward. Many other adjustments reduced the dollars the investors actually have the opportunity to receive. Therefore, nearly all of these other adjustments reduce ratepayer responsibility and equity investor returns in compliance with the Commission's responsibility to establish rates as low as reasonably permissible without transgressing constitutional constraints.

For example, to the extent the Commission makes downward adjustments to rate base, or disallows test year expenses, or increases test year revenues, or reduces the equity capital structure component, the Commission reduces the rates consumers pay during the future period when rates will be in effect. Because the utility's investors' compensation for the provision of service to consumers takes the form of return on investment, downward adjustments to rate base or disallowances of test year expenses or increases to test year revenues, or reduction in the equity capital structure component, reduce investors' return on investment irrespective of its determination of rate of return on equity.

The rate base, expenses, and revenue examples listed above are instances where the Commission makes decisions in each general rate case, including the present case, that influence the Commission's determination on rate of return on equity and cost of service and the revenue requirement. The Commission always endeavors to comply with the North Carolina Supreme Court's requirements that it "fix rates as low as may be reasonably consistent" with U.S. Constitutional requirements irrespective of economic conditions in which ratepayers find themselves. While compliance with these requirements may have been implicit and, the Commission reasonably assumed, self-evident as shown above, the Commission makes them explicit in this case to comply with the Supreme Court requirements of Cooper I.

Based on the changing economic conditions and their effects on DEC's customers, the Commission recognizes the financial difficulty that adjustments in DEC's rates may create for some of DEC's customers, especially low-income customers. As shown by the evidence, relatively small changes in the rate of return on equity have a substantial impact on a utility's base rates. Therefore, the Commission has carefully considered the changing economic conditions and their effects on DEC's customers in reaching its decision regarding DEC's approved rate of return on equity. The Commission also recognizes that the Company is investing significant sums in generation, transmission, and distribution improvements to serve its customers, thus requiring the Company to maintain its creditworthiness in order to compete for large sums of capital on reasonable terms. The Commission must weigh the impact of changing economic conditions on DEC's customers against the benefits that those customers derive from the Company's ability to provide safe, adequate, and reliable electric service. Safe, adequate, and reliable electric service is essential to the well-being of the people, businesses, institutions, and economy of North Carolina.

The Commission finds and concludes that these investments by the Company provide significant benefits to all of DEC's customers. The Commission concludes that the rate of return on equity approved by the Commission in this proceeding appropriately balances the benefits received by DEC's customers from DEC's provision of safe, adequate, and reliable electric service in support of the well-being of the people, businesses, institutions, and economy of North Carolina with the difficulties that some of DEC's customers will experience in paying DEC's adjusted rates.

Finally, the Commission gives significant weight to the Stipulation and the benefits that it provides to DEC's customers, which the Commission is obliged to consider as an independent piece of evidence under the Supreme Court's holdings in CUCA I and CUCA II.

The Commission in every case seeks to comply with the N.C. Supreme Court mandate that the Commission establish rates as low as possible within Constitutional limits. The scores of adjustments the Commission approves in this case comply with that mandate. Nearly all of them reduced the requested return on equity and benefit consumers' ability to pay their bills in this economic environment.

In this case, DEC originally requested a retail revenue increase of $611 million, or a 12.8% increase in annual revenues. The Commission has examined the Company's Application and supporting testimony and exhibits and Form E-1 filings seeking to justify this increase. The Public Staff and DEC reached a Stipulation that resulted in reducing the retail revenue increase sought by the Company by approximately $159 million. The Public Staff represents the using and consuming public, including those having difficulty paying their bills. The Public Staff representatives attended all of the hearings held across the State to receive customers' testimony. The Public Staff has a staff of expert engineers, economists, and accountants who investigate and audit the Company's filings. The Public Staff must recommend rates consumers should pay and the return on investment equity investors should receive. The Public Staff considers all factors included in cost of service. In recent years, the Public Staff and the utilities have entered into settlements resolving the issues so as to avoid at least part of the substantial rate case expense customers otherwise would pay. This process is favored by financial analysts and rating agencies because it reduces delay and enhances predictability, thereby creating a constructive, credit supportive, regulatory environment ultimately reflected favorably in investors' required cost of capital. Intervenors who generally represent narrow segments or classes of ratepayers seldom enter into these settlements, though often times they do not oppose them.

As with all settlement agreements, each party to the Stipulation gained some benefits that it deemed important and gave some concessions for those benefits. Based on DEC's Application and pre-filed testimony, it is apparent that the Stipulation ties the 9.9% rate of return on equity to substantial concessions the Company made.

Summary and Conclusions on the Rate of Return on Equity

The Commission has carefully evaluated the return on equity testimonies of DEC witness Hevert, Public Staff witness Parcell, AGO witness Woolridge, CUCA witness O'Donnell, Commercial Group witnesses Chriss and Rosa, Tech Group witness Strunk, and CIGFUR III witness Phillips. The Commission finds that the comparable earnings analysis testimony of Public

Staff witness Parcell, the risk premium analysis testimony of DEC witness Hevert, the comparable earnings testimony of CUCA witness O'Donnell, and the Stipulation are credible, probative, and are entitled to substantial weight.

Public Staff witness Parcell conducted a comparable earnings analysis using both his and witness Hevert's proxy groups of electric utilities. His comparable earnings recommended rate of return on equity range was 9.0% to 10.0%. The Commission approved rate of return on equity of 9.9% is in the upper portion of his range. As testified by witness Parcell, the comparable earnings analysis is based on the opportunity cost principle and is consistent with and derived from the Bluefield and Hope decisions of the U.S. Supreme Court, which are recognized as the primary standards for the establishment of a fair rate of return for a regulated public utility. The comparable earnings method is also consistent with the concept of rate base regulation for utilities, which employs the book value of both rate base and the capital financing rate base. Witness Parcell testified that his comparable earnings analyses considers the recent historic and prospective rates of return on equity for the groups of proxy utilities companies utilized by himself and DEC witness Hevert. He testified that his comparable earnings analyses reflect the actual rates of return on equity of the proxy companies, as well as the market-to-book ratios of these companies.

DEC competes against the Hevert and Parcell electric proxy group electric companies and other electric utilities for investments in equity capital. Investors have choices as to which electric utilities, or other companies, in which to invest. A Commission approved rate of return on equity for DEC below the earned rates of return on equity of other electric utilities could provide one basis for investors to invest in the equity of electric utilities other than DEC.

DEC witness Hevert's risk premium analysis is credible, probative, and entitled to substantial weight. His risk premium was calculated as the difference between the authorized rate of return on equity and the then-prevailing level of long-term 30-year Treasury yield. He then gathered data for 1,508 electric utility rate proceedings between January 1980 and March 31, 2017. The Commission approved rate of return on equity of 9.9% is approximately ten basis points below witness Hevert's risk premium's implied rate of return on equity range of 9.97% to 10.33%.

The Commission also concludes that the comparable earnings analysis by CUCA witness O'Donnell is credible, probative, and entitled to substantial weight. Witness O'Donnell testified that the comparable earnings for his and witness Hevert's proxy group of electric utilities produced earned returns of 9.25% to 10.25% over the period 2015 through 2022, balancing historical and forecasted returns. The Commission-approved 9.9% rate of return on equity is well within that range.

In its post-hearing brief, the AGO argues that the rate of return in the Settlement unnecessarily adds well over $100 million to DEC's annual revenue requirement, compared to an 8.75% rate of return on equity and a capital structure containing 50% equity and 50% debt. The AGO states that such an excessive return sends dollars out of North Carolina to DEC's shareholders – wherever in the world they are – and those dollars would be better spent in our local communities. In addition, the AGO believes that if DEC is allowed to recover coal ash costs from ratepayers drawing on the Commission's discretionary authority for the benefit of DEC's investors, the Commission should also exercise its discretion on behalf of consumers and establish a substantial reduction in the rate of return. The AGO notes that its witness Woolridge initially recommended a rate of return on equity of 8.4% based on market conditions when he prepared his testimony in January of 2018, but increased his recommendation to 8.75% when he updated his analyses two months later in March.

The AGO states that witness Woolridge's recommendation was based on two well-established models, the DCF and CAPM. The AGO argues that the comparable earnings model, which was used by Public Staff witness Parcell and CUCA witness O'Donnell, is not a recognized approach to estimating the cost of equity and that the "Risk Bond Yield Premium" was flawed for the reasons described in the testimony of its witness Woolridge.

The AGO states that ratepayers need a break, particularly if the Commission intends to allow DEC to recover coal ash closure costs.

In its post-hearing brief, the Commercial Group argues that the Settlement rate of return on equity of 9.90% should serve as an upper limit, but only if the Grid Rider mechanism is not approved. If the Grid Rider is adopted, the Commercial Group believes that DEC's rate of return on equity should be set below 9.90%.

CUCA, in its post-hearing brief, recommends that the Commission should not approve the Settlement, including cost of capital issues, between DEC and the Public Staff. CUCA states that the witnesses of the Public Staff, the AGO, CUCA and the Tech Customers have a "clustered" set of rate of return on equity recommendations that center around 9.0%, while DEC's witness recommends 10.75%. CUCA then argues that the 9.9% rate of return on equity in the Stipulation should be rejected, among other reasons, for the fact that it gives equal weight to the recommendations of the Public Staff and DEC witnesses only and gives zero weight to the recommendations of the other three expert witnesses. Further, to the extent that the Commission allows what DEC has requested with regard to coal ash cost recovery, the federal income tax reduction, Power Forward, and the Grid Rider, each of these things makes DEC a significantly less risky investment and, when risks go down, the rate of equity should go down accordingly. CUCA requests that the Commission refuse to accept 9.9% rate of return in the Stipulation and fix a rate of return for DEC that is compatible with the consensus results of the non-DEC witnesses.

In its post-hearing brief, Tech Customers state that while the Stipulation is material evidence entitled to appropriate weight in determining DEC's rate of return on equity and other rate of return inputs, the return approved by the Commission must be justified by substantial, competent evidence in the record as a whole. Tech Customers acknowledge that the 9.9% rate of return agreed to in the Stipulation is comfortably within the range advocated by the parties to the Stipulation, but argues that the Stipulation, standing alone, cannot support the 9.9% recommended return on equity, particularly when the rate at one side of the range lacks any indicia of a rational basis.

Tech Customers state that a utility advocating a rate of return on equity figure that substantially exceeds the output of widely-recognized empirical models and that exceeds recently authorized returns must justify that proposed upward adjustment with a quantitative analysis that shows the applicants risk profile to be materially higher than that of the proxy group. Tech Customers state that its witness Strunk outlined several empirical measures of risk in his testimony and the associated exhibits and none suggests DEC presents a higher risk profile than the proxy group companies. Given the results of the empirical models and the lack of objective evidence by DEC that it presents a higher risk profile than the proxy group warranting an upward departure from these measures, a rate of return on equity of 9.9% is unreasonably high. Accordingly, Tech Customers contend that the evidence presented concerning other authorized rates of return on equity, when put into proper context, lends substantial support to an authorized rate of return on equity of 9.70%.

The Commission has carefully evaluated the DCF analysis recommendations of witnesses Parcell, Hevert, Woolridge, Strunk, and O'Donnell, and the Commission gives limited weight to these analyses. As shown on Commercial Group's Exhibit CR-3, the lowest Commission-approved rate of return on equity for a vertically-integrated electric company for the period of 2015 through 2017 was 9.1%. Witness Parcell's specific DCF result was 8.7%, as stated in AGO witness Woolridge's Supplemental Exhibit JRW-2, p.1, his DCF recommendation was 8.80%, and the mid-point of witness O'Donnell's DCF was 8.5%. The average of Hevert's constant growth DCF means, as stated in Table 11 of his rebuttal testimony, was 8.45%, and the mid-point of the range of witness Hevert's Multi-Stage DCF analysis was 8.78%. The Commission considers all of these DCF results to be outliers, being well below the lowest vertically-integrated authorized rate of return on equity of 9.1%. The Commission determines that all of these DCF analyses in the current market produce unrealistically low results.

The Commission gives no weight to any of the witnesses' CAPM analyses. The analyses of witness Parcell with a mid-point of 6.5% is unrealistically low, and witness Parcell agreed as much in his testimony. The CAPM analysis of witness O'Donnell resulted in a CAPM rate of return on equity mid-point of 6.29%, which is an outlier well below the 9.1% previously discussed. Witness Woolridge's CAPM weighted median rate of return on equity of 7.90% is also an outlier and unrealistically low. DEC Witness Hevert's CAPM range of 9.18% to 11.88% is also an outlier and upwardly biased due to witness Hevert's risk premium component of his CAPM using a constant growth DCF for the S&P 500 companies solely using analysts projected EPS forecasts as the growth component. Witness Hevert's DCF dividend growth, component based solely on analysts' EPS growth projections, without consideration of any historical results, is upwardly biased and unreliable.

The rate of return on equity testimonies of Commercial Group witnesses Chriss and Rosa focused on the commission-approved rates of return on equity authorized for vertically-integrated electric utilities in 2015, 2016, and 2017 listed in Commercial Group Exhibit CR-3. The Commission gives weight to this testimony only as a check on the Commission's approved 9.9% rate of return on equity and to evaluate outlier rate of return on equity recommendations. CIGFUR III witness Phillips' testimony focused on the RRA report Major Rate Case Decisions, which showed a 9.61% average authorized rate of return on equity for electric utilities including both vertically-integrated electric utilities and distribution-only electric utilities. Since DEC is a vertically-integrated electric utility, the Commission gives witness Phillips' rate of return on equity testimony limited weight regarding authorized rates of return on equity for distribution-only electric utilities. Rather, as stated in Commercial Group Exhibit CR-3, recently authorized rates of return on equity for vertically-integrated electric utilities since 2015 average 9.78%, and in jurisdictions with RRA rated Average 1 constructive regulatory environments, being the same A1 rating as North Carolina, as shown in Hevert Exhibit RBH-R27 for the 16 decisions for vertically integrated electric utilities in the years 2015, 2016, and 2017, the average approved rate of return on equity was 9.93%. These two vertically-integrated electric utilities averages serve as a better check.

The 9.9% rate of return on equity approved in this proceeding for DEC is also consistent with the 9.9% rate of return on equity that the Commission approved for DNCP in the 2016 Rate Order and DEP in the 2018 Rate Order.

The Commission notes further that its approval of a rate of return on equity at the level of 9.9% – or for that matter, at any level – is not a guarantee to the Company that it will earn a rate of return on equity at that level. Rather, as North Carolina law requires, setting the rate of return on equity at this level merely affords DEC the opportunity to achieve such a return. The Commission finds and concludes, based upon all the evidence presented, that the rate of return on equity provided for herein will indeed afford the Company the opportunity to earn a reasonable and sufficient return for its shareholders, while at the same time producing rates that are just and reasonable to its customers.

Capital Structure

DEC originally proposed using a capital structure of 53% members' equity and 47% long-term debt. Tr. Vol. 4, p. 43. The Stipulation provides for a capital structure of 52% equity and 48% long-term debt. For the reasons set forth herein, the Commission finds that a 52/48 capital structure as set out in the Stipulation is just and reasonable.

Witness De May testified that the Company's specific debt/equity ratio will vary over time, depending on the timing and size of debt issuances, seasonality of earnings, and dividend payments to the parent company. Tr. Vol. 4, p. 43. As of the end of the test year, the actual regulatory capital structure[1] was 52.8% equity and 47.2% debt, id. at 72, and the 13-month average equity ratio was 54.8%. Id. The 13-month average equity ratio maintained by DEC through November 2017 was 53.3%. Id. The 52/48 capital structure agreed to in the Stipulation represents a compromise between the Company's 53/47 position and the Public Staff's recommendation of a 50/50 capital structure. Both Public Staff witness Parcell and DEC witness De May supported the agreed upon 52/48 capital structure ratios. Tr. Vol. 26, p. 894. DEC witness De May testified that the 52/48 capital structure ratios reflect a reasonable compromise, and also incorporate a reduction from the Company's currently authorized 53/47 capital structure ratios. Tr. Vol. 4, p. 88. Witness Hevert's settlement testimony also supported the stipulated 52/48 capital structure and he stated that the stipulated capital structure is reasonable when viewed in the context of the overall Settlement, and would be positively viewed by the ratings agencies that set the Company's credit ratings. Tr. Vol 4, p. 426. CUCA witness O'Donnell and AGO witness Woolridge recommended that the Commission reject the Company's capital structure proposal and instead advocate a 50/50 hypothetical capital structure. To support their recommended 50/50 capital structure ratios, CUCA witness O'Donnell and AGO witness Woolridge compared DEC's capital structure proposal to either the average common equity ratio of the comparable groups used by the witnesses to determine the recommended return on equity, the capital structure of Duke Energy Corporation,

[1] Regulatory capital structure excludes short-term debt and losses on unregulated subsidiaries.

the parent holding company of DEC, or the average common equity ratio authorized by state commissions in regulatory proceedings in 2017.

In rebuttal testimony, DEC witnesses De May and Hevert pointed out that the comparable groups used by each of the witnesses include several parent holding companies with regulated operating company electric utility subsidiaries. Noting that DEC is a utility operating company subsidiary, witness De May testified that it is an inappropriate comparison to include holding companies, i.e., an apples-to-oranges comparison. The Commission has previously commented on and rejected the use of parent company capital structures as opposed to operating company capital structures in determining the operating utility's appropriate equity/debt ratio. (See Order Granting General Rate Increase and Approving Amended Stipulation, Docket No. E-7, Sub 909, pp. 27-28) (December 7, 2009) (2009 DEC Rate Order). Parent and utility operating companies simply do not necessarily have the same capital structures, because, as witness Hevert points out, financing at each level is driven by the specific risks and funding requirements associated with their individual operations. Tr. Vol. 4, p. 287. In addition, witness Hevert notes that the use of the operating subsidiary's actual capital structure – that is, the capital actually funding the utility operations that provide service to customers – is entirely consistent with precedent of the Federal Energy Regulatory Commission (FERC), so long as three criteria are met: the operating subsidiary (1) issues its own debt without guarantees; (2) has its own bond rating; and (3) has a capital structure within the range of capital structures for comparable utilities. Tr. Vol. 4, pp. 287-88. DEC issues its own debt and is rated separately from its parent company, and since the evidence presented by witnesses Hevert and De May shows the DECs capital structure is generally comparable to that of other operating companies, especially vertically integrated electric utilities, the Commission notes that all three criteria are met. For example, in his rebuttal testimony, witness De May presented the capital structures of four large operating electric utilities located in the southeastern United States at December 31, 2013-16, and at the end of the third quarter of 2017. The averages for these four utilities, Florida Power & Light, Virginia Electric & Power, South Carolina Electric and Gas, and Georgia Power, were 60.7%, 52.9%, 51.4%, and 50.8%. Excluding the highest, Florida Power & Light, the average of the remaining three is 51.7% common equity. Id. at 63. Further, as witness De May testified, for the same reason it is inappropriate to use a proxy group including holding companies, it is inappropriate to apply the capital structure of Duke Energy Corporation to DEC. Id. at 77.

In addition, in the 2013 DEC Rate Case, the AGO argued that a 50/50 capital structure should be implemented for DEC, but, like witness Woolridge in this case, provided "no probative or persuasive evidence suggesting that a 50/50 capital structure is in fact appropriate." 2013 DEC Rate Order, p. 52. The Commission rejected the AGO's argument because that argument did not "recognize the pitfalls were the Commission to order in this case a capital structure at odds with the structure supported by the testimony of the expert witnesses and in line with the Company's actual capital structure in recent years." Id. at 53.

Those pitfalls are readily apparent. First, as witness De May stated, "a 50/50 capital structure would place pressure on…[the Company's "A" level credit rating] by affecting DEC's credit metrics. It would also likely negatively impact the ratings agencies' assessment of qualitative factors, in that movement away from the optimum 53/47 capital structure will likely be viewed as a step away from a credit supportive regulatory environment." Tr. Vol. 4, p. 76.[1] Second, as the Commission has already held in this case in connection with its rate of return on equity discussion, the ratings agencies' "assessment of qualitative factors" is vitally important to the maintenance of the Company's credit quality and to the cost of capital:

> The utilities the Commission regulates compete in a market to raise capital. Financial analysts, rating agencies, and investors themselves scrutinize with great care the regulatory environment and decisions in which these utilities operate. The regulatory environment includes the utilities commissions, consumer advocates, the state legislature, the executive branch and the appellate courts. <u>When regulatory risk is high, the cost of capital goes up.</u>

2013 DEC Rate Order, p. 37 (emphasis added).

As noted above, CUCA witness O'Donnell also compared DEC's proposed capital structure to the average common equity ratio granted by state commissions in regulatory proceedings in 2017. Based upon such data from SNL, this average common equity ratio was 49.1%. DEC witness Hevert testified in rebuttal that when he excluded proceedings for distribution-only utilities, since DEC is a vertically-integrated electric utility, and excluded proceedings in jurisdictions such as Michigan, Indiana, and Arkansas, that unlike North Carolina, include non-investor supplied sources of capital or use "fair value" rate base in determining a ratemaking capital structure, the authorized equity ratios ranged from 40.25% to 58.18% and the average authorized equity ratio was 50.51%. Tr. Vol. 4, pp. 389-90.

In its brief, the AGO contends that the evidence does not support the need for a capital structure that funds rate base using more than 50% common equity and the excessive reliance on equity in DEC's capital structure will cost ratepayers millions of dollars a year unnecessarily. The AGO states that the high equity ratio of DEC – which is maintained between 52-53% equity – helps to lift up the consolidated capital structure of Duke Energy Corporation. The AGO notes that DEC has the highest secured credit ratings of any of Duke Energy Corporation's subsidiaries and is rated higher than most electric utilities. Thus, the high quality ratio maintained by DEC has obvious benefits for Duke Energy Corporation – particularly in ratings by Standard & Poor's, where consolidated entities are evaluated as a family of risk and assigned a family rating. However, the AGO states that the issue is whether maintaining such a high equity ratio is cost effective for DEC ratepayers. The Commission notes that higher credit ratings translate to lower borrowing costs that certainly benefit ratepayers.

CUCA's brief states that DEC witnesses arrived at a very "equity rich" position of capital structure, recommending that DEC be granted an equity ratio, for ratemaking purposes of 54%. All of the other "expert" witnesses proposed some form of a "pro forma" capital structure closer to 50/50. CUCA pointed out that the cost of equity is higher than debt. Thus, the higher the equity

[1] Witness De May indicated in his Settlement Testimony that the slight move away from the 53/47 proposed capital structure represented by the Stipulation would likely still be viewed as credit supportive by the ratings agencies. Tr. Vol. 4, p. 84. In any event, a 50/50 structure is a far cry from a 52/48 structure – each percentage point of reduction in equity represents a $10 million reduction in revenue requirement, which is certainly significant in evaluating the effect of further reduction on the Company's credit metrics.

ratio authorized by the Commission, the higher rates that have to be set and paid by customers to support this additional equity element in the capital structure.

In addition to its analysis of witness testimony as set out above, the Commission also gives weight to the Stipulation and the benefits that it provides to DEC's customers, which the Commission is obliged to consider as an independent piece of evidence under the Supreme Court's holdings in CUCA I and CUCA II. As with all settlement agreements, each party to the Stipulation gained some benefits that it deemed important and gave some concessions for those benefits. Based on DEC's Application and pre-filed testimony, it is apparent that the Stipulation ties the 52/48 capital structure to substantial concessions the Company made to reduce its revenue requirement and to alleviate the impact of the rate adjustment on customers.

Finally, the Commission has also carefully considered changing economic conditions in connection with its capital structure determination, including their effect upon the Company's customers. As discussed in the rate of return on equity section above, which is incorporated herein, the public witnesses in this case provided extensive testimony concerning economic stress they are currently experiencing and have experienced for the last several years. The Commission accepts as credible and probative this testimony. Likewise, the Commission gives significant weight to the testimony of witness De May regarding the Company's need to raise capital at this time to finance the improvements needed for safe, adequate, and reliable electric service.

As in the case of the return on equity, the Commission recognizes the financial difficulty that the adjustment in DEC's rates may create for some of DEC's customers, especially low-income customers. The Commission must weigh this impact against the benefits that DEC's customers derive from DEC's ability to provide safe, adequate, and reliable electric service. Safe, adequate, and reliable electric service is essential to support the well-being of the people, businesses, institutions, and economy of North Carolina. The improvements to the Company's system are expensive, but provide tangible benefits to all of the Company's customers. The Commission concludes that the 52/48 capital structure approved by the Commission in this case appropriately balances the benefits received by customers with the costs to be borne by customers, including higher rates which some customers will find difficult to pay.

Accordingly, the Commission finds and concludes that the recommended capital structure of 52% common equity and 48% long-term debt is just and reasonable to all parties in light of all the evidence presented.

Cost of Debt

In its Application and supporting testimony, the Company proposed a long-term debt cost of 4.74%. Tr. Vol. 4, p. 46. The Stipulation provides for a 4.59% cost of debt. The Commission finds for the reasons set forth herein that 4.59% cost of debt is just and reasonable.

In his pre-filed direct testimony, Company witness De May testified that the Company's revenue requirement was determined using an embedded cost of long-term debt of 4.74% at the end of the test year. Tr. Vol. 4, p. 78.

In pre-filed direct testimony, Public Staff witness Parcell did not use the Company's cost of debt in his analysis. Instead, he used 4.57%, which, he testified, was DEC's "actual embedded cost of debt following the issuance of new long-term debt in November of 2017." Tr. Vol. 26, p. 838.

In his rebuttal testimony, witness De May testified that the Company did not agree with moving from the test year to a cost of debt through November 2017. Instead, the Company recommended that the cost of debt be updated through December 2017, which equaled 4.59%. Tr. Vol. 4, p. 78.

In his testimony in support of the Settlement, Public Staff witness Parcell agreed with the embedded cost of debt at 4.59%.

No intervenor offered any evidence to contradict the use of 4.59% as the cost of debt. The Commission therefore finds and concludes that the use of a debt cost of 4.59% is just and reasonable to all parties in light of all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 20

The evidence supporting this finding and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, the Stipulation, and the entire record in this proceeding.

The Stipulating Parties reached a partial settlement with respect to some of the revenue requirement issues presented by the Company's Application, including those arising from the supplemental and rebuttal testimonies and exhibits. As discussed above, the revenue requirement effect of the Stipulation is shown in Boswell Third Supplemental, as well as Stipulation Exhibit 1 Corrected and Revised McManeus Stipulation Exhibit 1 - Updated for Post-Hearing Issues, which provides sufficient support for the annual revenue required on the issues agreed to in this Stipulation.[1] Section III of the Stipulation outlines a number of accounting adjustments to which the Stipulating Parties have agreed. Public Staff witness Boswell presented schedules showing the financial impact of the Stipulation, as well as the amount of the rate increase that would result if the Commission agrees with the Company on all of the unresolved items, or, alternatively, agrees with the Public Staff on all of these items. The accounting adjustments that are not specifically addressed in other findings and conclusions are discussed in more detail below.

Aviation Expenses

In its initial and revised supplemental filing, the Company removed 39.93% of the Company's O&M costs related to corporate aviation. Public Staff witness Boswell made a further

[1] The Stipulation provides that no Stipulating Party waives any right to assert a position in any future proceeding or docket before the Commission or in any court, as the adjustments agreed to in the Stipulation are strictly for purposes of compromise and are intended to show a rational basis for reaching the agreed-upon revenue requirement without either party conceding any specific adjustment. The Stipulating Parties also agreed that settlement on these issues will not be used as a rationale for future arguments on contested issues brought before the Commission.

adjustment after investigating the aviation expenses charged to DEC during the test year. Based on the Public Staff's review of flight logs, the corporate aircraft are available for use by Duke Energy Corporation's Chief Executive Officer (CEO) and DEC staff. The Public Staff recommended that certain expenses allocated to DEC be removed due to the nature of the flights involved. Tr. Vol. 26 p 591-92. For the purposes of settlement, the parties agreed to an adjustment that removes 50% of the Company's corporate aviation O&M expense.

Executive and Incentive Compensation

In its Application, the Company removed 50% of the compensation of the four Duke Energy executives with the highest level of compensation allocated to DEC during the Test Period. Witness McManeus explained that while the Company believes these costs are reasonable, prudent, and appropriate to recover from customers, DEC has, for purposes of this case, made an adjustment to this item. Tr. Vol. 6, p. 253.

Public Staff witness Boswell recommended removal of 50% of the compensation for a fifth executive, as well as 50% of the benefits associated with the top five executives. Tr. Vol. 26, p. 587. She explained that executive compensation and benefits should be excluded because these executives' duties are closely linked to shareholder interests. Id. at 587-88. Witness Boswell also recommended disallowance of incentive compensation related to earnings per share (EPS) and total shareholder return (TSR). Id. at 590-91. She asserted that incentive compensation tied to EPS and TSR metrics should be excluded because it provides a direct benefit to shareholders only, rather than to customers. Id. at 591.

In his rebuttal testimony, Company witness Silinski testified that these proposed adjustments are inappropriate and should be rejected by the Commission. Tr. Vol. 26, p. 241. Witness Silinski explained that witness Boswell erroneously assumes a divergence of interests between shareholders and customers that has not been demonstrated to exist. Id. at 249. According to witness Silinski, to the contrary, employee compensation and incentives tied to metrics such as EPS and TSR benefit customers because those metrics reflect how employees' contributions translate into overall financial performance. Id. He testified that EPS, for example, is a measure of the Company's performance, and that performance is reflective of how certain goals – safety, individual performance, team performance, and customer satisfaction (all of which are components of incentive pay) are met in a cost-effective way. Id. Divorcing employee performance from such an important measure of a rate regulated company's overall health is unreasonable and counterproductive. Id. Additionally, witness Silinski explained that in order to attract a well-qualified and well-led workforce, the Company must compete in the marketplace to obtain the services of these employees. Id. at 250. The recommended adjustments would render the Company's compensation uncompetitive with the market, resulting in the inability to attract and retain the talent the Company needs to run a safe and reliable electric system. Id. at 246. Finally, witness Silinski pointed out that no witness in this proceeding challenges the reasonableness of the level of compensation expenses reflected in the ratemaking test period for the Company. Id. at 250. The Stipulation provides that "[t]he Company accepts the Public Staff's proposed adjustment to executive compensation to remove 50% of the compensation for the five Duke Energy executives with the highest amounts of compensation, and to remove 50% of the benefits associated with those five executives." Stipulation, § III.E.

As part of the Stipulation, the parties agreed to accept the Public Staff's adjustment with a modification to limit the incentives removed. This agreement is reflected in Section III.H. of the Stipulation, which provides that the Company's employee incentives should be adjusted to remove the cost of the STIP based on the Company's EPS for employees who qualify for the Company's LTIP.

Outside Services

Witness Boswell testified that the Public Staff reviewed costs for outside services associated with expenses that were indirectly charged to DEC by DEBS as well as those incurred by the Company directly that were incurred during the test period. Tr. Vol. 26, p. 592. Public Staff witness Boswell stated that the Public Staff's investigation revealed charges that were related to legal services for coal ash and groundwater issues related to coal ash. Id. She recommended removing these expenses from O&M in the test period. Id. Witness Boswell noted that the Public Staff also found certain expenses that were allocated to DEC that should have been directly assigned to other jurisdictions that she recommended should be removed. Id. at 592-93.

In her rebuttal testimony, witness McManeus noted that the Company agrees with approximately $665,000 of the $2,124,000 adjustment proposed by the Public Staff. Tr. Vol. 6, p. 307. She explained that the portion of the adjustment that the Company opposes is primarily related to legal services related to coal ash and groundwater issues, because the Company takes the position that these costs were reasonable and prudent and, therefore, should be recovered from customers. Id. Pursuant to Section III.F of the Stipulation, the Company agreed to remove certain costs associated with outside services, as stated in its rebuttal filing. This amount does not include costs incurred for certain legal services related to coal ash, which remain in the Unresolved Issues.

Costs to Achieve Duke Energy-Piedmont Merger

On September 29, 2016, in Docket No. E-7, Sub 1100, Docket No. E-2, Sub 1095, and Docket No. G-9, Sub 682, the Commission issued its Order Approving Merger Subject to Regulatory Conditions and Code of Conduct (Merger Order), which approved the merger between Duke Energy and Piedmont. Ordering paragraph 7(b) of the Merger Order, which addresses the ratemaking treatment of costs incurred to achieve the merger, states:

> DEC, DEP, and Piedmont may request recovery through depreciation or amortization, and inclusion in rate base, as appropriate and in accordance with normal ratemaking practices, their respective shares of capital costs associated with achieving merger savings, such as system integration costs and the adoption of best practices, including information technology, provided that such costs are incurred no later than three years from the close of the merger and result in quantifiable cost savings that offset the revenue requirement effect of including the costs in rate base. Only the net depreciated costs of such system integration projects at the time the request is made may be included, and no request for deferrals of these costs may be made.

(Emphasis added).

During the test year in this case, DEC included in operating expenses approximately $6.5 million on a North Carolina retail basis that it identified as systems and transition costs to achieve merger savings. Tr. Vol. 26, p. 594. Witness Boswell contended that the Merger Order only allows the Company to recover the capital costs associated with achieving merger savings, such as system integration costs. Id. As such, the Public Staff removed the $6.5 million of O&M expenses that DEC identified as systems and transition costs to achieve merger savings.

In her rebuttal testimony, witness McManeus explained that the Company opposed this adjustment. Tr. Vol. 6, p. 326. She noted that the costs that witness Boswell has removed are operating expenses, not capital costs. Id. According to witness McManeus, the Merger Order does not specifically address cost recovery for operating expenses associated with achieving merger savings. Id. Witness McManeus explained that should the Commission decide to exclude these expenses from recovery in this case, a deferral order would allow the Company to treat these costs like capital for ratemaking purposes. Id.

Notwithstanding their differing positions on the costs to achieve the Duke Energy-Piedmont merger, in the spirit of settlement and in the context of the Stipulation as a whole, the Company and the Public Staff have resolved this issue. Accordingly, the Stipulation provides that the Company accepts the Public Staff's proposed adjustment to remove costs to achieve the Duke Energy-Piedmont merger.

Sponsorships and Donations

Public Staff witness Boswell adjusted the Company's O&M Expenses to remove amounts paid for sponsorships and charitable donations. Specifically, she excluded from expenses amounts paid to the U.S. Chamber of Commerce, other chambers of commerce, the NC Chamber Foundation, and political-related donations. Tr. Vol. 26, p. 599. Witness Boswell argued that these expenses should be disallowed because they do not represent actual costs of providing electric service to customers. Tr. Vol. 26, p. 599. In her rebuttal testimony, witness McManeus testified that Chambers of Commerce promote business and economic development which in turn helps to retain and attract customers to DEC's service territory. Tr. Vol. 6, p. 311. She explained that funds paid to Chambers of Commerce that are not specified as a donation or lobbying on the Chamber invoice are generally assumed to be in support of business or economic development and are considered to be properly charged as a utility operating expense that should be included in the Company's cost of providing electric service to customers. Id. at 311-12. As a result, the Company opposed a portion of witness Boswell's proposed adjustment. Id. at 12. Witness McManeus also noted that in reviewing the adjustment proposed by witness Boswell, the Company determined that $5,261 of the charges in question were reclassified during the test period to FERC Account 426, which is excluded from cost of service. Id. Pursuant to Section III.K of the Stipulation, the Public Staff agreed to accept the Company's rebuttal position on sponsorships and donations expense, which removed amounts paid to the U.S. Chamber of Commerce and certain other expenses.

Lobbying and Board of Director Expenses

Witness Boswell made an adjustment to remove 50% of the expenses associated with the Board of Directors of Duke Energy that have been allocated to DEC. Tr. Vol. 26, p. 589. She argued that the Board of Directors has a fiduciary duty to protect the interests of shareholders, which may differ from the interests of ratepayers. Id. Accordingly, the Public Staff believes it is appropriate for the shareholders of the larger electric utilities to bear a reasonable share of the costs of compensating the Board of Directors, as well as the cost of insurance for these individuals. Id. Witness Silinski explained that the Company is required to have a Board of Directors and that the costs of being an investor-owned utility, including Board costs, are in fact costs of service. Id. at 252. He argued that it is not fair or reasonable to penalize the Company for being an investor-owned utility with attendant requirements to that corporate structure. Id. at 252-53.

With respect to lobbying expenses, witness Boswell noted that the Company made an adjustment to remove some lobbying expenses from the test year. Tr. Vol. 26, p. 595. She further adjusted O&M expenses to remove what she characterized as additional lobbying costs, including O&M expenses that she believed were associated with stakeholder engagement, state government affairs, and federal affairs that were recorded above the line. Id. at 595-96. In her rebuttal testimony, witness McManeus explained why the Company opposed this adjustment and disagreed with witness Boswell's characterization of these expenses. Tr. Vol. 6, p. 327. Witness McManeus testified that in 2016, the Company engaged a third-party consulting company to perform a detailed time study for the purposes of determining the percentage of time certain individuals spent on lobbying activities per the federal definition in 29 Code of Federal Regulations Section 367.4264. Id. A report with the results of the study was delivered to the Company in August 2016, and the Company booked journal entries to ensure that the 2016 labor costs were aligned with the results of the independent study. Id. Witness McManeus concluded that no further adjustments were warranted. Id.

Nevertheless, in the spirit of settlement and in the context of the Stipulation as a whole, the Company and the Public Staff have resolved these issues, and in Section III.K. of the Stipulation, the Company agreed to accept the Public Staff's recommended adjustments to lobbying and Board of Directors' expenses.

Allocations by DEBS to DEC

DEBS is the company that provides services to various affiliated entities of Duke Energy Corporation. The affiliated entities have a Cost Allocation Manual (CAM) that documents the guidelines and procedures for allocating costs between the entities to ensure that one entity does not subsidize another. As discussed above, during the test year, Duke Energy acquired Piedmont and the Commission approved the merger on September 29, 2016. According to Public Staff witness Boswell, this change, along with updates related to other affiliated entities, has caused the DEC allocation factors to decrease. Tr. Vol. 26, p. 595. Witness Boswell made an adjustment to reflect the fact that O&M expenses allocated to DEC from DEBS will be less going forward. Id. In her rebuttal testimony, witness McManeus explained that the Company did not agree with witness Boswell's adjustment because she included only three months of costs related to Piedmont, which results in a mismatch between the allocation factors and the costs to which they are being applied. Tr. Vol. 6, 323. In her supplemental testimony, witness Boswell updated the adjustment to include a full 12 months of the impact of the Piedmont acquisition into the adjustment and noted that the Company did not oppose this adjustment. Tr. Vol. 6, p. 617. As part of settlement, the parties agreed to accept the Public Staff's adjustment regarding the DEBS to DEC allocation as set forth in the supplemental testimony of Public Staff witness Boswell. Stipulation, § III.M.

Salaries and Wages

In her direct testimony and schedules, Company witness McManeus included an adjustment to annualize and normalize O&M labor expenses to reflect annual levels of costs as of April 1, 2017. The adjustment also restated variable short and long term pay to the target level. Tr. Vol. 6 p. 262. This adjustment was further updated in her supplemental filings. In her supplemental testimony, Witness Boswell explained that she adjusted the Company's updated payroll to reflect annualized payroll through December 31, 2017. Tr. Vol. 26, p. 616. For DEBS payroll allocated to DEC she applied the updated allocation factor only to the increase in payroll between December 31, 2016 and December 31, 2017, as the test year amount is included in the DEBS to DEC allocation adjustment discussed above. See id. She noted that the Company does not oppose this adjustment, as updated in witness Boswell's second supplemental filing. Id. The Stipulation provides that the Company accepts the Public Staff's methodology as to how to calculate salaries and wages as set forth in the supplemental testimony of witness Boswell. Stipulation, § III.N. Boswell Third Supplemental and Stipulation Exhibit 1 Corrected and McManeus Revised Stipulation Exhibit 1 – Updated for Post-Hearing Issues update the salaries and wages adjustment to reflect the Company and Public Staff's resolution on how to quantify the agreement reached in Section III.N of the Stipulation.

Upon consideration of all of the evidence in this proceeding, including the Stipulation which the Commission accepts in its entirety and upon which the Commission places great weight, the Commission finds and concludes that the stipulated adjustments discussed herein are just and reasonable to all parties and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 21

The evidence supporting this finding of fact and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, the Company and Public Staff Agreement and Stipulation of Partial Settlement, and the entire record in this proceeding.

In this case, the Company included an adjustment to amortize the excess deferred state income taxes that it deferred pursuant to the Commission's May 13, 2014 Order in Docket No. M-100, Sub 138. In its Application, the Company proposed that the State EDIT liability included in this case be returned to customers over a five-year period. Tr. Vol. 6, p. 263. Public Staff witness Boswell testified that it would be beneficial to return the State EDIT to customers through a rider that would expire at the end of a two-year period. Tr. Vol. 26, p. 600.

In the Stipulation, the parties agreed that the State EDIT liability should be returned to customers through a levelized rider that will expire at the end of a four-year period. Stipulation,

§ III.B. The Stipulating Parties provide that the appropriate level of State EDIT to be refunded to customers is $60,102,000 annually for the four years following the effective date of the rates approved in this proceeding. See Boswell Second Supplemental and Stipulation Exhibit 1; see also Revised McManeus Stipulation Exhibit 1 – Updated for Hearing. No intervenor took issue with this provision of the Stipulation. Accordingly, the Commission finds and concludes that the four-year State EDIT rider as set forth in Section III.B of the Stipulation is just and reasonable to all parties in light of all the evidence presented, and is hereby approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 22

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

In its Application, the Company requested recovery of certain operations and maintenance O&M expenses associated with its Customer Connect project. Company witness Hunsicker testified about the Company's plans to replace its customer information system (CIS), a project known as "Customer Connect," and the costs and revenue requirement the Company is seeking in this case to support this project. Tr. Vol. 18, pp. 253-64, 281. Witness Hunsicker explained that the Company's current CIS was developed over 20 years ago and was not designed to efficiently support new capabilities. Id. at 257. She stated that the Company and its customers' needs are very different than they were when the original CIS was constructed, and the system is past the point where modular "bolt on" systems or modular upgrades are effective. Id. at 255. Additionally, the Company's current CIS has many deficiencies. For example, the Company's existing CIS is not equipped to handle complex billing arrangements, such as net metering for self-generating customers, and these bills must be manually calculated. Id. at 257-58. The current CIS also does not enable access to account histories nor does it allow customers to employ preferred communication methods. Id. at 258-59. Witness Hunsicker explained that the new CIS will provide universal and simplified processes for customers, improve billing, allow the Company to easily identify and implement new rate structures for customers, and interface with the Company's new AMI technology. Id. at 261. Witness Hunsicker explained that Customer Connect began analysis and design in January 2018, and is currently planned to be in-service for DEC in 2022. Id. at 262. She further explained that the implementation will be phased and that new capabilities will be available to customers each year leading up to full deployment. Id. at 263. The estimated costs for Customer Connect for DEC, North Carolina, is between $220 and $230 million, which is based on the best and final offers for fixed price contracts that the Company negotiated with the software, systems integration, and change management vendors. Id. at 263. Witness Hunsicker explains that the Company is seeking a pro forma adjustment from $4.4 million to $15.1 million in O&M expenses associated with the project to reflect the average expected annual O&M expenses associated with the project from 2018 through 2020. Id. at 264.

Public Staff witness Floyd testified regarding the Public Staff's support of DEC's Customer Connect project. Tr. Vol. 23, p. 80. Witness Floyd described the shortcomings of the Company's current CIS and the improvements offered by the new CIS. Id. at 77-80. He also described the implementation plan for Customer Connect and recommended that the Company make semi-annual reports on the status of the implementation. Id. at 80, 82-83.

Witness Floyd further testified that the $13.3 million of expense related to the Company's initial work on Customer Connect is reasonable. Id. at 83. However, he also testified that Customer Connect was not used and useful as of the test year ending December 31, 2016, and that the full capabilities of Customer Connect will not be realized until the summer of 2022. Id. at 81. Therefore, the Public Staff, through witness Boswell, recommended an adjustment to remove from the Company's revenue requirement, the Customer Connect amounts projected for 2018 through the in-service date, reasoning that the system will not be fully functional until the summer of 2022. Tr. Vol. 26, p. 597.

In her rebuttal testimony, Company witness Hunsicker responded to the Public Staff's recommendation to remove the forecasted amounts of O&M expense between 2018 and the in-service date for Customer Connect. Tr. Vol. 18, p. 266. She explained that the Company has only asked for the level of O&M necessary to deploy the capital for the program, and that DEC is not asking for the program or its costs to be placed into rate base. Id. at 268. These O&M costs are not being capitalized to the program, and in order to be captured, they either need to be included in rates as the Company has requested, or set aside and capitalized to a regulatory asset to be recovered when the project comes online. Id.

Company witness Fountain explained that by entering into the Stipulation, the Company agreed to accept the Public Staff's adjustment to Customer Connect expenses, and the Company shall be authorized to establish a regulatory asset to defer and amortize expenses associated with its Customer Connect project. Tr. Vol. 6, pp. 219-20. Company witness McManeus explained that the Company shall be allowed to accrue a return on the regulatory asset in the same manner that Construction Work in Progress (CWIP) balances accrue AFUDC. Id. at 350. Company witness McManeus explained that AFUDC shall end and a 15-year amortization shall begin on the date Releases 5-8 of the project goes into service or January 1, 2023, whichever is sooner. Id.

Additionally, in order to provide the Commission and other interested parties with information concerning the status of development, spending, and the accomplishments to date, the Stipulating Parties will develop the reporting format and the content of that report within 90 days of the Commission's order approving the Stipulation, with the reports to be filed in this docket for the next five years by December 31 of each year or until Customer Connect is fully implemented, whichever is later. Stipulation, Section III.C.

In its post-hearing Brief, NCSEA cites the testimony of DEC witness Fountain that AMI and DEC's new CIS, Customer Connect, are interlocking components; and contends that if properly implemented together the two systems can provide customers with access to their energy consumption data to enable them to effectively conserve electricity. NCSEA states that it is generally supportive of DEC's investments in AMI and Customer Connect, but that DEC must ensure that Customer Connect can provide customers with energy consumption and allow customers to easily authorize third parties to access such data. NCSEA submits that DEC has failed to show that AMI and Customer Connect will provide these customer benefits. Citing the testimony of DEC witness Hunsicker, NCSEA contends that despite recognizing the benefit of providing consumers with access to their energy consumption data, investing in technology capable of providing consumers such access, and having no issue with providing consumers such access, DEC is not doing so. NCSEA acknowledges that the Commission has directed DEC to meet with NCSEA and other stakeholders to discuss implementing the Green Button Connect protocol for access to energy consumption data, but, nonetheless, submits that DEC has not provided sufficient evidence in this docket that Customer Connect will meet customer needs, comply with industry standards, or is capable of complying with directives from this Commission. As a result, NCSEA asserts that DEC's request for cost recovery for Customer Connect should be denied at this time.

Upon consideration of all of the evidence in this proceeding, including the Stipulation, the Commission approves the stipulated adjustments to the Company's Customer Connect expenses in this proceeding, and the Company shall be authorized to establish a regulatory asset to defer and amortize expenses associated with its Customer Connect project. The Commission finds that an effectively designed and implemented Customer Connect project may provide value to DEC's customers and support continued quality of service.

In arriving at its conclusion, the Commission gives substantial weight to the testimony of witness Hunsicker and witness Floyd regarding the deficiencies with the Company's current CIS and the improvements and new functionalities that the modernized CIS will provide to customers through implementation of the Customer Connect program. Thus, it is appropriate that these costs be deferred and allowed to accrue until the time that Customer Connect goes in-service or by January 1, 2023. Witnesses Hunsicker and Floyd have also testified to the benefits that customers will receive from the Customer Connect program in stages throughout its implementation. The Commission notes that the Company and Public Staff will file with the Commission a proposed Customer Connect reporting format and the content of that report within 90 days of this Order, and that subsequent reports shall be filed annually for the next five years, or until implementation is complete. The reporting will allow the Commission to monitor the status of the Customer Connect project and the associated expenses throughout the implementation process. The Commission recognizes the data access concerns expressed by NCSEA and determines that it is appropriate for the Customer Connect annual report to clearly describe the status of efforts to effectively provide energy consumption data to customers and the precautions taken to ensure data remains secure.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 23-24

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony, exhibits, and affidavits of DEC witnesses Fountain, McManeus and Miller, and Public Staff witness Boswell, and the entire record in this proceeding.

In its Application, the Company requested that its capital investment in the Lee CC plant, approximately $557 million, be included in rate base. DEC witness Miller explained that the Lee CC plant was expected to begin commercial operation in November 2017, provide 750 megawatts (MW) of total capacity, and emit carbon dioxide at half the rate and nitrogen and sulfur oxide emissions at a fraction of the rate compared to the plants retired by the Company. Tr. Vol. 26, p. 212. In her testimony, Public Staff witness Boswell proposed the removal of the Company's estimated O&M expenses needed to operate the plant as it represented an estimate, not actual O&M expenses needed to operate the plant. Id. at 580. Additionally, witness Boswell testified that if the Lee CC plant was not in service by the close of the hearing, she recommended removing the plant and related deferral adjustments from rates and including the plant in CWIP to be included in rate base. Id. at 581.

In her second supplemental testimony, Company witness McManeus reduced the amount of estimated incremental O&M costs associated with the Lee CC facility to approximately $1.98 million. Tr. Vol. 18, p. 296. Witness Miller testified that while the Lee CC plant was not yet in service, the Company utilized the actual non-labor O&M expenses for two substantially similar combined cycle plants, Buck and Dan River, to calculate the estimated incremental O&M expenses for Lee CC. Id. at 236. Therefore, according to witness Miller, the Buck and Dan River facilities serve as a reasonable proxy to determine whether the Company's estimated O&M expenses for Lee CC are reasonable. Id. In her supplemental testimony, Public Staff witness Boswell proposed to include a displacement adjustment to reflect the fact that existing plant(s) in the Company's fleet may not run as frequently due to the availability of the new plant. Tr. Vol. 26, p. 620. In his rebuttal testimony, DEC witness Miller stated that a displacement adjustment was not appropriate because Lee CC was built to serve a growing number of customers and the associated growth of energy and peak demand requirements. Id. at 235.

As part of the Settlement, the Public Staff and DEC agreed that for purposes of settlement, DEC would withdraw its adjustment to include incremental O&M expenses and the Public Staff would withdraw its displacement adjustment. Stipulation, § III.L. The Stipulating Parties therefore agreed that the appropriate level of ongoing O&M expense to be included in rates is $0. Id. The Stipulating Parties also agreed that the appropriate amortization period for the deferred expenses associated with the Lee CC facility is four years. Id. Additionally, DEC and the Public Staff agreed that it was appropriate to hold the record open until March 23, 2018, to allow the Company to submit final cost amounts to be included in this proceeding for Lee CC and for Public Staff to use these amounts to file with the Commission the Stipulating Parties' final recommendation with regard to the Lee CC-related revenue requirement, including Lee CC deferred costs, using the methodology recommended by the Public Staff in this proceeding. Id. Further, DEC and the Public Staff agreed to hold the record open to allow the filing by the Company of an affidavit indicating that the plant has closed to service for operational and accounting purposes and that it is used and useful for the benefit of customers. Id.

In accordance with the Stipulation, DEC provided the Public Staff with the final costs of the Lee CC plant on March 23, 2018. On April 10, 2018, the Public Staff filed its updated recommendations regarding Lee CC plant and expense-related items, as shown in Boswell Third Supplemental and Stipulation Exhibit 1. Also on April 10, 2018, the Company filed the Affidavit of Joseph A. Miller, Jr. indicating that as of April 5, 2018, the Lee CC plant closed to service for operational and accounting purposes and is providing DEC with 650 MW of capacity for the benefit of its North and South Carolina customers. On April 19, 2018, the Company filed Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues, which, among other things, reflects updates to the Lee CC plant and expense-related items to reflect final costing information for inclusion in this proceeding, including updates to plant investment, related deferred income taxes, depreciation, materials and supplies, and the deferral of those costs between the plant's operation date and the date rates are expected to become effective. On April 19, 2018, the Public Staff filed Boswell Third Supplemental and Stipulation Exhibit 1 Corrected, which, among other things, corrects the Lee CC addition to plant in service and corrects the Lee CC deferral calculation.

No intervenor took issues with these provisions of the Stipulation. Upon consideration of all of the evidence in this proceeding, including the Stipulation, which the Commission accepts in its entirety and upon which the Commission places great weight, the Commission finds and concludes that it was appropriate to keep the record open to allow the Company the additional time to attest to the commercial operation of the Lee CC facility and the Stipulating Parties to resolve the final cost amount to be included for recovery in this proceeding. The Commission appreciates the Stipulating Parties working together to resolve this matter economically. Because the conditions of the Stipulation have been met in a timely and appropriate manner, the Commission finds and concludes that DEC's request to recover the final cost amounts included in this case for the Lee CC plant, as adjusted by the Stipulating Parties and reflected in Boswell Third Supplemental and Stipulation Exhibit 1 Corrected and Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues, is just and reasonable to all parties in light of all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 25

The evidence supporting this finding and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

In her direct testimony, Company witness McGee testified to the Company's position that the beneficial reuse of coal ash constitutes a sale of by-product produced in the generation process, and therefore, associated gains and losses on the sale should be included in the fuel adjustment clause under N.C. Gen. Stat. § 62-133.2(a1)(9). Tr. Vol. 26, pp. 195-97. She explained that the Company excluded net loss amounts for September 2017 through August 2018, related to the sale of coal ash produced at the Company's Riverbend coal plant, from its March 8, 2017 fuel filing, pending the Commission decision in this proceeding. Id.

Public Staff witness Lucas testified that the costs relating to the disposal of coal ash from Riverbend to the Brickhaven facility in Chatham County, North Carolina, to the extent they are reasonable and prudent, should be recovered in base rates and not through the fuel adjustment clause because such costs did not result from sale of coal ash.

In Section III. P of the Stipulation, DEC withdrew its request to recover certain CCR costs through the fuel adjustment clause related to the excavation and movement of CCRs from Riverbend to Brickhaven. The Stipulation also provides that the recovery of these costs are left in the Company's deferred CCR balance for consideration of recovery in the Company's base rates.

No intervenor contested these provisions of the Stipulation. Accordingly, the Commission finds and concludes that the provisions of the Stipulation regarding the consideration of recovery of certain CCR costs through base rates, rather than fuel, as set forth in Section III.P of the Stipulation are just and reasonable to all parties in light of all the evidence presented, for purposes of this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 26

The evidence supporting this finding and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Company witness McGee also testified with respect to the amount of fuel that should be included in base rates. In her direct testimony she testified that she supported the fuel component of proposed base rates for all customer classes and the fuel pro forma adjustments to the test year operating expenses contained in McManeus Exhibit 1. Tr. Vol. 26, pp. 191-92. Witness McGee proposed to use the total prospective fuel and fuel-related costs factors that DEC proposed on March 8, 2017 in Docket No. E-7, Sub 1129. Id. Witness McGee explained that DEC's intent in using the fuel-related factors that were proposed at the time the Company's Application was prepared as a component of its proposed new rates was to make it clear that the Company is requesting a rate increase that relates to non-fuel revenues only. Id. at 194. In her testimony, Public Staff witness Boswell recommended that the base fuel and fuel-related cost factors be updated to reflect the rates that were actually approved by the Commission in that docket. Tr. Vol. 26, p. 584. In her rebuttal testimony, Company witness McManeus stated that the Company did not oppose the Public Staff's recommendation. Tr. Vol. 6, p. 305. Accordingly, Section IV. B. of the Stipulation sets forth the Stipulating Parties' agreed upon total of the approved base fuel and fuel related cost factors, by customer class, as set forth below (amounts are ¢/kWh excluding regulatory fee):

• Residential	1.7828 cents per kWh
• General Service/Lighting	1.9163 cents per kWh
• Industrial	2.0207 cents per kWh

Tr. Vol. 6, p. 354.

According to witness McGee, the Company will continue to bill customers the fuel rates authorized by the Commission in its annual fuel proceedings. Tr. Vol. 26, p. 194. As such, there will be no change in customers' bills as a result of including these fuel cost factors in the proposed base rates. Id. As shown on Boswell Third Supplemental and Stipulation Exhibit 1, Schedule 3-1(t), the Company's North Carolina retail adjusted fuel and fuel-related costs expense for the Test Period was $1,082,899,000. This amount was calculated using the base fuel factors identified above and North Carolina retail test period actual kWh sales by customer class as adjusted for weather and customer growth. Tr. Vol. 26, p. 193.

No intervenor contested these provisions of the Stipulation. Accordingly, the Commission finds and concludes that the provisions of the Stipulation regarding the base fuel and fuel-related cost factors as set forth in Section IV.B of the Stipulation are just and reasonable to all parties in light of all the evidence presented, for purposes of this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 27

The evidence supporting this finding and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

The Company's proposed adjustment for coal inventory, as reflected in its Form E-1, Item 10, Adjustment NC-1600, set the inventory balance to 40 days of 100% full load burn, resulting in a reduction to the materials and supplies component of cash working capital in this case. Tr. Vol. 23, p. 18. This is the level of coal inventory that was used in DEC's last general rate case for the materials and supplies component of cash working capital and was stipulated to by the Public Staff and the Company in the settlement agreement approved by the Commission in that case. Id.

In his pre-filed testimony, Public Staff witness Metz recommended adjusting the materials and supplies component of cash working capital to reflect a 40-day coal inventory based on a 70% full load burn. Id. at 25. He testified that a 70% capacity factor represents a reasonable estimate of the Company's coal fleet performance during peak conditions, though he would expect that the Company would adjust its inventory based on anticipated seasonal needs. Id. at 25-26. Witness Metz based his recommendation on DEC's historical trends and predicted use of the Company's coal fleet, as well as DEC's lower delivered fuel prices due to closer proximity to coal sources, combined with the efficiency of the Company's coal generation technology. Id. at 27.

In his rebuttal testimony, Company witness Miller explained that the Company actually contemplated requesting an increase in the full load burn inventory target to enable the Company to respond to un-forecasted increases in coal generation demand, given the increased volatility in coal generation due to factors such as fluctuating natural gas prices and weather-driven demand. Tr. Vol. 26, p. 228. However, the Company determined that it was prudent to continue to operate under the current 40-day full load burn inventory target and made a pro forma adjustment reducing its actual coal inventory at the end of the Test Period to reflect this. Id.

Witness Miller testified that adopting witness Metz's recommendation of a 40-day coal inventory based on a 70% full load burn could lead to negative supply, delivery, and operational impacts. Id. at 228-29. He testified further that his recommendation fails to contemplate the factors that impact a reliable fuel supply, including volatility in coal generation demand, delivery and/or supply risks, and generation performance. Id. at 228-29. In particular, he noted that witness Metz's recommendation assumes there will be ample amounts of coal available during higher demand periods and does not contemplate the increased demand from other utilities during the same period of increased demand being experienced by the Company. Id. at 228-31. Witness Miller explained that a 40-day, 70% capacity factor equates to only a 28-day full load burn at 100% during periods of peak demand. Id. at 228. According to witness Miller, if DEC is unable to dispatch cost-competitive coal generation during peak demand due to unreliable inventory levels, it will have to seek alternatives such as dispatching higher cost generation, paying higher prices for fuel, or purchase power. Id. As such, having unreliable coal inventory levels could result in unfavorable impacts on customers. Id. at 229.

In the Stipulation, the Public Staff and DEC agreed that for purposes of settlement, the Company may set carrying costs included in base rates reflecting a 35-day coal inventory at 100% capacity factor, and that a coal inventory rider should be allowed to manage the transition. More specifically, the Stipulating Parties propose that this increment rider shall be effective on the same date as new base rates approved in this proceeding and continuing until inventory levels reach a 35-day supply to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $73.23 per ton). The rider will terminate the earlier of (a) May 31, 2020 or (b) the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply on a sustained basis.[1] The Stipulation provides that for this purpose, three consecutive months of total coal inventory of 37 days or below will constitute a sustained basis. The Company will adjust this rider annually, concurrent with DEC's DSM/EE Rider, REPS Rider, and Fuel Adjustment Rider, and any over- or under-collection of costs experienced as a result of this rider shall be reconciled in that annual rider proceeding. Additionally, the Stipulation provides that any interest on any under- or over-collection shall be set at the Company's net-of-tax overall rate of return, as approved by the Commission in this proceeding. Finally, the Company agreed to conduct an analysis in consultation with the Public Staff demonstrating the appropriate coal inventory level given market and generation changes since the Company's last rate case (Docket No. E-7, Sub 1026), with such analysis to be completed by March 31, 2019.

No intervenor took issues with this provision of the Stipulation. The Commission finds and concludes that the reduction to coal inventory included in working capital and the establishment of the increment rider to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply, as provided in the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 28

The evidence supporting this finding of fact and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Summer Coincident Peak

DEC based its filing in this case on the summer coincident peak (SCP) methodology for allocation of the cost of service among jurisdictions and among customer classes. The Public Staff, CIGFUR III, CUCA, and Kroger concur with DEC's use of the SCP methodology for cost allocation. No intervenors presented testimony in opposition to the Company's use of the SCP methodology for cost allocation. Moreover, the Stipulation provides for the use of the SCP methodology for purposes of settlement.

Company witness Hager testified in support of the SCP methodology for allocation among jurisdictions and among customer classes. She explained that a coincident peak allocator assigns

[1] The Stipulation provides that the Company reserves the right to request an extension of the May 31, 2020 date.

the fixed demand-related costs to the jurisdictions and customer classes in proportion to their respective contribution to the system's maximum hourly demand during the test period. Tr. Vol. 19, pp. 24-25.

Each jurisdiction's and customer class' cost responsibility (i.e. the percentage of the fixed portion of production and transmission demand costs assigned to each jurisdiction and customer class) is equal to the ratio of their respective demand in relation to the total demand placed on the system. Id. at 25. The cost of service study supporting the Company's proposed rate design in this proceeding allocates the fixed portion of production and transmission demand-related costs based upon a jurisdiction's and customer class' coincident peak responsibility occurring during the summer. Id.

DEC's peak system demand for the test year, occurred on July 27, 2016, at the hour ending at 5:00 p.m. Id. This was also the peak generation and transmission demand used in the Company's cost of service study for the test year. Id. Witness Hager explained that the SCP in the test year is within the range of previous SCP occurrences, and it is therefore appropriate to assign fixed demand-related costs to the Company's jurisdictions and customer classes based upon the SCP. Id. at 26.

The Public Staff agreed with the Company's use of the SCP cost of service methodology. The Stipulation reflects that the "Public Staff does not oppose the Company's cost of service study and allocation methodology for purposes of settlement in this case only, with the exception of coal ash costs, which is included within the Unresolved Issues" (Stipulation, § III.C) and separately addressed herein at Finding and Conclusion No. 28. Public Staff witness Floyd explained that the Public Staff has historically supported and continues to support, the Summer Winter Peak and Average (SWPA) methodology. Tr. Vol. 23, p. 54. The Public Staff, however, does not object to the Company's use of the SCP, for purposes of this proceeding, because the differences between the per books calculations of revenue requirement between the SCP and SWPA methodologies is immaterial on a jurisdictional basis. Id. at 55.

CUCA witness O'Donnell agreed that the SCP allocation methodology "is appropriate for use in the Company's cost of service study in this proceeding." Tr. Vol. 18, p. 117. Witness O'Donnell stated that since DEC's system is historically summer peaking, the SCP cost of service study "is the most representative model of how the generation system is used in any given year." Id. at 116.

CIGFUR III witness Phillips also agreed that the SCP allocation methodology "is appropriate for use in the Company's cost of service study in this proceeding." Tr. Vol. 26, p. 257. Witness Phillips testified that the SCP allocation methodology "properly allocates cost responsibility to customer classes and, if rates are designed consistent with cost of service, minimizes the need for new generating capacity consistent with DEC's load management goals by sending correct price signals." Id. Kroger also supports the use of the SCP allocation methodology, and witness Higgins testified that the method "allocates production demand and transmission costs to jurisdictions and customer classes based on each group's contribution to the system's highest peak demand, which has historically occurred in summer months." Tr. Vol. 4, p. 500.

The Commission finds and concludes that SCP is the appropriate cost allocation methodology for purposes of this proceeding, subject to the provisions of the Stipulation. Upon consideration of all of the evidence in this proceeding, including the Stipulation upon which the Commission places significant weight, the Commission approves use of the SCP cost allocation methodology to set the Company's base rates in this proceeding.

In arriving at its conclusion, the Commission finds that having the necessary generation and transmission resources to meet the Company's summer peak (plus an appropriate reserve margin) is an essential planning criteria of the Company's system. Under cost causation principles, therefore, all customer classes should share equitably in the fixed production and transmission costs of the system in relation to the demands they place on the system at the peak. As discussed and supported in DEC's integrated resource plans, the Commission also recognizes the Company's shift to winter capacity planning. This change will require more attention in the Company's next general rate case. The Kroger Co. in its post-hearing Brief stated that "[i]f the Commission determines that the winter peak should also be considered in the allocation of production demand costs, an allocator based on the average of the single highest summer and single highest winter coincident peaks may also be appropriate." See Post-Hearing Brief of the Kroger Co., p. 7. The Commission concludes that DEC should file annual cost of service studies based on Winter Coincident Peak as well as the SCP and SWPA methodologies. In its next general rate case, the Company shall prepare cost of service studies based on each of these methodologies.

Although the Public Staff has traditionally supported the SWPA methodology, it is not unreasonable for the Stipulating Parties to have agreed to the use of SCP in this proceeding. Further, the Commission notes that the difference in the retail revenue requirements between the SCP and SWPA methodologies is immaterial on a jurisdictional basis.

The Commission finds and concludes that, for purposes of this proceeding, the Company may use the SCP methodology for allocation between jurisdictions and among customer classes under the provisions of the Stipulation and that the provisions of the Stipulation regarding cost of service methodology are just and reasonable to all parties in light of all the evidence presented.

Minimum System

The Company used a minimum system study to allocate distribution costs among customer classes. The Public Staff does not oppose the Company's cost of service study and allocation methodology for purposes of settlement. NCSEA witness Barnes objects to the use of a minimum system study to allocate costs to customers. Tr. Vol. 20, pp. 74-95. Moreover, witness Barnes also criticizes the specific methodology used by the Company, which he argues inflates the size and cost of the minimum system and increases the portion of the distribution system classified as customer-related. Tr. Vol. 20, p. 94-95.

Witness Hager explained that DEC's minimum system study allowed DEC to classify the distribution system into the portion that is customer-related (driven by number of customers) and the portion that is demand-related (driven by customer peak demand levels). Tr. Vol. 19, p. 35. The methodology behind the Company's minimum system study allows DEC to assess how much of its distribution system is installed simply to ensure that electricity can be delivered to each customer, regardless of the customer's frequency of use. Id. at 36. Witness Hager testified that "[w]ithout the minimum system, low use customers could easily avoid paying for the infrastructure necessary to provide service to them which is counter to cost causation principles." Id. She further explained that the methodology used by the Company is consistent with the guidance regarding allocation of distribution costs provided in the NARUC Cost of Service Manual. Id. at 37.

Witness Hager also explained that while the NARUC Cost of Service Manual suggests two methods of allocation, both of these methods identify a portion of FERC distribution asset accounts 364 to 368 as customer-related and a portion as demand related. Id. at 38. Therefore, witnesses Barnes' and Wallach's suggestion that all of the costs charges to accounts 364 to 368 should be allocated based on demand is inconsistent with the guidance provided in the NARUC Cost of Service Manual. Id.

On cross-examination by counsel for NCSEA, witness Hager testified regarding the Company's long history of using the minimum system method, stating that "the minimum system study has long been used in the cost of service study to develop the customer-related costs that are then passed to rate design and are the basis of rates that are ultimately approved by the Commission." Id. at 138-39. The Company "filed minimum system study results in every rate case for a long time" and the Commission "has approved the results of that." Id. at 143.

In response to questioning from Commissioner Clodfelter, witness Hager testified about the different variations of the minimum system method used by DEP and DEC. Tr. Vol. 20, pp. 27-29. Witness Hager explained that DEP determines the cost of constructing a minimum system configuration using today's costs and the cost of constructing a standard configuration in today's costs, and applies that ratio to the balance of plant account. Id. at 28. Alternatively, DEC calculates the current cost for a minimum size system and then applies a Handy-Whitman Index to adjust to book costs. Id. at 29. She noted, however, that while the methods differ, "they both have the same ultimate goal" and "get you back to the same place." Id. at 28, 30.

In its post-hearing Brief, NCSEA states that "the minimum system analysis is flawed." See NCSEA's Post-Hearing Brief, p. 37. NCSEA states that the minimum system methodology "assumes that some costs of the shared distribution system are effectively incurred solely for the purpose of connecting each customer and that these costs should therefore be classified as customer-related." Tr. Vol. 20, pp. 75-76. In effect, the minimum system methodology "double counts" demand-related costs because a minimum system is still capable of serving some level of demand. Id. at 76.[1]

---

[1] See also, Tr. Vol. 19, p. 36 ("But if someone, for whatever reason, wants electricity to light a single 100-Watt light bulb, that customer will require distribution assets such as poles and conductors and transformers to deliver that electricity."). NCSEA notes that, while small, a single 100-watt light bulb would nonetheless impose demand on the grid. See also, Official Exhibits, Vol. 20 (NCJC, et al., Hager/Pirro Cross Exhibit 1) ("Cost analysts disagree on how much of the demand costs should be allocated to customers when the minimum-size distribution

Furthermore, NCSEA states that the Company's modified minimum system methodology does not examine actual costs, but rather defines costs for specified components and extrapolates those costs across the Company's system. Id. at 86. In the case of poles and conductors, this results in more items being included in the minimum system study than are actually on the Company's system and results in a negative assignment for these components in the demand charge. Id. at 87. Further, NCSEA states that the Company's modified minimum system methodology contains flaws in its analysis of poles and structures, overhead conductors, line transformers, and service drops. Id. at 90-94.

The Commission is not persuaded by the evidence presented in this docket that the minimum system analysis employed by the Company is flawed in a way that precludes the Commission from accepting it as appropriate for cost allocation in this proceeding. However, the Commission gives some weight to NCSEA witness Barnes' argument that "[t]he Commission should reconsider its past acceptance of this method for the allocation for distribution costs, and disregard the results as a consideration in rate design." Tr. Vol. 20, p. 95. Witness Barnes stated in his testimony that "Many states confine the definition of customer costs to those costs that are directly attributable to a customer, such as metering and billing, excluding portions of the distribution system shared by multiple customers. A report commissioned by the National Association of Regulatory Utility Commissioners (NARUC) found that this basic customer method (100% demand for shared distribution facilities and 100% customer for meters and services) was the most common approach at the time of the report. There are a number of methods for differentiating between the customer and demand components of embedded distribution plant. The most common method used is the basic customer method, which classifies all poles, wires, and transformers as demand-related and meters, meter-reading, and billing as customer-related. This general approach is used in more than thirty states.[1] Tr. Vol. 20, p. 79.

Further, witness Barnes stated in his testimony that:

> [i]t is not clear to me that the Commission has recently delved into the details of the different methodologies used by North Carolina utilities in conducting their minimum system studies. In fact, significant differences in methodology are apparent to me based on my review of the studies performed by DEP, DEC, and Dominion Energy North Carolina (Dominion). For instance, in its 2016 general rate case, Dominion classified only 31.08% of secondary poles in FERC Account 364 as customer related [in its most recent rate case.][2] DEP classified 95.9% of

method is used to classify distribution plant. When using this distribution method, the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, which can be viewed as a demand-related cost.").

[1] F. Weston, et al., Charges for Distribution Service: Issues in Rate Design, p. 19, Regulatory Assistance Project (2000), available at http://pubs.narus.org/pub/536F0210-2354-D714-51CF-037E9E00A724.

[2] Application of Virginia Electric and Power Company, d/b/a Dominion North Carolina Power, for Adjustment of Rates and Charges Applicable to Electric Utility Service in North Carolina, Docket No. E-22, Sub 532 (March 31, 2016) DNCP Form E-1, Item 45F, p. 121.

secondary poles in FERC Account 364 as customer related in its most recent rate case.[1]

Tr. Vol. 20, pp. 82-83.

According to witness Barnes, DEC effectively classifies all shared secondary and primary poles in FERC Account 364 (as well as conductors in FERC Account 365) as customer-related. This is visible in the Company's COSS in the form of negative values for demand-related plant in service for FERC Accounts 364 and 365.[2] The negative values arise because the Company's calculated minimum system is larger than the actual FERC Account balance after removing direct assignments, which necessitates an adjustment. The true-up adjustment effectively results in a demand-related component of zero and a customer-related component of 100%. Similar differences are evident for other distribution Accounts, contributing to a wide range of estimates of residential customer units costs. Id.

The Commission recognizes that any approach to classifying costs has virtues and vices. It is important to effectively address issues such as those discussed by witness Barnes while at the same time recognizing the Company's substantial projected investments in its Power Forward programs. Just considering the grid modernization programs alone suggests that distribution system cost allocation among customer classes will take on heightened importance in future rate cases. The implications of using a suboptimal methodology or incorrectly applying an otherwise acceptable methodology, could be significant in the future. The Commission concludes that a more focused and explicit evaluation of options for distribution system cost allocation and an assessment of the extent to which any single allocation methodology is being consistently applied by the utilities is warranted. Therefore, the Commission directs the Public Staff to facilitate discussions with the electric utilities to evaluate and document a basis for continued use of minimum system and to identify specific changes and recommendations as appropriate. If the Public Staff ultimately recommends an alternative approach to minimum system as a result of this review, then the support for that position should be clearly defined. The Public Staff shall submit a report on its findings and recommendations to the Commission no later than the end of the first quarter of 2019 in a new, generic electric utility docket to be established by the Chief Clerk for this purpose.

Upon consideration of all the evidence in this docket, including the Stipulation, the Commission approves DEC's use of the minimum system methodology for cost allocation in this proceeding. The Commission places significant weight on the testimony of Company witness Hager regarding the Company's long history of employing the minimum system method and this method's alignment with cost causation principles. The Commission finds that the Company's use of the minimum system method for cost allocation in this proceeding is just and reasonable to all parties in light of all of the evidence presented.

[2] DEC Form E-1, Item 45D, p. 5.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 29

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony of Public Staff witness Boswell, the rebuttal testimony of DEC witness Doss, as well as the entire record in this proceeding.

As part of its filing in this case, the Company submitted a lead-lag study that was performed in 2010 using fiscal year 2009 data. Tr. Vol. 12, pp. 50, 55. Public Staff witness Michelle Boswell commented that a fully updated lead-lag study should have been completed for this case, and recommended that the Commission direct the Company to prepare and file a lead-lag study in its next rate case. Tr. Vol. 26, p. 602. In his rebuttal testimony, DEC witness Doss stated that the Company agrees with Public Staff witness Boswell's recommendation and testified that DEC will prepare and file an updated lead-lag study as part of its next rate case application. Tr. Vol. 12, p. 55.

The Stipulation incorporates the Company's agreement to file an updated lead-lag study in its next rate case. Stipulation, § IV.D. No intervenor took issue with this provision of the Stipulation. Accordingly, the Commission finds and concludes that, consistent with Section IV.D of the Stipulation and in light of all the evidence presented, DEC shall prepare and file an updated lead-lag study in its next general rate case.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 30

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Company witness Pirro provided testimony regarding the Company's proposed changes to rate design. Witness Pirro's direct testimony focused on DEC's major proposed rate design initiatives, including:

(1) Basic Facilities Charge (BCF) The Company proposes the BFC for all rate classes, with the exception of OPT-V, be set to recover a percentage difference between the current rate and the customer-related cost incurred to serve these customer groups. Tr. Vol. 19, p. 57. Witness Pirro explained that this approach was taken because current rates significantly understate the current cost of service related to the customer component of cost. Id. The Company's recommendation reduces subsidization while minimizing the rate impact on low usage customers. Id. A comparison of the current and proposed BFCs for each rate class is provided in Pirro Exhibit No. 8.

(2) Residential Rates. Witness Pirro explained that the Company has not proposed any major structural changes to its residential rates. The Company, however, has increased the discount available to customers taking service under Rate RS and Rate RE and receiving Supplemental Security Income through the Social Security Administration and who are blind, disabled, or 65 years of age or over. Id. at 61.

The Company also proposes to discontinue Residential Water Heating Service Controlled/Sub Metered Schedule. Id. at 72-73.

(3) General and Industrial Rates. Witness Pirro explained that other than revisions to the rate to collect the revised revenue requirement, the Company has not altered the overall structure of Rate LGS, Rate SGS, and Rate I, service to large general service, small general service, and industrial customers, respectively. Id. at 62. The Company proposes to increase the incremental demand charge for Rate HP to $0.5994 per kW. Id. at 63.

In Section IV.E of the Stipulation, the Stipulating Parties agreed to implement the rate design proposed by Company witness Pirro within in his direct testimony, except for the amount of the BFC which was an unresolved issue and addressed separately in Finding and Conclusion No. 34 herein. Additionally, the Company entered into the Lighting Settlement with NCLM, Concord, Kings Mountain, and Durham, which resolved certain outdoor lighting issues raised by intervenors in this docket. The Public Staff does not object to the Lighting Settlement.

Several intervenors provided testimony on various rate design issues in this proceeding, as discussed below. Having considered the testimony and exhibits of all of the witnesses and the entire record in this proceeding, the Commission makes its findings and conclusions on each of these issues as set forth below:

AMI Enabled Rates

EDF witness Alvarez criticized the lack of detail in the Company's Application regarding time varying rate offerings that the Company plans to implement in conjunction with AMI. Tr. Vol. 26, pp. 321-27. Company witness Pirro responded that "[i]t would be premature to offer a specific rate design before the infrastructure to support the design is available." Tr. Vol. 19, p. 88.

Additionally, EDF witness Alvarez testified about various AMI-enabled services that he argues offer significant customer and environmental benefit potential. See, e.g., Tr. Vol. 26, pp. 322-27. Company Witness Pirro responded that the Company will consider new rate designs after full AMI deployment, which is expected by mid-2019. Tr. Vol. 19, p. 87. As the Company continues deployment of AMI and begins implementation of new billing infrastructures, the Company will evaluate all potential future rate designs, including dynamic rate designs, and will assess the approach or combination of approaches that cost-effectively meets customer interests and demand response objectives. Id. Witness Pirro also responded to witness Alvarez's suggestion that a collaborative would be beneficial in developing time-varying rate designs, by reiterating that the Company highly values customer input in evaluating both current and future rate designs. Id. at 88. He explained that the Company routinely discusses its rate design with members of the Public Staff and customers, and that it is preferable that such input be received on an on-going basis, rather than awaiting a group meeting to be certain this guidance is considered in the decision-making process with respect to future rate designs and requirements for supporting infrastructures. Id.

Witness Pirro further explained why it would be premature to offer a specific AMI-enabled rate design in this proceeding. Id. In addition to the fact the AMI technology and new billing system infrastructure has not been implemented yet, he testified that it is important to evaluate each rate design in conjunction with other demand response options that seek to shift customer consumption. Id. He explained that all customer options need to be evaluated to achieve the most dependable load response at the lowest cost to customers. Id.

Public Staff witness Floyd testified that the Public Staff's support of the Company's AMI deployment is predicated on maximizing benefits to the customers. Tr. Vol. 23, p. 90. Witness Floyd noted that the Company has committed to develop new and innovative rate designs, which should contribute toward maximizing customer benefit. Id.

The Commission agrees that it is premature to offer specific AMI-enabled rate designs in this proceeding since the infrastructure underlying such rate design is not yet available. The Commission concludes, however, that it is appropriate for DEC to evaluate new rate designs that will, among other things, allow ratepayers in all customer classes to use the information provided by AMI to reduce their peak time usage and to save energy.

TOU or Critical Peak Pricing Rates

NCLM witnesses Hunnicutt and Coughlan testified that the Company should provide additional time-of-use (TOU) and critical peak pricing (CPP) dynamic pricing options for customers. Tr. Vol. 8, pp. 119-43; Tr. Vol. 26, p. 373. The City of Durham stated in its post-hearing Brief that it joins with the NCLM to ask the Commission to order DEC to develop proposals for effective time-of-use and critical peak pricing rate designs which encourage energy efficiency, and provide that information to ratepayers as soon as possible. Witness Hunnicutt testified generally that DEC "should find additional ways through its time-of-use rate designs to encourage and incentivize conservation" and "should provide additional data regarding energy usage to . . . customers on time-of-use rate schedules." Tr. Vol. 26, p. 378. Witness Coughlan testified in more detail regarding the Small General Service Time of Use (SGST) rate and CPP rate option studies, the Peak Time Credit (PTC) Rider pilot, and the smart grid project. Tr. Vol. 8, pp. 121-40. Witness oughlan advocates for the reintroduction of the SGST rate with lower kW and kWh charges, a TOU rate, a CPP rate, a SGS-TOUE rate, the OPT-E rate, and other dynamic pricing options. Id. at 105, 142-43.

Witness Coughlan testified that TOU and CPP dynamic pricing rates can provide a societal benefit. Id. at 119. These rates incent customers to reduce their peak demands and energy consumption during peak periods. Id. This stabilizes demand and creates significant savings for DEC and all customers. Id. While witness Coughlan acknowledged that DEC currently offers the OPT-V rate, he claimed that this TOU rate is not applicable for most customers, who have a load factor of less than 51%. Id. at 120.

Witness Coughlan also discussed the SGST and CPP rates that the Commission ordered the Company to offer on a pilot basis in Docket No. E-7, Sub 1026. Id. at 121-38. Upon conclusion of the pilot period, the Company decided to terminate these rates. Id. at 127. Ninety percent of the customers who participated in the SGST rate pilot program lost money compared to being served on their previous rate. Id. at 128. Witness Coughlan maintained that the SGST rate pilot was unsuccessful because the kW and kWh charges were too high. Id. He argued that if the SGST rate were reintroduced with lower kW and kWh charges, many customers could and would take advantage of the rate. Id. at 129.

DEC, however, terminated the SGST pilot rate, citing "below average acquisition rates and limited performance feedback available to customers." Id. at 127. Customer participation in the SGST pilot rate was low. Id. at 129-30. Witness Coughlan argued that with more time and more marketing efforts, participation would increase. Id. at 130. Moreover, without smart meters available to all customers served by the pilot rates, the Company was not able to provide the rate comparison data that customers wanted. Id. at 130-31; 137-38.

Witness Coughlan asserted that DEC is in a position to implement TOU and CPP rates now, and that municipal jails, parks/recreation facilities, and water and sewer treatment facilities, in particular, could benefit from these pricing options. Id. at 142.

In its post-hearing Brief, NCLM stated that "[t]he Commission should order DEC to develop proposals for new and innovative time-of-use and critical peak pricing rate designs and prepayment options before the next rate case, and receive input from customers." See Post-Hearing Brief and Partial Proposed Order of NCLM, p. 11.

In his direct testimony, Company witness Pirro explained that DEC was not proposing any innovative peak time pricing rate designs or offering real time price signals in this proceeding. Tr. Vol. 19, p. 58. Witness Pirro explained that DEC continues to review and analyze rate designs that offer customers opportunities to respond to price signals to achieve a lower cost for electric service. Id. As described in the testimony of witness Hunsicker, the Company is upgrading its billing system infrastructure to better support these types of designs. Id. Also, as explained by Company witness Schneider, DEC is in the process of deploying AMI that will provide the level of data that is required to bill these innovative designs. Id. at 58-59. Witness Pirro explained that the Rate Design Team is working closely with billing and metering projects to ensure that they will support the types of rate designs that customers will need in the future. Id. at 59. Witness Pirro also noted that the Company presently offers time-of-use rate designs to various customer classes to encourage load shifting and also offers several DSM programs to control customer appliances to aid in reducing system peak demands. Id. Moreover, on cross-examination by counsel for NCLM, witness Pirro explained that as the Company "gets closer to full AMI rollout and implementation of the billing systems, we will continue to work with the Public Staff and try to come to a common . . . ground on future price offerings and trying to balance that with maybe some demand response programs to achieve overall cost effectiveness." Id. at 203.

Based on the results of the pilot rates implemented in Docket No. E-7, Sub 1026, the Commission is not persuaded that DEC should be required to offer any additional TOU or CPP dynamic pricing rate options at this time. However, the Commission finds and concludes that DEC should, within six months of the date of this Order, file in this docket the details of proposed new time-of-use, peak pricing, and other dynamic rate structures, as detailed in the AMI portion of this Order.

OPT-V Rate

CIGFUR III witness Phillips criticized DEC's Optional Power Service Time of Use (OPT-V) rate schedule. Tr. Vol. 26, p. 258. While witness Phillips agreed that the Company's proposed demand charges for the OPT-V rate class were appropriate, he argues that the present and proposed energy rates are significantly higher than the unit costs reflected in DEC's cost of service study. Id. He stated that the energy charges for OPT-V customers are 30-60% above the unit costs in the Company's cost of service study, and argued that these charges should be reduced to better reflect actual energy costs. Id. at 268. Witness Phillips recommended that any approved reduction to the Company's requested revenue increase for the OPT-V class be used to reduce the proposed energy rates, particularly for Transmission Service and Large Primary Service customers. Id.

On cross-examination by counsel for CIGFUR III, witness Pirro explained that the Company did not agree with witness Phillips' recommendation to adjust the OPT-V rate design to move the energy charges closer to unit cost. Tr. Vol. 19, pp. 115-24. Witness Pirro explained that the OPT-V "rate and pricing structure has been very successful from the onset. [DEC has] had very positive feedback from [its] commercial/industrial groups during customer meetings, and they . . . have been very happy with the pricing structure. And . . . during those customer forum groups, [the Company has] had no complaints." Id. at 120. He added that OPT-V is a relatively new rate design and the Company has received positive feedback regarding this rate from both external and internal customers through its large account management and economic development teams. Id. at 124.

In addition to the Company having received very positive customer feedback regarding the OPT-V rate, witness Pirro explained that the Company must "look at all the pricing components in order to send appropriate price signals." Id. at 123. One such factor is marginal cost pricing, and witness Pirro testified that reducing energy rates below those levels would not be justifiable. Id. at 122. He reiterated that it is inappropriate to adjust the energy charge in isolation, and that the Company must "look at all of the pricing components as a whole, the customer charge component, the demand and energy, and you have to balance those to send the appropriate price signal." Id.

The Commission finds and concludes that the Company's proposed OPT-V rate is just and reasonable in light of the evidence presented. The Commission, therefore, rejects witness Phillips' recommendation to reduce the proposed energy rates for Schedule OPT-V on the grounds that adjusting one pricing component without consideration of all pricing factors is inappropriate. It is appropriate to consider all pricing components, including marginal cost pricing, customer charge, as well as demand and energy charge, and balance these various components in order to set rates that send an appropriate price signal to customers. Applying that framework, the Commission finds and concludes that the Company's proposed OPT-V rate, including the proposed energy rate, strikes an appropriate balance of pricing factors and sends the correct price signal to customers.

Outdoor Lighting

Company witness Cowling testified regarding the proposed changes to DEC's outdoor lighting rate schedules. First, the Company re-evaluated the outdoor lighting transition fees charged to customers who move from metal halide (MH) and high pressure sodium (HPS) to light emitting diode (LED). Tr. Vol. 26, p. 161. The Company is proposing to lower the transition fees to balance the actual take-rates while protecting the rate class from premature retirement of assets. Id. Witness Cowling explained that the Company has charged a transition fee for customers who voluntarily chose to upgrade standard, decorative, and/ or floodlight outdoor lighting fixtures from MH or HPS to LED. Id. at 162. The purpose of the transition fee was to appropriately reflect the remaining book value of the MH and HPS lights being replaced and hence slow the early retirement of installed assets to avoid adverse impacts on lighting rate base. Id. While the fees have successfully allowed customers to switch to LED technology while minimizing the impact of the transition on other lighting customers, the Company, based on its transition experience to LED technology, now recommends calculating transition fees based on a revised assumption regarding the rate of replacement of fixtures. Id. at 162-63. DEC proposes to reduce the fee to transition from a standard MH or HPS fixture to an LED fixture from $54 to $40 on Schedules GL and PL, and from $78 to $57 on Schedule OL. Id. at 163. The Company proposes to reduce the fee to transition from a standard MH floodlight or HPS floodlight fixture to an LED and/or LED floodlight fixture on Schedule FL from $142 to $112. Id. Cowling Direct Exhibit 1 outlines the current and proposed transition fees on Schedules OL, GL, PL, and FL.

Second, the Company proposes to proactively replace mercury vapor (MV) lights with LED lights on Schedule PL (governmental customers). Id. at 161. Currently, DEC is authorized to upgrade MV fixtures to LED technology upon failure on Schedule PL. Id. at 165. In Docket No. E-7, Sub 1114, DEC received Commission approval to proactively upgrade standard MV fixtures to LED on Schedule OL (private area lights) by no later than December 31, 2019. Id. at 165-66. Under the current approach of only replacing MV fixtures at failure and assuming that customers do not choose to upgrade voluntarily, at the current failure rate of approximately 4.6% per year it will take approximately 22 years to upgrade all of the MV fixtures in North Carolina. Id. at 166. A proactive strategy allows the Company to more rapidly phase-out obsolete MV fixtures in the DEC service territory. Id. Also, it is more cost-effective for the Company to replace the MV lights proactively grouping the work geographically, rather than reactively one-by-one as they fail. Id. The Company is proposing that the Commission approve DEC's proactive replacement on Schedule PL to begin in 2020 and with work completed by 2023. Id. at 167. This gives governmental customers adequate time to budget for the conversions, and also gives the Company adequate time to complete the proactive replacement underway on Schedule OL by the current December 2019 goal. Id.

Lastly, the Company is proposing several revisions to the outdoor lighting schedules to improve administration, including proposals (1) to close Schedule NL, which is a pilot tariff designed primarily to introduce LED technology, (2) to discontinue Schedule FL and merge it into Schedules OL and GL, and (3) to increase the contract term on Schedule OL for standard products from one year to three years. Id. at 161, 169-70. The Company incurs a significant capital investment when installing new outdoor lighting assets and these costs are not recovered if lighting service is discontinued after one year. Id. at 169.

Witness Cowling also explained in his direct testimony that the Company has participated in semi-annual meetings to address issues of interest to North Carolina municipalities and to specifically address lighting issues. Id. at 168. The Company states these meetings are valuable and plans to continue the outdoor-lighting specific dialogue that has been established between municipalities and the Company by meeting with the NCLM and governmental customers on as-needed basis. Id. at 168-69.

Public Staff witness Floyd responded to the Company's proposed outdoor lighting schedules by making three recommendations. First, Witness Floyd explained that the Public Staff agrees with DEC's proposed transition fees for LED service, testifying that the fees "reasonably balance the desire of customers for LED service, with the need to transition lighting in an orderly manner, while minimizing the adverse impact of stranded costs on the remaining lighting class." Tr. Vol. 23, p. 68. The Public Staff, however, states that the Company should consider providing an extended payment option to customers, such as municipalities who desire LED service, but struggle with budgeting issues that prevent their participation. Id. at 69.

Second, witness Floyd testified that the Company's proposal to accelerate the conversion of MV fixtures to LED served under Schedules OL and PL is reasonable, but recommends that the Company address the rates of return (ROR) for the lighting class in order to mitigate the increase in the cost of the conversion. Id. at 72. Witness Floyd recommended that the Company reduce its rates for Schedules FL, GL, OL and PL such that the resulting RORs are within 10% of the overall ROR for the North Carolina retail jurisdiction. Id. at 72-73. Witness Floyd also recommended that the Commission require the Company to file semi-annual reports on the status of its MV replacement program. Id. at 73.

Witness Floyd testified that the Public Staff does not object to the Company's proposals to close Schedules FL and NL. Id. at 74. Witness Floyd also testified about the alignment of rates for the same fixtures served under Schedules GL and PL. Id. at 74-76. Witness Floyd noted that Schedule GL and PL charge different rates for the same fixture, and that the only difference between the two schedules is the length of time a customer has been served under one schedule versus the other, which is not a valid reason for differing rates. Id. at 76. As such, he recommends that the Commission require the Company to continue to meet with municipal customers to evaluate changes to Schedules PL and GL that would make the rates for individual fixtures (LED and non-LED) served under Schedule GL the same as for Schedule PL. Id. at 76-77. He also recommends that the Company work with municipalities to develop a proposal to consolidate Schedules PL and GL in a future proceeding. Id. at 77.

NCLM was the only other intervenor to provide testimony regarding outdoor lighting rate design. NCLM witnesses Coughlan, Fisher and Watkins all presented testimony on various outdoor lighting issues.

Witness Coughlan recommended several changes to the GL rate schedule. Witness Coughlan advocated for the elimination of the transition fees for replacing HPS and MH luminaires with LED luminaires. Tr. Vol. 8, p. 104. Mr. Coughlan noted that the purpose of the transition fee was to appropriately reflect the remaining book value of the MH and HPS lights in order to avoid adverse impacts on the lighting rate base. Id. at 107. However, he argued, that the Company should actively promote the transition to LED lighting rather than discourage it through fees because LEDs are better for customers and the environment. Id. at 108. Witness Coughlan argued that DEC should not be compensated for the transition to new technology. Id.

Alternatively, he suggested that DEC could offset the loss in book value by requiring all lighting customers to pay for it, instead of only those customers switching to LED luminaires. Id. at 109.

Witness Coughlan advocated for establishing a fairer rate for municipalities under Rate GL by lowering the proposed rates for LED lighting. Id. at 110. The proposed ROR for Rate GL is 27.23%, compared to 7.98% for total retail rates. Id. at 109. Witness Coughlan noted that, overall LED lighting costs less than HPS lighting (e.g., installation labor costs, maintenance labor costs, maintenance equipment costs, energy costs), but DEC's rates for LED lighting "are significantly higher" than the rates for HPS lighting. Id. at 111-14. He asserted that lower maintenance labor costs, maintenance equipment costs, and energy costs for LED lighting should be, but are not, accurately accounted for in the proposed rates. Id. at 115-16. Witness Coughlan recommended that the costs for lighting under Schedule GL be adjusted such that on a cost/kWh consumed basis, the rates for LED lighting are equal to or lower than the costs of HPS lighting. Id. at 104.

Witness Coughlan also testified that, to the extent the transition fee is not eliminated, the Commission should only apply such a fee where a municipality seeks to convert all HPS lights to LED lights at the same time. Id. at 118. Witness Coughlan recommended eliminating the transition fee where an existing HPS light has failed or needs maintenance. Id. He argued that "[t]his approach would save DEC from having to travel to existing HPS lights to perform maintenance work and then making another trip back to the same light a year or two later to replace a recently maintained HPS light with an LED light as part of a mass conversion." Id.

Similarly, witness Watkins testified that the Company's LED transition fees and outdoor lighting rates make it "difficult for [the City of] Burlington and other municipalities to afford a complete conversion to LED lighting" which inhibits these municipalities from "maximizing energy efficiency and prevent crime." Tr. Vol. 26, p. 390. He recommends that DEC should cover the cost of conversions for HPS and MH fixtures as well as MV fixtures. Id. at 391. Likewise, witness Fischer testified that DEC should eliminate the transition fee entirely. Id. at 367. Furthermore, witness Fischer stated that if DEC decides not to charge a transition fee for LED lighting, the rates attributable to LED fixtures should not increase, as proposed in DEC's PL rate schedule. Id. at 390, 367. Witnesses Watkins and Fischer also recommended that if the municipality is required to pay a transition fee to switch to LED lighting, the rates paid for LED street lighting should not increase. Id. at 390, 368. Witnesses Watkins and Fischer testified that the current transition fees and the requirement to shift from Schedule PL to GL rate for conversions create a disincentive for municipalities to convert to LED street lighting. Id. at 391, 368.

These witnesses also noted that the Company is requesting rates for street lighting with a ROR for the GL class of 27.22% and the PL class of 12.20%, which fall outside of the +/-10% band of reasonableness for RORs relative to overall jurisdictional ROR (7.98%). Id. at 392, 368. Finally, witness Watkins testified that the NCLM would like to continue meeting with the Company semi-annually, rather than on an as needed basis as suggested by witness Cowling. Id. at 393.

In response to the intervenors' testimony regarding the Company's transition fees for LED service, witness Cowling explained in his rebuttal testimony that "the Company believes these fees are appropriate, as the Company, consistent with its Commission-approved tariffs, installed HPS and MH fixtures at the request of customers; thus, the prudently incurred stranded costs related to these assets should be recovered from the customer requesting early replacement, rather than burdening the lighting class as a whole." Id. at 173. He further testified that the Company will continue to monitor net book value and in future rate proceedings and seek adjustments accordingly. Id.

Witness Cowling also testified in opposition to witness Coughlan's recommendation that transition fees be eliminated for any HPS failure. Id. at 174. He explained that as stated in Witness Coughlan's testimony, HPS lamps last approximately six years, which is far less than the HPS fixture. Id. Given the long depreciation periods of HPS fixtures, replacing HPS fixtures after being in service for six years due to a bulb failure without a transition charge would still leave a significant net book value remaining for HPS fixtures. Id.

Witness Cowling agreed with the recommendation of Public Staff witness Floyd, and testified that the Company wants to work with NCLM to evaluate changes to Schedules PL and GL for the purpose of eventually consolidating Schedules PL and GL in a future proceeding. Id. at 177. Witness Cowling also testified that the Company values its partnership with all of the communities it serves and NCLM and will continue to meet with NCLM regarding outdoor lighting matters. Id. at 176. The Company has proposed meeting on an as-needed basis to provide more flexibility to meet either more or less often and address issues in a timelier manner as they arise. Id. at 177. The Company has also expressed an interest in attending NCLM's annual meeting to discuss lighting matters, which would minimize travel costs to NCLM members and expand the opportunity for more municipalities to participate in outdoor lighting discussions with the Company. Id.

Witness Pirro testified in response to the intervenors' testimony regarding the ROR for the lighting rates. Tr. Vol. 19, pp. 97-98. Regarding the proposed ROR of 27.23% on Schedule GL, witness Pirro explained that the proposed rates and concomitant return are the result of the application of the same rate design principles that were applied to all other rates proposed in this proceeding. Id. at 97. As noted on Pirro Exhibit No. 4 the current return on this rate schedule is nearly 31%. Id. DEC seeks to achieve rate parity for all of its customer classes; however, rate parity cannot be achieved quickly without some customers experiencing significant rate increases. Id. Thus, DEC has and is applying the principle of "gradualism" as it moves all rate classes closer to a uniform return. Id. While DEC understands witness Floyd's and NCLM witnesses' concerns, it must be recognized that ratemaking is a zero-sum process and costs not recovered from one customer class must be recovered from another customer class. Id. at 97-98. Witness Pirro testified that "DEC is committed to continuing to work with the Public Staff and NCLM in an attempt to resolve their concerns in a manner that is appropriate for DEC's other customers, and acceptable to the Commission, and will allow DEC a reasonable opportunity to recover its Commission-approved revenue requirement." Id. at 98.

Prior to the evidentiary hearing, the Company entered into the Lighting Settlement with NCLM, Concord, Kings Mountain, and Durham, which resolved all of the outdoor lighting issues raised by the NCLM in this docket.[1] The parties to the Lighting Settlement agreed to waive cross-examination of each other's witnesses on the outdoor lighting issues addressed in the Lighting Settlement. Lighting Settlement, p. 6. Moreover, the Public Staff does not object to the Lighting Settlement, (id. at 2), and waived its cross-examination of Company witness Cowling.

The Lighting Settlement provides in pertinent part as follows:

> 1. DEC shall keep the current proposed LED transition fee reduction for HPS luminaires from $54.00 to $40.00, but will evaluate adoption of LED technology and its impact on the transition fees every two years between rate cases and adjust the fees downward if applicable. DEC will eliminate the HPS transition fee on entire fixture failure. Transition fees will not be increased outside of a general rate proceeding. The results of any re-evaluation will be reported to the Commission and be subject of a filing for a fee reduction.
>
> 2. DEC will allow municipalities to spread the billing for transition fees for up to four years without incurring carrying costs, to be billed annually in August.
>
> 3. DEC will combine Rate Schedule GL (Governmental Lighting) and Rate Schedule PL (Street and Public Lighting) to reflect PL pricing as approved by the Commission in its final order in this Docket, effective September 1, 2018 and close Rate Schedule GL. Lights on Schedule GL will be mapped to the rates proposed on PL for inside municipal limits. For Schedule GL lights served underground, DEC will apply underground charges assuming up to 200 feet served from overhead to underground for a monthly fee of $0.87 per month. Additional decorative and/or non-standard charges for poles, fixtures, or underground fees greater than 200 feet will still apply as would be applicable under the currently-identical provision of Schedules GL and PL. This will lower the ROR on the GL rate.
>
> 4. Combining Rate Schedule GL and Rate Schedule PL and not seeking an increase in LED rates in this Docket results in a $1.658 million revenue requirement deficit to DEC. Upon approval by the Commission, the lighting ROR will be reduced to fall within the +/-10% range of the retail average and the resulting revenue reduction ($1.658 million under proposed rates) would be allocated to the other rate classes (RES, GS, I and OPT). The Parties affirm that this Agreement reflects the spirit and intent to continue moving government lighting's ROR closer to the average retail customer ROR.
>
> 5. DEC will maintain current LED prices for GL and PL customers and not seek a rate increase for LED fixtures in this Docket. After September 1, 2018,

[1] The only remaining issues in controversy raised by NCLM in this docket are (1) the impact of the Tax Cuts and Jobs Act on DEC's rates; and (2) TOU and CPP dynamic pricing rate options.

all LED rates applicable to governmental customers will be billed on the PL schedule.

6. For all customer lighting classes, DEC will eliminate the HP'S transition fee if the entire HPS fixture fails. Upon complete fixture failure, unless no comparable LED fixture is available, DEC will replace any standard or non-standard and/or decorative HPS fixture with a comparable LED fixture and the monthly rate for the new fixture will apply. DEC will continue to maintain HPS fixtures and perform minor repairs. DEC will not waive the transition fee for HPS fixtures that are replaced prematurely due to willful damage of the fixture and/or when minor repairs can be performed and the customer choses to voluntarily upgrade to LED.

7. DEC will close HPS to new installations in all lighting class Rate Schedules (PL, GL, and OL) to lessen the impact on the net book value to all lighting. Where the governmental customer requests the continued use of the same HPS fixture type for appearance reasons, DEC will attempt to provide such fixture, and the governmental customer shall be billed in accordance with the applicable provisions on Schedule PL.

8. The Company's floodlight service is currently billed on Schedule FL. In this Docket, DEC requested to close Schedule FL and move the floodlights to either Schedule OL (private customers) or to Schedule GL, (public customers). Effective upon Commission approval, DEC will proceed to add the governmental floodlights to Schedule GL at the proposed rates. Effective September 1, 2018, DEC will move these newly added floodlight from Schedule GL to Schedule PL, including any notations and applicable rates at the same time that DEC transitions the other non-floodlights from Schedule GL to Schedule PL.

9. As of September 1, 2018, governmental customers seeking new non-floodlight service which involves installing a new pole and/or new underground service will pay the current new pole and underground charges on Schedule GL. Currently, a standard wood pole is $6.49 per pole and underground charges begin at $4.62 up to 150 feet. The aforementioned fees will not be applicable to fixtures, poles and underground services for non-floodlights moved from Schedule GL to Schedule PL. Current PL fees for such services will apply unless otherwise modified in a future rate proceeding.

10. When Schedule GL is merged into the new PL, the Company will continue to provide an option for customers to prepay the initial capital costs of poles and underground wiring for products with the tiered rate structure (existing pole, new pole, and new pole underground) as provided for in Paragraph 9. These products will include LEDs and floodlights that are merging from GL to PL with the tiered rate design. Thus, if customers chose to prepay capital costs for the pole and underground wiring, customers will be billed for the existing pole rates accordingly.

11. As part of DEC's proposal to accelerate the conversion of MV fixtures to LED for governmental customers, the Company agrees to file semi-annual conversion progress reports with the Commission as proposed in the Docket testimony of Public Staff witness Jack Floyd. The Company will also provide governmental customer-specific data regarding proactive MV to LED conversions to impacted governmental customers before such work begins, as well as providing information summarizing the benefits of the conversion to LED for each governmental customer.

12. The Company will continue regular meetings with the NCLM and all interested localities at mutually convenient times and locations to discuss outdoor lighting issues.

Lighting Settlement, pp. 2-5.

In light of the parties' testimony and the Lighting Settlement, which the Commission accepts in its entirety and upon which the Commission places substantial weight, the Commission finds and concludes that the Company's proposed lighting rate schedules, as modified by the Lighting Settlement, are just and reasonable.

<u>Standby Service</u>

Standby service is where the Company provides service to customers with customer-owned generation during times when the generation either isn't operating or fails to operate and requires additional capacity and energy to be provided by the Company. Several of the Company's tariffs have some form of standby service. Based on witness Pirro's testimony, the Company developed, since the last rate case, an approach to pricing service to net metering customers with solar generation that was ultimately approved in South Carolina as the result of a collaborative agreement.

Further, witness Pirro testified that the Company has closely monitored developments leading up to House Bill 589 and its subsequent passage into law. There are multiple requirements for the Company to comply with this legislation, including changes to the current net metering tariffs. Witness Pirro noted that the Company's analysis in South Carolina will be useful for this purpose. The Company intends to pursue these changes outside of this general rate proceeding and believes that standby service consideration will be a critical part of that discussion. For the interim, witness Pirro testified that standby service is priced in the same manner as that supported by the Company and approved by the Commission in the last rate case.

Public Staff witness Floyd testified that "[g]iven the Company's proposed continuation of the current structure for standby charges until the net metering proceeding, and the small increase proposed for the rate itself, I consider the Company's proposal to be reasonable at this time." Tr. Vol. 23, p. 65.

The Commercial Group in its post-hearing Brief stated that:

> The Commercial Group opposes the structure of DEC's current and proposed standby service. Tr. Vol. 26, p. 529. However, recent N.C. legislation (Session Law 2017-192) would require DEC and other electric utilities to file new net metering rates that are set such that customer-generators pay their full fixed cost of service (but not more than their cost of service). Accordingly, the Commercial Group is deferring its advocacy on those issues to any upcoming proceedings regarding House Bill 589 compliance.

Id.

The Commission concurs with the Company's position and will address standby charges in an upcoming docket.

Summary with Respect to Rate Design

Based on the testimony of Company witnesses Pirro and Cowling, with consideration of the testimony of witnesses Floyd, Coughlan, Fisher, Hunnicutt, Watkins, Alvarez, and Phillips, as well as the Stipulation and the Lighting Settlement, the Commission finds and concludes that the rate design provisions in Section IV.E of the Stipulation as well as the Lighting Settlement are just and reasonable to all parties in light of all the evidence presented.

The Stipulation states that "[t]o the extent possible, the Company shall assign the approved revenue requirement consistent with the principles regarding revenue apportionment described in the testimony of Public Staff witness Floyd." See § IV.E.1 of Stipulation. Specifically, witness Floyd's testimony stated:

> That any proposed revenue change be apportioned to the customer classes, especially for the lighting class, such that: (a) Class RORs are within a band of reasonableness of ± 10% relative to the overall NC retail ROR; (b) All class RORs move closer to parity with the NC retail ROR; (c) The revenue increase to any one customer class is limited to no more than two percentage points greater than the NC retail jurisdictional percentage increase, with priority given to the percentage increase versus the ROR band of reasonableness; and (d) Subsidization among the customer classes is minimized.

Id.

The Commercial Group presented the testimony of witnesses Chriss and Rosa including a recommendation that "[i]f the Commission determines that the appropriate revenue requirement is less than that proposed by the Company, the Commission should use the reduction in revenue requirement to move each customer class closer to its respective cost of service while ensuring that all classes see a reduction from DEC's initially proposed increases." The Commission concludes that it is reasonable, to the extent possible, for the Company to consider the Commercial Group's recommendation when assigning approved revenue requirements.

Further, the Commission approves DEC's proposal to discontinue the Residential Water Heating Service Controlled/Sub Metered Schedule. The Commission is, however, concerned that discontinuing programs that can be used to effectively clip winter peaks is moving in the wrong direction. This is especially true given the fact that the Company has moved to "winter planning." The Commission noted in its Order accepting 2017 IRP update reports that "DEC's 2017 IRP includes winter DSM resources that are approximately 80 MW less than included in its 2016 IRP Report." See Order Accepting Filing of 2017 Update Reports and Accepting 2017 REPS Compliance Plans, Docket E-100, Sub 147, p. 7. The Commission concludes that additional emphasis on winter DSM resource planning is warranted.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 31-33

The evidence supporting these findings and conclusions is contained in the Company's verified Application and Form E-1, and the testimony and exhibits of DEC witnesses Fountain, Simpson, Pirro and McManeus, and Public Staff witnesses Williamson and Boswell and the entire record in this proceeding.

Vegetation Management

Company witness Simpson testified that vegetation management is a critical component of the Company's power delivery operation. Tr. Vol. 16, p. 100. He explained that DEC uses a reliability-based prioritization model to drive its routine integrated vegetation management program. Id. According to witness Simpson, in addition to routine circuit maintenance, there are four other important components to the Company's overall vegetation management approach:

(1) Herbicide spraying of the "floor" of the right-of-way is planned on a periodic basis to control the re-growth of incompatible vegetation in non-landscaped areas and where property owners allow the Company to spray;

(2) Cutting down of "hazard trees" outside of the area normally maintained on a distribution line. The Company implemented this program in 2014 and has been successful in targeting removal of diseased, decayed, or dying trees to preserve the integrity and safety of DEC's lines;

(3) Unplanned work performed at the direction of reliability engineering as a result of outage follow-up investigations or by customer-initiated requests; and

(4) Disciplined vegetation management outage follow-up process tied to a formal internal reliability review process.

Id. at 100-01.

In addition, witness Simpson described how as a result of the Company's worsening trends in SAIDI and SAIFI[1] and the Company's commitment to continue to improve reliability, DEC is enhancing its vegetation management program through a focus on the following areas, all of which require additional funding:

- An increase in the frequency of trimming to stabilize and improve the vegetation management impact on overall reliability performance;

[1] SAIDI and SAIFI are metrics that reflect the averages duration and frequency of power outages.

- Increase frequency of herbicide application where appropriate;
- Evaluate the feasibility of a Tree Growth Regulator program; and
- Continuing other aspects of the current program, such as distribution line "hazard tree" cutting and a disciplined vegetation management outage follow-up process.

Id. at 102-03. As explained by DEC witness McManeus, the Company has included a pro forma adjustment related to an expected $15.8 million increase in system expenditures, or $11.3 million on a North Carolina retail basis,[1] to reflect these enhancements to the Company's vegetation management program. Tr. Vol. 6, p. 264. Witness Simpson testified that this increase in funding will strengthen DEC's vegetation management plan and help maximize the effectiveness of the Company's planned grid improvements. Tr. Vol. 16, p. 103. He added that the Company believes that the additional funding and implementation of its plan, with these enhancements, will benefit customers. Id.

Public Staff witness Williamson testified that the Company initiated its current vegetation work cycle, referred to as the "5/7/9 plan" in 2013. Tr. Vol. 22, p. 43. He explained that the plan represented a change from a reliability-based approach to vegetation management to a cyclical approach. Id. The plan classifies DEC's distribution circuit-miles into three categories, maintained on three independent cycle periods: "Old-urban" – five years; "Mountain" – seven years; and "Other" – nine years. Id. He noted that these cycles were determined from a vegetation growth study conducted by DEC's consultant. Id. He stated that during the first five years of the plan, the Company completed vegetation management on 88% of the target miles. Id. at 44. For this period, he opined that the Company is behind their combined target miles for all categories, thus creating a back-log of approximately 3,752 miles. Id.

Additionally, witness Williamson indicated that when DEC initiated the 5/7/9 plan in 2013, the Company had developed a back-log of approximately 11,000 miles, and that as of January 2018 the current balance of those back-log miles was approximately 10,000 miles. Id. at 45. He contended that the Company would not need to address the 10,000 mile back-log if a proper, cyclical vegetation management program had been in use by the Company prior to 2013. Id. at 46. As a result, Public Staff witness Boswell recommended a pro forma adjustment to vegetation management test year expenses. Tr. Vol. 26, p. 596. The Public Staff's adjustment maintains the reactive, herbicide, and contract inspector program costs at test year actual spending levels, but applies a 7% increase in contractor vegetation management production labor costs. Tr. Vol. 22, p. 45.

Witness Simpson described how the Company performed a vegetation growth study to determine the optimum level of vegetation management for DEC's system, and that the Company used the results of that study to develop the 5/7/9 plan. Tr. Vol. 23, pp. 155-56. According to witness Simpson, the Company's last rate case did not fully fund the plan. Id. at 156. As a result, even though the Company has been spending above the vegetation management amounts included in rates from the last rate case, the Company has only been able to complete

[1] In her December 18, 2017 revised supplemental direct testimony and exhibits, witness McManeus adjusted these amounts to reflect increased labor costs due to higher contractor rates. Tr. Vol. 6, p. 290.

vegetation management on 88% of the planned miles during the five years since the 5/7/9 plan was adopted. Id.

Witness Simpson further stated that the Public Staff's recommended adjustment only took into account a 7% increase in contract rates for 2017 and did not consider that the 5/7/9 plan is still not funded. Id. at 156-57. In addition, he mentioned that the Public Staff did not acknowledge the Company's requested increase for transmission vegetation management. Id. at 158. He also noted that the Public Staff gave no consideration for the 2018 contractor rate increases, given that executed contracts could not be provided until after they were signed on January 24, 2018. Id. at 157. In her second supplemental testimony and exhibits, as well as her rebuttal testimony and exhibits, witness McManeus revised her adjustment to vegetation management expenses to reflect higher contractor rates in recently executed contracts. Tr. Vol. 6, pp. 298, 343. Those contracts resulted in an increase in 2018 rates of 18%. Tr. Vol. 23, p. 157. The revised rates resulted in an increase in production costs of $55.8 million versus the $44.9 million calculated in witness Boswell's schedule. Id. The new contracts also include increases for the demand costs, which are now $2.9 million versus the $2.4 million calculated by witness Boswell. Id. Witness Simpson noted that confirmation of the contractor increases was not available until after Public Staff filed its testimony, and that this is a key piece of information that the Commission should take note of and that may influence Public Staff's view. Id. at 155.

Witness Simpson concluded that given prudent increases in spending, known and measurable increases in contractor rates, and the commitment of the Company to its vegetation management cycles, it is reasonable for the Commission to approve its request to increase funding for vegetation management. Id.

The Stipulation provides that the Company should be allowed to recover distribution vegetation management costs in an annual amount of $62.6 million on a total system basis. Stipulation, Section III.A. For the purpose of complying with the Company's current vegetation management program, the Company committed to eliminate completely the 13,467 miles of Existing Backlog as of December 31, 2017 within five years after the date rates go into effect in this proceeding, and the Company additionally committed to spending the necessary amount on an annual basis to trim its annual target distribution miles under its 5/7/9 Plan. In addition, DEC agreed to provide a report annually to the Commission with the following information: (1) actual 5/7/9 and Existing Backlog miles maintained in the previous calendar year; (2) current level of Existing Backlog miles; (3) vegetation management maintenance dollars budgeted for the previous calendar year for 5/7/9 and Existing Backlog; and (4) vegetation management maintenance dollars expended in the previous calendar year for 5/7/9 and Existing Backlog. The Company further agreed that any accelerated amount of expenditures to eliminate the Existing Backlog miles shall not be used to increase the level of vegetation management expenses in future proceedings, but shall not prohibit the Company from seeking adjustments for vegetation management contractor rate increases. The Commission finds that this provision of the Stipulation represents a reasonable compromise of this disputed issue. The Commission, therefore, finds and concludes that DEC's and the Public Staff's agreement relating to vegetation management, as set forth in Section III.A of the Stipulation, is just and reasonable to all parties in light of all the evidence presented.

Quality of Service

Witness Fountain provided testimony relating to the Company's service quality and ways in which the Company is working to enhance the customer experience. Tr. Vol. 6, p. 186. Witness Fountain noted that customer satisfaction (CSAT) is a key focus area for DEC. Id. The Company's CSAT program includes both national benchmarking studies and proprietary transaction and relationship CSAT studies. Id. Witness Fountain explained that the Company leverages results from these studies to drive improvement to processes, technology, and behavior, in order to improve CSAT. Id. He indicated that DEC's J.D. Power's Electric Utility Residential Study scores are trending up, with the Company being among the most improved in the 2017 study, and closing the gap toward top quartile performance. Id.

Witness Fountain testified that DEC measures overall customer satisfaction and perceptions about the Company via its proprietary relationship study, the "Customer Perceptions Tracker." Id. Random surveys are taken from residential and small/medium business customers, and all large business electric customers, to better understand their customer experience with Duke Energy and overall perceptions of the Company. Id. He stated that Duke Energy North Carolina Residential satisfaction scores are up over ten points on average from 2013, with recent trends even higher. Id. at 187.

As explained by witness Fountain, in addition to its relationship study, DEC utilizes Fastrack, the Company's proprietary transaction study, to measure overall customer satisfaction with the Company's operational performance (i.e., responding to and resolving customer service requests). Id. Each year, thousands of interviews are conducted with DEC customers by a third-party research supplier upon the completion of the customers' service request. Id. The survey questions cover the entire experience, from the time the customer picks up the phone to contact the Company, until the issue is resolved. Id. Witness Fountain indicated that analysis of these ratings helps to identify specific service strengths and opportunities that drive overall satisfaction and to provide guidance for the implementation of process and performance improvement efforts. Id. Through mid-2017, roughly 85% of DEC's residential customers expressed high levels of satisfaction with these key service interactions (Start/Transfer Service, Outage/Restoration, Street Light Repair, etc.). Id.

Witness Fountain testified that in 2016, Customer Satisfaction continued as one of a select number of goals included in the annual incentive compensation plans for DEC employees. Id. According to witness Fountain, by connecting customer satisfaction directly to compensation, each employee is invested in improving and maintaining high customer satisfaction for all Duke Energy utilities, including DEC. Id. at 187-88. Results are monitored at the enterprise level, state level, and by customer segment, so problems can be identified and corrected. Id. at 188. This also allows the Company to identify and apply best practices across all Duke Energy jurisdictions. Id.

Finally, witness Fountain stated that the Company continues to enhance its customer service practices to address language, cultural, and disability barriers. Id. Among other accommodations, the Company's customer service center offers customer service and correspondence in Spanish, handles calls from TTY devices (text telephones), offers bills in Braille, and accepts pledges to pay from social service agencies. Id.

Public Staff witness Williamson also provided testimony regarding DEC's quality of service. Tr. Vol. 22, pp. 47-48. In evaluating the Company's overall quality of service, he reviewed the System Average Interruption Duration Index (SAIDI) and System Average Interruption Frequency Index (SAIFI) data filed by the Company in Docket No. E-100, Sub 138A; informal complaints and inquiries from DEC's customers received by the Public Staff's Consumer Services Division; filed Statements of Position in this docket; and his own interactions with DEC and its customers. Id. at 47. He noted that for the period 2008 through 2016, Company reports showed the SAIDI and SAIFI indices are worsening. Id. These trends show that the Company's outages are increasing in frequency, and when outages occur they tend to have a longer duration, on average. Id. He also stated that less than 1% of the direct contacts that the Public Staff's Consumer Service Division received from DEC customers related to service quality issues. Id. at 48. Witness Williamson concluded that the quality of service provided by DEC to its North Carolina retail customers is adequate at this time. Id.

No intervenor offered evidence contradicting the testimony and agreement of the Stipulating Parties that the quality of DEC's service is adequate. Therefore, consistent with the evidence and Section IV.J. of the Stipulation, the Commission finds and concludes that the overall quality of electric service provided by DEC is adequate.

Service Regulations

Witness Pirro described the proposed changes to DEC's Service Regulations. His pre-filed direct testimony on this matter was modified by his updated Exhibit 1 filed on December 19, 2017. Most of the revisions involve relatively small changes in charges, increases in some and decreases in others, imposed by DEC for various services, including the following.

(1) An increase in the reconnection fee from $25.00 to $27.13 during regular business hours, and a decrease from $75.00 to $27.13 during all other hours [Section XII].
(2) An increase in the initial customer connection charge from $15.00 to $24.18. [Section II].
(3) A decrease in the returned check charge from $20.00 to $5.00 [Section XII].
(4) A decrease in the monthly charge for extra facilities over and above those normally provided from 1.1% of the estimated cost to 1.0% per month, but not less than $25 [Section XVI(16)].

In addition, pursuant to DEC's present Service Regulations, if a residential dwelling unit does not meet the definition of "permanent," it will be considered temporary and service will be provided under a general service rate schedule. DEC proposed the following underlined language to Section XVI(1) and (2).

> [A]dditonally, for a manufactured home to be considered permanent, it must also be attached to a permanent foundation, connected to permanent water and sewer facilities, labeled as a structure which can be used as a permanent dwelling, and under a lease arrangement for five (5) years or longer or located on customer-owned land. If the structure does not meet the

> requirements of a permanent dwelling unit, service will be considered temporary and provided on one of the general service rate schedules.
>
> [M]anufactured homes which meet the requirements of a permanent residence under XVI above will be billed in accordance with the applicable residential rate schedule. Nonpermanent manufactured homes will be provided service under XVI(15) Temporary Service below and billed in accordance with the applicable general service rate schedule.

The Commission notes that one of the consequences of Temporary Service is that the customer must pay DEC's actual cost of connection and disconnection, which may be higher than the charges noted above.

Under Section V of its Service Regulations, with regard to rights-of-way, DEC initially proposed the addition of the following underlined language in the first paragraph:

> The Customer shall at all times furnish the Company a satisfactory and lawful right of way easement over his premises for the construction, maintenance and operation of the Company's lines and apparatus necessary or incidental to the furnishing of service. In the absence of formal conveyance, the Company, nevertheless, shall be vested with an easement over Customer's premises authorizing it to do all things necessary to the construction, maintenance and operation of its lines and apparatus for such purpose.

On April 27, 2018, DEC filed a letter stating that it had decided to withdraw from consideration the second sentence proposed under Section V. The Commission accepts DEC's withdrawal of that proposed additional sentence.

No party filed testimony regarding DEC's proposed changes to its Service Regulations. The Commission finds and concludes that DEC's proposed amendments to its Service Regulations are just and reasonable, serve the public interest, and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 34-35

The evidence supporting these findings of fact and conclusions is contained in the Company's Application and Form E-1, the testimony and exhibits of the DEC and Public Staff witnesses, the Stipulation and the Lighting Settlement, and the entire record in this proceeding.

As fully discussed above, the provisions of the Stipulation are the product of the give-and-take of settlement negotiations between DEC and the Public Staff. Comparing the Stipulation to DEC's Application, and considering the direct testimony of the Public Staff's witnesses, the Commission notes that the Stipulation results in a number of downward adjustments to the costs sought to be recovered by DEC. Further, the Commission observes that there are provisions of the Stipulation that are more important to DEC, and, likewise, there are provisions that are more important to the Public Staff. For example, the Public Staff was intent on obtaining a commitment from the Company regarding vegetation management and reduction of the Company's untrimmed, back-log miles. Likewise, DEC was intent on holding the record of this proceeding open to allow the Company to include the final cost amounts of the Lee CC project. Nonetheless, working from different starting points and different perspectives, the Stipulating Parties were able to find common ground and achieve a balanced settlement.

The result is that the Stipulation strikes a fair balance between the interests of DEC and its customers. As discussed above, the Commission has fully evaluated the provisions of the Stipulation and concludes, in the exercise of its independent judgment, that the provisions of the Stipulation are just and reasonable to all parties to this proceeding in light of the evidence presented, and serve the public interest. The provisions of the Stipulation strike the appropriate balance between the interests of DEC's customers in receiving safe, adequate, and reliable electric service at the lowest reasonably possible rates, and the interests of DEC in maintaining the Company's financial strength at a level that enables the Company to attract sufficient capital. Further, the Commission finds and concludes that the revenue requirement, rate design, and the rates that will result from the Stipulation, subject to the Commission's decisions set forth below on the contested issues, will provide just and reasonable rates for DEC and its retail customers.

Therefore, the Commission approves the Stipulation in its entirety. In addition, the Commission finds and concludes that the Stipulation is entitled to substantial weight and consideration in the Commission's decision in this docket. Further, the Commission concludes that the Lighting Settlement entered into by DEC with NCLM, and the Cities of Concord, Kings Mountain, and Durham is in the public interest and should be approved in its entirety.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 36

The evidence supporting this finding and conclusions is contained in the verified Application and Form E-1 of DEC, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

Company witness Pirro explained that the Company proposes to increase (or decrease) the BFC for each rate class to better reflect the underlying cost of serving customers regardless of the customer's level of energy use. Tr. Vol. 19, pp. 60, 63. Pirro Exhibit 8 shows the Company's proposed BFCs, which are based on a percentage difference between the current BFC and the costs determined in the Company's cost of service study provided by witness McManeus. Id. at 63. Specifically, DEC proposes to increase the monthly BFC for the residential rate class, other than Schedule RT, from $11.80 to $17.79, which reflects approximately 50% of the difference between the current rate of $11.80 and the customer-related cost of $23.78 identified in the cost study. Id. at 60; Pirro Ex. 8. Although the Company's analysis supports increasing the residential BFC to $23.78, the Company has proposed a smaller increase to moderate any effect on low-usage customers. Id.

Several intervenors provided testimony regarding the Company's proposed increases to the BFCs. Public Staff witness Floyd testified that DEC's requested increase is unreasonable given the impact of a large increase on low-usage customers. Tr. Vol. 23, p. 63. He notes that the BFC is an unavoidable charge and constitutes a large percentage of the bill for low-usage residential customers. Id. Witness Floyd explained that if DEC is granted its requested rate increase, approximately 45% of the total revenue increase from residential customers will come solely from the increase in the BFC. Id.

Witness Floyd recommends that any increase in the residential BFC should be limited to 25% of the approved revenue increase assigned to that customer class. Tr. Vol. 23, p. 64. Under the Company's proposed revenue increase of approximately $612 million, this produces a BFC of approximately $15.10 for Schedule RS. Id. at 63-64. Alternatively, witness Floyd recommended that the BFC remain unchanged in the event the Commission ordered a decrease in the revenue requirement as a result of this proceeding. Id. at 64.

NCSEA witness Barnes testified that the Company's proposed fixed customer charge increases are "extreme" and recommended that the current customer charges be maintained, or, alternatively, that the customer charges only be increased by the percentage increase in the overall revenue requirements adopted for each class. Tr. Vol. 20, p. 61. Specifically, witness Barnes testified that the increased residential BFC proposed by the Company was higher than other utilities and is therefore inappropriate. Id. at 66-69. Witness Barnes also argues that the proposed increases are inconsistent with the ratemaking principle of gradualism. Id. at 70.

Witness Barnes, as well as NC Justice Center, et al. witness Wallach, also assert that an increase in the customer charge dilutes customer incentives for distributed generation and energy efficiency. See id. at 71-73; Tr. Vol. 8, pp. 70-76. Witness Wallach argues that the customer charge should be consistent with the "true minimum plant cost per customer" (which is $11.08/month for residential customers), and that all other customer-related costs should be included in the volumetric energy rate. Tr. Vol. 8, pp. 68-72. Witness Wallach also takes issue with the Company's use of the minimum system analysis to determine customer-related distribution plant costs, as further discussed in this Order in the analysis related to Finding and Conclusion No. 28. Id. at 66-67. Witness Wallach argues that the fact that the BFC "exceeds the true customer-related embedded cost per residential customer indicates that a portion of demand-related distribution plant costs are inappropriately being recovered through the current BFC." Id. at 68. Therefore, residential customers with low usage are subsidizing larger customers under DEC's proposed rates. Id.

NC Justice Center, et al. witness Deberry also opposed the increased residential BFC, testifying that it will affect already cost-burdened residents who struggle to afford housing costs. Tr. Vol. 26, p. 348. Witness Deberry explained that over half of all cost-burdened households are renters without the ability to make investments in energy efficiency. Id. at 350-52. She further explained that the increased BFC would reduce incentives from bill savings for landlords to include utility programs in their property management, and thus the costs of an increased BFC would be passed on to customers least able to afford it. Id. at 354.

Similarly, NC Justice Center, et al. witness Howat testified that increasing fixed customer charges disproportionately impacts low-volume, low-income customers and discourages energy efficiency. Tr. Vol. 8, p. 22. Witness Howat testified that low-income households, and particularly low-income households of color, are at a heightened risk of loss of home energy service. Id. at 31-34.

In addition to the expert testimony of witnesses Howat and Deberry, other non-expert witnesses speaking at the public hearings testified about the hardship of increases in fixed charges to low-income households and senior citizens.

NC Justice Center, et al. in its post-hearing Brief stated that:

> It is in large part because of this disproportionate harm to those subsisting on low and fixed incomes that the National Association of State Utility Customer Advocates (NASUCA) is opposed to increases in mandatory, fixed charges like the BFC in this case. NASUCA Resolution 2015-1 (NCJC et al. Floyd Cross Exhibit 1, Ex. Vol. 23, p. 104.) The NASUCA resolution states that imposing a "high customer charge . . . unjustly shifts costs and disproportionately harms low-income, elderly, and minority ratepayers, in addition to low-users of gas and electric utility service in general."

Id.

The AGO stated in its brief that:

> Duke's proposal to increase the basic monthly charge for residential customers by 51% from $11.80/month to $17.79/month is extreme and inappropriate, particularly in the circumstances of this case. The proposal should be denied because it will discourage consumers from making investments in energy efficient products and home improvements or from taking other careful measures to budget their consumption, contrary to statutory public policy goals favoring energy efficiency and energy conservation.

AGO's Brief, pp. 91-92.

In his rebuttal testimony, Company witness Pirro responded to the arguments raised by these intervenors regarding the proposed increases to the residential BFC. First, he explained that "[i]t is important that the Company's rates reflect cost causation to minimize subsidization of customers within the rate class." Tr. Vol. 19, p. 83. Witness Pirro explained that "customer-related costs are unaffected by changes in customer consumption and therefore should be paid by each participant, regardless of their consumption." Id. He further explained that any customer-related revenue not recovered in the BFC is shifted to energy rates, which contrary to NC Justice Center, et al.'s position, actually results in high usage customers subsidizing the rates of lower usage customers. Id.

Witness Pirro disagreed with Public Staff witness Floyd's recommendation to limit the BFC to recover no more than 25% of the revenue increase approved for the rate class. Id. at 84. He explained that the Company shares witness Floyd's concern regarding the size of the increase and is sensitive to the impact of the BFC on its customers. Id. The Company has reflected that concern in its request to limit the increase to less than the fully justified customer-related cost. Id. An economically efficient rate design minimizes subsidization between customers and customer classes, and the Company has reflected this principle in its proposal. Id. While witness Floyd's recommendation moves to reduce subsidization, the Company is concerned that deferring a larger increase at this time merely shifts the need to increase the BFC to a future rate case proceeding. Id.

Additionally, witness Pirro responded to NCSEA witness Barnes' argument that DEC's BFC is higher than other utilities and is, therefore, inappropriate. Id. He explained that a utility's rates should be set based upon a careful examination of the individual utility's cost of service and an allocation of those costs to the jurisdictions and customer classes based upon methodologies found appropriate by the Commission. Id. In this proceeding, the Company has examined its costs and identified customer-related costs in excess of its current BFC. Id. Other utilities' cost and rates are irrelevant to a determination of DEC's rates. Id.

In response to witnesses Barnes and Wallach's assertion that an increased BFC discourages energy efficiency, Company witness Pirro countered that failing to properly recover customer-related cost via a fixed monthly charge provides an inappropriate price signal to customers and fails to adequately reflect cost causation. Id. at 85. Shifting customer-related cost to the kWh energy rate further exacerbates this concern and over-compensates energy efficiency and distributed generation for the cost avoided by their actions. Id.

Witness Pirro also responded to NC Justice Center, et al. witnesses Howat and Deberry's testimony regarding the disproportionate impact of an increased BFC on low-income customers. Witness Pirro explained that the Company is mindful of the impact of any rate increase on its customers, particularly low-income customers; however, the Company does not design rates based upon customer incomes, but rather applies cost causation principles to the extent practicable. Id. at 85. Witness Pirro explained that the Company uses other means to address the financial needs of low-income customers which are more effective than biasing the rate design, such as the Company's Residential Income Qualified Energy Efficiency and Weatherization Assistance Program, budget billing and payment arrangements, and Energy Neighbor Fund. Id. at 85-86.

At the hearing, Witness Pirro testified on redirect that the BFC increase the Company has requested is $5.99 per month, which would equate to 19 to 20 cents per day. Tr. Vol. 20, pp. 21-22. He also testified on redirect that, unfortunately, even though some of DEC's customers cannot afford such an increase, it is still appropriate to increase the BFC based upon cost causation rate design principles. Id. at 22-23. Witness Pirro explained that the Company used the concept of gradualism to effectively recover costs as they are incurred, but determined it was appropriate to seek only half of the difference between the current BFC charge and the fully-allocated cost of the BFC in this proceeding. Id. Witness Pirro further explained that any costs not recovered through the BFC are then recovered for the residential class through the energy charge, which creates different subsidies within that class. Id. at 23.

Based upon the entire record in this proceeding, the Commission concludes that DEC shall increase the monthly BFC for the residential rate class (Schedules RS, RT, RE, ES, and ESA) to $14.00. The Commission finds and concludes that the increase in the BFC for the residential rate class schedules is just and reasonable and strikes the appropriate balance providing rates that more clearly reflect actual cost causation. The increase in these schedules minimizes subsidization and provides more appropriate price signals to customers in the rate class, while also moderating the impact of such increase on low-income customers to the extent that they are high-usage customers such as those residing in poorly insulated manufactured homes. In arriving at this decision, the Commission gives substantial weight to the testimony of Company witness Pirro concerning cost of service. The Commission agrees with witness Pirro's testimony that failing to properly recover customer-related cost via a fixed monthly charge provides an inappropriate price signal to customers and fails to adequately reflect cost causation.

Further, the Commission agrees with witness Pirro's testimony that shifting customer-related cost to the kWh energy rate further exacerbates these concerns and may over-compensate energy efficiency and distributed generation for the cost avoided by their actions. However, the Commission does not find sufficient support in this proceeding to increase the BFC to $17.79 as proposed by the Company. Rather, the Commission in this proceeding finds, in response to parties resisting any increase in the BFC, that the modified increase in the residential BFC is appropriate. The Commission finds and concludes that it is just and reasonable that the BFC for other non-residential rate schedules shall be left unchanged at this time based upon the evidence in the record. In support of these conclusions, the Commission notes that other non-residential rate schedules are more complex, thus allowing for the minimization of cost-subsidization issues and ensuring greater consistency with cost causation and allocation principles. In addition, the Commission notes that a greater amount of fixed costs in the residential rate schedule, as opposed to non-residential rate schedules, presently are recovered through variable energy rates, which is inconsistent with basic cost allocation principles that fixed costs should be recovered through fixed charges, whereas variable costs should be recovered through variable charges. The Commission further notes that it likely will review and evaluate several competing theories on this issue in the near future, when a docket is created to review net metering rate schedules pursuant to the directive set forth in House Bill 589. Finally, although the parties dispute the extent to which the residential class should bear responsibility for fixed or demand related costs, the $14.00 charge the Commission approves lies within the range of the charges advocated by the parties. In its discretion, the Commission determines that $14.00 is the appropriate charge for purposes of this case. While DEC's evidence would support a higher charge, the Commission determines that cost causation analyses are inherently subjective and selecting a charge within the range advocated based on differing cost causation models is appropriate.

The Commission is sensitive to the impact of increasing fixed costs to any customer and especially low-income households. Nevertheless, all customer classes and the residential class in particular are composed of individual consumers with divergent usage patterns and financial situations. Class rates by definition are based on averages. Any changes in rate structure affects individual consumers differently depending on their usage. The Commission acknowledges the testimony of witness Pirro where he explained that the Company uses other means to address the financial needs of low-income customers which are more effective than biasing the rate design. In its cover letter, dated June 1, 2018, concerning the Pilot Grid Rider Agreement, the Company committed to making a shareholder-funded contribution totaling $4 million to certain programs to help mitigate the impact of rate adjustments on low-income customers and to support job training. The Commission fully endorses the Company's desire to contribute shareholder funds to support low-income programs and concludes that the $4 million should be used exclusively for the benefit of low-income customers through programs such as Share the Warmth. The Commission encourages the Company, to the extent it is able, to identify low-income customers likely to discontinue service prior to bringing their accounts up to date, in order to provide assistance and thereby reducing uncollectible accounts.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 37

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

The Stipulating Parties have not agreed regarding the methodology for calculating customer usage through December 2017. While Public Staff witness Saillor generally adopted the Company's approach, he made certain modifications to the Company's calculations. Tr. Vol. 19, pp. 98-99. The Company agrees with some of the modifications proposed by witness Saillor,[1] however, there are a few changes to witness Saillor's proposal that the Company proposes in order to "place the growth adjustment on a sound footing and to provide a consistent methodology." Id. at 99. In his rebuttal testimony, witness Pirro explained that the Company proposes (a) to remove the usage adjustment made for the test period, (b) to eliminate the use of a de-trending scheme used in the usage adjustment for the extended period, and (c) to include the lost sales of closed accounts in the extended period. Id.

First, witness Saillor made a usage adjustment of 29,329,823 kWh, which was calculated as an adjustment of the test period Y2016 to the previous year Y2015. Id.; Tr. Vol. 26, p. 904. Witness Pirro explained that while there is a basis for adjusting the usage in the test period (Y2016) for the usage in the extended period (Y2017) because the Company included the extended period in its calculations, there is no basis for including the previous year (Y2015). Tr. Vol. 19, pp. 99-100. He explained that Y2015 is not within scope of this proceeding and requires no linkages with test period data for the purpose of a usage adjustment. Id. at 100.

Secondly, witness Pirro explained that the Company does not agree with witness Saillor's usage adjustment of 314,916,793 kWh for residential accounts that employs a de-trending scheme. Id. Witness Pirro asserted that this adjustment is arbitrary and unnecessary. Id. He explained that the regression models used to predict customers at end of period have in effect already de-trended the per capita usage. Id. Also, witness Saillor's method uses an averaging scheme that uses data points twelve months apart and therefore the sales for which the adjustments are being calculated are not the total sales for the period. Id. Witness Pirro explained that the Company has recomputed the usage adjustment using the same weather adjusted series that Saillor has used but without the de-trending. Id.

Additionally, witness Saillor extended the customer growth adjustment from the end of the test period to November 30, 2017, to correspond with the Company's decision to update for plant additions and related expenses through that date. Tr. Vol. 26, p. 904. Witness Pirro explained that for the lost sales from initial accounts, witness Saillor adds 12 months of estimated sales to the new customers during the extended period (through November 2017) to the initial estimate. Tr. Vol. 19, p. 100. However, the closed accounts have only their test period sales removed which differs from the treatment of initial accounts. Id. For parity, witness Pirro asserted that the entire usage of the closed accounts from January 2016 through November 2017 should be used, and the

[1] For instance, witness Saillor proposed the use of weather-adjusted data instead of the actual billed usage which the Company does not oppose. Tr. Vol. 19, p. 99.

Company has added the usage of closed accounts in the extended period to the customer-by-customer adjustment. Id.

Finally, witness Pirro testified that the 12 months ended December 2017, which includes an additional month to the original analysis which was terminated at November 2017, should be used. Id. at 101. He explained that such an analysis was provided to the Public Staff but it did not include the modifications proposed by witness Saillor. Id. The Company therefore submitted an updated analysis for the 12 months ended December 2017 accepting the use of weather-adjusted usage data but rejecting the items described above and recommended that it be adopted in this proceeding and used to determine the growth adjustment. Id. In his supplemental testimony, witness Saillor incorporated customer data for the month of December 2017 in his customer growth analysis. Tr. Vol. 26, p. 911.

In light of the evidence presented, the Commission finds and concludes that Public Staff witness Saillor's methodology for calculating customer usage as set forth in his testimony, with the adjustments proposed by Company witness Pirro in his rebuttal testimony, is just and reasonable to all of the parties and should be employed by the Company in this case.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 38-40

The evidence supporting these findings of fact and conclusions is contained in the Company's verified Application, Form E-1, the record in Docket No. E-100, Sub 147 from October 3, 2016, and the testimony and exhibits of the following expert witnesses: DEC witnesses Schneider, McManeus and Pirro; Public Staff witnesses Floyd, McCullar and Maness; EDF witness Alvarez; and NCSEA witness Murray.

Proceedings in Docket No. E-100, Sub 147

By Orders dated April 11, 2012, and May 6, 2013, in Docket No. E-100, Sub 126, the Commission adopted rules requiring electric utilities, that file integrated resource plans (IRPs), to include in their IRPs information on how planned "smart grid" deployment would impact the utilities' resource needs. In addition, the Commission established a new requirement, Rule R8-60.1, for the electric utilities to file smart grid technology plans (SGTPs) every two years, with updates in the intervening years. The initial SGTPs were filed by the electric utilities on October 1, 2014.

On October 3, 2016, DEC and Duke Energy Progress, LLC (DEP) filed their SGTPs in Docket No. E-100, Sub 147 (SGTP Docket). Dominion Energy North Carolina (DENC) had previously filed its SGTP. Subsequently, comments were filed by the Public Staff, NCSEA and EDF. In addition, reply comments were filed by DENC, and jointly by DEP and DEC.

In summary, DEC's 2016 SGTP identified 14 smart grid technology projects that it was in the process of implementing, or was planning to implement in the next five years. Two such projects are AMI Phase 2 and AMI Expansion 2015. With regard to AMI Phase 2, DEC explained that it initiated a limited-scale project in 2013 leveraging grant funds from the U.S. Department of Energy (DOE) to deploy AMI in North Carolina and South Carolina. Phase 2 of the project replaced aging Advanced Meter Reading (AMR) meters with AMI. Phase 2 was completed in the first quarter of 2015. Including the meters previously installed in Phase 1, the project has installed about 313,500 AMI meters in North Carolina.

With respect to AMI Expansion 2015, DEC stated that it pursued a limited-scope AMI project to install approximately 181,000 AMI meters to serve residential customers in the Charlotte Metro area, and that the project was completed in July 2016.

DEC further stated that as of September 2016, it had cumulatively installed 527,391 AMI meters, an increase of approximately 252,260 AMI meters since its 2014 SGTP. DEC also identified four smart grid technologies actively under consideration: (1) AMI deployment; (2) usage alerts; (3) outage notifications; and (4) Pick Your Own Due Date. With respect to AMI deployment, DEC stated that in 2016 it began evaluating the case for continuing with incremental AMI deployments at about 150,000 per year, or moving forward with a project to replace all remaining AMR meters with AMI.

On March 29, 2017, the Commission issued an Order Accepting Smart Grid Technology Plans (SGTP Order) in Docket No. E-100, Sub 147. The SGTP Order reviewed and accepted the 2016 SGTPs filed by DEC, DEP and DENC.

On May 5, 2017, DEC and DEP filed supplemental information regarding DEC's and DEP's 2016 SGTPs. In summary, DEC advised the Commission that in late 2016 it decided to begin a full scale deployment of AMI in North Carolina, that it began implementing that decision in early 2017, and that it expected to complete its AMI deployment in North Carolina in 2019. DEC attached a cost-benefit analysis and other information regarding its decision to deploy AMI. The cost-benefit analysis concluded that DEC's AMI deployment would result in net benefits having a present value of $117.1 million. Supplemental Filing, Exhibit No. 2. The largest category of benefits included in the analysis is entitled, "Non-technical line loss reduction - power theft, equipment failures and installation errors" (NLLR). It is the last column of benefits shown on Exhibit No. 2, and totals $634.8 million.

On August 21, 2017, the Commission issued an Order Requiring Smart Meter Plan Presentation by Duke Energy Carolinas, LLC (SGTP Presentation Order). The Order scheduled a presentation on AMI by DEC, and included several questions to be answered by DEC regarding its decision to deploy AMI. Subsequently, in response to question number 2 included in the Commission's SGTP Presentation Order, DEC stated that the $634.8 million of NLLR included in its cost-benefit analysis was based on a 2008 report by the Electric Power Research Institute (EPRI). The EPRI report noted that industry experts project that a reasonable percentage for non-technical losses is 2% of gross revenue. DEC stated that it used this 2% of revenue approach to calculate the NLLR in its AMI cost-benefit analysis. Further, during the SGTP presentation by DEC on October 10, 2017, witness Schneider stated that based on DEC's cost-benefit analysis the costs of the AMI deployment would outweigh the benefits until 2025.

On October 2, 2017, DEC and DEP filed their SGTP update reports (SGTP Updates) in Docket No. E-100, Sub 147. In DEC's SGTP Update, on pages 6-8, DEC provided the information regarding its AMI deployment. In summary, DEC stated that through August 2017 it had installed approximately 850,000 AMI meters in North Carolina, and planned to install an additional 1.1 million AMI meters through 2019. Further, DEC stated that it would remove and replace approximately 1.32 million AMR meters from 2017 through 2019. DEC further stated that its AMR meters had an estimated salvage value of $1.37 million, and an estimated remaining net book value of $127.66 million, as of March 31, 2017. In Exhibit A, Appendix C, DEC provided its AMI cost-benefit analysis, which was the same analysis that DEC filed as a part of its supplemental information filing on May 5, 2017.

On November 20, 2017, the Commission issued an Order Requiring Additional Information (Additional Information Order) requesting that DEC respond to several questions about its AMI deployment. In addition, the Commission requested that DEC provide a revised cost-benefit analysis that included (1) DEC's historical kilowatt-hour and lost revenue data for NLLR that DEC has experienced in North Carolina, rather than using the EPRI 2% of revenue calculation, and (2) the cost of replacing AMI meters at the end of their 15-year useful life.

On December 15, 2017, DEC filed its responses, including its revised cost-benefit analysis as Exhibit No. 2. The largest category of benefits included in the analysis continued to be "Non-technical line loss reduction - power theft, equipment failures and installation errors." However, the amount of the NLLR benefit went down from $634.8 million to $448.8 million. In addition, the revised cost-benefit analysis, which included the cost of replacing AMI meters at the end of their 15-year useful life, showed that AMI deployment would result in net costs having a present value of $49.9 million.

Summary of AMI Testimony

DEC witness Schneider described the Company's plan to replace its current meters with AMI meters – often referred to as "smart meters" – that have advanced features, including the capability for two-way communications, interval usage measurement, tamper detection, voltage and reactive power measurement, and net metering capability. Tr. Vol. 18, p. 322. He testified that DEC began the deployment of AMI meters in 2016, and estimates completing implementation in mid-2019. Id. at 323. In 2016, the Company spent $73.9 million on new AMI meters across the system in North and South Carolina. Id. at 326. Witness Schneider explained that the Company's AMI project is not a "simple meter change-out" and will include advanced meters, a two-way communication network, and central computer systems, and that AMI is a foundational investment for DEC that will enable additional customer choice, convenience and control. Id. at 322-33.

Public Staff witness Floyd criticized the Company's cost-benefit analysis, arguing that the Company's expected benefit based on AMI's ability to reduce theft and other revenue losses related to meter tampering was based on an outdated EPRI study and was likely overstated. Tr. Vol. 23, p. 87. In addition, witness Floyd questioned whether the Company will immediately maximize the benefits available to customers from AMI. Id. at 89. He stated, for example, that customers who receive more detailed usage data from AMI should be able to use this data to save on power bills. Id. According to witness Floyd, customers will not be able to do so unless the Company provides new and innovative rate designs, such as TOU rate structures and new payment options, including prepay. Id. at 89-90. Witness Floyd also testified regarding customers who opt-out of having an AMI meter installed. Id. at 90-91. DEC has filed for approval of a Rider MRM in Docket No. E-7, Sub 1115, which would allow customers who desire to opt-out to pay a monthly fee to have a fully manual meter. Id. at 90. Witness Floyd acknowledged that if a significant number of customers opt-out of having an AMI meter, the benefits of AMI deployment will be diminished. Id. The Public Staff, therefore, supports the Company's request for Rider MRM, and encourages the Commission to approve that rider as part of this rate case. Id. at 91.

Public Staff witness Maness criticized the Company's proposed recovery of the remaining book value of replaced AMR meters over three years, the expected deployment period for the AMI program. Tr. Vol. 22, p. 103. Witness Maness testified that the meters being replaced have an average remaining useful life of 15.4 years, and that period should be used in the Company's depreciation study instead of the accelerated three-year period. Id. at 104. Public Staff witness McCullar testified that the Public Staff used the 15.4 year remaining useful life in developing the Public Staff's recommended depreciation rates. Tr. Vol. 26, p. 788. Witness McCullar also testified that DEC should use a 17-year average service life for AMI meters as opposed to the 15 years that the Company has proposed. Id. at 787.

Other than these concerns, however, the Public Staff stated that "the Company has made a reasonable assessment of the costs and benefits associated with its proposed deployment of AMI." Tr. Vol. 23, p. 92. The Public Staff does not object to the inclusion of the Company's AMI costs incurred to date and included in this case. Id. at 93.

EDF witness Alvarez also testified concerning the Company's cost-benefit analysis for AMI. Tr. Vol. 26, pp. 311-13. Witness Alvarez recommended that stakeholders be allowed the opportunity to conduct a detailed examination of the Company's cost-benefit analysis for its AMI program as part of a distinct grid modernization docket. Id. at 312.

NCSEA witness Murray also recommended that the Company implement a "bring your own device" offering that allows customers to connect Home Area Networks (HAN) directly to the Company's AMI radio to access energy usage information. Tr. Vol. 26, p. 401.

Company witness Schneider testified in response to these arguments. First, he responded to the Public Staff's criticism of the Company's cost-benefit analysis. Tr. Vol. 18, pp. 331-32. He explained that the Company based its reduction in revenue erosion from meter tampering on a 2008 EPRI study because analyzing non-technical loss is significantly complex and it would not be possible to use the actual historical kilowatt-hour and lost revenue data for energy theft that DEC has experienced. Id. at 332. In response to criticism that the Company will not maximize benefit to customers, witness Schneider explained that DEC has already implemented two new programs for DEC customers with smart meters, Pick Your Due Date and Usage Alerts. Id. at 334-35. He also explained that the Company plans to offer more innovative rate designs to complement AMI in the future, as detailed by Company witness Pirro. Witness Schneider also explained that all customers receiving smart meters under the AMI project will receive benefit from remote meter reading and mass meter interrogation capabilities, which allow the Company to quickly assess outages and restore power more efficiently. Id. at 335-37.

Witness Schneider testified that DEC agrees that customers should have the choice to opt-out of the AMI meter through a cost-based tariff. Id. at 337. The Company agrees with the Public Staff that the Commission should approve the opt-out program as filed, and respectfully requests approval by the Commission soon. Id. At the hearing in response to questioning by Commissioner Gray, witness Schneider explained that when a customer expresses concern with the new AMI meters, the Company attempts to address those concerns, and if the customer is adamant about not wanting a new meter, the customer is added to a bypass list. Tr. Vol. 18, p. 415. Currently, there are approximately 4,000 people on the bypass list, which equates to 0.3% of DEC's North Carolina customers. Id. at 415-16.

Witness Schneider also addressed witness McCullar's recommendation that a 17-year average service life for AMI meters be used as opposed to the 15 years that the Company has proposed. Tr. Vol. 18, p. 338. Witness Schneider testified that "[g]iven the pace of technology advancement, the trend across the industry is shorter depreciation schedules from a regulatory and accounting perspective, as systems such as AMI are more computer and sensor driven." Id. at 338-39. He also noted that the Commissions in Indiana, Kentucky, Ohio and Florida all utilize 15-year depreciation lives for the Duke Energy AMI meters deployed in those jurisdictions. Id. at 339.

Additionally, witness Schneider responded to witnesses Alvarez's criticism of the Company's cost-benefit analysis. He explained that "the Company's AMI cost-benefit analysis was filed in DEC's SGTP on October 2, 2017 in Docket No. E-100, Sub 147.[1] Id. at 339. "In past SGTP dockets, the Company has discussed that parties likely have different definitions of a "cost-benefit" analysis, and there is not a standard template that every project related to smart grid technologies follows in completing the evaluation and analysis for determining the business case for a specific technology." Id. Instead, many different factors go into the Company's decision to invest in a specific technology at a specific time. Id. Witness Schneider explained that "DE Carolinas believes that the Commission's existing SGTP, ratemaking, and EE/DSM processes provide opportunity for stakeholder engagement and comment in the development and approval of such programs to maximize customer benefits." Id. at 340. Moreover, witness Schneider rejected witness Alvarez's recommendation to open a new AMI docket as duplicative, stating that "[t]he Commission already has a SGTP rule and dockets to review, allow for intervenor investigation and comment, and ultimately accept, modify or reject the Company's SGTP and those of the other utilities" and that cost recovery for the AMI project will be subject to the existing robust and transparent rate case process." Id. at 342.

Finally, witness Schneider testified in opposition to witness Murray's recommendation regarding the "bring your own device" offering. Id. at 343-44. He explained that smart meter to HAN connections combine two separate security risks. Id. at 343. First, the current lack of security within internet devices, gateways and applications, and second, external connections to critical infrastructure. Id. For both topics, Duke Energy is deliberately and carefully evaluating the associated risk to the reliability of the power grid. Id. The Company is considering: (1) research conducted by third parties; (2) compliance with National Institute of Standards and Technology (NIST) based security standards that federal and state commissions have encouraged the Company to adopt; and (3) alignment with recently released security principles related to both topics provided by the Department of Homeland Security (DHS), National Security Agency (NSA) and the Department of Energy (DOE). Id. Cyber security threats are of the utmost concern to the Company and therefore, DEC does not support the "bring your own device" recommendation by witness Murray at this time. Id. Furthermore, on cross-examination by counsel for EDF at the

[1] The Commission has taken judicial notice of all filings in Docket No. E-100, Sub 147. Tr. Vol. 18, p. 402.

hearing, witness Schneider supported the Company's position on HAN connections, stating that the Company's cyber security experts have "grave concern" about allowing external connections to the Company's critical grid structure. Id. at 357.

Witness Schneider explained that a secondary concern regarding the "bring your own device" offering is support and upgradeability. Id. at 343. At this time, if a customer buys a device not known to the Company, DEC would not be able to provide support to the customer if that device fails or is not able to connect to the meter. Id. at 343-44. If a new security release is made available the Company may push that to the meter. Id. at 344. The Company would be unable to ensure that a new version that was pushed to the meter is compatible with all of the devices that a customer may have purchased. Id. Customer satisfaction would be impacted along with a large increase in call volumes. Id. Therefore, witness Schneider testified that the Company does not support the "bring your own device" recommendation by witness Murray, unless or until such concerns are addressed. Id.

Summary of Post-Hearing Briefs

In its post-hearing Brief, EDF recommends that the Commission reject DEC's request for cost recovery for AMI meters, and require DEC to establish a regulatory asset for these costs until DEC can demonstrate cost-effectiveness of its AMI deployment. EDF states that customer data access is foundational to realizing the benefits of AMI meters and requests that the Commission require DEC to implement the data access recommendations of NCSEA witness Murray. EDF summarizes witness Murray's recommendations regarding access to usage data, and states that AMI meters will not be used and useful unless DEC implements witness Murray's recommendations.

EDF also cites Public Staff witness Floyd's testimony that the Public Staff's support of DEC's AMI cost recovery is conditioned on DEC providing "informational tools and applications that provide more granular and timely data to allow customers greater insight and control over their actual usage." Tr. Vol. 23, p. 90. EDF contends that witness Murray's recommendations would fulfill this requirement. EDF further states that customer savings from full access to their usage data are quantifiable, and cites DEC witness Schneider's testimony that DEC quantified these benefits for Duke Energy's AMI deployments in Indiana and Kentucky.

In addition, EDF discusses DEC's pilot program to install a device that will receive energy usage data from the Zigbee radio in the customer's AMI meter and transmit the data, via the customer's home wi-fi system, to the customer's cell phone and computer. EDF criticized the fact that DEC will not provide similar data access to third parties or allow customers to purchase their own home energy monitors and synch them up with the AMI meter, stating that this pilot program violates the principle, established in DEC's service regulations, that DEC's electric service ends at the point of delivery, and discriminates by restricting customers to the use of a utility device in order to access their own data. EDF maintains that the Commission should require DEC to implement robust data access now, before DEC receives cost recovery for AMI meters. EDF, therefore, recommends that the Commission reject DEC's request for cost recovery and require it to establish a regulatory asset for AMI costs until DEC implements witness Murray's recommendations.

NCLM, in its post-hearing Brief, cites witness Coughlan's comparison of the time-of-use options offered by DEC and DEP as demonstrating the greater time-of-use offerings that DEP has without fully implementing AMI technologies and Power/Forward. In addition, NCLM cites Public Staff witness Floyd's concern that DEC will not immediately maximize the benefits available to customers of AMI, and his testimony that:

> [i]t will be incumbent upon DEC to maximize the benefits not only by eliminating or reducing expenses to provide utility service or NTLs, but also by providing new opportunities for customers to use both AMI meters and CCP so that they see a real benefit on their bills. Customers who are more aware of their energy use should be empowered to make more informed choices on how they use and pay for energy.

Tr. Vol. 23, p. 89.

NCLM states that complete deployment of AMI is not necessary for DEC to have discussions and receive input from customers on how to develop new rate designs, or to provide additional information to its current OPT-V customers. Moreover, NCLM contends that DEC should be required to increase its reporting on AMI and Customer Connect in order to provide more accountability. NCLM submits that the Commission should order DEC to provide its current time-of-use customers with additional information to maximize the benefits of load shifting, to develop proposals for new and innovative time-of-use and critical peak pricing rate designs and prepayment options before the next rate case, and to provide regular updates to the Commission about its progress in developing and deploying new rate designs.

In its post-hearing Comments, the City of Durham contends that ratepayers currently gain no benefits from AMI meters beyond the benefits received from DEC's used and useful AMR meters. Durham joins with NCLM in its request that the Commission order DEC to develop proposals for new and innovative time-of-use and critical peak pricing rate designs as soon as possible. Finally, Durham expresses concerns about the privacy implications of AMI two-way communications, and requests that the Commission consider ordering a study to be conducted on this issue.

Discussion and Conclusions

In the present docket, as part of DEC's general rate case application, DEC seeks to recover $90.9 million for AMI deployment in North Carolina from January through November 2017. "The requested increase in revenues related to AMI in this case includes a total of $11.2 million for return and depreciation related to this investment." Tr. Vol. 6, pp. 254-55. In addition, DEC requests authority to establish a regulatory asset account. The depreciation study recovers the remaining book value of these assets over 3 years; however, as the individual meters are replaced, DEC needs to move the retired meter balance into a regulatory asset account until the asset is fully depreciated. Id.

A. Reasonableness of AMI Costs

DEC witness McManeus testified regarding the costs of DEC's AMI deployment. Tr. Vol. 6, pp. 254-55. Further, in the SGTP Docket and the present docket, DEC has provided extensive information about its purchases of AMI meters and its costs of installing them. For example, the cost-benefit analyses include columns showing the capital and O&M costs of the AMI project. In addition, on March 26, 2018, at the request of the Commission, the Public Staff filed a late-filed exhibit that included a spread sheet provided by DEC in response to a Public Staff data request. In part, the exhibit shows that the total capital cost of DEC's AMI programs through September 2014 was $94.43 million, with $26.85 million having been provided by the DOE grant.

The Commission gives substantial weight to the above testimony and documentary evidence. In addition, no party has questioned the reasonableness of DEC's AMI costs. In State ex rel. Utils. Comm'n v. Intervenor Residents, 305 N.C. 62, 75-77, 286 S.E.2d 770, 778-79 (1982), the North Carolina Supreme Court held that the uncontested evidence of a public utility regarding the reasonableness of its costs can be accepted by the Commission as satisfying the utility's burden of proof on the question of cost recovery. As a result, the Commission finds and concludes that DEC has met its burden of showing that its AMI costs were reasonable. Public Staff witness Floyd testified:

> Except for the concerns I have raised concerning DEC's cost-benefit analysis, I believe the Company has made a reasonable assessment of the costs and benefits associated with its proposed deployment of AMI ... I do not object to inclusion of the Company's AMI costs incurred to date and included in this filing.

Tr. Vol. 23, pp. 92-93. Therefore, the Commission authorizes recovery on the merits on the basis of these uncontested recommendations.

As described above in the details of the SGTP Docket, DEC has followed a studied and deliberate plan for installing AMI, including the AMI Phase 1 and Phase 2 projects, and the AMI Expansion 2015 project. With regard to AMI Phase 1 and 2, DEC explained that it initiated the project in 2013. Leveraging grant funds from DOE, DEC replaced aging AMR with AMI in North Carolina and South Carolina. Phase 2 was completed in the first quarter of 2015, bringing the total of installed AMI meters to about 313,500 in North Carolina. In DEC's AMI Expansion 2015, DEC pursued a limited-scope AMI project to install approximately 181,000 AMI meters to serve residential customers in the Charlotte Metro area. That project was completed in July 2016. As of September 2016, DEC had cumulatively installed about 527,391 AMI meters. After gaining substantial knowledge about AMI provided by the installation of more than 500,000 AMI meters, DEC made a decision in late 2016 to begin full scale deployment of AMI in North Carolina, and began implementing that decision in early 2017.

The Commission gives substantial weight to the above evidence. AMI is a new technology. Maintaining adequate and reliable electric service includes staying abreast of the latest developments in equipment and technology. Indeed, advances in technology can provide efficiencies and other benefits that justify retiring present equipment. After having deployed AMI on a project-by-project basis for several years, it was reasonable and prudent for DEC to use that experience to decide to deploy AMI on a full scale.

In DEC's Supplemental Filing in the SGTP Docket, DEC discussed the possibility of additional customer services to be provided by AMI.

> [A]MI is the foundational investment that will enable enhanced customer solutions – giving customers greater control, convenience and choice over their energy usage, while also giving customers the opportunity to budget, save time and money. AMI technology allows a utility to gather more granular usage data and utilize new capabilities to offer new programs and services to customers that are not achievable through existing meters. The AMI technology will pave the way for programs that will allow customers to stay better informed during outages, control their due dates, avoid deposits, to be reconnected faster, and to better understand and take control of their energy usage, and ultimately, their bills. Over time, the Company also expects AMI meters to contribute to cost reductions from reduced truck rolls in the years after deployments.

Supplemental Filing, p. 1.

In addition, during redirect examination by DEC's counsel witness Schneider stated:

> [t]here is a lot of additional customer programs and benefits that the AMI, as a foundation, enables that, again, we didn't have those costs and benefits in our cost-benefit model because they just weren't designed yet. We didn't know what the costs were in each of those cases, you know, will be on their own. So in general, with a positive business case, and plus the fact that we know there is additional customer products and services that this solution can enable, the Company has made a decision that this is a viable project that we want to move forward with.

Tr. Vol. 18, pp. 413-14.

The Commission gives substantial weight to the above evidence. The AMI benefits, current and future, identified by DEC are substantial. It was reasonable and prudent for DEC to rely on these AMI benefits in deciding to deploy AMI on a full scale.

However, the Commission also agrees with NCLM, EDF and others that DEC should be required to follow through on designing and proposing new rate structures that will capture the full benefits of AMI. Therefore, the Commission finds and concludes that DEC should within six months of the date of this Order file in this docket the details of proposed new time-of-use, peak pricing, and other dynamic rate structures that will, among other things, allow ratepayers in all customer classes to use the information provided by AMI to reduce their peak time usage and to save energy. The Commission's goal is to require DEC to develop rate structures now that will enable DEC to deliver on its promise that there are "additional customer products and services that this solution [AMI] can enable" no later than DEC's next general rate case. Further, the Commission hereby gives DEC notice that DEC's success, or lack thereof, in developing new rate structures that enable AMI energy usage benefits will be one of the factors used by the Commission in determining the prudence and reasonableness of DEC's costs incurred in deploying AMI following the present rate case. In addition, as discussed subsequently herein, the Commission has directed DEC to continue working with the Public Staff, EDF and other interested parties to develop guidelines for access to customer usage data.

As noted above, the two cost-benefit analyses produced mixed results regarding the net present value of the costs and benefits of AMI. As a result, the Commission finds that the results of these analyses are not helpful in determining the benefits to be derived from AMI. Therefore, the Commission gives little weight to the conclusions of the cost-benefit analyses as to the net present value of AMI benefits and costs.

No party provided substantial evidence of a lack of prudence by DEC in its decision to deploy AMI. Although the Public Staff and EDF levied some general criticisms of DEC's cost-benefit analyses, they offered no concrete or probative evidence as to why the costs should not be recovered or a lack of reasonable decision making by DEC. Indeed, the Public Staff concluded that DEC made a reasonable assessment of AMI and, therefore, the Public Staff did not object to DEC's recovery of its AMI costs.

Based on the substantial evidence of DEC's project-by-project deployment of AMI for several years, and the current and future AMI benefits identified by DEC, the Commission concludes that a preponderance of the evidence shows that DEC's decision in early 2017 to fully deploy AMI was a prudent decision.

B. Appropriate Remaining Useful Life for AMR Meters

DEC's 2017 SGTP Update showed that the remaining net book value of its AMR meters was an estimated $127.66 million as of March 31, 2017. However, in the SGTP presentation witness Schneider testified that DEC would receive tax benefits that would reduce the lost book value to approximately $85 million. SGTP Presentation. DEC proposes in its depreciation study to recover the remaining net book value of the AMR meters over three years. Public Staff witness Maness does not oppose the establishment of a regulatory asset account to track the retirement and remaining depreciation of the replaced meters, but he opposes customers being charged the entire cost over 3 years. Public Staff witness Maness testified that DEC's existing AMR meters have an average remaining useful life of 15.4 years, and that 15.4 years should be used as the remaining useful life when developing depreciation rates.

DEC's deployment of AMR meters was a reasonable and prudent decision that helped DEC and its ratepayers capture the benefits of new metering technology at that time. Likewise, the Commission has determined that DEC's deployment of AMI today is a reasonable and prudent decision. Further, the Commission gives significant weight to the Public Staff's position that DEC should be allowed to recover the remaining book value of is AMR meters, but that the remaining useful life should be for 15 years, rather than the three years as requested by DEC.

With regard to EDF's recommendation to place AMI in a new docket, the Commission concludes that the current SGTP docket is the appropriate docket in which to obtain information and review the electric utilities' AMI plans. Moreover, the Commission finds and concludes that the potential benefits and risks of the "bring your own device" program advocated by NCSEA witness Murray can be studied and discussed in the meetings ordered in Docket No. E-100, Sub 147 regarding access to customer usage data.

In summary, the Commission finds good cause to grant DEC's request to recover its AMI costs. Further, the Commission finds good cause to require DEC to within six months of the date of this

Order file proposed new time-of-use, peak pricing, and other dynamic rate structures that will, among other things, allow ratepayers in all customer classes to use the information provided by AMI to reduce their peak time usage and to save energy. Finally, the Commission finds and concludes that DEC may establish a regulatory asset to track the retirement and remaining depreciation of AMR meters, but DEC shall use a 15-year remaining useful life in its depreciation study.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 41

The evidence supporting this finding of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, Docket No. E-100, Sub 147, the testimony of DEC witness Hunsicker, EDF witness Alvarez, and NCSEA witness Murray, and the entire record in this proceeding.

NCSEA witness Murray testified that DEC should provide customer usage data information, recorded by AMI, to customers and authorized third parties; provide historic use and current rate data to customers and authorized third parties in machine readable (xml) format; and establish a customer authorization process. Tr. Vol. 26, pp. 400-02. Both witness Murray and EDF witness Alvarez recommended that the Commission consider providing the energy usage data to customers and third parties through Green Button Connect My Data (GBC), a nationally standardized and automated method. Id. at 326-27, 412. According to witness Murray, a principal advantage of GBC is that consumers can automatically transmit data to third parties without having to purchase additional metering equipment for their home or building. Id. at 412.

In her rebuttal testimony, Company witness Hunsicker testified that DEC agrees with and defers to Public Staff witness Floyd's recommendation in his testimony to protect customer data and adhere to the Code of Conduct as it relates to the sharing of customer information. Tr. Vol. 18, p. 278. Witness Hunsicker further testified that providing third parties with access to consumption and load profile, which witness Murray recommends, would violate the prohibition against disclosing customer information to third parties. Id. According to witness Hunsicker, customers already have access to historic usage data in the form of bills and via the Company's external website, and that the Company plans to assess the possibility of providing usage information to customers using certain "Green Button" programs. Id. At the hearing, witness Hunsicker opined that customers have a basic right to access their usage data, but explained that the Company compiles the data and analyzes it using Company software, which creates a co-ownership of the data. Id. at 310. Witness Hunsicker further testified that the Company takes no issue with providing the capability for third party access to customer data, provided the following requirements are met: (1) the costs for the platform are borne by the participating customers; (2) the implementation of the platform has no impact on the Company's system or data security; (3) the appropriate customer and regulatory consents are complied with, including the Code of Conduct; and (4) the ongoing monitoring of the additional platform does not become disruptive of the Company's daily operation. Id. at 299-300. However, witness Hunsicker expressed particular concerns with providing data directly to third parties via an automated process due to the possibility of physical security risks resulting from increased third-party access to customer usage data and the potential for third parties to create customer confusion and possibly misrepresent their affiliation with the Company. Id. Witness Hunsicker stated that the Company looks forward to discussing these issues in more detail in the meeting to discuss guidelines for access to customer usage data, as directed by the Commission in its March 7, 2018 Smart Grid Technology Plan Update Order in Docket No. E-100, Sub 147. Id.

The Commission appreciates the recommendation of NCSEA and EDF regarding the collection and dissemination of customer usage data. However, the Commission is not persuaded that this is the time or the proceeding in which to impose such requirements on the Company. As witness Hunsicker testified, the Commission and interested parties are addressing issues regarding access to customer usage data in Docket No. E-100, Sub 147. In that docket, on March 7, 2018, the Commission issued an order on DEC's and DEP's (collectively, Duke's) 2017 Smart Grid Technology Plan (SGTP) Updates that included the following directive on access to customer data:

> [T]herefore, the Commission finds good cause to direct that Duke convene and facilitate discussions with NCSEA, the Public Staff, and other interested parties on this topic, with the goal of reaching agreement on all aspects, or as many aspects as possible, of the rule proposed by NCSEA. In addition, the Commission requests that the discussions include the Green Button Connect My Data system for data access. The Commission further directs that Duke provide the Commission a report detailing the discussions, agreements reached on particular points, points on which agreement has not been reached, and the barriers to agreement on remaining points, as well as the parties' plans for further discussions. The report shall be filed in Docket No. E-100, Sub 147 no later than 30 days after the first meeting of the stakeholder group. Further, the Commission directs Duke to reflect the results of these discussions in its 2018 SGTP reports.

2017 SGTP Order, at 10.

As a result, the Commission declines to adopt NCSEA's and EDF's proposal at this time.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 42-44

The evidence supporting these findings of fact and conclusions of law is found in the Application, the Stipulation, and the entire record in this proceeding, particularly the testimony and exhibits of the following expert witnesses: DEC witnesses Fountain, McManeus, and Simpson, Public Staff witnesses McLawhorn, Williamson, Parcell, and Maness; Commercial Group witnesses Chriss and Rosa, CIGFUR III witness Phillips, Kroger witness Higgins, EDF witness Alvarez, NCSEA witnesses Barnes and Golin, Tech Customers witness Strunk; and CUCA witness O'Donnell.

The expert witness testimony and exhibits regarding Duke's Power Forward Carolinas initiative (Power Forward) and DEC's request for special ratemaking treatment of Power Forward costs is voluminous. The Commission has carefully considered all of the evidence and the record as a whole. However, the Commission has not attempted to recount every statement of every witness. Rather, this Order provides a thorough summary of the evidence.

Likewise, the Commission has read and fully considered the parties' post-hearing briefs. However, the Commission has not in this Order expressly addressed every contention advanced or authority cited in the briefs, almost all of which address Power Forward or the Grid Rider in some fashion. Based upon the evidence and reasons addressed below, the Commission determines that DEC's request to establish a Grid Rider or, in the alternative, to allow deferral accounting of Power Forward costs through the establishment of a regulatory asset, should be denied.

Summary of the Evidence

DEC's direct testimony

Company witness Fountain testified that Power Forward is Duke's decade-long, \$13-billion grid modernization plan for Duke Energy Progress, LLC (DEP), and DEC, in each of their respective North Carolina service territories. Of the \$13 billion in total Power Forward spend by DEC and DEP on Power Forward programs, DEC plans to spend \$7.7 billion, including \$2.9 billion in capital and \$130 million in operations and maintenance (O&M) expense during the first five years. Witness Fountain testified that the purpose of Power Forward is to improve the performance and capacity of the grid, thereby making it smarter, more resilient, and better able to provide benefits to customers.

DEC Witness Simpson described generally the programs comprising Power Forward, including (1) targeted undergrounding, (2) distribution system hardening and resiliency, (3) self-optimizing grid technology, (4) transmission system improvements, (5) Advanced Metering Infrastructure (AMI)[1], (6) communication network upgrades, and (7) advanced enterprise systems. According to witness Simpson, these programs will primarily focus on projects that accomplish the following goals: improve the reliability and hardiness of the system while making it smarter, build a foundation for customer-focused innovation and new technologies, comply with prescriptive federal transmission reliability and security standards, address maintenance requirements for aging assets, further integrate and optimize intermittent distributed renewable energy generation, and address physical and cyber security, worsening weather, customer disruption, and wear and tear on equipment.

Power Forward investments are planned to supplement customary spend on the transmission and distribution (T&D) grid. To pay for Power Forward programs, DEC proposes that the Commission establish a Grid Reliability and Resiliency Rider (Grid Rider) to "more closely align ... [Power Forward] investments ... with the timeliness of recovery for these investments." Tr. Vol. 6, p. 193. According to witness Fountain, the Grid Rider "would be reset annually based on actual costs, with a true up for any over- or under-recovery." Id. Turning to the mechanics of the Grid Rider, witness Fountain testified that an annual rider proceeding would be held, at which DEC "would provide the specific projects that would be reviewed and approved and the scope of work and things like that." Tr. Vol. 9, p. 78.

On cross-examination, witness Fountain testified that DEC did not initially submit direct testimony regarding the rate impact of the proposed Grid Rider, although he later testified that the net average retail impact would involve a 16% rate increase over the 10-year Power Forward plan.

[1] Although AMI is a Power Forward program, Company witness Simpson testified on rebuttal that DEC is not proposing to recover AMI-related costs through the Grid Rider.

He also testified that DEC plans to invest in Power Forward programs regardless of whether the Grid Rider is approved, but that such investments would likely happen more slowly if the Grid Rider is not approved. Witness Fountain conceded that electricity demand growth is currently "not as much as in prior decades." Tr. Vol. 6, p. 432. Witness Fountain also admitted that Power Forward is part of Duke Energy's corporate policy intended, as quoted in a Duke investor earnings call, "to drive 4 to 6 percent earnings growth." Id. at 434. He acknowledged that Duke Energy represented to its investors that it would pursue distribution infrastructure riders to enhance investment returns, and that the addition of new riders to the ratemaking regulatory framework is intended to "recover [Power Forward] investments in ways that are good for customers as well as help drive shareholder value." Tr. Vol. 8, p. 211. He further conceded that DEC already has made a number of investments without the aid of a rider, including to transition DEC's grid from analog to digital technology through AMR meters.

Company witness McManeus testified that the Grid Rider would allow DEC to recover Power Forward costs on an annual basis after projects are deployed and closed to plant in service, as opposed to the traditional method of recovering costs through a general rate case. She testified that the Grid Rider would help to avoid some dilution of cash flow and earnings, which could slow the pace of the planned investments. The Grid Rider would be set based on "a projection of revenue requirements," combined with a true-up or "Experience Modification Factor" (EMF) for a prior test period. Tr. Vol. 6, p. 271. The Grid Rider would supplement rate changes implemented in general rate cases, with amounts not recovered through the Grid Rider to be included in base rates during the next rate case proceeding. Witness McManeus filed a late-filed exhibit on April 19, 2018, indicating that DEC is seeking to recover $35.2 million through the Grid Rider for 2018 Power Forward spending. Witness McManeus also requested that, in the event that the Commission does not approve the Grid Rider, a regulatory asset be established to defer Power Forward costs for future recovery in a general rate case.

In rebuttal testimony, witness McManeus acknowledged that the Grid Rider would result in "an annual 'mini-rate case' proceeding" limited in scope to costs incurred in connection with Power Forward. Id. at 333. She further testified that the Commission could take action if, as a result of the Grid Rider, DEC's earnings at some future point grew such that they are no longer just or reasonable. Therefore, she testified, the Grid Rider would not "definitively create[] the opportunity for the Company to over earn." Id. at 334. On cross-examination, witness McManeus acknowledged a number of times that the Grid Rider would pass only costs on to ratepayers, but would not account for cost savings resulting from improvements to the grid. She explained that "the reason that the Company requests a rider is to address the issue of regulatory lag that exists in any general rate case proceeding ... that would have the adverse effect of reducing cash flows and earnings." Id. at 440-41. She also conceded that approval of the Grid Rider "would eliminate some regulatory lag, but not necessarily a lot," and would mitigate some regulatory risk for DEC. Tr. Vol. 7, pp. 33-34. Witness McManeus further testified on cross-examination that the planned Power Forward spend described in DEC's filings is not granular data at the project level, but instead is in "large buckets" that correspond to FERC accounting categories. Tr. Vol. 9, p. 74. She conceded that the proposed 2018 Power Forward spending is based on "the same information." Id. at 76.

Company witness Simpson testified that Power Forward is a collection of programs that include projects to upgrade the Company's 'T&D grid. Witness Simpson testified that DEC provides service to approximately 2 million customers in North Carolina, where the Company has more than 100,000 miles of lines and over 1,600 substations. He indicated that in the last four years, the Company has spent $2.6 billion to maintain and upgrade DEC's T&D grid: $1.8 billion in distribution system investments and $770 million in transmission system investments. Distribution investments include connecting new customers, installing lights, adding capacity, and upgrading and maintaining infrastructure, while the Company's transmission investments include addressing capacity and compliance projects, as well as replacing wood poles, obsolete substations, and line equipment. Witness Simpson discussed the need for the Company to continue its customary T&D spending, in addition to Power Forward spend to be recovered through the Grid Rider. He stated that the Company anticipates customary T&D expenditures over the next five years to amount to $3.4 billion.[1]

Witness Simpson testified that Power Forward is necessary because of more frequent convective weather events, aging components, and the addition of more distributed energy resources (DER). While weather is something that the Company has always dealt with in maintaining electric service, witness Simpson stated that more frequent severe weather events drive worsening reliability metrics and that, in his opinion, enhanced hardening of the grid will improve the overall reliability of the grid. Even with more frequent extreme weather events, witness Simpson admitted that the distribution of root causes for outages will remain the same in terms of the number and types of events: 20% for vegetation management related outages, close to 20% for equipment failure, and 6-10% for public accidents, with only the minutes per interruption increasing.

As for the wear and tear on and age of T&D equipment, witness Simpson stated that while Power Forward is not about "chasing aging assets," the current electric grid was built 40 to 60 years ago, and is aging. Tr. Vol. 17, p. 34. Although not a new revelation to the Company, 30% of its T&D assets will be beyond their useful life in the next ten years; not even the best maintenance can stop the cumulative effects of age on the system. Witness Simpson acknowledged that the grid has evolved over decades, and is more hardened today in terms of quality of design than it used to be.

Witness Simpson described the Targeted Undergrounding program as using data analytics to identify line segments with degraded multi-year reliability performance when compared to overhead facilities, in total. Witness Simpson agreed in his rebuttal testimony that taking overhead lines and putting them underground is not a new technology and has been part of utility reliability improvement efforts for years. However, he asserted that the Targeted Undergrounding program is unique because of the data analytics which the Company now employs to determine which individual line segments (versus entire circuits) to underground. Witness Simpson stated that the Company is not talking about a massive undergrounding project but rather targeting specific poorly performing line segments to be undergrounded, which now can be determined in minutes and hours

[1] Witness Simpson originally projected $4.5 billion in customary T&D spend over the next five years. In his rebuttal testimony, however, witness Simpson lowered that projection by $1.1 billion, to reflect the removal of certain costs linked to Power Forward programs, which DEC now proposes to recover through the Grid Rider instead of through customary spend recovered through a general rate case.

as a result of new analytic capabilities, as opposed to the days and weeks it took in the past. Witness Simpson conceded, however, that using data analytics to determine how parts of the grid are performing is not a new concept, and is something that has been evolving for decades, and that will continue to evolve in the future.

According to witness Simpson, the Distribution Hardening and Resiliency program includes retrofitting transformers to eliminate common outage causes, replacing aged or deteriorating cable and conductors, and providing back feed capability to vulnerable communities. Witness Simpson testified that within Power Forward's Distribution Hardening and Resiliency Program, there are four categories of projects that are included in both the Power Forward budget and the Company's customary T&D reliability and integrity and maintenance programs. These four categories of projects are transformer retrofit, underground cable replacement, deteriorated conductor replacement, and targeted pole hardening. Witness Simpson stated that these categories only account for 10% of Power Forward spend and also testified that they constitute the only overlap between the Company's customary spend and Power Forward spend. Witness Simpson argued that these projects should be included in the Grid Rider due to the pace of the expenditures rather than the classification of the investment.

Witness Simpson explained that the Transmission Improvements program includes projects to update and replace transmission system equipment that is likely to fail in the near future, and to add systems that will notify the Company of problems before they result in an outage. The program also will include pole replacement, line rebuilds, substation animal mitigation, and other unspecified physical and cyber security improvements. Witness Simpson stated that this program expedites replacement of obsolete and old design equipment, replacing such equipment with newer equipment that will allow for improved proactive monitoring of the transmission system. Witness Simpson testified that while there is some remote proactive monitoring today, it is not uniform across the system, and the Company has not invested enough in the most current technology to provide a system-wide picture. DEC will consider which substations need upgrades to reach the Company's desired level of functionality. Another category of projects addressing substations is animal mitigation. Witness Simpson conceded that the Company has historically addressed animal mitigation, but contended that many substations still need these upgrades due to national security issues.

Witness Simpson testified that the Self-Optimizing Grid program will add redundant capacity to distribution circuits and substation transformers by replacing existing facilities with larger conductor cable and tying radial distribution circuits together with automated switches to create a distribution network and facilitate two-way power flow. Witness Simpson asserted that this effort also will make the grid "stiffer," allowing for more DER to be connected. Witness Simpson acknowledged, however, that adding redundant lines for back-feed or tie-ins is something that the Company has previously done.

Witness Simpson testified that the investment in Power Forward will be above the Company's customary spend, which he acknowledges is a spending level set by the Company based on projections of the costs necessary to maintain a reliable grid. Witness Simpson itemized the Company's customary distribution capital expenditures over the last four years as follows: 55% for expansion-related work, including serving new customers, lighting installations, and additional capacity; 22% for infrastructure maintenance activities such as pole replacement and underground cable replacement; 23% for targeted reliability improvements to reduce the number and frequency of power outages on the distribution system, including the transformer retrofit program, the sectionalization program, and self-healing technology to automatically isolate the cause of an outage and restore service to customers.

Witness Simpson testified that the Company needs to continue its customary investments in the T&D system to maintain the grid and to add new customers, for which DEC originally budgeted to spend $4.5 billion from 2017-2021. On rebuttal, however, witness Simpson clarified that the estimated customary spend level of $4.5 billion in fact included $1.1 billion that was for grid modernization before Power Forward was developed. The Company then moved that forecasted amount for grid modernization out of the projected plant in service account, where customary T&D expenses are found, and into an account set up for Power Forward expenditures following the announcement of Power Forward. Therefore, DEC now projects customary T&D spend of $3.4 billion, in addition to approximately $3.03 billion of projected Power Forward costs, comprised of $2.9 billion in capital and $130 million for O&M, to be spent between 2017 and 2021. The movement of the $1.1 billion from the customary plant in service account to the Power Forward account was illustrated during the hearing by a project that was part of the original grid modernization fund of $1.1 billion that was in the customary plant in service account. Witness Simpson conceded that the Company had initiated construction of, and placed into service, certain projects that were included in capital forecasting prior to the announcement of Power Forward, but because the cost of the projects had not yet been recovered, they were moved into the Power Forward account to be recovered through the Grid Rider.

On cross-examination, witness Simpson testified that the Company's reliability metrics typically vary from year to year, and conceded that DEC actually saw an improving trend from 2003 to 2012 without the implementation of a Power Forward-type program or a rider. As to the distinction between Power Forward spend and customary spend, witness Simpson testified on cross-examination that a layperson or even an engineer from an electric cooperative may not be able to distinguish Power Forward construction from customary spend construction, but that DEC would know which is which. Witness Simpson further testified that, even where DEC has identified specific amounts for the Targeted Undergrounding program, it has not yet actually decided which locations or how much of the system will be undergrounded. He also testified that DEC would proceed with Power Forward as planned, within the same time frame, even without approval of the Grid Rider.

Alternatively, if the Commission does not approve the Grid Rider, witness McManeus testified that DEC "requests approval to defer as a regulatory asset the O&M (including income and general taxes) and capital-related costs (depreciation and return) associated with [Power Forward] for recovery in a future general rate case proceeding." Tr. Vol. 6, p. 273.

Company witness Pirro testified about DEC's proposed rate design for the Grid Rider. He explained that cost recovery through the Grid Rider, if approved, would follow standard ratemaking principles and would reflect rates that differ by rate class to attribute cost responsibility to each respective class consistent with the COSS supported by witness Hager. However, for reasons set forth hereafter, the Commission is denying DEC's request to establish the Grid Rider, this effectively rendering moot the issues of cost allocation or rate design of the would-be rider.

Public Staff testimony

Public Staff witness Williamson testified that the Public Staff does not support the establishment of the Grid Rider or deferral accounting for Power Forward costs because the Public Staff is not persuaded that all of the components of Power Forward will result in modernization of the grid, as opposed to DEC satisfying its every day statutory obligation to provide adequate and reliable service to its customers. Witness Williamson further stated that much of the Power Forward initiative is designed to improve DEC's outage frequency and duration metrics, which should be part of DEC's every day planning and operations.

Witness Williamson described the Company's proposal as incredibly wide in scope with many disparate parts and elements. Witness Williamson further testified that if the Commission decides to approve a rider for Power Forward, then the Targeted Undergrounding program costs should not be recovered through the rider because the undergrounding of lines for reliability purposes is not new, modern, extraordinary, or outside the scope of normal operations required to provide adequate and reliable service to customers. He went on to state that the Distribution Hardening and Resiliency program also includes many projects that are customary T&D projects, such as cable and pole replacement. The Commission analyzes in more detail the Public Staff's position that Power Forward programs are not unique or extraordinary, and should therefore be considered routine, customary spend to be recovered through a general rate case, in its determinations hereafter.

In 2003, the Public Staff prepared a report on the feasibility of undergrounding the State's entire distribution grid for the North Carolina Natural Disaster Preparedness Task Force (2003 Report). Tr. Ex. Vol. 24, pp. 116-164. The 2003 Report found that undergrounding the entire distribution grid was too costly and recommended instead that each utility (1) identify the overhead facilities that repeatedly experience reliability problems; (2) determine whether conversion to underground is a cost-effective option for improving the reliability of those facilities; and, if so, (3) convert those facilities to underground.[1]

Regardless of whether the Grid Rider is approved, witness Williamson recommended that the Commission require DEC to include in its annual Smart Grid Technology Plan filings, required by Commission Rule R8-60.1, more detailed information on (1) the purpose of each project or category of projects, (2) a schedule of implementation, (3) changes to the schedule that would impact the project's cost or in-service date, (4) project capital and O&M costs (both new and any stranded costs of removed assets), (5) how the Company proposes to recover these costs, and (6) a demonstration of how the project is designed to reduce the outage frequency and duration of individual circuits or other T&D assets affected by the project.

[1] Company witness Simpson admitted that the Company had not performed any undergrounding of distribution lines in response to the Public Staff's recommendation in the 2003 Report.

Public Staff witness Maness stated that any time the Commission segregates one item or a group of items for single-item ratemaking, either through a rider or through deferral accounting, it upsets the regulatory balance in that the "incentives restraining capital investment that are naturally present in the normal aggregated method of ratemaking under [N.C. Gen. Stat. §] 62-133 are relaxed, because the only thing restraining the utility from making these types of investments is the ability of the regulator to devote precious resources to eliminate any imprudent or unreasonably large costs." Tr. Vol. 22, p. 92. In addition, "splitting out major items for single-item ratemaking can make it more likely that the Company will exceed its allowed or appropriate overall rate of return." Id. Witness Maness testified that, as with riders, deferral accounting is an exception to the general method by which rates are normally set for North Carolina's electric public utilities. Rates are normally set on the basis of the aggregate amount of the utility's expenses, revenues, and rate base, and a consideration of the rate of return produced by that aggregation of costs and revenues. Specific components of revenues and costs fluctuate over time, and increases in one cost component can often be offset by decreases in another, thus perhaps mitigating the need for a rate increase to provide recovery of the increase in cost of the first item. He explained that this is one of the reasons that the Commission has previously stated that deferral accounting and riders should be the exception, not the rule. Witness Maness stated that it is important that items set aside for special ratemaking treatment be both extraordinary in magnitude and very unique in type. In addition, witness Maness testified that when a rider or deferral accounting is established, costs intended to be included in the rider should be easily identifiable because of the issues and controversies that may arise regarding specific items of costs and their respective eligibility for special ratemaking treatment. Witness Maness agreed with Public Staff witness Williamson that the types of plant items that the Company is proposing for inclusion in the Grid Rider are vaguely described.

Public Staff witness Parcell testified that DEC's proposed Grid Rider shifts risk from the Company to its ratepayers in that the possibility that certain Power Forward expenses would be disallowed by the Commission would be reduced or eliminated. Witness Parcell quoted a report by Moody's Investors Service, stating in part that it views "the use of rider/tracking mechanisms as positive for credit as they reduce regulatory lag and improve the predictability and stability of cash flow." Tr. Vol. 26, p. 830. Public Staff witness Parcell testified that it is important to consider a rider's effect on the cost of equity for a utility and, accordingly, its rate of return on equity.

Testimony of other intervening parties

CIGFUR III witness Phillips testified that the proposed Grid Rider would shift regulatory risk from investors to customers, and may also eliminate DEC's incentive to prudently manage costs between base rate cases. Additionally, witness Phillips contended that Power Forward costs are not volatile or unpredictable, but rather are within the Company's control and, therefore, are not appropriately recovered through a rider. He stated that DEC has an obligation to provide safe and reliable electric service, and consequently, that Power Forward investments are likely to be made with or without approval of the Grid Rider. Witness Phillips stated that the Company has not demonstrated that the Grid Rider is necessary. As such, he recommended that the Grid Rider be rejected. In the alternative, if the Commission approves the Grid Rider, witness Phillips asserted that the Company's "allowed ROE should be reduced to reflect the reduced business risk that investors will face." Tr. Vol. 26, p. 277. Similarly, Tech Customers witnesses Chriss and Rosa asserted that the Grid Rider would reduce risk for the utility, and that this should be considered when setting DEC's rate of return on equity.

CUCA witness O'Donnell testified that the Grid Rider should be disallowed because, in his opinion, it is too expensive and is likely to harm the North Carolina economy. Witness O'Donnell also testified that DEC has been transparent about the purported benefits, but not the costs, of Power Forward. Witness O'Donnell testified that the Grid Rider is unnecessary because the Company can, and already is, investing in T&D equipment, with the only difference being that it has had to seek recovery of those investments through its general rate cases instead of an annual rider proceeding. Witness O'Donnell testified that DEC's lobbyists unsuccessfully attempted to have legislation enacted that would create the Grid Rider by statute.[1]

Witness O'Donnell stated that the Commission should open a separate docket to investigate the need for DEC's proposed grid investments and to allow for transparency and public involvement in the examination of the following issues: (1) whether Power Forward is needed for reliability purposes; (2) the benefits of Power Forward; (3) the costs of Power Forward; (4) whether Power Forward is cost-effective; (5) how other states are handling grid modernization issues; (6) lessons learned from other states; (7) how North Carolina's renewable energy industry will be affected by Power Forward; and (8) how the rate increases expected under Power Forward and the Grid Rider will affect the State's economy.

Witness O'Donnell further testified that the Company's objective is to drive earnings through Power Forward investments and that the Company seeks to shift risk onto consumers by asking for an automatic forward-looking cost recovery mechanism such as the Grid Rider. In addition, witness O'Donnell expressed concern that the Commission would not retain full regulatory review of Power Forward programs in the Grid Rider's annual proceeding. He stated that during such a proceeding, the ratepayer, and not the utility, would have the burden of proving that DEC's costs were not reasonably or prudently incurred.

While EDF witness Alvarez acknowledged that he is generally supportive of utility grid modernization efforts, he stated that the Commission should deny DEC's request for the Grid Rider until after the Commission has opened a separate proceeding to review, with stakeholder participation, whether Power Forward is warranted for the following reasons: (1) grid modernization investments are very large and distinct in character from business-as-usual investments; (2) Commission review with stakeholder participation will better align DEC's grid modernization investments with Commission and State priorities; (3) applying the "used and useful" standard to assess the prudence of grid modernization investments after the fact is inadequate to protect consumer and environmental interests; (4) disallowance of cost recovery could harm the utility's ability to finance future growth, making it impractical and difficult for the Commission to deny cost recovery once grid modernization investments have already been made; and (5) a Commission review process would likely result in a better cost-benefit ratio for grid modernization programs than if no such review were conducted.

---

[1] See Senate Bill 619 (2017).

Kroger witness Higgins testified that the Commission should disapprove the Grid Rider because, in his opinion, infrastructure investments should be evaluated in the context of a general rate case, wherein the totality of DEC's revenues and costs for a given test year are analyzed. He testified that investing in and maintaining the T&D system are fundamental responsibilities for a utility company and, therefore, the related costs should continue to be evaluated as part of a general rate case.

NCSEA witness Barnes testified that the Commission should disapprove the Grid Rider, and instead initiate a separate proceeding to fully investigate Power Forward. Witness Barnes testified that he is concerned about the proposed Grid Rider cost allocation, particularly in light of cost causation principles. Furthermore, of the total revenue requirement to be borne by residential customers, the majority would be recovered as a fixed monthly charge. Witness Barnes stated that the Grid Rider appears to be the first step toward a series of both fixed and variable rate increases for several years to come.

NCSEA witness Golin recommended that the Commission deny the Company's proposal to recover Power Forward costs through either the Grid Rider or deferral accounting. She stated that the Commission should instead open a stand-alone docket to thoroughly define and plan for a modernized grid. In so doing, witness Golin stated that the Commission should require DEC to conduct robust distribution resource planning and take a holistic view of the grid and the technologies that are capable of meeting the grid's needs. This, according to witness Golin, would assure proper forecasting, better evaluate the role of distributed energy resources, and allow for increased transparency and stakeholder input. "Distribution resource planning should be accompanied by thorough cost/benefit analyses that compare several investment pathways to meeting grid investment goals." Tr. Vol. 14, p. 70. Witness Golin recommended that, as part of a new proceeding to examine Power Forward, participants could determine a method and timeline for calculating and publishing the distributed generation hosting capacity of DEC's distribution circuits. Witness Golin also advocated that the Commission open a new docket or stakeholder working group "to assess the impacts of shifts in the Company's investment strategy with the current mechanisms for cost recovery and implications for rate design." Id.

NCSEA witness Golin testified that the Company has not made clear how or why some investments fall under customary spend, and thus are recovered through traditional general rate case proceedings, and other investments fall under Power Forward, and thus would be recovered through the Grid Rider. Witness Golin testified that the Company has also failed to delineate a clear decision-making procedure for how it determined which capital investments are routine, and thus customary spend, and which investments fulfil the goals of the Power Forward initiative, and thus would be Power Forward spend.

Witness Golin further opposed the Grid Rider because, in her opinion, riders allow utilities to obfuscate the risk of large capital investments, whereas DEC's shareholders would continue to bear the risk of investing in these projects if DEC is required to recover Power Forward costs through a general rate case. Witness Golin also opposed the Grid Rider because, in her opinion, it would harm the markets for energy efficiency and distributed energy resources.

Tech Customers witness Strunk testified that DEC failed to distinguish its planned Power Forward spending from customary T&D investments. Describing the significant overlap between Power Forward investments and customary T&D spend, witness Strunk identified the risk that DEC will pursue the recovery of ordinary T&D costs through the Grid Rider. He testified that the Grid Rider threatens to unbalance the regulatory process by moving large capital investments outside of the general rate case process. Witness Strunk testified that the Grid Rider is unnecessary to reduce regulatory lag, in part because both DEC and the Commission have other means of addressing such lag. Witness Strunk testified that DEC's proposal is distinguishable from grid modernization trackers employed in other jurisdictions in that the Grid Rider fails to clearly identify eligible assets, it contains no spending cap on Power Forward investments, and it fails to recognize any offsetting cost savings. Witness Strunk criticized the Ernst & Young study commissioned by DEC as flawed because, in his opinion, the study focused on indirect benefits, excluded analysis of rate impacts, and lacked a clear showing of what DEC contends to be a deteriorating trend in reliability metrics.

DEC's rebuttal testimony

In response to some intervenors who argued that Power Forward is unnecessary and not cost-effective, witness Fountain cited to the study by Ernst & Young, commissioned by DEC, and testified that North Carolina will see net economic benefits from Power Forward's direct capital investments, ranging from $240 million to $1 billion. In response to concerns and questions about the long-term rate impacts of Power Forward, witness Fountain provided DEC Fountain Redirect Exhibit 1, showing that by 2026, Power Forward costs would cause rates to increase by 25.24% for residential customers, 12.39% for commercial customers, and 6.52% for industrial customers.

In response to Public Staff witness Williamson's suggestion that DEC be required to file additional information about Power Forward as part of its annual Smart Grid Technology Plan, witness Simpson testified that the Company is agreeable to the six reporting requirements recommended by the Public Staff, but opposes adding the requirements as a result of this rate case because Commission Rule R8-60.1 affects other utilities besides DEC.

In response to Public Staff witness Williamson's position that the Company has provided insufficient detail to warrant recovery of Power Forward costs through the Grid Rider, witness Simpson testified that the Company has provided economic and technical analyses, in addition to responding to more than 250 data requests regarding its Power Forward plans. Furthermore, in response to several intervenors' concerns, witness Simpson testified that additional detail will be provided, and an ongoing review of Power Forward implementation will occur, through work plans[1] and detailed financial projections that would be subject to intervenor scrutiny and Commission review as part of the annual Grid Rider proceeding. Incurred costs would be subject to a prudency review by the Commission, as would be forward-looking cost projections. Witness Simpson testified that the ten-year duration of Power Forward is preferred because a shorter duration would result in higher prices for labor and material, while a longer duration potentially would involve significant staff turnover, and thus increased training costs, in addition to a slower realization of benefits.

[1] On April 2, 2018, DEC filed a late-filed exhibit containing such plans for 2018 and 2019 only.

Witness Simpson disagreed with Public Staff witness Maness that Power Forward investments are customary spend that would be incurred regardless as part of DEC's continued obligation to maintain its infrastructure in order to provide reliable electric service to its customers. Witness Simpson contended that the costs referenced by witness Maness are maintenance-related costs, not the upgrades and improvements contemplated by Power Forward, which will "convert [DEC's] legacy grid to a next-generation grid that will support our digital society and enable emerging technologies that will benefit customers now and into the future." Tr. Vol. 23, p. 165.

In response to Public Staff witness Williamson's concern that Targeted Undergrounding, in particular, is not a novel or extraordinary investment, witness Simpson conceded:

> ... that burying lines is by no means a novel technology; however, the data resolution and analytical tools that enable the Targeted Undergrounding program are novel—and necessary—to effectively and cost-efficiently know which lines to bury to reduce the maximum number of outages.

Id. at 165-66.

In response to Tech Customers witness Strunk's assertion that the Company has not sufficiently linked its proposed Targeted Undergrounding program to deficiencies in the existing grid, witness Simpson opined that Targeted Undergrounding "will decrease the number of [grid failure] events by as much as 30 to 40 percent." Id. at 177. He opined further that three Power Forward programs combined would improve SAIDI and SAIFI metrics by 40-60%. (Those three programs are Targeted Undergrounding, Hardening and Resiliency, and Self-Optimizing Grid.) Also in response to witness Strunk, witness Simpson testified that the distinction between customary T&D projects and Power Forward projects revolves around "the pace of the expenditures, not the classification of the investment." Id. at 169. Witness Simpson disputed that the Grid Rider would incentivize recovery of customary T&D costs through the Grid Rider, arguing that Power Forward "is comprised of a specific set of projects." Id. at 170. Witness Simpson conceded, however, that some of the projects described as Power Forward "do indeed have similar descriptions as customary [T&D] capital spending." Id. at 180.

In response to EDF witness Alvarez's concerns surrounding the costs of the Targeted Undergrounding program, witness Simpson testified that the per-customer cost referenced by witness Alvarez is inaccurate and that, in any case, the benefits of undergrounding are not limited only to those customers whose service is undergrounded. According to witness Simpson, undergrounding the outlier segments of the grid would eliminate over 50% of overhead system events and over 40% of all system events. Witness Simpson testified that for DEC, the Targeted Undergrounding program will result in an 18% improvement in SAIDI, a 17% improvement in SAIFI, a 36% reduction in non-major event day outages, and a 30% reduction in major event day outages.

In response to several intervenors' concerns that DEC has not sufficiently shown that the existing grid is unreliable enough to warrant the Power Forward spending and resulting rate increase, witness Simpson testified that "the directional trend is clear and consistent—both SAIDI and SAIFI are projected to [worsen] through the year 2026." Id. at 176.

In response to several intervenors' suggestions that a separate proceeding is needed to fully evaluate DEC's Power Forward initiative, witness Simpson disagreed because "[Power Forward] is no different from the grid planning the Company has [sic] done for years, but this initiative is more comprehensive in scope and period than is typical." Id. at 193. In addition, witness Simpson referenced the Technical Workshop that DEP was ordered to hold in early 2018. He again referred to the annual Grid Rider proceeding, which he said would be the avenue through which the Commission and intervening parties could evaluate DEC's Power Forward plans and expenditures.

In response to witness O'Donnell's testimony that DEC's customers are unlikely to see the value in a large rate increase to pay for Power Forward programs, witness Simpson pointed to research data purportedly showing that customers support the idea of grid improvement, even at a somewhat increased cost.[1] Witness Simpson stated that all ratepayers should see positive impacts from Power Forward programs, even after accounting for the increase in electric service rates, through either direct benefits like a reduction in power outages or through indirect benefits, like increased upward pressure on wages and increased economic activity.

In response to several intervenors' testimony contending that the Grid Rider, if allowed, would undermine the Commission's regulatory authority, witness McManeus testified that the Commission has allowed a number of cost-tracking riders, both as directed by the North Carolina General Assembly and in general rate cases, to recover capital and operating costs associated with various items. Although witness McManeus conceded that cost-tracking riders typically are used for regulatory compliance costs or volatile costs outside of the Company's control which comprise a significant component of operating expenses, she stated that riders are not necessarily limited to only these kinds of expenditures. She testified that the Grid Rider would be subject to an annual "mini-rate case" before the Commission, during which the following would allow for sufficient scrutiny of Power Forward costs: stakeholder participation, discovery, evidentiary hearing, true-up mechanism, review and audit of costs by the Public Staff, and expert witness testimony, along with the Company having to bear the burden of proving that the capital or O&M spend was reasonably and prudently incurred. In addition, witness McManeus testified that the Commission would retain authority over the Company's profitability through DEC's total electric earnings quarterly report filings and annual cost of service filings. For these reasons, witness McManeus contended that the costs associated with Power Forward actually would be subject to heightened Commission scrutiny if recovered through the Grid Rider, as opposed to a general rate case.

Witness McManeus specifically addressed intervenor concerns that the use of a rider would allow the Company to over-earn by creating an unbalanced regulatory process. Witness McManeus testified that the costs recovered through the rider would always be limited to actual costs incurred through the use of the EMF mechanism proposed in the Grid Rider. Any amounts over-collected from customers are refunded with interest. DEC witness Hevert also testified that an evaluation of the Company's peers, many of which he stated have rate mechanisms similar to the Grid Rider in place, is necessary to determine whether a Grid Rider would affect DEC's cost of equity or rate of return on equity.

[1] The Commission notes that other information in this same exhibit seems to indicate that 79% of customers would not find grid modernization investments to be reasonable if they resulted in only a 3% rate increase.

Witness McManeus clarified that DEC does not intend to "have the proposed [Grid Rider] supplant the traditional cost based rate cost recovery process." Id. at 336. Rather, according to witness McManeus, DEC is seeking to avoid a 4- to 26-month delay in cost recovery for a high volume of large expenditures involving short construction periods. Witness McManeus stated further that:

> [i]f rate cases did not occur every year, then this lag in the timing of cost recovery is multiplied. In contrast, such lengthy delays have been avoidable for large generation investments, where rate cases are often timed around the estimated completion date of the single large investment.

Id. at 337. Witness McManeus explained that the Company intends to "reflect the financing costs during the construction period through the capitalization of AFUDC." Id. at 338. Only after completion of each project and placing it into service, clarified witness McManeus, would its costs be incorporated into the Grid Rider.

Commission Determinations

The Commission has thoroughly reviewed with care the evidence on the issues surrounding DEC's request for special ratemaking treatment of Power Forward costs; namely, to establish a Grid Rider, or, alternatively, to create a regulatory asset.

While no intervenor generally disagrees with the Company's stated goals of improving and modernizing the grid, the Public Staff and other intervenors unanimously oppose DEC's proposed cost recovery mechanism for these investments. Similarly, while the Commission does not disagree with DEC's stated goals of improving reliability and modernizing the grid, the Commission concludes that it is without statutory authority to allow DEC's request for special ratemaking treatment of Power Forward costs.

As an initial matter, the Commission notes that – with the exception of deployment costs of AMI meters, which DEC is not seeking to recover through the Grid Rider and which are addressed elsewhere in this Order – DEC is not seeking recovery in the instant rate case of Power Forward expenditures incurred during the test year. As such, it would be premature for the Commission to evaluate at this time the prudency or reasonableness of the Company's Power Forward investments. Existing dockets (such as Integrated Resource Planning and Smart Grid Technology Plans), as well as future general rate case proceedings, will provide opportunities for the Commission, at the appropriate time, to consider evidence to evaluate the prudency and reasonableness of Power Forward costs.

A. No exceptional circumstances exist to justify the Grid Rider

DEC in its post-hearing brief, among other things, argues that past cases in which the Commission has created a rider in general rate case proceedings are analogous to the establishment of the Grid Rider in this case, and, therefore, the Commission has the statutory authority to implement the Grid Rider. The Public Staff, AGO, NCSEA, Tech Customers, and other intervenors argue that many of the same cases labeled by DEC as analogous are, in fact, distinguishable, from the issues in the instant proceeding, and, therefore, the Commission does not have the statutory authority to implement the Grid Rider.

As a starting point, the Commission recognizes that certain statutory parameters exist around the authority delegated to it by the Legislature:

> North Carolina Statutes and case law contain explicit limits as to the procedures through which the Commission may revise the rates of a public utility. They are as follows: (1) a general rate case pursuant to G.S. 62-133; (2) a proceeding pursuant to a specific, limited statute, such as G.S. 62-133.2; (3) a complaint proceeding pursuant to G.S. 62-136(a) and G.S. 62-137; or (4) a rulemaking proceeding.

Order Denying Request to Implement Rate Rider and Scheduling Hearing, Docket No. E-7, Sub 849, at p. 18, n.2 (June 2, 2008) (citing State ex. rel. Utils. Comm'n v. Nantahala Power and Light Co., 326 N.C. 190, 195, 388 S.E.2d 118, 121 (1990)). In the instant proceeding – a general rate case pursuant to N.C. Gen. Stat. § 62-133 – the Commission clearly possesses the authority to establish a cost-tracking rider if exceptional circumstances existed to justify such action. Indeed, myriad precedent exists in which the Commission has done just that, even in the absence of an express enabling statute,[1] and the Supreme Court of North Carolina has upheld the Commission's authority to establish a cost-tracking rider when exceptional circumstances, such as a national fuel crisis causing a utility's gas costs to fluctuate unpredictably, warrant such action. See, e.g., State ex rel. Utils. Comm'n v. Edmisten, 291 N.C. 327, 230 S.E.2d 651 (1976) (Edmisten I); State ex rel. Utils. Comm'n v. Edmisten, 291 N.C. 451, 232 S.E.2d 184 (1977) (Edmisten II).

DEC in its post-hearing brief acknowledges that the Commission has in the past recognized the limitations on its authority to create cost-tracking riders in general rate cases; namely, that compelling circumstances must exist to justify special ratemaking treatment.[2] In addressing said limitations, DEC attempts to argue that the magnitude of Power Forward investments, combined with the possibility that regulatory lag of cost recovery for such investments would be detrimental to the Company, are sufficiently exceptional circumstances to justify special ratemaking treatment in the instant proceeding. Accordingly, DEC attempts to argue that the facts in Edmisten I are analogous to DEC's proposed Grid Rider in the instant proceeding. The Commission is unpersuaded by this argument.

Edmisten I approved the use of a fuel adjustment rider in connection with a general rate case. There, the Court noted that the rider at issue "does indeed isolate for special treatment only one element of the utility's cost," but nonetheless approved the additive since it was adopted in connection with a general rate case and was of a nature that merely involved the application of a mathematical formula to the established rates going forward. Edmisten I, 291 N.C. at 340, 230

[1] See, e.g., Order Approving Partial Rate Increase and Allowing Integrity Management Rider, Docket No. G-9, Sub 631, at p. 39 (Dec. 17, 2013) (approving an Integrity Management Rider as part of a general rate case decision); Order Approving Partial Rate Increase and Requiring Conservation Initiative, Docket No. G-9, Sub 499 (Nov. 3, 2005) (approving a Customer Utilization Tracker as part of a general rate case decision); Order Granting General Rate Increase and Approving Amended Stipulation, Docket No. E-7, Sub 909 (Dec. 7, 2009) (approving a Coal Inventory Rider as part of a general rate case decision).

[2] See, Order Approving Partial Rate Increase, Docket No. G-5, Sub 356, at p. 11 (Sep. 25, 1996).

S.E.2d at 659. Notably distinguishable from the facts in the instant proceeding, however, Edmisten I (1) involved a rider that was adopted in the context of exigent circumstances related to the national fuel crisis in the 1970s, and only after the utility in that case demonstrated a clear connection between recovery of its fuel costs and its financial viability; (2) involved a rider that permitted recovery of core operating costs that now are recoverable under express statutory mechanisms; and (3) did not involve forecasted expenditures or evaluations, but rather permitted rate adjustments by application of a mathematical formula. In other words, the Commission established just and reasonable rates and then adopted a going-forward adjustment mechanism that it found necessary to achieve just and reasonable rates based on the exigencies of the energy crisis, which were beyond the utility's control, impacting the utility's expenditures. Crucially, the Supreme Court of North Carolina recognized in upholding the Commission's establishment of a fuel adjustment clause in Edmisten I that the "Commission, cognizant of its primary duty to fix just and reasonable rates, found upon uncontradicted evidence that the only way it could perform this duty under the facts was to permit use of the fuel clause." Id. at 346. Contrast such findings with those in the instant proceeding, in which the Commission finds and concludes that not only did DEC fail to show that the only way to achieve just and reasonable rates would be to allow special ratemaking treatment of Power Forward costs, but also that the greater weight of the evidence supports the conclusion that to allow the Grid Rider as requested would create unjust and unreasonable rates, in the Company's favor. Furthermore, the Commission finds that none of the facts justifying adoption of the fuel adjustment clause in Edmisten I are present in the instant proceeding. Where Edmisten I addressed fuel costs to be incurred by the utility as an essential component of its utility operations, DEC proposes in the instant proceeding to recover projected, future T&D expenditures for projects not yet identified, which are discretionary on its part. Where Edmisten I was decided in the context of wildly fluctuating fuel costs that threatened the utility's financial viability, here, DEC has complete control over the proposed spending, the rate of spending, and the timing of spending on Power Forward programs; it also has full control over its test year and the timing and frequency of when its applications for a general rate increase are filed. For these reasons, contrary to DEC's argument, Edmisten I cannot be read to endorse an end-run around the statutory rate-setting mechanisms; to the contrary, central to the Court's holding in Edmisten I was the Commission's conclusion that the rider was critical to the achievement of the statutorily-prescribed rates.

NCSEA and Tech Customers argue in their post-hearing briefs that a case in which the Commission addressed whether a utility could recover the costs of replacing bare steel and cast-iron mains and services through a rider, when the collected funds would be used to pay for expansion facilities, is analogous to DEC's proposed Grid Rider. See In re Pub. Serv. Co. of N.C., Docket No. G-5, Sub 356, pp. 10-13 (Sep. 25, 1996) (PSNC). The Commission agrees. In PSNC, the Commission explained that its legal authority to authorize riders that have the effect of adjusting rates outside of general rate cases is limited to specific "circumstances involving highly variable and unpredictable expense or volume levels beyond the control of the utility." Id. The Commission rejected the proposed rider in PSNC as unlawful for a number of reasons. First, the Commission found that "the cost had not been shown to constitute an unpredictable portion of ... annual construction expenditures" and that the utility "has control as to how much, how often and when the replacement takes place," meaning that the "expenditures are not highly variable or unpredictable, and they are generally controllable" by the utility. Id. Accordingly, the Commission held that implementation of the rider proposed in PSNC did not fall within its authority to establish.

The Commission noted a number of other concerns, including the possibility that rates would become unreasonable because the rider "would permit PSNC to recover the cost of the replacement mains without recognition of associated decreases in expenses or increases in revenues," a concern that was magnified "by the sheer magnitude and pace of PSNC's replacement program." Id. The Commission further noted that the rider "would require present ratepayers to pay for certain capital improvements as the funds are expended, rather than as the service is provided," which would "cause current ratepayers to subsidize the cost of serving future generations of ratepayers." Id.

Similarly, as argued by NCSEA and Tech Customers, the Commission agrees that a request for an annually adjustable nonutility generator (NUG) rider is analogous to DEC's proposed Grid Rider. See Order Approving Partial Rate Increase, Docket No. E-22, Sub 314 (Feb. 14, 1991) (VEPCO). In VEPCO, NC Power sought approval to recover future NUG expenses that it was contracted to incur over seven years through a NUG rider, with both deferred accounting and true-ups. In rejecting this request, the Commission found that (1) an annual adjustment for purchases of this type outside of a general rate case was not authorized by statute; (2) there was insufficient justification for treating purchased power expenses any differently from any other expense items in the ratemaking process; and (3) that "the NUG rider mechanism would preclude appropriate regulatory oversight of the Company's overall expenses ... because increases in payments to NUGs for additional capacity and energy could be offset by decreases in other cost of service items" that would not be accounted for without a general rate case. Id. at 19. Based on these "policy and legal concerns," the Commission denied NC Power's request.[1] Id. at 20.

DEC's proposed Grid Rider is analogous to the riders rejected by the Commission in PSNC and VEPCO, and is, accordingly, rejected for the same reasons. With the limited exception of federally-mandated reliability standards, DEC has complete control over the amount and timing of Power Forward expenditures, which thus are entirely predictable. DEC, through its request for the Grid Rider, merely seeks to recover more quickly costs that it has historically recovered without the need for a rider. Furthermore, there is no evidence in the record that without special ratemaking treatment for Power Forward costs, DEC would be unable to remain a strong, financially viable company.

The Commission finds and concludes that cost-tracking riders not specifically established by statute are and should continue to be considered an exception to the general ratemaking principles put in place by the General Assembly and this Commission.[2] In the instant case, there is no specific enabling statute or legislative directive requiring the establishment of the Grid Rider, and, therefore, it falls to the Commission to determine whether the circumstances presented by

[1] The Commission also noted that the fuel charge adjustment statute had been narrowly construed by the appellate courts, citing State ex rel. Utils. Comm'n v. Thornburg, 84 N.C. App. 482, 353 S.E.2d 413 (1987). There, the Court overturned the Commission's use of an "experience modification factor" to allow CP&L to recover a past under-recovery of fuel costs. Id., 84 N.C. App. at 490, 353 S.E.2d at 418. In light of the holding of the Court of Appeals, the Commission concluded "that an adjustment to base rates outside a general rate case, for which there is no specific statutory authority, to reflect a true-up of NUG expenses would be found unauthorized." Id. at 19.

[2] It should be noted, however, that there exists a plethora of precedent in which the Commission previously has approved the establishment of non-cost tracking riders in its adjudication of general rate cases, like the matter before the Commission in the instant proceeding. It also has approved the establishment of cost-tracking riders in its adjudication of general rate cases, when exceptional circumstances so warranted.

DEC are exceptional. The Commission finds and concludes that DEC has not presented exceptional or otherwise compelling circumstances to justify special ratemaking treatment of Power Forward costs.

DEC has raised concerns about the regulatory lag for its Power Forward investments. As an initial matter, the Commission notes that regulatory lag is not a new obstacle facing the utilities; rather, it always is present, to a certain extent, in an integrated, investor-owned utility market such as North Carolina. Although DEC in the instant proceeding testified from the perspective of the utility in characterizing regulatory lag as a problem necessitating a solution, it should be pointed out that regulatory lag in certain amounts can give company management an incentive to economize and make more worthwhile investments. Company witnesses Fountain and McManeus stated that while the Grid Rider would alleviate some regulatory lag, it would not be a significant reduction. DEC witness McManeus further stated that the Company did not do an analysis to determine the Company's cash flow with and without the rider; thus, there is no evidence in the record that the Company would be unable to carry out its operations without the requested cost-tracking rider. Therefore, the Commission finds DEC's regulatory lag concerns to be unpersuasive.

For all of these reasons, the Commission concludes that the Company's request for a Grid Rider should be denied. For the same reasons, the Commission concludes that the modified Grid Riders advanced by the Company in its post-hearing brief and Pilot Grid Rider Agreement and Stipulation, respectively, should also be denied.

B. Power Forward costs do not justify deferral accounting through a regulatory asset

Having already determined that DEC has failed to show that exceptional circumstances justify the establishment of a rider to recover Power Forward costs, the Commission now turns to DEC's request, in the alternative, to allow deferral accounting through the establishment of a regulatory asset for Power Forward costs.

As an initial matter, the Commission recognizes that it has in the past "historically treated deferral accounting as a tool to be allowed only as an exception to the general rule, and its use has been allowed sparingly." Order Approving Deferral Accounting with Conditions, Docket No. E-7, Sub 874, p. 24 (March 31, 2009). In addition, the Commission recognizes that it:

> has also been reluctant to allow deferral accounting because it, typically, equates to single-issue ratemaking for the period of deferral, contrary to the well-established, general ratemaking principle that all items of revenue and costs germane to the ratemaking and cost-recovery process should be examined in their totality in determining the appropriateness of the utility's existing rates and charges.

Id.

Turning now to the issues presented in the instant proceeding, the Commission finds and concludes that the reasons DEC says underlie the need for Power Forward are not unique or extraordinary to DEC, nor are they unique or extraordinary to North Carolina. Weather, customer disruption, physical and cyber security, DER, and aging assets are all issues the Company (and all utilities) have to confront in the normal course of providing electric service. The Commission further finds and concludes that while DEC intends to expend significant funds for T&D projects over the next ten years, a number of the Power Forward programs and projects proposed by DEC to be recovered through the Grid Rider are the kinds of activities in which the Company engages or should engage on a routine and continuous basis. Therefore, the Commission must conclude that Power Forward costs, as proposed in the instant proceeding, are not appropriate to be considered for deferral accounting. In reaching these conclusions, the Commission afforded substantial weight to the testimony of Public Staff witnesses Maness and Williamson, NCSEA witness Golin, and Tech Customers witness Strunk; conversely, the Commission was unpersuaded by DEC witness Simpson's contentions that Power Forward programs are new, novel, or extraordinary.

For example, monitoring, maintaining, and replacing aging equipment with like or new components, regardless of the pace at which these activities are conducted, is part of the Company's ongoing obligation to provide adequate and reliable electric service. In addition, the Commission concludes that new data analytics tools that DEC is using to identify the line segments in its Targeted Underground program do not make the program itself an extraordinary or unique modernization project. Undergrounding of lines is not a new concept, as conceded by DEC witness Simpson. Data analytics, as witness Simpson admitted, is neither a new phenomenon, nor is this current iteration of data analytics likely to remain unchanged for the foreseeable future.

Next, the Commission finds and concludes that the Distribution Hardening and Resiliency program contains, in its entirety, projects that also are within the scope of the Company's normal course of operating and maintaining the distribution grid. Of the categories of projects within this program, witness Simpson conceded that the transformer retrofitting, cable replacement, deteriorated conductor replacement/line rebuild, and pole hardening categories are also included in the Company's customary spend budget for the next five years. The Commission finds and concludes that these project categories are clearly within the Company's normal course of business and are not unique nor appropriate to be deferred.

Further, the Commission finds and concludes that the Transmission Improvements program also consists of projects that replace, rebuild, or improve existing transmission equipment. Federal reliability standards change as necessary to ensure national grid stability and reliability. DEC will be required to make the necessary improvements and modifications to its grid in order to remain compliant with such standards now and in the future, just as it has done for decades. Witness Simpson admitted that meeting such federal standards is customary as part of the Company's Business Expansion/Capacity expenditures. Therefore, these programs, too, are within the Company's ordinary course of business, and thus not appropriate for special ratemaking treatment.

Additionally, the Commission finds and concludes that DEC did not provide sufficient information to show how the Company will determine which Self-Optimizing Grid projects should be assigned to and recovered from the interconnection customers who would benefit the most from this capacity-enhancing and grid-strengthening work. Further, whether the majority of the money allocated to this program is for the replacement of lines deemed inadequate to handle new DERs on the system or new back feed or tie-in lines is unclear from the evidence presented. Either way, the Commission finds that back feed or tie-in lines do not represent new work or grid modernization, as witness Simpson testified. In fact, the addition of these kinds of lines is part of normal operations and the Company has added many of them to the grid in areas within its service territory in the past for purposes of ensuring reliable service to its customers.

Lastly, Enterprise Systems and Communications Network Upgrade programs include upgrades to several systems that the Company already uses to enable data acquisition and analytics to help control the grid. The Commission finds, therefore, that these upgrades are no different than many upgrades to other systems that the Company has made in the past and currently is in the process of making. One example is the Customer Connect program, which is an update to the existing customer information system and not included in Power Forward. The Commission considers these upgrades to constitute part of the ordinary evolution of the Company's business.

For all of these reasons, the Commission finds and concludes that DEC has not satisfied the criteria for deferral accounting treatment of Power Forward costs. In order for the Commission to grant a request for deferral accounting treatment, the utility first must show that the cost items at issue are adequately extraordinary, in both type of expenditure and in magnitude, to be considered for deferral. Second, the utility has to show that the effect of not deferring such cost items would significantly affect the utility's earned returns on common equity. Although it was uncontested by any party that DEC's planned Power Forward spend is extraordinary in magnitude, the Commission is unpersuaded that the entirety of Power Forward programs as proposed are unique or extraordinary. Assuming arguendo that all Power Forward programs as proposed were found to be unique and extraordinary, thus meeting the threshold criteria for consideration of deferral accounting, DEC failed to show that the effect of not deferring Power Forward costs would significantly affect its earned returns on common equity.

The Commission appreciates the Company's undertaking to strengthen and modernize its grid and retool other systems, and encourages its efforts. The Commission recognizes that the costs the Company has identified are substantial and that, by and large, the individual projects are of insufficient length to qualify for CWIP or AFUDC before such projects can be completed and placed in service. Without a rider or an order deferring costs, the Company risks an erosion of earnings from regulatory lag. Likewise, these circumstances promote more frequent, costly rate cases.

Nevertheless, the Commission determines as addressed herein that it does not possess the authority to approve the Grid Rider and that the description of projected projects on this record is insufficient to properly categorize customary spend projects, which the Company must undertake to comply with its franchise obligations, from extraordinary Power Forward or grid modernization projects.

With respect to deferral, the Commission acknowledges that, irrespective of its determination not to defer specific costs in this case, the Company may seek deferral at a later time outside of the general rate case test year context to preserve the Company's opportunity to recover costs, to the extent not incurred during a test period. In that regard, were the Company in the future before filing its next rate case to request a deferral outside a test year and meet the test of economic harm, the Commission is willing to entertain a requested deferral for Power Forward, as opposed to customary spend, costs. Should a collaborative undertaking with stakeholders as addressed herein produce a list of Power Forward projects, such designation would greatly assist the Commission in addressing a requested deferral. Were the Company to demonstrate that the costs can be properly classified as Power Forward and grid modernization, the Commission would seek to expeditiously address the request and to determine that the Company would meet the "extraordinary expenditure" test and conceptually authorize deferral for subsequent consideration for recovery in a general rate case.

The Commission can authorize a test for approving a deferral within a general rate case with parameters different from those to be applied in other contexts. Consequently, with respect to demonstrated Power Forward costs incurred by DEC prior to the test year in its next case, the Commission authorizes expedited consideration, and to the extent permissible, reliance on leniency in imposing the "extraordinary expenditure" test.

Having concluded that the Grid Rider and the Company's alternative request to allow deferral accounting of Power Forward costs should be denied, the Commission need not address the related issues, which also were contested by the intervenors, of cost allocation and rate design of the Grid Rider. DEC should seek recovery of its Power Forward expenditures through the traditional general ratemaking process outlined in N.C. Gen. Stat. § 62-133.

C. <u>DEC shall utilize existing Commission dockets to collaborate with stakeholders</u>

The Commission finds and concludes that several of the intervening parties have raised valid concerns regarding the need for additional transparency and detailed information regarding Power Forward. Although the Commission concluded in this proceeding that Power Forward costs do not warrant special ratemaking treatment, the Commission finds and concludes that additional information would be helpful to the Commission, the Public Staff, and to other intervening and interested parties to better understand Power Forward projects, grid modernization in general, and the cost-effectiveness of such programs.

EDF and NCSEA, in their post-hearing briefs, make compelling arguments that the Commission will not repeat here in support of their position that the Commission should establish a separate, generic docket for the purpose of investigating and evaluating the grid modernization plans of all investor-owned utilities in North Carolina. In addition, the Commission notes that EDF provides a comprehensive overview of grid modernization issues and proceedings, as handled in a number of other jurisdictions. Similarly, the Public Staff requests that DEC be required to include in its Smart Grid Technology Plan filings, required by Commission Rule R8-60.1, more detailed information on Power Forward investments.

While the Commission declines to adopt in its entirety either recommendation advanced by the intervening parties with respect to a separate proceeding to further evaluate some of the issues surrounding Power Forward and grid modernization, the Commission recognizes that there could be value in further collaboration between DEC and the intervening parties on how to resolve these issues, which the Commission expects will continue to be raised until such time as the parties can find a solution within our existing statutory framework. With that said, the Commission directs DEC to utilize an existing proceeding, such as the Integrated Resource Planning and Smart Grid Technology Plan docket, to inform the Commission, and to engage and collaborate with stakeholders to address the myriad of issues raised in the context of Power Forward and the Company's proposed Grid Rider.

D. The Pilot Grid Rider Agreement and Stipulation is disapproved

DEC, EDF, the Sierra Club, and NCSEA (Grid Rider Stipulating Parties) contend that their jointly-filed Pilot Grid Rider Agreement and Stipulation Among Certain Parties (Grid Rider Agreement), the contents of which the Commission will not in this Order summarize in detail, addresses several of the concerns raised by the parties regarding Power Forward and the Grid Rider. The Grid Rider Stipulating Parties further contend that a number of concessions were made both by DEC and its counterparties in order to reach the consensus that culminated with the filing of the Grid Rider Agreement. In essence, the Grid Rider Agreement contains a revised Power Forward proposal on a smaller scale, with a shorter duration and limitations on the Company's spending, at least during the initial three-year pilot period. The Grid Rider Agreement represents a hybrid of the Company's initial cost recovery and alternate cost recovery requests, with most costs being recovered through the Grid Rider during the first three years, followed by deferral of such costs thereafter.

While the Commission appreciates the efforts to resolve some of the contested issues surrounding Power Forward and the Grid Rider, the Commission nevertheless concludes that the Grid Rider Agreement must be disapproved. As an initial matter, even if the Commission hypothetically were to find that the Grid Rider Agreement sufficiently mitigates the valid concerns about Power Forward and the Grid Rider as expressed by the intervening parties throughout this proceeding, the Commission nonetheless still would be required to reach the same conclusion that the law as it currently exists does not allow for the establishment of a rider to recover costs that are predictable and within the utility's control.

In addition to the issue of legality, which in and of itself precludes under the instant circumstances the Commission's consideration of the Grid Rider Agreement, the Commission agrees with NCJC et al. and NC WARN that it would constitute poor policy to allow a partial group of interested parties to develop plans for grid modernization through settlement negotiations that address only certain of a number of contested issues, particularly when the Grid Rider Agreement was filed after the close of the evidentiary record in this proceeding, thus precluding entirely the opportunity for cross examination.

In conclusion, the Commission finds and concludes that the Grid Rider Agreement should be disapproved, for many reasons including the rationale for denying the Company's requests for special ratemaking treatment of Power Forward costs in the first place.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 45-49

The evidence supporting these findings of fact and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of Company witnesses Fallon, Diaz, and McManeus, CUCA witness O'Donnell, Tech Customers witness Kee, and Public Staff witnesses Metz, Maness, and Boswell, and the entire record in this proceeding.

In Docket No. E-7, Sub 819, which has been consolidated with this general rate case, the Company requests Commission approval of its decision to cancel the Lee Nuclear Project pursuant to N.C. Gen. Stat. § 62-110.7(d). In this general rate case, the Company requests permission to move the adjusted balance of the Lee Nuclear Project development costs from CWIP Account 107 to regulatory asset Account 182.2 and to recover the project development costs in rates by amortizing such costs over a 12-year period. The Company also requests that the unamortized balance of such costs be included in rate base to recover a net-of-tax return on the unamortized balance.

DEC witness Fallon testified that in its 2005 and 2006 Integrated Resource Plans (IRPs), the Company identified the need for significant capacity additions by summer 2016 and found nuclear generation to be a least cost supply-side alternative. Tr. Vol. 10, p. 182. In March 2006, DEC announced that it had selected the site for Lee in Cherokee County, South Carolina, to evaluate for possible nuclear expansion. Tr. Vol. 10, p. 183. On September 20, 2006, the Company filed a request in Sub 819 for a declaratory ruling for authority to recover the North Carolina allocable portion of necessary costs and obligations to be incurred through December 31, 2007. On March 20, 2007, the Commission issued its Order Issuing Declaratory Ruling (2007 Order), in which the Commission determined that it was appropriate for DEC to pursue project development work up to $125 million through December 31, 2007, for the Lee Nuclear Project and that DEC could recover the project costs in the manner determined to be appropriate by the Commission and allowed by law.

On January 1, 2008, N.C. Gen. Stat. § 62-110.7 went into effect. This statute provides for Commission review of a utility's decision to incur nuclear project development costs. Under this statute, prior to filing an application for a Certificate of Public Convenience and Necessity (CPCN) in North Carolina or another state, a public utility may request that the Commission review its decision to incur nuclear project development costs. Under N.C. Gen. Stat. § 62-110.7(a), project development costs are defined as:

> all capital costs associated with a potential nuclear electric generating facility incurred before (i) issuance of a certificate under G.S. 62-110.1 for a facility located in North Carolina or (ii) issuance of a certificate by the host state for an out-of-state facility to serve North Carolina retail customers, including, without limitation, the costs of evaluation, design, engineering, environmental analysis and permitting, early site permitting, combined operating license permitting, initial site preparation costs, and allowance for funds used during construction associated with such costs.

Generally speaking, under N.C. Gen. Stat. § 62-110.7(b), the Commission shall approve a utility's decision to incur project development costs if the utility demonstrates that the decision to incur such costs is reasonable and prudent; however, the Commission does not consider the reasonableness or prudence of any specific activities or items of costs until a rate case proceeding. North Carolina Gen. Stat. § 62-110.7(c) provides that reasonable and prudent project development costs shall be included in the utility's rate base and be fully recoverable through rates in a general rate case. However, if the project is cancelled, as has occurred in this case, N.C. Gen. Stat. § 62-110.7(d) allows the utility to recover all reasonable and prudently incurred project development costs in a rate case amortized over the longer of five years or the period during which the costs were incurred, which in this case is 12 years. It should be noted that while N.C. Gen.

Stat. § 62-110.7(c) provides for rate base treatment of project development costs and therefore includes a return, N.C. Gen. Stat. § 62-110.7(d), applicable to cancelled projects, only requires amortization of the costs and does not mention, and certainly does not mandate, a return.[1]

Witness Fallon testified that on December 7, 2007, DEC filed an Application for Approval of Decision to Incur Continued Generation Project Development Costs. Tr. Vol. 10, p. 186. Specifically, DEC sought approval of its decision to incur the North Carolina allocable share of an additional $160 million of Lee Nuclear Project development costs during 2008 and 2009 to maintain the ability to begin nuclear construction to serve customers in the 2018 timeframe as identified in the Company's 2007 IRP. Tr. Vol. 10, p. 187. The Commission approved DEC's request on June 11, 2008 (2008 Order). Tr. Vol. 10, p. 188.

On November 15, 2010, DEC filed an Amended Application for Approval of Decision to Incur Nuclear Generation Project Development Costs seeking approval to incur an additional $229 million of project development costs (later revised to $287 million), for a total of $459 million (including AFUDC) for the period January 1, 2010 through December 31, 2013, to allow Lee Nuclear to remain an option to serve customers in the 2021 timeframe. Tr. Vol. 10, pp. 188-89. The Commission did not approve DEC's request as filed, but in its Order dated August 5, 2011 (2011 Order), the Commission ruled that the nuclear project development costs incurred on or after January 1, 2011, would be subject to a not-to-exceed cap of the North Carolina allocable portion of $120 million and that its approval granted was limited to those nuclear project development costs that must be incurred to maintain the status quo with respect to the Lee Nuclear Project, including DEC's application for a combined operating license (COL) at the Nuclear Regulatory Commission (NRC). Tr. Vol. 10, pp. 190-91. As in the 2008 Order, the Commission allowed DEC to continue provisionally accruing AFUDC, stated that the Company would need to request regulatory asset treatment for any abandoned project development, and required DEC to continue filing semi-annual reports detailing activities and expenditures. Tr. Vol. 10 p. 191. The Commission did not retroactively approve the decision to incur project development costs during 2010. DEC did not seek further project development cost approval orders after the 2011 Order.

DEC witness Fallon testified that the Company incurred costs for the development of the Lee Nuclear Project of approximately $542 million through June 30, 2017. The costs are composed of the following categories: Combined Operating License Application (COLA) Preparation, NRC Review and Hearing Fees, Pre-Construction and Site Preparation, Land and Right of Way Purchases, Supply Chain, Construction Planning and Engineering, Operational Planning, Post COL, and AFUDC ($232 million of the $542 million), as reported in DEC's semi-annual reports to the Commission. Tr. Vol. 10, p. 178; Tr. Vol. 11 p. 19. He stated that in order to "maintain the status quo", DEC exceeded the cap set in the 2011 Order in 2013. Tr. Vol. 10, p. 192. Specifically, witness Fallon indicated that DEC began limiting its activities to only those activities and costs necessary to preserve the option of bringing the plant online around the 2021 target date, did not order equipment, and wound down non-essential site specific work and construction planning

[1] The return at issue here is the return associated with the unamortized balance of a plant that has been abandoned, the costs of which, if not deferred for potential rate recovery through amortization, would otherwise be written off as of the date of abandonment as a loss on the income statement. It is not the return normally accrued on a plant's cost balance during construction, the allowance for funds used during construction (AFUDC), which is included in the definition of "project development costs" set forth in N.C. Gen. Stat. § 62-110.7(a).

activities. Tr. Vol. 10, p. 208. He noted that the Company continued to substantially complete the design of the commercial buildings so that they could be completed in time to meet the 2021 date identified in the IRP. Id. According to witness Fallon, the Company completed its contractual commitments in areas no longer necessary to maintain the status quo and narrowed the scope of work to reduce costs. Further, he indicated that the Company wound down contracts so to preserve the work to be efficiently resumed at a later date. Id.

Witness Fallon also noted that the Company submitted a COLA with the NRC for two Westinghouse AP1000 Pressurized Water Reactors on December 13, 2007. Tr. Vol. 10 p. 180. He noted that a number of factors, many outside the control of DEC, led to a longer licensing period than originally anticipated. Tr. Vol. 10, p. 192. Witness Fallon stated that on December 19, 2016, the NRC issued a COL for the Lee Nuclear Plant allowing DEC to construct the units and to operate them for 40 years. Id. The licenses are renewable for an initial 20-year period and possibly a second 20-year period. Tr. Vol. 10, p. 181. Witness Fallon stated that under the terms of the COL, DEC is not compelled to build and operate the nuclear plant. Id.

Witness Fallon noted that the IRPs between 2006 and 2016 identified Lee Nuclear as a cost effective option to meet the need for base load, but the date of the earliest need for each unit moved to 2026 and 2028 in the 2016 IRP. Tr. Vol. 10, p. 185. He pointed out that through the 2016 IRP, Lee Nuclear Project continued to be least-cost carbon free generation option for customers. Tr. Vol. 10, p. 193. In addition, witness Fallon noted that having the COL for the Lee Nuclear Project would reduce the lead time required to license new nuclear plant at the site. Id. Witness Fallon also indicated that in DEC's latest IRP, the first Lee Nuclear unit would be needed no earlier than 2031, and then only in a carbon-constrained scenario with the assumption of no existing nuclear relicensing. Tr. Vol. 24, pp. 61-62.

In regard to the request to cancel the Lee Nuclear Project, witness Fallon said that since issuance of the COL, the risks and uncertainties in regard to beginning construction have become so great that cancellation was in the best interest of customers. Tr. Vol. 10, p. 195. He noted that in early 2017, Westinghouse announced its plans to exit the nuclear plant construction business, and then, on March 29, 2017, announced its bankruptcy. Tr. Vol. 10, p. 196. Additionally, the first two plants being constructed with AP1000 reactors, in South Carolina (V.C. Summer Project) and Georgia (Vogtle Project), have cost billions of dollars more than originally estimated and have faced significant delays. Id. Witness Fallon stated that the Westinghouse bankruptcy and the decision to stop construction at the V.C. Summer Project led to great uncertainty about the cost, schedule, and execution of construction for future nuclear projects, directly impacting the Lee Nuclear Project. Tr. Vol. 10, p. 198. Therefore, due to these uncertainties and risks, as well as projected low natural gas prices and uncertainty about carbon emission costs, witness Fallon testified that the Company thought that it is not in customers' best interest to construct and operate Lee Nuclear before the end of the next decade. Id. As a result, the Company requests to cancel the project, but maintain the COL. Tr. Vol. 10, pp. 198-99. Witness Fallon indicated that there would be post-COL costs of approximately $700,000 per year so the Company could make annual filings with the NRC and maintain the property. Tr. Vol. 11, p. 72.

DEC witness Diaz testified that in his experience as an NRC Commissioner, including serving as Chairman, he was thoroughly familiar with the AP1000 design and with the NRC licensing process. Tr. Vol. 10, p. 221. In reviewing DEC's decision to pursue the preparation of a COLA in 2005 and submit it to the NRC on December 13, 2007, witness Diaz stated DEC had chosen the optimal path to pursue licensing by using the NRC's new nuclear reactor licensing protocol pursuant to 10 C.F.R. Part 52 Rule (Part 52) (Tr. Vol. 10, p. 223), but that significant time was necessary due to Part 52 being untested. Tr. Vol. 10, p. 233. He noted that when DEC submitted its COLA, the NRC schedule provided for a 42-month period between submission of the application and receipt of the COL, though there was an expectation of a longer period due to the number of applications. Id.

Witness Diaz explained that the process to license the Lee Nuclear Project was delayed for a number of reasons outside of DEC's control, including delays related to the NRC's review of the Yucca Mountain licensing application (Tr. Vol. 10, pp. 235-36), the Waste Confidence Rule (Tr. Vol. 10, pp. 236-37), the Fukushima Dai-ichi accident (Tr. Vol. 10, pp. 238-39.), and the new Seismic Source Characterization. Tr. Vol. 10, p. 240. Additionally, delays occurred as DEC updated its COLA from Rev 16 to Rev 19 of the AP1000 (Tr. Vol. 10, pp. 241-42), changed the location of the reactor based on it improving reactor building stability and being more economical to construct (Tr. Vol. 10, pp. 242-43), added a make-up pond for cooling water due to the limited water in the main cooling source (Tr. Vol. 10, pp. 243-44), and amended the COLA to revise the cooling tower design. Tr. Vol. 10, p. 244. Witness Diaz testified that he believed that DEC acted prudently in making each of these changes and thus the resulting delays were reasonable. Tr. Vol. 10, pp. 241-44. He also noted difficulties associated with using Part 52 licensing that slowed the process, including requests for additional information (RAIs) and generic design issues, as well as design errors in Rev 19, all of which witness Diaz concluded DEC had managed in a reasonable and prudent manner. Tr. Vol. 10, pp. 245-48.

Witness Diaz also reviewed the cost breakdown for the COL and project-related costs for the Lee Nuclear Project and found that they compared favorably to the costs incurred by Florida Power & Light (FP&L) for its Turkey Point Units 6 and 7 COL. Tr. Vol. 10, p. 249. He discussed the disadvantages that would have resulted if DEC had suspended its efforts to license Lee Nuclear, the value of the Lee Nuclear COL, the advantages of DEC's licensing-first approach, and the reasonableness of the selection of the AP1000 design. Tr. Vol. 10, pp. 250-51. Witness Diaz concluded that based on his experience, DEC's approach to licensing and managing the Lee Nuclear Project, and its decision to extend the targeted operation dates, were reasonable and consistent with best practices. Tr. Vol. 10, p. 253. He further determined that the project costs incurred were reasonable and prudent. Tr. Vol. 10, p. 234.

DEC witness McManeus testified that the Company proposed amortizing the accumulated construction work in progress (CWIP) balance related to the Lee Nuclear Project. Tr. Vol. 6, p. 257. In her direct testimony, witness McManeus stated that the adjusted CWIP balance reflecting the actual costs incurred through June 30, 2017 and incorporating estimated additional expenditures through March 31, 2018, was \$353.2 million and \$527.1 million on a North Carolina and system basis, respectively. Id. She noted that non-depreciable land and its associated AFUDC had been removed from the balance. Id. This results in an annual revenue requirement of \$52.6 million, consisting of an annual amortization expense over 12 years of \$29.5 million, and a net of tax return on the unamortized balance of \$23.1 million. Id.

CUCA witness O'Donnell testified that DEC's exceedance of the cap set in the 2011 Order without coming to the Commission for approval of its decision to incur further project development costs was an example of DEC's tendency to "beg forgiveness than to ask permission." Tr. Vol. 18, p. 51.

Tech Customers witness Kee testified regarding the Lee Nuclear Project. Tr. Vol. 18, pp. 164-65. Witness Kee addressed various issues surrounding whether DEC should recover costs incurred to develop the Lee Nuclear Project. Id. at 165-66. Witness Kee recommended that (1) DEC should only recover those costs incurred up to December 31, 2009, if those costs were within the amounts preauthorized by the Commission; (2) DEC should not recover any costs incurred during 2010; and (3) the Commission should completely disallow or significantly limit any recovery of costs incurred between January 1, 2011 and June 2017. Id. at 204-05.

As an alternative to completely disallowing cost after January 1, 2011, witness Kee divided the Lee Nuclear Project costs into two categories: Type 1 and Type 2. Id. at 181. Type 1 costs are "related to the NRC review of the Lee COL application." Id. Type 2 activities are "at most, indirectly related to the NRC COL review process, but were undertaken in preparation for the eventual construction and operation of the Lee nuclear project." Id. at 182. Witness Kee posited that Type 1 activities fall within the meaning of "maintain the status quo" under the 2011 PDO, and Type 2 activities represent expenditures beyond the status quo. Id. at 181. His alternative recommendation was to allow only those costs after January 1, 2011 that relate to Type 1 activities and are less than the amount approved in the 2011 PDO. Id. at 205.

Public Staff witness Metz testified regarding the Company's request for cancellation of the Lee Nuclear project and recovery of the project development costs. He noted that the Public Staff hired as a consultant, Global Energy & Water Consulting, LLC, a firm with extensive experience with nuclear construction activities and NRC application processes, to (1) review the details of all costs charged to all the capital accounts assigned to engineering, licensing, and regulatory compliance for the Lee Nuclear Project; (2) review the decisions to begin, continue, and cancel the project, as well as issues with the AP1000 design, Westinghouse, and Westinghouse's owner, the Toshiba Corporation; (3) review DEC's project planning decisions; (4) compare the costs incurred to those of other utilities; and (5) identify any costs that were not reasonably or prudently incurred. Tr. Vol. 23, pp. 31-32. The Public Staff also reviewed the activities and costs internally. Tr. Vol. 23, p. 32. Based on the Public Staff's review as assisted by the consultants, the Public Staff found that with one exception involving design costs for a visitors' center, the costs incurred (not including AFUDC, which was reviewed by Public Staff witness Maness) were reasonably and prudently incurred based on information known at the time. Tr. Vol. 23, pp. 32-33. Witness Metz recommended that costs incurred for the architectural and engineering design of a visitors' center be disallowed on the basis that under the dictates of the 2011 Order, the costs did not directly support the COLA process at the NRC and were not necessary to maintain the status quo at that time. Tr. Vol. 23, pp. 33-34. This recommendation results in a disallowance of $507,009 on a system basis, exclusive of AFUDC. Tr. Vol. 23, p. 36.

Public Staff witness Maness testified that on behalf of the Public Staff, he investigated the reasonableness of the accrual of the AFUDC costs included in DEC's project development costs, and particularly DEC's dates for beginning and ending the accrual of AFUDC. Tr. Vol. 22, p. 100. Based on his review, witness Maness found the date on which DEC began accruing AFUDC to be reasonable, but recommended that AFUDC accrual end as of December 31, 2017, instead of the May 1, 2018, date estimated by DEC. Id. He testified that under FERC Accounting Release No. 5, AFUDC accruals must cease if construction is suspended or interrupted. Tr. Vol. 22, p. 101. Based on discussions between DEC and the Public Staff, witness Maness stated that the Company had confirmed that work on the Lee Nuclear Project had ended as of December 31, 2017, and that the Company had ceased accruing AFUDC at that time. Tr. Vol. 22, p. 102. He noted that removal of the estimated 2018 AFUDC from the costs proposed for Lee Nuclear recovery resulted in a $9 million adjustment. Id.

Public Staff witness Boswell contended that the Commission should adhere to its longstanding position that no adjustment should be allowed which would effectively enable the Company to earn a return on the unamortized balance of the construction costs of a nuclear plant that had been abandoned. Tr. Vol. 26, p. 140. She argued that the Commission has found in past cases that this treatment fairly allocated the loss between the utility and customers, and that customers should not bear all the risk of the cancelled plant. Id.

In his rebuttal testimony, witness Diaz disagreed with witness Kee's stratification of costs into two categories on the basis that both types of costs were necessary for the Company to adhere to the 2011 Order and to have the Lee Nuclear option available to meet the dates for need projected in DEC's IRPs. Tr. Vol. 26 p. 181. He noted that DEC could not have obtained the COL without exceeding the limits in the 2011 Order. Tr. Vol. 26, p. 182. Witness Diaz further testified about the value of the COL obtained by DEC. Tr. Vol. 26, pp. 186-88.

In rebuttal, Company witness Fallon testified that the Company did not oppose the recommendation of witness Maness to end the accrual of AFUDC for Lee Nuclear at December 31, 2017. Tr. Vol. 24, pp. 32, 33. In regard to witness Metz's proposed disallowance for the costs associated with the architectural and engineering of a visitors' center, witness Fallon explained the reasons why DEC sought to construct a visitors' center as one of the buildings with early design work, but conceded that witness Metz's conclusion to recommend a disallowance for these costs was reasonable. Tr. Vol. 24, p. 34.

Witness Fallon opposed the recommendation of Public Staff witness Boswell that DEC should not receive a return on the unamortized balance of the Lee Nuclear costs and associated accumulated deferred income taxes (ADIT). He noted that while witness Boswell referred to the costs of Lee Nuclear as having been prudently incurred, the financing costs of the unamortized balance were also prudently incurred costs. Tr. Vol. 24, pp. 34-35. Witness Fallon pointed out that N.C. Gen. Stat. § 62-110.7 does not prohibit DEC from receiving a return on the unamortized balance of prudently incurred costs. Tr. Vol. 24, p. 36. He argued that witness Boswell had not considered the specific facts of this case in making her recommendation of no return, including the fact that the Company had obtained a COL, the highly dynamic energy future, the advantages of maintaining fuel diversity, and the uncertainty of nuclear relicensing. Tr. Vol. 24, pp. 37-39. Witness Fallon also detailed the steps the Company took to mitigate the risks of the project. Tr. Vol. 24, p. 39.

In regard to the testimony of Tech Customers witness Kee, witness Fallon disagrees with the contention that all nuclear development costs must be approved or authorized in advance under

N.C. Gen. Stat. § 62-110.7 to be recoverable. Tr. Vol. 24, p. 40. Witness Fallon noted that while the project development orders (PDOs) issued in Sub 819 have specific authorizations, they do not foreclose the possibility that DEC may recover costs outside of the strictures of those Orders. Tr. Vol. 24, p. 41. He also stated that utilities are permitted, but not required, to seek approval of the decision to incur project development costs under N.C. Gen. Stat. § 62-110.7, and that the Commission did not approve DEC's request for approval to incur Lee Nuclear costs in 2010, but it made no finding as to their recoverability. Id. Witness Fallon testified that DEC had exceeded the spending cap set in the 2011 Order. However, he testified that DEC interpreted the 2011 Order as requiring the Company to limit its spending to amounts necessary to preserve the option of building Lee Nuclear so that it would be available to meet the target dates of need set out in DEC's IRPs, including maintaining an active COLA at the NRC. Tr. Vol. 24, p. 44. In order to maintain this active COLA status, witness Fallon explained that DEC had to continue its permitting, pre-construction, engineering, design, construction planning, and operational planning activities to maintain the status quo. Tr. Vol. 24, p. 45. Further, witness Fallon testified that it was necessary for DEC to continue its efforts in many areas to avoid signaling to the NRC that DEC was not actively pursuing the Lee COL, which could have resulted in termination of the review process by the NRC prior to the issuance of the COL. Id.

On cross-examination, witness Fallon identified Tech Customers Fallon Rebuttal Exhibit 1 as an internal presentation made in February 2012 to the Company CEO's staff by himself and the nuclear development staff regarding the future of the Lee Nuclear Project. Tr. Vol. 24, p. 54. The exhibit showed the projected dollars spent that exceeded the limits of PDOs issued by the NCUC and the South Carolina Public Service Commission. Tr. Vol. 24, p. 56. The presentation indicated that filing for a subsequent PDO would put the NCUC in a "difficult position" as James E. Rogers, the CEO during the 2011 proceeding had testified that DEC would not proceed with Lee Nuclear unless the North Carolina General Assembly had enacted legislation allowing DEC to receive CWIP costs through a specified cost recovery process.[1] Tr. Vol. 24, p. 57. The presentation also noted the negative impact on the Lee Nuclear business case of projected low natural gas prices. Id. The presentation also pointed out the negative effect on the Lee Nuclear project that would result from a rejection of a further request for approval to incur nuclear development costs. Tr. Vol. 24, p. 58. Based on these factors, Nuclear Development recommended in 2012 that the Company not seek an additional PDO. Id. The Company also had another internal meeting in early 2013 where it again decided against pursuing a further PDO for similar reasons, as well as delays occurring with the NRC process. Tr. Vol. 24, pp. 62-64. Following the merger of Duke Energy Corporation and Progress Energy, Inc., a third senior management meeting was held in November 2013 to consider whether to pursue a PDO. Tr. Vol. 24, pp. 65-66.

Witness Fallon agreed that one of the purposes of N.C. Gen. Stat. § 62-110.7 is to help alleviate some portion of the risk that certain costs incurred for nuclear project development activities may be found to be imprudent. Tr. Vol. 24, p. 71. Witness Fallon stated that he was the Company witness supporting DEP's request in its recent rate case to recover COLA costs of approximately $45.3 million for its cancelled Harris Nuclear project. Tr. Vol. 24, p. 74. In that case, DEP did not seek a return on the unamortized balance of the costs for the COLA for the

[1] This testimony by Mr. Rogers was one of the factors cited by the Commission in its decision to issue only a limited approval of DEC's decision to incur project development costs in the 2011 Order.

cancelled Harris Nuclear project. Tr. Vol. 24, p. 75. However, witness Fallon argued that the Harris Nuclear and Lee Nuclear projects are different because DEC had sought approval for the Lee Nuclear Project under N.C. Gen. Stat. § 62-110.7, the Lee Nuclear project had progressed beyond the development stage to receipt of a COL, and that the investor risk differed due to the amount of spending and the scope of activities. Tr. Vol. 24, pp. 75-77. Finally, witness Fallon acknowledged that while having the COL means that DEC may use its option to build the Lee Nuclear plant when the time is right, the time may never be right. Tr. Vol. 24, p. 82.

In her rebuttal testimony, Company witness McManeus noted that the Company did not oppose the recommendations of Public Staff witness Metz to remove certain costs associated with the design of a visitors' center from the Lee Nuclear costs or Public Staff witness Maness to remove AFUDC for the months after December 2017. Tr. Vol. 26, p. 310. She testified that the Company did oppose the adjustment recommended by Public Staff witness Boswell to remove the unamortized balance of deferred project development costs and the associated ADIT from rate base, thereby preventing the Company from earning a return on the unamortized balance. Id. Witness McManeus argued that the Commission should consider that the Lee Nuclear project costs were financed by investors and should appropriately be in rate base. Tr. Vol. 6, p. 311. According to witness McManeus, if the Commission determines that the Lee Nuclear costs were incurred prudently, it should include those costs in rate base, thereby allowing the Company to earn a return on the unamortized balance. Id. On cross-examination, witness McManeus agreed that the decision to allow the Company to earn a return on cancelled plant was within the Commission's discretion. Tr. Vol. 8, p. 232. She further agreed that once the amortization of Lee Nuclear was completed, it would be inappropriate for the Company to re-establish the asset and thus recover it from the customers again. Tr. Vol. 26, p. 110. She indicated that if recovery of Lee Nuclear costs were allowed, DEC would have a regulatory asset that would be amortized over the period allowed, and then in DEC's next rate case, the balance of the regulatory asset would be addressed. Id.

Discussion and Conclusions on Lee Nuclear

A. Recovery of Costs

In regard to specific items of cost, the Commission agrees with Public Staff witness Metz that costs incurred for the architectural and engineering design of a visitors' center did not directly support the COLA process at the NRC and were not necessary to maintain the status quo at that time as directed by the 2011 Order. As such, these costs should be disallowed. The Commission also agrees with Public Staff witness Maness that accrual of AFUDC on the project should have stopped after all substantive work on the project had come to an end by December 31, 2017. As noted above, DEC did not contest either of these two proposed adjustments.

As noted above, Tech Customers witness Kee recommended disallowance of the costs incurred in 2010 and the costs in excess of the limit set in the 2011 Order. In its proposed order, Tech Customers supports this position. NC WARN supports the recommendations of witness Kee in its brief. In its proposed order, the AGO argues that given the evidence challenging the reasonableness and prudence of DEC's expenditures on and after January 1, 2011, and DEC's failure to provide details sufficient to identify what it would have cost to maintain the status quo, the costs incurred on or after January 1, 2011 for new development activities should be disallowed.

The Commission finds that witness Kee's recommendation appears to be based on a misinterpretation of N.C. Gen. Stat. § 62-110.7. First, N.C. Gen. Stat. § 62-110.7(b) includes the word "may" indicating that it is at the utility's discretion whether it will seek to incur approval of its decision to incur nuclear project development costs under the statute. Costs for which preapproval is not sought, such as those in 2010, are still appropriately considered in a general rate case proceeding under N.C. Gen. Stat. § 62-133, including the prudence of the decision to incur the costs. Similarly, the costs that were incurred outside the cap set in the 2011 Order are appropriately considered in this proceeding. N.C. Gen. Stat. § 62-110.7 provides a utility approval only of its decision to incur nuclear development costs under the circumstances at the time of the decision. No particular costs are approved or found to be reasonable, and circumstances can change after issuance of the approval making it no longer reasonable to incur costs. As discussed by DEC witness Fallon, DEP elected to pursue development of its Harris Nuclear project without obtaining approval under N.C. Gen. Stat. § 62-110.7 and the Commission approved recovery of the costs of the COLA in DEP's recent rate case without regard to whether DEP had received approval under N.C. Gen. Stat. § 62-110.7. The Commission further disagrees with witness Kee that what he categorizes as Type 2 costs should be disallowed because they were not necessary to maintain the status quo. The Commission finds that, except as discussed above in regard to the visitors' center and AFUDC, the costs were reasonably and prudently incurred to maintain the status quo and ensure that Lee Nuclear would be an option for the dates of projected need in DEC's IRPs.

B. Cancellation of the Lee Nuclear Project

The Company has stated that it seeks Commission approval to cancel the Lee Nuclear Project. The Commission agrees with DEC witness Fallon that the risks and uncertainties in regard to beginning construction of the Lee Nuclear Project, including the Westinghouse bankruptcy, issues with Toshiba, the cancellation of the Summer project, overruns and delays at the Vogtle project, as well as natural gas prices and potential carbon emissions regulation, have become so great that cancellation is in the best interest of customers. Further, DEC's 2017 IRP does not show a need for the first unit until 2031, and then only under a number of assumptions.

While no party expressed opposition to DEC's decision to cancel the Lee Nuclear Project, in their proposed orders, the Tech Customers and the Public Staff question the authority of the Commission to cancel the project noting that the Commission had never granted the project a CPCN under N.C. Gen. Stat. § 62-110.1, nor had any other state approved the project. While there may be merit to such observations, suffice it to say, the Commission finds and concludes that adequate justification exists to support cancellation of the Lee Nuclear Project and that DEC's decision to cancel the project is reasonable and prudent and in the public interest.

C. Return on Unamortized Balance

The Commission is also in agreement with Public Staff witness Boswell's position concerning the Company's request to earn a return on the unamortized balance of the costs. Company witness McManeus acknowledged on cross-examination that in the cases of Duke Power Co., Docket No. E-7, Sub 338, 72 N.C.U.C. 173 (Nov. 1, 1982); Carolina Power & Light Co., Docket No. E-2, Sub 461, 73 N.C.U.C. 114 (Sept. 19, 1983); and Carolina Power & Light Co., Docket No. E-2, Sub 481, 74 N.C.U.C. 126 (Sept. 21, 1984), all involving abandoned nuclear plants, the Commission had refused to allow a return on the unamortized balance. She further stated that she knew of no other case decided since 1982 approving a return on the unamortized balance; and neither the Public Staff nor the Commission has been able to identify any such case. The Commission's 1982-84 decisions denying a return on the unamortized balance of nuclear plant costs have been reaffirmed in cases such as Carolina Power & Light Co., Docket No. E-2, Sub 537, 78 N.C.U.C. 238 (Aug. 5, 1988), aff'd in part, rev'd in part on other grounds, and remanded sub nom. State ex rel. Utils. Comm'n v. Thornburg, 325 N.C. 484, 385 S.E.2d 463 (1989). See also, State ex. rel. Utils. Comm'n v. Thornburg, 325 N.C. 463, 480-81, 385 S.E.2d 460-61 (1989), which held that the Commission had the legal authority to deny a return on the unamortized balance of nuclear cancellation costs.

In the Commission's judgment, the decisions it has reached on this issue since 1982 are correct and should be followed in this case. The Commission has repeatedly decided that the loss experienced upon the cancellation of a nuclear plant should be shared between the shareholders and the ratepayers. As the Commission stated in its Order in Duke Power Co., Docket No. E-7, Sub 358, 73 N.C.U.C. 255, 266 (Sept. 30, 1983), when addressing the loss associated with the Cherokee Nuclear Plant (Lee's precursor abandoned nuclear project at the same site):

> It would be inequitable to place the entire loss of expenditures that were prudent when made on the utility. Thus, amortization should be allowed. However, on the other hand, the ratepayer must not bear the entire risk of the Company's investment. A middle ground must be found on which the Company bears some of the risk of abandonment and the ratepayer is protected from unreasonably high rates.

See also, In re Carolina Power & Light Co., Docket No. E-2, Sub 461, 55 P.U.R. 4th 582, 601 (1983).

Accordingly, regulatory commissions in North Carolina and many other states have allowed the utility to recover the costs of an abandoned plant through amortization, while excluding the unamortized balance from rate base. In this way, a fair allocation of the losses is accomplished: the ratepayers are required to bear the losses resulting directly from the cancellation, while the shareholders must absorb the loss associated with the delay in receiving their compensation. This is the policy that the Commission adopted in Duke Power Company's case in November 1982; we have consistently adhered to it in the years since, and we see no valid reason to depart from it now.

The Commission does not agree with witness Fallon that the Company's receipt of three PDOs should factor into whether it should receive a return. The Commission notes that the Company chose to act without a PDO in 2010 and after the second quarter of 2013, over one third of the period of the project, thereby acting outside of the requirements of and protections offered by N.C. Gen. Stat. § 62-110.7. While N.C. Gen. Stat. § 62-110.7 is permissive and the Commission has found that the Company's Lee Nuclear incurred costs and activities were reasonable and prudent (except as discussed above in regard to the visitors' center and AFUDC) regardless of whether it received PDOs for the entire period, DEC's receiving Commission approval of some of its decisions to incur nuclear project development costs does not factor into the Commission's exercise of its discretion under N.C. Gen. Stat. § 62-110.7(d) as to whether the Company should get a return on the unamortized balance of the Lee Nuclear costs.

Additionally, the Commission rejects the contention by witness Fallon that having obtained a COL should merit shifting the entire burden of cost and risk to ratepayers. While the Commission agrees that the COL has value, that value will only be realized if the plant is built. Pursuant to the 2017 IRP, that possibility would occur only under very limited circumstances. Moreover, there is a cost to maintaining this option that DEC will likely be requesting ratepayers to bear in future rate cases.

Further, in Docket No. E-2, Sub 1035, DEP sought a deferral on its Harris COLA costs, but requested no return on the unamortized balance, citing State ex rel. Utils. Comm'n v. Thornburg, 325 N.C. 463, 385 S.E.2d 451 (1989) (holding that NCUC had authority to allow CP&L to recover capital investment in cancelled plants through 10-year amortization, with no return on the unamortized balance); Order Approving Stipulation and Deciding Non-Settled Issues, Docket No. E-7, Sub 828 (December 20, 2007) (treating GridSouth costs as an abandonment loss and allowing recovery of prudently-incurred costs over a 10-year amortization period, with no return on the unamortized balance); and Order Approving Partial Rate Increase, Docket No. E-7, Sub 358 (September 30, 1983) (allowing Duke Power to recover abandonment loss due to Cherokee Nuclear Units 1-3 cancellation over a 10-year amortization period, with no return on the unamortized balance). The Commission sees no reason to treat the Lee Nuclear Project differently, regardless of the difference in costs or achievement of a COL.

The Commission also notes that in its proposed order, for the first time in this proceeding, DEC argues that the Commission specifically made a distinction that it would treat the Lee Nuclear project development costs differently for purposes of ratemaking in its 2007 Order and that the General Assembly codified that distinction when it did not prohibit a return on the unamortized balance of prudently incurred costs during the amortization of a cancelled plant in N.C. Gen. Stat. § 62-110.7(d). In fact, DEC now argues that the principles of statutory construction that it weaves between N.C. Gen. Stat. § 62-110.7(c) and 110.7(d) support the Company's position that it should earn a return on the costs invested to develop the Lee Nuclear Project, even though it is cancelled. With respect to DEC's argument in these regards, the Commission simply disagrees. First, the Commission can unequivocally state that nothing in its 2007 Order spoke directly to or implied support for the Company to be able to earn a return on the unamortized balance. The Commission also notes that DEC's own witnesses testified that it was within the Commission's discretion whether or not to allow a return on the unamortized balance. Further, since the Lee Nuclear Plant is now cancelled, the term "...the potential nuclear plant..." that appears in N.C. Gen. Stat. § 62-110.7(c) is no longer applicable to the issue at hand, and N.C. Gen. Stat. § 62-110.7(d) is now controlling and there is no mention in N.C. Gen. Stat. § 62-110.7(d) regarding a return on the unamortized balance. In addition, although not applicable here, N.C. Gen. Stat. § 62-110.6(e), regarding rate recovery for construction costs of out-of-state electric generating facilities that are cancelled, directs the Commission to provide cost recovery as provided in N.C. Gen. Stat. § 62-110.1(f2) and (f3). N.C. Gen. Stat. § 62-110.1(f2) and (f3) include the provision that "...the Commission shall make any adjustment that may be required because costs of construction previously added to the utility's rate base pursuant to subsection (f1) of this section are removed from rate base and recovered in accordance with this subsection." (emphasis added) This analogous portion of the statute makes clear that costs associated with canceled plant are not part of rate base and the Commission determines to interpret N.C. Gen. Stat. § 62-100.7 which is silent as to the issue similarly. In summary, the Commission has carefully reviewed DEC's contentions that any prior Commission order or the ratemaking treatment prescribed in N.C. Gen. Stat. § 62-110.7(c) is supportive, applicable, or controlling with respect to allowing a return on the unamortized balance and disagrees.

Finally, although not discussed in the record, the Commission notes that during the entire 12-year period in which DEC incurred and funded the project development costs, it was allowed to accrue an AFUDC return. In fact, AFUDC comprises over forty percent of the total Lee Nuclear project development cost. The accrual of the AFUDC has already provided DEC, or its investors, a return on all non-AFUDC costs incurred during the past 12 years and that return will be recovered in cash from ratepayers over the next 12 years as the total allowed cost is amortized. The Commission concludes this consideration is supportive of its decision to require a fair allocation of costs for the cancelled plant between the Company and its ratepayers by denying a return on the unamortized balance during the 12-year amortization period.

D. Summary of Conclusions on Lee Nuclear

In summary, the Commission concludes in regard to the Lee Nuclear Project that the costs were reasonably and prudently incurred except the costs of the architectural and engineering design of a visitors' center and AFUDC after December 31, 2017. The Commission finds that it is reasonable and prudent for the Company to cancel the Lee Nuclear Project at this time. Finally, the Commission holds that the costs of the Lee Nuclear Project should be recovered through amortization over a period of 12 years, with no return on the unamortized balance.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 50-51

The evidence supporting these findings and conclusions is contained in the Company's verified Application and Form E-1, the direct testimony of Public Staff witnesses Robert Hinton and Michael Maness, the rebuttal testimony of Company witnesses Stephen De May and David Doss, and the entire record in this proceeding.

Background of the Nuclear Decommissioning Trust Fund

Every nuclear power plant owner in the United States is required under rules promulgated by the NRC to ensure that the nuclear plants it owns and operates are properly decommissioned when they reach the end of their useful lives. Monies to pay for decommissioning activities are collected from customers in rates and deposited in trust funds, where they are invested and earn returns.

DEC operates seven nuclear-powered units at three different power plants. Funds the Company has collected in rates from customers over the years, pursuant to specific authorizations contained in rate orders issued by this Commission, have been deposited in nuclear decommissioning trust funds (while each nuclear unit has its own decommissioning funds held in trust, for ease of reference, they are herein referred to collectively as the (NDTF)) pursuant to the NRC rules. Under those rules, as well as rules promulgated by the IRS, NDTF funds are to be used exclusively for nuclear decommissioning activities, which include license termination, dealing with spent fuel, and site restoration.

Through procedures described in greater detail below, every five years the Company engages a third-party consultant to perform a site-specific study and prepare a site-specific estimate of the decommissioning costs which will be necessary to decommission the units DEC owns and operates. Based upon that study, the Company files a report setting out those estimates (the Decommissioning Cost Study Report, or Cost Report). Every five years, based upon financial assumptions provided by additional third-party consultants, the Company models NDTF balances at the time of decommissioning and files a report in a prescribed format (the Decommissioning Cost and Funding Report, or Funding Report) detailing the total revenue requirement/decommissioning expense needed to fund its decommissioning obligations.

The Company last filed a Cost Report and Funding Report in 2014. Those Reports indicated that based upon projected decommissioning costs and projected NDTF balances (both projected decades into the future, inasmuch as decommissioning will not take place until decades into the future), the NDTF was adequately funded. Tr. Vol. 12, p. 48. Accordingly, the Company concluded that, at least as of that time, the Company need not collect in rates any cost with respect to nuclear decommissioning, and that additional contributions to the NDTF need not be collected from customers. The Company has not collected any NDTF contributions from customers since January 1, 2015.

Thereafter, with the joint support of the Company and the Public Staff, the Commission implemented a decrement rider as of July 1, 2015, reducing the Company's revenue requirements in order to reflect nuclear decommissioning costs at $0. In this rate case, based upon standard escalations of the 2014 Cost Report and 2014 Funding Report, the Company again concluded that the NDTF was adequately funded and determined that it need not collect any nuclear decommissioning expense as part of its cost of service.

In this docket, the Public Staff has taken the position that the NDTF is overfunded by $2.35 billion. The Public Staff asserts that in order to redress this supposed overfunding, the Company should be required to refund the excess by assigning to nuclear decommissioning "expense" a value of ($29 million) – that is, negative $29 million – per year. Acknowledging that the funds in the NDTF are untouchable for this purpose, in that they are to be used solely for decommissioning, the Public Staff developed a proposal by which the funds would be refunded to customers through the mechanism of a "loan" to be "repaid" after decommissioning is complete.

DEC contends the NDTF is not "overfunded." Further, as discussed below, under generally accepted accounting principles (GAAP), the Company believes it would have to write off the proposed "loan" inasmuch as it would not have a probable and acceptable path to repayment. DEC also argues that the approach recommended by the Public Staff is retroactive in nature, thus violating the prohibition against retroactive ratemaking in North Carolina. Finally, DEC submits prior orders of this Commission including prior agreements between the Public Staff and the Company appropriately provide for addressing surplus decommissioning funds – if any – at the conclusion of decommissioning.

Summary of Evidence Relating to NDTF

On July 25, 1988, the Commission opened Docket No. E-100, Sub 56 (Sub 56 Docket) to consider issues relating to decommissioning cost and funding for nuclear power plants owned and operated by the public utilities under its jurisdiction, namely Carolina Power & Light Company (now DEP), Duke Power Company (now DEC), and North Carolina Power (now Dominion North Carolina Power).[1]

On November 3, 1998, the Commission issued an Order in the Sub 56 Docket (Order Approving Guidelines (DEC – Maness Cross-Examination Ex. 1, Tab 1)), in which it adopted guidelines for the determination and reporting of nuclear decommissioning costs (the Guidelines). The Guidelines establish the five-year cycle of report filing described above, with respect to both the Cost Report, where the Company estimates decommissioning costs, and the Funding Report, detailing the total revenue requirement/decommissioning expense needed to fund the Company's decommissioning obligations. Further, as Public Staff witness Maness confirmed, the Public Staff is provided a 90-day period to issue discovery and investigate the cost and funding analysis the Company sets out in its Reports. Tr. Vol. 22, pp. 185-86. The Public Staff then has 90 days to prepare and file its own report. Id. In accordance with the Guidelines, the Public Staff has routinely reviewed the Company's decommissioning Cost Reports and decommissioning Funding Reports.

In the Company's last rate case, it proposed that nuclear decommissioning expense be $35 million. See 2013 DEC Rate Order, p. 110; DEC – Maness Cross Examination Ex. 1, Tab 3. The Public Staff, through witness Hinton, proposed an adjustment to reduce that expense to $14.6 million, which the Company accepted and the Commission ordered. Id. at 111. In the following year, the Company's five-year Cost Report/Funding Report cycle required it to file those Reports. As noted above, the Company concluded in connection with those filings that the NDTF was adequately funded and that a decrement rider to reduce nuclear decommissioning expense to $0 as of January 1, 2015 was warranted, which the Commission ultimately ordered. DEC – Maness Cross Examination Ex. 1, Tabs 2 and 4; Tr. Vol. 22, pp. 189-92.

As required by the Guidelines, the Public Staff investigated the 2014 Cost Report and the 2014 Funding Report, as well as the Company's suggestion that nuclear decommissioning expense be reduced to $0 through a decrement rider. Tr. Vol. 22, p. 193. Its investigation was thorough, and the report that it prepared pursuant to the Guidelines was likewise thorough and well thought-out. Id. at 194. In that report (Public Staff Report; DEC – Maness Cross-Examination Ex. 2), the Public Staff noted that the NDTF fund balance would exceed estimated decommissioning costs at license termination[2] on a North Carolina retail jurisdictional basis by $2.5 billion. Id. at 11-12. The Report further indicated in its "Conclusions and Recommendations" section that the Public Staff had completed its investigation of the Cost Report and the Funding Report, had reviewed the Company's responses to data requests, and had no disagreement with the Company "regarding the calculation and implementation of the $0 expense/revenue requirements

[1] The Chairman ruled that the Commission would take judicial notice of the filings in the Sub 56 Docket in this proceeding. Tr. Vol. 22, p. 183.

[2] Measurement at license termination is the manner in which the Guidelines require the Funding Report to be filed. See DEC – Maness Cross-Examination Ex. 1, Tab 1, Attachment 1.

or any other aspect of its decommissioning cost and funding activity." Id. at 12. The Public Staff Report then concluded that apart from the implementation of the decrement rider, "the Public Staff has no recommendations for further action by the Commission in this matter." Id. (emphasis added).

In this rate case, the Company again determined that the nuclear decommissioning expense in its cost of service was $0. Tr. Vol. 12, p. 49. The Public Staff, however, asserted, through witness Hinton, that the NDTF was overfunded by $2.35 billion. Tr. Vol. 22, p. 252. The Public Staff proposed that these "excess" funds be returned to customers, and that this could be accomplished by reducing North Carolina retail expense by $29.1 million. Id. at 260.[1]

Under applicable NRC and IRS regulations, these funds could not be simply withdrawn from the NDTF, a fact recognized by Public Staff. Id. at 252. It indicated instead, through witness Maness, that if the Company "cannot remove such funds from the NDTF, its shareholders will be required to provide (i.e., loan) the funds for the expense reduction …." Id. at 105 (emphasis added). Witness Maness added that this loan would be "on a temporary basis." Id. Company witness Doss testified, "if the Public Staff's recommended rate-making mechanism is approved, and if actual experience mirrors the projections on which the Public Staff's recommended refunds are based, the Company would not be entitled to collect on the loans to ratepayers until funds could be withdrawn from the NDTF upon the completion of nuclear decommissioning activities, which is currently expected to occur in approximately 50 years." Tr. Vol. 12, p. 60.

Discussion and Conclusions

The key factual predicate to the Public Staff's recommendation is that the NDTF is overfunded. The facts in this case indicate that it is premature to reach such a conclusion. The Public Staff's principal proponent of the notion that the NDTF is overfunded – witness Hinton – did not testify that this is the case in absolute terms. Rather, his testimony is hedged with qualifiers: "Assuming the projected decommissioning costs and earning returns … are accurate through when DEC's last nuclear unit is decommissioned, the NDTF is currently over-funded by $2.35 billion." Tr. Vol. 22, p. 252 (emphasis added). A number of qualifiers and the uncertainty regarding future events underlie witness Hinton's conclusion that the NDTF is currently overfunded. Id. However, witness De May testified that on an NC retail basis, the NDTF is actually underfunded as of the end of the test year:

> [T]he NDTF balance was $2.19 billion as of December 31, 2016. The estimated decommissioning cost (in 2016 dollars) as of December 31, 2016 was $2.46 billion. In other words, on a current dollars basis, the NDTF was approximately 89% funded as of December 31, 2016.

Tr. Vol. 4, pp. 79-80.

[1] Witness Hinton's direct testimony indicated that this figure was $19.4 million (Tr. Vol. 22, p. 252), but he discovered an error in his analysis and corrected the figure to $29.1 million Id. at 260.

Witness De May further testified that the Company uses three methods to determine whether the funding levels in the NDTF are adequate such that the nuclear decommissioning portion of cost of service should be assigned a zero-dollar cost. One is the "current value" method, which is what is described above. Another is the "projected value" method, which is the basis of witness Hinton's conclusion. The projected value method measures, as its name suggests, the funds in the NDTF projected as of the end of decommissioning, still decades into the future, compared to projected costs, again decades into the future. In other words, the projected value method measures "the projected balance of the NDTF at the end of the decommissioning period, i.e., after all decommissioning activities are completed, and is in future dollars (ranging from 2058 through 2067)." Id. (emphasis added). Witness De May testified that this measure indicates whether the NDTF is adequately funded, but does not indicate that it is fully funded – for that, one cannot know "until the last dollar is spent on decommissioning." Id. at 568.

The third method witness De May described is the "probability of success" method. This method, witness De May explained, uses a probability of success ratio to evaluate the likelihood of having sufficient funds to fully decommission each nuclear unit. Id. at 80. This approach involves 5,000 Monte Carlo simulations of market returns and escalation factors between the time of analysis and the end of decommissioning and generates a percentage of scenarios for which funding is adequate to meet all future decommissioning obligations. Id. Witness De May testified that "[a]s of December 31, 2016, the nuclear unit probability of success ratios ranged from 77% to 85%, depending on the unit; conversely, the probability of not having sufficient funds to decommission the nuclear units ranged from 15% to 23%." Id. (emphasis in original). Although these percentages may support a determination that no additional funding from ratepayers is currently required to fund the NDTF, the Company submits that in no way should this be interpreted as supporting a view that the NDTF is "overfunded."

The Company based its determination that the NDTF funding levels were adequate and that, as a consequence, it would not request any nuclear decommissioning cost in its revenue requirements in this case, on the fact that the NDTF has experienced higher than expected returns recently and that the escalation rate assumption has remained modest. Id. at 82. There is, of course, no assurance that these conditions will extend into the future, and certainly no assurance that they will extend decades into the future. Uncertainty is further compounded by timing, as license extensions or unforeseen circumstances could accelerate or push out the plants' retirement dates. Insofar as escalation rates are concerned, witness De May testified that the model used to estimate funding requirements is highly sensitive to changes in the escalation rate assumption, and that an "increase in the forecasted escalation rate from 2.40% to 3.09%, a 0.69% increase, fully eliminates the projected NDTF overfunded balance at the end of the decommissioning period." Id. He noted that for the period 1913-2017, the average consumer price index (CPI-U) rate has been 3.24%. Accordingly, changing the escalation rate from the currently model rate of 2.4% just to the average CPI-U increase over the past hundred years means that the Public Staff's projected $2.35 billion overfunding disappears. Id. at 587.

He also testified regarding returns, "You probably hear this all the time in investment jargon, past returns are not an indication of future results." Tr. Vol. 5, p. 58. A 2015 Public Staff Report (DEC – Maness Cross-Examination Ex. 2), noted:

> The current healthy financial position of the ... [NDTF] relative to estimated costs results largely from significantly higher than expected trust fund investment returns that have been experienced in recent years. The trust fund has not, however, always experienced such strong investment returns, and in fact, there have been many years of low or negative investment returns.

Id. at 13.[1]

Witness Hinton attempts to address concerns that the Public Staff's recommendation would lead to future underfunding by asserting that there are sufficient regulatory protections to avoid any significant under recovery in the NDTF. Tr. Vol. 22, p. 252. However, DEC contends that this statement ignores that some of those protections include restrictions preventing withdrawals from the NDTF. As witness De May indicated,

> [T]here is a reason it's illegal to take money out of the trust. It's because ... [the NDTF is] not an investment account, it's not a savings account. It's there for the very good public policy of decommissioning nuclear power plants ....

Tr. Vol. 4, p. 588.

In light of all of the evidence presented, the Commission determines that it is premature to find and conclude that the NDTF is overfunded. While the funding model that is used to determine the annual nuclear decommissioning expense forecasts that under various assumptions, the NDTF may be overfunded by approximately $2.4 billion, the evidence also indicates that on a current dollar basis it is only 89% funded. The Commission agrees with witness De May's concern that returning the projected excess funds to ratepayers now could lead to underfunding of the NDTF in the future. The record shows that the NDTF has experienced higher than expected returns recently, and the escalation rate used to forecast decommissioning costs has remained modest compared to historical rates of inflation, both of which have contributed to favorable results. Changes in assumptions for variables, including investment returns, escalation rates and decommissioning start or completion dates, will all impact future NDTF funding levels, as will deviation of future experience from current forecasts. In the judgment of the Commission, while the NDTF is currently adequately funded, it is premature to find and conclude that the NDTF is overfunded, and therefore, it would not be prudent to return funds to customers at this time, and perhaps for several years, even if it were legally permissible to do so.

Given the Commission's finding and conclusion in this regard, it is not necessary for the Commission to address the related issues between the parties regarding GAAP treatment, retroactive ratemaking and prior agreements.

---

[1] For example, industry-wide from 2006 through 2008, the financial markets had a significant negative impact on trust fund balances. See NRC Office of Nuclear Regulation, 2009 Summary of Decommissioning Funding Status Reports for Nuclear Power Reactors (SECY-09-0146, October 6, 2009), p. 7, available online at: https://www.nrc.gov/docs/ML0925/ML092580041.pdf. The Commission takes judicial notice of this NRC report.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 52-55

The evidence supporting these findings and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of DEC witnesses Spanos, Doss, and Kopp, Public Staff witness McCullar, and the entire record in this proceeding.

Company witness Doss introduced Doss Exhibit 3, the revised depreciation study filed in this docket (Depreciation Study), as prepared by Gannett Fleming Valuation and Rate Consultants, LLC. Tr. Vol. 12, p. 56. As explained by witness Doss, the Depreciation Study included updates to estimates of final plant depreciation costs for steam, hydraulic, and other production plants, as well as updated forecasted generation plant retirement dates. Id. at 77. In addition, witness Doss introduced Doss Exhibit 4, the Decommissioning Cost Estimate Study (Decommissioning Study) prepared by Burns and McDonnell Engineering Company, Inc. (Burns & McDonnell), an external engineering firm. This report included estimates for final decommissioning costs at steam, hydraulic, and other production plants.

DEC witness Doss testified that the updated depreciation rates for various fossil and hydro plants reflect changes in the probable retirement dates to align with current licenses, industry standards, or operational plans due to aging technology, assumptions for future environmental regulations, or new planned generation. Tr. Vol. 12, pp. 51-52. In addition, the Depreciation Study incorporates generation assets that have been placed in service since the last study, as well as the W.S. Lee Combined Cycle Plant, once it goes into service. Id. at 52. Additionally, the rate for meters to be replaced under the Company's Advanced Metering Infrastructure (AMI) deployment was updated to allow recovery of the net book value over three years. Id. The Depreciation Study uses a 15-year average service life for the new AMI meters being deployed, increasing depreciation expense. Id. Finally, witness Doss also notes that there is a net decrease in the depreciation expense for distribution, transmission, and general plant assets, primarily driven by longer average service lives for assets such as overhead and underground conductors and services. Id.

Public Staff witness McCullar and CIGFUR III witness Phillips also made recommendations related to depreciation expense. Witness McCullar recommended several adjustments to the Company's proposed depreciation rates including adjustments to future terminal net salvage costs (also known as decommissioning and dismantlement costs), to other production plant interim net salvage percentages, and to remove inflation from terminal net salvage costs. Tr. Vol. 26, pp. 777-78, 783-85. Witness McCullar testified that based on December 31, 2016 investments, DEC was proposing an increase in its depreciation annual accrual of $81,480,296. Tr. Vol. 26 p. 773. Based on Public Staff witness McCullar's investigation, the Public Staff recommended an increase in DEC's depreciation annual accrual of $20,709,566 based on December 31, 2016, investments, a decrease of $60,770,730 from the amount proposed by the Company. Tr. Vol. 26, p. 775. The difference between the Company's and the Public Staff's proposed depreciation annual accrual results from four adjustments proposed by witness McCullar, and one recommended by Public Staff witness Maness, as discussed below. Finally, witness Phillips recommended that changes in the depreciation rates should net to a zero-dollar impact.

Estimated Terminal Net Salvage Costs – Contingency

Burns & McDonnell conducted the Decommissioning Study for DEC, which formed the basis for DEC's terminal net salvage cost estimates. In that study, a 20% contingency for future "unknowns" was included in DEC's estimate of future terminal net salvage costs. "Public Staff witness McCullar recommended that the 20% contingency for future "unknowns" included in DEC's estimate of future terminal net salvage costs be eliminated. Tr. Vol. 26, p 778. Witness McCullar explained that including a 20% contingency factor puts the risk of possible future unknowns on current ratepayers. Id. Witness McCullar pointed out that DEC has not identified actual future costs to be covered by the contingency, but estimates future terminal net salvage costs based on anticipated contractors' bids for dismantlement of equipment, addressing of environmental issues, and restoration of the site, and then adds 20% for unknown costs that DEC cannot specifically identify. Tr. Vol. 26, pp. 778-79. Public Staff witness McCullar testified that putting all the risk of "estimated future unknown unidentified costs" on current ratepayers was inappropriate and recommended a contingency of 0%. Tr. Vol. 26, p. 780. In response to witness McCullar's recommendation, DEC witness Kopp explained why a 20% contingency is appropriately included in DEC's Decommissioning Study. He explained that contingency protects customers by ensuring more accurate estimates of the costs of terminal net salvage to be incurred in the future. Tr. Vol. 10, p. 108. He stated that while these costs could not be specifically identified, it was reasonable to expect them to be incurred. Id. Witness Kopp explained that direct decommissioning costs were estimated based on performing known tasks under ideal conditions. Tr. Vol. 10, p. 109. However, Company witness Kopp admitted that Burns & McDonnell did not obtain any firm quotes for DEC facilities, but used unit pricing or its experience. Tr. Vol. 10, p. 137. Further, according to witness Kopp, the contingency was added to recognize the likelihood of cost increases for unknown costs. Id. He pointed out uncertainties in work conditions, scope of work, the manner in which work would be performed, estimating quantities, weather, and unknown contamination, among other things. Tr. Vol. 10, pp. 109-10. DEC witness Kopp testified that inclusion of contingency costs was standard industry practice. Tr. Vol. 10, p. 110. He explained that a 20% contingency was appropriate at a site where power had been generated for years and where there was likely to be more environmental contamination, and thus was based on the level of risk of additional contamination. Tr. Vol. 10, pp. 111-12. Witness Kopp pointed out that there had been no on-site testing for hazardous materials or environmental contamination, no sampling of groundwater, no subsurface investigation, no asbestos inventories, and that the cost estimates included only a minimal level of environmental remediation. Tr. Vol. 10, pp. 111-12. Company witness Kopp contended that it would not be prudent to try to develop estimates that were more accurate or precise so that a smaller contingency would be reasonable, because of the high cost of conducting such a study and the limited time that the cost estimates could be considered reliable. Tr. Vol. 10, p. 113. Yet he argued that while these estimates were not precise enough to develop a more reasonable contingency, they were precise enough on which to base depreciation rates. Tr. Vol. 10, pp. 113-14. DEC witness Kopp noted that Burns and McDonnell had performed a decommissioning study for DEP in 2012, and that study's estimates for the decommissioning and demolition of Cape Fear, H.F. Lee, Sutton, Robinson, and Weatherspoon plants forecast costs 11% lower than actually incurred. Tr. Vol. 10, p. 114.

Accordingly, witness Kopp explained that a 20% contingency on these costs is both reasonable and warranted based on the risk level associated with the decommissioning projects.

As the Company pointed out in its Response to Public Staff Data Request No. 17, the anticipated contractor's bid is based on performing known dismantlement tasks under ideal conditions. Id. at 116. (emphasis added) Witness Kopp contended that Public Staff witness McCullar had not taken into account that the direct costs were based on known tasks occurring under ideal conditions. Tr. Vol. 10, pp. 115-16. Witness Kopp also pointed out the minimal level of investigation Burns & McDonnell made into the existence and costs of potential environmental contamination and remediation, which he argued supported a 20% contingency. Tr. Vol. 10, p. 116. Regarding witness McCullar's contention that the Company should not recover a contingency for costs that cannot be identified at this time, witness Kopp agreed that specific future costs could not be identified, but noted that some typical costs that might be incurred or that have been incurred on similar projects were known. Tr. Vol. 10, pp. 117-18.

On cross examination, Company witness Kopp indicated that the Decommissioning Study did not take into account the impact of any planned changes to convert the Belews Creek, James E. Rogers (Cliffside), and Marshall plants to dual fuel capability as planned by the Company (Spanos/Kopp Cross Exhibit 1), which could increase or decrease the study's estimates. Tr. Vol. 10, pp. 127-29. Neither did the study take into account any changes in steel and aluminum prices that might occur due to imposition of tariffs. Tr. Vol. 10 pp. 133-34. Witness Kopp also stated that decommissioning and demolition was the most prudent option at the end of a plant's useful life, but acknowledged sale of a plant as another option. See Duke Energy's announcement of the sale of its retired Walter C. Beckjord coal-fired power plant, Spanos/Kopp Public Staff Cross Exhibit 3. Tr. Vol. 10, pp. 131-33.

In his testimony, DEC witness Kopp testified that, "[a]s engineering design for demolition progresses and some of these unknowns can be determined through subsurface investigations, asbestos sampling, and engineering specifications, the amount of contingency may be reduced; however, contingency would never be completely eliminated." Tr. Vol. 10, pp. 112-13. He also stated that the "Company performed no subsurface investigations, asbestos inventories, or groundwater sampling to identify and define remediation requirements during this planning phase." Tr. Vol. 10, p. 112. However, on cross-examination, witness Kopp admitted that the Company did perform asbestos inventories. Tr. Vol. 10, p. 136. But instead of relying on studies that had been performed, "Burns and McDonnell did not rely upon these historical studies ...." Tr. Vol. 10, p. 136.

DEC witness Kopp highlighted all the environmental testing that has yet to be done and all the uncertainties inherent in the study. While the Decommissioning Study was conducted based on data from 2016 and 2017, DEC has since announced plans to convert three of its plants to dual-fuel capability, changing some of the assumptions in the study. While it is impossible to anticipate all future costs, merely being able to identify possible future costs or costs incurred for other projects is not the most firm basis on which to calculate contingency. This causes some concern for the Commission.

The Commission takes note that the Company failed to take into account the possibility that scrap prices may increase or that the production plant may be repurposed, or sold. Further, DEC witness Kopp's claim that a contingency is needed to account for the unknown of asbestos is not fully supported by the record in this proceeding, since DEC has performed asbestos inventories and identified an asset retirement obligation for these legal asbestos abatement obligations. See Kopp/Spanos Public Staff Exhibit 4. Identifying these costs should reduce the unknown of asbestos and thus reduce any contingency.

Based on the above discussion and all of the evidence in the record, the Commission finds that the contingency proposed for net terminal salvage in this proceeding of 20% is improper and should be reduced. While the Commission appreciates the Public Staff's concern for keeping depreciation rates low, the potential for further environmental costs and remediation costs should not be given short shrift, especially in light of other environmental costs that are discussed elsewhere in this Order. However, the Commission acknowledges the arguments that the Public Staff has made, and in an attempt to strike a fair balance, the Commission finds that a 10% contingency factor is fair to all parties. The Commission further notes that in DEP's most recent rate case proceeding, Docket No. E-2, Sub 1142, the Commission approved a 10% contingency factor. The Commission is confident that a 10% contingency factor, while less than DEC's requested factor of 20%, should protect the Company from additional costs it will incur but cannot specify at the present date. The Commission also finds that a 10% contingency factor properly reflects the inclusion of items that should push unknown costs downward (i.e increase in scrap prices, etc.) thereby protecting the ratepayers as well. Based on the foregoing, the Commission concludes that including a contingency factor of 10% should be utilized by the Company.

Cost Escalated to the Date of Retirement

It is important to recover the service value of the Company's assets by determining the net salvage costs that will be incurred in the future. As DEC witness Spanos explained, using the straight-line method of depreciation, these costs are recovered ratably, or in equal amounts, each year over the life of the Company's plant. Tr. Vol. 10, p. 83. This approach is consistent with the Uniform System of Accounts, which specifies that the cost of removal is the actual amount paid at the time the transaction takes place. Id. at 84. As such, including the future cost of net salvage for plant accounts is consistent with established depreciation concepts. In developing decommissioning cost estimates, it is necessary to escalate those estimates to the time period in which the cost is expected to be incurred.

Public Staff witness McCullar testified that the Company took the estimated future terminal net salvage costs from the Decommissioning Study, which are in year 2016 dollars, and inflated them to the year of the assumed retirement of the production plant. She testified that DEC proposes to collect these inflated amounts in today's more valuable dollars from ratepayers. Tr. Vol. 26, pp. 780-81. Witness McCullar's Exhibit RMM-2 showed how for the Cliffside plant, the estimated terminal net salvage cost of $48,075,000 in year-2016 dollars was inflated to $105,945,645 in year-2048 dollars, assuming an annual inflation rate of 2.5% to 2048, the estimated year of retirement, increasing the estimated net salvage cost by a factor of 2.2. Tr. Vol. 26, p. 781. DEC proposes to begin collecting this $105,945,615 calculated using year-2048 dollars from current ratepayers, who would be paying in current dollars. Id. Public Staff McCullar contended that it would be unreasonable in this case to collect these inflated costs of removal in current dollars because it imposes too much risk on ratepayers due to the significant period of time over which the inflation is estimated. Tr. Vol. 26, p. 282.

Witness McCullar recommended that DEC should inflate the terminal net salvage costs to the year 2023, or the retirement date, whichever occurs first. Witness McCullar testified that she selected 2023 because it aligned with the time when the Company is expected to file its next rate case. Witness McCullar stated, "since depreciation rates approved in this proceeding are expected to go into effect in 2018, the year 2023 would be five years later, by which time depreciation rates would have been reviewed in a new base rate case." Tr. Vol. 26, p. 784. Witness McCullar noted that her recommendation reduces the risk on ratepayers associated with paying rates based on extended periods of estimated inflation, while protecting the Company from the risk that it would not be able to collect its net salvage costs. Tr. Vol. 26, p. 784.

Witness Spanos explained that many of the Company's plants will not be retired for many years. Tr. Vol. 10, p. 86. Witness Spanos highlighted the importance of "understanding the Company's expectations for these assets, as well as the estimates within the industry." Id. at 91. Accordingly, the net salvage costs must be escalated so that the correct amounts are allocated over the remaining lives of the plants. Tr. Vol. 10, p. 86. The approach used by the Company to escalate cost is widely supported by authoritative depreciation texts and industry practice. For example, witness Spanos pointed out that the NARUC Manual provides the following:

> Under presently accepted concepts, the amount of depreciation to be accrued over the life of an asset is its original cost less net salvage. Net salvage is the difference between gross salvage that will be realized when the asset is disposed of and the costs of retiring it.

Tr. Vol. 10, p. 88. (emphasis added).

In addition, Wolf and Fitch, another highly regarded authoritative depreciation text, provides further support for the position that inflation is appropriately a part of the future cost of net salvage. Wolf and Fitch also argue against a present value or current value concept. In his testimony, Witness Spanos provided the following passage from Wolf and Fitch:

> Some say that although the current consumers should pay for future costs, the future value of the payments, calculated at some reasonable interest rate, should equal the retirement cost. Studies show that the salvage is often "more negative" than forecasters had predicted.

Tr. Vol. 10, p. 89.

Finally, witness Spanos referenced Accounting for Public Utilities by Robert L. Hahne and Gregory E. Aliff to support the proposition that the Uniform System of Accounts and regulatory definition require net salvage to be estimated at a future price level. Id.

The testimony and evidence presented in this case demonstrates that authoritative texts and sound depreciation practices support escalating terminal net salvage costs to the date that the costs are expected to be incurred. Despite arguing against an approach in which the Company would recover costs over the life of the asset, witness McCullar concedes that some escalation is necessary. In fact, witness McCullar escalated terminal net salvage to the projected date for the Company's next base rate case in her calculations. Further, witness McCullar's escalation rate is entirely dependent on the timing of when the Company files its base rate case and lacks any nexus to the timing of the future retirement of the asset. The Commission notes that the record is void of any accounting literature support for witness McCullar's approach, nor would such an approach be appropriate.

The Commission cannot rely upon the scheduling of rate cases to remedy the flaws in witness McCullar's alternative proposal. Witness McCullar's approach is not supported by sound depreciation methods and would likely result in the under recovery of net salvage costs over the life of the asset. To that end, other state utility commissions have rejected witness McCullar's alternative approach as unsupported. For example, in a recent case before the Washington Utilities and Transportation Commission (WTC), witness McCullar advanced similar arguments against the escalation of terminal net salvage costs along with other recommendation related to depreciation.[1] In rejecting the recommendation, the WTC noted that Public Counsel and witness McCullar provided no response to the critique that witness McCullar's approaches were not supported by authoritative accounting literature.[2] The WTC found witness McCullar's net salvage proposal "[v]ague in its methodology, not supported by authoritative accounting literature, and supported by unwarranted assumptions."[3]

The fact is the vast majority of jurisdictions use a method for net salvage in which future net salvage is estimated at its future cost and recovered through straight-line depreciation (also known as the traditional method). Approximately 46 out of 50 jurisdictions recover future costs using the straight-line depreciation method. The use of this method is also consistent with the treatment of escalation in the most recent DEP rate case. As witness Spanos explained, depreciation should be done in a systematic and rational manner based on information known at the time and consistent with the Uniform System of Accounts. Id. at 165.

Considering all the evidence, the Commission finds and concludes that the escalation of terminal net salvage cost and the use of the straight-line method of depreciation in determining escalation as performed in the DEC Decommissioning Study is just and reasonable, appropriate for use in this case, and is adopted.

---

1 See Washington Utilities and Transportation Commission v. Puget Sound Energy, Final Order Rejecting Tariff Sheet; Approving and Adopting Settlement Stipulation; Resolving Contested Issues, & Authorizing and Requiring Compliance Filing, Washington Utilities & Transportation Commission, Docket UE-170033 (December 5, 2017) Puget Sound Order.

2 Puget Sound Order, pp. 50-51.

3 Id. at 60. The WTC noted further that witness McCullar's "comparison of net salvage accruals to net salvage expenditures PSE incurred during recent years would effectively recover net salvage as an operating expense, not a depreciation expense."

Other Production Plant Interim Net Salvage Percent Production Accounts

In this case, DEC witness Spanos testified that he recommended a future net salvage percent of negative 4% for other production accounts. Id. at 90. The estimated future net salvage is part of the annual depreciation accrual, which is credited to the reserve to cover the estimated future net salvage costs. As witness Spanos explained, he established an interim net salvage percent on an account basis and then performed the appropriate calculation in order to get the appropriate weighted interim net salvage, excluding account 343.1. Tr. Vol. 12, p. 143. The net salvage estimates were based on an analysis of historical cost of removal and salvage data, expectations with respect to future removal requirements, and markets for retired equipment and materials. See Doss Exhibit 3 IV-2; Tr. Vol. 12, p. 116. The interim net salvage component is approximately 32% of the utilized net salvage percent for other production plant. Id. at 90. Witness Spanos further testified that he noted that the Public Staff's recommended interim net salvage percentage had been included in the depreciation rate proposed for the Lee Combined Cycle Plant. Id. DEC witness Spanos contended that determining an interim net salvage percentage for other production plant should be based on historical data as well as informed judgment. Id. He stated that Accounts 343 and 344 included large amounts of gross salvage related to older combined cycle facilities not applicable to all assets in the account. Id. Company witness Spanos also stated that the high gross salvage numbers were related to the rotable parts of combined cycle facilities, consistent with DEP. Id.

Public Staff witness McCullar proposed a 0% net salvage value for accounts 342, 343, 344, 345, and 346. She testified that for some accounts, the annual accrual amount that would be accrued for estimated net salvage is several times the annual amount DEC actually incurs for net salvage. Tr. Vol. 26, p. 278. Witness McCullar indicated that the historical analysis has been a positive $12,891,310 per year for the last three years and a positive $8,649,160 per year for the last five years. Witness McCullar explained that these positive net salvage amounts indicated that DEC's booked gross salvage exceeded the Company's incurred costs of removal and thus, DEC did not need to collect interim removal costs for these accounts. As a result, witness McCullar took the position that DEC should utilized a 0% interim net salvage based on DEC's actual experience. Witness McCullar further testified that the 0% interim net salvage would not include the final decommissioning costs. The impact of the Public Staff's proposed adjustments to terminal net salvage contingency and escalation rates and interim net salvage results in a decrease in DEC's proposed depreciation rates as of December 31, 2016, of $13,382,159, as shown on p 14 of Exhibit RMM-1 on the line for Total Production. Tr. Vol. 26, p. 786.

In response, witness Spanos testified that in the case of other production plant, it is critical to understand all the components of the historical data. For example, in Accounts 343 and 344, there are large amounts of gross salvage and corresponding retirements that relate to the early installations of combined cycle facilities which are not applicable to all assets in the account. Tr. Vol. 10, p. 91. As witness Spanos described further, the high gross salvage amounts relate to the rotable parts of the combined cycle facilities, which are handled consistently with DEP's assets. Id. Under cross-examination by Public Staff, witness Spanos explained that Account 343 contains high salvage amounts in years 2014, 2015, and 2016, but using informed judgment, he understood those amounts to be related primarily to rotable parts and associated with combined cycle facilities. Using more than just statistical analysis is necessary to evaluate these production plants; informed judgment must also be relied upon as Witness Spanos did. In recommending the negative 4% interim net salvage percentage, witness Spanos took into account the Company's expectations for the assets as well as the estimates within the industry. Id.

The Public Staff presented evidence on cross-examination of DEC witnesses Kopp/Spanos regarding the Company's proposed positive net salvage percentages in Accounts 343 and 344 were related to rotable parts. Kopp/Spanos Public Staff Cross-Examination Exhibit 7 shows that DEC has established rotable parts in a separate account, Account 343.1. Further, Kopp/Spanos Public Staff Cross Exhibit 8 shows that the Public Staff did not propose any adjustment to the interim net salvage percentage for Account 343.1, Prime Movers Rotable. Additionally, under cross examination, witness Spanos admitted that Account 343.1, containing these rotable parts, was also excluded from the Company's interim net salvage proposal for Accounts 342, 343, 344, 345, and 346. Tr. Vol. 10, p. 143.

Based on the evidence discussed above and the entire record in this case, the Commission finds that the Public Staff's proposal to set an interim net salvage percentage of 0 for Accounts 342, 343, 344, 345, and 346 is reasonable. Historical data show that using a negative value, as was previously set, has resulted in DEC overcollecting its costs. It would be inequitable to charge customers for costs that the utility is unlikely to incur. As discussed previously, the Company has stated publicly that it plans to file multiple rate cases between 2019 and 2023, and therefore, this issue can be reexamined in the next base rate case.

Other Depreciation Recommendations

CIGFUR III witness Phillips recommended that any approved changes to depreciation rates should net to a zero-dollar impact on the level of depreciation expense included in rates. Tr. Vol. 10, p. 94. He further recommended that customers not be burdened at this time by the impact of shortening service lives of generating plants based upon assumptions about changing and evolving environmental regulations. Id.

As DEC witness Spanos correctly asserted, witness Phillips provided no support or justification for his net zero proposal, other than a desire that depreciation rates not increase. Tr. Vol. 10, p. 94. Witness Phillips offered no credible critique of the Company's filed Depreciation Study and provided no alternative analysis. The Depreciation Study demonstrates that current depreciation rates are insufficient and that adjustments are necessary for DEC to recover the full cost of its assets providing service to DEC's customers. Id. at 95.

Furthermore, witness Phillips incorrectly states that depreciation rates have changed due to changes to life spans as a result of environmental regulation. Witness Spanos highlighted that there are a variety of reasons that depreciation rates change over time as evidenced by the Depreciation Study filed in this case. The Depreciation Study includes all of DEC's assets, and changes in depreciation rates occur for many reasons, including updated service life and net salvage estimates, updated historical data, and additions to generating facilities. The Depreciation Study is based upon the available information regarding the Company's assets, and the depreciation rates, therefore, needs to be updated to reflect current circumstances. Tr. Vol. 10, p. 95.

For the foregoing reasons, CIGFUR III witness Phillips' blanket recommendation regarding depreciation rates lacks any conclusive support and is rejected.

Conclusion

In light of all of the evidence presented, the Commission finds and concludes that the depreciation rates proposed by DEC in this case, which are based on the revised Depreciation Study included as Doss Exhibit 3 and the Decommissioning Study included as Doss Exhibit 4, with the exception of the adjustments discussed above, are just and reasonable, fair to both the Company and its customers, and therefore, are approved.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 56-58

The evidence in support of these findings of fact and conclusions is contained in the testimony and exhibits of Company witnesses De May, Fountain, and McManeus; Public Staff witnesses Boswell, Parcell, and Hinton; Tech Customers witnesses Strunk and Brown-Hruska, NCLM witness Coughlan; Justice Center et al. witness Howat; Kroger witness Higgins; CIGFUR III witness Phillips and the entire record in this proceeding.

The federal Tax Cuts and Jobs Act (the Tax Act) was signed into law on December 22, 2017. Among other provisions, the Tax Act reduced the federal corporate income tax rate from 35% to 21%, effective January 1, 2018.[1] It also repealed the manufacturing tax deduction and eliminated bonus depreciation. The Company filed its application for rate increase on August 25, 2017, many months before the enactment of the Tax Act and, therefore, the revenue requirement the Company requested was based on the pre-Tax Act tax laws.

On January 16, 2018, DEC witness McManeus filed her Second Supplemental Direct Testimony that only included limited discrete changes as a result of the Tax Act relating to the elimination of bonus depreciation and the manufacturing tax deduction. Her filing did not include an adjustment to income tax expense as a result of the decrease in the federal corporate income tax rate, nor did it include any proposal for the return of the protected and unprotected Federal EDIT to ratepayers.

In her direct testimony filed on January 23, 2018, Public Staff witness Boswell included an adjustment to income tax expense to reflect the decrease in the federal corporate income tax rate, as well as to remove the manufacturing tax deduction that was also included in the Tax Act. She stated that at that time, the Public Staff was waiting for information from the Company regarding Federal EDIT and reserved the right to supplement her filing to include the Public Staff's proposal for flow back of Federal EDIT.

[1] In response to the enactment of the Tax Act, on January 3, 2018, the Commission opened a rulemaking docket (Docket No. M-100, Sub 148, i.e. the Tax Docket) for the purpose of determining how the Commission should proceed. In the Order establishing the Tax Docket, the Commission placed all public utilities on notice that the federal corporate income tax expense component of all existing rates and charges, effective January 1, 2018, would be billed and collected on a provisional rate basis.

In rebuttal testimony filed on February 6, 2018, DEC proposed an immediate reduction in the Company's revenue requirement, within the context of this proceeding, to account for the reduction in the federal corporate income tax rate but offered no proposal to return Federal EDIT to ratepayers. Company witness Fountain testified that the passage of the Tax Act "provides the Commission with a unique tool to smooth out customer rate adjustments during a multi-year transition period." Tr. Vol. 6, p. 212. He stated that this could be accomplished by offsetting items such as storm response costs, ongoing coal ash basin closure compliance costs or other environmental compliance costs, or accelerating the depreciation of certain assets, such as the existing AMR meters or coal plants. Tr. Vol. 6, p. 213.

In her rebuttal testimony, witness McManeus testified that the Company opposed witness Boswell's adjustment to reduce income tax expense. Tr. Vol. 6, p 323. Witness McManeus testified that the Company had identified the amount of reduction in annual revenue requirement related to reduced income tax expense and translated the amount into a decrement rate per kWh. Witness McManeus stated that the Company proposed to apply the decrement to North Carolina retail service beginning January 1, 2018, and defer the resulting amount into a regulatory liability, continuing the deferral until new rates are established in this rate case that reflect the benefits of the lower tax expense. Tr. Vol. 6, p. 331.

In supplemental testimony filed on February 20, 2018, witness Boswell presented the Public Staff's proposal regarding the flowback of Federal EDIT. Witness Boswell included three adjustments based on the information provided by the Company. First, she recommended the return of protected Federal EDIT based upon the Company's calculation of the net remaining life of the timing differences, as required under the Internal Revenue Code. For the unprotected Federal EDIT, witness Boswell recommended removing the Federal EDIT regulatory liability associated with the unprotected differences from rate base, and placing it in a rider to be refunded to ratepayers over two years on a levelized basis, with carrying costs. Witness Boswell stated that immediate removal of unprotected Federal EDIT from rate base increases the Company's rate base and mitigates regulatory lag that might occur from refunds of unprotected Federal EDIT not contemporaneously reflected in rate base. Further, she maintained that refunding the unprotected Federal EDIT over two years allows the Company to properly plan for any future credit needs. Tr. Vol. 26, pp. 618-19. Ultimately, during the hearing, the Public Staff modified its proposal to adjust the flowback period from two years to five years. Boswell Second Supplemental Testimony, filed March 19, 2018, Tr. Vol. 26, pp. 637-38. The modified proposal is referred to herein as the Public Staff Proposal.

In response to the Public Staff's original 2-year EDIT flowback proposal, the Company Proposal was made initially in Supplemental Comments, filed March 1, 2018, in Docket No. M-100, Sub 148, a docket that the Commission established on January 3, 2018, in order to gather comments from the utilities it regulates along with the Public Staff and other interested parties, to decide how to implement the Tax Act (Tax Docket). By letter filed the next day, the Public Staff objected to the Company Proposal being made in the Tax Docket, in light of the fact that the Company's general rate case was then open and had not yet gone to hearing. Accordingly, the Company then made its proposal in this Docket on the opening day of the expert witness evidentiary hearings, and the Commission took judicial notice of all filings in the Tax Docket. Tr. Vol. 5, p. 14.

ELECTRIC – RATE INCREASE

On the first day of the evidentiary hearing, the Company presented its proposal to address the Tax Act. The Company Proposal was presented in this proceeding by witness De May. Tr. Vol. 4, pp. 423-24; Tr. Vol. 5, pp. 67-79; De May Rebuttal Ex. 5. The Company Proposal has three basic component parts, and the first two components reduce the Company's revenue requirement.

First, the Company Proposal implements an immediate reduction of approximately $211.5 million to the Company's revenue requirement to reflect collection of federal corporate income tax at the 21% rate instead of the 35% rate. Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues, Line 29; Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Line 1.

Second, the Company Proposal implements Federal EDIT flowback to customers, with the flowback timeframes varying based on the particular Federal EDIT bucket at issue:

- For protected Federal EDIT, the Company Proposal applies the Tax Act-prescribed IRS normalization rules, resulting in a reduction in revenue requirements of approximately $34.4 million annually or per year. Revised McManeus Stipulation Ex. 1 – Updated for Post-Hearing Issues, Line 30; Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Line 2.
- For unprotected Federal EDIT related to property, plant and equipment, the Proposal also applies the normalization rules, although, as all of the parties agree, application of those rules is not required by the Internal Revenue Code. The only modification, that results in a faster flowback, is that while the Company's analysis indicates that the average life of the flowback in the absence of the Tax Act would have been 25 years, the Proposal implements that flowback over 20 years. Tr. Vol. 5, pp. 78, 105. DEC maintained that this was done "for the sake of simplicity" (id. at 105.), and results in a reduction in revenue requirements of approximately $36.7 million annually or per year. Revised McManeus Stipulation Ex. 1 – Updated for Post-Hearing Issues, Line 33; Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Line 3.
- For unprotected Federal EDIT not related to property, plant and equipment, the Proposal implements flow back through a five-year decrement rider, with the five-year timeframe being used again "for the sake of simplicity." Tr. Vol. 5, p. 105. The reduction in revenue is approximately $39.6 million per year during the five years the rider is in effect. Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Line 7. Because these unprotected Federal EDIT are being flowed back to customers through a rider, that includes a return component, base rates must be adjusted correspondingly (as an increase) in the amount of $15.1 million. Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Line 5.

Accordingly, the reduction in revenue requirements effected by these two components of the Company Proposal equals $307.1 million annually or per year. Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1, Lines 1-3, 5 and 7.

The third component of the Company Proposal mitigates, but does not eliminate, the negative cash flow impact of these reductions by increasing annual revenue requirements by $200 million. The Company Proposal (De May Rebuttal Ex. 5) did not originally identify specific means through which this could be accomplished, but did provide examples of accelerated regulatory asset amortization, and also suggested the alternative of collecting certain expenses (for example, the coal ash basin closure cost "run rate") on an accelerated basis.[1] As witness De May testified, in concept this component of the Company Proposal aims "to preserve the cash flow and credit quality, and we can skin that cat a few ways." Tr. Vol. 5, p. 87.

Combined, therefore, the three component parts of the Company Proposal net to a reduction in the Company's annual revenue requirement of almost $107 million. Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1. The Company Proposal implements an immediate reduction in rates to reflect the 21% Federal corporate income tax rate, but also, as witness De May testified, mitigates the impacts and "preserve[s] ... [the Company's] credit quality ... to something that resembles pre-tax reform." Tr. Vol. 5, p. 82.

On cross-examination, Company witnesses Fountain and McManeus were questioned about the Company's income tax proposal. Witness McManeus acknowledged that ratepayers advanced the funds that constitute the Federal EDIT at issue. Tr. Vol. 6, p. 399. She also conceded that tax normalization laws do not dictate when unprotected PP&E Federal EDIT should be returned to ratepayers (unlike protected Federal EDIT). Tr. Vol. 6, p. 399. Witness McManeus further admitted that because unprotected Federal EDIT is not subject to tax normalization rules, the Commission has discretion as to the time period over which the funds will be returned to ratepayers. Tr. Vol. 8, p. 224. She agreed that due to the reduction in the tax rate, the Federal EDIT is no longer needed to cover the Company's taxes. Tr. Vol. 8, p. 224. Witness McManeus acknowledged that the $200 million in accelerated expenses would be included in the Company's revenue requirement. Tr. Vol. 8, p. 226. When asked to identify the specific assets and other items that the Company would include in the proposed $200 million acceleration, she could not identify anything specific, referring to the general options set forth in the proposal. Tr. Vol. 8, p. 230. Witness Fountain conceded that he could understand the positon of some customers who would like to have the benefits of the federal tax reform all flowed back immediately, but testified that the Company's proposal is balanced. Tr. Vol. 7, p. 94.

In response to Commission questions about the Company's income tax proposal, witness McManeus testified that the $200 million figure was provided by witness De May as an appropriate number to accomplish the objectives that he had in mind. The Company did not provide any specific numbers that comprise the $200 million. Tr. Vol. 9, p. 38. Witness Fountain could not identify any specific regulatory assets the Commission could select for accelerated amortization. Tr. Vol. 9, p. 90. Witness Fountain acknowledged that the Company is merely trying to achieve a particular financial metric for its cash flow. Tr. Vol. 9, p. 90.

On March 19, 2018, Public Staff witness Boswell filed her Second Supplemental Testimony. In addition to explaining the current differences between the Company's and the Public Staff's revenue requirement proposals and to refine the outside services adjustment, she addressed DEC's income tax proposal. She explained that while the Company has incorporated the known and measurable reduction in income tax expense associated with the decrease in the federal

[1] Kathy Sparrow, one of the public witnesses in the public witness hearing held in Charlotte on January 30, 2018, also suggested that tax reform gains and coal ash costs could offset against each other. Tr. Vol. 3, p. 95.

corporate income tax rate, the Company appears to have made the refunding of known and measurable tax dollars owed to ratepayers contingent upon increasing annual expenses by $200 million per year for an unknown number of years through the acceleration of depreciation for as yet unknown assets or through accelerating the amortization of costs associated with coal ash basin closures. Tr. Vol. 26, p. 634. She also noted that the Company has calculated the known and measurable refund of protected Federal EDIT based upon tax normalization rules. However, regarding unprotected Federal EDIT, she stated that the Company has proposed an amortization of approximately 82% of its unprotected Federal EDIT over 20 years, with the remaining 18% amortized over five years.

Thus, the Company's and the Public Staff's proposals differ as to: (1) the rate at which unprotected Federal EDIT should be flowed back to ratepayers; and (2) whether it is appropriate to increase the Company's revenue requirement by $200 million to accelerate depreciation of unknown and unspecified assets or legacy meters, or accelerated amortization of coal ash costs. Tr. Vol. 26, pp. 634-35. Witness Boswell noted that the Company does not dispute that the Commission has the discretion to flow back all of the unprotected Federal EDIT over any time period it finds appropriate. Tr. Vol. 26, p. 636. Company witness De May testified extensively regarding the impact implementation of the Tax Act could have on the Company's credit quality and the importance of maintaining the Company's current, high credit rating. Witness De May explained that as a result of the Tax Act, Duke Energy Corporation, the parent Company of DEC, was placed by Moody's on negative credit outlook. Tr. Vol. 4, p. 541. He explained that a negative outlook is different from a ratings downgrade. Witness De May stated that it is "like a yellow light, a warning" (id.), signaling to the investment community that a ratings downgrade could materialize in the next 12 to 18 months. Id. The January 2018 Moody's Report states that the Tax Act is "credit negative" for the utilities sector because of its impact upon cash flow, and that among the companies most negatively impacted is Duke Energy Corporation, the parent company of DEC. January 2018 Moody's Report, pp. 1, 3. The Report specifically notes that the parent corporation's "consolidated cash flow credit metrics are currently weakly positioned and likely to be incrementally pressured by tax reform." Id. at 5.

While Moody's has not put DEC on negative credit outlook, as witness De May explained, "the risk to Duke Carolinas is not zero just because it was not named in the initial report." Tr. Vol. 4, p. 542. Witness De May testified that while DEC currently maintains "a very strong balance sheet," the Tax Act is biased toward the health of corporations, and because utilities are structured different than most corporations, the Tax Act impacts utilities negatively. Tr. Vol. 5, p. 82. As Moody's notes, "most utilities will attempt to manage any negative financial implications of tax reform through regulatory channels ... [and that] actions taken by utilities will be incorporated into our credit analysis on a prospective basis." Moody's January 2018 Report, p. 3.

Moreover, witness De May elaborated, during cross-examination by counsel for CIGFUR III, on the negative impact of weakening the Company's balance sheet: "Duke Energy Carolinas' customers benefit from a strong utility company ... [and] a weakening of the balance sheet is not in the customer's interest, and it does not support the Company's capital plan ...." Tr. Vol. 4, pp. 436-37. He testified further, "[u]ltimately, adverse cash flow impacts also have an adverse impact upon customer rates – DE Carolinas' customers benefit through lower electricity rates when the Company has lower financing costs, greater access to capital, and more timely cash recovery of its investments." Id. at 88-89.

The Company has proposed a 20-year flowback of unprotected but property-related EDIT. The Public Staff has criticized this aspect of the Company Proposal on several grounds. First, Public Staff witness Boswell asserted that the Company has "artificially" created the class of unprotected property-related EDIT. Tr. Vol. 26, p. 636. Witness De May explained that the 20-year period in the Company Proposal is tied directly to the underlying assets that created the deferred tax balances that became Federal EDIT when the Tax Act dropped the corporate income tax rate to 21%. As witness De May testified:

> I would say that from a theory perspective, those excess deferred taxes actually have a life. When I described to you what happened in a single asset where we collect from customers before we pay the government and then we're paying the government, but not collecting from customers, that is something that is dealt with through normalization. But there's a life to that; there's a life cycle to that, and protected and unprotected property related deferred taxes are no different except for the fact that they come from two places in the Internal Revenue Code and the statute protects one and it doesn't the other.

Tr. Vol. 5, p. 78. Witness De May testified further in response to questions from Commissioner Brown-Bland that he trusted "firmly in the theory behind the flowback of excess deferred taxes over the life of the underlying assets" (id. at 102-03.), that the normalization concept underlying the 20-year flowback proposal was discussed at length in the GAO Report, and that "normalization exists for a reason ...." Id. at 103. Witness De May testified that normalization balances the customer and Company interests; it protects the Company's cash flow and also protects the customer against rate volatility, because the deferred balance acts as an offset to rate base, and, therefore, a reduction in rates. Id. at 104.

Also, as both the GAO Report and witness De May noted, deferred taxes represent an interest-free loan from the government that the Company then used, at no cost to customers, to invest in its business. Tr. Vol. 5, pp. 72-73. Witness De May explained that by making these investments, customers saved capital costs by the Company using an interest-free loan from the government rather than investor-supplied capital. However, witness De May testified that because these funds have been invested there is not a readily available reserve pool from which the cash needed to flow back the EDIT can be drawn and the Company would have to enter into financings to flow back EDIT in two years as originally proposed by the Public Staff. Id. at 79. He explained that it helps avoid volatility in customer rates. Id. at 80. Witness De May stated that, "[i]f we flowback these excess deferred taxes instantly or over a two-year period, you would see a dramatic reduction in customer rates followed by a snapping back of rates" and then a faster growth in rates due to the higher rate base. Id.

The Public Staff also raised generational equity concerns in advocating for a shorter flowback time period. EDIT funds, it indicated, "rightfully belong to the ratepayers and should be returned to them as soon as reasonably possible." Tr. Vol. 26, p. 637. Witness De May responded, "... we have to think about how that balance got created." Tr. Vol. 5, p. 73. Witness De May noted that it was created because of tax deferral, and the funds so generated then were invested in the business. Id. The Company argued that normalization, or the gradual return of EDIT over the life of the capital asset being depreciated, actually fosters generational equity by spreading the depreciation benefit over that time period.

The Company asserted that the Public Staff's proposed 5-year flowback would negatively impact its credit metrics. Tr. Vol. 5, p. 86. DEC maintained that, in fact, Hinton Cross Examination Exhibit 1 indicates that the relevant FFO/Debt ratios for the Public Staff Proposal over the Company's five-year planning horizon would fall below the 25% threshold, which the most recent Moody's report on DEC warned could result in a possible downgrade. See Moody's October 2017 Report, p. 2.

Finally, the Public Staff criticized the Company Proposal on the basis that in the last major overhaul of the Tax Code in 1986, the Company proposed and the Commission accepted a 5-year flowback of unprotected EDIT. See Order Allowing Rates to Become Effective (Stipulated 1987 Order), dated December 4, 1987, filed in Docket Nos. M-100, Sub 113 and E-7, Sub 415.

The Company, however, noted some differences between the 1986 tax law and today's Tax Act. First, DEC asserted that the total amount of the North Carolina retail portion of unprotected Federal EDIT is approximately $953 million, and in 1987, the North Carolina retail portion of unprotected Federal EDIT was approximately $28 million. See Application by Duke Power Company for Authority to Decrease Electric Rates and Charges (Stipulated 1987 Application), dated November 13, 1987, filed in Docket No. E-7, Sub 415. Also, as witness De May testified, the magnitude of the reduction in tax rates was smaller in 1986 – the reduction was from 46% to 34%, a 26% decrease, while today the reduction was from 35% to 21%, a 40% decrease. Tr. Vol. 4, p. 446. Finally, DEC argued that the general business environment was different as well. Witness De May testified that in 1986, the Company experienced 5-6% customer growth and today it is half of a percent. Id. at 448. See De May – Public Staff Cross-Examination Ex. 21, Slide 24. Witness De May also stated that the Company is "experiencing environmental challenges unlike anything we had in 1986." Tr. Vol. 4, p. 448.

According to DEC, another credit supportive measure is the third component of its Proposal, which mitigates the negative cash flow impact of Federal EDIT flowback by increasing revenue requirements by $200 million annually. The Public Staff indicated that it is "adamantly opposed" to this part of the Company Proposal. Tr. Vol. 26, p. 639. The Public Staff argued that adoption of this part of the proposal would "virtually" wipe out the "entire" benefit to customers. Id. The Company, however, has noted that customers will benefit under the Company Proposal by $107 million per year. Revised McManeus Workpapers – Updated for Post-Hearing Issues, Schedule 1-1. This component of the Company Proposal provides for early collection of regulatory assets – that is, from the customer perspective, liabilities otherwise owed to DEC by customers. Tr. Vol. 4, p. 445. Witness De May explained that extinguishing these liabilities has a beneficial effect on the Company's cash flows, but also means that customers will pay less in the future. Id. DEC maintained that accelerated payment also reduces the carrying cost of those regulatory assets, again lowering customer charges. Moreover, the Company noted that the Moody's January 2018 Report forecasted this exact type of regulatory outcome, which Moody's predicts will be credit supportive as utilities work through regulatory channels to manage the negative financial implications of tax reform, stating: "For example, to offset a decline in cash flow, utilities could propose to regulators additional investments that benefit customers or accelerate recovery of regulatory assets." Moody's January 2018 Report, p. 3.

The AGO asserted in its post-hearing brief that as a result of recent reductions in the federal corporate income tax, DEC's costs are much lower going forward and it has accrued a large sum in federal deferred taxes that it no longer needs. The AGO argued that these cost reductions should be flowed through to ratepayers promptly. The AGO recommended that the Commission reject DEC's problematic proposals and approve utility rates that promptly flow through the benefits for customers. The AGO stated that it concurs with the testimony given on behalf of DEC's ratepayers, who advocate a prompt reduction in the Company's revenue requirement to account for the cost of service impact.

The AGO maintained that the extra $200 million increment sought by DEC should be rejected, because by deviating from the statutorily mandated ratemaking formula, DEC would establish rates that are inflated by design. The AGO asserted that fixing rates that are intended to over-collect revenues is contrary to the ratemaking formula in N.C. Gen. Stat. § 62-133(b) and (c), and violates key ratemaking principles. The AGO stated that the Commission's responsibility is to "fix such rates as shall be fair both to the public utilities and to the consumer." N.C. Gen. Stat. § 62-133(a). The AGO further stated that the statutory intent is that the Commission "fix rates as low as may be reasonably consistent" with Due Process constitutional considerations.[1] The AGO asserted that the burden of proof is on the utility to show that its proposed changes in rates are just and reasonable according to N.C. Gen. Stat. § 62-75; 62-134(c) and that DEC cannot meet that burden.

The AGO noted that Commission precedent and North Carolina case law support the prompt flow-through of tax reform benefits to utility ratepayers. The AGO noted that when Congress passed the Tax Reform Act of 1986, the Commission found that the significant reduction to the tax rate would "have an immediate and favorable impact on the cost of providing ... public utility services to consumers in North Carolina," and concluded that "[i]t is incumbent upon this Commission to take the appropriate action as required so as to preserve and flow through to ratepayers, as a reduction to public utility rates, any and all cost savings realized in this regard which would otherwise accrue solely to the benefit of the stockholders." Order Initiating Investigation In the Matter of the Tax Reform Act of 1986, issued October 22, 1986 in Docket No. M-100, Sub 113, at 1. The AGO noted that, affirming the Commission's final decision in that proceeding, the North Carolina Supreme Court observed that the purpose of the Commission's proceeding in 1986 was to "take the effect of the reduction in tax rates and flow it through to the ratepayers." State ex rel. Utils. Comm'n v. Nantahala, 326 N.C. at 197, 388 S.E.2d at 122.

The AGO stated that, similarly, when the North Carolina legislature adopted tax reform in 2013, it intended for the benefits of reduced state income taxes to be flowed through to ratepayers as the tax changes occurred. See In the Matter of Implementation of House Bill 998 – An Act to Simplify the North Carolina Tax Structure and to Reduce Individual and Business Tax Rates in Docket No. M-100, Sub 138.

---

[1] State ex rel. Utils. Comm'n v. Duke Power Co., 285 N.C. 377, 388, 206 S.E.2d 269, 276 (1974) (Duke Power).

The AGO maintained that furthermore, although DEC has claimed that customers may be harmed by the reduction to its cash flow prompted by a reduction in rates, the evidence in support of that hypothetical position was not substantiated. The AGO stated that the Tech Customers witnesses Brown-Hruska and Strunk reviewed claims by DEC witness De May that the Company's funds from operations to debt (FFO/Debt) ratios would drop to the point that a downgrade would likely occur. The AGO stated that based on their review of the projected FFO/Debt ratios proffered by witness De May and the most recent credit assessment from Standard & Poors, they concluded that DEC's credit metrics would not be jeopardized by the elimination of the additional $200 million in cash flow. Tr. Vol. 26, p. 514.

The AGO noted that, rather, the Company's projections demonstrate that the Company is on track to maintain and even to exceed, after implementation of the Tax Act, FFO/Debt ratios in the range of 24 to 26 percent, which is the base case assumption relied upon by S&P before the Tax Act became law. Consequently, the AGO recommended that the Commission reject DEC's request for a $200 million annual increase in its revenue requirement.

The AGO noted that another impact of the federal income tax rate reduction is that it prompts a large reduction in the amount of accumulated deferred income taxes that DEC has accrued. The AGO stated that DEC acknowledges that customers should benefit from the excess accumulation. The AGO stated that, nonetheless, DEC proposes to spread out the return of most of the excess over many years, so that its rates are not reduced as much as they would be if the excess is returned promptly.

The AGO stated that it supports a return of the excess deferred taxes as soon as possible, but in no event longer than the initial recommendation of the Public Staff to return the excess deferred income taxes over 2 years because ratepayers will benefit immediately from the use of the amounts they are owed. The AGO argued that DEC has not supported its claim that any harm will fall to customers by the prompt return of the funds, and it is time for DEC to stop relying on excess revenues or a loan from its customers to maintain the overly flush cash flow that was provided under former tax deferral policies. The AGO asserted that the alternative of not returning dollars to consumers who struggle to pay their bills, or to consumers who would use their money for different purposes if given the opportunity, results in an undue burden on ratepayers and communities in North Carolina.

CIGFUR III stated in its post-hearing brief that the Commission should reject DEC's proposal to prolong the return of unprotected PP&E EDIT to ratepayers over a period of 20 years and should implement the Public Staff's proposal to return all unprotected EDIT over a five-year period.

CIGFUR III stated that in the early years of a given capital asset, the utility collects more in tax expense from ratepayers than it pays out to the IRS due to the difference in accelerated depreciation for tax purposes and straight-line depreciation for ratemaking purposes; that situation reverses once the ratemaking depreciation expense begins to exceed the tax depreciation. CIGFUR III noted that assuming that tax rates stay constant, over the life of a capital asset, the total tax expense paid by the ratepayers to the utility should match the tax expense the utility pays in federal taxes. CIGFUR III maintained that as a result of the differences in depreciation timing and because tax funds are ratepayer supplied, in the early years of a given capital asset ratepayers provide the utility an interest-free loan, reflected as a credit to the utility's ADIT liability account. CIGFUR III noted that due to the Tax Act, DEC's future tax liabilities will not be as high as anticipated when DEC filed its general rate case in August 2017, and the amount by which DEC's current ADIT balances exceed their future income tax liability because of the Tax Act are the EDIT at issue.

CIGFUR III stated that while certain EDIT have been designated by the IRS code as "protected" and are required to be normalized over the remaining life of the asset, the Commission has wide discretion in the timing and duration of the return of "unprotected" EDIT. CIGFUR III recommended that the Commission conclude that unprotected EDIT should be promptly flowed back to ratepayers; however, the Company proposes to delay returning what it designates as unprotected PP&E EDIT, although it concedes that this category of EDIT is not subject to IRS tax normalization rules. CIGFUR III stated that it opposes delayed return of unprotected EDIT and supports the Public Staff's recommendation that the unprotected EDIT be returned to ratepayers over 5 years.

CIGFUR III argued that the tax normalization rules are very clear and either EDIT is protected, or it is not. CIGFUR III asserted that the EDIT that the Company designates as "PP&E-related" is still clearly unprotected; a fact conceded by the Company. CIGFUR III stated that the Company's assertion that it should only return this PP&E-related unprotected EDIT over the same period of time it would have paid the funds to the IRS had the tax law not been passed is not supportable by any logical accounting or ratemaking principle, and should not dictate this Commission's decision as to what is a reasonable amount of time within which to return these funds to ratepayers. CIGFUR III asserted that these funds rightfully belong to the ratepayers and should be returned to them as soon as reasonably possible.

CIGFUR III maintained that while DEC stated that the delayed refund of unprotected EDIT is needed to protect its FFO/Debt ratio and thus its credit metrics, it has failed to offer compelling evidence in support of this justification. CIGFUR III asserted that to the contrary, Public Staff witness Hinton testified and concluded that, "it is unlikely that spreading the EDIT over five years will result in a debt rating downgrade and it is reasonable and fair to Duke's ratepayers and the Company." Tr. Vol. 22, p 277. As such, CIGFUR III urged the Commission to adopt the Public Staff's proposal to return all unprotected EDIT over 5 years.

CIGFUR III also recommended that the Commission reject DEC's proposal to "smooth out rate volatility" by slowing the flowback of benefits to ratepayers by accelerating the depreciation of ill-defined assets amounting to $200 million per year. CIGFUR III noted that DEC has requested this $200 million annual increase to its revenue requirements to collect expenses related to AMR meters, coal-fired plants, or coal ash clean up on an accelerated basis; specifically, the Company contended that its requested $200 million annual increase in its revenue requirement is required to mitigate the negative cash flow impact of the revenue requirement reductions resulting from the Tax Act and protects the Company's pre-Tax Act credit quality. CIGFUR III contended that, however, to the contrary, witnesses Strunk and Brown-Hruska, testifying on behalf of the Tech Customers, contended that:

> [T]he projected FFO/Debt ratios, adjusted so as to eliminate the request for an additional $200 million in cash flow, do not jeopardize the Company's credit metrics. Rather, the Company's projections demonstrate that the Company is on track to maintain and even to exceed – after implementation of the Tax Act – FFO/Debt ratios in the range of 24 to 26 percent, which is the base case assumption relied upon by S&P before the Tax Act became law. Consequently, we recommend that the Commission reject DEC's request for a $200 million annual increase in its revenue requirement.

CIGFUR III Brief, pp. 23-24.

CIGFUR III stated that as a result of the analysis performed by the Tech Customers witnesses and the Company's failure to present compelling evidence of financial harm, it contends that DEC's request to increase its annual revenue requirement by $200 million is unnecessary and should be rejected.

CUCA argued in its post-hearing brief that DEC's rates should be adjusted to give customers full credit for the reduction in the Federal corporate income tax rate from 35% to 21% contained in the Tax Act. CUCA asserted that giving the customers the full benefit of a 100% flow through of this federal income tax reduction will help to soften the economic blow to consumers' budgets that will result from any rate increase approved by the Commission in this case. CUCA noted that DEC, however, argued that the benefits of the Tax Act should not be 100% flowed through to the customers right away and instead, the customers should be required to accept a delayed payment of some of the benefits of the tax reduction while DEC makes other uses of the customers' money.

CUCA asserted that the "math in this situation does not require a rocket scientist to solve": Federal income tax rates are reduced from 35% to 21% and the "gross up" that DEC requires to account for income taxes is significantly reduced. CUCA stated that if the effective tax rates (like any other item of expense) go down, it has to follow that the utility's revenue requirement also must go down. CUCA Brief, p. 15. CUCA argued that the revenue requirement impact of a reduction in the federal corporate income tax rate from 35% to 21% is a finite, calculable amount. CUCA asserted that customers should immediately receive, as soon as any new rates for DEC become effective, the full benefit of this tax reduction. CUCA opined that DEC should not be able to place a hold on what is, fundamentally, the ratepayers' money by any sort of delayed refund mechanism. CUCA maintained that such a delay puts ratepayers in the position of having to pay "phony" or "phantom" income taxes as a part of the overall utility revenue requirement. CUCA Brief, p. 15.

CUCA noted that DEC argued that, unless it could delay reducing rates by the full amount of the tax reduction, it would be forced into a position of having to borrow working capital funds and that its credit rating could be seriously undermined. CUCA noted that the Supplemental Testimony of the Tech Customers witnesses clearly refutes this argument. CUCA stated that the supplemental testimony shows that DEC will not experience any funding difficulties and will not incur any sort of erosion or damage to its credit rating.

CUCA asserted that to the extent the Commission allows DEC, as DEC has requested, to delay the full impact of the Tax Act tax reductions, then the customers and ratepayers are, in essence, being required to provide an interest free loan to the DEC stockholders. CUCA argued that if the Commission allows this, then the amounts of the Tax Act tax refunds that are not immediately flowed through should bear interest, to be ultimately repaid to the customers, at an annual rate of not less than 10% of the value of the delayed refund during the time of such delay. CUCA stated that that is the only way in which the ratepayers can be made whole for the loan they would be forced to make to the DEC stockholders. CUCA stated that, in addition, if DEC is allowed to delay the full impact of the tax refund implemented by Congress and the President, this delay will tend to reduce the business, financial, and operating risks of DEC. CUCA argued that, therefore, in addition to the payment of interest, the Commission should reduce the rate of return on equity awarded to DEC because of the risk reduction.

The Justice Center et al. stated in their post-hearing brief that the recent changes to federal tax law give the Commission an opportunity to mitigate the impact of any rate increase on the Company's most vulnerable customers. The Justice Center et al. noted that DEC has collected a large pool of unprotected EDIT. The Justice Center et al. urged the Commission to direct $5 million of the EDIT to the Helping Home Fund, which provides efficiency upgrades to low-income customers, for each year of the period over which the EDIT is amortized to flow back to ratepayers. The Justice Center et al. argued that at the same time, the Commission should reject DEC's request to retain $200 million in ratepayer dollars per year as cash-flow protection for the Company.

The Justice Center et al. noted that at the Greensboro public hearing, the executive director of the NCCAA, Sharon Goodson, recommended that the Company contribute up to $5 million annually to the Fund. Tr. Vol. 2, pp. 21-22; Goodson Ex. 1. The Justice Center et al. asserted that a $5 million annual contribution from DEC's unprotected EDIT represents less than 14 percent of the total unprotected EDIT that will flow back to ratepayers, and a smaller percentage of the overall EDIT that is owed to ratepayers.

The Justice Center et al. maintained that there is precedent for using a regulatory liability for the benefit of customers to fund energy-efficiency investments for the utility's low-income customers. The Justice Center et al. noted that the Helping Home Fund itself was originally funded with $10 million of a $20 million regulatory liability from DEP held for the benefit of its North Carolina retail customers.

In addition, the Justice Center et al. stated that sound policy reasons support directing a meaningful portion of the unprotected EDIT for targeted investments in low-income energy efficiency, rather than simply flowing all of the funds to ratepayers through rebates or a decrement rider. The Justice Center et al. maintained that utility investments in energy efficiency help to alleviate high energy burdens faced by low-income households, particularly when those households are faced with rate increases. The Justice Center et al. argued that low-income households, racial minorities, renters, and low-income customers residing in multifamily buildings experience higher than average energy burdens, meaning that they pay a higher percentage of their income on energy bills than their counterparts. The Justice Center et al. asserted that the Southeast faces some of the highest energy burdens in the nation and that households with high energy burdens must face difficult trade-offs between paying utility bills and paying for other necessities such as food, prescriptions, transportation, and medical care. Tr. Vol. 8, pp. 33-38. The Justice Center et al. also stated that low-income households are more likely than the average household to have older and less efficient appliances. The Justice Center et al. stated that by lowering energy costs during periods of high demand, and avoiding or deferring the need to build or upgrade expensive new power plants and transmission infrastructure, investments in energy efficiency also bring system-wide benefits that are shared by all customers. The Justice Center et al. stated that each dollar invested in energy efficiency yields up to four dollars in benefits for customers.

The Justice Center et al. noted that at the evidentiary hearing in this matter, DEC witness Fountain recognized that it would be appropriate for the Commission to direct a portion of the unprotected EDIT for the benefit of low-income customers. The Justice Center et al. stated that when asked whether the Company would object to allocating a portion of unprotected EDIT to the Helping Home Fund, witness Fountain agreed that the Commission could use a portion of the unprotected EDIT for low-income energy-efficiency measures: "the Tax Act is a tool that the Commission has before it that it can use to mitigate customers' rate impacts in a variety of different ways, and...there could be some considerations for low-income customers....it's a very useful tool for the Commission to be able to have." Tr. Vol. 7, p. 57. The Justice Center et al. stated that, moreover, witness Fountain agreed that there was precedent for using a regulatory liability held by the Company for the benefit of ratepayers to support the Helping Home Fund. Id. at 58. The Justice Center et al. noted that Commissioner Patterson asked witness Fountain whether the Helping Home Fund has been favorably received and whether DEC had considered making additional contributions to the Fund in the context of this general rate case. Tr. Vol. 9, pp. 111-12. The Justice Center et al. maintained that while witness Fountain praised the program, he acknowledged that the Company has made no commitment to further support the program from shareholder dollars or otherwise in this rate case.[1] Id. The Justice Center et al. stated that similarly, Commissioner Clodfelter and Chairman Finley urged DEC to consider additional ways to meet the needs of low-income customers, including consideration of the Ohio Percentage of Income Payment Plan and the Missouri "Dollar More" program. Tr. Vol. 9, pp. 97-98; 114-15.

The Justice Center et al. maintained that DEC's failure to offer any assistance to its low-income customers to mitigate the effects of its proposed increase in rates and charges should be relevant to the Commission's decision whether to grant any of those requested increases. See, e.g., Order Granting General Rate Increase, Docket No. E-2, Sub 1023, p. 82 (May 30, 2013) (finding that funding of low-income assistance programs "is a just and reasonable measure to mitigate the impact of the proposed rate increase on . . . low-income customers"). The Justice Center et al. noted that the potential impact of new rates on customers is a "critical consideration" in the Commission's determination on whether to accept those new rates. Cooper, 366 N.C. at 495, 739 S.E.2d at 548 (holding that the Commission must consider the impact of changing economic conditions on customers when determining return on equity for a public utility). The Justice Center et al. asserted that to the extent that the Commission grants any component of DEC's request for a rate increase, it would be reasonable to order the allocation of $5 million per year of DEC's unprotected property, plant, and equipment EDIT to the Helping Home Fund for as long as that EDIT is amortized to flow back to ratepayers.

---

[1] On June 1, 2018, DEC made a shareholder-funded commitment of $4 million for programs including those to assist low-income customers.

Kroger asserted in its post-hearing brief that customers should receive the full benefit of the tax savings provided by the Tax Act. Kroger noted that the reduction in the corporate income tax rate per the Tax Act will reduce DEC's federal income tax expense for regulatory purposes and that this reduction in tax expense should directly reduce the revenue requirement in this case. Kroger stated that viewed in isolation, this single component of the change in tax law, i.e., the reduction in the tax rate from 35 percent to 21 percent, reduces DEC's revenue requirement by a significant amount.

Additionally, Kroger noted that the Tax Act has implications for DEC's ADIT. Kroger stated that DEC accumulates these deferred income taxes in the ADIT on its regulatory books in an amount equal to this anticipated future tax liability. Kroger asserted that now that the corporate income tax rate has been reduced by 40 percent, DEC's anticipated future tax liability has also decreased by a comparable amount. Kroger noted that as of January 1, 2018, when the new tax rates became effective, a substantial portion of the ADIT on DEC's books will be considered to be "excess" ADIT. Kroger asserted that this excess ADIT should be returned to customers.[1]

Kroger recommended that the Commission reduce the revenue requirement in an amount that provides customers with the full benefit of the tax savings provided by the Tax Act and that the Company's revenue requirement in this case should be adjusted to reflect the direct impact to its cost-of-service and excess ADIT should be credited to customers starting with the rate effective period in this general rate case.

NCLM noted in its post-hearing brief that its witness Brian W. Coughlan provided testimony that DEC's rates should be adjusted downward to account for the significantly lower corporate income tax rates that DEC will pay since the enactment of the Tax Act. Tr. Vol. 8, pp. 105-107. NCLM noted that its Settlement Agreement with DEC did not resolve the issues raised by NCLM as to adjusting all rates downward to account for the lower corporate income tax rates in the Tax Act. NCLM stated that DEC's unanticipated tax savings should be used to mitigate any rate increase.

NCLM stated that its witness Coughlan addressed this issue in his testimony to supplement the Commission's work in Docket No. M-100, Sub 148. Tr. Vol. 8, pp. 105-107. NCLM noted that witness Coughlan simply asserted that, "[t]he new tax cuts should be taken into account now. The new tax rates take effect before the new electric rates will take effect. If the new tax rates are not accounted for at this time, DEC will have significantly higher than expected and appropriate earnings, and DEC customers will pay unfairly high rates between now and the next rate case." Id. at 106. NCLM respectfully requested that the Commission allow rate payers to benefit from the tax cuts to the maximum extent possible in this docket.

The Tech Customers asserted in their proposed order and post-hearing brief that the Commission is required in this general rate case to, among other things, account for the Company's operating expenses for the test year, taking into account "evidence ... tending to show actual changes in costs". See, e.g., N.C. Gen. Stat. §§ 62-133(b)(3) and (c). The Tech Customers stated that given this requirement, the effects of the Tax Act as to the rates charged by the Company

[1] Direct Testimony of Kevin Higgins, pp. 6-7.

should be addressed in this general rate case rather than the separate, generic proceeding that the Commission has initiated in Docket No. M-100, Sub 148. The Tech Customers asserted that the Public Staff's proposal for return of EDIT best balances the need to return tax overcollections to ratepayers as promptly as possible with the appropriate regulatory goals of avoiding adverse rate impacts for ratepayers and allowing sufficient time for DEC to manage its cash flow so as to avoid negative impacts to its credit metrics.

Further, the Tech Customers maintained that DEC's proposal to offset the reduction in its revenue requirement resulting from the Tax Act with $200 million in accelerated depreciation expense is not sufficiently supported in the record and raises significant legal and practical concerns. The Tech Customers argued that a decline in revenues resulting from a change in federal tax law does not, by itself, support the adoption of offsetting revenue increases where those increases are not independently justified and supported.

The Tech Customers noted that given that the issue relating to the implementation of federal tax reform was introduced into this proceeding after the filing of testimony by the parties, the parties have addressed this issue through supplemental testimony, examination at hearing, and in post-hearing briefing.

The Tech Customers noted that they offered Supplemental Testimony of witnesses Strunk and Brown-Hruska. The Tech Customers witnesses evaluated the reasonableness of DEC's contention that a $200 million annual increase in spending was necessary to support its credit metrics. The Tech Customers stated that based on the projected FFO/Debt ratios offered by DEC witness De May and a review of the most recent credit assessment of Standard and Poor's, witnesses Strunk and Brown-Hruska found that DEC's projected FFO/Debt ratios, adjusted to eliminate the request for an additional $200 million in cash flow, do not jeopardize the Company's credit metrics. Tr. Vol. 26, p. 514. The Tech Customers stated that, instead, their analysis study shows that DEC is on track to maintain, or even exceed, its stated FFO/Debt ratio goal after implementation of federal tax reform. Id. The Tech Customers maintained that witnesses Strunk and Brown-Hruska also compared DEC's FFO/Debt ratio to those of comparable companies, including those in witness Hevert's proxy group, and found that DEC's ratios are in line with, or above, those of the comparable companies and that its FFO/Debt ratios are among the healthiest among the proxy group companies both on a current and projected basis. Id. at 516-517. Based on this analysis, the Tech Customers noted that their witnesses concluded that DEC's rationale for its proposal was inconsistent with the financial forecasts it has provided in its own exhibits and not necessary to protect its current credit standing. Id. at 519.

The Tech Customers stated that the Commission is required in this general rate case to, among other things, account for the Company's operating expenses for the test year taking into account "evidence . . . tending to show actual changes in costs." See, e.g., N.C. Gen. Stat. § 62-133(b)(3) and (c). The Tech Customers asserted that this statute suggests, if not mandates, that the Commission implement tax reform in this proceeding.

Further, the Tech Customers stated that they agree with the Public Staff's recommendations concerning EDIT. The Tech Customers stated that they do not find support in accounting or ratemaking principles for the distinction in unprotected EDIT advocated by DEC. The Tech Customers stated that the PP&E assets for which DEC seeks a 20-year amortization period, like other unprotected EDIT, are not subject to IRS normalization rules. The Tech Customers asserted that Congress intentionally excluded EDIT from unprotected assets from the treatment given to protected EDIT because the excluded assets do not have normal useful lives. The Tech Customers noted that DEC asserted that unprotected PP&E EDIT is similar in nature to protected EDIT (which is also related to PP&E) and therefore it is reasonable to flow it back over a similar period. Tr. Vol. 5, p. 78. However, the Tech Customers stated that they can discern no principled basis for distinguishing between the assets in the manner proposed by the Company and an examination of the specific assets in this category suggests that they include assets (e.g., casualty loss, depreciation lag, AFUDC debt, pension cost) with highly uncertain accounting lives. See DEC Response to Public Staff Data Request No. 155-3, filed March 22, 2018.

Moreover, the Tech Customers argued that 20 years is simply too long a period over which to return over-collected ratepayers' money, and DEC has offered no evidence suggesting otherwise. In this regard, the Tech Customers stated that they are sympathetic to the need to return tax over-collections as expeditiously as possible. See, e.g., Buckeye Pipe Line Co., 13 FERC ¶ 61267, 61594 (1980) ("Millions of the Americans who use [electricity] live in poverty or on very tight budgets. Those people are in no position to lend money to anybody. A state of affairs that compels them to supply . . . electric companies with long-term credit in amounts that may sometimes seem minuscule on a per capita basis to the affluent but that are almost always material to the poor and to those who are just getting by cannot be viewed complacently.").

The Tech Customers noted that DEC has also raised concerns about the impact of the EDIT flowback on its cash flow that it speculates could negatively impact its credit metrics. Tr. Vol. 5, pp. 67-83. While the Tech Customers acknowledged the concerns raised by DEC, as well as the benefits that ratepayers derive from the Company's strong credit profile, the Tech Customers recommended that the Commission conclude that DEC's evidence on this point is not compelling or convincing.

Moreover, the Tech Customers noted that the Company's concerns over cash flow and credit metrics are mitigated, to an extent, by the Public Staff's five-year flow back proposal that provides the Company with the benefit of removing the total amount of the unprotected EDIT credit from the rate base in the current case, which benefits the Company by increasing rates and thereby moderating any cash flow issues, to the extent they may arise. The Tech Customers asserted that the financing cost to the Company will be imposed ratably over the period that the EDIT is returned through the levelized rider.

Finally, the Tech Customers recommended that the Commission conclude that DEC's proposal to offset the reduction in its revenue requirement resulting from the Tax Act with \$200 million in accelerated depreciation expense is not sufficiently supported in the record and raises significant legal and practical concerns. The Tech Customers maintained that a decline in revenues resulting from a change in federal tax law does not, by itself, support the adoption of offsetting revenue increases where those increases are not independently justified and supported. The Tech Customers asserted that aside from the desire to offset reductions resulting from the change in tax law, the Company has not offered any principled explanation of the need for accelerated depreciation nor has it offered any basis for applying special depreciation rates for particular assets. The Tech Customers noted that DEC does articulate concerns about adverse rate impacts on consumers, but the Tech Customers support a five-year return of EDIT that will help ameliorate adverse impacts resulting from the return of EDIT. Moreover, the Tech Customers maintained that as to DEC's credit metrics, record evidence suggests that DEC's projected FFO/Debt ratios, adjusted to eliminate the proposed additional $200 million in cash flow, will not jeopardize the Company's credit metrics. Tr. Vol. 26, p. 514. The Tech Customers stated that, instead, evidence suggests that DEC will be on track to maintain, or even exceed, its stated FFO/Debt ratio goal after implementation of federal tax reform without an annual $200 million revenue increase. Id.

In light of the parties' testimony and all of the evidence presented, the Commission finds and concludes that it is appropriate to: (1) recognize a $211,512,000 per year reduction in DEC's revenue requirement to reflect the current 21% Federal corporate income tax rate; (2) deny DEC's proposed $200 million per year credit metric mitigation measure; and (3) allow DEC to continue to maintain all EDIT related to the Tax Act in a regulatory liability account for three years or until its next general rate case, whichever is sooner, at which point it will be returned to DEC's customers with interest reflected at the overall weighted cost of capital approved in this case of 7.35%. The Commission concludes that this approach appropriately balances the interests of DEC and its ratepayers.

The evidence shows that there is some agreement between the parties regarding how to implement the effects of the Tax Act. The Company and the Public Staff agree upon the revenue requirement effect of the decrease in the corporate income tax rate, the repeal of the manufacturing tax deduction, and the elimination of bonus depreciation. No party disputes the amounts presented by the Company and the Public Staff regarding the impact of the Tax Act on these issues, and the Commission finds and concludes that the revenue requirement changes presented by the Company and the Public Staff related to these issues are appropriate and should be approved. This decision results in a $211,512,000 per year reduction in DEC's revenue requirement.

Further, the Commission gives great weight to the testimony of the Public Staff, the AGO, CIGFUR III, the Justice Center et al., Kroger, NCLM, and the Tech Customers that DEC's proposed $200 million per year credit metric mitigation measure is inappropriate and should be denied. Therefore, the Commission declines to allow the Company to include an additional $200 million in its annual revenue requirement for the purpose of offsetting the impacts of the Tax Act on DEC's revenue requirement.

The Commission agrees with the Public Staff that DEC's request amounts to essentially eliminating the benefit of the corporate income tax decrease on the Company's ongoing expenses. DEC's request for this extraordinary relief was presented in very vague and uncertain terms; the Company simply mentioned a few possible uses for the additional $200 million in annual revenue. None of the Company witnesses could even articulate the reason for the $200 million number, nor could they provide a breakdown of what that number represents, other than that witness De May felt the number to be appropriate. The Commission further agrees with the Tech Customers that a decline in the tax rate does not support the adoption of an offsetting revenue requirement increase that is not independently justified and supported. The Commission also agrees with the Tech Customers that adoption of the $200 million proposal would raise significant legal and practical concerns. Moreover, as noted by the Public Staff, the request was not time-limited; in theory, the additional $200 million in revenue requirement would equate to $1 billion after five years. Finally, the Commission finds and concludes that offsetting known and measurable reductions in taxes to be paid going forward against the recovery of unknown ongoing coal ash basin closure costs as ultimately proposed by DEC in its Post-Hearing Brief and Proposed Order in this docket in order to delay reflecting the current Federal corporate income tax rate in base rates constitutes inappropriate ratemaking.

The Commission finds that the $200 million in additional annual revenue requirement appears solely designed to arbitrarily inflate the Company's revenue requirement beyond the actual cost of service. The Company essentially seems to be telling ratepayers that they can receive the reduction in the tax rate, but they have to pay most of it back through accelerated depreciation expenses. The Commission rejects this proposal as arbitrary. The Commission is confident that the Company's management can navigate this situation without artificial and arbitrary adjustments to annual revenue requirement. The Commission concludes that the Company's request for an additional $200 million per year as a credit metric mitigation measure is not supported by the preponderance of the evidence and therefore is denied.

Finally, the Commission notes that DEC filed its rate case application in August 2017, four months before the enactment of the Tax Act. The Commission finds that it is appropriate to recognize this fact in rendering its final decision in this matter. The Tax Act is the most significant federal tax legislation since the 1986 Tax Act enacted some 30 years ago. Based on this fact and finding that the evidence presented by DEC concerning its credit metrics and a possible credit downgrade merit some weight, the Commission concludes that DEC shall maintain all of its EDIT in a regulatory liability account pending flow back of that liability to DEC's ratepayers with interest reflected at the overall weighted cost of capital approved in this case of 7.35% in three years or in DEC's next general rate case proceeding, whichever is sooner. If DEC has not filed an application for a general rate case proceeding by June 22, 2021, it shall file its proposal by that date to flow back to its ratepayers both the protected and the unprotected EDIT generated due to the Tax Act. The federal EDIT flowback proposal should include all workpapers that support the proposed calculations. The Public Staff is specifically requested to file comments on the proposal by no later than July 22, 2021. Other parties also may file comments on the proposal by no later than July 22, 2021.

The Commission notes that in the generic rulemaking proceeding established by the Commission to address the recent changes in the State corporate income tax rate (Docket No. M-100, Sub 138), the Commission concluded that EDIT for all utilities, as appropriate, were to be held in a deferred tax regulatory liability account until they could be amortized as reductions to income tax expense for ratemaking purposes in each utility's next general rate case proceeding. The Commission stated that it agreed with PSNC Energy's comments in that docket that recognizing the amortization of the EDIT in the next general rate case of a utility would provide for certainty as to the amount to be amortized instead of having to base the flow-back calculation on an estimate. In that proceeding, no party objected to that option of handling the EDIT. In addition, the Commission noted in its May 13, 2014 Order in the generic proceeding that both Carolina Water Service, Inc. of North Carolina (CWSNC) and Aqua had had open rate case proceedings at the time the generic State tax docket was initiated. A rate order was issued in CWSNC's rate case docket on March 10, 2014, and a rate order was issued in Aqua's rate case docket on May 2, 2014. The Commission concluded in the May 13, 2014 Order that the expense piece of the State corporate income tax rate change was reflected in the rates established in the CWSNC and Aqua open rate case proceedings, but that CWSNC and Aqua needed to adhere to the findings on State EDIT outlined in the May 13, 2014 Order. The May 13, 2014 Order concluded for the State EDIT that each utility was to hold the State EDIT in a deferred tax regulatory liability account until they could be amortized as reductions to income tax expense for ratemaking purposes in each utility's next general rate case proceeding. The Commission's decision herein is reasonably consistent with the treatment of CWSNC and Aqua in the generic State corporate income tax proceeding.

Further, the Commission notes that this process used in Docket No. M-100, Sub 138 has worked well and customers received or are receiving EDIT related to the State corporate income tax rate changes. In fact, in this proceeding, DEC and the Public Staff stipulated to begin returning (four years after the Commission's State EDIT decision in the May 13, 2014 Order in the generic rulemaking docket) to DEC's customers the State EDIT through a four year decrement rider.

In addition, the Commission notes that in the Commission's 1986 federal corporate income tax law change generic rulemaking proceeding (Docket No. M-100, Sub 113), the Commission concluded in its October 20, 1987 Order to Require Filing of Tariffs to Reduce Rates and Refund Plans to Effect Flow Through of Tax Savings for Those Regulated Companies not covered by Specific Orders on This Matter (1987 Order), as follows:

> [t]hat the appropriate amortization of accumulated excess deferred income taxes will be considered in each company's next general rate case or such other proceeding as the Commission may determine to be appropriate. Any additional amounts relating to the adjustment that should have been made by the company for the flowback of excess deferred income taxes shall be placed in a deferred account and should ultimately be refunded to ratepayers with interest.

1987 Order. Although this conclusion was reached in a generic rulemaking proceeding, the Commission concludes that the fact that DEC had already filed its rate case application before the enactment of the Tax Act in this instant proceeding, it is appropriate to follow this same process for returning Federal EDIT to DEC's ratepayers.

However, the Commission, in its discretion, concludes that it is appropriate in this case to set a time limit for DEC to retain all of the EDIT generated due to the Tax Act. The Commission concludes that it is preferable to address this EDIT in a rate case proceeding; but due to the sheer magnitude of the EDIT that in total is approximately $2.14 billion, the Commission finds that DEC must begin the process to flow back the EDIT to ratepayers no later than three years from the date of this Order (or sooner if DEC files a rate case in less than three years). Therefore, the Commission concludes that if DEC has not filed an application for a general rate case proceeding by June 22, 2021, it shall file its proposal by that date to flow back to its ratepayers both the protected and the unprotected EDIT generated due to the Tax Act. The federal EDIT flowback proposal should include all workpapers that support the proposed calculations. The Public Staff is specifically requested to file comments on the proposal by no later than July 22, 2021. Other parties also may file comments on the proposal by no later than July 22, 2021.

In conclusion, the Commission finds it appropriate to: (1) recognize a $211,512,000 per year reduction in DEC's revenue requirement to reflect the current 21% Federal corporate income tax rate; (2) deny DEC's proposed $200 million per year credit metric mitigation measure; and (3) allow DEC to continue to maintain all EDIT related to the Tax Act in a regulatory liability account for three years or until its next general rate case whichever is sooner at which point it will be returned to DEC's customers with interest reflected at the overall weighted cost of capital approved in this case of 7.35%. The Commission concludes that this approach appropriately balances the interests of DEC and its ratepayers.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 59-64

The evidence supporting these findings of fact and conclusions is found in the Company's verified Application, DEC's Petition for an Order Approving a Job Retention Rider (JRR), filed on August 14, 2017, in E-7 Sub 1152 (JRR Petition), the testimony of Company witness Pirro, the testimony of Public Staff witness McLawhorn, the testimony of other witnesses, the exhibits of witness Pirro, and the entire record in this proceeding. The Commission takes judicial notice of the Company's Initial and Reply Comments filed in Docket No. E-100, Sub 73 where the Company outlined the conditions that led to the loss of industrial jobs and where the Commission issued establishing guidelines on December 8, 2015. (JTR Order)

In its Petition, DEC requests approval of its JRR, a five-year pilot program for industrial customers that is intended to curtail further loss of industrial jobs in DEC's service territory. Petition, at p. 1. The Commission acknowledged the JRR's goal to stem further loss of industry, industrial production and industrial jobs in DEC's service territory as an important policy goal for North Carolina when it adopted the Guidelines for Job Retention Tariffs in Docket No. E-100, Sub 73. Petition at p. 3. Company witness Pirro testified in support of the Company's proposed JRR. Witness Pirro explained that the JRR will benefit ratepayers by retaining North Carolina jobs and strengthening local economies thereby aiding the commercial and residential markets. Tr. Vol. 19, p. 95. Since 2014, 50 manufacturing facilities served by Duke Energy have ceased operation in North Carolina. Id. at 78, 90. Witness Pirro states that the Company's IRP Update, filed on September 1, 2017 in Docket No. E-100, Sub 147, demonstrates the continuing struggles of manufacturing in North Carolina. Tr. Vol. 19, p. 90. He testifies that "[t]he Plan shows a steady decline in the number of industrial customers receiving electric service and our expectation [is] that even by 2023 industrial sales will still be below actual pre-recession sales realized in 2007." Id.

Witness Pirro also explained the eligibility requirements for the proposed JRR. Customers that use electric power as a principal motive power for the manufacture of a finished product, the extraction, fabrication or processing of a raw material, or the transportation or preservation of a raw material or a finished product would be eligible for the Company's proposed JRR. Id. at 90-91. Furthermore, in order to qualify for JRR, industrial customers must show that they (i) have or are considering the ability to shift production from their facilities to facilities in other states or countries; (ii) are considering a need to reduce the employment level at their facilities due in whole or in part to the impact of electricity cost; (iii) intend to reduce or are presently evaluating reduction of production levels or load due in whole or in part to the impact of electricity cost; or (iv) have load that is otherwise at risk of loss. Petition at p. 5. Additionally, eligible customers must have an aggregate electrical load of 3,000 kW or greater, in addition to other conditions described in the Petition and proposed JRR. Tr. Vol. 19, p. 91.

In its Petition, the Company does not seek recovery of the revenue reduction resulting from implementation of the JRR at this time, but instead requests deferral accounting with interest on the amount in excess of the $4.5 million that the Company will absorb on a one-time basis. Petition at p. 3.

CUCA witness O'Donnell testified in support of the Company's proposed JRR. Witness O'Donnell testified that if DEC continues to lose industrial load, the fixed costs of operating the DEC system will be shifted to the remaining customers in an amount even greater than the average 0.74% cited in DEC's Petition. Tr. Vol. 18, pp. 54-55. For example, witness O'Donnell calculated that if the Company's manufacturing load completely eroded, the remaining customers' rates would increase by over 16% annually. Id. at 55. He concluded that it would be much less harmful to residential customers to pay a 0.74% increase for five years than to have a permanent 16.22% increase. Id.

CIGFUR III witness Phillips also testified in support of the Company's proposed JRR. Witness Phillips testified that the Company's proposed JRR follows the Guidelines for Job Retention Tariffs issued by this Commission on December 8, 2015 in Docket E-100, Sub 73, and that the proposed JRR is in the public interest, and recommended that the Commission approve it. Tr. Vol. 26, p. 280. Witness Phillips testified that his review of DEC's historic and projected growth in customers indicated that within the 2007 to 2032 timeframe, the Company will see residential customers increase by 32.2%, commercial customers increase by 23.3%, and industrial customers decrease by 28.6%. Id. at 281. Witness Phillips testified that the proposed JRR will benefit all customers because "[i]f industrial load is lost, DEC would need to recover a larger portion of fixed costs from its remaining customers, resulting in higher electric rates for these customers." Id. at 282. Therefore, preserving jobs and industrial load through the Company's proposed JRR will strengthen the economy and keep electric rates lower for DEC's non-industrial customers. Id. Witness Phillips also testified that the Commission's guidelines in Docket No. E-100, Sub 73 do not exclude pipeline customers that are also important to the North Carolina economy. Id. at 283. Therefore, he testified that it would be unreasonable to impose restrictions on the Company's proposed JRR that exclude those customers. Id. at 284.

While the Public Staff is supportive of the JRR and believes that it is in the public interest, witness McLawhorn expressed several concerns regarding the proposed rider. Tr. Vol. 20, pp. 141-46. First, witness McLawhorn expressed concern with the availability of the rider to customers involved in the "transportation or preservation of a raw material of a finished product," which is understood to include gas pipeline customers. Id. at 141-42. He noted that pipelines are different than other industrial manufacturing facilities in that pipelines are fixed investments that are not easily relocated to another area, and unlike other industrial manufacturers, pipelines do not produce a finished product. Id. at 142. He recommended this disputed phrase be eliminated from the availability section of Rider JRR-1. Second, he argued that there are no specific criteria designated for use by the Public Staff to evaluate customer employment and financial records to aid in evaluating an applicant's justification for seeking the JRR thus depriving the Public Staff of the ability to verify the truthfulness of the information. Id. at 142-44. He also opposed the Company's request for deferral accounting of the revenue loss and the Company's proposal for sharing the discount between the Company's shareholders and ratepayers. Id. at 146. Lastly, witness McLawhorn recommended that the requirement that the discounted revenue must be used to retain jobs in North Carolina be more prevalently displayed in the Application form and that the language in the compliance filing clearly identify the length of the JRR from initial approval. Id. at 145-46.

Despite these concerns, the Public Staff generally supports the Company's proposed JRR, concluding that the rate reduction it provides for industrial customers would "assist them in maintaining jobs and load in North Carolina." Id. at 139-40. Witness McLawhorn testified that the Company's proposed JRR complies with the Commission's Guidelines for Job Retention Tariffs set forth in its December 8, 2015 order in Docket No. E-100, Sub 73. Tr. Vol. 20, pp. 134-38. Witness McLawhorn also testified that the proposed JRR is not unduly discriminatory because it is designed to reach the largest industrial customers, which impact other commercial and residential customer classes. Tr. Vol. 20, p. 138. Witness McLawhorn further stated that the proposed JRR "provides for a balancing of benefits and costs between those customers eligible for [JRR] and those that will bear the reduction in revenue that result from implementation of the rider." Id. at 139. Lastly, witness McLawhorn recommended that the impact of the rate discount be recovered from all retail ratepayers, including the customers eligible for the rate discount. Id. at 147.

Commercial Group witnesses Chriss and Rosa testified in opposition to the Company's proposed JRR. Witnesses Chriss and Rosa state that the proposed JRR fails to comply with Commission guidelines by limiting applicability to a subset of industrial customers and the rigor of verifying customer attestations is unclear. Tr. Vol. 26, p. 547. Witnesses Chriss and Rosa further request that if the JRR is approved, that it be extended to non-industrials that also provide jobs and have aggregate loads of 3,000 kW or greater. Id.

In its post-hearing Brief, Commercial Group continues to advocate a denial of the JRR. However, Commercial Group recognizes that the Commission approved a more limited JRR for DEP in DEP's rate case which included five safeguards, which the Commercial Group contends should be adopted in this case if approved. Commercial Group submits that the JRR would violate N.C. Gen. Stat. § 62-140(a) because it would unjustly discriminate among customers having an aggregate load of at least 3 MW based solely on whether the customer is an industrial customer. Commercial Group contends that this is a return to the Standard Industrial Classification (SIC) code distinctions that the Commission found discriminatory and rejected in prior proceedings. Commercial Group states that the Commission stated its concern in its final Order in DEC's 2011 rate case, Docket E-7 Sub 989, regarding the reasonableness and fairness of maintaining a rate differential based largely on labels such as the SIC codes. Commercial Group quotes N.C. Gen. Stat. § 62-140(a), and states that the legal standard is not whether a public utility can subject a customer to an unreasonable prejudice or disadvantage if doing so would be an advantage to other customers or the utility. Rather, the legal standard is that the public utility cannot grant any unreasonable preference or subject any person to any unreasonable prejudice or disadvantage. Further, Commercial Group contends that industrial customers are not a separate class of service because both industrial and commercial customers are members of the same OPT-V class, and that many non-industrial ratepayers in these classes have an aggregate load of at least 3 MW. According to Commercial Group, where the JRR's only distinguishing characteristic is industrial status, the JRR remains as unlawful and unduly discriminatory as the preference for OPT industrial customers that the Commission previously rejected, and, therefore, the JRR as proposed should be rejected as well.

In addition, Commercial Group states that the proposed JRR definitions and parameters that DEC selected provide only an illusion of being reasonable criteria for determining which customers should receive a rate subsidy. As an example, Commercial Group contends that the applicant could simply state that it has at some time in the past thought about obtaining the ability to move a portion of its operations out of state, but the applicant need not presently have such ability, presently plan to move operations out of state, nor be in such financial condition that jobs would be lost but for a JRR subsidy. Commercial Group further notes that the applicant does not need to maintain existing levels of employment, but instead chooses a level of employment that it states it will maintain, even if the level is lower than its present level.

Commercial Group notes that DEC witness Hevert gave convincing testimony that economic conditions in North Carolina have improved substantially since DEC's last rate case in 2013, and since the Commission adopted job retention guidelines in 2015. The unemployment rate in North Carolina and DEC's service territory has fallen substantially during these periods. Tr. Vol. 4, pp. 161, 165. Further, the correlation between the drop in unemployment in North Carolina and more broadly across the United States has been very high. Id. at 165. Moreover, DEC industrial customers already receive competitive rates that are below the national average and below the average in the Atlantic South region.

Commercial Group questions whether there will be a means to assess the effectiveness of the JRR. Commercial Group cites the testimony of Public Staff witness McLawhorn regarding the report that DEC will be required to file, and states that the report will not provide any reliable, independently verifiable information to determine the success or failure of the JRR. Based on the uncertainty of verifiable results from the JRR, Commercial Groups requests that the Commission should require the same safeguards that it required of DEP for its JRR in DEP's most recent rate case.

Company witness Pirro's rebuttal testimony responded to the concerns raised by other witnesses related the Company's proposed JRR. Witness Pirro agreed with the Public Staff's concern regarding difficulty evaluating customer financial and employment records. Tr. Vol. 19, p. 92. To address this concern, witness Pirro explained that DEC will impose a requirement that an officer of the customer sign the application and the signature be notarized. Id. Witness Pirro also noted that the guidelines don't require a demonstration of financial distress, but the discounted revenue must contribute to job retention in North Carolina. Id.

Additionally, witness Pirro testified regarding the inclusion of customers involved in the "transportation or preservation of a raw material of a finished product", that this language was included to allow the JRR to apply primarily to gas pipeline customers. Id. at 92. He stated that pipeline customers have expressed concerns with electricity costs and have requested rate relief to aid in their North Carolina operations. Id. DEC believes that it is reasonable to include this type of customer with manufacturing facilities when applying the JRR. Id.

Witness Pirro further testified that deferral accounting was requested because the timing and magnitude of the revenue reduction is unclear. Id. at 93. "The use of deferral accounting allows the Company to assess the true impact of the rider and seek recovery at a later date when revenues are more certain." Id. at 93-94. Witness Pirro also disagreed with witness McLawhorn's recommendation that the Company's shareholders absorb $4.5 million every year the rider is in effect. Id. at 95. Witness Pirro testified that the JRR will benefit ratepayers by retaining North Carolina jobs and strengthening local economies thereby aiding the commercial and residential markets. Id. While the Company's shareholders are willing to absorb a portion of the revenue reduction in the first year to implement the program, a requirement that shareholders absorb this cost in subsequent years would deprive the Company of a reasonable opportunity to recover its just and reasonable costs. Id.

Lastly, Witness Pirro agreed with witness McLawhorn's requested two changes to the application form and tariff. Id. at 93. He explained that the Company does not oppose the relocation of the statement regarding the discounted revenue being used to retain jobs in North Carolina to a more prevalent location in the Application. Id. The Company also does not object to more clearly identifying that the Rider terminate and no longer be available for service 5 years from the effective date of the Rider. Id.

In the Stipulation, the Company and the Public Staff agreed that "the Company's proposed Job Retention Rider generally complies with the Commission's guidelines adopted in Docket No. E-100, Sub 73, but two issues remain to be decided upon by the Commission: (1) whether companies involved in the transportation or preservation of a raw material or a finished product (e.g., pipeline customers) should qualify; and (2) how or if the Job Retention Rider should be funded after the expiration of the initial year's $4.5 million shareholder contribution." Stipulation, § II. c.

Except for the two unresolved issues stated above, the Stipulating Parties have agreed to the proposed JRR as described by witness Pirro in his rebuttal testimony, and further agreed that JRR revenue credits shall be recovered through a JRR Recovery Rider (JRRR) from all retail customers concurrent with JRR implementation, which is anticipated to occur approximately six months following the Commission's decision. Id. at 11, 13. The Stipulation provides that JRR and JRRR revenues shall be reported to the Commission annually and the JRRR shall be reviewed and will be subject to adjustment annually coincident with the September fuel adjustment to match anticipated recovery revenues and true-up any past over-or under-recovery. Id. at 13. Additionally, due to the uncertain date of implementation, compliance tariffs shall be filed prior to implementation of the JRRR and customers shall be notified by bill insert or message upon implementation. Id.

Company witness Pirro filed testimony and exhibits in support of the Stipulation. In his settlement supporting testimony, he explains that the recovery rate under the JRRR is set at $0.00041 per kWh to recover the first year of impact, less the $4.5 million absorbed by the Company, reduced by 10% for application lag. Tr. Vol. 19, pp. 107-08. Witness Pirro further testified that the JRRR is intended to keep the Company revenue neutral with respect to the JRR, other than the one-time $4.5 million contribution from shareholders, over the 5-year pilot period, and, if needed, a final true-up shall be applicable upon termination of JRR. Id. at 108.

The Commission finds and concludes that the Company's proposed JRR as modified by this Order is just and reasonable to all parties based on all of the evidence presented. The Commission finds that the continued loss of industrial jobs in DEC's service area will have a detrimental effect on the State. The Commission views the Company's proposed JRR as an effort to retain industrial jobs in North Carolina and concludes that implementation of the rider is in the public interest. As with other economic development tariffs previously approved by this Commission, approval of the JRR is based in part on an evaluation of the expected economic benefits resulting from the tariff. The Commission has considered the economic impact of the continuing decline of the North Carolina industrial base as well as the impact of the recovery rider on non-participating ratepayers, and concludes that the JRR strikes the appropriate balance between the two. The Commission concludes that by limiting the availability of the JRR to industrial customers, the Company has minimized the effect on non-participants while assisting the group of customers that are most in need of assistance. To further minimize the impact to non-participants and to achieve the goal of the JRR in the most cost-effective manner, the Commission shall limit the JRR to a one-year pilot, with the option of renewal for one additional year upon a showing that the JRR is achieving the intended objectives. Requiring the Company to show the Commission the effectiveness of the JRR in the rider proceeding removes any concerns expressed by the Commercial Group regarding measurement and verification. This reduction in the number of years for the pilot to one-year with the opportunity for a second year allows the Commission and the parties to assess the health of industrial sector as a whole after one year on the JRR and if an additional year would be in the public interest. In addition to the reduction of the pilot to one year, with the opportunity for a second year, the Commission determines that additional changes to the JRR are necessary for proper measurement and verification. First, the Company shall require the Customer to maintain an employment level of 90 percent of the its employees, with the number of employees determined by an average of its employment level over the twelve months prior to the filing of the Application and Agreement for the Job Retention Rider. The application shall state the specific number of employees and verify that this number represents 90 percent of the monthly average over the past twelve months. Second, the Customer shall submit in writing to DEC no later than March 1, and quarterly thereafter, a report verifying the employment level at the Customer's facility(s) receiving the Job Retention Rider credits. Third, if the Customer does not maintain the stated employee level, the Customer shall be removed from the tariff pursuant to the language in the proposed application and shall be required to refund the amount of benefits received under the JRR. DEC shall change the application language accordingly. The Commission has considered the arguments for expanding the JRR made by Commercial Group witnesses Chriss and Rosa, and concludes that expanding the JRR to other customer classes would place too large a burden on non-participants and would be unreasonable.

Furthermore, the Commission concludes that limiting the availability of the JRR to only industrial customers is not unreasonably discriminatory. Rather, it is based on a reasonable difference between customer classes, and the discount offered to participants under the JRR as compared to the amount of rider recovery on non-participants bears a reasonable proportion to the difference between the customer classes. See State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, 348 N.C. 452, 468, 500 S.E.2d 693, 704 (1998). Based on the evidence presented, the Commission finds that industrial customers' sales have been flat or declining since the recession, while residential and commercial sales are growing. Furthermore, a $0.003227 per kWh reduction in rates for participating industrials as compared to an increase in rates for the average retail customer of approximately $0.000539 per kWh per month under the JRR is proportionate to differences between these customer classes and reasonable given the economic and rate benefits of retaining industrial customers on DEC's system.

The Commission concludes that the JRR, with the modifications established in this Order, is in accordance with the requirements and guidelines the Commission previously established. In the JRT Order, the Commission directed utilities to "craft eligibility requirements that are narrowly tailored to meet the intended goals of maintaining jobs in the most economically efficient manner." Although the disputed phrase that allows for the eligibility for pipeline companies was included in the JRT Order as a possible example of eligibility criteria, the Commission is not persuaded that the eligibility criteria proposed by the Company is sufficiently narrow to ensure that the JRR will maintain jobs in the most efficient manner. Pipelines, which cannot relocate, are sufficiently different from other industrial customers and should be excluded from eligibility in the JRR. The disputed phrase "or the transportation or preservation of a raw material of a finished product" should be removed from the eligibility criteria.

The Commission further concludes that the customer attestations regarding certain eligibility requirements for the JRR, as modified by this order, are reasonable and adequate. Based upon the practical considerations of managing eligibility and how eligibility for certain rates is verified in other contexts, such as the opt-out process for DSM/EE rates, the Commission concludes that the Company's proposed method for verifying eligibility for the JRR is reasonable.

Commercial Group states that it does not take issue with the Commission's gradual approach to class revenue allocation, except if the Commission grants the proposed JRR. In that event, according to Commercial Group, the Commission should use any such reduction to move each customer class closer to its respective cost of service. The Commission does not agree with Commercial Group's position. The approval of the JRR does not eviscerate the principle of gradualism in reaching rate of return equilibrium among the customer classes. Further, the rate designs approved herein and the approval of the JRR will result in just and reasonable rates.

Finally, the Commission notes that the proposed JRR is a limited-term pilot, which will allow the Commission and the Company to follow the customers on the tariff and to consider whether the tariff meets its objectives of job retention and the related economic benefits. If it does not, then the JRR will not be continued beyond its one-year term. Except as modified by this order, the Commission finds that it is reasonable for DEC to implement JRR and JRRR as proposed in the Stipulation and Pirro Settlement Exhibit 1.

The Company, as well as ratepayers, benefit from the retention of industrial jobs, and the load related to the retention of the industrial jobs. In addition to the testimony in this case, this fact is further justified by the Company's indication in Docket No. E-100, Sub 73 that it was considering funding all or a portion of a JRT and provided comments on the necessary requirements for measurement and verification under the scenario of a fully Company-funded JRT. To achieve just and reasonable rates, if the pilot program is extended to a second year, it is appropriate for the Company to contribute to the JRR at the same level as year one. Therefore, the Company's recovery should be reduced by the amount of $4.5 million if the Commission determines in the rider proceeding that the JRR pilot program should be extended to a second year.

The Commission, therefore, concludes that the proposed JRR, as modified by this Order, is in the public interest, is not discriminatory and is consistent with the Commission's holding that "approval of a JRT is a matter of sound ratemaking policy to address the undisputed decline in industrial sales in North Carolina." Order Adopting Guidelines for Job Retention Tariffs in Docket No. E-100, Sub 73, at 22. If the JRR is extended an additional year and at the end of the second year the Company determines there is still a need for the JRR, nothing in this order prevents the Company for filing for a new JRR based upon the economic circumstances at that time.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 65-68

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the record in Docket No. E-7 Sub 1110, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

In Docket No. E-7, Sub 1103, DEC requested to defer its costs of complying with the Coal Ash Management Act (CAMA) and the EPA's Coal Combustion Residual Rule (CCR Rule, collectively CAMA) and notified the Commission that it had established an Asset Retirement Obligation (ARO).

In its March 15, 2017 comments in Docket No. E-7, Sub 1103, the Public Staff supported the Company's deferral request, provided that ratemaking treatment for the deferred amount would be determined in the next base rate case:

> In this particular case, the Public Staff believes that the non-capital costs and depreciation expense related to compliance with state and federal requirements cited in the Companies' petition generally satisfy the criteria for deferral for regulatory accounting (but not necessarily ratemaking) purposes. First, they are adequately extraordinary in both type of expenditure and in magnitude to justify consideration for deferral. Second, the effect of not deferring the expenses on the Companies' respective earned returns on common equity would be significant.

Initial Comments of the Public Staff, at p. 6.

In the present docket, DEC witness McManeus noted that the Company had petitioned in Docket Nos. E-2, Sub 1103, and E-7, Sub 1110, for approval to defer certain costs incurred to comply with environmental requirements for Coal Combustion Residuals (CCR or coal ash). Tr. Vol. 6, p. 239. While various parties opposed recovery in rates of some of the coal ash costs, that is a separate issue from the deferral request. The deferral request was generally unopposed, and the Commission finds and concludes that deferral in a regulatory asset for previously incurred coal ash environmental costs is consistent with the Commission's criteria for deferrals and reasonable in the circumstances of this case.

In the present docket, Public Staff witness Maness indicated that the Public Staff continues to believe that prudently incurred CCR expenditures should be allowed to be deferred for regulatory accounting purposes. Witness Maness made several adjustments and with regard to the addition of a return on deferred coal ash expenditures from December 2017 through April 2018, DEC agreed with this adjustment (Tr. Vol. 6, p. 314), and it was not opposed by other witnesses.

The Commission notes that new rates will not be effective by May 1, 2018, as might have been expected at the time of the filing of witness Maness' testimony; therefore, the Commission finds it appropriate and reasonable to extend the accrual of this return until the effective date of rates approved in this proceeding. Based on the foregoing, the Commission finds and concludes that a return based on the net-of-tax overall weighted cost of capital authorized in DEC's last general rate case should be added to the amount of deferred coal ash costs are approved in this Order for recovery in rates, and that the return should be applied through the effective date of the rates approved in this proceeding.

Additionally, as recommended by the Public Staff, the Commission concludes that use of the 2018 federal income tax rate of 21% is appropriate to calculate the 2018 portion of the carrying costs. With respect to Public Staff witness Maness' adjustment regarding mid-month cash-flow convention, DEC witness McManeus accepted this adjustment (Tr. Vol. 6, p. 314), and no other witness opposed it. The Commission finds and concludes that the mid-month convention for calculation of the return is reasonable and appropriate. Additionally, as recommended by the Public Staff, the Commission concludes that compounding of the carrying costs should take place at the beginning, rather than the end, of January of each year.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 69-72

The evidence supporting these findings and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony of the public witnesses, and the testimony and exhibits of the following expert witnesses: DEC witnesses Fountain, McManeus, Kerin, Wells, Wright, De May, Hager, and Doss; Public Staff witnesses Junis, Garrett, Moore, Lucas, Boswell, and Maness; AGO witness Wittliff; CUCA witness O'Donnell; and Sierra Club witness Quarles.

The public witness testimony and expert witness testimony and exhibits regarding DEC's CCR costs are voluminous. The Commission has carefully considered all of the evidence and the record as a whole. However, the Commission has not attempted to recount every statement of every witnesses. Rather, the following is a complete summary of the evidence.

Likewise, the Commission has read and fully considered the parties' post-hearing briefs. However, the Commission has not in this order expressly addressed every contention advanced or authority cited in the briefs.

Based upon the evidence addressed below and in the exercise of its expert judgment and discretion, the Commission determines that a management penalty of approximately $70 million should be assessed for DEC's mismanagement of its CCR activities undertaken through the end of the test year as extended for reasons set forth hereafter.

Coal-fired power plants have played a predominant role in electricity generation by DEC throughout its history, and the Company is dependent upon coal-fired generation today. With coal-fired generation comes a by-product – coal ash, also known as coal combustion residuals, or CCRs. At least since the 1950s, standard industry practice, particularly in the Southeastern United States, has been reliance on coal ash basins. Such basins were constructed and used at all of the Company's coal-fired generating units.

The United States Environmental Protection Agency (EPA) has studied CCRs and their proper management and handling since the 1980s, but the agency only began moving forward on comprehensive regulation of CCRs less than ten years ago. In 2010, the EPA issued proposed rules regarding CCRs. EPA's final rule – the Coal Combustion Residuals Rule (CCR Rule) – was promulgated on April 17, 2015. North Carolina also enacted specific statutory requirements for coal ash management in CAMA, which became effective in 2014 and was amended in 2016. The CCR Rule and CAMA introduced new requirements for the management of coal ash. DEC, of course, must comply with these new requirements, which mandate closure of the Company's coal ash basins. Mandated closure triggers Generally Accepted Accounting Principles (GAAP) provisions relating to the retirement of long-lived tangible assets, and specifically triggers the requirement that the Company account for compliance costs through ARO accounting. The Company, as required by GAAP, established an ARO with respect to its coal ash basins, and, in accordance with the Commission's orders in Docket No. E-7, Sub 723, deferred the impacts of its GAAP-mandated ARO accounting. The Company now seeks recovery of the coal ash basin closure costs incurred to date in connection with CCR Rule and/or CAMA compliance, along with such costs it anticipates will be incurred annually on an ongoing basis. The Company's proposal has three component parts:

- First, DEC seeks recovery of the actual coal ash basin closure costs it incurred from January 1, 2015 through December 31, 2017. On a North Carolina retail jurisdiction basis, these costs amount to $566.8 million.[1] McManeus Rebuttal Ex. 3, pp. 36-37. The Company proposes further that, rather than recovering 100% of these already incurred costs immediately, it recover them over a five-year amortization period, and it seeks a return on the unamortized balance.
- Second, DEC seeks to recover on an ongoing basis $201.3 million per year in annual coal ash basin closure spend. This amount is based upon the NC retail jurisdiction portion of the test year (2016) coal ash basin closure expense incurred by the Company.
- Third, DEC seeks permission to establish a regulatory asset/liability and defer to this account the NC retail portion of annual costs that are over or under the costs established in connection with the Company's request that it be permitted to recover in rates on an ongoing basis its actual test year coal ash basin closure costs – i.e., the amount over or under $201.3 million, if the Company's proposal as detailed above is approved by the Commission. In addition, the costs incurred from January 1, 2018 through the date new rates set in this proceeding are effective would also be deferred to this account. The deferred amounts (including a return) would be brought into rates and recovered through future rate cases.

The Commission, as it has in prior rate orders, provides a review of the applicable legal principles, to provide a framework for the application of those principles to the facts of this particular case. See, e.g., 2013 DEC Rate Order, pp. 23-28 (in Duke Energy Carolinas 2013 Rate Case, Commission provided an extensive review of the "governing principles" regarding rate of return). For purposes of assessing the Company's coal ash basin closure cost recovery proposal, the applicable principles include (1) the general cost recovery framework and the role of the revenue requirement in that framework; (2) principles underlying "reasonable and prudent" costs;

[1] This amount excludes any fines, penalties and other unrecoverable costs incurred by the Company. See Tr. Vol. 6, p. 259.

(3) principles underlying the concept of "used and useful," and (4) a discussion of the burden of proof, and, in particular, presumptions and the distinction between the burden of production (borne by Intervenors) and the ultimate burden of persuasion (borne by the Company).

In the recently-decided DEP rate case (Docket No. E-2, Sub 1142, the 2018 DEP Rate Case, or 2018 DEP Case), the Commission's decision summarized cost recovery based upon these principles, and found that for cost recovery the utility must prove that the costs it seeks to recover are "(1) 'known and measurable'; (2) 'reasonable and prudent'; and (3) 'used and useful' in the provision of service to customers." 2018 DEP Rate Order, p. 143. The same standard applies in this case.

The arguments raised by Intervenors in this docket challenge the inclusion of the Company's coal ash basin closure costs in rates because the costs are not "reasonable and prudent" and "used and useful," or on the theory that cost recovery should be shared by both the shareholders and ratepayers.

Summary of the Evidence

A. Company Direct Case Overview and Costs Sought for Recovery

In his direct testimony, Company witness Fountain testified that DEC is requesting recovery of ash basin closure compliance costs incurred in the period from January 1, 2015 through November 30, 2017. Witness Fountain explained that the Company has removed costs related to its response to the Dan River release and is not requesting their recovery for them. Tr. Vol. 6, p. 174. Witness Fountain also testified on direct that, based on actual coal ash expenses incurred during the 2016 test year, DEC is seeking recovery of ongoing ash basin closure compliance spend of $201 million per year, with any difference from future spend being deferred until a future base rate case. He stated that including this revenue requirement will provide a measure of predictability to customers of future coal ash expense rate drivers. Id. at 174.

Company witness McManeus testified that Adjustment No. 18 to the Company's operating revenues and expenses amortizes the actual deferred costs incurred through December 31, 2017, in connection with compliance with federal and state environmental requirements related to CCRs, pursuant to DEC's petition in Docket Nos. E-2, Sub 1103 and E-7, Sub 1110 for authority to defer such costs in a regulatory asset account, over a five-year period. She explained that while the costs to comply with CAMA and the CCR Rule are largely duplicative, the Company has determined a small portion of the costs to be specific to CAMA, unique to North Carolina and appropriate for direct assignment to North Carolina. She stated that in the deferral calculation, for CAMA-specific costs, the adjustment separates out the portion allocable to the wholesale jurisdiction and directly assigns the retail portion to North Carolina retail. She stated that these costs were based on actuals at the end of the test period, updated through November 30, 2017.[1] The Company proposes to defer these costs over a five-year period and to earn a net of tax return on the unamortized balance. Witness McManeus testified that the expected deferred balance, based on total system spend on

[1] These costs were later updated to actual costs through December 31, 2017, and the deferred balance including return computed as of April 30, 2018. McManeus Rebuttal Ex. 3, pp. 36-37.

these costs during this period, plus applying allocation factors and incorporating the return on the deferred costs, is $524.0 million.[1] Witness McManeus clarified the Company seeks no recovery for fines, penalties, or costs of which DEC has agreed to forego in the deferral. Tr. Vol. 6, pp. 259-60, 279-80, 288-89, 297, 343.

Witness McManeus testified that Adjustment 19 increases O&M to reflect the expected ongoing annual level of expenses DEC will incur in connection with coal ash compliance costs represents the amount in ongoing annual coal ash basin closure expense (sometimes referred to in this Order as "ongoing compliance costs"). She explained that this number – $201.3 million on a North Carolina retail basis – is based upon actual test year (2016) spend, and stated that the Company is also requesting permission to establish a regulatory asset/liability and defer to this account the North Carolina retail portion of annual costs over or under the amount established in this proceeding. She explained that this will ensure that the Company only recovers from customers its actual level of spending related to coal ash. She also clarified that no fines, penalties, or costs of which DEC has agreed to forego recovery are included in this adjustment. Tr. Vol. 6, pp. 260-61, 279-80, 288-89.

B. Company Direct Case: Coal Ash Overview

Company witness Kerin described his management role with the Ash Basin Strategic Action Team (ABSAT), the umbrella organization created for Duke Energy companies to address the laws, regulations, and orders concerning the management of CCRs. Witness Kerin discussed how, during his work on the ABSAT team, he spent approximately 3,000 hours working exclusively on CCR issues, familiarizing himself with state and federal regulations dealing with CCR and historical industry practices and standards used to comply with such regulations. He described how he interviewed legacy employees who worked at, and with, coal combustion generating units and CCR handling sites, and reviewed historical company documents dealing with those facilities and sites in order to gain an understanding of how CCR handling standards inside and outside of the Company developed over time. Witness Kerin also described how he toured and inspected every CCR basin in Duke Energy's North and South Carolina jurisdictions, as well as CCR sites at Duke's Midwest sites, Dominion, AEP, and TVA. He detailed how he developed CCR evaluations for Duke Energy's CCR sites, and an industry peer group to discuss CCR issues generally, which continues to meet semi-annually. Witness Kerin concluded that during his time on the ABSAT team, he gained an understanding and knowledge of coal ash management practices at utilities across the country. Tr. Vol. 14, pp. 96-97.

Witness Kerin provided a detailed discussion of DEC's coal ash management history and practices and the new obligations imposed on the Company by the CCR Rule and CAMA. He explained that CCRs are by-products produced from the electricity production process lifecycle – the burning of coal – at coal-fired generation plants and include fly ash, bottom ash, boiler slag, and flue gas desulfurization (FGD) material. He stated that environmental regulations related to CCR management have evolved significantly over time, affecting how the Company has operated its coal-fired plants in compliance with those obligations. He maintained that at each step in the

[1] This amount has been adjusted to $566.8 million based on the estimated deferral balance at April 30, 2018. McManeus Rebuttal Ex. 3, pp. 36-37.

environmental regulatory evolution process, DEC was in line with industry standards and maintained that DEC reasonably and prudently managed CCRs and its coal ash basins. He explained that since its last rate case, DEC has become subject to both federal and state regulations that require it to take significant action to close its ash basins. Tr. Vol. 14, pp. 99-112.

Witness Kerin testified that since the early 1900s, DEC has disposed of CCRs in compliance with then current regulations and industry practices. Until the 1950s, CCRs were either emitted through, in the case of fly ash, smokestacks or, in the case of bottom ash, manually removed the ash from boilers and stored it in landfills. Since that time, the industry transitioned to a water sluice to remove ash from boilers, and to clean the electrostatic precipitators, preventing ash from being emitted through the smokestacks. This effluent, as well as FGD blowdown, was then diverted to ash basins, of which DEC has 17 in the Carolinas. In other words, in many cases, ash basins were actually created or relied upon to effectuate prior environmental regulations. In the mid-1970s, the enactment of the Clean Air Act and its subsequent amendment in the 1990s required electric utilities to capture more CCRs through the use of electrostatic precipitators (ESP) or bag houses and FGD blowdown. Tr. Vol. 14, pp. 99-112.

Witness Kerin provided a detailed history of coal ash regulation. He testified that the Clean Water Act of 1972 and the subsequent creation of the National Pollutant Discharge Elimination System (NPDES) permitting system, made wet ash handling and ash basins the primary lawful and effective way to meet CCR needs and environmental requirements from 1974 until 2015. Tr. Vol. 14, pp. 100, 106-09.

Witness Kerin testified that, in June 2010, the EPA proposed national minimum criteria to regulate the disposal of CCRs and the operation and closure of active CCR landfills and existing and inactive CCR surface impoundments. He stated that, approximately five years later in April 2015, EPA published the final CCR Rule in the Federal Register. He explained that the CCR Rule established national minimum criteria for CCR landfills and surface impoundments, which result in different impacts at each CCR unit, depending on site-specific factors, and testified to the exact nature of those criteria. He stated that the CCR Rule also contains requirements for how and when CCR basins must be closed, and that it provides for closure either by cap-in-place or removal of the ash. He noted that as stated in the CCR Rule, the EPA considers CCRs to be a non-hazardous solid waste. In 2014, North Carolina enacted CAMA, which requires that all ash basins in the State be closed, either through excavation or via the cap-in-place method. He explained further that CAMA requires closure of all ash basins in North Carolina, with the closure option (excavate or cap-in-place) and deadline driven by a prioritization risk ranking classification process. Witness Kerin noted that, in many respects, CAMA mirrors the federal CCR Rule. He stated that all of DEC's ash basins must be closed under one or both of these programs. Tr. Vol. 14, pp. 100, 115-26.

He also stated that the Company has begun the process of closing, or submitting plans to close, its ash basins in accordance with the program with the most limiting requirements. Tr. Vol. 14, p. 100. Witness Kerin also testified that coal-powered electric generation has since ceased at four of the eight coal-fired DEC generating facilities with ash basins, including the Dan River, Buck, Riverbend, and W.S. Lee plants. Id. at 103.

Witness Kerin also noted that in addition to the CCR Rule and CAMA, DEC is also subject to other CCR-related obligations that result from state environmental regulatory oversight under existing rules and regulations. For DEC, in South Carolina, there is one Consent Agreement with the South Carolina Department of Health and Environment (SCDHEC) applicable to ash management at the W.S. Lee plant. The W.S. Lee Consent Agreement, between DEC and SCDHEC, requires ash excavation of the Inactive Ash Basin, the Ash Fill Area, and any other areas where ash may have potentially migrated from these sites. Tr. Vol. 14, p. 127.

Witness Kerin testified that the CCR Compliance Requirements—CAMA, the CCR Rule, and other consent and/or settlement agreements and orders concerning CCR management and disposal—represent new regulatory requirements that have significantly changed the operation and life cycle of the on-site ash basins and landfills. Id. at 115. He noted that there is a great deal of duplication and interaction between federal rule, state law and agency action and that many of the actions Duke Energy will take will serve multiple compliance purposes. He explained that many actions and draft rules applicable to many utilities, not just Duke Energy, were already being developed prior to 2014, and that the Company is now in another wave of evolution in environmental regulation pertaining to ash. He stated that in response to these new requirements addressing CCR disposal activities, the Company is adding dry fly ash, bottom ash, and FGD blowdown handling systems to operating coal-fired plants that are not already so equipped. He also stated that the Company is modifying all active and decommissioned plants to divert storm water and low-volume wastewater away from the basins. He testified that, accordingly, the Company is requesting recovery of the incremental compliance costs related to coal ash pond closures incurred starting in 2015 through November 30, 2017, and recovery of ongoing compliance costs. He maintained that both these incurred and ongoing compliance costs are reasonable, prudent, and cost effective given the individual facts and circumstances at each power plant and ash basin site at issue. He maintained further that each of the Company's historical and ongoing CCR compliance costs is reasonable, prudent, and cost effective given the individual facts and circumstances at each power plant and ash basin site at issue. Tr. Vol. 14, pp. 100-01.

Witness Kerin stated that ash removal has been initiated at several DEC stations, including the Dan River and Riverbend Plants. He stated that excavation plans were developed to systematically prepare for executing this work, including the identification of any necessary permits and approvals. These excavation plans were submitted to the applicable state regulatory body, SCDHEC or DEQ, prior to beginning ash excavations. As the CCR Rule and CAMA lead to ash basin closure, preparations are required to transition the coal-fired generating sites for this outcome. Operating coal-fired power plants in the Carolinas require plant modifications to fully transition to dry ash handling in order to cease sluice flow to the ash basins. All coal-fired power plants, even those retired, require some level of modification to cease all flows to the ash basins, such as storm water or low volume waste water, and may require construction of a new retention pond. These modification activities are planned and are now being executed. Tr. Vol. 14, p. 132.

Witness Kerin described the closure plans and site analysis and removal plans developed by Duke Energy to physically close the ash basins, noting that these plans are technically informed by the structural stability of the impoundments, the potential for adverse impacts from external events such as 100-year floods, the groundwater and/or surface water impacts identified in the Closure Study Analysis, and the groundwater corrective actions required in the Corrective Action

Plans. Ash basins can be closed by excavation, with the ash permanently stored in a CCR landfill or used in a beneficial way such as a structural fill or for cementitious purposes. Ash basins can also be closed by capping the CCR in place. Tr. Vol. 14, pp. 132-33.

Witness Kerin also maintained that the Company's CAMA closure plans will meet the national standards set forth by the CCR Rule as well as the more specific requirements determined by the North Carolina Department of Environmental Quality (DEQ) under the CAMA regulatory process. He explained that the state-mandated closure plans are reviewed and approved by SCDHEC in South Carolina and DEQ in North Carolina. During this review and approval process, these state regulatory agencies could impose additional restrictions, limitations, requirements, and/or actions to close the ash basins. Other specific compliance plans will be developed and implemented to meet the various requirements and timelines of CAMA and the CCR Rule, such as the fugitive dust control plans, which were required under Section 257.80 of the CCR Rule by October 19, 2015. As a second example, run-on and run-off control system plans were developed and implemented by October 19, 2016, for CCR landfills pursuant to Section 257.81 of the CCR Rule. Compliance plans will continue to be developed and implemented as required by the CCR Rule and CAMA. Tr. Vol. 14, p. 133.

Company witness Kerin testified that in Exhibits 10 and 11 to his testimony, he broke the ash pond closure costs already incurred or expected to be incurred prior to November 30, 2017, down into their core components and described the plants to which these costs apply. In detailing these costs, he also provided narrative summaries as to why, in his view, these costs were incurred and why the compliance actions which led to those costs were the most reasonable and cost-effective options given the applicable facts and circumstances. He maintained that these exhibits, coupled with the balance of his testimony and exhibits, demonstrate that these costs are reasonable and prudent. Tr. Vol. 14, p. 135.

Company witness Kerin maintained that DEC's historical handling of CCRs was reasonable, prudent, and consistent with industry standards over time. This demonstrates that nothing that DEC has done historically is causing the Company to incur any unjustified costs today to comply with post-2015 CCR regulations. Tr. Vol. 14, p. 135. Company witness Kerin explained that, in the preamble to the CCR Rule, EPA details that in 2012 alone, over 470 coal-fired electric generating facilities burned over 800 million tons of coal, generating approximately 110 million tons of CCRs in 47 states and Puerto Rico. In 2012, approximately 40% of the CCRs generated were beneficially used, with the remaining 60% disposed in CCR surface impoundments. Of that 60%, approximately 80% was stored in on-site basins and landfills. Across the United States, CCR disposal currently occurs at over 310 active on-site landfills, averaging over 120 acres in size with an average depth of 40 feet, and at over 375 active on-site surface impoundments. Stated differently, according to witness Kerin, the Company is re-using (selling) and storing CCRs in the same manner and at approximately the same percentages as the coal-fired utility industry's national averages. Duke Energy's practices have been and continue to be consistent with those of the industry. Similar to the industry, DEC has on-site CCR landfills that are actively receiving production fly ash, and some bottom ash, at specific coal-fired generating sites, including the Allen, Belews Creek, Cliffside, and Marshall Plants in the Carolinas. Also similar to the industry, DEC has active ash basins still receiving bottom ash, and some fly ash, at specific coal-fired generating sites, including the Allen, Belews Creek, Cliffside, and Marshall Plants in the

Carolinas. Witness Kerin maintained that the ash handling practices for ash basins and ash landfills in the Carolinas are consistent with the applicable regulatory requirements that were in effect during the history of these CCR units. Tr. Vol. 14, pp. 113-14.

Witness Kerin also maintained that DEC's CCR storage and handling practices are consistent with the practices of other Duke Energy affiliates and Duke Energy peer utilities. He explained that the Company's CCR storage and handling practices are consistent across the Duke Energy fleet, including coal generation located in Florida and in the Midwest. Duke Energy as it currently exists today has been formed over the years through the mergers of several utilities with independently operated coal fired generation, including the Cinergy Corporation in 2006 and Progress Energy, Inc. in 2012. Indeed, going further back in time, Progress Energy, Inc. was created in 2000 from the merger of legacy utilities CP&L and Florida Power Corporation (FPC). Similarly, Cinergy Corporation was created in 1994 by the merger of legacy utilities Public Service Indiana (PSI) and Cincinnati Gas & Electric Company (CG&E). Yet, the historical and current CCR handling and use of CCR basins is consistent across all of these legacy companies that make up Duke Energy Corporation today, and consistent with the industry. Tr. Vol. 14, p. 114.

At the hearing, in response to questions from counsel for the Sierra Club regarding reports on ash disposal from the 1970s and 1980s, witness Kerin clarified that DEC did not build any new basins after 1982, when the last basin was constructed at Buck, and that any other disposal areas constructed by the Company would have been undertaken pursuant to permit by the DEQ or its predecessor. Tr. Vol. 14, pp. 180-84. He also testified that, in his opinion, there would not be increased cost associated with the schedule of activities contained in the draft Special Order by Consent (SOC) resolving a DEQ Notice of Violation with regard to the Allen, Marshall, and Cliffside plants that would not otherwise have been incurred, and clarified that cap-in-place costs are based on acreage size, not volume of ash in the basin. Id. at 213-18.

In his direct testimony, Company witness Wright noted that coal ash use and disposal has been studied by the EPA since the mid-1980s. After several studies and some limited regulatory standards, on May 22, 2000, the EPA determined the need to regulate coal combustion wastes under Subtitle D of the Resource Conservation and Recovery Act (RCRA). He noted that these types of expenses have been routinely recovered as a cost of service and included in rate cases including the reasonable costs associated with operating, maintaining and upgrading environmental equipment. The cost recovery for these rate-based environmental costs also usually included a return. Tr. Vol. 12, pp. 130-31.

C. Company Direct: Cost Recovery Overview

Witness Wright also testified that in part as a response to an accident at a surface impoundment at Tennessee Valley Authority's (TVA) Kingston Fossil Plant in Harriman, Tennessee, the EPA published in the Federal Register proposed new coal ash disposal regulations for CCRs. The proposed regulations specifically referenced the TVA incident as a major reason for the proposed rule, and discussed several other coal ash incidents that led to the promulgation of the rule. Witness Wright maintained that, because the EPA's proposed rule's publication date precedes the February 2, 2014 coal ash release accident at the Dan River Steam Station (Dan River), the Dan River accident was not mentioned in the EPA's proposed rule, nor could it have been, as a reason for establishing the rule. He also noted that EPA's finalized CCR Rule, signed on December 19, 2014 and published in the Federal Register (FR) on April 17, 2015, did reference the Dan River accident, but it did not indicate that the accident modified the proposed rule. Tr. Vol. 12, pp. 131-32.

Witness Wright further explained that in August 2014, after the EPA's proposed coal ash regulations were published but prior to their finalization, the State of North Carolina adopted CAMA. He noted that while EPA and CAMA rules are similar in many respects, "largely duplicative," DEC must ensure that its coal ash disposal methods meet the standards established in both regulations as well as any other state agency requirements. Tr. Vol. 12, p. 132.

Witness Wright maintained that recoverable costs, as they relate to electric utility expenditures in North Carolina, are costs that are reasonable and that are prudently incurred in the provision of safe, reliable electric service to a utility's customers. He argued that N.C. Gen. Stat. § 62-133(b) embodies this principle. He maintained that because environmental compliance costs are a necessary cost of providing electric service, these types of costs – and a return on those costs if deferred over time – are recoverable in rates. He also maintained that environmental compliance costs are similar to other costs that a utility might spend in producing and delivering power. He asserted that the Company incurs costs in compliance with environmental laws and regulations, similar to other costs necessary for the generation of electric power, and that these coal ash disposal costs are like nuclear decommissioning costs or coal plant retirement costs which have long been deemed recoverable for utilities across the country, including DEC. Tr. Vol. 12, p. 123.

Witness Wright noted that the Commission has allowed the recovery of costs related to environmental expenditures. Citing to witness Kerin's lengthy discussion of the numerous investments the Company has made over time in compliance with historical coal ash and other environmental regulations, he asserted that in his experience these types of costs, including the reasonable costs associated with operating, maintaining and upgrading environmental equipment, plus a return, have been routinely recovered as a cost of service through general rate cases, whether as capital or ongoing operation and maintenance expense or some combination thereof. Tr. Vol. 12, pp. 127-29.

Witness Wright testified further that utilities are not allowed to recover environmental fines or penalties, or costs incurred from the actions causing such penalties. He stated his understanding that none have been requested in this case. He also asserted that it is important, however, to make sure that the costs underlying or directly causing such fines or penalties be separated from prudently incurred, ongoing costs. For example, he offered, if a generating plant received a fine, that fine should not be recoverable. The fact that a fine was given, however, does not mean that the ongoing, prudently-incurred costs necessary to produce generation should be disallowed. Tr. Vol.12, p. 130.

Witness Wright further asserted that the new federal coal ash standards did not result from the Dan River spill. He noted that the final rule only mentions the Dan River accident, and that there is no clear evidence in the final rule that the Dan River accident changed or modified the EPA's proposed rule. He asserted that both the proposed rule and the final rule addressed the need for imposing corrective action at inactive facilities, and asserted that in promulgating the

CCR Rule, the EPA cited hundreds of potential risks or incidents with ash ponds similar to Dan River that, in part, led to the adoption of the Rule. Based on this analysis along with the timing of the CCR Rule, he opined that the Dan River accident did not change the CCR regulations, although it probably added support for the EPA's proposals. Tr. Vol. 12, pp. 132-34.

Witness Wright also maintained that, in terms of timing, the new state CAMA coal ash standards did result from the Dan River spill, but in terms of the substance of the standards adopted there is not necessarily a connection. He opined that the Dan River spill helped prompt the North Carolina General Assembly to examine the State's and national coal ash disposal policies and regulations, and that out of that legislative investigation came CAMA. He noted that some four years prior to Dan River, the EPA had proposed and was close to finalizing its new CCR regulations, which in his opinion helped inform the State's legislative leaders regarding the language contained in CAMA. He noted that the proposed CCR regulation also strongly encouraged the states to adopt at least the federal minimum criteria in their solid waste management plans. Therefore, he concluded, that the North Carolina Legislature and/or the State's DEQ would likely have taken steps to adopt coal ash regulations shortly after the CCR Rule was finalized in 2015. He concluded that the timing of CAMA was influenced by the Dan River accident, but also expressed his belief that, even without the Dan River accident, the State would likely have adopted some new coal ash disposal standards similar to CAMA in the 2015 timeframe in response to the CCR rules. He stated that, regardless, the Company must comply with both the federal and state coal ash disposal standards. Tr. Vol. 12, pp. 134-36.

In his direct testimony, Company witness Wright testified that, in his opinion, the coal ash disposal costs that DEC seeks to recover in this case are "used and useful" utility cost. Tr. Vol. 12, p. 144. He explained that DEC's coal ash disposal sites have always been used and useful as part of the coal-fired generation production process. He noted that N.C. Gen. Stat. § 62-133(b)(1) provides that, in setting utility rates, the Commission must "ascertain the reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period, in providing the service rendered to the public within the State, minus accumulated depreciation, and plus the reasonable cost of the investment in construction work in progress." Id. He testified that, therefore, to be recoverable and/or included in rate base, the cost must be both reasonable and incurred for property that is used and useful in providing service to customers. He stated that the Company has historically spent dollars in order to comply with the coal ash disposal regulations in effect at the time, and these dollars were a necessary expenditure related to used and useful utility costs made in the provision of electric service at the time. The Company was, and continues to be, obligated to meet the needs of its customers. This obligation to serve requires the disposal of coal ash subject to the disposal standards at the time, thereby rendering the disposal sites for this coal ash, for which costs DEC seeks recovery in this case, "used and useful" in providing electric service. Id. at 144-45. He stated that this is supported by the Commission's conclusions in the 2016 Dominion rate case, where the Commission determined that because current CCR repositories are and have served their purpose of storing CCRs for many years, they have been used and useful for ratepayers, and that such storage facilities will continue to be used and useful until the CCRs are moved to a permanent repository, or they are capped and closed. Id. at 145-46.

Witness Wright also noted with respect to the Commission's Order Approving Rate Increase and Cost Deferrals and Revising PJM Regulatory Conditions in Docket No. E-22, Sub 532 (Dec. 22, 2016) (2016 DNCP Rate Order) that, in that case, the Commission addressed the exact issue of the recovery of coal ash disposal costs that is at issue in this proceeding. In addition to the decision that prior coal ash disposal assets were used and useful, he noted that in that order the Commission and Public Staff concluded that Dominion's historical response to coal ash disposal was consistent with industry practice at the time and that these costs were reasonable and prudent. Second, they found that Dominion's test year coal ash disposal expenses incurred in compliance with the newer coal ash disposal regulations were likewise reasonable and prudent. Finally, he noted that, similar to what DEC is requesting in this rate case, the 2016 DNCP Rate Order also allows Dominion to establish an ARO to defer additional coal ash disposal cost and for the recovery of those costs to be adjudicated in a future proceeding. Tr. Vol. 12, pp. 146-47.

D. The Positions of Intervenor Parties other than the Public Staff

AGO witness Wittliff maintained that the Dan River ash release was largely responsible for the development of CAMA in its present form, which he said accelerated remediation and closures and narrowed the field of removal and closure options. Tr. Vol. 11, pp. 239, 248-50, 272. He claimed that the plea agreements into which the Company has entered evidence harm to the environment caused by DEC's criminal negligence. Id. at 239-41, 265-67, 272-73. He also claimed that the Company's actions and inactions resulted in environmental harm and the incurrence of compliance costs that could have been significantly lower or possibly even avoided. Id. at 274-75. He asserted that, by not building new lined surface impoundments when it was "obvious" that additional impoundments were needed and would better protect the environment, the Company delayed and avoided potential exposure to requirements for more rigorous environmental controls on the new impoundments. Id. at 255. He questioned the Company's diligence with respect to managing dam safety, contended that the Company did not comply with the requirements of its ash basin permits at Dan River and Riverbend, and asserted issues of vegetation control and stability of impoundments at other facilities. Id. at 255-63, 273-74. He also claimed that the Company's 10-K filings with the Securities and Exchange Commission (SEC) show Duke Energy's awareness of trends in coal ash management and regulation towards lined impoundments. Id. at 236-38. Witness Wittliff further questioned Company witness Kerin's expertise with regard to coal ash issues and claimed that the Company's coal ash handling practices were not consistent with industry. Id. at 268-69.

At the hearing, in response to questions by counsel for the Company, witness Wittliff admitted that, while his testimony stated that he would support a Commission finding that the coal ash costs incurred by DEC were unreasonable and imprudent, his actual position is that the Company should be able to recover its costs to comply with the CCR Rule, but nothing more. Tr. Vol. 11, pp. 279-81. However, in its post hearing brief the AGO, on whose behalf witness Wittliff testified, maintained that all of DEC's 2015-2017 CCR remediation costs should be disallowed. Witness Wittliff stated that costs incurred by the Company to comply with the CCR Rule are reasonable and prudent. Id. at 282-83. He admitted that he did not identify any specific costs that could have been lower or should be disallowed. Id. at pp. 287-89. In response to questions regarding environmental compliance issues at electric power stations at which he had worked over the course of his career, witness Wittliff testified that he was not in a position at those times to say what those companies should or should not have done with respect to environmental compliance, but that he is in such a position now with respect to DEC, to say what should have happened with the Company's previous coal ash management. Tr. Vol. 11, p. 289 – Tr. Vol. 12, pp. 13-24.

CUCA witness O'Donnell opined that DEC should only recover costs to comply with the CCR Rule, not any costs under CAMA that exceed CCR Rule compliance costs, based on his contention that Duke Energy caused CAMA. Tr. Vol. 18, pp. 59-60. Witness O'Donnell purported to compare the DEC coal ash ARO to what he termed similar coal ash AROs of utilities across the United States. He concluded that the Company's ARO coal ash costs are among the highest in the nation, and contended that the only discernable difference between the Duke Utilities and the other utilities in his comparison was CAMA, which he asserted was prompted by the Dan River spill. He stated that DEC did not provide a similar financial analysis for this case. Id. at 56, 61-66. He asserted that there is no evidence to suggest that Duke's coal ash situation is significantly different from that of utilities across the country or from that of utilities in neighboring states. He claimed the Company failed to provide any evidence to counter his argument that its mismanagement led to excessive costs associated with its coal ash cleanup, and that because the Company chose not to dissect his analysis "bit by bit," that gives his evidence more credence. Id. at 66.

Sierra Club witness Quarles evaluated the methods DEC has proposed to close existing coal ash ponds at the Allen and Marshall plants and opined as to environmental conditions that may be associated with capping those ponds in place. He asserted that he evaluated site conditions at each location and the likelihood that DEC will be able to meet closure performance standards in the CCR Rule if it opts for cap-in-place closure. He also asserted that continued storage of coal ash at Allen and Marshall poses significant environmental risks. He stated that the coal-fired power plant industry recognized in at least the mid-1970s that disposal of CCRs into unlined disposal units and within close proximity to groundwater was risky, and that construction of unlined disposal units after that time was unreasonable. He claimed it would have been consistent with industry practice at the time for DEC to close and remediate leaking impoundments and construct new, lined dry landfills. He asserted that the Company built new unlined disposal areas at Allen and Marshall, and that lined landfills and surface impoundments were commonplace and more cost effective than building unlined surface impoundments since the mid-1970s. Tr. Vol. 6, pp. 19-118, 120-22.

Witness Quarles stated that the unlined basins at these plants were constructed over named and unnamed stream valleys, with wastes submerged in groundwater, and groundwater flows into those basins from topographically higher elevations and will come in contact with submerged coal ash. He also stated that there are documented impacts to groundwater at these basins and that a cap will not prevent lateral inflow of groundwater from adjacent areas. He concluded that closure in place at these basins would allow continued contamination of downgradient groundwater and violate the technical standards of the CCR Rule, and that removal of coal ash from the Company's ash basins would reduce the concentrations and extent of this contamination. Lastly, witness Quarles stated that DEC's plan for closure-in-place is well documented by the coal power trade industry association as an inappropriate groundwater corrective action where CCRs are submerged in groundwater like at Allen and Marshall. Tr. Vol. 6, pp. 19-118, 122-24.

At the hearing, Witness Quarles did not dispute on cross examination by Company counsel that the 1988 Report to Congress stated that only about 25% of all facilities had liners to reduce offsite mitigation of leachate, that only 40% of generating units built since 1975 had liners, that only 15% had leachate collection systems, only one-third had groundwater monitoring systems and that such systems were more common at newer facilities, that coal combustion waste streams generally do not exhibit hazardous characteristics, and that EPA's tentative conclusion was that current waste management practices appear to be adequate for protecting human health and the environment. Witness Quarles also confirmed that he did not conduct a site-by-site engineering analysis of the cost to the Company to close and remediate leaking impoundments and construct new, lined dry landfills. Tr. Vol. 6, pp. 143-45. In response to questions by the Commission he admitted that he has not raised the concerns he raised in this proceeding regarding cap-in-place at Allen and Marshall with DEQ. Tr. Vol. 6, pp. 149-50.

In its post-hearing Brief, the AGO contends that ratepayers should not be forced to cover costs caused by DEC's historic imprudence in managing its coal ash basins. The AGO argues that the Commission needs to consider several factors when determining whether the costs incurred are recoverable in rates. The AGO outlines them as follows: 1- The first is DEC's history of imprudence; 2- DEC's costs must be reviewed in detail to evaluate whether and to what extent they are for property that is "used and useful" and are recoverable in ratebase; 3- DEC has insurance to cover a large portion of the coal ash remediation costs it seeks from ratepayers, and these insurance proceeds should be taken into account; 4- DEC's request for cost recovery relies on a petition for an accounting order allowing deferral of the costs that is untimely, unreasonable, and unjustified as a basis for retroactive recovery of expenditures that DEC incurred in 2015 and 2016; and 5- DEC's claim that it is "entitled" to the recovery of coal ash costs from prior periods if it proves the costs are "known and measureable," "reasonable and prudent," and "used and useful" is not consistent with the statutory ratemaking regime, in which rates are established and become effective prospectively in order to allow—but not guarantee—the opportunity for cost recovery, and the rates are presumed to be just and reasonable until new rates are established by the Commission.

The AGO disagrees with this Commission using a 1988 DEP case in its recent decision in Docket No. E-2 Sub 1142, regarding Duke's burden of proof of prudent and reasonable costs. The AGO states that under the Commission's "prudence framework" in the DEP Order recently issued, a utility's costs are presumed to be reasonable and prudent unless challenged, and the challenges presented must show three things: "(1) they must identify specific and discrete instances of imprudence; (2) demonstrate the existence of prudent alternatives; and (3) quantify the effects by calculating imprudently incurred costs." In re Application of Duke Energy Progress, LLC, for Adjustment of Rates and Charges Applicable to Electric Utility Service In North Carolina, Docket No. E-2, Sub 1142, Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase, at 196 (Feb. 23, 2018)("2018 DEP Order")(citing the 1988 DEP Rate Order at 15) The AGO contends that this framework essentially puts the burden of proof on Intervenors. The AGO argues that it should be up to DEC to prove that some or all of the detailed costs are not attributable to its poor history of operations.

The AGO argues that evidence that the Company was noncompliant with regulatory requirements shows its imprudence, and cites Commissioner Brown-Bland's dissent to the 2018

DEP Order, indicating that violations of statutes that have the purpose of protecting the public from harm to life or safety constitute negligence per se. See Bell v. Page, 271 N.C. 396, 156 S.E.2d 711 (1967); Hampton v. Spindale, 210 N.C. 546, 187 S.E. 775 (1936). The AGO contends that DEC's five criminal convictions should be conclusive evidence of imprudence.

The AGO states that the Commission may consider an agency's standards or determinations when making its own determination about the prudence and reasonableness of coal ash activities, but cannot simply substitute another agency's determination or standards for its own. See State ex rel. Utils. Comm'n v. Carolina Water Service of North Carolina v. Public Staff, 335 N.C. 493, 503, 439 S.E.2d 127, 132 (1994).

The AGO states that coal has been utilized for many decades and beginning in approximately 1950, DEC, like many utilities, used unlined earthen impoundments to deposit its CCRs. The AGO states that in the 1970s, the United States Department of Energy directed that research be done on coal ash residuals and that the research revealed that there was a "growing awareness that the discarded wastes from coal combustion are a serious potential source of surface and ground water contamination" and that the wastes "have the potential for causing great environmental damage if not properly handled." 1979 Los Alamos Report, Tr. Ex. Vol. 12, pp. 189-204. In 1988, the EPA, in its Report to Congress on the topic of "Wastes from the Combustion of Coal by Electric Utility Power Plants," voiced concerns over the "substantial quantities of wastes" produced by electric utility power plants and concurred with the Los Alamos Report that "[t]he primary concern regarding the disposal of wastes from coal-fired power plants is the potential for waste leachate to cause ground-water contamination" from the potentially toxic metals in the ash due to the fact that "[m]ost utility waste management facilities were not designed to provide a high level of protection against leaching." 1988 EPA Report to Congress, Tr. Ex. Vol. 12, p. 228.

The AGO contends that before the North Carolina General Assembly passed CAMA, DEC's coal ash activities were governed by three important laws: North Carolina's Dam Safety Act, the federal Clean Water Act, and North Carolina's 2L Groundwater rules and that DEC violated all of these laws and standards.

First, the AGO alleges that DEC violated dam safety standards. The AGO states that during the five-year dam safety inspections between 1996 and 2009, all seven of the facilities were cited for issues regarding seeps. Tr. Vol. 11, p. 259. Between 1996 and 2009, the five-year dam safety inspectors also expressed concerns regarding stability issues at the Allen, Dan River, Marshall, Cliffside, and Riverbend Steam Stations. Tr. Vol. 11, pp. 261-262. After the TVA incident, the dams at these facilities were all rated by the EPA in 2009 as having either high hazard potential or significant hazard potential.

Second, the AGO alleges that DEC violated the Clean Water Act citing, among others, that in 2015, Duke pled guilty to five counts of criminally negligent violations of the Clean Water Act. In addition to the four charges involving Dan River, one charge stemmed from the unauthorized discharge of pollutants from an unpermitted channel that allowed contaminated water from its coal ash basin at its Riverbend Steam Station to be discharged into the Catawba River from at least November 8, 2012 through December 30, 2014. Ex. Vol. 12 pp. 355-356, 400-01; Ex. Vol. 12, pp. 302, 346-347. The AGO also cites that after the Southern Environmental Law Center threatened to filed civil lawsuits, DEQ initiated lawsuits against all of the Company's facilities which was resolved by the parties. The AGO also cites that on March 4, 2016, the DEQ issued Notices of Violation to Duke Energy Carolinas related to seeps. Tr. Vol. 11, p. 267. On January 8, 2018, the Company announced its entry into a proposed Special Order by Consent with DEQ to settle alleged water quality violations at the Allen, Marshall, and Cliffside Steam Stations. Id. Each of the seeps identified and addressed in the Special Order exhibited some indication of the presence of coal ash wastewater. Id. The Company paid $84,000 ($4,000 each for 21 seeps identified at these facilities prior to January 1, 2015) and committed to dewatering six coal ash ponds at these three facilities. Id. The resolution of these seeps is independent of the requirements of the CCR Rule and CAMA, and therefore any activities employed to resolve these seeps should be disallowed. Id.

Third, the AGO claims that DEC violated the 2L groundwater standards citing that in 2012 and 2013, when all of Duke's sites were monitored and the groundwater data gathered, the Company found and the EPA noted that there were exceedances of the groundwater 2L standards at all eight sites. 40 CFR Parts 257 and 261, 80 Fed. Reg. 74 (Apr. 17, 2015), p. 21455; AGO Late-Filed Exhibit 1-K-Nov. 4, 2013 Ash Basin Groundwater Summaries. The AGO provides that the Company gave notice of potential legal claims arising from groundwater contamination to its insurers in 1996 and 1997. In that correspondence, Duke advised its insurance carriers, AEGIS and Lloyd's of London, that it may have legal exposure for pollutant discharges from coal combustion residuals ponds at its coal-fired power stations. Ex. Vol. 10, p. 528; Ex. Vol. 10, p. 538. The AGO further states that on November 3, 2013, Duke Energy Corporation prepared a breakdown of data regarding exceedances of the 2L water quality standards for all of its facilities and found exceedances at all eight of the Company's plants. AGO Late-Filed Exhibit 1-K-"Nov. 4, 2013 Ash Basin Groundwater Summaries" Duke_USAO_01448182. Significantly, Allen Steam Station, Buck Steam Station, Dan River Steam Station, and W.S. Lee Steam Station had exceedances of both the primary and the secondary standards. Lastly, in its settlement of the 2013 court case, DEC agreed to perform groundwater remediation per CAMA and 2L. The AGO argues that CAMA only applies to surface impoundments, not inactive ash areas, N.C.G.S. 130A-309-200 et seq. (2017); therefore, any costs associated with the excavation and removal of inactive ash areas are patently related only to the Company's violation of groundwater regulations and should be disallowed.

The AGO further argues that DEC disregarded the law citing that Mr. Wells testified that "there was no obligation in the 2L rules to monitor groundwater quality" after the corrective action requirements were added, and in fact, the Company considered itself "under no universal obligation to monitor for groundwater impacts" until required to do so via a NPDES permit or other regulatory requirement mandated by the regulatory agency. Tr. Vol. 24, pp. 229-230. The AGO argues that the 2L Rules, since their promulgation in 1979, are and have always been founded on strict liability and self-enforcement principles. 15A N.C.A.C. 02L .0101 et seq. As stated in its Policy provisions, "[n]o person shall conduct or cause to be conducted, any activity which causes the concentration of any substance to exceed" the water quality standards specified in these Rules. 15A N.C.A.C. 02L .0103(d) (2017). As these Rules "are applicable to all activities or actions, intentional or accidental, which contribute to the degradation of groundwater quality," DEC had a duty to comply with these Rules. Id.

Next, the AGO argues that DEC understood the changing regulatory landscape for years and did not change its practices. The AGO cites many documents that prove this point. The AGO contends that as early as 2003, more than ten years prior to the enactment of CAMA and the Federal CCR Rule, DEC knew that at some point in the future, it would no longer be able to store wet ash in unlined surface impoundments but did nothing about it. Ex. Vol. 16, Pt. 2, p. 123. In January 2007, DEC noted that it would "be required to construct landfills for disposal of its non-saleable CCP . . . in the years to come ..." Ex. Vol. 16, Pt. 3, p. 50. In a document called "Duke Energy Environmental Management Program for Coal Combustion Products" dated May 29, 2007, Duke called "disposal in surface impoundments" the highest risk method of disposition of coal ash, and stated that this risk assessment should be used to support planning and management decisions. Ex. Vol. 16, Pt. 3, p. 60. In its 2010 Securities and Exchange 10-K filing, Duke Energy Corporation advised that it currently estimated that it would spend $131 million "over the period 2011-2015 to install synthetic caps and liners at existing and new CCP landfills and to convert some of its CCP handling systems from wet to dry systems to comply with current regulations." Ex. Vol. 16, Pt. 3, p. 238. Other documents include a 2013 Ash Basin Closure Strategy (AGO Late-Filed Exhibit 1-E-"Ash Basin Closure Strategy" p. Duke_USAO_01448357), review notes of an Environmental Review given to the Board of Directors of Duke Energy Corporation on August 27, 2013, (AGO Late-filed Exhibit 1-I.), and a presentation made to the Senior Management Committee on the "Ash Basin Closure Strategy on November 25, 2013. AGO Late-Filed Ex. 1-L p. Duke_USAO_1329810. The AGO states that in January 2014, less than a month before the Dan River spill, Duke Energy Corporation's Senior Vice President of Environmental Health and Safety acknowledged in a presentation to the Senior Management Committee that the Company's "coal ash is impacting the groundwater at all locations [and that] [t]his is not an overnight event, ash has been managed in this fashion for decades and it will take decades to close the ponds." Ex. Vol. 10, p. 611. Two of the recommendations given to the Senior Management Committee were to 1) "aggressively pursue closure of ash ponds at all decommissioned sites" and 2) "close all active ash ponds." Id. at 659. The AGO argues that despite the need to pursue the closure of its ash ponds and to convert to dry ash handling, DEC never implemented its own internal recommendations prior to the Dan River spill and the enactment of CAMA and the Final CCR Rule.

Next, the AGO argues that DEC failed to meet industry standards as it failed its duty to be a reasonable and prudent operator. The AGO further argues that under any standard, the Intervenors have shown the costs are not reasonable for cost recovery. The AGO states that it has shown discrete instances of imprudence, that prudent alternatives existed, and that imprudently incurred costs are enormous and certain disallowances should be made by the Commission. The AGO further argues that the Commission may "not allow an electric public utility to recover from the retail electric customers of the State costs resulting from an unlawful discharge to the surface waters of the State from a coal combustion residuals surface impoundment." N.C. Gen. Stat. § 62-133.13 (2014). This section of CAMA applies to discharges occurring on or after January 1, 2014. N.C.G.S. Session Law 2014-122, Sen. Bill 729, Part I, § (1)(b). The AGO states that it is not possible to determine exact disallowances, but the AGO contends that there are costs that would have resulted from the unlawful discharges to the surface waters of the State from at least the Riverbend plant cited in the Federal criminal case from January 1, 2014 to December 30, 2014. Ex. Vol. 12, pp. 400-401.

Next, the AGO submits that DEC should not receive "carrying costs" during amortization of the deferred CCR costs by placing the unamortized balance in rate base because the deferred CCR costs are not used and useful but rather are special operating expenses. According to the AGO, operating expenses are recoverable without return pursuant to N.C. Gen. Stat. § 62-133(b)(3) and State ex rel. Utils. Comm'n v. Thornburg (Thornburg I), 325 N.C. 463, 475, 385 S.E.2d 451, 458 (1989). Further, the AGO submits that the unamortized balance of the CCR deferred costs are similar to those considered in State ex rel. Utils. Comm'n. v. Carolina Water, 335 N.C. 493, 507, 439 S.E.2d 127, 135 (1994) (Carolina Water), where the Supreme Court considered whether the Commission erred when it treated utility plant that was not in service at the end of the test year – and would not be returned to service – as "an extraordinary property retirement," allowed amortization of the unrecoverable costs over ten years, and included the unamortized portion in rate base. The Court concluded that the costs were for plant that was not used or useful and, thus, the unamortized costs should not have been included in rate base. As the Supreme Court explained: "Including [these] costs in rate base allows the company to earn a return on its investment at the expense of the ratepayers." Id. at 508, 439 S.E.2d at 135.

Further, the AGO contends that the coal ash activities and expenditures are no longer related to ongoing or active property used or useful for providing utility service. The AGO states as support for this position that the costs in the asset retirement obligation are for the closure of basins and disposal of coal ash that Duke has identified with retired coal-fired steam stations (Ex. Vol. 16, Pt. 1, p. 24); the AGO argues that these coal ash closure and disposal costs are typically recovered in depreciation expense for long-term assets, as is recognized in the Commission's 2003 Order on Asset Retirement Obligations, DEC's internal evaluation of coal ash in 2014 contemplated the use of depreciation reserve funds, and Duke response to questions about whether such costs are included in depreciation expense in which DEC stated that the costs were not thought to result in a net negative salvage value, not that depreciation is inapplicable to such costs (Ex. Vol. 10, p. 691); depreciation costs are recovered over the 'useful life' of the asset. The AGO argues that no attempt has been made to define a useful life for the "property" that has generated coal ash expenditures and the retired plants where most of the costs were incurred do not have a remaining 'useful life' and no attempt has been made to identify the cost components, or consider the distinction between expenditures at operating versus retired plants or between expenditures such as those for construction of a landfill versus transportation costs.

The AGO posits that the fact that Duke has created an Asset Retirement Obligation for the coal ash expenditures does not dictate how the Commission must treat the costs for regulatory purposes. Deferral accounting is used to keep the regulatory accounting the same until a change in regulatory accounting is authorized. The AGO argues that imposing these coal ash costs on current ratepayers raises intergenerational fairness given DEC's failure to take action earlier. The AGO highlights that the Commission has previously dealt with the intergenerational issue when it considered whether to allow the recovery of manufactured gas plant clean-up costs based upon new environmental requirements. The AGO states that the Commission allowed recovery of the clean-up costs, however the amount was amortized over a period of years and no carrying costs were allowed on the unamortized balance.

The AGO contends that DEC's request to recover the deferred costs involves single-issue ratemaking, i.e., Duke seeks to recover coal ash costs going back to the beginning of 2015 – plus carrying costs – without review of the other rate elements that were in effect in 2015 that might offset the need for the cost recovery. With respect to the ARO, the AGO contends that DEC failed to request authorization to defer the coal ash costs before they were incurred and that the deferral in this case relates to Duke's establishment of an Asset Retirement Obligation for costs that are already accounted for in rates through amortization and depreciation. Lastly, the AGO argues that Duke's proposal to recover $201 million per year for ongoing coal ash costs as regular operating expenses is unreasonable and should be denied. Instead, Duke should be authorized to defer future costs for recovery in a future general rate case.

In its post-hearing Brief, CUCA contends that DEC's request for 100% CAMA compliance cost recovery is not appropriate. CUCA submits that DEC's costs are overstated and that many are the result of DEC's negligence, which is most clearly highlighted in DEC's guilty plea in the federal criminal environmental proceeding. CUCA supports an equitable sharing of the CCR cleanup costs due to the fact that CAMA costs are much higher than the CCR Rule compliance costs and that DEC's mismanagement directly led to the passage of CAMA. CUCA states that a 25% recovery is equitable. Further, CUCA contends that the CCR Rule is a self-implementing rule which has not been triggered by any citizen suits, and that in the absence of a regulatory directive to do so, DEC should not have pursued regulatory closure of operating sites. CUCA asks the Commission to revisit its analysis of management penalty in the DEP rate case order stating that the $30 million penalty amounts to a 1%[1] penalty which is too low based upon the evidence of DEC's negligence and criminal acts to come to a more fair result in this case. CUCA contends this division of costs sends the message that DEC is not being held responsible for its actions. Lastly, if the Commission does allow a similar 1% penalty in this case, it should also decrease the return on equity as DEC becomes a less risky company.

In its post-hearing Brief, CIGFUR III argues that DEC should not be allowed an equity component in the calculation of its deferred coal ash remediation carrying costs and that the appropriate amortization period is ten to fifteen years as opposed to five. CIGFUR III states that the total cost to defer is $497 million and that the carrying charges associated with the incurred coal ash costs since 2015 are $27 million, $6 million is associated with the cost of debt and $21 million is associated with the cost of equity. CIGFUR III further states that amortizing over 5 years results in annual amortization expense of $104.8 million, plus a $29.9 million net tax return, for a total requested revenue requirement of $135 million for deferred coal ash pond closure costs. CIGFUR III argues that the carrying costs should not include the equity component and that the deferral should be financed at the lowest option, which is the cost of debt. Allowing the equity component increases the amount charged to DEC's ratepayers and is inappropriate for such a significant expense that fails to enhance reliable service. CIGFUR III submits that the CCR costs were incurred over many decades and the stored coal ash is no longer used and useful in the provision of electric service. With respect to the run rate, CIGFUR III argues that DEC should not recover the run rate of $201 million and that DEC should defer ongoing costs for future recovery in its next rate case.

---

[1] One percent relates to the penalty amount in relation to the Company's total CCR expenditures to comply with CAMA and the CCR rule, including future expenditures. Further, in relation to the DEP case, the 1% does not include the approximately $10 million discrete disallowance for transportation costs.

Sierra Club, in its post-hearing Brief, first discusses the legal standard for setting just and reasonable rates. Sierra Club argues that the closure of DEC's CCR basins is not in direct response to the CCR Rule or CAMA, but was made necessary because of DEC's unlawful discharges of CCR constituents to surface waters, and, therefore, DEC's closure costs are not recoverable under N.C. Gen. Stat. § 62-133.13. Further, Sierra Club contends that all of DEC's CCR basins are unlawfully discharging pollutants into surface waters and/or groundwaters, and that the only way to stop these unlawful discharges is to close the ponds and eliminate the source, the coal ash. Therefore, Sierra Club concludes that the cost of pond closures results from the unlawful discharges and are not recoverable.

Sierra Club submits that DEC failed to meet its burden to prove that storage of CCRs in unlined, leaking basins for decades was a reasonable and prudent way for DEC to manage its CCRs. According to Sierra Club, the DEC evidence provided by witnesses Kerin, Wells and Wright about the historical handling of CCRs being reasonable, prudent and consistent with industry standards over time is not credible. Rather, Sierra Club contends that: (1) DEC's groundwater monitoring did not comply with the EPRI standards set forth in EPRI's CCR manuals; (2) that DEC's continued use of unlined basins was contrary to the national trend toward lined basins or dry fly ash handling systems; and (3) that DEC's response to the surface water and groundwater pollution shown by its monitoring reports, once it finally began monitoring, was not reasonable or adequate. Sierra Club states that DEC's first facility to be converted to dry fly ash handling was the Belews Creek plant in 1983, after DEC became aware that selenium from sluiced coal ash was killing the fish in Belews Lake. The result, according to Sierra Club, was a 75% decrease in selenium concentrations.[1] Yet DEC did not use this information and experience to perform investigations at other plants, or to convert to dry fly ash handling at other plants.

Sierra Club also cites DEC's criminal pleas as evidence that DEC allowed unauthorized discharges of pollutants into surface waters. Sierra Club states that the environmental audits conducted as a part of DEC's plea arrangement identified unauthorized seeps containing pollutants above background levels at all DEC plants. Sierra Club contends that the evidence these unauthorized discharges of pollutants have been occurring for an undisclosed amount of time, and, pursuant to N.C. Gen. Stat. § 62-133.13, provide the basis for the Commission to deny all costs of dewatering the CCR basins, at a minimum.

With regard to groundwater pollution, Sierra Club states that DEC failed to follow the industry standard for monitoring compliance with the 2L requirements and, instead, conducted initial sampling at the Allen plant, then extrapolated that data to conclude that there was no violation of the 2L standards at DEC's other seven plants. Sierra Club contends that DEC did not conduct consistent groundwater monitoring at all of its plants until the 2000s, and that similar to the surface water audits the court ordered ground water audits found that CCR constituents are in the groundwater beneath all of DEC's CCR basins. In addition, Sierra Club points to DEC's 1996 insurance letter as proof that DEC knew about contamination above the 2L standards at Allen, Belews Creek, Dan River, Marshall and W.S. Lee as early as 1996.

[1] The selenium levels of concern at this site were from water discharges allowed from the NPDES permit rather than from groundwater leachate.

Sierra Club submits that the manner in which DEC failed to inspect and maintain the Dan River basin is indicative of its history of mismanagement and inaction with respect to CCR, and that this is conclusive evidence of imprudence, along with the following decisions made by DEC during the last 30 years:

(1) Failing to follow industry standards to stop using unlined basins.
(2) Waiting 20 years after the fish kill at Belews Creek to convert other plants to dry fly ash handling.
(3) Not conducting preliminary site investigations at all plants after the fish kill at Belews Creek.
(4) Waiting 30 years to regularly monitor ground water, contrary to the industry standard as of 1981.
(5) Not taking any action in response to the 1981 or 1982 EPRI manuals or the 1988 EPA Report, such as switching to lined basins, monitoring groundwater and dewatering basins.
(6) Spending millions of dollars on a leachate collection system at Allen and Marshall, then dumping the leachate into unlined basins at Allen and Marshall.

Moreover, Sierra Club argues that DEP's closure plans for its Allen and Marshall CCR basins do not comply with the CCR Rule or protect against continued discharges, and, therefore, DEC's proposed run rate should be rejected. Sierra Club contends that capping in place the Allen and Marshall CCR basins will not protect against continued contamination of ground water due to leaching of coal ash constituents into groundwater or into surface waters through migration.

NC WARN contends that DEC should not be allowed to recover any costs for the mitigation and cleanup of its CCR basins based on its extensive managerial mistakes and failures to take prompt action to correct known liabilities, and that no CCR costs should be borne by ratepayers. According to NC WARN, DEC has not met its burden of showing which of its CCR costs are capital expenses and which are operating expenses, N.C. Gen. Stat. § 62-133(b)(1) limits rate base recovery in rates to "property used and useful," and the statute does not include operating costs. As such, DEC's costs of compliance with federal and state directives stemming from CCR violations, and court orders mandating cleanup cannot be placed in rate base or otherwise recovered.

NC WARN also states that a review of the NC Clean Smokestacks Act is helpful because it provides guidance on what costs should not be allowed, such as costs incurred by the utility for failure to comply with any federal or state law, rule, or regulation for the protection of the environment or public health, and criminal or civil fines and penalties. N.C. Gen. Stat. § 62-133.6(a)(2). NC WARN asserts that the evidence shows that all of the costs incurred by DEC relating to CCR came from court orders and criminal plea agreements, and that DEC took no actions voluntarily, even actions that could have minimized subsequent costs and mitigated environmental damage. Further, NC WARN states that the evidence shows that DEC "knew or should have known" about the significant problem of leaking CCR basins in the early to mid-1980s, if not before, and that the industry standard increasingly became lining CCR basins to prevent water contamination. NC WARN points to DEC's insurance letters in 1996, 2011, and 2016 regarding potential damages and future compensation for mitigation and cleanup costs as significant evidence of what DEC knew or should have known, and contends that the refusal by the insurance companies to cover these multi-million dollar claims demonstrates DEC's culpability for at least the last 20 years. In conclusion, NC WARN submits that DEC mishandled its coal ash for decades, taking the least expensive options, and disregarding the substantial negative impacts of coal ash on families, property, and water supplies adjacent to the coal ash basins, and that the evidence demonstrates criminal negligence, millions in fines and penalties, and a number of judicial decisions and regulatory actions requiring DEC to do what it should have done all along.

E. The Position of Public Staff Witnesses Garrett and Moore

Public Staff witnesses Garrett and Moore testified that they investigated the prudence and reasonableness of costs incurred by DEC with respect to its coal ash management. In addition, they reviewed the approach taken by DEC to determine the least cost method of achieving compliance with the laws and regulations governing coal ash management. Witnesses Garrett and Moore testified that in some circumstances, DEC incurred costs associated with management of coal ash from CCR units that were not required under State or federal law. In those circumstances, witnesses Garrett and Moore evaluated the specific facts and details surrounding those CCR units to determine whether they agreed that DEC's management of those CCR units was reasonable and prudent. To the extent they believed that DEC's actions and costs incurred were not reasonable nor prudent, they recommended that the Commission disallow these costs. In conducting their investigation, witnesses Garrett and Moore reviewed the closure plans and coal ash-related costs incurred for all of DEC's coal-fired facilities, conducted extensive discovery, participated in numerous meetings, and visited several of the DEC facilities in question. Tr. Vol. 21, pp. 19-20.

Witnesses Garrett and Moore did not take exception with DEC witness Kerin's general characterization of the applicable federal and State regulations addressing the management and closure of coal ash basins in North Carolina and South Carolina. They did, however, identify several decisions made by DEC they maintained that were not required by law or where lower-cost compliance options were available, which they described in further detail in their testimony. Tr. Vol. 21, pp. 20; 50.

With regard to DEC's Allen, Belews Creek, Buck, Cliffside, and Marshall plants, witness Moore noted that DEQ issued final classifications for these facilities as "Low to Intermediate Risk" in May 2016, and that DEP is in the process of establishing the permanent replacement water supplies required under N.C. Gen. Stat. § 130A-309.211(c)(1) and performing the applicable dam safety repair work at these sites. Tr. Vol. 21, p. 54. Upon completion of these tasks within the timeframe provided, the impoundments at these facilities will be reclassified as low-risk pursuant to N.C. Gen. Stat. § 130A-309.213(d)(1). He explained that CAMA requires, at a minimum, that the impoundment be dewatered and closed either by excavation or by placement of a cap system that is designed to minimize infiltration and erosion. Witness Moore noted that this approach is generally the most cost-effective means for closure of a CCR unit. He also testified that CAMA (S.L. 2016-95) does not require the submission of proposed closure plans for low- and intermediate risk impoundments until December 31, 2019, so DEC has not submitted a Site Analysis and Removal Plan (SARP) to DEQ for any of the Low to Intermediate risk facilities at this time. He maintained, therefore, that a prudence review of the closure plans would be premature, so witness Moore took no exception in the present case to DEC's current proposed closure method for the coal ash basins located at Allen, Belews Creek, Buck, Cliffside, and Marshall. Tr. Vol. 21, pp. 55-57.

Public Staff witness Moore took exception to DEC's closure method for the CCR units located at Buck Steam Station. Duke selected Buck, along with DEP's Cape Fear and H. F. Lee Stations, as the three beneficiation sites pursuant to N.C. Gen. Stat. § 130A-309.216, which required Duke to identify three sites located within the state with ash stored in the impoundments suitable for processing for cementitious purposes. Upon selection of the sites, Duke was required to enter into a binding agreement for the installation and operation of ash beneficiation projects at each site capable of annually processing 300,000 tons of ash to specifications appropriate for cementitious products, with all processed ash to be removed from the impoundments located at the sites. Tr. Vol. 21, pp. 58-61. Witness Moore also noted that the timeframe proposed by DEC for beneficiation of the Intermediate Risk sites extends beyond the closure timeframe called for in Section 3.(a) of S.L. 2016-95 for sites deemed Intermediate Risk, and that N.C. Gen. Stat. § 130A-309.215 provides a variance option for closure deadlines that are found to be in the public interest. Id.

Public Staff witness Moore testified that instead of selecting Buck, Duke should have selected the CCR units located at Weatherspoon as one of the three beneficiation sites as required by N.C. Gen. Stat. § 130A-309.216, where Duke has selected the excavation of CCR and beneficial use option, with contracts in place for the delivery of the coal ash material to facilities in South Carolina for use in the concrete industry. This would have allowed the Buck Station to instead utilize significantly lower cost closure options instead of cementitious beneficiation. CCR units at Buck could have been classified as low risk upon completion of the establishment of permanence replacement water supplies and completion of applicable dam safety repair work, and instead may have been eligible for closure under the "cap-in-place" closure method under CAMA, which would have significantly lowered closure costs for Buck. Tr. Vol. 21, pp. 59-61. Witness Moore therefore recommended that the Commission disallow the $10 million already incurred by DEC for the cementitious beneficiation project at Buck. Tr. Vol. 24, p. 108.

With regard to DEC's selected closure actions at the Dan River Plant, witness Moore took exception with DEC's decision to excavate and transport coal ash from Ash Stack 1 at Dan River off-site to the Maplewood Landfill in Amelia, Virginia. He contended that had DEC conducted an adequate assessment of on-site greenfield landfill options at the time it began evaluating off-site disposal options, it would have identified viable on-site disposal options that would have allowed DEC to dispose of all of the ash on-site without having incurred the added expenses associated with the off-site transfer and disposal. Tr. Vol. 21, pp. 62-70.

Witness Moore disputed DEC's position that the moratorium on CCR landfills, which was enacted on September 20, 2014, in Section 5.(a) of S.L. 2014-122, and expired on August 1, 2015, had any impact on DEC's ability to construct an on-site greenfield landfill at Dan River in a timely fashion. He also noted that there were no regulatory obligations related to coal ash management that required removal of CCR materials from Ash Stack 1 as stated by DEC, particularly under the aggressive timeframes required for high-priority sites under CAMA. He evaluated DEC's investigation of on-site landfill options, particularly along the western boundary of the property, and found that DEC had no records documenting any evaluation of the area. With regard to the reasons provided by DEC as to why it did not utilize the area between the combined cycle plant and the western property boundary, Public Staff witness Moore found no valid technical reasons why an adequately sized on-site landfill could not have been located along the western boundary to have handled all of the ash on-site without having to incur the significant costs associated with off-site transportation costs and construction of rail handling equipment. Tr. Vol. 21, pp. 64-66.

As a result of DEC's unnecessary actions to transport ash off-site from the Dan River facility, witness Moore recommended a total disallowance at the Dan River facility of $59.3 million from DEC's coal ash expenditures during this recovery period. Public Staff Moore Exhibit 4.

Witness Moore summarized the coal ash closure approach taken by DEC at its Riverbend facility. Witness Moore testified that CAMA required the excavation of CCR materials from the Primary Ash Basin and the Secondary Ash Basin, but there were no regulatory obligations that required removal of CCR materials from the Ash Stack Area or the Cinder Pit. Witness Moore did not take exception with DEC's plan to remove this additional material, but he did take exception with DEC's decision to utilize the Brickhaven structural fill facility for off-site disposal. Tr. Vol. 21, p. 70, 72. Witness Moore testified that the Brickhaven facility did not present any scheduling advantages or reduce costs, and instead resulted in increased delays and litigation resulting from community opposition to the proposed project. Witness Moore testified that the DEC-owned on-site landfill at the Marshall Facility should have been utilized for the disposal of all ash from Riverbend. Tr. Vol. 21, p. 86.

Witness Moore did, however, take exception to DEC's decision to haul approximately 17,000 tons of CCR material from the Ash Stack Area by truck to the R&B Landfill in Homer, Georgia. Instead, Witness Moore stated that DEC could have utilized the landfill at the Marshall Facility for the CCR material, resulting in shorter hauling distances and lower disposal costs. Witness Moore recommended that the Commission disallow the $489,600 premium paid to transport and dispose of the 17,000 tons of CCR material to the R&B Landfill, as opposed to the Marshall Station. Tr. Vol. 21, pp. 72-74.

Public Staff witness Garrett focused his testimony on the activities undertaken by DEC at its W.S. Lee site in South Carolina. Witness Garrett agreed with DEC's decision to utilize an on-site landfill to dispose of the ash material in the Primary Ash Basin and Secondary Ash Basin at W.S. Lee, noting that this approach was consistent with Duke Energy's stated guiding principles and provided a lower cost closure solution compared to an off-site landfill. Tr. Vol. 21, pp. 39-40. Witness Garrett also concurred with DEC's decision to take some actions at the Inactive Ash Basin (IAB) and the Old Ash Fill to mitigate risk associated with long-term environmental issues at the site, but he did not agree with DEC's decision to immediately begin excavation and transportation of ash to the R&B landfill in Homer, Georgia. Witness Garrett instead testified that DEC should have followed the recommendations of its consulting engineers, which recommended repair and maintenance on the IAB berm in 2014, rather than immediate excavation. Witness Garrett further stated that DEC failed to provide a regulatory or technical reason to substantiate immediate removal of the ash from the IAB. Witness Garrett therefore recommended that the Commission disallow approximately $27 million from DEC's request, which is the premium associated with the costs incurred by DEC to transport ash to Homer, Georgia, as opposed to excavating and landfilling on-site. Tr. Vol. 21, pp. 40-41.

Witness Garrett also took exception with DEC's plan to excavate and dispose of the coal ash material contained in the Structural Fill area at W.S. Lee, because the area was developed in accordance with all applicable environmental regulations, is not in close proximity to the Saluda River, has been effectively capped in place, and does not pose any environmental concerns in its present state. Id.

F. Public Staff Witness Junis' Equitable Sharing And Coal Ash Adjustment Testimony

Public Staff witness Junis listed three conceptual options for regulatory treatment of coal ash costs. The first option is to allow full recovery of coal-ash related costs on the grounds that the costs have been reasonably incurred to comply with CAMA and the CCR Rule. Tr. Vol. 26, p. 721. This is essentially the approach recommended by DEC, minus fines, penalties, and other specific costs listed in their federal criminal plea agreement as non-recoverable in rate proceedings. Id. The second option is to disallow recovery of costs to comply with CAMA on the grounds that CAMA is the direct consequence of imprudent DEC environmental violations. Tr. Vol. 26, pp. 721-22. The third option is to disallow the costs incurred to defend and remedy environmental violations, except to the extent that CAMA requirements increased the cost of remediation. Tr. Vol. 26, p. 722. Under this approach, which the Public Staff advocates in theory, disallowances would be based on the costs to remediate environmental violations rather than the costs flowing from CAMA compliance. Id.

While the Public Staff supports the third option in theory, witness Junis encountered "complicating factors" that led him to modify this preferred regulatory treatment for practical reasons. Id. He observed that, while some environmental violations are clearly due to Company negligence, others fall into a gray zone where they are neither clearly imprudent nor clearly reasonable. Tr. Vol. 26, p. 723. For instance, decisions to place coal ash in unlined impoundments could have been reasonable based on what DEC knew or should have known at the time the basins were constructed some decades in the past. Tr. Vol. 26, pp. 723-24. At the same time, Public Staff witness Junis explained that it can be unreasonable to impose on ratepayers the costs incurred because those impoundments leaked coal ash constituents and contaminated groundwater outside the compliance boundaries, in violation of state environmental laws and regulations. Tr. Vol. 26, p. 724. Witness Junis also noted that calculating the costs of many environmental violations would be too speculative as such calculations would involve estimations based on scenarios that did not occur (e.g., preventing violations through basin construction or modification some decades earlier, or remedying violations if CAMA had not been enacted). Tr. Vol. 26, p. 725.

Due to the complicating factors, witness Junis offered a more practical approach that would exclude certain coal ash costs from recovery in rates as follows:

(1) DEC litigation costs incurred during the test year in cases where there are environmental violations;
(2) costs to remedy environmental violations where the costs exceed what CAMA would have required in the absence of environmental violations;

(3) fines, penalties, and other costs associated with the federal criminal plea agreement involving the Dan River and Riverbend plants, payments to DEQ to settle the assessment of penalties involving the Dan River plant, and the penalty for groundwater violations at DEC and DEP plants including Belews Creek and Sutton;
(4) the adjustments and disallowances recommended by Garrett and Moore to the extent there is no double disallowance for the same item; and
(5) an equitable sharing of the remaining allowed costs of coal ash management through the deferral and amortization approach recommended by Public Staff witness Maness.

Tr. Vol. 26, pp. 727-28.

Witness Junis noted that DEC has removed the costs listed in item (3) above from its rate request. Tr. Vol. 26, p. 728. Thus, the regulatory treatment of those costs is not in dispute. The disallowances recommended by witnesses Garrett and Moore are discussed elsewhere in this order. The remaining cost exclusions listed by witness Junis include litigation-related expenses in cases of environmental violations. In this category, he recommended exclusion of $2,109,406 (total system, not just NC retail, as shown in Boswell Exhibit 1, Schedule 3-1(n), line 1) of test year outside legal fees for litigation of the state enforcement actions filed by DEQ alleging violations at all of DEC's North Carolina plants and, to any extent they have not already been excluded by DEC, for litigation of the penalties assessed by DEQ for violations at the Dan River plant. Tr. Vol. 26, pp. 730-31. Witness Junis asserted that there is compelling evidence of the environmental violations on which these legal actions were based. Tr. Vol. 26, p. 731. He referenced a number of the exhibits to his testimony detailing DEQ data in support of this assertion. Id.

For the category of costs to remedy environmental violations where the costs exceed what CAMA would have required in the absence of environmental violations, witness Junis identified, to date, $1,288,526 (total system) of expenditures incurred from January 1, 2016, through November 30, 2017, for extraction wells and treatment of groundwater at DEC's Belews Creek plant pursuant to the settlement agreement between DEQ and DEP in the Sutton penalty assessment case. Tr. Vol. 26, pp. 733-34. He took the position that these costs would not have been incurred but for unlawful contamination of groundwater by DEC's Belews Creek ash basins, and that these costs are over and above the lowest reasonable costs of CAMA compliance in the absence of violations. In addition to the costs associated with extraction wells and treatment of groundwater, witness Junis identified $857,350 of expenditures for selenium removal equipment at DEC's Riverbend plant on the grounds that this equipment had not been placed in operation at the time of his testimony. Tr. Vol. 26, p. 734. Witness Junis noted that there could be additional costs in this category in the future. Tr. Vol. 26, p. 732.

The final category for disallowance is based on an "equitable sharing" of all coal ash-related costs not otherwise disallowed. Tr. Vol. 26, p. 738. Witness Junis referred to witness Maness' testimony for description of how the equitable sharing should be implemented and the reasons for it. Id. Witness Junis further testified that "An equitable sharing is particularly appropriate in light of the extent of the Company's failure to prevent environmental contamination from its coal ash impoundments, in violation of state and federal laws." Tr. Vol. 26, p. 738. In support of his opinion, he noted the nature and extent of coal ash environmental problems addressed in the federal criminal plea agreement, unlawful discharges, dam safety deficiencies, and numerous groundwater violations. Tr. Vol. 26, p. 739. He added that the sheer number of legal actions against DEC for coal ash environmental violations, while not evidence of the Company's guilt, is suggestive of the extent of the problem. Tr. Vol. 26, pp. 739-40. Witness Junis asserted that the numerous lawsuits regarding DEC's non-compliance with N.C. Gen. Stat. § 143-215.1 and state groundwater rules would in all probability have led to environmental cleanup costs even if CAMA and the CCR Rule had not been adopted, and that the costs of impoundment closures under CAMA and the CCR Rule overlap what would otherwise have been coal ash cleanup costs under existing state and federal environmental laws and regulations. Tr. Vol. 26, p. 741. Based on DEC's culpability for environmental violations, witness Junis testified that an equitable sharing would be appropriate, whereas it would be unreasonable and unjust to burden ratepayers with all the coal ash-related costs when ratepayers were not culpable for the environmental violations. Tr. Vol. 26, pp. 741-42.

Witness Junis responded to DEC witness Kerin's assertion in his testimony that the EPA's 2015 Effluent Limitations Guidelines (ELG) Rule forced DEC to convert its coal-fired plants to dry ash handling. Tr. Vol. 26, p. 742. Witness Junis noted that conversion to dry ash handling or cessation of operations is a requirement of CAMA, which was enacted in 2014, and, thus, the ELG Rule, which was not promulgated until 2015, was not the driver of this outcome in North Carolina. Tr. Vol. 26, p. 743.

Witness Junis disagreed with Company witness Kerin's testimony that DEC had not done anything to cause it to incur any unjustified coal ash-related costs, and he disagreed with witness Wright's minimization in his testimony of the role of the Dan River spill on the enactment of CAMA. Tr. Vol. 26, pp. 743-44. He stated that Dan River spill "was a large contributing factor to the creation of CAMA, which forced the Company to take expensive corrective actions." Tr. Vol. 26, p. 744. He further noted that Senate President Pro Tem Phil Berger recommended that the spill be discussed in the General Assembly's next meeting in a press release issued four days after the spill, and that the first version of CAMA directly referenced the spill in its preamble. Tr. Vol. 26, p. 745.

Witness Junis also disagreed with Witness Wright's assertion that the Commission should treat DEC the same as it treated DNCP in its 2016 rate case, in which the Commission approved amortization with a return for DNCP's past deferred coal ash costs. Tr. Vol. 26, p. 747. Witness Junis stated that the volume of environmental regulatory action against Dominion was miniscule compared to that against DEC, and that this was borne out by the Company's own responses to Public Staff Data requests in which it failed to produce evidence of environmental violations by DNCP after 1993. Tr. Vol. 26, p. 748.

In supplemental testimony, witness Junis recommended disallowance of an additional $206,553 in expenditures for groundwater extraction and treatment at DEC's Belews Creek plant listed in DEC witness McManeus' second supplemental testimony, which updated coal ash costs through December 31, 2017. Tr. Vol. 26, pp. 752-53. This recommendation is based on the same grounds for the disallowance of groundwater extraction and treatment costs detailed in witness Junis' direct testimony.

In his initially filed and supplemental direct testimony, Public Staff witness Maness identified the following seven adjustments to the Company's proposed recovery of coal ash costs. Some of the adjustments incorporate recommendations from other Public Staff witnesses:

a. Witness Maness incorporated adjustments to reflect a prudent and reasonable level of coal ash expenditures as recommended by Public Staff witnesses Moore, Garrett, and Junis. Tr. Vol. 22, pp. 65-66, 147, 153-54.

b. Witness Maness recommended adjusting the N.C. retail jurisdictional allocation factors to (a) allocate the costs DEC has identified as "CAMA Only" costs by the comprehensive allocation factor, rather than a factor that does not allocate costs to South Carolina retail operations; and (b) allocate all coal ash expenditures by the energy allocation factor, rather than the demand-related production plant allocation factor.

c. Witness Maness recommended addition of a return on deferred coal ash expenditures from December 2017 through April 2018, to bring the total balance up to the expected effective date of the rates approved in this proceeding. Tr. Vol. 22, pp. 69-70. The Company accepted this approach in its Second Supplemental Filing, as noted above. However, the Company has calculated the 2018 net-of-tax debt carrying cost using a Federal income tax rate of 35%; witness Maness recommended using the updated 2018 rate of 21%. Tr. Vol. 22, pp. 149-50.

d. Witness Maness recommended calculation of the return on the deferred coal ash costs be made with a mid-month cash flow convention, rather than the beginning-of-month convention used by the Company. Tr. Vol. 22, p. 70. The Company accepted this approach in its Second Supplemental Filing, as noted above. However, the Company had continued to apply compounding at the end of January each year. Witness Maness continued to recommend compounding carrying costs at the beginning of January each year. Tr. Vol 22, p. 149.

e. In conjunction with the Public Staff's proposal for equitable sharing of coal ash costs between ratepayers and investors, witness Maness recommended amortization of the balance of deferred coal ash expenditures over a 25-year period, rather than the 5-year period proposed by the Company. Tr. Vol. 22, pp. 70-85, 153-54.

f. Also in conjunction with the Public Staff's proposal for equitable sharing of coal ash costs between ratepayers and investors, witness Maness recommended reversal of the Company's inclusion of the unamortized balance of coal ash expenditures in rate base; this reversal, in conjunction with the 25-year amortization period, would produce a 49% ratepayers / 51% investors sharing of the burden of deferred coal ash expenditures. Tr. Vol. 22, pp. 70-85, 153-54, 162.

g. Witness Maness recommended removal of the ongoing annual expense amount, or "run rate," proposed by DEC to recover additional coal ash management costs incurred from the date the rates approved in this proceeding become effective through the date rates become effective in DEC's next general rate case.

G. Company Witnesses – Rebuttal

Rebuttal testimony with respect to the reasonableness and prudence of the Company's coal ash basin closure costs was provided by Company witnesses Kerin, Wright, and Wells. Rebuttal testimony with respect to witness Maness' proposed adjustments was provided by witness McManeus. Rebuttal testimony with respect to the Company's entitlement to earn a return on the unamortized balance of coal ash costs, ARO accounting and the "used and useful" concept, was provided by witnesses Wright, McManeus, and Doss. Such testimony is summarized as follows.

1. Kerin

Company witness Kerin's rebuttal testimony responded to the direct testimony of Public Staff witnesses Garrett, Moore, and Junis, CUCA witness O'Donnell, AGO witness Wittliff, and Sierra Club witness Quarles. As in the DEP proceeding, witness Kerin testified that witnesses Garrett and Moore engaged in a robust analysis and investigation of the costs that DEC incurred to comply with the CCR Rule and CAMA, and he agreed with the majority of their conclusions. He also stated that based on a complete review of the applicable facts and real world conditions, he did not believe their suggested disallowances were warranted, and that they again missed or overlooked key facts in several of their recommendations. Tr. Vol. 24, pp. 90-92.

First, he disagreed with witness Moore's conclusion that it was imprudent and unreasonable for DEC to transport CCR material from Dan River to a landfill in Virginia until the on-site CCR landfill could be constructed, and with their recommended disallowance of $59,320,890, which represents the difference between the cost to transport the material off-site and the cost to dispose of it in what he classified as a hypothetical and impractical on-site landfill along the western property boundary. Witness Kerin stated that witness Moore conceded that the CAMA moratorium prohibited construction of new or expanded CCR landfills located wholly or partly on top of the Primary Ash Basin, Secondary Ash Basin, and the Ash Fill 1 and 2 areas. He also stated that, while witness Moore correctly asserted that the moratorium did not prohibit construction of landfills in other areas of the site, specifically near the western property boundary, based on the Company's exploration of off-site and on-site locations for a CCR landfill for the Dan River ash, locating the on-site landfill on the western property boundary was never a feasible option due to multiple factors that witness Moore did not consider. Tr. Vol. 24, pp. 92, 94-105, 131.

Witness Kerin explained that in June 2015, Duke Energy purchased two tracts of land near Dan River (the Hopkins Tracts), which together with the Dan River plant were subject to a City of Eden zoning ordinance that made landfill construction on those properties cost prohibitive. He explained further that, while DEC and the City of Eden entered into an agreement whereby the City amended its zoning ordinance to allow landfill construction on the Dan River property, several limitations were imposed on the location of an on-site landfill. The landfill could only be located on the Dan River Facility premises, not on the Hopkins Tracts. In addition, the on-site landfill needed to be located near the existing basins, and as remote from residential areas as feasible. Witness Kerin noted that the nearest location to the existing basins is within the footprint of the former ash stack, and that this is the location DEC chose for the landfill. This choice also minimized impacts to surrounding properties by ensuring that the landfill was located as far as feasibly possible from neighboring properties. He stated that, because witness Moore's proposed location, in contrast, was not closest to existing basins or as remote as feasible from residential areas, the City of Eden would not likely have approved the zoning required to construct the landfill in this location. Witness Kerin stated that, if witness Moore had considered the City of Eden agreement, he could not have concluded that his alternative landfill location was reasonable or prudent. Tr. Vol. 24, pp. 95-96.

Witness Kerin maintained further that construction of the landfill in witness Moore's proposed location would require complete excavation of a LCID Landfill on the site. He explained that DEQ had allowed Duke Energy to dispose of asbestos in the Dan River LCID Landfill, and stated his opinion that North Carolina regulators would not allow DEC to disturb a covered landfill containing asbestos. This is because, while asbestos that is covered and in a landfill poses little to no risk to environmental health or safety, when uncovered and disturbed through excavation, it becomes friable and will be released into the air, posing an unacceptable risk to workers and, potentially, neighbors. Witness Kerin also testified that, even if the Company were allowed to excavate the LCID Landfill, disposal of the fill material would have posed additional challenges. While witness Moore asserted that the Company could have disposed of the material at the Rockingham County Landfill, witness Kerin stated that it is not clear that that location would have accepted the volume of asbestos—at least 60,000 cubic yards—required to be excavated from the LCID Landfill. Even if Rockingham would accept the asbestos, because it imposes strict double-bagging requirements for asbestos waste, this requirement would prohibit pursuing this alternative from an operational and labor standpoint. Tr. Vol. 24, pp. 97-98.

Witness Kerin stated that DEC also located the on-site landfill so that it does not interfere with existing streams and wetlands on the Dan River Plant premises. He stated that witness Moore's alternative location would in contrast interfere with two streams and two wetlands and impact several others, which would have required the Company to apply for U.S. Army Corps of Engineers (USACE) and DEQ permits to address those impacts. He also stated that, in the Company's experience, it is not likely that USACE would have approved the requisite permits, or would not have done so in time for the Company to meet the closure deadline of August 2019, especially considering that another on-site location – the one chosen by DEC – would have no impacts to streams or wetlands. He contended that witness Moore's proposal neither avoids nor minimizes impacts to jurisdictional waters, and relies solely on cost as support for his location. He asserted that the location that DEC chose for the landfill allowed it to proceed without litigation or delay, and will allow it to meet its CAMA imposed excavation deadlines. Tr. Vol. 24, pp. 98-100.

Witness Kerin maintained in addition that witness Moore's alternative location did not consider elevation changes and other topographical features, such as the steep slopes on the alternative site that lead to and through streams and wetlands. He also asserted that the steep grading limits the airspace that can be realized for developing a lined landfill of the size needed, and the elevation of witness Moore's proposed location would result in the landfill being in neighbors' line of sight. Witness Kerin also asserted that the land along the western property boundary is not suitable for landfill construction, as the depth to bedrock is fairly shallow, leaving little room for excavation for fill volume, borrowing soil or buffering to groundwater. He asserted further that the slope to stream combination on the western and southern sides of witness Moore's proposed landfill location leaves no area for stormwater management on the low side of the landfill, and that significant borrow resources would be required to fill the toe of the slope to achieve enough buffer from the stream for landfill access and stormwater features, adding expense and time to the project. Further, he maintained that the Company would have needed to obtain a new construction permit and construct an industrial NPDES outfall through the service water pond in order to build witness Moore's proposed landfill, and that both the permit and the outfall would have required substantial time to obtain and construct and would have to be in place before construction on the landfill began. In addition, he maintained that the 100-year flood plain in this area intrudes into portions of witness Moore's proposed location, and would present additional permitting challenges and likely not leave sufficient space for required stormwater management features on the site. Tr. Vol. 24, pp. 100-02.

Finally, with regard to Dan River, witness Kerin maintained that, even if DEC could have overcome all of the obstacles to witness Moore's proposed site, the proposed disallowance was incorrectly calculated. He explained that witness Moore did not correctly calculate the Company's costs for excavating, transporting, and disposing of Ash Stack 1 off-site, and that his proposed $83,531,985 disallowed should be reduced by approximately $3.8 million that is actually attributable to excavation and transportation of ash from the Primary Ash Basin. Witness Kerin also asserted that witness Moore's cost estimates to construct his alternative landfill are too low. He explains that when the presence of asbestos and the need to relocate the warehouse building in the center of the alternative location are accounted for, the cost to build witness Moore's alternative location landfill jumps by $10,790,900 to $35,001,095, thereby reducing witness Moore's proposed disallowance further, to $44,742,265. Witness Kerin emphasized that, because witness Moore's proposed site was not a viable option and never considered by the Company for the myriad reasons he discussed, this recalculation is hypothetical, but that it shows that witness Moore's proposed disallowance is incorrect even if his suggested course of action were possible, which it was not. Tr. Vol. 24, pp. 103-05.

Witness Kerin also disagreed with witness Moore's contention that DEC should have chosen Weatherspoon over Buck as a beneficiation site, and with the recommendation that $10,612,592 associated with beneficiation costs at Buck be disallowed. N.C. Gen. Stat. § 130A-309-216 requires an impoundment owner to: (i) identify two sites by January 1, 2017 and an additional site by July 1, 2017; and (ii) enter into a binding agreement for the installation and operation of an ash beneficiation project at each site capable of annually processing 300,000 tons of ash to specifications appropriate for cementitious products, with all ash processed to be removed from the impoundments located at the sites. Witness Kerin maintained that in keeping with the timing requirements imposed by CAMA, Duke Energy identified Buck, H.F. Lee, and Cape Fear as the three beneficiation sites based on its conclusion that they offered the most feasible alternative and the best economic value to customers while complying with CAMA. While he agreed that reuse of ash at Weatherspoon is appropriate, and noted that the Company is selling Weatherspoon ash for reuse today, he disagreed that Weatherspoon was a possible choice for one of the three beneficiation sites required by CAMA. Tr. Vol. 24, pp. 93, 105-08, 131.

Witness Kerin explained that witness Moore mixes apples and oranges by contending that by selecting Buck as a beneficiation site and therefore supplying an additional 300,000 tons per year of CCR material to the concrete industry, the Company in turn reduced demand for the 70,000 tons per year of CCR material for the same purposes from Weatherspoon for which Duke Energy was unable to find a purchaser. He explained that Weatherspoon ash is sold under contract to cement manufacturers and is used as raw material or aggregate in the manufacture of cement, while beneficiated ash from Buck is used as a replacement for cement in concrete. Because these are separate products that are used for different purposes, the sale of beneficiated ash from Buck has no impact on the demand for ash from Weatherspoon. Tr. Vol. 24, pp. 105-06.

Witness Kerin maintained further that witness Moore's assertion that choosing Buck increased closure costs at that site compared to other closure options misses several key facts that support the decision to select Buck as the third beneficiation site. He noted that Weatherspoon contains only 2.4 million tons of ash, which is approximately one-third the 6.4 million tons at Buck, and that the Company reasonably considered the amount of ash available at the site, and the potential uses for the ash when making decision to invest in beneficiation at a particular location. Witness Kerin also maintained that Weatherspoon is in a poor geographic location in relation to the major markets for ash used in the cement industry. He explained that since trucking the ash is part of the cost of the sales, with its proximity to Charlotte and Greensboro, Buck is in a much better location for beneficiation, and has the highest revenue projection, followed by Cape Fear (Greensboro and Raleigh) and H.F. Lee (eastern North Carolina and Virginia). Witness Kerin noted further that, even after issuing an RFP, Duke Energy has only been able to secure a buyer willing to enter into a long-term contract for 230,000 tons of ash from Weatherspoon, but not the additional 70,000 tons to qualify the site for beneficiation. He also asserted that the statute's specific references to installation and operation of an ash beneficiation project and production indicates the General Assembly's intent that Duke Energy construct and operate technology such as carbon burn-out plants and STAR technology, rather than use the basic drying and screening operations occurring at Weatherspoon. Tr. Vol. 24, pp. 106-07.

Witness Kerin also disputed witness Moore's recommendation that the Commission disallow recovery of $2,000,100 related to DEC's purchase of nine adjacent parcels at Cliffside. He stated that witness Moore's conclusion ignores one of the Commission's and DEC's core policies, which is to encourage and promote harmony between public utilities, their users and the environment. He also noted that the cost of the Cliffside parcels was not included in the costs the Company is seeking to recover in this case, and has never been part of the Company's ARO and as such the recommended disallowance of these costs should not be granted. Tr. Vol. 24, pp. 93, 108.

Witness Kerin also objected to witness Moore's suggestion that the $489,000 in costs to ship ash from Riverbend to Homer, Georgia should be disallowed on the basis that the ash could have been shipped to DEC's Marshall Steam Station. Witness Kerin testified that shipping ash to Homer, Georgia was a reasonable, temporary solution that allowed DEC to begin required ash excavation within the mandatory time frame after Riverbend received its NPDES stormwater permit. He explained that the Company sent Riverbend ash to Marshall once that site became available, but that Marshall was not an available location in May 2015, when the Company began trucking ash from Riverbend pursuant to DEQ directives. Those directives, as contained in an August 13, 2014, letter from DEQ, requested that Duke Energy submit an excavation plan for Riverbend by November 15, 2014, and that it begin removing ash at Riverbend within 60 days of receiving DEQ approvals to do so, which included an NPDES Stormwater Permit. Since DEQ issued the permit on May 15, 2015, DEC had until July 15, 2015, to begin excavating Riverbend ash. He stated that while the Company was exploring long-term options to receive the Riverbend ash, it was still obligated to meet this deadline, and thus it was imperative that the Company find someone to haul and dispose of the Riverbend ash on a short turnaround. Waste Management National Services, Inc. (Waste Management) was able to meet that requirement, and began trucking ash from Riverbend on May 21, 2015, and transported the final load on September 18, 2015 (as opposed to February 2016, as asserted by witness Moore). DEQ approved

Duke Energy's request to dispose Riverbend ash at Marshall on June 19, 2015, which did not allow enough time for the Company to accomplish all of the tasks required to utilize Marshall and still meet the 60-day deadline. Once those tasks were accomplished, DEC did begin transporting Riverbend ash to Marshall on July 22, 2015, seven days after DEQ's excavation deadline. Tr. Vol. 24, pp. 93, 108-10, 131-32.

Witness Kerin also clarified that DEC could not have stopped trucking Riverbend ash to the R&B Landfill once it began trucking to Marshall, as the Company was under contract with Waste Management to dispose of the ash at R&B for 17 weeks, or through September 18, 2015, and would have been in breach of contract if it had halted the ash transport before that date. He also stated that the Company's decision to enter into a 17-week contract was based on several factors, including the short turnaround needed for a contractor to truck and accept the ash, and the knowledge that this would be a temporary disposal site and resulting need to find a contractor willing to accept a limited tonnage of ash. Tr. Vol. 24, pp. 110-11.

Finally, witness Kerin noted that Public Staff witness Garrett agreed with the Company that the Inactive Ash Basin and the Old Ash Fill at W.S. Lee needed to be excavated. Witness Kerin disagreed, however, with witness Garrett's assertion that DEC should have delayed excavation of ash material from the Inactive Ash Basin (IAB) and Old Ash Fill at W.S. Lee in order to undertake a grading and slope stabilization project, excavate the overly steep sections of the IAB berm, and dispose of that ash on-site. Witness Kerin testified that this approach would not have been reasonable or prudent and therefore disagreed with witness Garrett's recommendation that the costs associated with transferring ash to Brickhaven ($27,275,192) should be disallowed. Tr. Vol. 24, pp. 93, 111-12, 132.

Witness Kerin testified that, consistent with a Consent Agreement entered into by Duke Energy and the SCDHEC in September 2014, which required excavation of the IAB, the Company excavated ash from this basin and trucked it to the solid waste landfill operated by Waste Management in Homer, Georgia. He explained that, based on available stability analysis, the IAB did not meet the required CCR Rule dam safety factors for maximum storage pool and liquefaction conditions. He concluded that it was therefore reasonable and prudent for DEC to begin excavation immediately. Witness Kerin also noted that at the time the Company was deciding how to manage the IAB, its priority was to address stability and erosion concerns on the river frontage along the IAB dike. He asserted that, due to the low safety factors of the IAB dike, the Company was already limiting equipment access on the dike crests, which limited work to the very narrow portion of downslope area that extended from the dike toe to the river's edge. Witness Kerin asserted further that the equipment necessary to implement witness Garrett's proposal could not have safety traversed the dike on the downslope, and that moving the heavy equipment to the downstream/river side of the downslope would have created undue risk to bank stability and unnecessarily risked worker safety. In addition, while the Company evaluated interim measures that could offer stability and risk mitigation during excavation, these involved work at and in the river to both access and install the features, and the Company decided not to pursue these measures due to the time needed to obtain a USACE permit for work in the river. He noted that the Company had already initiated the IAB's excavation and that by the anticipated 12-month time period to obtain the permit and 4-6 months to install the required features, the basin would be nearly excavated, and the Company would have to later remove the features to restore the river. Witness Kerin maintained that witness Garrett's proposed two-phased approach would not address these issues, would have unnecessarily put worker and environmental safety at risk, and the delay would have been unacceptable to DEC and to the SCDHEC. Tr. Vol. 24, pp. 112-14, 132.

Witness Kerin disagreed with witness Garrett that the Company should have agreed to different terms in the Consent Agreement with SCDHEC. He explained that, based on SCDHEC's expressed concerns, the deadlines agreed to pursuant to the Consent Agreement were reasonable and allowed the Company to achieve the primary goal of the agreement, which was to excavate ash. SCDHEC's concerns were driven by the IAB abutting the Saluda River and the resulting risk of river impacts, the steepness of the banks, and the heavily wooded nature of the slope. He stated that SCDHEC wanted Duke Energy to take prompt action with respect to excavating the IAB, and that desire is reflected in the Consent Agreement and excavation deadlines. Tr. Vol. 24, p. 115.

Witness Kerin also disagreed with witness Garrett that the Company should have delayed excavation of the Old Ash Fill, noting that the Old Ash Fill was also subject to the Consent Agreement and that the SCDHEC was as adamant that the Company excavate this site immediately as it was with regard to the IAB. Tr. Vol. 24, p. 116.

Finally, witness Kerin testified in response to witness Garrett's criticism of DEC's plan to excavate the Structural Fill Area at W.S. Lee in the future, even though witness Garrett did not suggest any disallowances with respect to this plan. Witness Kerin stated that, in order to resolve the concerns of SCDHEC and environmental groups, the Company agreed to mitigate the future risk of operating two ash management structures by managing all ash at W.S. Lee through a single management structure – the landfill – as opposed to taking a piecemeal approach as suggested by witness Garrett. He stated that if the Company was later required to excavate the Structural Fill area after the landfill project was completed, it would incur greater costs than it will incur by managing the ash while the landfill project is ongoing, and that the decision to excavate this area now is reasonable and prudent approach to mitigating against potential future ash related liability and to reduce future costs for the site. Tr. Vol. 24, pp. 93, 116.

Witness Kerin also testified that Public Staff witness Junis' testimony, similar to witness Lucas in the DEP case, incorrectly asserts that the costs of groundwater treatment wells installed at Belews Creek would not have been incurred absent the Sutton Settlement. Witness Kerin asserted that this conclusion ignores the fact that, while the measures undertaken at Belews Creek were reflected in the Sutton Settlement, they were moved up in time from when they would have otherwise been required, and DEC would have installed extraction wells in order to comply with CAMA even without the Sutton Settlement. Tr. Vol. 24, p. 117.

He also disagreed with witness Junis' contention that the Company should not recover the cost of equipment that could remove selenium at Riverbend. He stated that witness Junis' recommendation does not reflect the reality of managing that facility either at the time of that purchase or at present. He explained that in order to excavate the Riverbend ash, as required by CAMA, DEC had to dewater the impoundments, and that the interstitial water treatment system for the dewatering process was designed to meet NPDES permit limits, including selenium. The environmental consultant hired by the Company to develop this treatment system, WesTech, proposed the SeaHAWK bioreactor system for this purpose. Witness Kerin contended that it was imperative for the Company to have a treatment system that could appropriately treat the site's wastewater and meet future permit selenium limits. He stated that, while the SeaHAWK is important to the Company for staying within its permit limits, it is expensive to operate (approximately $60,000/month), and that the Company will only use it when other physical and chemical extraction methods are insufficient. Witness Kerin emphasized, however, the prudency of having this system in place should it be needed, in order to avoid the need to cease ash removal operations in the case that selenium levels increased and the bioreactor was not on site. He offered the example of a five-month delay to secure a bioreactor would cost the Company several million dollars in delay charges under its contract with Charah. He concluded that it was reasonable and prudent for DEC to purchase a bioreactor system to mitigate against potential violations of NPDES permit limits and to treat decanted wastewater at Riverbend, and that the recommended disallowance of those costs should therefore be rejected. Tr. Vol. 24, pp. 90, 117-19, 132.

Witness Kerin also rebutted AGO witness Wittliff's assertion that the Commission should disallow the Company's coal ash costs, and noted that witness Wittliff's testimony appears to go even further in this case than his recommended disallowance in the DEP case. Witness Kerin testified that witness Wittliff's testimony, with its revisionist history approach to coal ash management and his inability to specify or quantify specific disallowances, is not useful to the Commission. Tr. Vol. 24, pp. 91, 133.

Witness Kerin testified that AGO witness Wittliff's contentions that DEC's management of coal ash has lagged behind the rest of the utility industry, and that the Company has ignored dam safety at its facilities, are incorrect. He asserted that DEC's ash management practices have conformed and evolved with changes in industry practices and regulatory standards. He noted that witness Wittliff based his assertion that the Company knew by 2008 that impoundments were no longer the industry standard in part on excerpts from Duke Energy's 10-K filings around that time. He stated that these excerpts, which pertain to Duke Energy and not to individual utilities like DEC, simply notify the Securities and Exchange Commission of potentially significant coal ash costs that Duke Energy anticipated at that time, and potential new regulatory contingencies to which it could become subject, but were not intended to analyze DEC's coal ash management practices and do not support witness Wittliff's claim that the Company's coal ash management practices were out of step with industry or that the Company knew of any such inconsistency. Witness Kerin also stated that while the 1988 and 1999 EPA Reports cited by witness Wittliff in support of his position show increases in the percentages of new lined landfills and surface impoundments, witness Wittliff acknowledged that the Company last constructed a new ash basin in 1982. In addition, while these reports show an increase in the percentage of basins that were lined from 17 to 28% between 1975 and 1995, 28% is still a minority of new basins being constructed, which is consistent with DEC's practice during this time frame. Witness Kerin stated further that witness Wittliff's assertion fails to account for site-specific conditions, which as the EPA explains in the preamble to the CCR Rule and guidance, is an essential consideration when making CCR unit-specific determinations. Finally, he pointed out that witness Wittliff presented no credible evidence to show that the Company's engineering and design of its impoundments was not consistent with industry practice and regulatory requirements at the time. Tr. Vol. 24, pp. 119-21.

Witness Kerin also rebutted witness Wittliff's assertion that DEC should have built new lined impoundments as opposed to expanding existing unlined impoundments. He testified that witness Wittliff's argument ignores the fact that construction of new lined impoundments would have entailed significant expense to the Company, while not removing the need to maintain existing unlined impoundments. In addition, because such action would have occurred before it was consistent with industry standards, it would have put the Company at risk of disallowance of those costs. Witness Kerin stated that the suggestion that DEC chose not to construct new lined impoundments in order to delay and avoid potential exposure to requirements for more rigorous environmental standards is therefore not only unfounded but also inconsistent with the realities of managing coal ash basins. He noted that, at the hearing in the DEP proceeding, witness Wittliff admitted that the majority of utilities in the country continued to use unlined, wet ash impoundments well after the timeframe in which he alleges the Company should have ceased to do so, because the law allowed them to do it, and the law continued to allow them to do it. Witness Kerin noted the inconsistency between admitting that the Company's use of unlined, wet basins was legal and in line with most utilities in this country, and asserting that DEC was imprudent by doing so. Tr. Vol. 24, pp. 121-22.

Witness Kerin also responded to witness Wittliff's contention that dam safety has not been a priority for the Company, and stated that DEC has a very robust dam safety program, led by a central organization with responsibilities for each site in the system. The program includes weekly documented inspections, and tracking of any corrective actions, as well as episodic inspections to be conducted following heavy rain events or certain seismic events. He stated that the Company also conducts detailed, documented annual inspections of each facility, and that any issues identified are tracked through to resolution. He noted in addition that the Company internally inspects and documents basin discharge piping annually, and again tracks identified issues through to resolution. Any required modifications are managed through a stringent program including plans and specifications submitted to and approved by DEQ's Dam Safety Program. This is all in addition to DEQ's own annual inspections of the basins and all completed modification projects. He stated that the Company provided five-year dam safety inspections dating to the 1970s. He maintained that no instance arose in which the Company failed to act upon a major dam safety issue. He argued that subsequent mentions of certain issues simply show that DEC was monitoring the condition before identifying or confirming the need for longer- term repair, and that these inspections do not show any major issue that threatened the integrity of the dam's ability to retain the ash in the basin. Tr. Vol. 24, pp. 122-24.

Witness Kerin responded to witness Wittliff's criticism of witness Kerin's own CCR experience and qualifications to discuss ash management industry standards, noting the irony of witness Wittliff's position in light of his own limited experience in this area. Tr. Vol. 24, p. 124.

Witness Kerin also testified that, like his testimony in the DEP case, CUCA witness O'Donnell's analysis and recommendation of a 75% disallowance of the Company's coal ash costs relies on multiple analytical flaws that are fatal to his conclusion, and that witness O'Donnell made little effort to address those flaws in his conclusions from the earlier case. Specifically, witness Kerin disagreed with witness O'Donnell's conclusion that his national comparison of CCR assets retirement obligation, or ARO, amounts shows that the Company's ARO is overstated by 75%. He stated that witness O'Donnell appears not to have considered 23 factors that must be accounted for in order to seriously attempt this type of analysis. He also stated that witness O'Donnell made no attempt to quantify DEC's coal ash AROs resulting from CAMA, as compared to its obligations under the CCR Rule, or to determine the impetus for coal ash AROs for the other utilities to which he compares the Company. Witness Kerin argued that witness O'Donnell cannot credibly testify that the Company's ARO coal ash costs are higher because of CAMA when he cannot attribute any specific ARO coal ash costs to CAMA or attribute ARO coal ash costs for other companies to any particular regulatory obligation. He explained that, even if witness O'Donnell had conducted such an analysis, it would not provide an accurate comparison, because other utilities are in very different stages of their coal ash management timeline than DEC. Witness Kerin also maintained that the SNL data relied upon by witness O'Donnell are rough estimates, and that there is substantial uncertainty over the level of actual closure costs for many of those utilities he listed. Witness Kerin therefore recommended that the Commission consider the reasonableness of the Company's ARO amount on its own merits, based on the facts of this case, and without regard to witness O'Donnell's proposal. Tr. Vol. 24, pp. 90, 125-28, 133.

Finally, witness Kerin disagreed with Sierra Club witness Quarles' assertions as to the consistency of DEC's coal ash management practices with industry, the costs of lined landfills as compared to surface impoundments, and Duke Energy's previous pursuits of reuse options for ash. Tr. Vol. 24, p. 91. For the same reasons he presented in response to witness Wittliff's testimony, witness Kerin disagreed with witness Quarles' conclusion that operation of unlined basins after the 1980s was unreasonable, and countered that witness Quarles does not appear to have considered industry standards or regulatory requirements or, like witness Wittliff, to have presented any specific evidence that the Company's impoundment engineering and design was not consistent with industry practice and regulatory requirements at the time. He also testified that witness Quarles' assertion that closure costs for surface impoundments were higher than costs for lined landfills fails to consider the additional costs associated with conversion to lined landfills, in addition to the fact that DEC last constructed a new basin in 1982. Finally, witness Kerin clarified that the Company did make sales of coal ash for reuse during the 1980s, from Marshall in 1986 and Belews Creek in 1988, contrary to witness Quarles' assertion otherwise. Tr. Vol. 24, pp. 128-29, 133-34.

2. Wright

On rebuttal, Company witness Wright testified to several issues related to the recovery of costs associated with coal ash remediation expenses raised in the testimonies of Public Staff witnesses Garrett, Moore, Junis, and Maness, AGO witness Wittliff, and CUCA witness O'Donnell. He stated that, overall, the theories underlying these witnesses' recommended disallowances of these costs are unfounded, do not provide a proper basis on which costs may be disallowed, and should be rejected by the Commission. Tr. Vol. 12, pp. 156-2-3, 161-62.

Witness Wright first disagreed with Public Staff witness Junis' recommendation to disallow approximately 49% of the Company's remaining coal ash costs after accounting for certain other disallowances that he and Public Staff witnesses Garrett and Moore recommend. Witness Wright stated that this recommendation does not align with the appropriate regulatory standard for denial of cost recovery, which he explained is a finding that specifically identified costs are imprudent or unreasonable. He noted that witness Junis did not find the Company imprudent for most of the coal ash-related cost, nor did witness Junis find the Company's costs to be unreasonable. Instead, witness Wright explained, witness Junis asked the Commission to disallow these costs apparently based on the theory that the Company acted poorly in its historical coal ash disposal methods and on speculation of past or future environmental compliance issues.

Witness Wright maintained that it is not proper for the Commission to deny cost recovery based on speculation of future findings of violation, or to impose a sharing of costs based upon an undefined culpability standard. Tr. Vol. 12, pp. 156-4, 162-63.

Witness Wright also explained that the proposed sharing of cost is inconsistent with Commission precedent and with the Public Staff's own position on the recovery of coal ash disposal cost in Dominion's 2016 base rate case. In that case, he recalled, Dominion requested a recovery of CCR Rule compliance costs up to and through 2016. He explained that those expenditures included closure and related costs for the Chesapeake Energy Center, even though a court found past violations of the Clean Water Act at this location. He stated that the Commission concluded that the recovery of these costs, as provided in the stipulation entered into in that case by the Public Staff and Dominion, was just and reasonable. He stated his opinion that the CCR cost recovery methodology applied in the Dominion case was correct and should be applied in the same way for DEC. Tr. Vol. 12, pp. 156-12, 163.

Witness Wright also testified that the Public Staff's suggestion that the Commission's treatment of abandoned nuclear plants supports its proposed cost sharing proposal is not appropriate, because abandoned nuclear plant costs are not comparable to CCR costs. He explained that the Commission has found abandoned nuclear cost not to be used and useful, and thus not eligible for rate-based treatment. In contrast, he noted, the coal plants associated with these costs and the related coal ash disposal facilities have been used and useful in providing low-cost, reliable power to North Carolina customers for more than 70 years, and will continue to be used and useful. He stated that this is consistent with the recent Dominion case, where the Commission found that CCR repositories were and continue to be used and useful, were therefore not abandoned, and were therefore eligible for recovery through amortization and a return on the unamortized balance, similar to other types of used and useful property. Tr. Vol. 12, p. 156-16 – 156-19.

Witness Wright proceeded to state that the Commission's treatment of environmental cleanup of manufactured natural gas (MNG) plants also does not support the Public Staff's proposed cost sharing, and referred to his direct testimony that MNG plant costs differ from coal ash disposal costs, both in terms of the time that elapsed between the actual usage of the facility and the environmental-related cost recovery, and in terms of ownership. In addition, he noted that MNG facilities, like abandoned nuclear plants, were found not to be used and useful. He noted further that there is no need to rely on a 23-year-old cost recovery example from a different industry, dealing with assets last used more than 70 years ago, when the best example of the Commission's treatment of coal ash disposal costs can be found in the Dominion case that was decided one year ago. Tr. Vol. 12, p. 156-18.

Witness Wright also testified that the 25-year amortization period proposed by the Public Staff is not justified by their cost sharing theory, which is based on a culpability theory and by defining these costs as being extremely large. He explained that adoption of this proposal would undermine the basic cost of recovery principles embodied in the North Carolina utility regulation and would subject utilities to an unknowable and ill-defined cost recovery standard. He explained further that it could also result in a perception of the State's utilities as riskier, leading to higher cost of capital and cost of service. Tr. Vol. 12, p. 156-22.

Witness Wright disagreed with witnesses who claimed that Duke Energy substantially caused the CCR Rule and CAMA and that, therefore, all costs incurred to comply with these requirements should be disallowed. He referenced his direct testimony that while the timing of CAMA may have been influenced by the Dan River accident, he cannot conclude that the North Carolina legislature would have adopted a different substantive law without Dan River. He noted in addition that there are numerous examples of North Carolina lawmakers and regulators adopting environmental policies, not only specific to this state, but stricter than national or neighboring states' policies. He also noted that state-specific actions to address CCRs have been adopted in a number of jurisdictions. Based on all these factors, he opined that North Carolina likely would have adopted a state-specific CCR regulation regardless of the Dan River accident. Tr. Vol. 12, pp. 156-24 – 156-27, 163-64.

Witness Wright also argued that CAMA was not intended to be a punitive law. He stressed that CAMA does not contain any punitive limitation on cost recovery except for the provision for certain spills to surface water. He also noted that attempts to further restrict coal ash disposal cost recovery under this law have been tried three times, but in all three cases, amendments or laws to disallow cost recovery were defeated. He stated that the General Assembly has shown that it will, when it wants to, adopt specific cost recovery restrictions with other state environmental laws, as exemplified by the Clean Smokestacks Act. In contrast, he explained, the legislature's affirmative decision not to disallow prudently-incurred costs related to CAMA, and not to adopt subsequent proposals to disallow such costs, indicates that CAMA was not meant to be punitive with regard to cost recovery, but rather intended to leave cost recovery determinations to this Commission's oversight and sound regulatory policy. Tr. Vol. 12, pp. 156-28 – 156-31, 164-65.

With regard to coal ash litigation costs, witness Wright reiterated that DEC has excluded from its recovery request all fines, penalties, and fees related to the Dan River accident. Tr. Vol. 12, p. 156. He also opined, however, that witness Junis' apparent position that all of the Company's costs to defend lawsuits should be disallowed recovery, regardless of whether the Company is ultimately found liable or not, is not supported by precedent or sound regulatory policy. First, the Glendale Water case does not support this theory. In addition, he noted that the Commission has recognized that settlements and litigation defense costs, when reasonable and prudent, are recoverable costs, and that the Commission and the Public Staff have also recognized that settlements are beneficial. Tr. Vol. 12, pp. 156-31 – 156-36, 165.

Witness Wright disagreed with the Public Staff's recommendation of provisional cost recovery for coal ash expenditures prudently incurred from January 2015 through August 2017, based on the argument that the appropriateness of such recovery may depend on the outcome of legal determinations. He noted first that this would appear to be retroactive ratemaking. He also stated that the standard is that the utility makes the best possible decisions on expenditures based on the information available at the time, and determinations of the reasonableness and prudency of these costs should not depend on future outcomes of legal proceedings but what was known or knowable at the time. Tr. Vol. 12, pp. 156-39 – 156-40, 165.

Additionally, witness Wright disagreed with Junis' recommendation that costs to remedy environmental violations where the costs exceed what CAMA would have required be disallowed, including those specifically related to Belews Creek groundwater extraction and treatment and a second related Riverbend selenium removal. Witness Wright, citing to his earlier testimony, stated first, that absent a finding that the Company was guilty or had liability associated with environmental issues that led to additional compliance costs, or that the settlement in question Junis was citing to was imprudent, that environmental costs like the Belews Creek costs noted here should be recovered from ratepayers and not shareholders. Secondly, in regard to Junis' statements that DEC had a duty to comply with groundwater rules, and its failure to comply are a reason to deny the recovery of these costs with or without settlement, witness Wright cited his earlier testimony where he discusses how and why unlined coal ash pond exceedances occur and are not unexpected. Moreover, witness Wright noted his earlier testimony in explaining why witness Junis' theory that DEC had a duty to comply with the North Carolina groundwater rules, Title 15A, Subchapter 2L of the North Carolina Administrative Code (2L rules), without regard to whether it followed accepted industry practices, is misplaced. Tr. Vol. 12, pp. 156-36 – 156-38, 162.

Next, witness Wright stated that he disagreed with CUCA witness O'Donnell's belief that the DEC was responsible for the passage of CAMA and should be responsible for any coal ash costs above that required by the CCR Rule, and cited to his earlier statements disagreeing with such. Witness Wright opined that the Commission should reject witness O'Donnell's recommendation that the Company's environmental compliance costs should be disallowed based on a comparison of the alleged national asset retirement obligations, or ARO, amounts relating to CCRs. He stated further that witness O'Donnell's analysis neither considered the fact that most utilities are behind DEC from a timing perspective in both planning and addressing coal ash pond closure, nor reflected the most recent coal ash CCR costs being reported by various electric utilities. Witness Wright also disagreed with witness O'Donnell's statement that the EPA's reconsideration of aspects of its CCR Rule "direct[ly] conflict[s]" with witness Wright's statements about this country's ever-tightening environmental standards. Witness Wright stated that although it was possible that the EPA could modify its current rule, there is no way for DEC to know if, when, or how such modification might occur. Tr. Vol. 12, p. 156-40 – 156-43.

Finally, witness Wright testified that the Commission should reject AGO witness Wittliff's recommendation that because the Company had a "history" of regulatory violations, and due to the Dan River accident leading to the enactment of CAMA, DEC should be disallowed recovery of coal ash related costs. In reference to his earlier statements on CAMA and his direct testimony, witness Wright reiterated his belief that the North Carolina legislature would have adopted some type of state specific coal ash closure legislation shortly after the passage of CCR, regardless of the Dan River accident. He noted that witness Wittliff did not quantify the disallowance he recommends, but instead assumed that the costs incurred to comply with both the Federal CCR rules and CAMA were unreasonable or imprudent without any underlying support. Additionally, witness Wright identified that witness Wittliff's recommended disallowance was also at odds with his testimony filed in the DEP case. Tr. Vol. 12, pp. 156-43 – 156-44, 163-64.

At the hearing, witness Wright explained in response to questions by counsel for the Sierra Club that, if the Commission approved the Company's request for recovery of ongoing expenses, the Company would then bring its actual costs to the Commission for review and approval annually. Tr. Vol. 12, p. 186. Witness Wright also explained in response to questions regarding EPRI documents from the 1980s that those reports acknowledged that more information was being provided about potential impacts from coal ash, but that the reports also advised that disposal procedures not yet be modified. Id. at 191-92. During cross by counsel for NC WARN, he discussed the decision tree that the Commission uses to determine whether costs are recoverable and how that recovery will occur. Witness Wright explained that the first question is whether the costs were reasonable and prudent in providing service to ratepayers and, if so, the next question is whether they were used and useful and, if so, the last stage is to consider what outcome would be fair and equitable. Witness Wright explained further that it is at the last stage where the Commission has leeway to consider different rate designs to achieve a fair and equitable result. Id. at 202-06.

Witness Wright testified in response to questions by counsel for the Public Staff that the fact that DEC has an exceedance or even a violation is not indicative or necessarily tied to the recoverability of costs DEC is seeking in this case. Witness Wright explained that if DEC has a violation and admitted wrongdoing, or an adjudicated proceeding determined there was wrongdoing, those costs or fines should not be recovered. Witness Wright testified that that is different from DEC having to now comply with new standards; in terms of costs associated with new obligations, he considers those long-term compliance costs. Tr. Vol. 13, pp. 77-78, 91-93. On redirect, witness Wright agreed that it is reasonable to assume that state and federal regulators who understood how soil and water interact with each other would have passed appropriate rules and regulations over time to account for that interaction. Tr. Vol. 13, pp. 95-96.

In response to questions by the Chairman, witness Wright confirmed that, in his opinion, the Commission's primary responsibility pertains to cost recovery rather than regulating how utilities implement state and federal environmental laws, and agreed that DEQ was the agency in charge of approving coal ash remediation plans. Witness Wright also agreed that the Commission is not a court of general jurisdiction, and that it determines the reasonableness and prudence of utility decisions rather than make cost recovery decisions by following a duty of care or any other standard available in tort or other type of law. Witness Wright confirmed that this standard does not consider what could or should be anticipated into the future, but considers what is reasonable and prudent given the information known now. Tr. Vol. 13, pp. 99-102.

3. Wells

Company witness Wells testified on rebuttal to the different approach taken by the Public Staff in this case from the DEP case. In the DEP case, the Public Staff attempted to characterize DEP's compliance with its NPDES permits as poor. In this case, witness Junis did not discuss DEC's compliance with NPDES permit requirements, which witness Wells noted has been outstanding, but rather suggested that the existence of seepage at the Company's CCR impoundments is evidence of the Company's "culpability." Witness Wells explained that the Public Staff's position ignores (1) the fact that the EPA first directed permitting authorities to address seeps in 2010, (2) the Company's attempts to obtain regulatory certainty as to seeps, and (3) DEQ's challenges in implementing EPA's direction. Tr. Vol. 24, p. 226.

Witness Wells testified that Public Staff witness Junis' negative characterization of DEC's compliance record is not justified by the historical record. Tr. Vol. 24, p. 224. He explained that exceedances of groundwater standards and the existence of seeps in the vicinity of the Company's ash basins do not indicate mismanagement or poor compliance programs. Witness Wells stated that the existence of groundwater exceedances at or beyond the compliance boundaries at DEC sites is rather a function of where these sites are on the timeline of groundwater assessment and corrective action under modem laws that have changed the way unlined basins are viewed. Witness Wells testified that the Company's decision to use unlined basins to treat ash transport water was reasonable and consistent with the approach consistently employed across the power industry at the time that the basins were built. Witness Wells noted that each DEC site had been properly and legally operating an unlined basin for at least a decade before the adoption of any regulatory requirements related to groundwater corrective action. Witness Wells noted further that as requirements changed over time, DEC has taken every action required by DEQ's groundwater rules, and later by CAMA and the federal CCR Rule, to address groundwater impacts as they have been identified. Tr. Vol. 24, pp. 227-29, 236, 258.

Witness Wells opposed the suggestion that DEC only engaged in comprehensive groundwater monitoring and remediation when forced to do so by CAMA and other developments. He explained that the Company began monitoring groundwater at Allen in 1978, Belews Creek and Marshall in 1989, Dan River and W.S. Lee Steam Stations in 1993, and the remaining sites in or around 2006. He noted that, in 2011, DEQ prescribed a process to be undertaken by DEQ and utilities upon the identification of a groundwater exceedance near a coal ash pond, which included performance of an assessment to determine the cause of the exceedance and, as necessary, develop a Corrective Action Plan consistent with North Carolina groundwater rules. He stated that under that process, only after a utility failed to undertake corrective action when directed to do so would DEQ consider pursuing enforcement. He noted that, contrary to witness Junis' testimony, all of this activity predates the threat of litigation by environmental groups, the DEQ enforcement suit, the Dan River spill, and CAMA. He also testified that, as witness Junis' testimony and exhibits demonstrate, DEC has always promptly responded to any concerns raised by the relevant regulatory entities and where necessary, implemented appropriate corrective action steps to remedy any issue. He stated that the Company has proactively sought consent orders and written agreements to ensure alignment with the regulatory agency as to appropriate scope and timing of additional investigation and corrective action. Tr. Vol. 24, pp. 230-31, 234-36, 259-60.

Witness Wells disagreed with witness Junis' apparent contention that DEC should have moved well ahead of accepted science, regulatory requirements, and industry practice and begun taking measures to prevent any and all groundwater quality issues without regard to the cost of those measures or whether sufficient and proven technology existed at the time to address the conditions at the site. He explained that the papers cited by witnesses Junis, Wittliff, and Quarles discussing potential issues associated with coal ash disposal, and the importance of developing and implementing appropriate controls, highlight the evolving state of knowledge regarding the risks and best practices related to coal ash disposal management, rather than condemn the use of unlined basins. Tr. Vol. 24, pp. 232-34, 258-59.

Witness Wells also testified that North Carolina's groundwater laws were not intended, as witness Junis contends, to be punitive. While he agreed that the groundwater rules require corrective action without regard to fault, he disagreed with witness Junis' conclusion that responsibility for corrective action is equivalent to any other violation of the law. He stated that the record in this case clearly demonstrates that groundwater contamination resulted from DEC's otherwise lawful use of unlined ash basins in furtherance of its mission to provide low cost electricity, and that the use of ash basins was an accepted and reasonable practice conducted with DEQ and EPA oversight. He explained that, for historical sites such as those at issue in this case, this State's groundwater regulations and the DEQ's practices and policies, as well as the CCR Rule, are focused on environmental protection rather than culpability, that the required corrective action is based upon science and not an assessment of wrongdoing. He stated that, in evaluating Corrective Action Plans, DEQ considers numerous factors, including the extent of any threat to human health or safety, impact on the environment, available technology, potential for natural degradation of the contaminants, and cost and benefits of restoration. He concluded that, if the utility cooperates with DEQ, the applicable law and policies are designed to drive corrective action rather than enforcement action, and he saw no intent for those law and policies to be used to deny cost recovery in regulatory proceedings. Tr. Vol. 24, pp. 237-38, 260.

Witness Wells also stated that witness Junis' characterization of groundwater violations under the 2L rules ignores the iterative nature of comprehensive site assessment. He noted that measuring exceedances at different locations in a plume around an activity may result in multiple exceedances of groundwater standards, but that measurement does not result in multiple violations of the 2L rule's prohibition. He explained that this distinction is important for evaluating the claim that the number of exceedances indicates a "breadth of environmental violations." He stated that it would be more accurate to say that, at seven sites, DEC has lawfully operated ash basins that, after decades of use, resulted in exceedances of groundwater standards at those sites. He pointed out how Duke Energy's coal ash basins are some of the most studied sites in North Carolina, with more than 1,400 groundwater monitoring wells, and that the number of exceedances presented by witness Junis signifies therefore the thoroughness of the evaluation rather than a number of groundwater violations. Tr. Vol. 24, pp. 238-40, 260-61.

Witness Wells also explained that the extraction and treatment activity required by the Sutton Settlement, which costs witness Junis recommends for disallowance, is work that the Company simply agreed to perform earlier than required under the CCR Rule and CAMA in order to address offsite groundwater impacts. Tr. Vol. 24, pp. 241, 260.

Witness Wells also disagreed with witness Junis that the amount of litigation regarding the Company's ash basins suggests that the Company was imprudent in managing ash. He opined that the amount of litigation has been driven by nongovernmental organizations that have been pressing for complete excavation of ash from all basins across the Southeast. He stated that DEC has appropriately been opposed to this, arguing instead that final closure methods should be dictated by the CAMA process and a site-specific balancing of net environmental benefits of various closure options based on science, regulatory policy, and the best interest of the Company's customers. He stated that the positions of the NGOs and the suits do not themselves indicate imprudence. Rather, he explained, the appropriate closure methodology must take into consideration the particular characteristics of each site. He stated that the EPA and North Carolina agree and that, consistent with this principle DEC has settled cases where science and engineering supported closure by excavation, and continues to vigorously litigate cases where other closure methods are more or equally protective of the environment at less cost. He concluded that the volume of filed litigation on its own should not factor into the Commission's determination of whether the Company's CCR costs were prudently incurred. Tr. Vol. 24, pp. 242-44.

Witness Wells also disagreed with the Public Staff's suggestion that any exceedance or violation of water quality regulations, no matter how minor or how long ago, leads to the denial of cost recovery for any activity that acts to "cure" the impacts of the violation. He reiterated that not all exceedances of the 2L standards amount to a violation that requires corrective action under the 2L rules. He also stated that even when an exceedance requires corrective action, the groundwater rules do not treat the exceedance the same way as, for example, the Clean Water Act treats an exceedance of an NPDES permit limit. When the latter is violated, he explained, the permittee is immediately subject to a notice of violation (NOV) and penalty, and must ensure the next discharge complies with the permit limit or risks a new NOV and escalating penalty. He contrasted this with groundwater standards, under which an exceedance does not immediately result in an NOV and penalty. Instead, he explained the owner/operator must report the exceedance and work with DEQ to determine whether it was due to permitted activity, assess the extent of the exceedance, and undertake corrective action. Any newly measured exceedances do not require a further site assessment and do not result in additional or escalating penalties, but are actually expected as additional assessment prior to corrective action is conducted. He testified that the 2L Rules' corrective action provisions are deliberately designed around the idea that older facilities, built before liners were a regulatory obligation, were likely to have associated groundwater impacts, that such impacts were not the result of regulatory noncompliance, and that they should be addressed in a measured process. He concluded that compliance with this process is not mismanagement and should not be held against DEC with respect to cost recovery. Tr. Vol. 24, pp. 244-46.

Witness Wells also addressed seeps. He explained that all earthen impoundments seep, and that DEQ's dam safety regulations acknowledge this.. He stated that EPA first directed permitting authorities to address seeps in 2010, and at that time, the Company engaged DEQ to determine the appropriate approach to address seeps and began including them in permit applications. He asserted that DEQ did not consider seeps to have a significant environmental impact. He also maintained that EPA and DEQ did not appear to agree on the appropriate approach to address seeps. He maintained that, absent the CCR Rule or CAMA, the existence of seeps in a basin would not on its own automatically trigger basin closure and should not, therefore, impact the Company's ability to recover its CCR environmental compliance costs. He asserted that, although closing basins would be one way to address seeps, it would be the most drastic of several possible remedies, and both EPA and DEQ have stated that seeps can be addressed by permitting or rerouting, among other options. Tr. Vol. 24, pp. 246-50, 261.

Accordingly, Witness Wells explained, DEC entered into a special order by consent (SOC) with DEQ to address seeps at the Allen, Marshall, and Rogers (formerly Cliffside) stations. He explained that the SOC provides regulatory clarity and certainty as to the appropriate monitoring frequency, parameters to be sampled and limits with respect to the non-engineered seeps, while requiring the Company to accelerate the schedule for decanting water from the basins, a process that is expected to substantially reduce or eliminate seeps. He further testified that DEC is working with DEQ to develop additional SOCs based on this model to address non-engineered seeps at the remainder of DEC's and DEP's impoundments. He clarified that the SOC requirements to accelerate decanting do not create additional costs for the Company over and above the cost to complete these activities in compliance with CAMA and the CCR Rule. In sum, witness Wells testified that the application for and execution of SOCs to address seeps is not evidence of DEC "culpability," but rather a regulatory mechanism to provide clarity and alignment with respect to scope and schedule for compliance-related activities given a change in circumstances, such as a change in requirements or in operations. Tr. Vol. 24, pp. 251-53, 261.

Finally, witness Wells disagreed with witness Junis' suggestion that DEC caused the creation and adoption of the CCR Rule. He testified that the environmental regulatory regime is an ever-evolving body of law, and the EPA engaged in more than two decades of studies before it finally issued a proposed CCR Rule in 2010. Through this process, he noted, the EPA identified 150 cases in over 20 states involving over 25 utilities and government facilities that involved groundwater damage with at least a potential link to coal ash; but determined that immediately closing basins, which would require shutting down operating coal plants, would be more harmful than taking a measured approach. Tr. Vol. 24, pp. 254-55, 261-62.

At the hearing, in responding to questions by counsel for the Sierra Club, witness Wells responded that the Company did engage in voluntary analysis of its coal ash sites prior to DEQ requirements to do so, as far back as the 1970s at Allen, and determined based on those analyses that no significant impacts to groundwater were occurring, and no significant risk to groundwater going forward. Tr. Vol. 25, pp. 36-37.

In response to questions by the Commission, witness Wells confirmed that while the AGO and Public Staff presented documents in this case addressing the Company's actions going back to the 1950s, the AGO took no action itself with regard to coal ash management until 2014, when the AGO became involved with citizen suits. He opined that the reason for that inaction was that the Company's actions with regard to coal ash were acceptable from a regulatory perspective until much more recently. Tr. Vol. 26, pp. 72-73. He also stated that DEC's recent comprehensive studies of the groundwater surrounding the Company's ash basins conducted pursuant to CAMA have confirmed that, while groundwater has been impacted, there is no evidence of any current or likely future impacts to, for example, off-site drinking wells or other receptors at any of the seven sites, and have validated the Company's measured approach to coal ash management in previous years. Id. at 77-80. He confirmed that the Company currently has installed wastewater treatment equipment where needed at all of its basins to comply with CAMA. Id. at 82-83.

In response to questions by the Chairman, he further confirmed that, absent other considerations, there are a number of remedies to address a seep that could be applied rather than to excavate the basin. Tr. Vol. 26, pp. 85-88. He also stated that substances such as iron, manganese, and pH are classified by the EPA as secondary maximum contaminant levels which are regulated based on aesthetics (e.g., taste, odor, etc.) and are not considered health risks. Witness Wells acknowledged that some recent studies have suggested that exposure to extremely high levels of manganese could pose a health risk, but explained that, typically, those levels are orders of magnitude above where the limit was set for aesthetic purposes. Id. at 88-91. Finally, he addressed the difficulty of monitoring groundwater impacts, especially when dealing with naturally occurring elements, and explained that a single monitoring well is a snapshot of that particular area at that point in time, and that conditions 100 yards away could be very different, yet still be naturally occurring. He stated that this is why the Company's efforts to monitor a large area is an iterative process. Id. at 91-93.

4. McManeus

On rebuttal, witness McManeus responded to witness Maness' proposed adjustments regarding coal ash pond closure costs. She explained that there were two main adjustments, to remove ongoing environmental costs and adjust deferred environmental costs, as listed in Boswell Exhibit 1, Schedule 1, and based upon seven specific adjustments proposed by witness Maness. Witness McManeus explained that although the Company disagrees with the majority of the Public Staff's seven proposed adjustments, it does not disagree with witness Maness' third or fourth adjustments. Witness Maness' third adjustment is to add a return on the deferred balance up through the expected date of new rates in this proceeding. The fourth adjustment is to calculate the return using a mid-month convention rather than a beginning-of-month convention. Tr. Vol. 6, pp. 312-14, 357-58.

In regard to witness Maness' second adjustment recommending that the costs DEC has identified as "CAMA only" be allocated based on an allocator that allocates to all jurisdictions, witness McManeus explained that the Company has identified very specific cost categories that should be treated as an exception to the general allocation rule that costs of a system be borne by all of the users of the system. Witness McManeus explained that these costs are unique to North Carolina and that such an exception is consistent with other examples where the Commission has allowed direct assignment to North Carolina, and cited to the cost allocation methods used in regard to the North Carolina Renewable Energy and Energy Efficiency Standard and the Clean Smokestacks Act. Witness McManeus further explained that the Company disagreed with witness Maness' first, fifth, sixth, and seventh proposed adjustments, and that such adjustments were addressed by other Company witnesses' testimony. Tr. Vol. 6, pp. 312-16, 357-58.

Witness McManeus rebutted the Public Staff's recommendation to exclude the deferred coal ash balance from rate base, and indicated that, to the contrary, it was appropriate for that balance to remain in rate base and for the Company to earn a return on it. She indicated that while witness Doss approached this issue from an accounting perspective, from her viewpoint it was important to recognize that rate base represents the amount of funds supplied by investors. Such funds have been advanced for many purposes, including construction of electric plant, but, she stated, there are other purposes as well – for example, to purchase fuel inventory or to provide cash working capital, etc. Tr. Vol. 6, p. 317. In this particular case, she indicated, investors have advanced funds to pay for coal ash compliance costs, and it is therefore appropriate for the Company to be allowed a return on the deferred coal ash balance during the period for which the Company will amortize and collect these amounts from its customers, as the Company will continue to incur financing costs on the balance of funds that is uncollected. Id. She added that the characteristic that makes the deferred coal ash cost a legitimate component of rate base is the fact that the funds used to pay those costs were supplied by investors. Id. at 318.

Lastly, witness McManeus addressed witness Maness' statement that expenses of operating and maintaining property in rate base in the present or in the future "are allowed to be recovered from the ratepayers on an ongoing basis as operating expenses." Agreeing with his statement, she explained that this is the principle underlying the Company's proposal for recovery of the ongoing annual coal ash basin closure costs, what witness Maness terms the "run rate." Witness McManeus stated that these ongoing compliance costs are no different from other ongoing and recurring expenses the Company incurs in the test year, and that such costs are equivalent to the Company's reasonable and prudent test year coal ash basin closure spend. She further explained how the Company's proposed recovery of these ongoing compliance costs through rates would be subject to true-up in subsequent rate cases so that only actual costs are recovered. In conclusion, witness McManeus cited to Chairman Finley's statements in the recent DEP rate case proceeding that a rider could be an alternative mechanism for cost recovery of on-going compliance costs, and stated that the Company agrees that a rider would be an appropriate alternative mechanism to recover such costs. Tr. Vol. 6, pp. 315-16, 357-58.

5. Doss

Witness Doss rebutted the Public Staff's positions regarding ARO accounting that the Company employed for its deferred coal ash compliance costs, and, in particular, witness Maness' characterization of those costs as a deferred expense. Witness Doss provided a detailed explanation of the GAAP and FERC accounting rules with respect to the ARO established in connection with the Company's coal ash basin closure obligations, as well as the deferral orders issued by the Commission in Docket No. E-7, Sub 723. Tr. Vol 12, pp. 61-71. He noted that the Company had simply accounted for these costs as required under GAAP and FERC Uniform System of Accounts, and had deferred the impacts of ARO accounting, as authorized by the Commission's deferral orders. Id. at 70-71.

Witness Doss also responded to witness Maness' opinion that coal ash costs should not be classified as "used and useful" costs. He indicated that, to the contrary, under GAAP and FERC accounting guidance, the asset created when a Company initially recognizes an ARO is considered part of the property, plant and equipment for the assets which must be eventually retired. Id. at 71. He noted further that such costs are used and useful in that they are intended to provide utility service in the present or in the future through achieving their intended purpose: environmental compliance, the retirement of the ash impoundments and the final storage location for the residuals from the generation of electricity, and that the achievement of those three purposes is used and useful as the utility has the obligation to comply with CAMA and the CCR Rule. Id. at 73.

Commission Determinations

General Cost Recovery Principles

A central operating principle underlying utility rate regulation in North Carolina (and virtually all other jurisdictions) is that the utility's costs are recoverable in rates. As two of the leading modern commentators on utility regulation put it in the opening paragraphs to a chapter (titled "The Role of the Revenue Requirement") in their treatise on utility regulation:

> No firm can operate as a charity and withstand the rigors of the marketplace. To survive, any firm must take in sufficient revenues from customers to pay its bills and provide its investors with a reasonable expectation of profit .... Regulated firms are no exception. They face the same constraints ....
>
> A basic concept underlying all forms of economic regulation is that a regulated firm must have the opportunity to recover its costs. ... Without the opportunity

> to recover all of its costs and earn a reasonable return, no regulated private company can attract the capital necessary to operate.

Jonathan A. Lesser & Leonardo R. Giacchino, Fundamentals of Utility Regulation 39 (Pub. Utils. Reports, Inc., ed., 2007) (Lesser & Giacchino).

Lesser & Giacchino refers to the concept of cost recovery as the "revenue requirement" (id.), and the North Carolina Supreme Court has also acknowledged its central role in utility ratemaking. See, e.g., State ex rel. Utils. Comm'n v. Thornburg, 325 N.C. 484, 490, 385 S.E.2d 463, 466 (1989) (Thornburg II) and State ex rel. Utils. Comm'n v. Thornburg, 325 N.C. 463, 467 n.2, 385 S.E.2d 451, 453 n.2 (1989) (Thornburg I), in which the concept is stated to be embedded in the statutory rate making formula, and, indeed, expressed formulaically:

> This statute [N.C. Gen. Stat. § 62-133] requires the Commission to determine the utility's rate base (RB), its reasonable operating expenses (OE), and a fair rate of return on the company's capital investment (RR). These three components are then combined according to a formula which can be expressed as follows:
>
> (RB x RR) + OE = REVENUE REQUIREMENT

Costs are not recoverable simply because they are incurred by the utility. The utility must show that the costs it seeks to recover are (1) "known and measurable"; (2) "reasonable and prudent"; and (3) where included in rate base "used and useful" in the provision of service to customers. Lesser & Giacchino, at 41-43. But once it has shown that these metrics are met, the utility should have the opportunity to recover the costs so incurred. This is what North Carolina's ratemaking statute requires (see N.C. Gen. Stat. § 62-133(b)(5)), and to do otherwise would amount to an unconstitutional taking.

In this case, no party has questioned whether the coal ash basin closure costs for which the Company seeks recovery are "known and measurable"; indeed, the Company documented these costs and has shown that they were in fact incurred. Rather, the arguments raised by Intervenors challenging the inclusion of the Company's coal ash basin closure costs in rates center on whether those costs are "reasonable and prudent" and whether they are "used and useful." These concepts have been framed by this Commission and the North Carolina Supreme Court.

A. Reasonable and Prudent

The seminal treatment of "reasonable and prudent" costs is this Commission's order entered in Docket No. E-2, Sub 537 (the 1988 DEP Rate Case), in which the Commission approved with some exceptions costs the Company incurred in connection with the construction of Unit 1 of the Shearon Harris nuclear plant. See 1988 DEP Rate Order. The Commission there articulated the following principles governing the question of "reasonable and prudent":

First, the standard for judging prudence is "whether management decisions were made in a reasonable manner and at an appropriate time on the basis of what was reasonably known or reasonably should have been known at that time. ... [T]his standard ... must be based on a contemporaneous view of the action or decision under question. Perfection is not required.

Hindsight analysis – the judging of events based on subsequent developments – is not permitted." 1988 DEP Rate Order, p. 14.

Second, challenging prudence requires a detailed and fact intensive analysis, and the challenger is required to (1) identify specific and discrete instances of imprudence; (2) demonstrate the existence of prudent alternatives; and (3) quantify the effects by calculating imprudently incurred costs. Specifically,

- A decision cannot be imprudent if it represents the only feasible way to accomplish a necessary goal.
- The Commission can only disallow imprudent expenditures – that is, actions (even if imprudent) with no economic impact upon customers are of no consequence. Thus, identification of an imprudent action or inaction is not by itself sufficient; rather, there must be a demonstration of the economic impact.
- The proper amount chargeable to customers is what the expenditure would have been absent the imprudent acts or decisions of management.

Id. at 15. The North Carolina Supreme Court upheld the Commission's prudence determination. See Thornburg II, 325 N.C. at 489, 385 S.E.2d at 466 (finding "no error" in that portion of the Commission's decision).

B. Used and Useful

"Used and useful" is a concept directly embedded in the ratemaking statute – N.C. Gen. Stat. § 62-133(b)(1) states that the Commission must "Ascertain the reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period, in providing the service rendered to the public within the State, less that portion of the cost which has been consumed by previous use recovered by depreciation expense ...." In general, the Supreme Court's treatment of the concept has been in the negative, i.e., asserting as a basis for its decision that something is not "used and useful" – for example, excess common facilities are not "used and useful" as a matter of law, see Thornburg II, 325 N.C. at 495-96, 385 S.E.2d at 469, and a water treatment plant that was not in service as of the end of the test year and would never again be in service was not "used and useful" within the meaning of N.C. Gen. Stat. § 62-133(b)(1). State ex rel. Utils. Comm'n v. Carolina Water Serv., Inc., 335 N.C. 493, 508, 439 S.E.2d 127, 135 (1994). The reverse, of course, is that if the expenditures do support and provide service to customers, the costs are "used and useful."

C. Burden of Proof

The Commission must address arguments on the burden of proof. DEC argues that it incurred the CCR remediation costs at issue, meeting its prima facie burden and that Intervenors have failed to justify discrete disallowances. The AGO argues DEC bore the burden of quantifying the disallowances the AGO deems appropriate. DEC argues that the substantive standard is imprudence. Others argue that the standard is one of due care. The CCR remediation costs DEC seeks to recover in this docket and that are being challenged by Intervenors consist of 2015-2017 costs to dewater, remove, and transport CCRs from unlined repositories and store them in lined ones or to install caps. DEC incurs these costs pursuant to requirements of EPA CCR Rule and North Carolina CAMA provisions or other requirements of DEQ. In compliance with this Commission's authorization, these costs have been accounted for in an Asset Retirement Obligation account and have been deferred to permit appropriate ratemaking treatment in this case.

The AGO argues that DEC should bear the burden to disprove why disallowances to its 2015-2017 CCR remediation costs should not be accepted.

> The AGO does not agree that the factors the Commission found appropriate for an approach taken by an independent auditor in the 1988 DEP Order should have been applied in the 2018 DEP Rate Order as a prudence framework, and similarly in this general rate case, the prudence framework is inappropriate because it essentially puts the burden of proof on intervenors, contrary to settled law. As the Commission observed in the 2018 DEP Order, because costs are site-specific, establishing a past cost would be a "near impossibility." 2018 DEP Order p. 200. As discussed in detail in Part I.B below, there is extensive affirmative evidence that Duke's imprudent management of coal ash disposal and coal ash sites, and its delays in addressing known problems, have driven up the costs now being incurred and have shifted the costs onto future customers unfairly. It is not appropriate to require ratepayers to prove that costs are unrecoverable; rather it is up to Duke to prove that some or all of the detailed costs are not attributable to the poor history of operations; that prudent alternatives that would have reduced the costs were not available when problems became known; and that these factors support the reasonableness of the costs Duke seeks to recover.

AGO's Brief, pp. 9-10.

The AGO cites no authority for this argument, nor does it argue that cases and precedent relied upon by DEC and the Commission in the 2018 DEP case to the contrary are wrongly decided or should be ignored. While asserting that the Commission's reliance on established evidentiary principles in the 2018 DEP case is "contrary to law," the AGO cites no authority to back up its assertion. The AGO asserts in response to DEC's petition to recover 2015-2017 CCR remediation costs -- costs no party asserts DEC did not incur -- that these costs should be disallowed due to DEC's imprudence in years prior to 2015. These are the AGO's allegations, not DEC's. The AGO's novel theory that a petitioner should bear the burden to disprove Intervenor allegations unsupported by evidence is one the Commission does not accept. The AGO's theory of its case, at least in its brief, appears to be that if DEC had acted to remediate CCR disposal and storage issues in years prior to 2015, DEC's costs would have been lower, so the 2015-2017 costs are excessive.

To prevail, the AGO must quantify what the costs of the actions not taken should have been. The AGO argues DEC failed to act appropriately before 2015. DEC cannot be expected to provide costs of acts not taken. The AGO has not undertaken this task.

While some of the costs to comply with the requirements of environmental regulators are challenged by Intervenors as excessive, i.e., unreasonable, most of the costs being challenged are questioned on the theory that DEC is in breach of a standard classified as a "duty to exercise due care." The challenge equates failure to meet a due care standard with management imprudence. According to this theory, even though no environmental regulatory requirement imposed a duty to remove CCRs from unlined impoundments before EPA CCR rules or CAMA, management was imprudent in not doing so. The challenge does not address DEC's decisions to initially place the CCRs in unlined impoundments between 1945 and 1982, but its failure to remove the CCRs thereafter or alternatively to cease to sluice CCRs to these unlined impoundments at a time when trends within the industry suggested that leachate finding its way into groundwater from the bottom of the unlined repositories posed potential risks to the environment and human health.

The Commission has not been cited any case to support the theory that, in determining the recovery through utility rates, costs of environmental remediation incurred by management to comply with express requirements of environmental regulators, management's decisions should be assessed against a standard of due care. The Commission's duty is not to determine liability to and assess damages for torts committed by management for injury to the environment or to receptors of contaminants. Environmental regulators and courts of general jurisdiction are the appropriate arbitrators of those disputes. DEC's unlined impoundments at issue operated pursuant to environmental permits as wastewater treatment facilities by DEQ or its predecessor. That agency's statutory mandate is environmental protection and would be the agency to rectify a breach of a duty of due care, if any, such as that advocated by certain Intervenors in this case. The issue before this economic regulatory tribunal is imprudence - who should bear the remediation costs - the utility's stockholders or its consumers and on the basis of what justification.

According to the U.S. Supreme Court:

> Good faith is to be presumed on the part of managers of a business. ... In the absence of showing of inefficiency or improvidence, a court will not substitute its judgment for theirs as to the measure of a prudent outlay.

West Ohio Gas Co. v. Ohio Pub. Utils. Comm'n., 294 U.S. 63, 72, 55 S. Ct. 316, 321 (1935).

In a case cited with favor in Priest, Principles of Public Utility Regulation:[1]

> Only where affirmative evidence is offered challenging the reasonableness of the operating expenses incurred, on the grounds that they are exorbitant, unnecessary, wasteful, extravagant, or incurred in the abuse of discretion or in bad faith, or are of a nonrecurring character not likely to recur in the future, has the commission a reasonable discretion to disallow any part of the expenses actually incurred.

[1] A.J.G. Priest, Principles of Public Utility Regulation 1969, Vol. I, pp. 422-23.

Alabama Pub. Serv. Comm'n v. Southern Bell Tel. & Tel. Co., 253 Ala. 1, 42 So.2d 655, 674 (1949) cited with approval, State ex rel. Utils. Comm'n. v. Intervenor Residents, 305 N.C. 62, 77, 286 S.E.2d 770, 779 (1982).

This standard against which costs recovery challenges are measured has elements qualitatively and quantitatively distinct and more rigorous than a tort standard of due care. The expert witnesses sponsored in this case failed to support allegations of discrete actions constituting imprudence. For its equitable sharing disallowance, the Public Staff proceeded on an equitable sharing theory, not on a theory of imprudence. AGO witness Wittliff on cross-examination failed to show what DEC should have done differently to remediate CCR, when it should have acted, and what the cost of such alternative conduct should have been. While AGO witness Wittliff filed forceful allegations on paper in the prehearing filings, much as was the case in the DEP rate hearing, his support of that testimony from the stand on cross examination was not persuasive.[1] Public Staff witness Junis likewise could not identify costs DEC would have incurred to remediate prior to 2015.[2] Without record evidence from parties advocating disallowances for failure to take CCR remediation steps prior to 2015 pursuant to the burden of proof theory or an unsupported "failure to exercise due care standard" of what action DEC should have taken, when it should have acted, and what the costs would have been, the Commission cannot approve such specific disallowances. Attempts to identify years-old hypothetical past costs, for example, by allocating

[1] Q. Beginning on line 16, you state, "However, when it came to making changes to its own unlined surface impoundments, the Company chose not to move forward with the industry, but instead chose to add more and more coal ash to the unlined impoundments despite the longstanding seepage and groundwater issues at its facilities."

Did I read that correctly?

A. You did.

Q. Mr. Wittliff, despite your 30 years of experience as an engineer, I am correct, am I not, that if I look through the entirety of your testimony in this case and all of your exhibits, I will not find any engineering analysis of what exactly that DEC should have done, when it should have done it, where it should have done it, and how much it would have cost with respect to the lines in the testimony that I just read you, will I?

A. Say that again, please.

Q. Yes, sir. You make a contention, on page 10 of your testimony, on line 17 through 20 that I just read, alleging that DEC chose not to move forward with the industry, but instead chose to move more and more coal ash to unlined impoundments.

My question is, if I want to look at how I should have moved forward with the industry, where I should have done it, when I should have done it, how much it should have cost me - and by "me," I'm referring to DEC - I cannot find those answers anywhere in your prefiled testimony, can I?

A. No.

Tr. Vol. 11, pp. 283-84

[2] "The coal ash-related environmental violations have a cost. Corrective actions to address environmental impacts under CAMA and the Environmental Protection Agency's (EPA) Coal Combustion Residuals Final Rule (CCR Rule), including ultimately closure of all DEC ash basins, will remedy the environmental violations. Therefore, it is not feasible to identify all the costs that would have been incurred to remedy violations under the pre-existing environmental regulations and laws, such as 15A NCAC 02L (2L rules) and North Carolina General Statute 143-215.1, if CAMA and the CCR Rule were not in effect. . . . There is no doubt that substantial assessment and remedial costs would have been incurred without CAMA and the CCR Rule, but, in my opinion, those costs cannot be quantified without undue speculation."
Tr. Vol. 26, pp. 646-47

tons of CCRs to formulate inexact allocation percentages to be applied to 2015-2017 costs is to rely upon guesswork that simply is legally and equitably deficient.[1]

Coal ash located within basins above levels saturated by water and unaffected by the contours of the bottom of the impoundment can be removed at a cost lower than coal at lower levels. Costs of replacement repositories will vary depending on land costs, location, regulatory requirements and site preparation costs. Transportation costs will vary depending on distance, market conditions, regulatory requirements and timing of incurrence.

Efforts to identify what DEC should have done prior to EPA CCR and CAMA, when it should have done so and what the costs should have been even with the benefit of 20/20 hindsight pose insurmountable obstacles. CCR remediation even under the supervision of NC DEQ is a site-specific undertaking with procedures that have evolved over time and continue to do so. Without statutory or regulatory standards and guidelines to follow, no one can say what the prudent course would have been even if one acts on the assumption that DEC was imprudent to await promulgation of the definitive environmental regulatory requirements.

Under EPA CCR regulations and CAMA requirements, the prevalent remediation remedy is dewatering, excavation and removal or cap-in-place. These explicit, express requirements depend heavily on NC DEQ oversight and supervision. The remediation steps must be completed in compliance with deadlines and substantial collaboration between NC DEQ and DEC with respect to permitting. Compliance will occur as far into the future as 2028. No one can predict today how compliance will be accomplished or what these future compliance costs will be. The decision by NC DEQ on whether cap-in-place for eligible impoundments versus CCR removal has yet to be made. Yet Intervenors ask the Commission to look backward where the regulatory requirements were not in place and therefore unknown and speculate what it would have cost to comply so as to impose the imprudence disallowance. Having failed to even attempt to quantify such a disallowance, Intervenors' theory is without probative support and must be rejected.

Without any requirement such as EPA CCR rules or CAMA to remediate CCRs stored in unlined pits simply because unlined pits posed "potential" threats to the environment, Intervenors must "pick a date" when in their opinion such remediation should have been undertaken. Likewise, Intervenors apparently assume the remediation remedy would have been dewatering, excavation and removal or perhaps cap-in-place, even though they do not agree on which of these alternatives is appropriate for each basin. No support for this assumption exists. Without requirements such as those of EPA CCRs and CAMA, DEC logically would have attempted to investigate each unlined repository to determine insofar as possible the extent to which contamination was occurring or had the potential to occur. Absent evidence of actual or probable future contamination, DEC would have been remiss in spending millions of dollars to remediate or to choose the most expensive remediation alternative.

As to impoundments where contamination was occurring or potentially would occur, remedies far short of complete excavation such as installing water extraction methods beyond the

[1] When quantifying quantities of CCR for purposes of cap-in-place, utilities rely upon linear measurements, not tonnage.

impoundment to remove water or to excavate contaminated soil were available and arguably should have been employed as a least cost solution.

Any CCR impoundment leaks, whether lined or unlined. The underlying soil composition and subsurface groundwater flow direction for each site are significant considerations in assessing risk of harmful contamination from CCR constituents. Piedmont red clay acts as a natural sealant. Unless CCR contaminants in excess of proscribed levels migrate beyond boundaries outside repositories, no actionable threat occurs. Monitoring wells provide tools to measure migration of harmful constituents. Determinations of naturally occurring levels of CCR contaminants must be made to determine whether measurements in excess of published standards, if any, originate at the impoundment.

Determining the number and placement of monitoring wells, not an inexpensive endeavor (Tr. Vol. 26, p. 92), is an inexact science. The prevalent and cost-effective process is to install monitoring wells iteratively to best identify harmful groundwater contamination. Tr. Vol. 26, pp. 92-93. Evidence of excessive constituent levels up gradient of impoundments tells nothing about impoundment contamination but is necessary to identify naturally occurring constituents that may or may not exist down gradient. Unlike synthetic contaminants like dry cleaning fluid or nuclear waste where evidence of its presence in groundwater can be tied to a source of pollution, all the potentially harmful elements from coal ash occur naturally in the ambient environment. Tr. Vol. 26, pp. 92-93. Underground water flows may dissipate excessive levels of CCR contaminants through natural attenuation to those below standard thresholds. There may be no receptors in the vicinity of the impoundment.

The best evidence of the difficulty in determining what DEC should have done, when it should have done so and what the cost should have been prior to 2015 is the significant dispute that arises in this case over what DEC should have done, when it should have done so and what the costs should be with respect to the actual 2015-2017 costs. DEC actually has incurred these costs in its efforts to comply with EPA CCR and CAMA published standards and requirements undertaken under NC DEQ's supervision and guidance. Parties to this case hotly dispute where replacement repositories should be constructed, when and how CCRs should have been transported, and which CCRs should have been designated for beneficial reuse.

Consequently, the Commission determines that efforts to recreate the past as no party has been able to do so is a fruitless endeavor that the Commission is unable and unwilling to undertake.

Additional complications to certain Intervenors' theory that disallowances to 2015-2017 CCR remediation costs should be made because DEC failed to begin remediation or alternative CCR storage earlier magnify the fatal flaw in the theory. From an accounting cost recovery perspective, the Commission authorizes establishment of an ARO, defers costs for remediation, and later amortizes these deferred costs over five years. DEC began to incur the remediation costs in 2015 and will continue to do so under EPA CCR and CAMA regimes until 2028. Consequently, under procedures being followed, cost recovery will occur through 2033. If, under certain Intervenors' theory, DEC should have begun remediation in 2006 (hypothetically, because Intervenors cannot identify the starting date under their theory), DEC would still have been incurring CCR remediation costs during the test year and would have been amortizing CCR remediation costs from prior years. Consequently, ratepayers paying rates established in this case could very well face the possibility of being no better off under Intervenors' alternative, unsubstantiated theory. Perhaps, arguably, DEC should have established a coal ash remediation cost ARO earlier in anticipation of a future requirement to undertake remediation efforts, and costs not so accounted for should be disallowed. However, the Commission's practice is not only to approve the establishment of the ARO but to defer the costs accounted for in the ARO for later recovery in a general rate case. Theories relied upon to recreate the past based on hypothetical scenarios all depend on guesswork and subjective factual constructs that are beyond the ratemaking standards this Commission must employ.

The burden of proof to show that rates are just and reasonable is always on the utility. See N.C. Gen. Stat. § 62-134(c). Intervenors, however, have a burden of production in the event that they dispute an aspect of the utility's prima facie case. See, e.g., State ex rel. Utils. Comm'n v. Conservation Council, 312 N.C. 59, 64, 320 S.E.2d 679, 683 (1984) (utility's costs are "presumed to be reasonable" unless challenged); State ex rel. Utils. Comm'n v. Intervenor Residents of Bent Creek/Mt. Carmel Subdivisions, 305 N.C. 62, 76-77, 286 S.E.2d 770, 779 (1982) ("The burden of going forward with evidence of reasonableness and justness arises only when the Commission requires it or affirmative evidence is offered by a party to the proceeding that challenges the reasonableness of expenses...."). If the Intervenor meets its burden of production, the ultimate burden of persuasion reverts to the utility, in accordance with N.C. Gen. Stat. § 62-134(c).

The Commission has consistently followed this shifting burden framework. See, e.g., DEC Remand Order, (Docket No. E-2, Sub 1142) p. 34. In practice this means that Intervenors may not rest merely on arguments and theories, they must adduce actual evidence challenging some aspect of the Company's cost recovery case. Further, that evidence must support the Intervenor's challenge under the substantive standard established by North Carolina law. Evidence predicated on 20/20 hindsight is insufficient to effectuate a prudence challenge, inasmuch as the substantive prudence standard forbids hindsight analysis.

D. Conclusion with respect to January 1, 2015 - December 31, 2017 Costs

The Commission determines that the Company has met its burden – both the prima facie burden of production and the ultimate burden of persuasion – of showing that the coal ash basin closure costs it actually incurred from January 1, 2015 through December 31, 2017 are recoverable and that a return, but one reduced to recognize a mismanagement penalty, is warranted, and that the Commission with contrasting evidence on the merits, with exception addressed below, authorizes recovery.

First, Company witness Kerin demonstrated that the Company's coal ash management historical practices (i.e., pre-CCR Rule and pre-CAMA) have generally comported with industry practices and then-applicable regulations, especially in this region of the country. See, e.g., Tr. Vol. 14, pp. 99-100, 135. The Commission determines that compliance with industry standards is an important but not the sole criterion in determining the recoverability of CCR remediation costs. As part of his work to bring DEC into compliance with the new CCR Rule and CAMA, witness Kerin helped establish and participated in an industry peer group consisting of representatives of, for example, Dominion and Southern Company, and his interaction with that group and his investigation of practices at other Duke Energy Corporation-affiliated utilities confirm his conclusion that the Company's practice was not out of line with the overall industry practice. Id. at 96-97. As witness Kerin testified, when he looked at all of the practices at the Duke Energy Corporation utilities, in multiple states, "Indiana, Ohio, North Carolina, South Carolina, and Florida, all those practices were the same, so that led me to believe that all those [companies], prior to becoming Duke Energy companies, were managing their ash and their ash basins in the same manner." Id. at 158-59. He made the same observation concerning the peer group of companies – AEP, Dominion, the Southern Companies and TVA – and "their practices were similar." Id. at 159. He concluded: "So that whole group of states across the eastern part of the United States, we were operating our basins in the same fashion." Id.

Witness Kerin's testimony on this point was not seriously or credibly controverted by any Intervenor. Indeed, AGO witness Wittliff was not able to specify exactly how the Company should have acted differently in managing its coal ash to be consistent with industry, at which sites it should have taken those actions, and how much those actions would have cost the Company. Tr. Vol. 11, pp. 283-89. Witness Wittliff also presented no credible evidence showing DEC's engineering and design of its impoundments was not consistent with industry practice and regulatory requirements at the time other than his own, subjective allegations. Tr. Vol. 24, p. 121.

Moreover, key documents that Intervenors used in cross-examination in an effort to rebut witness Kerin's testimony contain provisions that in part support, to some extent at least, his testimony and these findings. For example:

- Los Alamos Laboratory Report (1979): "Much of the ash produced by coal ash combustion is discharged into ash ponds." Sierra Club – Kerin Cross Ex. 3, p. 6.
- EPRI Coal Ash Disposal Manual (1981): No coal ash was landfilled in either North or South Carolina; rather, all of it was stored in ponds. Sierra Club – Kerin Cross Ex. 4, Table 3-1, pp. 3-7. Further, 81% of the coal ash produced in the Southeast was placed in ponds. Id. at 3-8.
- EPA Report to Congress (1988): This Report (Sierra Club – Kerin Cross Ex. 5) confirms that the Company's disposal of coal ash in ponds conformed in large measure to industry practice. The Report refers to ponds as "surface impoundments" Id. at 4-11, and notes that CCR waste management practices varied by region, and that in the South (EPA Region 4, which includes North and South Carolina) 95% of the plants manage their CCRs on-site. Id. at 4-23. The Report continues, "On-site management is common because utilities in this region often use surface impoundments, which are typically located at the power plant." Id. It noted further that "access to abundant, inexpensive supplies of water ... [in Region 4] often made it economical to use this management option." Id. at 4-20.

The 1988 EPA Report also indicates that "until recently, most surface impoundments and landfills used for utility waste management have been simple unlined systems," and that "liner use has been increasing in recent years." Id. at 4-33. Intervenors point to these statements to argue that the Company's continued use of unlined ponds was outside standard industry practice and is otherwise imprudent. The Commission disagrees. The Report notes, for example, that 87% of surface impoundments were unlined (id. at 4-33), and that neither North Carolina nor South Carolina required liners. Id. at 4-3. It also notes that one-fifth of waste generated by coal-fired power plants was reused, and "the remaining four-fifths are typically disposed in surface impoundments or landfills." Id. at ES-2. The Report thus validates witness Kerin's testimony that "unlined basins were the industry standard" at that time. Tr. Vol. 24, pp. 128-29. As he stated, "the EPA report focused on new landfills and surface impoundments, while DEC last constructed a new ash basin in 1982." Id. at 129 (emphasis in original). This was six years before the EPA Report was submitted to Congress. As witness Kerin stated further, in the DEP case AGO witness Wittliff testified that the majority of utilities continued to use unlined wet ash impoundments even after this timeframe, "because '[t]he law allowed them to do it, and the law continued to allow them to do it.'" Id. at 122. Finally, witness Kerin's conclusion is supported by the preamble to the CCR Rule itself. See Public Staff Kerin Cross-Examination Ex. 4.

Based upon similar evidence in the DEP case, the Commission found that "[s]ince the 1950s, standard industry practice at least in the Southeast, has been to deposit in coal ash basins, and such basins were constructed and used at all of the Company's coal-fired generating units." 2018 DEP Rate Order, p. 142. This finding and witness Kerin's testimony are also consistent with the Commission's findings in the 2016 DNCP Rate Order: "DNCP, like many electric utilities in the United States, has for decades generated electricity by burning coal. During those decades, the widely accepted reasonable and prudent method for handling CCRs has been to place them in coal ash landfills or ponds (repositories)." 2016 DNCP Rate Order, p. 60.

It is undisputed that there will be a natural flow from an unlined basin into groundwater. This is a function of basic science. Tr. Vol. 13, p. 58. As Company witness Wells testified:

> Earthen basins and dike walls are prone to the movement of liquid through porous features within those structures through a process known as seepage. Such seepage is common, and, to a degree, is necessary to maintain the stability of an earthen dam or dike wall; otherwise they become saturated, which may reduce margins of safety with respect to their structural integrity.

Tr. Vol. 24, p. 246. Accordingly, seepage from the Company's unlined ash basins – basins that complied with industry standards and the then-applicable regulatory requirements – is part of the "normal operation" of the basins. This evidence of the Company's historical compliance establishes that, except in limited fashion, its past coal ash management practices did not cause it to incur in the January 1, 2015 – December 31, 2017 timeframe unjustified costs to comply with current laws and regulations. Tr. Vol. 14, pp. 100-01.

Second, witness Kerin's testimony established that in large measure the costs were reasonable and prudent. In light of the evidentiary presumptions and shifting burden of production and persuasion, and based on the Commission's assessment of the credibility of the witnesses opining on the facts and policy considerations at issue, the Commission relies heavily on his testimony. The testimony of other Company witnesses, including witness Wells, will be discussed in greater detail in the sections of this order dealing with the Public Staff's specific disallowance recommendations. Witness Kerin's testimony was credible, demonstrated command of the subject matter (he testified, after all, that he had "lived" with that "company-specific subject matter every day for the past four years" (Tr. Vol. 24, p. 92), and the Commission determined in the 2018 DEP Rate Order that he has "'lived' this project since its inception," (2018 DEP Rate Order, p. 187), and the Commission concludes that his conclusions were not dislodged after being subjected to vigorous cross-examination.

Third, witness Kerin's testimony establishes that the capitalized costs for which the Company seeks recovery are eligible for a return and, at least to the extent they are capital in nature, were used and useful. These costs were expended to comply with the CCR Rule and CAMA, along with consent agreements that require the Company to implement corrective actions consistent with either or both of those regulatory requirements. Tr. Vol. 14, p. 115. Capital expenditures undertaken to enable compliance with the law qualify as "used and useful," in that the Company does not have the option to fail to comply, and, as indicated in the testimony of Company witness Wright, are routinely recoverable in rates. Tr. Vol. 14, p. 115; Tr. Vol. 12, p. 131. Further, witness Kerin's testimony (see Tr. Vol. 14, p. 135 and Kerin Ex. 10 and Ex. 11) details the "core components" of the costs incurred. These include, for example:

- With respect to the Allen and Belews Creek Plants' coal ash basins, oversight and environmental health and safety (EHS) activities, engineering and basin closure projects;
- With respect to the Buck Plant's coal ash basins, EHS activities, basin closure costs, mobilization and beneficiation costs;
- With respect to the Cliffside Plant's coal ash basins, mobilization and infrastructure costs, water management, ash processing, basin support projects, inspections and maintenance, and EHS activities;
- With respect to the Dan River Plant's coal ash basins, mobilization and infrastructure costs, water management, ash processing, landfill construction, engineering closure costs, and EHS activities;
- With respect to the Marshall Plant's coal ash basins, EHS activities, inspections and maintenance;
- With respect to the Riverbend Plant's coal ash basins, ash processing, water management, and EHS activities; and
- With respect to the W.S. Lee Plant's coal ash basins, mobilization, ash processing, and engineering closure plans.

Witness Kerin testified further that mandated closure of the existing coal ash basins meant that the modifications had to be made to their associated power plants, so as to direct storm water flow away from the ash basins and to cease bottom ash and fly ash sluice flow to the basins. Tr. Vol. 14, p. 133. In addition, other process streams must be directed away from the coal ash basins to facilitate de-watering and closure. Id.

Witness Kerin and his supporting exhibits describe costs expended to facilitate the Company's handling and storage of coal ash, so as to conform to the new legal requirements imposed on the Company resulting from the promulgation of the CCR Rule and the passage of CAMA. DEC is subject to these new legal requirements and must handle and store coal ash in a manner that complies with them. As such, except as detailed below, the capital costs of compliance are "used and useful," and the Company is authorized to recover them along with other costs accounted for in the ARO, along with a return as adjusted below on its outlay of these funds.

1. Intervenor Challenges to Cost Recovery

Intervenors have mounted challenges to the Company's recovery (with a return) of its already-incurred coal ash basin closure costs on two levels. First, in a manner that departs from the prudence framework the Commission established in the 1988 DEP Rate Case, the AGO, through witness Wittliff; CUCA, through witness O'Donnell; and the Public Staff, through witness Maness, all advocate that costs be disallowed even without a detailed analysis of the specific costs the Company has submitted for recovery.[1] Second, the Public Staff (and only the Public Staff) proposes to disallow specific costs incurred through the testimony of witnesses Garrett and Moore, and Junis, thus at least attempting to follow the Commission's prudence framework.

However, the Commission determines that these approaches are not appropriate, and these proposed specific disallowances are not approved.

2. AGO/CUCA Approach: The Company "Caused" CAMA

At the hearing, in response to questions by counsel for the Company, witness Wittliff admitted that, while his testimony stated that he would support a Commission finding that the coal ash costs incurred by DEC were unreasonable and imprudent, his actual position is that the Company should be able to recover its costs to comply with the CCR Rule, but nothing more. Tr. Vol. 11, pp. 279-81. He stated that costs incurred by the Company to comply with the CCR Rule are reasonable and prudent. Id. at 282-83. In contradiction to its witness, the AGO in its brief asserted that all the CCR cost recovery DEC seeks in this case is imprudent. Not only has the AGO been unable to quantify the costs DEC should have incurred prior to 2015, it has failed to sponsor a witness that can support its theory of the case. While purporting to represent consumers, the AGO's theories and recommended disallowances are inconsistent with those of the Public Staff, tasked with representing the same constituency.

Witness Wittliff admitted that he did not identify any specific costs that could have been lower or should be disallowed. Id. at pp. 287-89. However, witness Wittliff continued to pose the theory that the Company "caused" CAMA, and while he cannot point to imprudent action on the part of DEC in undertaking to comply with CAMA, the fact that the Company "caused" the statute to be enacted affects its ability to recover its CAMA-related costs. Tr. Vol. 11, pp. 239, 248-50, 272. CUCA witness O'Donnell agrees. Tr. Vol. 18, pp. 59-60 (Company caused CAMA and therefore should not recover any CAMA cost).

In these witnesses' view, CAMA sets a more aggressive coal ash basin closure schedule for certain of the Company's basins than would have been set under the CCR Rule alone, and the

[1] Sierra Club witness Quarles asserted that continued storage of coal ash at Allen and Marshall poses significant environmental risks, and concluded that closure in place at these basins would allow continued contamination of downgradient groundwater and violate the technical standards of the CCR Rule, and that removal of coal ash from DEC's ash basins would reduce the concentrations and extent of this contamination. Tr. Vol. 6, pp. 17-118; 119-27. Witness Quarles made no effort to quantify the economic impact of his recommendation, which would increase cost to customers. The Commission is persuaded by the evidence presented by witness Kerin and witness Moore that the closure plans for the Allen and Marshall Plants are appropriate. DEQ will be responsible for determining which closure plans are appropriate for Allen and Marshall. The Commission determines that the associated expense for Allen and Marshall is reasonable and prudent.

more aggressive schedule leads, again in their view, to higher costs. Witness Wittliff testified that he "[didn't] know quantitatively, because [he] didn't do that kind of analysis," in regard to what costs the Company would have eventually been required to undertake by the CCR Rule and CAMA, despite any exceedances, violations, criminal prosecutions, and civil and administrative lawsuits. Tr. Vol. 11, pp. 282-83.[1] Accordingly, the Commission determines that witness Wittliff's opinion cannot legitimately support disallowances, because it fails with respect to the prudence review framework the Commission established in the 1988 DEP Rate Case: (1) it fails to identify specific and discrete instances of imprudence; (2) it fails to demonstrate the existence of prudent alternatives; and (3) most importantly, it fails to quantify the effects by calculating imprudently incurred costs.

Witness O'Donnell proposes a 75% disallowance, but he does so predicated not on a calculation of "imprudently incurred costs" as required by the Commission's framework, but rather based on what he terms a "financial analysis" through comparison of the size of the ARO established by the Company to capture coal ash basin closure expense associated with CCR Rule and CAMA compliance with the AROs established by other utilities to capture their coal ash basin closure expense. This "calculation" is unpersuasive, however, as demonstrated by witness Kerin, (see Tr. Vol. 24, pp. 124-28), and as the Commission determined in the DEP case. See 2018 DEP Rate Order, p. 196. In particular, the analysis lacks any attempt by witness O'Donnell to account for the differences in which different utilities may have valued their closure cost estimates, or the differences in the timing of their estimates. As the Commission held in the 1988 DEP Rate Order, industry comparisons, even if relevant, are "of little value in determining specific acts of imprudence." 1988 DEP Rate Order, p. 56. The Commission agreed with the Company's witness that "[t]he flaw in industry comparisons ... is that there are unique conditions on every nuclear project so that no projects are exactly comparable" (id.), and the same applies to AROs established by different utilities to capture their specific coal ash basin closure costs. Witness Kerin indicates, and the Commission agrees, that this renders witness O'Donnell's "analysis" without significant probative value – it is not a true apples-to-apples comparison of the utilities' AROs.

A more fundamental reason demonstrates why the Commission determines it should not accept the opinions of witnesses Wittliff and O'Donnell – the notion that the Company was the direct cause of CAMA is of limited legal basis. Witness O'Donnell presents no evidence of such direct causation, and witness Wittliff appears to base his opinion on a draft preamble to the Senate bill (Tr. Vol. 11, pp. 240, 248-50), notwithstanding the fact that this preamble is not present in the final ratified bill.[2] Moreover, in North Carolina, legislative intent is ascertained by the plain words of the statute. Rhyne v. K-Mart Corp., 149 N.C. App. 672, 562 S.E.2d 82 (2002). "Legislative history" of the type seemingly relied upon by witness Wittliff is legally impermissive. In State v. Evans, 145 N.C. App. 324, 550 S.E.2d 853 (2001), the Court stated:

---

[1] The AGO complains that the Commission imposes an inappropriate burden upon it to offer evidence to quantify the disallowances it advocates. The AGO cannot legitimately assert that the burden is unfair when it has failed to undertake the task of attempting to elicit that evidence. The AGO has undertaken substantial discovery of DEC in this case. Based on the omissions in its presentation, the AGO apparently failed to "close the loop" in seeking to elicit evidence on what it would have cost to take the remediation steps it alleges DEC should have taken prior to 2015.

[2] See N.C. Gen. Stat. § 130A-309.200, et seq.

> While the cardinal principle of statutory construction is that the words of the statute must be given the meaning which will carry out the intent of the Legislature .... [t]estimony, even by members of the Legislature which adopted the statute, as to its purpose and the construction intended to be given by the Legislature to its terms, is not competent evidence upon which the court can make its determination as to the meaning of the statutory provision.
>
> Thus, "[e]ven the commentaries printed with the North Carolina General Statutes, which were not enacted into law by the General Assembly, are not treated as binding authority by this Court." Accordingly, press releases and commission recommendations offered by defendant as evidence of the punitive purpose behind [the statute] are in no manner binding authority on this Court.

145 N.C. App. at 329-30, 550 S.E.2d at 857 (citations omitted). Accord. Elec. Supply Co. of Durham v. Swain Elec. Co., 328 N.C. 651, 657, 403 S.E.2d 291, 295 (1991); Styres v. Phillips, 277 N.C. 460, 472, 178 S.E.2d 583, 590 (1971) ("The intention of the legislature cannot be shown by the testimony of a member; it must be drawn from the construction of its acts.").[1]

Even if the actions or inactions of DEC or one of its sister companies was a direct cause of CAMA as these witnesses allege, such direct causation alone is not sufficient legal basis for disallowing otherwise recoverable costs. If the North Carolina General Assembly had intended to give the Commission the authority to deny otherwise recoverable environmental compliance costs due to some punitive theory of causation, it could have said so – and it did not. The legislature does not operate in a vacuum. Rather, it operates within the context of N.C. Gen. Stat. § 62-133, in which prudently incurred costs are recoverable. Had it intended to disavow the routine cost recovery standard, it can be expected that the legislature would have had to do so explicitly. Accordingly, witnesses Wittliff and O'Donnell theories of punitive causation do not comport with the controlling law of this state.

3. The Public Staff's "Equitable Sharing" Concept

In this case, as in the 2018 DEP Rate Case, the Public Staff advocates an "equitable sharing" of coal ash basin closure costs. The Public Staff's equitable sharing proposal is supported by witness Maness. Tr. Vol. 22, pp. 70-85. Witness Maness achieves the sharing in the same manner in which he implemented the Public Staff's 50-50 sharing proposal in the 2018 DEP Case. First, he removes the unamortized coal ash basin closure costs from rate base, thereby, through that step, eliminating any return on that unamortized balance. Id. at 72. The second step is to choose an amortization period that will result in the desired level of "sharing." Id. The sharing level that the Public Staff and witness Maness deem "equitable" is 51% to the Company and 49% to

[1] In Styres v. Phillips, the Supreme Court also stated that "the rule is that ordinarily the intent of the legislature is indicated by its actions, and not by its failure to act." Styres, 277 N.C. at 472, 178 S.E.2d at 590. Accordingly, the suggestion through cross-examination questions by the AGO (see, e.g., Tr. Vol. 13, p. 22) that as CAMA does not contain an express provision mandating cost recovery of compliance costs, the General Assembly did not intend for the statute to allow such costs, is also without any basis. To the extent that any such evidence is competent, the most relevant evidence regarding the General Assembly's failure to act is the fact that on two separate occasions the General Assembly was presented with the opportunity to mandate non-recoverability of compliance costs, and on both occasions the provision so stating did not pass.

customers. Id. at 84. Mathematically that results in a 27-year amortization period (id.), although, when adjusted for the rate of return to which the Company and the Public Staff agreed, subject to the Commission's approval, was appropriate in this case, the amortization period is reduced to 25 years. Id. at 153. Even under the 25-year amortization period, however, the sharing level remains 51% to the Company and 49% to customers. Id. at 162.

The Commission chose not to accept the "equitable sharing" concept in the 2018 DEP Case, and does so again, on the same basis.

First, the concept is standard-less, and, therefore, from the Commission's view arbitrary for purposes of disallowing identifiable costs – there is no rationale that supports a substantially large 51% disallowance. The Public Staff chose a desirable equitable sharing ratio, then backed into the mechanism to achieve that level of disallowance, leaving the allocation subject to an arbitrary and capricious attack, particularly as it provides no explanation as to why the "equitable" split for DEP in the 2018 DEP Case was in its view 50-50, while the "equitable" split in this case is 51-49. As the Commission held in the 2018 DEP Case, the "Public Staff provides insufficient justification for the 50/50 [split] as opposed to 60/40 or 80/20 ...." 2018 DEP Rate Order, p. 189.

Black's Law Dictionary defines an "arbitrary and capricious" decision as one which, inter alia, is "without determining principle." See Tate Terrace Realty Investors, Inc. v. Currituck Cty., 127 N.C. App. 212, 222-23, 488 S.E.2d 845, 851 (1997). The Commission can discern no "determining principle" in the Public Staff's "equitable sharing" proposal. As such, were the Commission to adopt it, the Commission's action would be subject to an arbitrary and capricious attack and likely subject itself to reversal. An illustrative case is Sanchez v. Town of Beaufort, 211 N.C. App. 574, 710 S.E.2d 350 disc. review denied, 365 N.C. 349, 718 S.E.2d 152 (2011), in which the Court held that it was arbitrary and capricious for a municipal body to "cherry pick" a standard without providing any basis of any particular determining principle. Sanchez, 211 N.C. App. at 580, 710 S.E.2d at 354. In this case, the Beaufort Historic Preservation Commission (BHPC) attempted to limit the construction of petitioner's home to 24 feet in height "without the use of any determining principle from the BHPC guidelines." Id. at 582, 710 S.E.2d at 355. Rather, the BHPC members based the standard "on their own personal preferences," with each member providing a manner of re-working the project's construction to comply with a 24-foot height maximum, but none providing a reason as to why 24 feet when the height "could be a different number ...." Id. at 581 (emphasis in original). Thus, while the BHPC members could provide a way to arrive at the height maximum, they could not provide a "why" for that particular height maximum. Failure to provide a determining principle for the height maximum itself rendered the BHPC's decision arbitrary and capricious. Id. at 582.

Ultimately, the Public Staff, through witness Maness, indicates that "what is and what is not allowed in rate base is within the legal discretion of the Commission to decide." Tr. Vol. 22, p. 73. The Public Staff overstates the Commission's discretion, and to the extent the Commission possesses such discretion, the Commission chooses not to exercise it in the manner the Public Staff advocates. To understand exactly how, it is necessary first to examine the Public Staff's purported rationales for its sharing proposal. There are two: first, the Company's alleged past failures, as detailed in the testimony of Public Staff witness Junis, to prevent environmental contamination from its coal ash basins, and, second, an asserted "history of approval of sharing of extremely large costs that do not result in any new generation of electricity for customers." Id. at 71-72.

As to the first asserted predicate, the Company disputes such "failures," as set out in the testimony of Company witness Kerin. The Commission credits Kerin's testimony, as detailed below, but whether or not the Company were guilty of some sort of violation is insufficient to justify the Public Staff's 51/49 sharing proposal. Witness Maness admitted that these alleged acts or failures to act are related to past operations. Tr. Vol. 22, p. 80. No persuasive evidence exists that any of these actions or inactions caused discrete expenditures by the Company to comply with its CCR Rule and CAMA obligations, which are the costs that the Company seeks to recover. Past actions, even if imprudent in this context must result in quantifiable costs, which the Public Staff has not shown. Therefore, identification of an imprudent action or inaction is not by itself sufficient; rather, there must be a demonstration of the economic impact. 1988 DEP Rate Order, p. 15. The Public Staff has made no such demonstration in this case, and no such demonstration with respect to the Public Staff's 51/49 sharing arrangement.

Apart from his specific recommendation regarding disallowance of groundwater remediation expense (discussed below), witness Junis' testimony does not link the past actions of the Company to the costs it seeks to recover. As Company witness Wright indicates, to link alleged past "violations" to current compliance costs in the factual context of this case is to "put the Company in an untenable situation." Tr. Vol. 13, p. 39.

Past violations may well be imprudent, but with respect to the "question of responding to new regulations and new standards, that is a totally separate question." Id. The Commission agrees with this distinction. In keeping with its decision in the 1988 DEP Rate Order, this aspect of which was affirmed by the North Carolina Supreme Court, to permit disallowance there must an actual expenditure shown to be imprudently incurred.

The Public Staff's position, simply stated, is that it does not matter if the Company's actions in incurring the CCR Rule and CAMA compliance costs were prudent – the Public Staff's equitable sharing proposal would still apply. As witness Maness testified, "[E]ven if 'prudent'" (Tr. Vol. 22, p. 126), the Public Staff would still find it "appropriate to have the shareholders of those companies bear a greater share of the cleanup costs under an equitable sharing approach." Id. Accordingly, the predominant rationale for the Public Staff's proposal is witness Maness' second predicate: the proposition that the Commission has a "history of approval of sharing of extremely large costs that do not result in any new generation of electricity for customers." Id. at 72.

Witness Maness overstates his position – as witness Wright notes, there is "no provision of Chapter 62 requiring different treatment for 'extremely large costs'" (Tr. Vol. 12, pp. 156-21-156-22), and, witness Wright detailed any number of "extremely large cost" items not associated with new generation for which cost recovery is routinely allowed. Id. The Commission determines that this is another example of the arbitrariness inherent in the Public Staff's sharing proposal.

It appears that witness Maness' rationale for the sharing proposal is grounded in the Public Staff's view of the discretion available to the Commission. He states first that pursuant to N.C. Gen. Stat. § 62-133(b)(1), and with the exception of construction work in progress under certain circumstances, "the only costs that the Commission is required to include in rate base are ... the 'reasonable original cost of the public utility's property used and useful, or to be used and useful within a reasonable time after the test period ....'" Tr. Vol. 22, p. 73. He indicates that he is advised by counsel that "beyond these requirements what is and what is not in rate base is fully within the Commission's discretion to decide, as long as the rates set thereby are fair and reasonable to both the utility and the consumers." Id.

DEC and the Public Staff stridently debate whether the 2015-2017 CCR remediation costs if found used and useful and otherwise meet the test for amortization with a return on the unamortized balance "must" or "may" be approved. The Public Staff argues that approval of a return is discretionary. The Commission determines it unnecessary to determine whether the costs must receive a return on the unamortized balance. In its discretion, as expressly authorized by N.C. Gen. Stat. § 62-133(d), with the exception addressed below, it approves a return.

DEC argues that deferred 2015-2017 CCR remediation costs accounted for in an ARO as authorized by the Commission in its 2018 order should be amortized over five years and should earn a return on the unamortized balance. The Public Staff argues that these ARO costs should be amortized over 25 years with no return based primarily on an equitable sharing theory. In support of these parties' contrasting positions and in order to challenge the merits of their opposition, the parties laboriously debate issues of used and useful, "entitled" versus "eligible" for earning a return, plant in service versus working capital, capital costs versus expenses, etc. The parties arduously debate the applicability to this issue of cases addressing an abandoned sewage treatment plant, costs of discontinued nuclear projects, and manufactured natural gas remediation costs.

No witness argues that the Commission lacks the discretion to follow the precedent it established in the two previous cases, DNCP and DEP, where it addressed the issue of amortizing deferred ARO CCR remediation costs over five years and a return on the unamortized balance. No witness argues that the law forbids the Commission to authorize a return on the unamortized balance. The Commission chooses to exercise its discretion and authority under N.C. Gen. Stat. § 62-133(d) and follow its precedent here - amortize the ARO costs over five years and authorize a return on the unamortized balance. The Commission will address the lengthy arguments and debate, but determines that by and large the arguments are not particularly germane or dispositive to the Commission's decisions. The Commission will not accept the Public Staff equitable sharing argument primarily because the Commission determines in its discretion that amortization of the deferred ARO costs over 25 years is inequitable and finds inadequate support for a 50-50 or 51-49 sharing versus some other ratio. The justification for disallowance of 50% of the ARO costs is not persuasive. The Commission concludes that the Public Staff relies on the equitable sharing principle because it, like other Intervenors, has been unable to quantify a disallowance on the basis of the alleged DEC acts and omissions prior to 2015 providing the predicate for the requested disallowance. Instead, the Commission relies upon some of the evidence offered to support the equitable sharing theory to impose a management penalty as discussed below.

While arguments by the parties through analogy to cases on other issues provide some helpful context, the issue of amortization of deferred CCR remediation costs required to comply with EPA CCR requirements and CAMA is sui generis and distinguishable. These expenditures, as FERC and GAAP refer to them, are "costs" or an "asset" of remediation. They have been deemed by the Commission without objection as extraordinary, as not being recovered through current rates and have for those reasons been deferred. As such, they are investor-supplied funds; not ratepayer-supplied funds and under principles of equity, law and fairness are eligible for a return. Otherwise the investor supplying these funds is deprived of the time value of money and is inadequately compensated resulting in an increased risk and ultimately increasing the Company's cost of capital. The Commission in its discretion hereby authorizes a return, but discounts it as discussed below.

The nuclear discontinued plant costs, to the extent relevant to the issues in this case, are primarily so with respect to the Public Staff argument in support of equitable sharing. The Commission determines on balance that the support for equitable sharing the Public Staff argues these cases provide is unpersuasive. This is not to say that the Commission is of the opinion it could not approve an equitable sharing remedy in a given case outside the context of a nuclear plant discontinuance case, but this is not a nuclear plant discontinuance case and not one the Commission chooses to rely upon to authorize equitable sharing. The costs the electric utilities incurred at issue in those cases were for nuclear plants, that had they been placed on line and generated electricity would have been added to rate base as used and useful plant in service. Some of the costs were for plants actually placed on line but sized to serve more units than the units actually generating electricity and therefore constituted excess capacity or plant not "useful." The costs had never been placed in rate base as plant in service prior to the general rate cases at issue, and to the extent they were costs in abandoned nuclear facilities, they were facilities never used to generate electricity. Those are not the facts at issue here. None of the nuclear plant discontinuance cases either before the Commission or the courts on appeal held that to the extent a portion of the costs could be recovered, they were ineligible for any return on the undepreciated balance, just that the costs should not be added to rate base. In fact, in the past, the Commission has approved a return. Order dated September 24, 1982, Docket No. E-2, Sub 444. (Commission authorized recovery of costs associated with cancelled Harris Units 3 and 4 over a ten-year period with inclusion of the interest arising from the debt financing portion of the unamortized balance.)

The costs of the sewage treatment plant at issue in Carolina Water were classified as abandoned plant. The plant long having been in service had been taken out of service, and it would never be used again because service would be provided by contract with a governmental agency. A portion of the original costs to build the plant had not been recovered through depreciation at the time of abandonment. That is not the factual situation in this case. Here there is a deferral of ARO CCR remediation costs. New costs were incurred in 2015-2016 in addition to creation or maintenance of the impoundment in prior years.[1]

---

[1] The issues of earning on the abandoned wastewater treatment plant was not the major issue before the Court in the Carolina Water case. The ultimate issue before the Commission was whether the unrecovered costs of the sewage treatment plant should be treated as plant held for future use of abandoned plant. Discussion of this issue consisted of less than two pages in a 126-page order. The monetary consequences amounted to a few thousand dollars per year. Docket No. W-354, Sub 111, Order dated July 31, 1992, pp. 56-58. The facts at issue in the case are unlikely to be repeated. Under the Uniform System of Accounts, the costs of individual components, in many instances, are

The MFG case is somewhat analogous, but does not address billions of dollars of CCR remediation costs incurred to comply with EPA and CAMA requirements accounted for in a deferred Commission approved ARO. The Commission is unable to discern whether the natural gas utility was required to construct lined landfills in which to place contaminated materials or construct caps over any existing repositories. The MFG case was a Commission decision, one the Commission may follow or not as it determines appropriate. For reasons fully explained herein, it determines not to follow it.

As to Public Staff arguments that the ARO costs or assets were all "capitalized expenses," the Commission, were it necessary to resolve this issue, would disagree. For example, a significant portion of the costs compiled in the asset retirement obligation has been or will be spent on creation of lined landfills with synthetic liners or impermeable caps over existing impoundments. These structures are examples of long-lived assets and are capital in nature- not expenses. Another significant portion, had they not been accounted for in an ARO and deferred, would have been operating or other expenses.[1] However, while expenditure of costs outside of the ARO context that are deferred may include what otherwise would be classified as "expenses," e.g., operating costs, when they are capitalized and by order of the Commission are deferred, they lose for ratemaking purposes the attributes of test year recurring "expenses" deemed recoverable through the rates then in effect that do not qualify for a return. To the extent they qualify for recovery "of" (versus recovery "on") test year expenses in a general rate case through N.C. Gen. Stat. § 62-133(b)(3), they are recoverable as "actual investment currently consumed through reasonable actual depreciation" (amortization) rather than traditional test year, recurring "reasonable operating expenses." The Commission determines that while sui generis these ARO costs in totality are more closely related to deferred production plant costs than deferred storm damage costs, for example.

In Footnote 2 on page 5 of the Public Staff brief, the Public Staff contends:

> [2] Thornburg I provides that the Commission has discretionary authority to award or deny a return on the unamortized balance. A subsequent decision of the North Carolina Supreme Court indicates such deferred operating expenses are not eligible for a return on the unamortized balance: "Costs for abandoned property may be recovered as operating expenses through amortization, but a return on the investment may not be recovered by including the unamortized portion of the property in rate base." State ex rel. Utils. Comm'n v. Carolina Water Serv., 335 N.C. 493, 508 (1994) (Carolina Water Service). This decision did not expressly overrule Thornburg I, but nonetheless suggests that a return on unamortized balance of a regulatory asset is not a discretionary matter for the Commission; instead it

combined into classes for calculating depreciation rates and net salvage value. Within these classes many individual components retire before or after the end of their projected useful lives. These retirements affect the recalculated depreciation rates, but the individual components are not classified as abandoned plant. See Tr. Vol. 2, Doss Ex. 3. Hahne & Aliff, Accounting for Public Utilities § 6.04 pp. 6-8, 6-10, § 6.05[3] pp. 6-12.

[1] 2016 is the twelve month test year in this case. To the extent the Commission had not authorized deferral of the ARO in 2016, the non-capital portion of the CCR remediation costs to the extent reasonable and prudent would be recoverable dollar-for-dollar in the revenue requirement. The portion spent on capital projects to the extent comprising completed projects would be added to rate base and eligible to earn a return.

may be prohibited by law.[1] For purposes of the present Post-Hearing Brief, the Public Staff position is that under either the Thornburg I holding or the Carolina Water Service holding, there is no DEC entitlement to a return on the unamortized balance of its deferred coal ash costs.

The Commission finds the contention inaccurate that the cited cases deny the Commission discretion to authorize a return on a deferred CCR remediation ARO. The nuclear plant discontinuance costs at issue in Thornburg I were not "deferred operating expenses" like deferred CCR ARO costs, and the abandoned water treatment plant costs at issue in Carolina Water likewise were not deferred "regulatory asset" costs comparable to either deferred nuclear plant discontinuance costs or deferred CCR ARO costs.[2] The Commission notes that it has authorized deferral of capital costs in utility plant (e.g., combined cycle natural gas fired electric generating plants) completed and placed in service prior to the test year or prior to the end of the test year of a general rate case to prevent loss of recovery of costs. The costs so deferred are not test year recurring operating expenses but deferred capital costs, added to rate base and eligible for a full return. A used and useful analysis is appropriate to determine recovery of these costs. Docket No. E-22, Sub 532 (Dec. 22, 2016) (2016 DNCP Rate Order)

The Public Staff also argues inaccurately and misleadingly that "it generally makes no regulatory sense to defer to a regulatory asset a cost that could be placed in rate base – deferral is used when necessary to prevent significant erosion of earnings, which is applicable to expenses but not to property that can be put in rate base; . . . ." In the Commission's December 22, 2016 order in the most recent DNCP general rate case, Docket No. E-22, Sub 532, the Commission approved a stipulation between the Company and the Public Staff to defer the post-in-service costs of the Warren County CC and the Brunswick County CC. These plant-in-service electric production assets had been placed in service prior to the end of the general rate case test year, and the deferral postponed the date on which depreciation costs began and permitted return on the full costs of the assets. This deferral related to property, not expenses.

---

[1] While the Public Staff suggests that authorizing a return on the unamortized balance might not be discretionary, this suggestion is belied by the Public Staff's alternative remedy for disallowing CCR remediation costs set forth on page 422 of its proposed order:

> Consequently, the Commission in the exercise of its judgment and discretion, determines that a management penalty in the approximate sum of $72.3 million is appropriate with respect to DEC CCR remediation expenses accounted for in the earlier established ARO with respect to costs incurred through the end of the test year as adjusted. . . . Had the Commission not imposed this penalty, the deferred coal ash costs would have been amortized over five years with a full authorized return on the unamortized balance. The penalty will be imposed by reducing the resulting annual amortization expense by approximately $14.46 million (from the return on the unamortized balance in the rate base portion) for each of the five years, resulting in an approximate $72.3 million management penalty.

[2] While the regulatory accounting concepts of creation of a "regulatory asset/liability" and "deferral" include a wide spectrum of cost categories, this Commission views differently costs incurred before the test year of a general rate case (like extraordinary storm costs) and costs otherwise recognizable as test year costs or expenses but deferred for non-traditional future recovery such as nuclear plant discontinuance costs that are not added to rate base but are nonetheless amortized over future years. Costs in the former category are deferred to prevent loss of recovery. Costs in the latter category generally are deferred to limit, reduce or postpone recovery.

From the outset, the Public Staff has acknowledged and recognized that the ARO costs do not fit into traditional categories: "The Public Staff believed that the non-capital costs and depreciation expense related to compliance with state and federal requirements ... these very unique deferred expenses . . . the unusual circumstances of these costs . . . the unique nature of the costs and the complexity of the issues surrounding the determination of ultimate rate recovery." Tr. Vol. 18, pp. 300-01, Docket No. E-2, Sub 1142.

In the Commission's attempt to obtain a classification of the types of costs included in the ARO in the DEP case, witness Maness listed among others, site preparation, site infrastructure, construct a landfill, cap-in-place, capital expenditures related to equipment and facilities." Tr. Vol 19, p. 58. Under any analysis, these are not expenses but capital items. Had DEC not sought establishment of an ARO and deferral, it is incorrect that they would not have been added to plant in service and depreciated over their useful lives.

In Docket No. E-2, Sub 1142, witness Maness was asked why certain ARO capital costs were not appropriately classified as used and useful.

Q. Just to be clear, one of the things we are doing -- we showed it up on the screen here yesterday - we are putting liners under these coal ash pits, right?
A. Yes, sir.
Q. And that's - and we are putting caps or proposing to put caps over some coal ash basins?
A. Yes.
Q. Isn't that used and useful expenditure to keep the coal ash where it belongs?
A. Well, that raises a number of interesting questions, and I can't pretend to be able to answer them in detail. I have been searching for some answers in the accounting literature and haven't found anything direct yet."
Tr. Vol. 19, pp. 65-66.

Upon being questioned and when given the opportunity to support its position that the deferred ARO costs are "expenses," the Public Staff simply was unable to do so.

When witness Maness was asked whether classifying the ARO costs as used and useful made any difference to the outcome of the case, he responded, "I don't think it makes any difference in this case." Tr. Vol. 19, p. 66. The Commission agrees.

The Commission does agree with the Public Staff and others that even if the ARO deferral costs are found used and useful and that a 9.9% rate of return on rate base is appropriate, the Commission nevertheless has authority to disallow a portion of the return on the ARO costs due to mismanagement. This is what the Commission has required, and it is legally justified in doing so.

As expressed through witness Maness' testimony, the Public Staff looks to the Commission's Order Granting Partial Increase in Rates and Charges in Docket No. E-2, Sub 526 (Aug. 27, 1987) (1987 DEP Rate Order) and its affirmance by the Supreme Court in Thornburg I, 325 N.C. 463, 385 S.E.2d 451 (1989) as precedent for its equitable sharing concept. The Commission determines that Thornburg I provides less support for the equitable sharing the Public

Staff advocates when viewed within the context of other cases addressing nuclear plant discontinuance costs. Greater context is found in Thornburg II, the 1988 DEP Rate Order and the Commission's Order Denying Motions for Reconsideration in the 1988 DEP Rate Case (Docket No. E-2, Sub 537) (1988 DEP Reconsideration Order), and the Supreme Court's reversal in part of those orders in Thornburg II, 325 N.C. 484, 385 S.E.2d 463 (1989).

The principal issue in the 1987 DEP Rate Case/Thornburg I was whether the Company could recover in rates any portion of the costs associated with the abandoned Units 2, 3, and 4 of the Shearon Harris nuclear plant. The Commission had previously decided that the Company could amortize the costs associated with these abandoned units over a ten-year period, but that "no ratemaking treatment should be allowed which would have the effect of allowing ... [the Company] to earn a return on the unamortized balance." 1987 DEP Rate Order, p. 61. Over the objections of the AGO, the Commission decided to continue to follow that process in the 1987 case – it allowed amortization of abandonment costs over a ten-year period, what the court classified as an operating expense[1] for the purposes of rate recovery under N.C. Gen. Stat. §§ 62-133(b)(3) and 62-133(c), but no return. The Supreme Court, in a passage extensively quoted in witness Maness' testimony (Tr. Vol. 22, pp. 75-76), affirmed the Commission's decision, holding that N.C. Gen. Stat. §§ 62-133(b)(3) and 62-133(c) were elastic enough to include non-recurring abandonment costs as utility test year "expense," and that N.C. Gen. Stat. § 62-133(d), which allows the Commission to factor in "all other material facts of record that will enable it to determine what are just and reasonable rates," also provided support for the Commission's decision. The Court further held that as a matter of policy a return of, but not a return on, the abandonment costs was appropriate. Thornburg I, 325 N.C. at 476-81, 385 S.E.2d at 458-61. The Commission had not authorized a return on the costs at issue. The contested issue was recovery of not recovery on the nuclear investment costs.

In Thornburg I, the Court held specifically that the Commission's recovery of but no return on decision was "within the Commission's discretion" and would not be disturbed. Id. at 481. That decision effected a "sharing" between the Company's shareholders, on the one hand, and its customers, on the other – shareholders received a return of the costs, but no return on the costs. It is based upon this holding that the Public Staff, through witness Maness' testimony, contends that "reasonable rates can include a sharing between ratepayers and investors with regard to plant cancellation costs" (Tr. Vol. 22, p. 75), and that the Commission possesses discretion to implement this sharing.

There are, however, distinctions between the 1987 DEP Rate Case/Thornburg I and the present case. First this case does not involve "abandoned plant" or cancellation costs. Rather, it involves an asset retirement obligation and whether or not the unamortized balance is eligible for a return. As such, the authority that the Public Staff relies upon to support its "equitable sharing" concept is not directly on point. This is illustrated by examining the prior orders of this

[1] While the Court's use of the term "operating expense" is technically correct as referenced in the statute, the more precise term should have been "actual investment currently consumed through reasonable actual depreciation" (amortization) in N.C. Gen. Stat. § 62-133(b)(3). The costs at issue are not recurring operating and maintenance or other "expenses" expended in the test year. They are ever decreasing costs allowing a "return of," but not a "return on" the nuclear plant costs. See Tr. Vol. 9, pp. 115-131; Vol. 10, pp. 14-28.

Commission and the subsequent Thornburg case: the 1988 DEP Rate Order, the 1988 DEP Reconsideration Order, and Thornburg II.

In the 1988 DEP Rate Case, the principal issue for decision was the reasonableness and prudence of the costs of constructing and placing into service Unit 1 of the Shearon Harris nuclear plant. The Commission found that for the most part, Harris Unit 1 costs were reasonable and prudent, and that determination in the 1988 DEP Rate Order was upheld by the Supreme Court. Thornburg II, 325 N.C. at 488-89, 385 S.E.2d at 465-66 (finding "no error" in that part of the Commission's Order). However, a part – $570 million-worth – of the costs the Commission considered were incurred in connection with facilities to be shared with Units 2, 3, and 4, units that the Company had ceased to construct to completion. The Commission found that while these $570 million in costs were prudently incurred, they should be shared between the Company's customers and its shareholders. The Commission found that approximately $180 million of those costs were properly classified as "abandonment" costs and should be borne by shareholders. 1988 DEP Rate Order, pp. 112-14. The remaining $390 million were left in rate base.

Responding to the Public Staff's request that the Commission reconsider this decision and remove the entire $570 million from rate base on the grounds that all of it related to abandoned plant, the Commission reaffirmed its decision in the 1988 DEP Reconsideration Order and provided additional explanation for its ruling. It stated that the Public Staff's request that the full $570 million for the common facilities be treated as abandonment costs was based upon a "misunderstanding" of the 1988 DEP Rate Order and the Commission's objective in splitting this $570 million item into $390 million of rate base and $180 million of cancellation costs. 1988 DEP Reconsideration Order, pp. 2-3. The Commission did not (it says in the 1988 DEP Reconsideration Order) intend to treat the "excess common facilities" as abandoned plant; rather, it effected an "equitable sharing" (emphasis added) of the $570 million between customers and shareholders. The Commission reiterated that the Company's choice of the cluster design – which engendered the shared facilities – was reasonable and prudent, and that except as specifically indicated in the 1988 DEP Rate Order, the costs of the Shearon Harris plant were "reasonable and prudently incurred." Thus, the Commission found, the $570 million at issue was also reasonably and prudently incurred.

Nevertheless, the Commission held, (id. at 4-5), that it was appropriate to share the $570 million at issue, and it indicated that it came up with the allocation (essentially one-third to cancellation costs and two-thirds to rate base) on its own and adopted it "for reasons of fairness and equity." The Commission held that it continued "to believe that a reasonable and equitable apportionment of the burden and risks associated with ... [the Company's] prudent investment in common facilities is appropriate." It stated further that its assignment of $180 million as the value of the Company's prudent investment in common facilities to be treated as cancellation costs for ratemaking purposes was an appropriate exercise of its "regulatory discretion."

The Supreme Court disagreed. It held that the Commission did not have the discretionary power to effectuate its "equitable sharing" decision. Rather, the facilities were either "used and useful," and therefore in rate base, or they were not. The Court looked to the Commission's finding that the facilities in question were "excess common facilities," and held that "excess" facilities were not "used and useful" as a matter of law. Thornburg II, 325 N.C. at 495. Accordingly, looking to the broader spectrum of Commission and Supreme Court precedent, the Commission determines not to approve the Public Staff's "equitable sharing" concept through reliance on the nuclear plant discontinuance cost cases.

4. ARO Accounting and "Used and Useful"

In the 2018 DEP Rate Case, the Public Staff argued that the Commission had the discretion to implement the "equitable sharing" concept based upon the Public Staff's interpretation of prior Commission orders and decisions of the North Carolina Supreme Court that permit equitable sharing in the case of abandoned nuclear plants or long out-of-use manufactured gas plants. As noted above and in the 2018 DEP Rate Order, the Commission determines not to approve the Public Staff equitable sharing recommendation. In the 2018 DEP Case, the Commission held to the contrary that

> Costs placed in an ARO account are eligible for deferral and amortization and for earning on the unamortized balance. As such, even if the remediation costs are ARO expenditures, they are eligible for ratemaking treatment as though they are used and useful assets.

2018 DEP Rate Order, p. 196. In this case, Public Staff disputes this as a matter of accounting, and concludes on the basis of its interpretation of the accounting standards that the Company's coal ash basin closure expenditures cannot be classified as "used and useful." As it did in the 2018 DEP order, the Commission determines that it can authorize a return on the unamortized ARO costs.

The Public Staff's position is advanced by witness Maness. Starting from the premise that the Company "chose" to account for its coal ash basin closure costs through ARO accounting, witness Maness makes three basic points. First, he indicates that the Company's deferred coal ash basin closure costs placed in the ARO are more properly categorized as deferred expenses, in that the ARO is "a regulatory accounting and ratemaking method that does not explicitly account for any coal ash compliance costs, either in the past or in the future, as the capitalized costs of property, but instead accounts for them as ongoing expenses ...." Tr. Vol. 22, p. 79. Second, he states that the fact that the Company classifies these costs as "working capital" is irrelevant, and merely a matter of convenience. Id. at 81. Third, he asserts that these costs cannot possibly be classified as "used and useful," because (in his view) that term applies only to utility plant, not expenses. Id. at 77. The Commission disagrees, but as the Public Staff agrees that the Commission possesses the discretion to approve a return on the unamortized balance of the deferred CCR remediation ARO costs, the Commission finds the debate for purposes of this case to be for the most part an academic one.

First, the Commission disagrees that the Company "chose" ARO accounting. The Commission has already so held in the 2018 DEP Case: "Once it became clear that the new laws and regulations governing coal ash would require closure of the Company's existing coal ash basins, GAAP required that an ARO be established, and the Company had no choice in the matter." 2018 DEP Rate Order, p. 194.[1] Further, as Company witness Doss testified, in addition to

[1] As the Public Staff and the Commission have noted previously, "Statements of the FASB are officially recognized by the Securities and Exchange Commission (SEC) as authoritative with regard to GAAP in the United States, and the requirements included in those Statements are essentially mandatory for any publicly traded entity."

GAAP requirements "the Company was also required to (and did) adhere to and apply the accounting guidance under ... [the] Federal Energy Regulatory Commission ('FERC') Code of Federal Regulations ('CFR'), as well as Orders of this Commission." Tr. Vol. 12, p. 62. The Company's ARO accounting complies with the authoritative statements of GAAP, FERC, and this Commission.

Witness Doss provided an extended explanation of the GAAP, FERC, and deferral directives that govern the manner in which the Company established the ARO and has accounted for coal ash basin closure costs in the ARO. The Commission credits his explanation and testimony, which are un-contradicted.

a. GAAP

The CCR Rule and CAMA were new laws that compelled basin closure under GAAP.[1] As Company witness Doss indicated, "The closure obligation triggered ARO accounting requirements." Tr. Vol. 12, p. 63. He elaborated:

> Statement of Financial Accounting Standard ("SFAS") No. 143 (now codified as ASC 410) was effective for and implemented by the Company in 2003 for financial reporting purposes. This guidance requires recognition of liabilities for the expected cost of retiring tangible long-lived assets for which a legal retirement obligation exists. GAAP (in ASC 410-20-20) refers to these costs as an "Asset Retirement Obligation" or an ARO, and defines a "legal obligation" as an "obligation that a party is required to settle as a result of an existing or enacted law ...." (Emphasis added). Each of CAMA and the CCR Rule qualify as an "enacted law" under this guidance.

Id. As he explained further (id. at 64-65), GAAP requires ARO accounting for the closure costs under ASC 410-20-15. Specifically, Subtopic 15-2 indicates that the guidance applies to the following transactions and activities:

a) Legal obligations associated with the retirement of a tangible long-lived asset that result from the acquisition, construction, or development and (or) the normal operation of a long-lived asset, including any legal obligations that require disposal of a replaced part that is a component of a tangible long-lived asset.
b) An environmental remediation liability that results from the normal operation of a long-lived asset and that is associated with the retirement of that asset. The fact that partial settlement of an obligation is required or performed before full retirement of an asset does not remove that obligation from the scope of this Subtopic. If environmental contamination is incurred in the normal operation of a long-lived asset and is associated with the retirement of that asset, then this Subtopic will apply (and Subtopic 410-30 will not apply) if the entity is legally obligated to treat the contamination.

See Order Granting in Part and Denying in Part Request for Deferral Accounting, Docket E-7, Sub 723 (April 4, 2003), pp. 11-12.

[1] The applicable GAAP guidance is contained in Doss Rebuttal Ex. 1.

c) A conditional obligation to perform a retirement activity. Uncertainty about the timing of settlement of the asset retirement obligation does not remove that obligation from the scope of this Subtopic but will affect the measurement of a liability for that obligation (see paragraph 410-20-25-10).

Here, the coal ash basins being retired are tangible long-lived assets, and so Subtopic 15-2(a) applies. In addition, to the extent that retirement involves any environmental remediation, that remediation is the result of the normal operation of the basins, which is the subject of Subtopic 15-2(b). As noted in Company witness Kerin's testimony, the use of ash impoundments as a storage location for coal ash and other CCR was in accordance with industry standards and then-applicable regulations. Finally, under Subtopic 15-2(c), the retirement requirements are a conditional obligation to perform a retirement activity as the nature, timing and extent of the closure depends on various determinations. In CAMA those determinations revolve around the legislative or the North Carolina Department of Environmental Quality assessed risk rankings. Under the CCR rule, those determinations revolve around the evaluation of certain criteria by specific deadlines.

Upon recognition that ARO accounting is required, GAAP further indicates that the entity "shall capitalize an asset retirement cost by increasing the carrying amount of the related long-lived asset by the same amount as the liability." ASC 410-20-25-5; see also Tr. Vol. 12, p. 20.

The reference in ASC 410-20-15-2(b) to environmental compliance costs in connection with "normal operation" highlights an important distinction in this case with respect to the Company's coal ash basin closure costs. GAAP distinguishes between costs associated with "normal" and "costs associated with improper" operation. The Company has demonstrated that "normal" operation applies.

The distinction is detailed in witness Doss' testimony. Subtopic 410-20 of the ARO guidance applies to "normal operation" (see ASC 410-20-15-2(b); Doss Rebuttal Ex. 1, p. 2 of 28), and permits their inclusion in an ARO. Subtopic 410-30 applies to improper operation (see ASC 410-20-15-3(b); Doss Rebuttal Ex. 1, p. 2 of 28), and excludes them from an ARO. For example, as witness Doss testified, "Costs associated with the Company's Dan River spill ... are covered by Subtopic 15-3(b), and, therefore, are not included in the coal ash basin closure ARO." Tr. Vol. 12, p. 66. This comports with the GAAP guidance itself, which notes that "a certain amount of spillage may be inherent in the normal operations of a fuel storage facility, but a catastrophic accident caused by noncompliance with an entity's safety procedures is not." See ASC 410-20-15-3(b); Doss Rebuttal Ex. 1, pp. 2-3 of 28. The guidance notes further that the spillage costs are properly within the ARO, while costs resulting from the catastrophic accident are excluded. Id.

GAAP guidance notes that "whether an obligation results from the normal operation of a long-lived asset may require judgment." See ASC 410-20-55-7; Doss Rebuttal Ex. 1, p. 11 of 28. Witness Doss acknowledged this. Tr. Vol. 12, p. 111. But it is not unbridled or arbitrary judgment. To the contrary, the exercise of judgment is carefully circumscribed through internal and external controls.

Witness Doss described these controls at length in his testimony. He noted that "DEC has implemented a Coal Ash ARO Charging Committee whose purpose is to evaluate costs to be incurred for determination as to whether they qualify for ARO accounting treatment ... [and that decisions] of the Coal Ash ARO Charging Committee are summarized in a charging guidelines document." Id. at 66-67. These decisions are reviewed internally by the Company's "Coal Combustion Products (CCP) group to ensure that 1) all relevant facts were appropriately communicated by CCP and understood by the Committee, and 2) that the CCP group understands the decisions to properly categorize actual project costs." Id. at 67. Finally, any ARO-related cost classification is also reviewed by the Company's external auditor, Deloitte & Touche LLP, which in the course of its annual audit issues its opinions that the Company's financial statements are presented fairly in all material respects and in accordance with GAAP, and that the Company has effective internal control over financial reporting. Id. at 67-68.

The Commission determines that the evidence that the coal ash basin closure costs incurred by the Company, and for which it seeks recovery in this case, result from the "normal," non-catastrophic operation of the Company's coal ash basins is compelling. It is detailed above in connection with the Commission's discussion of the Company's prima facie case, and need not be repeated. The Company has demonstrated that its coal ash management practices, storage of CCR in unlined ash basins, complied with the then-applicable regulations and with industry practice. Seepage from unlined basins is therefore part of the "normal operation" of those basins.

b. FERC

Witness Doss also explained the FERC accounting guidance. He noted that the Company is regulated by FERC, and therefore required to use the FERC Uniform System of Accounts, which states, in relevant part:

> An asset retirement obligation represents a liability for the legal obligation associated with the retirement of a tangible long-lived asset that a company is required to settle as a result of an existing or enacted law, statute, ordinance, or written or oral contract or by legal construction of a contract under the doctrine of promissory estoppel. An asset retirement cost represents the amount capitalized when the liability is recognized for the long-lived asset that gives rise to the legal obligation. The amount recognized for the liability and an associated asset retirement cost shall be stated at the fair value of the asset retirement obligation in the period in which the obligation is incurred.

Tr. Vol. 12, p. 68. He noted further that the FERC Uniform System of Accounts General Instruction No. 25 requires that:

> a utility initially record a liability for an ARO in Account 230 — Asset Retirement Obligations, and charge the associated asset retirement costs to the electric utility plant that gave rise to the legal obligation in Account 101- Electric Plant in Service. The asset retirement cost is to be depreciated over the useful life of the related asset that gives rise to the obligation by recording a debit to Account 403.1- Depreciation Expense for Asset Retirement Costs and a credit to Account 108 Accumulated Provision for Depreciation of Electric Utility Plant. In periods

> subsequent to the initial recording of the ARO, the utility shall recognize the period-to-period changes of the ARO that result from the passage of time due to the accretion of the liability by recording a debit to Account 411.10 — Accretion Expense, and a credit to Account 230.

Id. at 68-69.

Commission's Deferral Order and Summary of Accounting Rules and Deferral

In 2003, after the Financial Accounting Standards Board required the implementation of the ARO accounting guidance, the Commission ruled in Docket No. E-7, Sub 723 "That the implementation of SFAS 143 [now codified as ASC 410] for financial reporting purposes and the deferrals allowed in this docket shall have no impact on the ultimate amount of costs recovered from the North Carolina retail ratepayers for nuclear decommissioning or other AROs, subject to future orders of the Commission." See Order Granting Motion for Reconsideration and Allowing Deferral of Costs, Docket E-7, Sub 723 (August 8, 2003), p. 12. As witness Doss explains,

> The cash outflows to settle the ARO are not recorded as an expense of DE Carolinas. The Company has already recognized depreciation expense through the life of the asset and accretion expense over the period of expected settlement of the ARO, and these costs were capitalized previously as part of the Asset Retirement Cost related to the ARO. See ASC 410-20-25-5. However, in the case of DE Carolinas and pursuant to the Commission's Order in Docket No. E-7, Sub 723, the depreciation and accretion expenses were deferred. The amount spent related to the coal ash basin closure ARO is effectively the portion of the deferred depreciation and accretion expense which has now been incurred as a cash outflow and which is "subject to the future orders of the Commission" as stated in the Order. Therefore, the Company's deferral request of costs incurred and the recovery request in this rate case are in accordance with the deferral Order the Commission issued in Docket No. E-7, Sub 723.

Tr. Vol. 12, p. 70.

While the accounting rules detailed herein are complex, in simplified terms, both GAAP and FERC accounting guidance require the recognition of a liability (the ARO) upon the requisite triggering event – the legal obligation to retire the Company's coal ash basins. Recognition of the liability carries with it recognition of a corresponding asset – the capitalized cost of settling the liability, which under both GAAP and FERC rules is considered part of the property, plant and equipment for the assets that must be retired. While under ordinary circumstances these recognition events would be reflected over time in the Company's income statements, because of the deferral order in Docket No. E-7, Sub 723, the income statement impacts are deferred into regulatory assets "pending further orders of the Commission." The Company in this case is seeking such a further order, so as to reflect in rates the outflow of cash that it has incurred – and that its investors have funded – as it proceeds to settle the asset retirement obligation created by the CCR Rule and CAMA.

c. The Savoy Letter

The Company's accounting of its coal ash costs has not occurred in a vacuum. Over 20 months before DEC filed its application to increase rates in this docket, it sent a letter to the Commission, copying the Public Staff, in which the Company detailed exactly how it was accounting for its coal ash basin closure costs. See Letter dated December 21, 2015 from Brian D. Savoy, the Company's SVP, Chief Accounting Officer, and Controller to Gail L. Mount, Chief Clerk (Savoy Letter), filed in Docket No. E-7, Sub 1110.[1] The Savoy Letter:

- Describes the GAAP and FERC accounting requirements regarding AROs;
- Describes the triggering events for the creation of the ARO, noting the promulgation of the CCR Rule and the passage of CAMA;
- Indicates that an ARO related to the closure of coal ash basins was recorded on the Company's balance sheet;
- Indicates further that a corresponding asset was recorded "as part of the associated coal plant in the property, plant and equipment (PP&E) accounts, or if associated with a retired coal plant, recorded in regulatory assets"; and
- Noted that "[c]onsistent with the requirements of the Commission's Order dated August 8, 2003 in Docket No. E-7, Sub 723 ... all income statement impacts relating to the AROs ultimately reside in regulatory asset accounts."

Witnesses Fountain and McManeus were examined at length regarding the Savoy Letter at the evidentiary hearing. Tr. Vol. 9, pp. 117-24. That examination established, inter alia, that basin closure costs, whether they be denominated capital costs, O&M costs, general administration costs are nevertheless capitalized in connection with the establishment of the ARO; that such costs are extraordinary and not reflected in the Company's then-current rates; and, therefore, needed to be set aside and deferred so that the Company would not lose recovery of those costs "to the detriment of the stockholder." Id. at 123-24.

No party takes issue with the Company's accounting of coal ash basin closure costs in an ARO, as detailed in the Savoy Letter. Certainly, the Public Staff does not – witness Maness' testimony does not challenge the basis for or the propriety of the accounting treatment, he comes to a different conclusion regarding the effect of such treatment upon the Company's entitlement versus its eligibility to earn a return on the unamortized balance of those costs. As noted previously, Intervenors have a burden of production when challenging the Company's costs. This principle equally applies to the accounting for costs. The Commission determines that the Company has met this burden. The Public Staff challenge makes the issue ripe for the Commission to address the issue on the merits. The Company has met its burden of showing that the costs it seeks to recover are not only reasonably and prudently incurred, but also appropriately accounted for in ARO

[1] This Docket was established on March 28, 2016 by order of the Commission, and the Savoy Letter placed therein, so as to acknowledge the Letter and allow other parties with interest to be made aware of it. See Order Acknowledging Receipt of Filing, Docket No. E-7, Sub 1110 (Mar. 28, 2016). The order recited that no filings were made in response to the letter as of the time the Docket was established, and indeed, no substantive filings were made thereafter until the Company filed its Petition for Accounting Order on December 30, 2016, formally seeking deferral of coal ash basin closure costs. The Sub 1110 Docket has been consolidated with this rate case docket.

accounting, and the Commission agrees that based on its determinations on the merits that recovery is appropriate except as addressed below.

Several consequences flow from this determination. First, deferred costs are costs "that have been paid for by the ... [utility] but have yet to be included for ratemaking purposes ...." Lesser & Giacchino, p. 52. Through the Savoy Letter, the Company told the Commission and the Public Staff, and the Commission told all interested parties, exactly how the Company's coal ash basin closure costs were being accounted for, and explicitly indicated that the costs were being deferred pursuant to the Commission's orders in Docket No. E-7, Sub 723. Neither the Public Staff nor anyone else, including the AGO, raised any objection.

Nor did the Public Staff or the AGO raise any objection when the Company made its formal deferral request in 2016. Tr. Vol. 9, p. 126. The Public Staff however asserts that deferral for regulatory accounting purposes is appropriate, given the magnitude of the costs and their potential impact upon the authorized rate of return. The nature of the deferral is such that all costs, no matter how classified, related to the Company's coal ash basin closure obligations are accounted for in the ARO. Id. p. 125. The ARO was established for this purpose, as the Savoy Letter makes clear. As such, the Commission determines that even were it necessary to resolve this issue, witness Maness' classification of these costs as "deferred expenses" is not persuasive, not supported by authority and not determinative, given the nature of deferral.

It is also incorrect as a matter of accounting. As witness Doss testified, "The Company has accounted for these costs as required under GAAP and FERC Uniform System of Accounts." Tr. Vol. 12, p. 71. Under GAAP, the costs (no matter what their classification) are capitalized pursuant to ASC 410-20-25-5. Id. at 70. Under FERC accounting, they are capitalized as well. Id. at 68-69. Accordingly, when properly accounted for in an ARO, the specific classification of costs is not determinative, because under GAAP and FERC guidance ARO costs are capitalized. The nomenclature relied upon in GAAP and FERC is costs, assets, and liabilities, not "expenses."

Likewise, witness Maness' criticism that these costs are placed in "working capital" is also not determinative. Witness Maness, without support and solely as a matter of opinion, states that the Company's inclusion of the deferred balance of coal ash basin closure costs in the "working capital" portion of rate base is merely a matter of convenience. Tr. Vol. 22, p. 81. He does not state that their inclusion in working capital is incorrect, merely that such inclusion is not determinative of the issue of whether the Company is entitled to a return on the unamortized balance. It appears that witness Maness has misunderstood the Company's position, as is evident from the testimony of witness McManeus, which the Commission also credits. She testified:

> [I]t is important to recognize that rate base represents the amount of funds supplied by investors. Such funds have been advanced for many purposes. Certainly, construction of electric plant is one such purpose, but there are others – for example, to purchase fuel inventory, to provide cash working capital, etc. Further, to accurately determine the amount of investor-supplied funds, one must consider whether any amounts that have been used for such purposes have been advanced by customers, rather than investors. In this particular case, investors have advanced funds to pay for coal ash compliance costs.

Tr. Vol. 6, p. 317. She elaborated further, indicating that the "characteristic that makes the deferred coal ash cost a legitimate component of rate base" is the fact that the funds used to pay those costs were supplied by investors. Id. at 318.

The point of a deferral is that the costs to be deferred are of a magnitude that they need to be taken out of the normal ratemaking accounting process and set to one side for later inclusion in rates, lest the Company lose its ability to recover them. Tr. Vol. 9, pp. 123-24. Should the Company's ability to recover such costs be impaired, it will not be able to earn at its authorized rate of return. Id. at 124. Setting them to one side means that unless a return is allowed, the Company's ability to earn its authorized rate of return is again impaired. Further, if in the process of bringing the deferred costs into rates the costs are amortized over a period of years, not allowing a return on the unamortized costs again impairs the Company's ability to earn at its authorized rate of return. Rates that impair the Company's ability to earn its authorized return are not just and reasonable, unless the Company should be penalized due to mismanagement, for example, and the Commission would act contrary to law were it to order them.

Finally, the Public Staff's notion that costs accounted for in an ARO, at least to the extent they relate to long lived capital assets, are expenses and therefore ineligible to be characterized as "used and useful" is inconsistent with ARO accounting, and also inconsistent with the law. The Commission has already decided that the Public Staff's legal position that "used and useful" property is confined to "plant" is incorrect. It held in the 2018 DEP Rate Case:

> As a matter of law, it is not necessary that something be classified as "plant" in order to be properly included in rate base. Rather, the issue is the source of the funds. In State ex rel. Utils. Comm'n v. Virginia Elec. & Power Co., 285 N.C. 398 (1974) (VEPCO), for example, the Supreme Court held that working capital (which is not "plant") could be included in rate base, so long as it was provided by the utility:
>
> > Like any other business, a public utility must at all times have on hand a reasonable amount of materials and supplies and a reasonable amount of funds for the payment of its expenses of operation. While Chapter 62 of the General Statutes makes no reference to working capital, as such, the utility's own funds reasonably invested in such materials and supplies and its cash funds reasonably so held for payment of operating expenses, as they become payable, fall within the meaning of the term "property used and useful in providing the service" ... and are a proper addition to the rate base on which the utility must be permitted to earn a fair rate of return.
> >
> > Conversely, the utility is not entitled to include in its rate base funds which it has not provided but which it has been permitted to collect from its customers for the purpose of paying expenses at some future time and which it actually uses as working capital in the meantime.
>
> 285 N.C. at 414-15. As the Company appropriately accounted for coal ash basin closure costs in the working capital section of rate

> base, and as these funds were investor-furnished, not customer-furnished, VEPCO holds that they are "used and useful" within the meaning of N.C. Gen. Stat. § 62-133(b)(1) in the provision of service. As such, the Company is entitled to earn a return on those funds over the period in which the costs are amortized.

2018 DEP Rate Order, pp. 194-95.

In addition, however, witness Maness is incorrect in his view of the appropriate accounting outcome. He indicates, "It is appropriate to state that the actual costs capitalized by a utility as the costs of used and useful property itself may be included in rate base and thereby earn a return, as long as those costs are reasonable and prudently incurred, and are intended to provide utility service in the present or in the future; however, the expenses of operating and maintaining that property in the present or in the future do not get capitalized as part of the cost of the property." Tr. Vol. 22, pp. 77-78 (emphasis added.) It is less than clear what witness Maness means by this qualification.

However, as witness Doss testified, in ARO accounting, "Under both GAAP and FERC guidance the asset created when a Company initially recognizes an ARO is considered part of the property, plant and equipment for the assets which must be eventually retired." Tr. Vol. 12, p. 71 (emphasis added.) Accordingly, such costs are used and useful in that they are intended to provide utility service in the present or in the future through achieving their intended purpose: environmental compliance, the retirement of the ash impoundments and the final storage location for the residuals from the generation of electricity. As witness Doss concluded, "The achievement of those three purposes is used and useful as the utility has the obligation to comply with CAMA and the CCR Rule." Id. at 73.

When the coal ash basins at issue in this matter were constructed, they were capital assets "used and useful" in the provision of service to customers – their function was to store coal ash, a byproduct of the generation of electricity. Even if closed as a result of CAMA and the CCR Rule, the basins at all but high priority sites will remain, although they may be capped in place or have other remedial measures taken to comply with the current regulatory requirements. As such, they will remain used and useful, because they will still store coal ash, a byproduct of electricity generation. The basins at high priority sites will no longer exist, but in the case of Dan River, a new landfill is being constructed, which is a capital asset and used and useful – it, too, will store coal ash. The landfill will have a long-lived synthetic liner, a cost that even outside the concept of ARO accounting is not an "expense." Other expenses of a more O&M or general administration variety were incurred yet deferred under the deferral orders of this Commission, meaning that the Company is afforded the opportunity to recover them in rates at a later time. The funds used to pay for those costs were furnished by the Company and its investors, and the costs are eligible for a return on, not merely a return of, those funds, lest its earnings be impaired. In this sense, just like "classic" working capital, these funds are "property" of the Company, used and useful in the provision of electric service to its customers. Such funds, properly accounted for in an ARO, are eligible "deferral and amortization and for earning on the unamortized balance." The Commission so orders in this case.

The question to be decided is the amount of the funds so eligible. That depends upon the Commission's analysis of the reasonableness and prudence of the costs incurred.

5. Procedure for Establishing the Deferral

The AGO, in its brief, argues that establishment of the ARO is unlawful on several grounds. The AGO argues that the 2015-2017 CCR remediation costs accounted for in the ARO if recovered through rates constitute retroactive ratemaking. The AGO argues that the deferral should not be permitted because DEC failed to obtain prior approval. The AGO argues that deferral of the CCR remediation costs does not meet the test established by the Commission because DEC has not shown that its earnings would have been sufficiently harmed when the ARO was established.

As to the assertion of retroactive ratemaking, the fundamental purpose of creating a deferral is to recognize that the costs were not being recovered in rates when incurred. Moreover, the test period in this case is the 12 months ending December 31, 2016 adjusted for known and measurable charges through December 31, 2017. Consequently, many of the costs are within the test period as adjusted. As to the 2015 costs, the Commission determines they along with subsequently incurred costs have been properly deferred for recovery in this case, were extraordinary when incurred, and were not being recovered in rates in effect at the time incurred. DEC notified the Commission of its decision to establish the ARO in December 2015 and sought permission to defer in December 2016. The AGO commented on the DEC request and did not object to the timing of the request.

The Commission customarily requires contemporaneous approval of deferral accounting for extraordinary expenditures incurred between general rate cases. The Commission prefers this procedure over efforts to recover pre-test year costs recovery in the general rate case where no contemporaneous approval had been sought. This is not a case where DEC failed to seek contemporaneous approval. DEC sought deferral in 2016 after giving earlier notification in 2015. It was in 2016 that the Company had information permitting a quantification of the costs at issue. Just as a utility cannot request prior approval of extraordinary storm damage costs before the storm occurs, no requirement exists of pre-event approval of CCR costs such as these - only reasonably contemporaneous approval, and the Commission has waived even this requirement in the past. See Order Granting General Rate Increase, (Dec. 21, 2012), Docket No. E-22 Sub 479, addressing DNCP's request for deferral of costs of the Bear Garden generating plant. Significantly, any AGO complaint as to timing of the deferral request should have been raised at the time DEC sought approval of the deferral. The AGO made no such complaint.

Similarly the AGO's argument that the deferral should be disallowed because DEC's earnings in 2015 and 2016 were such that deferral was unjustified should have been made at the time the deferral was sought. Moreover, the AGO's untimely evidence to support its theory of lack of economic harm to justify deferral is deficient. The AGO has referred to surveillance reports showing what DEC was earning in 2015 and 2016. These are returns that do not reflect the CCR remediation costs. DEC's December 21, 2015 notification of ARO accounting and its surveillance reports expressly state that the ARO costs are not reflected. Without showing what the returns would have been without deferral, the surveillance report returns tell little about the financial justification for the deferral. Moreover, 2016 is a test year. Financial data fully adjusted after general rate case changes should be used if looking backward at what DEC's earnings were in 2016. The Commission determines that the CCR remediation in the ARO were properly deferred and that the costs so deferred are appropriately amortized over five years and that the unamortized portion is eligible for a return.

6. The Public Staff's Specific Cost Disallowance Proposals

The Commission must undertake a detailed analysis before any costs can be disallowed on the basis of findings of imprudence. 1988 DEP Rate Order, p. 15. The Public Staff undertook such an analysis of the Company's coal ash costs, and based on that analysis presented three discrete and specific proposed sets of disallowances. Two were presented through witness Junis: first, $2,109,406 of legal expenses associated with the defense of litigation matters regarding alleged environmental violations and, second, $2,352,429 reflecting groundwater extraction and treatment costs that witness Junis asserted exceed what CAMA would have required absent alleged environmental violations. Finally, Public Staff witnesses Garrett and Moore recommended a disallowance totaling $97,698,274 relating to the cost of the Company's compliance activities at Buck, Dan River, Riverbend, and W.S. Lee, on the grounds that those activities were more costly than other reasonable alternatives.

a. Junis: Alleged Environmental "Violations"

The Public Staff, through witness Junis, asserts that disallowance of the Company's litigation expense and groundwater costs is justified because these costs flow from "violations" of the law. Tr. Vol. 26, pp. 728-34. For the reasons discussed below, the Commission based on its assessment of the evidence and in the exercise of its discretion determines not to authorize the Public Staff's proposed disallowances of legal expense and groundwater extraction and treatment costs. The evidence does not support a finding that DEC violated the law (with the exception of the federal plea agreement, the costs related to which are not at issue here), nor does it support a finding of imprudence with respect to these costs.

i. Junis: Legal Expenses

Witness Junis cites the Glendale Water case (State ex rel. Utils. Comm'n v. Public Staff, 317 N.C. 26, 343 S.E.2d 898 (1986)) for the proposition that the legal expense should be excluded. In that case, the North Carolina Supreme Court held that legal expense associated with a penalty proceeding in which the utility had been found to have violated the law should be excluded. Witness Junis suggests that the same rationale would apply to his exclusion of the Company's litigation expense related to what he terms DEC's failure to comply with environmental laws and regulations. He claims that "compelling evidence" of such violations is shown by the SOCs and DEQ reports of exceedances. Tr. Vol. 26, pp. 728-29.

The distinction between this case and Glendale Water is that, with the exception of the federal plea agreement with respect to the Dan River spill and Riverbend (for which the Company is not seeking to recover any costs of penalties and fines), there is no finding in the other litigation brought against the Company, or admission by the Company in that litigation, that any "violation" actually occurred. No Intervenor introduced evidence in this case that any "violation" actually occurred. Witness Junis' testimony that the Company's legal expenses for state litigation of coal ash complaints resulted from "violations" is based on the DEQ reports of groundwater exceedances and the fact that DEC sought SOCs to address seeps at the Allen, Marshall, and Rogers (Cliffside) stations, both of which Junis interprets as "compelling evidence of DEC's violations." Tr. Vol. 26, pp. 730-31.

The Commission determines that the facts of this case are distinguishable from Glendale Water. Litigants settle disputed matters frequently for many reasons that are unrelated to the settling parties' underlying view of the merits of the dispute. In this case, for example, the Company and the Public Staff have entered into a Partial Settlement which includes a rate of return on equity of 9.9% (versus the Public Staff's recommendation of 9.1%), and a capital structure of 52% equity and 48% debt (versus the Public Staff's recommendation of 50/50). This settlement, which the Commission has approved, therefore results in millions of dollars paid by customers over and above the Public Staff's pre-settlement position, but that does not mean that the Public Staff somehow ceased to believe in that pre-settlement position. It means that the Public Staff, on balance, determines that its constituency (the using and consuming public) is better off with the Partial Settlement than without, despite the fact that the rate of return on equity and capital structure provisions of the settlement will cause increased rates. Likewise, an SOC is a regulatory mechanism intended to provide clarity and certainty with respect to scope and schedule for compliance-related activities given a change in circumstances, such as a change in requirements or in operations. The Company's willingness to enter into an SOC, therefore, is not premised upon an underlying admission of culpability. Furthermore, as explained by witness Wells, a DEQ report of an exceedance does not equate to a violation of environmental law or regulation.

Witness Junis has attempted to expand the applicability of Glendale Water by applying its holding beyond a litigated finding of liability to include (1) resolutions of complaints that do not involve any finding of liability and (2) pending legal claims of environmental violations, where there is "compelling evidence of environmental violations." Tr. Vol. 26, pp. 729-30. The Commission disagrees with the Public Staff position. Glendale Water applies where there is a finding of liability and the Commission declines to extend its holding further. In addition, the Commission does not find DEQ exceedance reports or SOCs to constitute compelling evidence of environmental violations.

The Commission determines, as it did in the 2018 DEP Rate Order, that entering into a settlement does not equate to an admission of guilt or wrongdoing. 2018 DEP Rate Order, p. 180. Conflating the existence of a settlement agreement or an SOC with an admission or other proof of guilt or wrongdoing is inconsistent with both the law and public policy of North Carolina. The North Carolina Rules of Evidence, for example, prohibit parties from using the existence of a settlement as evidence of liability.[1] Likewise, in other matters before the Commission, the Public Staff has defended the regulatory policy of encouraging reasonable and prudent settlements. In 2016, NC WARN filed a Petition for Rulemaking seeking to require settlements between the Public Staff and utilities to be made open to the public. Tr. Vol. 12, p. 156-34; see also Order

[1] N.C. R. Evid. 408 ("Evidence of (1) furnishing or offering or promising to furnish, or (2) accepting or offering or promising to accept, a valuable consideration in compromising or attempting to compromise a claim which was disputed as to either validity or amount, is not admissible to prove liability for or invalidity of the claim or its amount. Evidence of conduct or evidence of statements made in compromise negotiations is likewise not admissible.").

Declining to Adopt Proposed Settlement Rules, Docket No. M-100, Sub 145 (Mar. 1, 2017) (Settlements Order). The Public Staff opposed NC WARN's petition, arguing that public policy favors settlements:

> [T]he Public Staff submits that settlements promote the informal exchange of ideas and information among the parties, the elimination of insignificant or noncontroversial issues ahead of an evidentiary hearing, informed decision making and the efficient administration of justice, especially in the complex matters that are typically before the Commission. Moreover, settlements result in savings to consumers by reducing litigation expenses that would otherwise be recoverable by utilities as a component of the cost of providing utility service.

Tr. Vol. 12, p. 156-35. See also Settlements Order, p. 3.

Further, in its opposition to NC WARN's petition, the Public Staff cited to North Carolina case law "touting the benefits of settlements" in business litigation. Tr. Vol. 12, p. 156-35. See also Settlements Order, p. 3 (citing Knight Pub. Co., Inc. v. Chase Manhattan Bank, N.A., 131 N.C. App. 257, 262, 506 S.E.2d 728, 731 (1998) (Knight)). The Public Staff relied on the principle articulated in Knight that North Carolina "law favors the avoidance of litigation," and a compromise made in good faith "will be sustained as not only based upon sufficient consideration but upon the highest consideration of public policy as well." Tr. Vol. 12, p. 156-35 (quoting Knight, 131 N.C. App. at 262, 506 S.E.2d at 731 (emphasis added) (internal quotations omitted)). As in the 2018 DEP Rate Order, the Commission again determines not to approve a disincentive to settle pending or future lawsuits. 2018 DEP Rate Order, p. 180. The Commission therefore rejects the Public Staff's proposed disallowance of the Company's legal.

ii. Junis: Groundwater Treatment Costs

Similar considerations apply to the groundwater extraction and treatment costs witness Junis seeks to disallow, which he characterizes as costs to remedy environmental violations that exceed what CAMA would have required absent such violations. He cites as examples of such costs those resulting from (1) the DEQ Settlement Agreement (also referred to as the Sutton Settlement), which Junis contends result in costs greater than would have been necessary to pay for CAMA compliance without violations, and (2) resolutions of lawsuits alleging environmental violations where the outcome involves remedial action that costs more than the risk classification warrants, and "compelling evidence" shows the outcome resulted from environmental violations. Tr. Vol. 26, pp. 731-32. Witness Junis applies this theory of disallowance to include the Company's expenditures for groundwater extraction and treatment at Belews Creek, made pursuant to the September 2015 Sutton Settlement between DEQ, DEC, and DEP. See Junis Exhibit 29, Official Exhibits Vol. 26 (DEQ Settlement Agreement). He also applies this theory to include the Company's expenditures for selenium removal equipment at the Riverbend plant. Tr. Vol. 26, pp. 733-34.

Consistent with the 2018 DEP Rate Order, the Commission again declines to find that the DEQ Settlement Agreement evidences violation of environmental obligations. The DEQ Settlement Agreement references in its recitals a DEQ "Policy for Compliance Evaluations" promulgated in 2011, and it appears from the recitals and their description of that Policy that there was a very serious question as to whether any violation of the State's groundwater standards had occurred. See DEQ Settlement Agreement, at 3, 4-5. The recitals also indicate, with the passage of CAMA, that the Company would be required to close its coal ash basins, and that CAMA "dictate[d], in detail a procedure for assessing, monitoring and where appropriate remediating groundwater quality in areas around coal ash impoundments in North Carolina ...." Id. at 3-4. Further, in the recitals the DEQ acknowledged that the CAMA requirements were "designed to address, and will address, the assessment and corrective action" associated with alleged groundwater contamination. Because CAMA would require the Company to implement certain actions, the Commission determines as it did in the 2018 DEP Rate Order (see 2018 DEP Rate Order, p. 181) that it was reasonable for the parties to settle irrespective of whether the Company had committed violations of 2L Standards. Had the Company continued to litigate the matter in this circumstance, its actions may have been deemed by the Public Staff and this Commission to be imprudent, with a disallowance of the legal costs incurred in connection with continued litigation.

The Commission finds the testimony of Company witnesses Wells and Kerin to be instructive with respect to the Public Staff's proposed disallowance of groundwater treatment costs, and entitled to substantial weight. Witness Wells' testimony demonstrates that DEC has in most instances adequately managed its coal ash and that the Company's management and appropriate responses to seeps and groundwater issues do not equate to environmental violations. Witness Kerin's testimony demonstrates that costs related to groundwater extraction and treatment at Belews Creek and its purchase of wastewater treatment equipment at Riverbend were reasonable and prudent and are recoverable.

Witness Wells testified that exceedances of groundwater standards and the existence of seeps in the vicinity of the Company's ash basins do not indicate mismanagement or poor compliance programs. He explained that the existence of groundwater exceedances at or beyond the compliance boundaries at DEC sites is rather a function of where these sites are on the timeline of groundwater assessment and corrective action under modern laws that have changed the way unlined basins are viewed. He testified further that the Company's decision to use unlined basins to treat ash transport water was reasonable and consistent with the approach consistently employed across the power industry at the time that the basins were built, and noted that each DEC site had been properly and legally operating an unlined basin for at least a decade before the adoption of any regulatory requirements related to groundwater corrective action. He stated that as requirements changed over time, DEC has taken action required by DEQ's groundwater rules, and later by CAMA and the federal CCR Rule, to address groundwater impacts as they have been identified. As he noted, witness Junis did not contend that either DEC or the state of North Carolina was an outlier by using unlined basins during this timeframe, and no such contention could reasonably be made given well-published facts about coal power generation practices at that time. Tr. Vol. 24, pp. 227-29, 233, 236, 258.

Witness Wells adequately rebutted the Public Staff's suggestion that DEC only engaged in comprehensive groundwater monitoring and remediation when forced to do so by CAMA and other developments. He testified that the Company began monitoring groundwater at Allen in 1978, Belews Creek and Marshall in 1989, Dan River and W.S. Lee Steam Stations in 1993, and the remaining sites in or around 2006. He noted that, in 2011, DEQ prescribed a process to be undertaken by DEQ and utilities upon the identification of a groundwater exceedance near a coal ash pond, which included performance of an assessment to determine the cause of the exceedance and, as necessary, develop a Corrective Action Plan consistent with North Carolina groundwater rules. He stated that under that process, only after a utility failed to undertake corrective action when directed to do so would DEQ consider pursuing enforcement. He noted that, in contravention of witness Junis' testimony, all of this activity predates the threat of litigation by environmental groups, the DEQ enforcement suit, the Dan River spill, and CAMA. He also testified that, as witness Junis' testimony and exhibits demonstrate, DEC has always promptly responded to any concerns raised by the relevant regulatory entities and where necessary, implemented appropriate corrective action steps to remedy any issue. He stated that the Company has proactively sought consent orders and written agreements to ensure alignment with the regulatory agency as to appropriate scope and timing of additional investigation and corrective action. Tr. Vol. 24, pp. 230-31, 234-36, 259-60.

Witness Wells also disagreed with the Public Staff's suggestion that any exceedance or violation of water quality regulations, no matter how minor or how long ago, leads to the denial of cost recovery for any activity that acts to "cure" the impacts of the violation. In addition to reiterating that not all exceedances of the 2L standards amount to a violation that requires corrective action under the 2L rules, witness Wells stated that even when an exceedance requires corrective action, the groundwater rules do not treat the exceedance the same way as, for example, the Clean Water Act treats an exceedance of an NPDES permit limit. When the latter is violated, he explained, the permittee is immediately subject to an NOV and penalty, and must ensure the next discharge complies with the permit limit or risks a new NOV and escalating penalty. Tr. Vol. 24, pp. 244-45.

Witness Wells contrasted this process with groundwater standards, under which an exceedance does not immediately result in an NOV and escalating penalty. Instead, he explained the owner/operator must report the exceedance and work with the DEQ to determine whether it was due to permitted activity, assess the extent of the exceedance, and undertake corrective action. Any newly measured exceedances do not require a further site assessment and do not result in additional or escalating penalties, but are actually expected as an additional assessment prior to corrective action is conducted. He testified that the 2L rules' corrective action provisions are deliberately designed around the idea that older facilities, built before liners were a regulatory obligation, were likely to have associated groundwater impacts, that such impacts were not the result of regulatory noncompliance, and that they should be addressed in a measured process. He concluded that compliance with this process is not mismanagement and should not be held against DEC with respect to cost recovery. Tr. Vol. 24, pp. 245-46. The Commission agrees.

The Commission is further persuaded by witness Wells' testimony that witness Junis' characterization of groundwater violations under the 2L rules ignores the iterative nature of comprehensive site assessment. He noted that measuring exceedances at different locations in a plume around an activity may result in multiple exceedances of groundwater standards, but that does not result in multiple violations of the 2L rule's prohibition. He explained that this distinction is important for evaluating the claim that the number of exceedances indicates a "breadth of environmental violations." It would be more accurate to say, he explained, that, at seven sites, DEC has lawfully operated ash basins that, after decades of use, resulted in exceedances of groundwater standards at those sites. He pointed out how Duke Energy's coal ash basins are some of the most studied sites in North Carolina, with more than 1,400 groundwater monitoring wells, and that the number of exceedances presented by witness Junis signifies therefore the thoroughness of the evaluation rather than a number of groundwater violations. Tr. Vol. 24, pp. 238-41, 260-61. The Commission notes in particular witness Wells' testimony at the hearing that the iterative (and difficult) nature of monitoring groundwater impacts is illustrated by the fact that two wells located a short distance from each other could present very different conditions, including different naturally occurring constituents. Tr. Vol. 26, pp. 91-93.

Witness Wells also persuasively argued that the groundwater extraction and treatment costs that witness Junis recommended for disallowance relate to activity that DEC agreed to undertake pursuant to the DEQ Settlement Agreement to accelerate, but that would have been required in the normal course as part of the groundwater correct action under the CCR Rule and CAMA. Tr. Vol. 24, p. 241. Although CAMA borrows heavily from the 2L Rules, including by incorporating the substance of its corrective action requirements, one key difference between the two laws is that CAMA's groundwater assessment and corrective action provisions are triggered by exceedances – not violations – of the 2L groundwater standards.[1] In other words, unlike the 2L Rules, CAMA requires utilities to perform groundwater assessment and corrective action for all identified exceedances of the 2L groundwater standards regardless of whether the exceedance amounts to a violation of the applicable groundwater standard.

The Commission is also persuaded by the evidence presented by Company witness Kerin in response to the Public Staff's position, which shows that the groundwater treatment wells installed at Belews Creek would have been installed even without the DEQ Settlement Agreement, because while the time frame for that installation was moved up pursuant to the Agreement, the Company would have installed the wells in order to comply with CAMA even absent the Agreement. Tr. Vol. 24, p. 117.

Based on the credible and persuasive testimony of the Company's witnesses, the Commission determines, with exceptions addressed below, that there is insufficient evidence that DEC would have had to engage in any groundwater extraction and treatment activities absent the obligations imposed upon it by CAMA and/or the CCR Rule. Witness Wells' testimony in particular shows that the assertion that DEC's "violations" resulted in the DEQ Settlement Agreement and in groundwater extraction and treatment costs that would not otherwise have been incurred is incorrect and not supported by the evidence.

The Commission determines that Witness Kerin also successfully rebutted witness Junis' position that the cost of equipment to remove selenium at Riverbend should be disallowed. He explained that it was imperative for the Company to have a system to appropriately treat the site wastewater and to meet future permit selenium limits. He also noted that while this system is important for those reasons, because it is also expensive to operate, the Company will only use it when other physical and chemical extraction methods are insufficient. He emphasized the

[1] Id.; see also N.C. Gen. Stat. § 130A-309.211. When preparing a corrective action plan, CAMA does not require the utility to describe any 2L violation and instead required only a "description of all exceedances of the groundwater quality standards, including any exceedances that the owner asserts are the result of natural background conditions." N.C. Gen. Stat. § 130A-309.211(b)(1)a (emphasis added).

prudency of having this system in place should it be needed, in order to avoid the need to cease ash removal operations if selenium levels increased and no bioreactor was on site. He noted that such a delay would cost the Company millions of dollars of delay charges. Tr. Vol. 24, pp. 90, 117-19, 132. The Commission agrees that it was reasonable and prudent for the Company to purchase the bioreactor system to mitigate against potential violations of permit limits and declines to accept witness Junis' recommended disallowance of these costs.

No party disputes the reasonableness of the amount of groundwater assessment and treatment costs the Company seeks to recover in rates. The dispute relates instead to the fact that the groundwater assessment and treatment costs were incurred pursuant to a settlement with DEQ and in response to DEQ reports. The testimony of witnesses Kerin and Wells demonstrates that these costs – amounting to $2,352,429 – were reasonably and prudently incurred to comply with the Company's obligations under CAMA and the CCR Rule. The Commission determines that they therefore are recoverable in rates, as are the $2,109,406 in legal fees that witness Junis also proposed excluding.

The AGO, Sierra Club, and other Intervenors make similar arguments to the Public Staff that DEC has failed to keep pace with industry standards and should therefore not be allowed to recover current environmental compliance costs in rates. As in the DEP case, these Intervenors argue that the Company should have done more, in contradiction to other witnesses that DEC should have done less, than just comply with the current environmental regulations at the time.

As an initial matter, based upon the evidence presented in this case, with the exception of the federal criminal case to which DEC pled guilty, the Company has not been found liable for violations of the law. As stated above, the Commission will not use settlement agreements to find liability. The AGO witness asserts that the Commission should consider all of the seeps located at DEC's ash basin sites and deny recovery of CCR costs except – as clarified at the hearing – those which are incurred to comply with the CCR Rule. However, as stated in the criminal case that covered engineered seeps, DEQ and DEC have been in long-standing negotiations as to whether seeps are a violation of the law and since 2014, whether seeps should be covered by the NPDES permit. AG-Kerin Direct Cross Examination Exhibit 6, pp. 78, 95; AG-Kerin Direct Cross Examination Exhibit 5, p. 44. According to statements made in the criminal case, DEQ has currently not made a determination on this issue. AG-Kerin Direct Cross Examination Exhibit 5, p. 44.

In addition, the Commission finds the testimony of Company witness Kerin informative as to Intervenors' claims. Witness Kerin explained that the securities filings cited by AGO witness Wittliff simply notified the SEC of potentially significant coal ash costs that Duke Energy anticipated at that time, and potential new regulatory contingencies to which it could become subject; they were not intended to analyze the Company's coal ash management practices and do not support any claim that such practices were out of step with industry, much less that DEC was aware of any such inconsistency. Witness Kerin also rebutted the AGO's assertion that the Company should have built new lined impoundments rather than expand existing unlined impoundments, citing the significant expense that new lined impoundments would entail, while not eliminating the obligation to maintain existing unlined impoundments. He pointed out that such action would have put the Company at risk of disallowance of costs. He recalled witness

Wittliff's testimony in the DEP proceeding that utilities continued to use unlined wet ash impoundments because the law continued to allow them to do so, and noted the inconsistency between admitting that such a practice was legal and asserting that it was also imprudent. Witness Kerin also enumerated the ways in which the Company has practiced dam safety and explained that the five-year dam safety inspections demonstrate careful monitoring of issues as well as a lack of any major issue threatening dam integrity. Tr. Vol. 24, pp. 119-24. For many of the same reasons, witness Kerin demonstrated the inaccuracy of Sierra Club witness Quarles' assertions regarding the consistency of the Company's coal ash management practices with industry standards and the costs of lined landfills as opposed to surface impoundments. Tr. Vol. 24, p. 91.

The limitations of the Intervenors' and the Public Staff's approach is the fact that the kinds of actions they appear to have favored – such as lining ash ponds when others in the industry were not lining them, or creating dry ash basins when the Company's industry peers were sluicing coal ash into wet basin impoundments, would (a) have increased costs that would have been charged to customers, or (b) would have left the Company open to credible claims of "gold-plating," and therefore cost disallowance, which would have prevented the Company from moving forward with these suggested improvements in the first place. These parties advance inconsistent positions. They fault the Company for not undertaking steps that others were not, but at the same time disavow any responsibility of paying for that which they – in 20/20 hindsight – wish the Company had undertaken. As noted at the hearing during questioning of Company witness Wells, these parties criticize the Company's coal ash management practices dating back decades, yet took no actions themselves to address coal ash until within the past five years. For all of these reasons and based on the evidence presented, the Commission is not persuaded, with exceptions noted below and later in this the order, that any past violations by DEC, or many of its past coal ash management practices, support the discrete amounts of cost disallowances advocated by the Intervenors and the Public Staff in this case.

The AGO and the Sierra Club further assert that all of the coal ash closure costs are the result of unlawful discharges and are not recoverable pursuant to N.C. Gen. Stat. § 62-133.13. The Commission rejects the AGO and Sierra Club's reading of N.C. Gen. Stat. § 133.13. The costs being incurred are not resulting from an unlawful discharge as defined by the statute, which is a discharge that results in a violation of State or federal surface water quality standards. Rather, DEC is incurring the costs to comply with the federal CCR rule and CAMA.

Lastly, with respect to the bottled water expense DEC is seeking cost recovery of, although no party requested a specific disallowance for the cost of bottled water, the Commission finds that DEC shall remove from its request for recovery any costs for bottled water.[1]

b. <u>Garrett and Moore: Overview</u>

The Public Staff, through witnesses Garrett and Moore, asserts that the Company acted imprudently and unreasonably with respect to the management of CCRs from the Buck, Dan River, Riverbend, and W.S. Lee Plants, and contends that the Company should have selected different

[1] The total amount spent on bottled water through the end of August 2017 is $1,606,185. These costs include the bottled water itself, the delivery company and personnel associated with the delivery, and the consulting firm that is managing the overall bottled water delivery program for Duke Energy. Tr. Vol. 14, pp. 220-21.

management approaches, thereby saving costs. The Public Staff recommends that a $10,612,592 disallowance be applied with regard to Buck Plant ash (Tr. Vol. 21, p. 61), a $59,320,890 disallowance be applied with regard to the Dan River Plant ash (Tr. Vol. 21, p. 67), a $489,600 disallowance be applied to Riverbend Plant ash (Tr. Vol. 21, p. 74), and that a $27,275,192 disallowance be applied with regard to W.S. Lee ash (Tr. Vol. 21, pp. 34-34), for a total recommended disallowance of $97,698,274.

The Commission determines not to accept this discrete disallowance, based upon the testimony of Company witness Kerin, which the Commission credits and to which the Commission attaches substantial weight. In the 1988 DEP Rate Order, this Commission stressed the importance of carefully examining the Company's explanations of the decisions it made, as of the time they were made, and emphasized the credibility of the decision-makers, particularly in juxtaposition to after-the-fact analyses presented by Intervenor-retained consultants. See, e.g., 1988 DEP Rate Order, p. 29. The Commission does not question the bona fides or expertise of Garrett and Moore. The Commission is persuaded, however, by witness Kerin's testimony that Garrett and Moore missed or overlooked pertinent facts and real world conditions in their recommendations, and that their discrete disallowances are therefore unwarranted. Witness Kerin's testimony regarding the Company's decisions is entitled to substantial weight – more weight than after the fact evaluations from Garrett and Moore. Witnesses Garrett and Moore's recommended disallowances were challenged at the hearing through cross-examination. These witnesses were unable effectively to support their positions while on the witness stand. The Commission determines their recommendations deficient on the basis of a lack of credibility. In this regard, the Commission is not persuaded to discount witness Kerin's testimony by witness Wittliff's challenges to witness Kerin's expertise. As concluded in the 2018 DEP Rate Order, witness Kerin has "lived" this project since its inception (2018 DEP Rate Order, p. 187), and demonstrated competent understanding of the subject in pre-filed testimony and at the hearing. Witness Witliff's testimony from the witness stand likewise suffered from a lack of credibility.

i. Moore: Location of On-Site Landfill at Dan River

Witness Moore asserted that, while he agreed with DEC's decision to construct an on-site landfill at Dan River, he disagreed with the Company's chosen location for the onsite landfill. Tr. Vol. 21, pp. 90-91. Instead of locating the landfill within the footprint of the Ash Fill areas – which required first excavating and transporting off-site ash from those area – witness Moore contended that DEC should have considered locating the landfill along the western property boundary of the site, Id. at 91-92, even though he conceded that the CAMA moratorium prohibited construction of new or expanded CCR landfills located wholly or partly on top of the Primary Ash Basin, Secondary Ash Basin, and the Ash Fill 1 and 2 areas. Tr. Vol. 24, p. 94. Witness Kerin's rebuttal testimony demonstrates that witness Moore's proposal was not feasible in the time frames available to the Company, and in likelihood impossible from an engineering perspective.

Witness Moore illustrated his proposed landfill site location with a chalk-line, ovaloid drawn on top of an existing jurisdiction water designation map for the Dan River Plant. Tr. Vol. 21, p. 44; Moore Direct Exhibit 4. This drawing is the totality of the engineering work papers and documentation offered in support of his proposal in his direct testimony. Tr. Vol. 21, p. 92. To agree with witness Moore's recommended disallowance, the Commission would have to conclude that DEC should and could have constructed his proposed landfill in compliance with

North Carolina law. The Commission cannot reach that conclusion based on the dearth of supporting documentation from witness Moore regarding his proposed landfill, as well as the volume of evidence presented by witness Kerin in opposition to witness Moore's suggestion. An alternative proposed action must have been feasible in order to be a valid alternative. 1988 DEP Rate Order, p. 15.

Witness Moore admitted that he did not conduct a site suitability study for his proposed landfill location, nor did he conduct a hydrogeologic study of the conditions at the western portion of the Dan River Plant property. Both studies are required under North Carolina law before a landfill can be permitted or constructed. See 15A N.C. Admin. Code 13B §§ .0503-.0504. He did not analyze soil borings of that area of the property, did not visit the portion of the property where he proposed siting the landfill, despite having the opportunity to do so when he made a site visit to the property, and did not make an attempt, at the time he submitted his direct testimony, to calculate the height of his proposed landfill. Tr. Vol. 21, pp. 92-93. Witness Moore only did this after witness Kerin filed his testimony. Tr. Vol. 22, p. 26. His testimony and workpapers, or lack thereof, would not satisfy North Carolina's landfill permit application requirements, let alone justify construction of his landfill.

The Commission concludes that DEC engineers reached the reasonable and prudent decision to reject the western portion of the property as a feasible location for an onsite landfill. As witness Kerin discussed in his rebuttal testimony, there are many engineering and other obstacles to the construction of an onsite landfill along that portion of the property.

First, construction of witness Moore's proposed landfill would have required excavation of an LCID Landfill containing asbestos. The fact that the LCID Landfill contained asbestos was not known to witness Moore when he filed his testimony, but could have been discovered had he pulled the publicly available permit for that landfill. Tr. Vol. 21, pp. 97-99. In his direct testimony, witness Moore suggested that the LCID Landfill could have been excavated and transported to the Rockingham County Landfill. As the Rockingham County Landfill no longer accepts asbestos, witness Moore conceded that his proposal with regard to the LCID Landfill was no longer possible. Tr. Vol. 21, p. 99. Even if there was a location that could accept the materials containing asbestos in the LCID Landfill, the Commission is persuaded by witness Kerin's testimony that it was prudent for the Company to avoid unnecessarily exposing workers or neighbors to asbestos by locating the onsite landfill in a location that would have required excavation of the asbestos. Tr. Vol. 24, pp. 97-98.

Witness Moore's proposal was also infeasible in that it would have significant wetland and stream impacts as compared to the minimal impacts to streams and wetlands posed by the Company's chosen onsite landfill location. Witness Moore's testimony gave too little attention to stream and wetland impacts, suggesting that mitigation of on-site streams is not uncommon to allow for construction of landfills. Tr. Vol. 21, p. 65. However, witness Moore made no attempt in his testimony to identify the stream and wetland impacts, to prepare a permitting timeline for those impacts, or to analyze the likelihood that those impacts could be permitted. As witness Kerin stated in his rebuttal testimony, and witness Moore acknowledged during live testimony, the U.S. Army Corps of Engineers (Army Corps) will conduct an alternatives analysis demonstrating the practicality of other options that would not impact streams or wetlands, and that permit applicants are required to avoid and minimize aquatic resource impacts to the maximum extent practicable. Tr. Vol. 21, pp. 104-05; DEC-Garrett and Moore Cross Ex. 1, Tab 6; Tr. Vol. 24, pp. 98-100. As compared to witness Moore's proposal, the Company's selected landfill location avoided and minimized impacts to onsite streams and wetlands. Therefore, permitting witness Moore's selected location for stream and wetland impacts would have been challenging based on the Army Corps' alternative analysis criteria. In order to meet CAMA's deadlines, it was reasonable and prudent for DEC to avoid the permitting uncertainty created by witness Moore's proposal by avoiding impacts altogether.

Witness Moore's proposal raises additional permitting uncertainties. Witness Kerin testified that the stream combination on the western and southern sides of witness Moore's proposed landfill would have required the Company to obtain a new construction permit to construct an industrial NPDES outfall through the service water pond, and that both the permit and the outfall would have required substantial time to obtain and construct. Both the new permit and outfall would have to be in place before construction on the landfill could begin, potentially jeopardizing compliance with CAMA's deadlines. The CAMA deadlines provide the overarching framework by which prudency must be assessed. 2018 DEP Rate Order, p. 185. In addition, witness Kerin noted that the 100-year flood plain in this area intrudes into portions of witness Moore's proposed location, and would present additional permitting challenges and likely not leave sufficient space for required stormwater management features on the site. Tr. Vol. 24, pp. 100-02. Witness Moore did not dispute these conclusions.

The evidence shows that had witness Moore visited the site of his proposed landfill, he would have confronted dramatic elevation changes and other topographical features, such as steep slopes, that would have made his proposed site difficult. Further, had witness Moore conducted a site suitability or hydrogeologic study, he would have discovered that the depth to bedrock on the western portion of the property is fairly shallow, leaving little room for excavation for fill volume, borrowing soil or buffering to groundwater. While witness Moore agreed that a landfill owner should minimize potential impacts to neighbors, wetlands, and dangerous materials as much as possible, (Tr. Vol. 21, p. 108), the above site-specific conditions unique to the western property boundary, which witness Moore did not consider in his analysis, would have resulted in a landfill that was in the neighbors' line of sight and more intrusive than the Company's selected location. Tr. Vol. 24, pp. 100-02.

DEC's decision to minimize impacts to neighboring properties in siting its onsite landfill was consistent with an agreement that the Company would ultimately reach with the City of Eden regarding the Dan River site. As a condition of allowing DEC to construct an onsite landfill, the City of Eden required that the landfill be located near the existing basins, and as remote from residential areas as feasible. Tr. Vol. 21, p. 106; DEC-Garrett and Moore Cross Ex. 1, Tab 7. Witness Moore did not dispute the City of Eden agreement's conditions. Tr. Vol. 21, p. 107-08. The nearest location to the existing basins is within the footprint of the former ash stack, and this is the location DEC chose for the landfill. This choice also minimized impacts to surrounding properties by ensuring that the landfill was located as far as feasibly possible from neighboring properties. In contrast, as witness Moore acknowledged, his selected location was not closest to existing basins or as remote as feasible from residential areas. Id. Therefore, had DEC selected witness Moore's proposed landfill location, Mr. Kerin testified, the City of Eden likely would not have approved the zoning required to construct the landfill in this location. See 15A N.C. Admin. Code 13B § .0504(1)(e) (requiring local government approval for construction of a landfill). Witness Kerin stated that, if witness Moore had considered the City of Eden agreement, he could not have concluded that his alternative landfill location was reasonable or prudent. Tr. Vol. 24, pp. 95-96. The Commission agrees.

Infeasible options do not support a finding of imprudence. 1988 DEP Rate Order, p. 15. Witness Kerin's testimony demonstrates that the Company's actions and real-time decisions regarding the Dan River site were in fact reasonable and prudent, and the costs were prudently incurred. The Commission therefore rejects the Public Staff's proposed disallowance of these costs.

ii. Moore: Buck as Beneficiation Site

Witness Moore contended that DEC should have chosen Weatherspoon over Buck as a beneficiation site, and recommended disallowance of beneficiation costs of $10,612,592 incurred within the test period at Buck. The Commission rejects witness Moore's discrete recommendation. Witness Kerin's testimony shows that witness Moore's analysis is based on a faulty interpretation of CAMA, and that DEC's selection of Buck was reasonable and prudent because it satisfies market demands and maximizes capital investment in the required beneficiation equipment.

CAMA requires the Company to: (i) identify two sites by January 1, 2017 and an additional site by July 1, 2017; and (ii) "enter into a binding agreement for the installation and operation of an ash beneficiation project at each site capable of annually processing 300,000 tons of ash to specifications appropriate for cementitious products, with all ash processed to be removed from the impoundments located at the sites." N.C. Gen. Stat. § 130A-309-216 (emphasis added). Witness Kerin testified that DEC satisfied CAMA's requirements by identifying Buck, H.F. Lee, and Cape Fear as the three beneficiation sites based on its conclusion that they offered the most feasible alternative and the best economic value to customers while complying with CAMA. Tr. Vol. 24, pp. 93, 105-08, 131.

At each of the three sites, the Company has contracted to install and operate STAR technology units to process the onsite ash. Tr. Vol. 21, p. 112. The Company has also contracted to sell 230,000 tons of ash from Weatherspoon as aggregate in the manufacture of cement. Id. at 59, 116; Tr. Vol. 24, p. 107.

Witness Moore suggests that the Company could have selected Weatherspoon as a beneficiation site if it had only found a buyer for another 70,000 tons of ash from this location to qualify under CAMA. By selecting Buck, witness Moore contended, Duke Energy supplied an additional 300,000 tons per year of CCR material to the concrete industry, in turn reducing the demand for the 70,000 tons per year of CCR material for the same purposes from Weatherspoon for which Duke Energy was unable to find a purchaser. While the Company agrees that reuse of ash at Weatherspoon is appropriate – and the Company is selling Weatherspoon ash for reuse today – it contends that the Weatherspoon ash would not satisfy CAMA. Based on the testimony of witness Kerin, the Commission agrees.

Contrary to Public Staff witness Moore's suggestions otherwise (Tr. Vol. 21, pp. 111-12), the Commission concludes that the most reasonable reading of N.C. Gen. Stat. § 130A-309-216 indicates that the General Assembly intended that Duke Energy install and operate technology, such as carbon burn-out plants and STAR technology, to process and transform ash to a usable product rather than use the basic drying and screening methods occurring at Weatherspoon. Tr. Vol. 24, pp. 106-07. It is here where witness Moore's theory becomes problematic.

Witness Moore's testimony suggested that the Company's handling of Weatherspoon ash, which does not involve beneficiation processing or much of any processing beyond excavation, would satisfy the CAMA beneficiation requirement. At the hearing, however, witness Moore admitted that the DEP sites chosen for beneficiation under CAMA – Cape Fear and H.F. Lee – and the DEC site, Buck, have and will use the STAR technology to beneficiate ash, and that the ash being sold from the Company's Weatherspoon site is not being beneficiated with STAR technology. He confirmed that installation of a STAR facility to convert ash for cementitious purposes is a reasonable and prudent method of executing the requirements of CAMA, and that ash from the ponds is run through the STAR unit and burned to lower the carbon content of the ash. The process changes the physical and chemical characteristics of the ash, thereby creating a stronger product that can be used in the ready-mix market. Tr. Vol. 21, pp. 111-13, 115; DEC-Garrett and Moore Cross Ex. 1, Tab 12, p. 6. As witness Moore agreed on cross examination, the Weatherspoon ash and the ash that is beneficiated with such technology, as at Buck, are "apples and oranges." Id. at 117.

Witness Moore did not object to Duke Energy's beneficiation approach at H.F. Lee and Cape Fear. Having concluded that installing STAR units at H.F. Lee and Cape Fear was a reasonable and prudent "method of executing the requirements of CAMA," (Id. at 113), the Commission determines that he cannot creditably argue that Duke Energy could have simply excavated, dried, and sold ash from Weatherspoon and still satisfied CAMA's beneficial reuse requirements. Id. at 112. In other words, witness Moore admitted that STAR units accomplish the following: "the installation and operation of an ash beneficiation project at each site capable of annually processing 300,000 tons of ash to specifications appropriate for cementitious products." N.C. Gen. Stat. § 130A-309-216. His recommended disallowance, however, in this rate case, depends on a reading of CAMA that does not require installation of a STAR unit or similar technology. The Commission determines that the Public Staff position is inconsistent. The Commission concludes that CAMA contemplates the installation of STAR units or other ash processing technology that changes the physical and chemical characteristics of ash to specifications appropriate for cementitious products.

In addition, witness Kerin pointed out that, even after issuing an RFP, Duke Energy has only been able to secure a buyer willing to enter into a long-term contract for 230,000 tons of ash from Weatherspoon, but not the additional 70,000 tons. Tr. Vol. 24, pp. 105-06. Witness Moore made no attempt to identify a potential buyer for the 70,000 tons. Tr. Vol. 21, pp. 118-19. While the Weatherspoon ash is sold under contract to cement manufacturers and is used as raw material or aggregate in the manufacture of cement, the processed ash from Buck is used as a replacement for cement in concrete. Because these are separate products that are used for different purposes, the sale of beneficiated ash from Buck has no impact on the demand for ash from Weatherspoon. Id. at 105-06. The Commission determines that finding a buyer for 70,000 tons of ash from Weatherspoon would not solve the compliance problem witness Moore identifies. Under his proposal, none of the ash would be processed through a STAR Unit or similar technology, and would therefore not meet CAMA's beneficiation requirement.

The Commission also agrees with the Company that, because CAMA requires the installation of a STAR Unit or similar technology, a cost of approximately $181 million, it was reasonable for the Company to consider the amount of ash available at the site and the potential uses for the ash when making a decision to invest in beneficiation at a particular location. Weatherspoon contains only 2.4 million tons of ash, which is approximately one-third the 6.4 million tons at Buck, so the per-ton cost to process ash at Buck is significantly lower than it would be at Weatherspoon. Additionally, Weatherspoon is in a poor geographic location in relation to the major markets for ash used in the cement industry. Because trucking the ash is part of the cost of the sales, Buck's proximity to Charlotte and Greensboro makes it a much better location for beneficiation, and has the highest revenue projection, followed by Cape Fear (Greensboro and Raleigh) and H.F. Lee (eastern North Carolina and Virginia).

Witness Moore's proposal is not feasible as it would not satisfy the Company's statutory requirement to beneficiate ash. Alternative proposed actions must be feasible in order to truly be alternatives. 1988 DEP Rate Order, p. 15. The Commission cannot, therefore, conclude that the Company was unreasonable or imprudent by selecting Buck over Weatherspoon, and by implementing a beneficiation plan at Buck that does satisfy CAMA.

iii. Moore: Riverbend Off-site Transportation Costs

Public Staff Witness Moore took no exception to DEC's overall ash management plan at Riverbend, including its decision to remove CCR material from the ash stack area or the cinder pit, even though those units are not subject to CAMA or CCR. He did object to DEC's decision to transport and dispose of CCR material from the ash stack to the R&B landfill in Homer, Georgia and to the Brickhaven Facility. Witness Moore recommended that the Commission disallow $489,000 as the premium that was paid to dispose of CCR material from the Ash Stack at the R&B Landfill in Homer, Georgia versus the Marshall Station. Tr. Vol. 21, pp. 72-73.

As witness Kerin noted in his testimony, DEC was required to begin excavation of ash from Riverbend within 60 days of receiving its stormwater permit from DEQ. When DEC received that permit in May 2015, Marshall was not available to accept Riverbend ash. Since DEQ issued the permit on May 15, 2015, DEC had until July 15, 2015 to begin excavating Riverbend ash. While the Company was exploring long-term options to receive the Riverbend ash, it was still obligated to meet DEQ's deadline, and thus it was imperative that the Company contract with a company to haul and dispose of the Riverbend ash on a short turnaround. Waste Management National Services, Inc. (Waste Management) was able to meet that requirement, and began trucking ash from Riverbend on May 21, 2015, and transported the final load on September 18, 2015. While DEC eventually received approval to dispose of Riverbend ash at Marshall, the Commission is persuaded that DEC would not have been able to send ash to Marshall within the time frames required by DEQ. Tr. Vol. 21, pp. 93, 108-10, 131-32.

Witness Moore's recommended disallowance is based on a "perfect world" scenario where DEC could have accurately predicted permitting uncertainties, such as the dates when DEQ was going to issue the stormwater permit for Riverbend or approval for ash disposal at Marshall. The Commission declines to approve disallowances where the Company promptly achieved compliance with DEQ's 60-day excavation requirement. The Commission uses the CAMA deadlines as the framework by which to assess prudency. 2018 DEP Rate Order, p. 185. The Commission concurs with witness Moore that "[t]he lowest cost option may not always be the reasonable or prudent decision. The determination must be made on a case-by-case basis and the specific factors, obligations, site-specific limitations and other factors known by management at the time." Tr. Vol. 21, pp. 89-90. The Commission concludes that the Company acted reasonably and prudently for the Company to begin excavation at Riverbend as soon as practicable in order to ensure compliance with DEQ's requirements. This decision necessitated finding a temporary disposal solution; therefore, the costs associated with that temporary disposal solution are also reasonable and prudent and should not be disallowed.

iv. Garrett: W.S. Lee Off-site Transportation Costs

The Commission is not persuaded by witness Garrett's testimony that a lower cost option at W.S. Lee was feasible. Like witness Moore's recommended onsite landfill at Dan River, witness Garrett's proposal for W.S. Lee may look viable on paper, but when applied to "real world" conditions, it loses its persuasiveness.

As an initial matter, the Commission agrees with the Company and witness Garrett that DEC's overall ash management plan at W.S. Lee, which includes building an onsite landfill to store ash from the Primary and Secondary ash basins, is reasonable and prudent. Tr. Vol. 21, pp. 25-26. The Commission also agrees that some action was necessary to excavate the IAB or Old Ash Fill to mitigate risk associated with the long-term environmental issues, based on the proximity of the IAB to the Saluda River. The Commission declines to accept, however, witness Garrett's conclusion that delaying excavation of those sites for seven years would have been acceptable to South Carolina regulators or would have eliminated the risk to the Saluda River. Tr. Vol. 24, p. 156.

No dispute exists that DEC's decision to excavate the IAB and Old Ash Fill before the onsite landfill was complete eliminated the geotechnical and environmental risks by November 2017. Tr. Vol. 21, p. 28. Under witness Garrett's plan, ash in the IAB and in the Old Ash Fill would have been left in place and not excavated until the on-site landfill in the secondary ash basin was complete in 2022. Tr. Vol. 21, pp. 129, 130-31. Therefore, the ash would have remained in the IAB and Old Ash Fill an additional seven years until 2022 as compared to the excavation plan DEC undertook. Tr. Vol. 21, pp. 127, 131-32. Under the Company's agreement with SCDHEC, which required excavation of the IAB and Old Ash Fill by December 31, 2017, witness Garrett's seven-year delay was not an option. Tr. Vol. 24, p. 151.

Even assuming witness Garrett's plan was technically feasible and would have resolved the stability issues, implementing his plan would have required trading old risks for new risks. See DEC-Garrett and Moore Cross Ex. 1, Tab 20. Witness Garrett acknowledged during live testimony that the report contained at Tab 20 concluded that if the IAB ash was not removed, danger arose of it's flowing into the Saluda River. Tr. Vol. 21, pp. 135-36. He also acknowledged that in certain areas of the IAB that abut the Saluda River, the steep, 1:1 slopes are covered in trees and vegetation. Id. at 137. Witness Garrett also agreed that trees would have to be removed to execute his proposal, but he did not consider in his analysis how the trees would be removed (with heavy equipment or chain saws) or how tree removal might affect slope stability. Id. at 148-49. He also acknowledged that soft, alluvial clays run beneath the IAB and the steep slopes where his proposed work would occur, and that the dam itself is partially constructed from ash and sandy silt that would also have to be excavated. Id. at 138, 141. Witness Garrett conceded that his work proposal as reflected in Garrett Direct Exhibit 3 is "not a design document" nor is it "specific instruction on how to go about that work." Id. at 141. He also acknowledged the limitations of the S&ME report on which he relies, in that it, too, does not explain practically how a slope stability and grading project would be executed. Id. at 141, 146-47.

The Company provided persuasive evidence in the form of witness Kerin's testimony that witness Garrett's proposed grading and stability project would not have been reasonable or prudent. Witness Kerin testified that the equipment necessary to implement witness Garrett's proposal could not have safely traversed the dike on the downslope of the IAB. Moving the heavy equipment to the downstream/river side of the downslope to excavate silt, ash, sand and trees would have created undue risk to bank stability, worker safety, and risk of an ash release into the Saluda River. Witness Garrett's proposed project would have unnecessarily put worker and environmental safety at risk, and the delay would have been unacceptable to DEC and to the SCDHEC. These new risks were understandably unacceptable to the Company. Tr. Vol. 24, pp. 112-14, 132.

The Commission cannot conclude that witness Garrett's proposal was the more reasonable and prudent option because the Public Staff cannot show, from an engineering perspective, how the work would be practically and safely executed. The Public Staff only presented a concept. To take witness Garrett's plan from concept to reality would require engineering and design plans with specific instructions on how the work would be conducted. Tr. Vol. 21, p. 141. The Public Staff, although armed with an engineering expert, failed to present any such plans. On the other hand, Company witness Kerin credibly provided evidence of the real-world flaws with witness Garrett's concept, from both timing and engineering perspectives.

The Commission concludes that it was reasonable and prudent for Duke Energy to immediately excavate the IAB and Old Ash Fill, in compliance with its agreement with SCDHEC. Duke Energy was able to eliminate existing risks without creating new risks. The Commission declines to second-guess the Company's judgment in that regard. Therefore, because no onsite landfill was available for the disposal of the IAB and Old Ash Fill materials at the time they were excavated, it was also reasonable and prudent for the Company to utilize the R&B landfill in Homer, Georgia for disposal of those materials, and the costs associated with that effort should not be disallowed.

Finally, based on witness Kerin's testimony the Commission agrees that the Company's plan to mitigate future risk of operating two ash management structures, which would be the result if it did not excavate the Structural Fill Area at W.S. Lee in the future, is reasonable and prudent, even though witness Garrett did not suggest any disallowances with respect to this plan. Witness Kerin stated that, in order to resolve the concerns of SCDHEC and environmental groups, the Company agreed to mitigate future risk of operating two ash management structures by managing all ash at W.S. Lee through a single management structure – the landfill – as opposed to taking a piecemeal approach as suggested by witness Garrett. He stated that if the Company was later required to excavate the Structural Fill area after the landfill project was completed, it would incur greater costs than it will incur by managing the ash while the landfill project is ongoing, and that the decision to excavate this area now is reasonable and prudent approach to mitigating against potential future ash related liability and to reduce future costs for the site. Tr. Vol. 24, pp. 93, 116.

7. Conclusion with respect to January 1, 2015 – December 31, 2017 Costs

The Commission finds that the costs are known and measurable, were reasonably and prudently incurred, and to the extent capital in nature are used and useful in the provision of service to customers. The Commission determines the costs were properly deferred. As such, with the exception noted below, they are recoverable from customers. The issue that remains is the amortization period over which this recovery is to be made.

The Commission deems the Company's proposal, which submits that the amortization period should be five years, to be reasonable and appropriate. The Public Staff, in its 51/49 "equitable sharing" proposal, suggests a period of 25 years (with no return), but its suggestion is tied to (indeed, mathematically required by) the sharing arrangement. As discussed more fully above, the Commission determines that the Public Staff's sharing proposal is from the Commission's perspective arbitrary and unfairly punitive and therefore unacceptable. Thus, a 25-year, no return amortization period is not approved. The five-year period suggested by the Company is identical to the period over which the Commission approved in the 2018 DEP Rate Case, as well as the period over which Dominion North Carolina Power's already-incurred coal ash basin closure costs were amortized in the 2016 DNCP Rate Case (Docket No. E-22, Sub 532). Further, inasmuch as the Company appropriately applied ARO accounting and this Commission's deferral orders issued in Docket No. E-7, Sub 723 to these costs, the Company is eligible to earn a return.

In summary, with the exception noted below, DEC has shown by the greater weight of the evidence that its coal ash basin closure costs actually incurred over the period from January 1, 2015 through December 31, 2017 are (a) known and measurable, (b) reasonable and prudent, and (c) where capital in nature used and useful, and, as such, those costs are recoverable in rates. DEC has further shown that its proposal that these costs be amortized over five years, with a modified return on the unamortized balance, is reasonable. The Commission encourages the selection of minority and women-owned businesses, where appropriate, when contracting for future services associated with compliance with CAMA and the CCR Rule.

8. The Commission's Cost of Service Penalty

The costs DEC has incurred through the end of the test year as adjusted in coal ash remediation tasks have been substantial, and the Company will continue on an annual basis to incur a substantial level of costs through approximately 2028. The vast majority of these costs would have been incurred irrespective of management inefficiency in order to comply with EPA CCR requirements. When DEC initially constructed coal ash impoundments and transported CCRs to them many decades ago, it did so in accord with the prevailing industry practices at the time, especially in this part of the country. In part and over time this was in response to environmental regulations requiring the removal of pollutants such as CCRs from the coal plant smokestacks to reduce air pollution.

Over time, the EPA and other environmental regulators have scrutinized the impact of CCRs in unlined repositories on surface and ground water and have assessed the extent to which harmful constituents in CCRs exceed those naturally occurring in the environment and their impact on human health. One long-lasting debate before EPA addressed the extent to which CCRs should be classified as hazardous waste under RCRA, a debate only recently resolved. Had EPA classified CCRs as a hazardous waste, economic reuse in all likelihood would have become an impossibility.

Another area of scrutiny has been the appropriate need for and method of remediation with respect to closing and potentially moving CCRs from unlined impoundments.

Many of the criticisms of DEC's CCR remediation practices raised in this case, before the federal district court in the criminal proceeding and before other courts and administrative agencies, address issues such as seeps from impoundment dikes, improper maintenance of dikes, lax reporting, exceedances and NPDES violations with respect to surface water discharges. The primary and ultimate remediation however is dewatering and excavation of and transportation from existing unlined impoundments and construction of new lined impoundments or, for older discontinued impoundments that qualify, caps preventing rainwater intrusion. This is where the vast majority of the billions of dollars of CCR remediation costs must be spent. This ultimate remediation step is necessary to prevent most of the leachate from infiltrating groundwater from the bottom of unlined basins, but would have been required irrespective of the harms that constitute other alleged mismanagement. In addition, this remediation process cures other less pervasive environmental and health threats.

Intervenors fault DEC for failure to undertake this remediation process years earlier before being required to do so. The evidence shows that DEC undertook steps toward CCR remediation and incurred costs in anticipation of impending closure but hesitated to spend substantial sums until the requirements became clearer. Had DEC acted in compliance with assertions that it act more aggressively sooner, it would have incurred costs its consumers would have been responsible for then. So from a ratemaking perspective, this Commission's concern, the question of when the remediation should have taken place, now or in the future or twenty years ago, is not determinative of whether the costs of the remediation should be recovered through rates and to what extent. Intervenors are unable to show when DEC should have acted differently in the past or what the increased costs would have been then. The Commission rejects efforts from any source to advance theories in support of discrete disallowances that parties before the Commission have not seen and have therefore been denied any opportunity to analyze and respond. The Commission must depend on parties before it, particularly the Pubic Staff, with the statutory responsibility to audit and respond to general rate case filings to advance theories for cost recovery.

Indeed, whenever undertaken, the costs would have been site specific, and establishing a past cost in this case would be a near impossibility. As DEC would have been required to undertake the remediation at issue in 2015 through 2017, irrespective of other improper actions of which it has been accused and for which it pled guilty to and was sentenced for in the criminal proceeding, any disallowance in this case must be made within the context of these facts. Had DEC acted irresponsibly in neglecting seeps earlier, the remedy would have been pumping the water from the seeps back into the basin, for example. Costs of this remediation would have been negligible in comparison to removing ash or cap-in-place.

DEC in the past contemplated a future requirement to close unlined impoundments. While it was reasonable and appropriate to anticipate and plan for what EPA's ultimate decisions would be, the Commission determines not to penalize DEC through denial of cost recovery for its decision to wait until EPA's CCR determinations in this area were finalized. Had DEC acted prematurely in anticipation of regulations under consideration but not yet implemented, with the expenditure of substantial sums in the process, and with the ultimate EPA decisions differing from those anticipated, DEC risked unjustified expenditures. In 2015, the EPA announced the Clean Power Plan. Had electric utilities incurred costs prematurely to comply, these costs could have been called into question when the U.S. Supreme Court stayed the Clean Power Plan. Even today efforts to soften the impact of the EPA CCR Rule are under consideration by the current administration. If effectuated, anticipated cost recovery may change in the future.

A significant example of the ambiguity and uncertainty DEC faced in the management of CCR impoundments is illustrated by reference to a November 1, 2004 Long Term Ash Strategy Study Phase Report addressing 1983 and 1984 CCR repositories at DEP's Sutton coal fired plant in New Hanover County referred to in the 2018 DEP order. The 1983 impoundment was unlined and had reached capacity prior to the 2004 report. The 1984 impoundment was lined and was rapidly approaching capacity, and the report identified and classified alternatives for CCR use or disposal to prevent shutdown of the Sutton plant. In the "Problem Description" section of the report, the authoring engineer listed issues either directly or indirectly related to a contribution to the overall ash strategy for the Sutton plant. The issues were described as secondary and not a dictating factor in the solution of the best alternative but as a look at overall environmental structure and stewardship. The first issue addressed the 1983 unlined impoundment that for the most part had ceased to receive CCRs.

> <u>1983 Pond is Unlined</u>
>
> The first issue is that the 1983 ash pond was constructed during a period when it was not required to provide a non-permeable liner, and was constructed with the native sandy soils.[1] This pond has been functionally full since 1983, but is still permitted[2], and is occasionally used when there are issues requiring the 1984 ash pond to be temporarily dry. The current environmental atmosphere is that these ponds will eventually have to [sic] emptied and placed in a lined containment to eliminate the leaching of the ash products into the groundwater system. This is an issue that is not currently being pressed, but it is anticipated that with the tighter environmental conditions it will soon become an emergent issue. This issue is

---

[1] The reference to "native sandy soils" is significant. Its characterization for absorption of leachates is greater than for the clay soils of the Piedmont at issue with respect to the DEC impoundments in this case.

[2] The 1983 impoundment operated pursuant to a DEQ permit. Obviously, at the date of the report, DEQ was not requiring closure or dewatering and removal of the CCRs. This would not occur until passage of the CCR Rule and CAMA years later.

> aggravated by the fact that a test monitoring well located 300' from [sic] edge of the 1983 ash pond has shown high levels of arsenic during the past two quarterly tests. This may or may not be related to the unlined ash pond. A recent study by an independent firm indicated this concern may be less than originally thought. It could be mitigated by adding monitoring wells to the NPDES permit, but could still pose an issue in the future.[1] There is also a county well water source approximately 1200' from the test well that is monitored by the county.
>
> Elsewhere in the report under the "Do Nothing" alternative, the author stated:
>
> It is assumed that the North Carolina Division of Water Quality (NCDWQ) will require the 1983 ash pond to be emptied and lined to comply with current ash pond regulations. For the purpose of this study it is estimated that there is a 5% chance annually of the ash pond required to be relined starting 2007, and that in 2013 there will be a 10% chance annually thereafter until 2019.

In 2018, it is less than clear as to what the author refers to as the "current environmental atmosphere" or "current ash pond regulations." The author of the report does not elaborate or explain. Were the Commission to attempt to read the author's mind, this would be mere speculation. To the extent DEQ was enforcing them, DEQ was not requiring DEC to take additional steps to comply. As the report states, the 1983 impoundment was operating pursuant to a DEQ permit, and DEQ had not required closure. The author repeatedly uses the word "assumes" and "anticipated" to predict the environmental regulators' future intent. The author's speculation as to if and when unlined impoundments might have to be dewatered and excavated was off the mark. With respect to the 1983 Sutton unlined impoundment, that impoundment will never be relined. If it had been relined as the author suggests, the Company would have been required to move the CCR's twice, once to some new location, then back to the newly relined 1983 repository. Such is not the case for compliance with EPA CCR rules and CAMA where the CCR's were moved only once -- deposited in a new, lined landfill.[2]

The EPA's CCR rule was passed in 2015, and the NC CAMA was passed in 2014 with deadlines a number of years beyond that. DEC did not choose the alternative recommendation in the report, creation of an industrial park, nor did it excavate the unlined 1983 impoundment in response to the report. The report contains no recommendation to excavate the 1983 impoundment solely for environmental remediation. The Commission is unable today to say how in the past the 1983 impoundment would have been excavated and how the excavated CCRs would be placed in a lined impoundment, what the cost would have been and what cost recovery treatment would have

---

[1] This recitation is consistent with the comprehensive testimony of witness Wells in this case that with respect to the types of contaminants at issue from CCR impoundments, they exist in naturally occurring quantities in the soil. Monitoring wells showing exceedances above standards are not dispositive without measurement of naturally occurring constituents.

[2] Intervenors are highly critical of DEC for failure to take action in response to consultants, in-house investigative teams and outside research entities such as EPRI before 2015. However, quite inconsistently, when it comes to criticizing DEC's actions after 2015, they assert that DEC was remiss in not stopping short of what SCDHEC wished for remediation of W.S. Lee and the consultant for the selenium treatment at Riverbend. They contend DEC spent too much in complying with these required or suggested remediation steps.

been appropriate. Indeed, the 1983 impoundment today is being excavated pursuant to express EPA and DEQ guidelines, and the parties to the DEP case vigorously contest how compliance with these requirements should be accomplished and what the cost should be.

The purpose of the report was to determine the best course based upon the fact that the 1984 lined ash pond was reaching capacity and would be non-operational by June 2006. It is important to note that the author was indicating that the 1984 ash pond would be non-operational under the NPDES permit due to capacity constraints as opposed to environmental concerns.

Intervenors are advocating substantial disallowances in this case for expenditures DEC incurred to meet CAMA deadlines, such as at Dan River, Riverbend, or Buck, before all of the regulatory requirements had been finalized. A substantial area of contention is exceedances and environmental violations addressing harmful constituents in coal ash even though determinations with respect to naturally occurring levels of background concentrations of these constituents have not been established. Rules for regulating seeps from dikes are yet to be finalized. As testified to by witness Wells, with respect to covered engineered seeps, DEQ and DEC have been in long-standing negotiations as to whether seeps are a violation of the law and since 2014 whether seeps should be covered by the NPDES permit. Even as DEC continues to remediate, state regulatory agencies must review and approve the process and may impose additional restrictions, limitations and requirements. Even subsequent to EPA CCR rules and CAMA, the General Assembly enacted the Mountain Energy Act of 2015, changing the requirements for the Asheville plant remediation for DEP. Closure options for each of the CCR impoundments are site specific. Even now, Intervenors criticize the selection of repositories for beneficiation. Intervenors contend DEC spent too much to comply with CAMA. As discussed below, others advocate that this Commission supersede the authority of environmental regulators and require excavation of all DEC's impoundments and prohibit cap-in-place and spend more than DEC contemplates irrespective of what DEQ may require. The Commission is unable to recreate the past and place a price tag on remediation costs that might have been incurred in anticipation of environmental requirements.

Intervenors maintain that DEC should have addressed CCR remediation in years prior to EPA's CCR regulations and CAMA when the industry began to grow concerned over potential CCR environmental degradation. Under this theory, remediation costs would have been lower then and as a consequence CCR remediation costs DEC seeks for recovery beginning in 2015 are excessive and should be disallowed in whole or in part.

The most significant shortcoming in this theory is that no attempt has been made by any party to this case to demonstrate what the costs would have been in earlier years that theoretically would be so much lower as to make the 2015 and subsequent CCR remediation costs unnecessary or excessive. To the extent efforts are made in this case after the record has closed, as was the case in the DEP case, DEC has had no opportunity to respond and any such effort is unfair and inappropriate.

Before EPA CCR rules and CAMA, DEC's impoundments were operated under permits authorized and overseen by DEQ or its predecessor, clients of the AGO. DEQ suggested no requirements that DEQ dewater the impoundments, remove the CCRs and transport them to lined landfills or install caps in place. No requirements existed for DEC to follow. Had DEC undertaken impoundment closure, DEQ would have been required to oversee the process, but of what that oversight would have consisted is unknowable today.

DEC has incurred costs beginning in 2015 and thereafter pursuant to elaborate EPA and CAMA requirements under close scrutiny and oversight from DEQ. Parties to this case hotly contest and dispute the steps DEC has taken to comply and assert that DEC's expenditures have been unreasonable.

In an effort to comply with CAMA, DEC identified Buck as a beneficiation site. Public Staff witness Moore argues DEC should have chosen instead Weatherspoon and that DEC therefore spent $10,612,592 too much between January 1, 2015 and November 30, 2017.

In order to comply with CAMA, DEC constructed an onsite landfill of Dan River. Public Staff witness Moore argues that DEC selected the wrong site, the former footprint of the Ash Fill 1, and should not have increased the costs to transport CCR materials offsite. He contends that DEC spent $59,320,890 too much.

In order to comply with CAMA, DEC transported CCRs from the Riverbend Ash Stack to the R&B landfill in Homer, Georgia and to the Brickhaven facility. Public Staff witness Moore contends that the material should have been disposed of at the Marshall plant and DEC spent $489,600 too much.

In order to comply with SCDHEC requirements, DEC attempted to close the regulated ash basin of W.S. Lee and mitigate risks of the unregulated inactive ash basin and fill area. Public Staff witness Garrett disagreed with DEC's decision to immediately begin excavation and transportation from these basins and transport CCRs to the R&B landfill in Homer, Georgia. Witness Garrett testified that DEC spent $27,275,192 too much.

Public Staff witnesses contend that DEC spent $97,698,274 too much to comply with EPA and CAMA. Even with access to steps DEC took and to the compilation of costs DEC incurred, these witnesses encountered difficulty understanding what DEC did. Witness Moore calculated the cost for excavating, transporting and disposing of Ash Stack I at the Dan River off-site to be $83,531,985. This was $3.8 million too high because this amount should have been attributable to excavation and transportation of ash from the Primary Ash Basin. The cost to build the alternative landfill location when accounting for the need to address asbestos and relocate the warehouse building at Dan River increases witness Moore's cost determination by $10,790,900. Witness Moore originally included costs of parcels at Cliffside even though DEC had not requested recovery of those costs. Witness Moore assumed DEC began transport of CCRs from Riverbend to the R&B Landfill beginning May 2015 and continuing to February 2016. However, the DEC contract with Waste Management was for 17 weeks through September 18, 2015.

Witness Moore criticizes DEC for spending too much at Buck, Riverbend, and Dan River <u>to comply with</u> CAMA[1] requirements. Witness Junis criticizes DEC for spending too much at Belews Creek and Riverbend for remediation <u>not required by CAMA</u> for selenium removal. Witness Quarles criticizes DEC for <u>spending too little</u> at Allen and Marshall to remediate by not removing the coal ash from the unlined basins there in disregard of what DEQ may ultimately require for compliance with CAMA. The Commission deems the various Intervenor theories for remediation cost disallowance "all over the map" and deficiently inconsistent.

With so much disagreement over what DEC should have done or is doing to comply with EPA requirements and CAMA, the Commission determines that insurmountable obstacles exist to quantify the alleged offsets that are a fundamental element to Intervenors' disallowance theory. The Public Staff, the agency required by statute to audit rate requests and recommend adjustments, candidly testified that it does not base its recommended equitable sharing recommendations on past DEC imprudence. That agency was unwilling to attempt to speculate what DEC should have done in the past, when it should have acted and, most significantly, what the costs would have been. No other party has undertaken such effort. Without any evidence sponsored by any witness quantifying what DEC should have spent in the past, the Commission has no basis for disallowing 2015-2017 DEC remediation costs in support of a theory that DEC should have done more prior to 2015.

The Commission would be required to anticipate the difficulty in complying with local ordinances like the ordinance DEC confronted from the City of Danville. The Commission would be required to anticipate the level of community opposition such as that experienced at Riverbend. The Commission would be required to anticipate what, if any, issues the legislature or DEQ might have imposed for beneficiation. The Commission would be required to anticipate the reaction of state or local representatives to DEC's decision to excavate or cap-in-place repositories within their legislative districts. The Commission concludes such tasks are unwarranted.

Intervenor theory on groundwater exceedances is that DEC violates 2L standards whenever monitoring wells show exceedance of standards or where DEC has not installed monitoring wells in addition to those required by DEQ to disprove the existence of exceedances. Some of the exceedances were from measurements taken within the CCR impoundments. The Commission cannot accept this theory. The fallacy of the theory rests on the fact that the undisputed evidence is that all of the constituent elements measured against the standards, including iron, manganese and pH, constituents harmful neither to the environment nor human health, occur naturally in the North Carolina soils irrespective of the proximity of coal ash impoundments. The evidence shows that DEQ by its actions or inactions does not agree that the existence of exceedances without evidence that they are caused by coal ash contamination pose a risk to the environment or human health so as to require immediate remediation. DEQ has established a low priority to DEC's request to add 2L limits to NPDES permits. Although the Commission is not an environmental regulator, it must agree with DEC and DEQ that failure to take the costly actions required to comport with this Intervenor theory falls well short of mismanagement so as to justify some unquantified disallowance of 2015-2017 costs of dewatering and removal of CCRs from unlined pits or construct caps, which will cure exceedances caused by CCR groundwater contamination, if any.

This Commission's responsibility is cost recovery. Environmental regulators must oversee protection of the environment and public health. The Commission's responsibility is to determine whether coal ash remediation costs as required by environmental regulators should be recoverable through rates.

Another factor the Commission must address is the imposition of requirements of CAMA in addition to those of EPA. The evidence in this case is that the level of transportation and beneficiation costs being contested arises from more aggressive CAMA deadlines and uncertainty over the timing of the granting of regulatory permits for replacement impoundments. Except as addressed generically elsewhere, the Commission is reluctant to second-guess specific DEC decisions on its attempts to comply with these requirements in a 20/20 hindsight fashion. Likewise, the Commission is reluctant, except in limited fashion, to penalize DEC for good faith efforts to comply with state statutes irrespective of the factors motivating the General Assembly to impose them.

In his testimony, AGO witness Wittliff asserts that DEC's mismanagement caused CAMA and that costs DEC incurred to comply with CAMA in excess of those to comply with EPA CCR requirements should be disallowed. Witness Wittliff makes no effort to quantify the disallowance he proposes under this theory. In contradiction of its own witness, the AGO in its post-hearing brief argues that all of DEC's 205-2017 CCR remediation costs should be disallowed -- again without showing what DEC's costs should have been before 2015 under the AGO's theory. The AGO insists it is up to DEC to make these calculations for it.

Aside from the unsubstantiated theoretical underpinnings of the Wittliff argument, it is not possible to segregate CAMA 2015-2017 costs from EPA CCR costs. Indeed, a major prudency disallowance advocated by the Public Staff addresses 2015-2017 remediation costs at DEC's W.S. Lee plant in South Carolina. DEC was required to meet deadlines beyond those imposed by the EPA but not as a result of CAMA, which did not apply outside of North Carolina.

Conversely, the Commission is unable to find DEC faultless in the dilemma it has faced. Much testimony addresses the issue of whether DEC's mismanagement of CCRs "caused" the General Assembly to enact CAMA. DEC argues that other nearby states enacted CCR remediation statutes in addition to EPA's CCR rules, and that the Dan River spill affected the timing but not the substance of CAMA's requirements. The Commission is unable to conclude that DEC mismanagement is the primary cause of CAMA. Just as a preamble never accepted cannot legally justify legislative intent, neither can the absence from earlier versions of CAMA that would have addressed cost recovery. Nevertheless, the provisions of CAMA directly address remediation of DEC CCR repositories and impose accelerated deadlines with respect to them. The Commission therefore is unable to conclude that DEC mismanagement to which it admitted in the federal criminal court proceeding was not at least a contributing factor. Even DEC witness Wright's testimony suggests as much. While DEC presents persuasive evidence that its alleged mismanagement has not been supported and was not the cause of CAMA, this evidence is difficult to reconcile with its admissions and guilty pleas before the federal district court in the criminal proceeding. DEC represented that it mismanaged its CCR activities.

The Commission's conclusions with respect to the impact of DEC's mismanagement as a contributing factor to the enactment of CAMA are significant in two ways. First, the Commission determines that this conclusion adds support to the Commission's assessment of a management penalty in the form of cost disallowance arising primarily from the Company's admissions of mismanagement in the federal criminal case. Secondly, it supports the Commission's determination to reject more discrete disallowances such as those addressed by the Public Staff with respect to Buck, Riverbend and Dan River transportation costs. The Commission deems these costs traceable to CAMA timelines, implemented in part in response to DEC's CCR management practice, but is unpersuaded that the quantification of the costs is accurate or that the severity of the proposed disallowances is justified. Consequently, the Commission takes the incurrence of these costs into account in establishing the amount of its management penalty.

DEC admits to pervasive, system-wide shortcomings such as improper communication among those responsible for oversight of coal ash management. As stated above, while the Commission cannot state that CAMA would not have been passed or that its requirements other than accelerated deadlines would have been less onerous but for DEC's mismanagement of its CCR activities, neither can it state that DEC activities were without impact on the CAMA provisions that have resulted in increased costs that are at issue in this case. More fundamentally, in its admissions and pleas of guilty before the federal district court, DEC has outlined acts of criminal negligence through management misfeasance. In so doing, the Commission determines that, irrespective of CAMA, DEC has placed its consumers at risk of inadequate or unreasonably expensive service.

The Commission must regulate DEC pursuant to the requirements of Chapter 62 to see that compatibility with environmental well-being is maintained. N.C. Gen. Stat. § 62-2(a)(5). Service is to be provided on a well-planned and coordinated basis that is consistent with the level of energy needed for the protection of public health and safety for the promotion of the general welfare as expressed in the state energy policy, N.C. Gen. Stat. § 62-2(a)(6). All companies are prevented from violating environmental statutes. N.C. Gen. Stat. § 143-215.1. DEC is required to maintain safe and reliable service. As an electric utility, safety usually means safe electric service. In the context of this case, the Commission also determines that it means assuring safe operation of its coal-burning facilities so as not to render the environment unsafe. Declining to acquire and install a relatively inexpensive camera in a decades-old storm water drainage pipe over which the large coal ash impoundment is constructed when engineers repeatedly recommend such installation does not comply with a duty to provide safe service.

Fortunately, Dan River was a plant where coal-fired generation had been discontinued at the time of the 2014 spill. Risers in disrepair, inadequate oversight of impoundment dikes and seeps have not resulted in catastrophic failures causing plants to be taken offline or service disruptions, but DEC's irresponsible management of its impoundments over a discrete period of time placed its customers at risk of inadequate service and has resulted in cost increases greater than those necessary to adequately maintain and operate its facilities.

Consequently, having pled guilty to management criminal negligence, DEC cannot go without sanction in the form of cost of service disallowances. At the same time, to the extent the Dan River plant spill has contributed to the CCR remediation expense that otherwise would have been lower, the Company has borne responsibility for Dan River remediation costs without ratepayer support. The Company has been penalized by the federal district court. It cannot seek cost recovery of these monetary penalties or remediation assessments. Further, the mismanagement to which DEC pled guilty was only for a fraction of the time DEC operated the impoundments. No evidence was submitted that DEC's management was imprudent from the initial date of operation. The penalties imposed by this Commission take the form of denial of recovery of a return on historic remediation costs that reduce a portion of costs that ratepayers otherwise would have borne. The Commission deems double penalization inappropriate as an unwarranted penalty that has a tendency to unduly threaten the long-term overall wellbeing of the Company, a situation not in the best interest of its consumers.

A major difficulty the Commission confronts in this case is the identification and quantification of the appropriate CCR remediation adjustment to incurred costs. The record does not contain evidence appropriately quantifying the cost DEC incurred with respect to discrete remediation activities.[1] The Public Staff's witnesses' encountered difficulty in quantifying and supporting the costs for the alleged Cliffside, Riverbend and Dan River disallowances and other less specific ones motivates the Commission to resist imposition of discrete cost disallowances. The Commission deems disallowance of the totality of costs, as some parties advocate, unjustified. The Commission deems full recovery, as DEC advocates, unjustified. The Commission deems the Public Staff's 51/49 equitable sharing disallowance unfairly punitive and of questionable legal sustainability. The Commission deems requirements that more costs be imposed than DEQ might require without cost recovery unjustified. Moreover, the Commission deems it inadvisable to approve or suggest future disallowances with respect to CCR remediation expenditures as far away as 2028 and beyond. In sum, the Commission cannot agree with any of the parties in this case and must fashion and quantify a remedy different from any of those advocated before it.

The Commission operates under a legislative mandate that requires it to fix rates that will allow a utility "by sound management" to pay all of its reasonable operating costs, including maintenance, depreciation, and taxes, and earn a fair return on its investment. N.C. Gen. Stat. § 62-133(b)(4). State ex rel. Utils. Comm'n v. General Telephone Co., 285 N.C. 671, 208 S.E.2d 681 (1974). If the Commission finds that a utility has not been soundly managed, it may penalize a utility by authorizing less than a "fair return." Id.[2] The Commission must quantify the penalty by making a finding of what return would have been allowed if there were sound management. Id. The North Carolina Supreme Court has stated that "[t]he size of the penalty is left to the judgment of the commission, but must be based upon substantial evidence, and the penalty must not result in a confiscatory rate of return." Id. General Telephone addressed a rate of return on rate base penalty for mismanagement resulting in inadequate service. In this case, DEC's mismanagement takes the form of admitted inadequate oversight of its CCR activities that placed service to its consumers at risk and, at least indirectly, increased costs. As the penalty is a defined

[1] As the Commission recited in its order in the DEP case, AGO witness Wittliff was asked whether he offered any opinion on what he thought the Company's appropriate amount of recovery under the CCR rule should be. He responded:

> ... I would explain that I'd love to have been able to come up with some extremely precise numbers and explain it all to you where it all made crystal clear sense and you could hang your hat on it and that's the number, we can pin that down. The problem is, is that this is, as we've already - - everyone seems to have observed, is it's an extremely complex case with a lot of moving parts, and it's not as easy to - - to make that sort of definitive statement. Tr. Vol. 15, pp. 77-78.

The same evidentiary shortcoming is present in the record in this case.

[2] See also State ex rel. Utils. Comm'n v. Morgan, 277 N.C. 255, 177 S.E.2d 405 (1970) (holding "that it is not reasonable to construe [the statute] to require the Commission to shut its eyes to 'poor' and 'substandard' service resulting from a company's willful, or negligent, failure to maintain its properties [] and it is obvious that consistently poor service, attributable to defective or inadequate or poorly designed equipment or construction justifies a subtraction ...").

monetary penalty rather than a percentage return penalty, the impact on cost of service would be the same if it had been a rate of return on rate base penalty.

Consequently, the Commission in the exercise of its judgment and discretion, determines that a management penalty in the approximate sum of $70 million is appropriate with respect to DEC CCR remediation expenses accounted for in the earlier established ARO with respect to costs incurred through the end of the test year as adjusted. This penalty is based on the totality of evidence contained in the record, as recited in detail above, and does not result in confiscation. Had the Commission not imposed this penalty, the ARO costs would have been amortized over five years with a full authorized return on the unamortized balance. As the Commission has addressed comprehensively above in this order, the Commission possesses the discretion to authorize a return on the unamortized balance. The unamortized balance is not a recurring test year operating expense. The annual amortization of the balance (return of not return on) is the amount that equals to operating expense pursuant to N.C. Gen. Stat. § 62-133(b)(3). The penalty will be imposed by reducing the resulting annual revenue requirement by $14 million (from the return on the unamortized balance on the capitalized costs) for each of the five years, resulting in an approximate $70 million management penalty. While this penalty differs in form from that in General Telephone, the Commission determines that conceptually General Telephone provides appropriate precedent. By imposing this management penalty, the Commission does not suggest that further penalty or disallowances with respect to past DEC actions or inactions will be imposed with respect to future CCR remediation expenses. The size of the penalty meets judicial requirements as it is quantified and is not confiscatory.

With respect to CCR remediation costs to be incurred during the period rates approved in this case will be in effect, the Commission determines that the "run rate" or the "ongoing compliance costs" mechanism advocated by DEC will not be approved. By requesting the creation of an ARO, in addition to the run rate, DEC concedes that treating CCR expenditures as a recurring test year expense is inadequate. Future annual costs, the evidence shows, are predicted to vary substantially from year to year. Instead, CCR remediation costs incurred by DEC during the period rates approved in this case will be in effect shall be booked to an ARO that shall accrue carrying costs at the approved overall cost of capital approved in this case (the net of tax rate of return, net of associated accumulated deferred income taxes). The Commission will address the appropriate amortization period in DEC's next general rate case, and, unless future imprudence is established, will permit earning a full return on the unamortized balance. While this ratemaking treatment will, in limited fashion, diminish the quality of DEC's earnings, over time, assuming reasonable and prudent CCR management practices, it permits appropriate recovery. Prior to the next rate case, the Commission shall require that DEC provide a detailed accounting of its Cost of Removal Reserve for its steam assets and how the Company is utilizing this Cost of Removal Reserve.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 73

The evidence supporting this finding and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, the Stipulation, and the entire record in this proceeding.

Public Staff witness Maness stated that coal ash costs prudently incurred from 2015 through 2017 (i.e., costs not subject to Public Staff recommended disallowances apart from equitable sharing) should be allowed provisional cost recovery. Tr. Vol. 22, pp. 63-64. He explained that the reasonableness of some of those costs may depend on the outcome of legal proceedings or other legal determinations, as described by witness Junis. Id. Witness Junis testified that environmental lawsuits had not been resolved for several DEC plants. Tr. Vol. 26, p. 732.

Witness Wright argued against witness Maness' recommendation of provisional cost recovery. Witness Wright stated that provisional rates appeared to be retroactive ratemaking and the utility should not be subject to hindsight review. Tr. Vol. 12, errata pp. 156-39-40.

Provisional cost recovery is appropriate in certain circumstances. However, the Commission is not persuaded that there is good cause to order provisional cost recovery of DEC's CCR costs that are approved in this Order. The Commission has weighed the Public Staff's and other intervenors' concerns about the pending insurance lawsuits and pending determinations by DEQ, EPA, and certain courts, that will establish whether past actions of DEC amount to environmental violations against the uncertainty that is inherent in provisional rates. With regard to the insurance litigation, DEC has committed that insurance proceeds recovered by DEC will benefit ratepayers as an off-set to DEC's CCR costs. Further, the insurance proceeds are not known and measurable as of the end of the test year. Moreover, the Commission has included in this Order specific reporting requirements and other conditions with which DEC must comply regarding the insurance proceeds.

With respect to pending determinations by EPA and DEQ, the Commission is not inclined to delay its work in order to wait for these agencies to complete their work. As a result, on balance the Commission finds and concludes that it will not order that the CCR cost recovery in this docket is provisional.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 74-75

The evidence supporting these findings and conclusions is contained in the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, the Stipulation, and the entire record in this proceeding.

DEC has used a demand allocation factor to allocate its costs related to its compliance with state and federal environmental regulations regarding coal ash pond closures in this case. Tr. Vol. 19, p. 39. Additionally, the Company has identified specific CAMA-related costs and allocated these costs directly to North Carolina customers. Tr. Vol. 6, p. 314.

Public Staff witness Maness recommended applying a jurisdictional allocation of all coal ash expenditures by a comprehensive system factor. Tr. Vol. 22, pp. 66-68. He stated that his adjustment removed the distinction between costs DEC described as CAMA-only and the remainder of the coal ash costs. Id. at 66. He stated that for CAMA-only costs, DEC utilized North Carolina retail allocation factors that do not allocate any of the system level costs to South Carolina retail operations. Id. at 67. He opined that even though some of the costs incurred by DEC are being incurred pursuant to North Carolina law, it is fair and reasonable to allocate those costs to the entire system because the coal plants associated with the costs are being, or were, operated to serve the entire DEC system. Id. Public Staff witness Maness also stated that he used the energy allocation factor to allocate system-level coal ash costs to North Carolina retail operations, rather than the demand-related production plant allocation factor utilized by the Company. Id. at 67-68. Witness Maness recommended that an energy allocator be used to determine the North Carolina retail portion of the coal ash costs because they are being incurred due to the fact that the coal ash was produced by the burning of coal to produce energy over the years, and like the cost of coal, should be allocated by energy, and not peak demand. Id. at 68.

NCSEA witness Barnes also objected to DEC's classification of coal ash costs as demand related. He argued that this approach is contrary to cost causation principles because coal ash is a by-product of consumption of a fuel, and the volume of coal ash produced is associated with overall energy use, not demand during a single hour of the year. He recommended that all coal ash remediation costs approved for recovery be allocated using an energy allocator. Tr. Vol. 20, p. 62.

Additionally, CIGFUR III witness Phillips testified in support of the Company's proposed allocation of coal ash management costs on a demand basis, stating that such allocation "is appropriate and should be approved." Tr. Vol. 26, p. 258. CIGFUR III witness Phillips further testified that coal ash is not a fuel, but an environmental waste with no energy potential. Id. at 271. Witness Phillips also stated that compliance costs associated with coal ash remediation did not exist at the time the coal was burned, but arose more recently. Id. Therefore, remediation costs should not be allocated on a kilowatt-hour basis. Id. Further, the investment associated with coal ash ponds is typically included in generation plant accounts and should be allocated on the same basis and DEC allocates generation plant based on demand. Id.

In her rebuttal testimony, DEC witness McManeus opposed witnesses Maness' recommendation that the costs DEC identified as "CAMA only" be allocated to all jurisdictions, instead of directly assigning these costs to North Carolina. Tr. Vol. 6, p. 313. Witness McManeus explained that while she generally agrees that the costs of a system should be borne by all of the users of the system, the Company has identified very specific cost categories that should be treated as an exception to this general rule due to their nature as being unique to North Carolina. Id. These cost categories include groundwater wells used specifically for CAMA purposes and permanent water supplies provided to North Carolina customers pursuant to CAMA. Tr. Vol. 14, p. 120. Witness McManeus explained that this allocation is consistent with prior Commission decisions related to the Company's costs of complying with other North Carolina laws including REPS and the North Carolina Clean Smokestacks rule. Tr. Vol. 6, pp. 313-14. Because the Commission has allowed the Company to recover 100% of its costs associated with complying with those North Carolina laws, the Company believes it is also appropriate that CAMA-specific costs be directly assigned to North Carolina customers. Id. at 314.

Additionally, Company witness Hager responded to witnesses Maness' and Barnes' recommendation to classify coal ash costs as demand related. Witness Hager explained that the costs in question are associated with compliance with federal and state environmental requirements related to closing coal ash ponds. Tr. Vol. 19, p. 39. Residual end of life costs typically and logically follow the cost of the plant, which is allocated based on demand. Id. This is supported by the fact that end of life costs (removal costs) and salvage values are factored into depreciation rates, and depreciation expenses are allocated based on demand. Id. Witness Hager also noted that it is also consistent with end-of-life nuclear fuel costs in nuclear decommissioning costs which are allocated based on demand. Id. at 39-40.

The Commission finds and concludes, with respect to the above-stated adjustments, that it is appropriate to (1) allocate the costs DEC has identified as "CAMA Only" costs by the comprehensive allocation factor, rather than a factor that does not allocate costs to the South Carolina retail; and (2) allocate all coal ash expenditures by the energy allocation factor, rather than the demand-related production plant allocation factor. Regarding the jurisdictional allocation, the Company had directly assigned costs for certain groundwater wells and permanent water supplies to North Carolina on the grounds that such costs were mandated by CAMA and were unique to North Carolina. Tr. Vol. 6, pp. 259, 313-14; Tr. Vol. 14, p. 134. In contrast, witness Maness argued the coal plants had served the entire North Carolina and South Carolina system of DEC, so the costs should be allocated across both jurisdictions. Tr. Vol. 22, pp. 66-67. Regarding the allocation factor, the Company recommended the demand-related factor (Tr. Vol. 6 p. 314; Tr. Vol. 19, pp 39-40), whereas the Public Staff argued for the energy-related factor because the amount of coal ash is related to the amount of energy produced. Tr. Vol. 22, pp. 67-68. The Commission agrees with Public Staff witness Maness that the amount of coal ash correlates with the amount of energy produced from coal, and that the entire DEC system benefited from that energy. Accordingly, and consistent with the Commission's February 23, 2018, Order in Docket No. E-2, Sub 1142, the Commission finds and concludes that the deferred coal ash costs should be allocated across the entire DEC system, and should be allocated on the energy-related factor.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 76-78

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

On February 26, 2018, the AGO filed a Stipulation as to Admission of Evidence. The AGO and DEC stipulated that the testimony given by Company witness David Fountain regarding insurance coverage in Docket No. E-2, Sub 1142 (DEP Rate Case), along with the associated exhibits, is appropriate to be admitted into evidence in the present case. The testimony was located in the DEP Rate Case in Volume 7 of the transcript in pages 368 through 505 and AGO Fountain Cross Examination Exhibits 1 through 8.

In its post hearing brief, the AGO requested that the Commission monitor the insurance litigation and contended that it would be appropriate for the Commission to make similar findings and conclusions regarding insurance that it made recently in the DEP Rate Order.

The Commission concludes that DEC should be required to place all insurance proceeds received or recovered by DEC in the Insurance Case in a regulatory liability account and hold such proceeds until the Commission enters an order directing DEC as to the appropriate disbursement of the proceeds. In addition, the regulatory liability account shall accrue a carrying charge at the overall rate of return authorized for DEC in this Order.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 79

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

With regard to DEC's CCR costs from 2018 forward, DEC witness McManeus testified that DEC is requesting to establish a regulatory asset/liability account and defer to this account the portion in annual rates that is more than DEC's actual costs, or the amount in annual rates that is less than DEC's actual costs. In essence, the asset/liability account would be a tool used to true-up the difference in DEC's next general rate case.

The Commission agrees with DEC's recommended approach, not only for CCR costs, but also for all cost deferral accounts. A deferred cost is not the same as the other cost of service expenses recovered in the Company's non-fuel base rates. A deferred cost is an exception to the general principle that the Company's current cost of service expenses should be recovered as part of the Company's current revenues. When the Commission approves a typical cost of service, such as salaries and depreciation expense, there is a reasonable expectation that the expense will continue at essentially the same level until the Company's next general rate case, at which time it will be reset. On the other hand, when the Commission approves a deferred cost the Commission identifies a specific amount that has already been incurred by the Company, or, in the case of CCR costs, is estimated to be incurred by the Company. In addition, the Commission sets the recovery of the amount over a specific period of time. Further, the Company is directed to record the recovery of the specific amount in a regulatory asset account, rather than a general revenue account. If DEC continues to recover that deferred cost for a longer period of time than the amortization period approved by the Commission that does not mean that DEC is then entitled to convert those deferred costs into general revenue and record them in its general revenue accounts. Rather, the Company should continue to record all amounts recovered as deferred costs in the specific regulatory asset account established for those deferred costs until the Company's next general rate case.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 80-82

The evidence supporting these findings of fact and conclusions is contained in the Stipulation, the Company's verified Application and Form E-1, the testimony and exhibits of the witnesses, and the entire record in this proceeding.

The Company presented Revised McManeus Stipulation Exhibit 1 – Updated for Post-Hearing Issues reflecting DEC's revised requested increase incorporating the provisions of the Stipulation, the Company's position on the unresolved issues and the impact of the EDIT decrement riders. Per those exhibits, the resulting proposed revenue requirement increase of the Company is $372,527,000. Boswell Corrected Third Supplemental and Stipulation Exhibit 1, Schedule 1 shows the Public Staff's revised recommended incorporating the provisions of the Stipulation, the impact of the EDIT decrement riders and its adjustments reflecting the Public Staff's position on the unresolved issues. The resulting proposed revenue requirement adjustment by the Public Staff is ($385,697,000).

As discussed in the body of this Order, the Commission approves the Stipulation in its entirety and makes its individual rulings on the unresolved issues as discussed. Due to the intricate and complex nature of some of the issues, the Commission requests that DEC recalculate the required annual revenue requirement as consistent with all of the Commission's findings and rulings herein within 10 days of the issuance of this Order. The Commission further orders that DEC work with the Public Staff to verify the accuracy of the recalculations. Once the Commission receives this filing, the Commission will work promptly to verify the calculations and will issue an Order with final revenue requirement numbers.

In addition, the Commission requests that DEC and the Public Staff provide the Commission with the demand and energy allocation factors that they, respectively, deem appropriate for allocating the CAMA costs to the North Carolina retail jurisdiction.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 83

The evidence supporting this finding of fact and conclusions is contained in the Company's verified Application, the testimony and exhibits of all the witnesses, the Stipulation, and the entire record in this proceeding.

Pursuant to N.C. Gen. Stat. § 62-133(a), the Commission is required to set rates that are "fair both to the public utilities and to the consumer." In order to strike this balance between the utility and its customers, the Commission must consider, among other factors, (1) the utility's reasonable and prudent cost of property used and useful in providing adequate, safe and reliable service to ratepayers, and (2) a rate of return on the utility's rate base that is both fair to ratepayers and provides an opportunity for the utility through sound management to attract sufficient capital to maintain its financial strength. See N.C. Gen. Stat. § 62-133(b). DEC's continued operation as a safe, adequate, and reliable source of electric service for its customers is vitally important to DEC's individual customers, as well as to the communities and businesses served by DEC. DEC presented credible and substantial evidence of its need for increased capital investment to, among other things, maintain and increase the reliability of its system and comply with environmental requirements.

Based on all of the evidence, the Commission finds and concludes that the revenue requirement, rate design and the rates that will result from this Order strike the appropriate balance between the interests of DEC's customers in receiving safe, reliable and efficient electric service at the lowest possible rates, and the interests of DEC in maintaining the Company's financial strength at a level that enables the Company to attract sufficient capital. As a result, the Commission concludes that the revenue requirement and the rates that will result from that revenue requirement established as a result of this Order are just and reasonable under the requirements of N.C. Gen. Stat. § 62-30, et seq.

IT IS, THEREFORE, ORDERED as follows:

1. That the Stipulation filed by DEC and the Public Staff on February 28, 2018, is hereby approved in its entirety.

2. That the Lighting Settlement entered into by DEC and NCLM, Concord, Kings Mountain, and Durham, is hereby approved in its entirety.

3. That DEC shall recalculate and file the annual revenue requirement with the Commission within 10 days of the issuance of this Order, consistent with the findings and conclusions of this Order and the Stipulation. The Company shall work with the Public Staff to verify the accuracy of the filing. DEC shall file schedules (North Carolina Retail Operations – Statement of Rate Base and Rate of Return, Statement of Operating Income, and Statement of Capitalization and Related Costs) summarizing the gross revenue and the rate of return that the Company should have the opportunity to achieve based on the Commission's findings and determinations in this proceeding. In addition, DEC and the Public Staff shall provide the Commission with the demand and energy allocation factors that they, respectively, deem appropriate for allocating the CAMA costs to the North Carolina retail jurisdiction.

4. That DEC is hereby authorized to adjust its rates and charges in accordance with the Stipulation and findings in this Order effective for service rendered on and after the following day after the Commission issues an Order accepting the calculations required by Ordering Paragraph No. 3.

5. That the Commission shall issue an Order approving the final revenue requirement numbers once received from DEC and verified by the Public Staff as soon as practicable.

6. That the appropriate revenue requirement for the first four years shall be reduced by the annual State EDIT rider decrement of $60,102,000.

7. That it is appropriate to recognize a $211,512,000 per year reduction in DEC's revenue requirement to reflect the current 21% Federal corporate income tax rate in DEC's base rates.

8. That DEC's proposed $200 million per year credit metric mitigation measure is denied.

9. That DEC shall continue to maintain all EDIT related to the Tax Act in a regulatory liability account for three years or until its next general rate case, whichever is sooner, at which point it will be returned to DEC's customers with interest reflected at the overall weighted cost of capital approved in this case of 7.35%. If DEC has not filed an application for a general rate case proceeding by June 22, 2021, it shall file its proposal by that date to flow back to its ratepayers both the protected and the unprotected EDIT generated due to the Tax Act. The federal EDIT flowback proposal should include all workpapers that support the proposed calculations. The Public Staff is specifically requested to file comments on the proposal by no later than July 22, 2021. Other parties also may file comments on the proposal by no later than July 22, 2021.

10. That DEC's request to establish a rider to recover Power Forward costs is denied.

11. That DEC's request, as an alternative to a rider, to establish a regulatory asset for the deferral of Power Forward costs is denied.

12. That DEC is instructed to collaborate with the intervening parties, through the generic and DEC-specific Integrated Resource Planning and Smart Grid Technology Plan docket, toward the goal of resolving some or all of the issues surrounding grid modernization and the most appropriate cost recovery mechanism for such costs.

13. That the Pilot Grid Rider Agreement and Stipulation is disapproved.

14. That the Company shall implement an increment rider, beginning on the effective date of rates in this proceeding, and expiring at the earlier of (a) May 31, 2020,[1] or (b) the last day of the month in which the Company's actual coal inventory levels return to a 35-day supply on a sustained basis, as defined in this Order, to allow the Company to recover the additional costs of carrying coal inventory in excess of a 35-day supply (priced at $73.23 per ton). The Company shall adjust the rider annually, concurrently with its DSM/EE, REPS, and fuel adjustment riders.

15. That on or before March 31, 2019, the Company, in consultation with the Public Staff, shall complete an analysis showing the appropriate coal inventory level given market and generation changes since the Company's rate case in Docket No. E-7, Sub 1026.

16. That the approved base fuel and fuel-related cost factors (excluding regulatory fee), by customer class, are as follows: 1.7828 cents per kWh for the Residential class, 1.9163 cents per kWh for the General Service/Lighting class, and 2.0207 cents per kWh for the Industrial class.

17. That the Company is hereby, authorized to establish a regulatory asset for deferral of post in-service costs for Lee CC, as described herein. These costs shall be amortized over a four-year period.

18. That DEC's request to cancel the Lee Nuclear Project is granted.

19. That DEC's request to recover its project development costs relating to the Lee Nuclear Project is granted, with the exception of costs relating to the Visitors Center and the 2018 AFUDC, as described herein.

20. That the balance of Lee Nuclear Project development costs, adjusted to remove land costs, shall be moved from CWIP Account 107 to regulatory asset Account 182.2 and amortized over a 12-year period, and that the Company shall not earn a return on the unamortized balance.

21. That the Public Staff's proposal that the Company be required to refund to customers $29 million per year relating to the Company's NDTF is hereby, denied.

22. That the depreciation rates proposed by DEC in this case, as modified by this order, are approved.

23. That the aspects of rate design agreed upon in the Stipulation are approved and shall be implemented.

---

[1] The Company may request an extension of the May 31, 2020 date.

24. That the Company shall increase the monthly BFC for the residential rate class (Schedules RS, RT, RE, ES and ESA) to $14.00. The BFC for other rate schedules shall remain unchanged.

25. That the Company is hereby authorized to establish a regulatory asset to defer and amortize expenses associated with the Customer Connect project. The regulatory asset account shall accrue AFUDC until the DEC Core Meter-to-Cash release (Releases 5-8) of the Customer Connect project goes into service or January 1, 2023, whichever is sooner. At that point, the costs will be amortized over 15 years.

26. That DEC shall file reports regarding the development, spending, and accomplishments of the Customer Connect project each year by February 15 for the next five years or until the Customer Connect project is fully implemented, whichever occurs later. Further, DEC and the Public Staff shall develop the reporting format for the annual Customer Connect project report and file the format with the Commission within 90 days of this Order.

27. That DEC shall prepare and file a lead-lag study in its next general rate case.

28. That DEC's request to recover its AMI costs of $90.9 million in this proceeding is hereby approved.

29. That within six months of the date of this Order, DEC shall file in this docket the details of proposed new time-of-use, peak pricing, and other dynamic rate structures that will, among other things, allow ratepayers in all customer classes to use the information provided by AMI to reduce their peak-time usage and to save energy.

30. That DEC's costs for AMR meters replaced by AMI shall be recovered over a 15-year period.

31. That the Company's proposal for a JRR, as modified by this Order, and the JRRR are hereby approved for a one-year pilot with an option to renew it for a second year if the Company provides evidence that the JRR is achieving its intended purpose.

32. That the JRR and JRRR revenues shall be reported to the Commission annually, if the JRR is in effect more than one year, and the JRRR shall be reviewed and will be subject to adjustment annually coincident with DEP's December fuel adjustment to match anticipated recovery revenues and true-up any past over-or under-recovery.

33. That due to the uncertain date of implementation, compliance tariffs shall be filed prior to implementation of the JRRR and customers shall be notified by bill insert or message upon implementation.

34. That with respect to the Company's vegetation management program, the Company shall eliminate the 13,467 miles of Existing Backlog, as described herein, within five years after the date rates go into effect in this proceeding.

35. That any accelerated amount of expenditures to eliminate the Existing Backlog shall not be used to increase the level of vegetation management expenses in future proceedings, but shall not prohibit the Company from seeking adjustments for vegetation management contractor increases.

36. That DEC shall provide a report annually to the Commission with the following information: (1) actual 5/7/9 and Existing Backlog miles maintained in the previous calendar year; (2) current level of Existing Backlog miles; (3) vegetation management maintenance dollars budgeted for the previous calendar year for 5/7/9 and Existing Backlog; and (4) vegetation management maintenance dollars expended in the previous calendar year for 5/7/9 and Existing Backlog.

37. That the proposed amendments to DEC's Service Regulations are hereby approved.

38. That the Public Staff shall facilitate discussions with the electric utilities to evaluate and document a basis for continued use of minimum system and to identify specific changes and recommendations as appropriate. If the Public Staff ultimately recommends an alternative approach to minimum system as a result of this review, then the support for that position should be clearly defined. The Public Staff shall submit a report on its findings and recommendations to the Commission no later than the end of the first quarter of 2019 in a new, generic electric utility docket to be established by the Chief Clerk for this purpose.

39. That DEC shall file annual cost of service studies based on Winter Coincident Peak as well as the SCP and SWPA methodologies. In its next general rate case, the Company shall prepare cost of service studies based on each of these methodologies.

40. That DEC's proposal to discontinue Residential Water Heating Service Controlled/Sub Metered Schedule is approved.

41. That DEC shall recover the actual coal ash basin closure costs DEC has incurred during the period from January 1, 2015, through December 31, 2017, in the amount of $545.7 million, to be adjusted based on the allocation factors to be provided by DEC and the Public Staff pursuant to Ordering Paragraph No. 3, and DEC is authorized to establish a regulatory asset as requested in the Company's petition in Docket No. E-7, Sub 1110. These costs shall be amortized over a five-year period, with a return on the unamortized balance and then reducing the resulting annual revenue requirement by $14 million for each of the five years.

42. That DEC shall not be allowed to recover on an ongoing basis $201.3 million in annual coal ash basin closure costs, subject to true-up in future rate cases. DEC is authorized to record its January 1, 2018 and future CCR costs in a deferred account until its next general rate case. This deferral account will accrue a return at the overall rate of return approved in this Order.

43. That within 10 days of the resolution by settlement, dismissal, judgment or otherwise of the litigation entitled Duke Energy Carolinas, LLC, et al. v. AG Insurance SA/NV, et al., Case No. 17 CVS 5594, Superior Court (Business Court), Mecklenburg County, North Carolina (Insurance Case), DEC shall file a report with the Commission explaining the result and

stating the amount of insurance proceeds to be received or recovered by DEC. This reporting requirement shall apply even if the case is appealed to a higher court.

44. That DEC shall place all insurance proceeds received or recovered by DEC in the Insurance Case in a regulatory liability account and hold such proceeds until the Commission enters an order directing DEC regarding the appropriate disbursement of the proceeds. The regulatory liability account shall accrue a carrying charge at the overall rate of return authorized for DEC in this Order.

45. That if DEC receives revenue for any deferred cost for a longer period of time than the amortization period approved by the Commission for that deferred cost, the Company shall continue to record all revenue received for that deferred cost in the specific regulatory asset account established for that deferred cost until the Company's next general rate case.

46. That the Commission's approval in the Order for deferral accounting and other accounting procedures is without prejudice to the right of any party to take issue with the amount of or the accounting treatment accorded these costs in any future regulatory proceeding.

47. That within 30 days of this Order, but no later than ten business days prior to the effective date of the new rates, DEC shall file for Commission approval five copies of all rate schedules designed to comply with this Order, accompanied by calculations showing the revenues that will be produced by the rates for each schedule. This filing shall include a schedule comparing the revenue that was produced by the filed schedules during the test period with the revenue that will be produced under the proposed settlement schedules, and the schedule illustrating the rates of return by class based on the revenues produced by the rates for each schedule.

48. That DEC shall submit a proposed customer notice to the Commission for review and approval, and upon approval of the notice by the Commission, shall give appropriate notice of the approved rate adjustment by mailing the notice to each of its North Carolina retail customers during the billing cycle following the effective date of the new rates.

ISSUED BY ORDER OF THE COMMISSION.
This the 22nd day of June, 2018.

ELECTRIC – RATE INCREASE

DOCKET NO. E-7, SUB 1146

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application of Duke Energy Carolinas, LLC, for Adjustment of Rates and Charges Applicable to Electric Utility Service in North Carolina	))))	ORDER APPROVING REVISED FUEL COST ADJUSTMENT RIDER

BY THE COMMISSION: On July 31, 2018, Duke Energy Carolinas, LLC (DEC) filed a revised Fuel Cost Adjustment Rider, along with a revised Summary of Rider Adjustments for approval. In its cover letter, DEC indicates that after consultation with the Public Staff, DEC has identified changes needed to its Fuel Cost Adjustment Rider in order for municipal customers on lighting Schedules GL and PL to remain fuel neutral from the fuel rate changes otherwise effective August 1, 2018.

IT IS, THEREFORE, ORDERED that the revised Fuel Cost Adjustment Rider shall be, and is hereby, approved, pro nunc tunc.

ISSUED BY ORDER OF THE COMMISSION.
This the 3rd day of August, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-7, SUB 1032

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of Application by Duke Energy Carolinas, LLC, for Approval of Residential Power Manager Program	)))	ORDER APPROVING PROGRAM MODIFICATIONS

BY THE COMMISSION: On December 28, 2017, Duke Energy Carolinas, LLC (DEC or the Company), filed an application seeking approval of its proposed modifications to its Residential Power Manager Program (Program) and associated tariff under Commission Rule R8-68. The Program was originally approved on October 29, 2013, and is a voluntary demand response program that allows the Company to limit the run time of participating customers' central air conditioning systems.

The proposed modifications to the Program would allow the Company to use a participating customer's thermostat to limit the run time of the customer's central air conditioning system. The Company's specific request is to: 1) include eligible customer- owned "smart" thermostats and related incentives and service charge, and 2) allow DEC to issue incentive payments in a variety of ways, including, but not limited to, bill credits, checks, and prepaid credit cards.

The application includes estimates of the Program's impacts, costs, and benefits used to calculate the cost-effectiveness of the Program. DEC's calculations indicate that the Program will remain cost-effective under the Total Resource Cost, the Utility Cost, and the Rate Impact Measure tests.

The Public Staff presented this matter at the Commission's Regular Staff Conference on February 5, 2018. The Public Staff stated that the Program has the potential to continue to encourage energy efficiency, appears to continue to be cost effective, will be included in future DEC IRPs, and is in the public interest. Therefore, the Public Staff recommended that the Commission approve the Program modifications.

Based on the foregoing and the entire record in this proceeding, the Commission finds good cause to approve the Program modifications. The Commission further finds and concludes that the appropriate ratemaking treatment for the Program, including program costs, net lost revenues, and performance incentives, should be determined in DEC's next annual cost recovery rider to be considered pursuant to Commission Rule R8-69.

IT IS, THEREFORE, ORDERED as follows:

1. That the proposed modifications to the Program are hereby approved pursuant to Commission Rule R8-68.

2. That the Commission shall determine the appropriate ratemaking treatment for the Program, including program costs, net lost revenues, and incentives, in DEC's annual cost recovery rider, in accordance with G.S. 62-133.9 and Commission Rule R8- 69.

3. That DEC shall file with the Commission, within 10 days following the date of this order, a revised tariff showing the effective date of the tariff.

ISSUED BY ORDER OF THE COMMISSION.
This the 7th day of February, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Commissioner Charlotte A. Mitchell did not participate in this decision.

DOCKET NO. E-7, SUB 1173

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Petition of Duke Energy Carolinas,	)	
LLC, for Approval of Its Rider US	)	ORDER APPROVING RIDER
(Unmetered Service)	)	

BY THE COMMISSION: On April 13, 2018, Duke Energy Carolinas, LLC (DEC or the Company), filed a request seeking approval of its proposed Unmetered Service rider (Rider US) and waiver of Commission Rule R8-8. Rider US is intended to provide unmetered service to small installations where it is impractical or uneconomical to meter electric service.

Commission Rule R8-8 requires customer bills to show the readings of the meter at the beginning and the end of each billing period. As it would not be possible to provide meter readings on a customer's bill when the service is provided on an unmetered basis, Duke is requesting waiver of this rule.

DEC stated that it was proposing Rider US in response to customer requests for service to small electric loads like wireless internet services and cameras which are mounted on Company-owned lighting poles and posts. DEC also stated that the types of equipment it expects to serve will require no more than 100 watts of electricity.

DEC further stated that the proposed tariff and rates were based on the estimated energy consumption associated with the equipment to be served. Monthly service under Rider US will be provided under Schedule SGS, with the customer paying the basic facilities charges and REPs charges under Schedule SGS, plus the applicable energy charges associated with the equipment installed under Rider US.

The Public Staff presented this matter to the Commission at its Regular Staff Conference on May 7, 2018. The Public Staff also stated that DEC had indicated to the Public Staff that (1) availability was limited to equipment mounted on Company-owned poles because these lighting facilities readily provide the connections needed to serve the equipment without additional facilities; (2) DEC was willing to serve multiple pieces of equipment on the same delivery point, provided the aggregate load of all equipment does not exceed 100 watts; and (3) that DEC's proposed rate structure for Rider US reduces presumed monthly usage for each wattage range by 4 kWh each month in acknowledgement of the lower cost to serve the unmetered loads in question.

Based on the foregoing, the Commission is of the opinion that DEC's request for approval of Rider US and waiver of Commission Rule R8-8 should be granted.

IT IS, THEREFORE, ORDERED that DEC's request to implement its Rider US is hereby approved as filed, waiver of Commission Rule R8-8 is granted, and that within 10 days following the date of this order, DEC shall file with the Commission a revised tariff showing the effective date.

ISSUED BY ORDER OF THE COMMISSION.
This the 7th day of May, 2018.

NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. E-2, SUB 1142
DOCKET NO. E-2, SUB 1153

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

DOCKET NO. E-2, SUB 1142 In the Matter of Application by Duke Energy Progress, LLC, For Adjustment of Rates and Charges Applicable to Electric Utility Service in North Carolina DOCKET NO. E-2, SUB 1153 In the Matter of Petition of Duke Energy Progress, LLC, for an Order Approving a Job Retention Rider	ORDER APPROVING JOB RETENTION RIDER TARIFFS AND BILL MESSAGE

BY THE CHAIRMAN: On February 23, 2018, the Commission issued an Order Accepting Stipulation, Deciding Contested Issues and Granting Partial Rate Increase (Rate Order) in the above-captioned dockets authorizing Duke Energy Progress, LLC (DEP) to adjust its rates and charges for retail electric service in North Carolina. In addition, the Rate Order approved DEP's application to implement a Job Retention Rider (JRR). Ordering Paragraph No. 25 directed DEP to file JRR compliance tariffs and a proposed bill insert or bill message prior to implementing the JRR.

On July 25, 2018, DEP filed its proposed JRR tariffs to be effective for service rendered on and after September 1, 2018, and a proposed bill message.

On August 2, 2018, the Public Staff filed a letter stating that it has reviewed the proposed tariffs and recommends that the Commission approve the tariffs.

Based on the foregoing and the record, the Chairman finds good cause to approve DEP's JRR tariffs and bill message.

IT IS, THEREFORE, SO ORDERED.

ISSUED BY ORDER OF THE COMMISSION.
This the 14th day of August, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-2, SUB 1170
DOCKET NO. E-7, SUB 1169

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Petition of Duke Energy Progress, LLC, and Duke Energy Carolinas, LLC, Requesting Approval of Green Source Advantage Program and Rider GSA to Implement G.S. 62-159.2	)))))	ORDER ESTABLISHING PROCEEDING TO REVIEW PROPOSED GREEN SOURCE RIDER ADVANTAGE PROGRAM AND RIDER GSA

BY THE CHAIRMAN: On July 27, 2017, House Bill 589 (Session Law 2017-192) was enacted into law. Part III of House Bill 589, enacted as G.S. 62-159.2, requires each electric utility serving more than 150,000 North Carolina retail jurisdictional customers, as of January 1, 2017, to file with the Commission an application requesting approval of a new program to procure renewable energy resources on behalf of North Carolina's major military installations, the University of North Carolina system, and large nonresidential customers served by the offering utility.

On January 22, 2018, in Docket Nos. E-2, Sub 1170, and E-7, Sub 1169, Duke Energy Progress, LLC, and Duke Energy Carolinas, LLC (collectively Duke), jointly filed a proposed Green Source Rider advantage program and rider GSA, consistent with the requirements of Section 3.(b) of House Bill 589.

The Chairman, therefore, finds good cause to initiate this proceeding to review Duke's proposed Green Source Rider advantage program and rider GSA. The Chairman invites interested persons to petition to intervene and to provide comments or suggestions to assist the Commission in its review of Duke's proposed Green Source Rider advantage program and rider GSA.

IT IS, THEREFORE, ORDERED as follows:

1. That the participation of the Public Staff is recognized pursuant to G.S. 62-15(d) and Commission Rule R1-19(e);

2. That other interested persons wishing to become formal parties and participate in this proceeding may file petitions to intervene pursuant to Commission Rules R1-5 and R1-19 on or before February 23, 2018;

3. That the Public Staff and intervenors may file initial comments or suggestions, as provided herein, on or before February 23, 2018;

4. That all parties may file reply comments or suggestions, as provided herein, on or before March 16, 2018; and

5. That, upon receipt of the parties' initial and reply comments, the Commission will proceed appropriately in deciding whether to approve Duke's proposed Green Source Rider advantage program and rider GSA.

ISSUED BY ORDER OF THE COMMISSION.
This the 26th day of January, 2018.

For the Using and Consuming Public:

Robert B. Josey, Jr., Staff Attorney, Public Staff, North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300

BY THE COMMISSION: On June 20, 2018, Duke Energy Progress, LLC (Duke Energy Progress, DEP, or the Company), filed an application pursuant to N.C. Gen. Stat. § 62-133.2 and Commission Rule R8-55 regarding fuel and fuel-related cost adjustments for electric utilities, along with the testimony and exhibits of Kendra A. Ward, Eric S. Grant, Joseph A. Miller, Jr., Kelvin Henderson, and Kenneth D. Church.

Petitions to intervene were filed by the North Carolina Sustainable Energy Association (NCSEA) on June 28, 2018, by Carolina Industrial Group for Fair Utility Rates II (CIGFUR) on July 3, 2018, and by Carolina Utility Customers Association, Inc. (CUCA) on July 19, 2018. The Commission granted NCSEA's petition to intervene on June 29, 2018, CIGFUR's petition to intervene on July 6, 2018, and CUCA's petition to intervene on July 24, 2018.

On July 2, 2018, the Commission entered an Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines, and Requiring Public Notice. That Order provided that direct testimony of intervenors should be filed on September 4, 2018, that rebuttal testimony should be filed on September 12, 2018, and that a hearing on this matter would be held on September 18, 2018.

The intervention of the Public Staff is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e). On September 13, 2018, DEP filed affidavits of publication indicating that public notice had been provided in accordance with the Commission's procedural Order issued on July 2, 2018. On August 29, 2018, the Public Staff filed the affidavit of Jenny X. Li and the affidavit of Dustin R. Metz, in accordance with N.C. Gen. Stat. § 62-68. On September 10, 2018, DEP filed a motion requesting that DEP witnesses Kendra A. Ward, Eric Grant, Kenneth D. Church, Kelvin Henderson and Joseph A. Miller, Jr., be excused from appearance at the expert witness hearing, representing that all parties to the proceeding had agreed to waive cross-examination of the witnesses. On September 12, 2018, the Commission granted the motion, excusing DEP witnesses Ward, Grant, Miller, Henderson, and Church from appearing at the expert witness hearing.

The case came on for hearing as scheduled on September 18, 2018. The application, prefiled direct testimony and exhibits of DEP's witnesses and the prefiled affidavits of the Public Staff's witnesses were received into evidence. No other party presented witnesses, and no public witnesses appeared at the hearing. The Public Staff and DEP filed a joint proposed order on October 18, 2018.

Based upon the Company's verified application, the testimony, affidavits, and exhibits received into evidence at the hearing, the affidavits of the Public Staff and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

1. Duke Energy Progress is a duly organized corporation existing under the laws of the State of North Carolina, is engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North Carolina, and is subject to the jurisdiction of the Commission as a public utility. Duke Energy Progress is lawfully before this Commission based upon its application filed pursuant to N.C. Gen. Stat. § 62-133.2.

2. The test period for purposes of this proceeding is the 12 months ended March 31, 2018 (test period).

3. In its application and testimony in this proceeding, DEP requested a total increase of approximately $226 million to its North Carolina retail revenue requirement associated with fuel and fuel-related costs, excluding the regulatory fee. The fuel and fuel-related cost factors requested by DEP included Experience Modification Factor (EMF) riders to take into account fuel and fuel-related cost under-recoveries experienced during the test period of approximately $224. This includes the deferred under-recovered balance of approximately $42 million carried forward from the prior year's filing in Docket No. E-2, Sub 1146.

4. The Company's baseload plants were generally managed prudently and efficiently during the test period so as to minimize fuel and fuel-related costs.

5. The Company's fuel and reagent procurement and power purchasing practices during the test period were reasonable and prudent.

6. The test period per book system sales are 62,453,151 megawatt-hours (MWh). The test period per book system generation (net of auxiliary use and joint owner generation) and purchased power is 70,851,204 MWh and is categorized as follows:

Net Generation Type	MWh
Coal	9,240,778
Natural Gas, Oil and Biomass	22,933,359
Nuclear	29,666,537
Hydro – Conventional	587,221
Solar	247,821
Purchased Power – subject to economic dispatch or curtailment	3,549,071
Other Purchased Power	4,626,417
Total Net Generation (may not add to sum due to rounding)	70,851,204

7. The appropriate nuclear capacity factor for use in this proceeding is 94.1%.

8. The North Carolina retail test period sales, adjusted for customer growth and weather, for use in calculating the EMF are 37,259,304 MWh. The adjusted North Carolina retail customer class MWh sales are as follows:

N.C. Retail Customer Class	Adjusted MWh Sales
Residential	15,621,843
Small General Service	1,891,451
Medium General Service	11,038,646
Large General Service	8,346,128
Lighting	361,235
Total (may not add to sum due to rounding)	37,259,304

9. The projected billing period (December 2018-November 2019) sales for use in this proceeding are 62,133,368 MWh on a system basis and 37,659,805 MWh on a North Carolina retail basis. The projected billing period North Carolina retail customer class MWh sales are as follows:

N.C. Retail Customer Class	Projected MWh Sales
Residential	15,956,916
Small General Service	1,795,996
Medium General Service	10,351,641
Large General Service	9,176,034
Lighting	379,219
Total (may not add to sum due to rounding)	37,659,805

10. The projected billing period system generation and purchased power for use in this proceeding in accordance with projected billing period system sales is 68,667,857 MWh and is categorized as follows:

Generation Type	MWh
Coal	5,721,568
Gas Combustion Turbine (CT) and Combined Cycle (CC)	22,506,145
Nuclear	29,210,311
Hydro	606,686
Solar	304,154
Purchased Power	10,318,993
Total (may not add to sum due to rounding)	68,667,857

11. The appropriate fuel and fuel-related prices and expenses for use in this proceeding to determine projected system fuel expense are as follows:

A. The coal fuel price is $33.54/MWh.
B. The gas CT and CC fuel price is $29.04/MWh.
C. The appropriate expense for ammonia, lime, limestone, urea, dibasic acid, sorbents, and catalysts consumed in reducing or treating emissions (collectively, Reagents) is $14,989,402.
D. The total nuclear fuel price (including Joint Owners generation) is $6.72/MWh.
E. The total system purchased power cost (including the impact of Joint Dispatch Agreement (JDA) Savings Shared and the impact of House Bill 589, N.C. Sess. L. 2017-192), is $529,383,055.
F. System fuel expense recovered through intersystem sales is $105,350,249.

12. The projected fuel and fuel-related costs for the North Carolina retail jurisdiction for use in this proceeding are $844,290,141.

13. The Company's appropriate North Carolina retail jurisdictional fuel and fuel-related expense under-collection for purposes of the EMF was $224,334,099, consisting of under-recoveries of $89,796,902; $6,865,500; $37,833,573; $86,641,717 and $3,196,403, for the Residential, Small General Service, Medium General Service, Large General Service, and Lighting classes, respectively. These amounts include the deferred under-recovered balance from the prior year as follows: $21,282,684; $1,023,834; $17,750,323 and $1,807,912 for the Residential, Small General Service, Large General Service, and Lighting classes, respectively.

14. The increase in customer class fuel and fuel-related cost factors from the amounts approved in Docket No. E-2, Sub 1146 should be allocated among the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology that was approved by the Commission in that docket.

15. The appropriate prospective fuel and fuel-related cost factors for this proceeding for each of DEP's rate classes, excluding the regulatory fee, are as follows: 2.311¢/kilowatt-hour (kWh) for the Residential class; 2.556¢/kWh for the Small General Service class; 2.477¢/kWh for the Medium General Service class; 1.757¢/kWh for the Large General Service class; and 2.251¢/kWh for the Lighting class.

16. The appropriate EMFs established in this proceeding, excluding the regulatory fee, are as follows: 0.575¢/kWh for the Residential class; 0.363¢/kWh for the Small General Service class; 0.343¢/kWh for the Medium General Service class; 1.038¢/kWh for the Large General Service class; and 0.885¢/kWh for the Lighting class.

17. The total net fuel and fuel-related cost factors for this proceeding for each of DEP's rate classes, excluding the regulatory fee, are as follows: 2.886¢/kWh for the Residential class; 2.919¢/kWh for the Small General Service class; 2.820¢/kWh for the Medium General Service class; 2.795¢/kWh for the Large General Service class; and 3.136¢/kWh for the Lighting class.

18. In this proceeding, DEP included a rate to recover a revenue deficiency related to a fuel EMF that expired and was removed from billed rates on November 30, 2017, but was inadvertently included in the calculation of the compliance rates filed effective March 16, 2018, in DEP's general rate case, Docket No. E-2, Sub 1142. The following rates by class for the EMF Deficiency Rider will be in effect for a 12-month period expiring on and after November 30, 2019: 0.022¢/kWh for the Residential class; 0.052¢/kWh for the Small General Service class; 0:068¢/kWh for the Medium General Service class; 0.002¢/kWh for the Large General Service class; and (0.046)¢/kWh for the Lighting class.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 1

This Finding of Fact is essentially informational, procedural, and jurisdictional in nature and is uncontroverted.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 2

Section 62-133.2(c) of the North Carolina General Statutes sets out the verified, annualized information that each electric utility is required to furnish to the Commission in an annual fuel and fuel-related cost adjustment proceeding for a historical 12-month test period. Commission Rule R8-55(b) prescribes the 12 months ending March 31 as the test period for DEP. The Company's filing in this proceeding was based on the 12 months ended March 31, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 3

The evidence for this Finding of Fact is contained in the application, the direct testimony of Company witness Ward and the entire record in this proceeding. This finding is not contested by any party.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 4

The evidence for this Finding of Fact is contained in the testimony of Company witnesses Henderson and Miller, and the affidavit of Public Staff affiant Metz.

Commission Rule R8-55(d)(1) provides that capacity factors for nuclear production facilities will be normalized based generally on the national average for nuclear production facilities as reflected in the most recent North American Electric Reliability Corporation (NERC)

Generating Availability Report, adjusted to reflect the unique, inherent characteristics of the utility facilities and any unusual events. Company witness Henderson testified that DEP's nuclear fleet consists of three generating stations and a total of four units. He testified that the Company's four nuclear units operated at a system average capacity factor of 95.67% during the test period. This capacity factor, as well as the Company's 2-year average capacity factor of 94.66%, exceeded the five-year industry weighted average capacity factor of 90.03% for the period 2012-2016 for average comparable units on a capacity-rated basis, as reported by NERC in its latest Generating Unit Statistical Brochure.

Company witness Miller testified concerning the performance of DEP's fossil/hydro assets. He stated that the Company's generating units operated efficiently and reliably during the test period. He explained that several key measures are used to evaluate operational performance, depending on the generator type: (1) equivalent availability factor (EAF), which refers to the percentage of a given time period a facility was available to operate at full power, if needed (EAF is not affected by the manner in which the unit is dispatched or by the system demands; it is impacted, however, by planned and unplanned (*i.e.*, forced) outage time); (2) net capacity factor (NCF), which measures the generation that a facility actually produces against the amount of generation that theoretically could be produced in a given time period, based upon its maximum dependable capacity (NCF *is* affected by the dispatch of the unit to serve customer needs); (3) equivalent forced outage rate (EFOR), which represents the percentage of unit failure (unplanned outage hours and equivalent unplanned derated hours); a low EFOR represents fewer unplanned outage and derated hours, which equates to a higher reliability measure; and (4) starting reliability, which represents the percentage of successful starts.

Witness Miller presented the following chart, which shows operational results, categorized by generator type, as well as results from the most recently published NERC Generating Unit Statistical Brochure for the period 2012 through 2016:

Generator Type	Measure	Review Period DEP Operational Results	2012-2016 NERC Average	Nbr of Units
Coal-Fired Test Period	EAF	78.0%	82.0%	446
	NCF	29.6%	58.3%	
	EFOR	8.0%	7.6%	
Coal-Fired Summer Peak	EAF	90.5%	n/a	n/a
Total CC Average	EAF	85.2%	84.8%	301
	NCF	78.0%	53.0%	
	EFOR	0.69%	5.5%	
Total CT Average	EAF	79.4%	87.6%	826
	SR	98.2%	98.1%	
Hydro	EAF	95.8%	81.1%	1,120

Company witness Miller also testified that the Company, like other utilities across the United States, has experienced a change in the dispatch order for each type of generating facility due to continued favorable economics resulting from the lower pricing of natural gas. Gas-fired facilities provided 69% of the DEP fossil/hydro generation during the test period.

The Commission finds and concludes that DEP generally managed its baseload plants prudently and efficiently to minimize fuel and fuel-related costs.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 5

Commission Rule R8-52(b) requires each electric utility to file a Fuel Procurement Practices Report at least once every 10 years and each time the utility's fuel procurement practices change. The Company's revised fuel procurement practices were filed with the Commission in Docket No. E-100, Sub 47A in 2008, and were in effect throughout the 12 months ending March 31, 2018. In addition, the Company files monthly reports of its fuel and fuel-related costs pursuant to Commission Rule R8-52(a). Further evidence for this Finding of Fact is contained in the testimony of Company witnesses Ward, Grant, Miller, and Church.

Company witness Ward testified that DEP's fuel procurement strategies that mitigate volatility in supply costs are a key factor in DEP's ability to maintain lower fuel and fuel-related rates. Other key factors include DEP's diverse generating portfolio mix of nuclear, coal, natural gas, and hydro; lower natural gas and coal prices; the capacity factors of its nuclear fleet; the combination of DEP's and DEC's respective skills in procuring, transporting, managing and blending fuels and procuring reagents; the increased and broader purchasing ability of the combined companies; and the joint dispatch of DEP's and DEC's generation resources.

Company witness Grant described DEP's fossil fuel procurement practices, set forth in Grant Exhibit 1. Those practices include computing near and long-term consumption forecasts, determining and designing inventory targets, inviting proposals from all qualified suppliers, awarding contracts based on the lowest evaluated offer, monitoring delivered coal volume and quality against contract commitments, and conducting short-term and spot purchases to supplement term supply.

According to witness Grant, the Company's average delivered coal cost per ton increased approximately 1%, from $80.26 per ton in the prior test period to $80.82 per ton in the test period. The Company's transportation costs increased approximately 5%, from $28.03 per ton in the prior test period to $29.42 per ton in the test period.

Witness Grant stated that DEP's current coal burn projection for the billing period is 2.3 million tons compared to 3.9 million tons consumed during the test period. DEP's billing period projections for coal generation may be impacted due to changes from, but not limited to, the following factors: delivered natural gas prices versus the average delivered cost of coal, volatile power prices, and electric demand. Combining coal and transportation costs, DEP projects average delivered coal costs of approximately $81.65 per ton for the billing period compared to $80.82 per ton in the test period.

According to witness Grant, DEP continues to maintain a comprehensive coal and natural gas procurement strategy that has proven successful over the years in limiting average annual fuel price changes while actively managing the dynamic demands of its fossil fuel generation fleet in a reliable and cost-effective manner.

Witness Grant further testified that DEP's current natural gas burn projection for the billing period is approximately 171.8 million MMBtu, which is an increase from the 169.4 million MMBtu consumed during the test period. The current average forward Henry Hub price for the billing period is $2.81 per MMBtu, compared to $3.03 per MMBtu in the test period. Witness Grant also testified that the Company's average price of gas purchased for the test period was $4.68 per MMBtu, compared to $4.00 per MMBtu in the prior test period, representing an increase of approximately 17%.

Pursuant to N.C. Gen. Stat. § 62-133.2(a1)(3), DEP is allowed to recover the cost of "ammonia, lime, limestone, urea, dibasic acid, sorbents, and catalysts consumed in reducing or treating emissions." Company witness Miller testified that the Company's fossil/hydro/solar generation portfolio consists of 9,268 MWs of generating capacity, 3,544 MWs of which is coal-fired generation across three generating stations and a total of seven units. These units are equipped with emission control equipment, including selective catalytic reduction (SCR) equipment for removing nitrogen oxides (NOx), flue gas desulfurization (FGD or scrubber) equipment for removing sulfur dioxide (SO_2), and low NOx burners. This inventory of coal-fired assets with emission control equipment enhances DEP's ability to maintain current environmental compliance and concurrently utilize coal with increased sulfur content, thereby providing flexibility for DEP to procure the most cost-effective options for fuel supply.

Company witness Miller further testified that overall, the type and quantity of chemicals used to reduce emissions at the plants vary depending on the generation output of the unit, the chemical constituents in the fuel burned, and/or the level of emissions reduction required.

Company witness Church testified that DEP's nuclear fuel procurement practices involve computing near and long-term consumption forecasts, establishing nuclear system inventory levels, projecting required annual fuel purchases, requesting proposals from qualified suppliers, negotiating a portfolio of long-term contracts from diverse sources of supply, and monitoring deliveries against contract commitments. Witness Church explained that for uranium concentrates, conversion, and enrichment services, long-term contracts are used extensively in the industry to cover forward requirements and ensure security of supply. He also stated that, throughout the industry, the initial delivery under new long-term contracts commonly occurs several years after contract execution. For this reason, DEP relies extensively on long-term contracts to cover the largest portion of its forward requirements. By staggering long-term contracts over time for these components of the nuclear fuel cycle, DEP's purchases within a given year consist of a blend of contract prices negotiated at many different periods in the markets, which has the effect of smoothing out the Company's exposure to price volatility. He further stated that diversifying fuel suppliers reduces DEP's exposure to possible disruptions from any single source of supply. Due to the technical complexities of changing fabrication services suppliers, DEP generally sources these services to a single domestic supplier on a plant-by-plant basis using multi-year contracts.

Under N.C. Gen. Stat. §§ 62-133.2(a1)(4), (5), (6), and (7), utilities are permitted to recover the cost of non-capacity power purchases subject to economic dispatch or economic curtailment; capacity costs of power purchases associated with qualifying facilities subject to economic dispatch; certain costs associated with power purchases from renewable energy facilities; and the fuel costs of other power purchases. Company witness Grant testified that DEP and DEC utilize the same process to ensure that the assets of the Companies are reliably and economically available to serve their respective customers. To that end, both companies consider numerous factors such as the latest forecasted fuel prices, transportation rates, planned maintenance and refueling outages at the generating units, estimated forced outages at generating units based on historical trends, generating unit performance parameters, and expected market conditions associated with power purchases and off-system sales opportunities in order to determine the most economic and reliable means of serving their customers.

No party presented testimony contesting the Company's fuel and reagent procurement and power purchasing practices. Based upon the fuel procurement practices report, the evidence in the record, and the absence of any testimony to the contrary, the Commission finds and concludes that these practices were reasonable and prudent during the test period.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 6

The evidence supporting this finding of fact is contained in the testimony and exhibits of Company witness Ward.

According to the exhibits sponsored by Company witness Ward, the test period per book system sales were 62,453,151 MWh, and test period per book system generation and purchased power amounted to 70,851,204 MWh (net of auxiliary use and joint owner generation). The test period per book system generation and purchased power are categorized as follows (Ward Exhibit 7):

Net Generation Type	MWh
Coal	9,240,778
Natural Gas, Oil and Biomass	22,933,359
Nuclear	29,666,537
Hydro – Conventional	587,221
Solar	247,821
Purchased Power – subject to economic dispatch or curtailment	3,549,071
Other Purchased Power	4,626,417
Total Net Generation (may not add to sum due to rounding)	70,851,204

The evidence presented regarding the operation and performance of the Company's generation facilities is discussed in the Evidence and Conclusions for Finding of Fact No. 4.

No party contested witness Ward's exhibits setting forth per books system sales, generation by fuel type, and purchased power. Therefore, based on the evidence presented and noting the absence of evidence presented to the contrary, the Commission finds and concludes that the per books levels of test period system sales of 62,453,151 MWh and system generation and purchased power of 70,851,204 MWh are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 7

The evidence supporting this Finding of Fact is contained in the testimony and exhibits of Company witness Henderson and the affidavit of Public Staff witness Metz.

Commission Rule R8-55(d)(1) provides that capacity factors for nuclear production facilities will be normalized based generally on the national average for nuclear production facilities as reflected in the most recent NERC Generating Availability Report, adjusted to reflect the unique, inherent characteristics of the utility's facilities and any unusual events. The Company proposed using a 94.1% capacity factor in this proceeding based on the operational history of the Company's nuclear units, and the number of planned outage days scheduled during the 2018-2019 billing period. This proposed capacity factor exceeds the five-year industry weighted average capacity factor of 90.03% for the period 2012-2016 for average comparable units on a capacity-rated basis, as reported by NERC in its latest Generating Availability Report. Public Staff affiant Metz did not dispute the Company's proposed use of a 94.1% capacity factor.

Based upon the requirements of Commission Rule R8-55(d)(1), the historical and reasonably expected performance of the DEP system, and the fact that no party disputed the Company's proposed capacity factor, the Commission finds and concludes that the 94.1% nuclear capacity factor, and its associated generation of 29,210,311 MWh, are reasonable and appropriate for determining the appropriate fuel and fuel-related costs in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 8-10

The evidence supporting these Findings of Fact is contained in the testimony and exhibits of Company witness Ward.

On her Exhibit 4, Company witness Ward set forth the test year per books North Carolina retail sales, adjusted for weather and customer growth, of 37,259,304 MWh, comprised of Residential class sales of 15,621,843 MWh, Small General Service sales of 1,891,451 MWh, Medium General Service sales of 11,038,646 MWh, Large General Service sales 8,346,128 MWh, and Lighting class sales of 361,235 MWh.

Witness Ward used projected billing period system sales, generation, and purchased power to calculate the proposed prospective component of the fuel and fuel-related cost factors. The projected system sales level used, as set forth on Ward Exhibit 2, Schedule 1, is 62,133,368 MWh. The projected level of generation and purchased power used was 68,667,857 MWh (calculated using the 94.1% capacity factor found reasonable and appropriate above), and was broken down by witness Ward as follows, as set forth on that same schedule:

Generation Type	MWh
Coal	5,721,568
Gas Combustion Turbine and Combined Cycle	22,506,145
Nuclear	29,210,311
Hydro	606,686
Solar	304,154
Purchased Power	10,318,993
Total (may not add to sum due to rounding)	68,667,857

As part of her Workpaper 7, Company witness Ward also presented an estimate of the projected billing period North Carolina retail Residential, Small General Service, Medium General Service, Large General Service, and Lighting MWh sales. The Company estimated billing period North Carolina retail MWh sales to be as follows:

N.C. Retail Customer Class	Projected MWh Sales
Residential	15,956,916
Small General Service	1,795,996
Medium General Service	10,351,641
Large General Service	9,176,034
Lighting	379,219
Total (may not add to sum due to rounding)	37,659,805

These class totals were used in Ward Exhibit 2, Schedule 1, in calculating the total fuel and fuel-related cost factors by customer class.

Based on the evidence presented by the Company, the Public Staff's acceptance of the amounts presented by the Company, and the absence of evidence presented to the contrary, the Commission finds and concludes that the projected North Carolina retail levels of sales set forth in the Company's exhibits (normalized for customer growth and weather), as well as the projected levels of generation and purchased power, are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSION FOR FINDING OF FACT NO. 11

The evidence supporting this Finding of Fact is contained in the testimony and exhibits of Company witnesses Ward and Grant, and the affidavit of Public Staff witness Metz.

In her Exhibit 2, Schedule 1, Company witness Ward recommended the fuel and fuel-related prices and expenses. The total adjusted system fuel and fuel-related expense, based in part on the use of these amounts, is utilized to calculate the prospective fuel and fuel-related cost factors recommended by the Company and the Public Staff.

In his affidavit, Public Staff witness Metz stated that, based on his investigation, the projected fuel and fuel-related costs (including reagents) set forth in DEP's application and testimony are reasonable and in accordance with the requirements of N.C. Gen. Stat. § 62-133.2.

No other party presented evidence on the level of DEP's fuel and fuel-related prices and expenses.

Based upon the evidence in the record as to the appropriate fuel and fuel-related prices and expenses, the Commission finds and concludes that the fuel and fuel-related prices recommended by Company witness Ward and accepted by the Public Staff for purposes of determining projected system fuel expense are reasonable and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 12

The evidence supporting this Finding of Fact is contained in the testimony and exhibits of Company witness Ward and the affidavit of Public Staff witness Metz.

According to Ward Exhibit 2, Schedule 1, the projected fuel and fuel-related costs for the North Carolina retail jurisdiction for use in this proceeding are $844,290,141. Public Staff witness Metz did not take issue with her calculation.

Aside from the Company and the Public Staff, no other party presented or elicited testimony contesting the Company's projected fuel and fuel-related costs for the North Carolina retail jurisdiction. Based upon the evidence in the record and the absence of any direct testimony to the contrary, the Commission finds and concludes that the Company's projected total fuel and fuel-related cost for the North Carolina retail jurisdiction of $844,290,141 is reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NOS. 13-17

The evidence supporting these Findings of Fact is contained in the testimony and exhibits of Company witness Ward, the affidavits of Public Staff witnesses Li and Metz.

Company witness Ward presented DEP's fuel and fuel-related expense (over)/under-collection and prospective fuel and fuel-related cost factors. Company witness Ward's testimony sets forth the projected fuel and fuel-related costs, the amount of (over)/under-collection for purposes of the EMF, the method for allocating the decrease in fuel and fuel-related costs, the composite fuel and fuel-related cost factors, and the EMFs, along with revised exhibits and work papers. Public Staff witness Li agreed that DEP's EMF increment/(decrement) riders for each customer class should be approved based on the following under-recoveries, including the previously deferred under-recovery of $42 million from the prior year fuel proceeding, Docket No. E-2, Sub 1146:

N.C. Retail Customer Class	Under - Recovery
Residential	$89,796,902
Small General Service	6,865,500
Medium General Service	37,833,573
Large General Service	86,641,717
Lighting	3,196,403
Total (may not add to sum due to rounding)	$224,334,099

As a result of these amounts, Public Staff witnesses Li and Metz recommended approval of the following EMF increment/(decrement) billing factors, excluding the regulatory fee:

N.C. Retail Customer Class	EMF Increment/ (Decrement) (cents/kWh)
Residential	0.575
Small General Service	0.363
Medium General Service	0.343
Large General Service	1.038
Lighting	0.885

The Commission finds and concludes that the EMF increment/(decrement) billing factors set forth in the affidavit of Public Staff witness Li and the affidavit of Public Staff witness Metz are reasonable and appropriate for use in this proceeding.

Company witness Ward calculated the Company's proposed fuel and fuel-related cost factors using a uniform bill adjustment method. She stated that the increase in fuel costs from the amounts approved in Docket No. E-2, Sub 1146 should be allocated among the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology utilized in past DEP fuel cases approved by the Commission. No party opposed the use of this allocation method. Public Staff witness Metz recommended the approval of the prospective and total fuel and fuel-related cost factors (excluding regulatory fee) set forth in the Company's application and the testimony of witness Ward.

Based upon the testimony and exhibits in the record, the Commission finds and concludes that DEP's projected fuel and fuel-related cost of $844,290,141 for the North Carolina retail jurisdiction for use in this proceeding is reasonable. The Commission also finds and concludes that the EMF increment/(decrement) riders and the EMF interest decrement rider for each class set forth in the affidavit of Public Staff witness Li and the affidavit of Public Staff witness Metz in this proceeding, excluding the regulatory fee, and the Public Staff's prospective fuel and fuel-related cost factors proposed in this proceeding for each of the rate classes, are appropriate. Additionally, the Commission finds and concludes that DEP's increase in fuel and fuel-related costs from the amounts approved in Docket No. E-2, Sub 1146 should be allocated among the rate classes on a uniform percentage basis, using the uniform bill adjustment methodology approved by this Commission in DEP's past fuel cases.

The test period and projected fuel and fuel-related costs, and the proposed factors, including the EMFs, are not opposed by any party. Accordingly, the overall fuel and fuel-related cost calculation, incorporating the conclusions reached herein, results in net fuel and fuel-related cost factors of 2.886¢/kWh for the Residential class, 2.919¢/kWh for the Small General Service class, 2.820¢/kWh for the Medium General Service class, 2.795¢/kWh for the Large General Service class, and 3.136¢/kWh for the Lighting class, excluding regulatory fee, consisting of the prospective fuel and fuel-related cost factors of 2.311¢/kWh, 2.556¢/kWh, 2.477¢/kWh, 1.757¢/kWh, and 2.251¢/kWh, EMF increments/(decrements) of 0.575¢, 0.363¢, 0.343¢, 1.038¢, and 0.885¢/kWh, and EMF interest decrements of 0.000¢/kWh, 0.000¢/kWh, 0.000¢/kWh, 0.000¢/kWh and 0.000¢/kWh for the Residential, Small General Service, Medium General

Service, Large General Service, and Lighting classes, respectively, all excluding the regulatory fee. The billing factors, both excluding and including the regulatory fee, are shown in Appendix A to this Order.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 18

The evidence supporting this Finding of Fact is contained in the testimony and exhibits of Company witness Ward.

Company witness Ward testified that a revenue deficiency had resulted from a fuel EMF that expired and was removed from billed rates on November 30, 2017, but was inadvertently included in the calculation of compliance rates filed effective March 16, 2018, in DEP's general rate case, Docket No. E-2, Sub 1142. Witness Ward further testified that this under-collection without interest for the time period March 16, 2018 – May 31, 2018 will be recovered over a 12-month period expiring on and after November 30, 2019. The proposed EMF Deficiency Riders by class are as follows: 0.022¢/kWh for the Residential class; 0.052¢/kWh for the Small General Service class; 0.068¢/kWh for the Medium General Service class; 0.002¢/kWh for the Large General Service class; and (0.046)¢/kWh for the Lighting class.

Based on the evidence presented by DEP, and noting the absence of evidence presented to the contrary by any other party, the Commission finds and concludes that the Company's fuel EMF deficiency rider rates are reasonable.

IT IS, THEREFORE, ORDERED as follows:

1. That effective for service rendered on and after December 1, 2018, DEP shall adjust the base fuel and fuel-related cost factors in its North Carolina retail rates, as approved in Docket No. E-2, Sub 1142, amounting to 1.993¢/kWh for the Residential class, 2.088¢/kWh for the Small General Service class, 2.431¢/kWh for the Medium General Service class, 2.253¢/kWh for the Large General Service class, and 0.596¢/kWh for the Lighting class (all excluding the regulatory fee), by amounts equal to 0.318¢/kWh, 0.468¢/kWh, 0.046¢/kWh, (0.496)¢/kWh and 1.655¢/kWh, respectively, and further, that DEP shall adjust the resulting approved prospective fuel and fuel-related cost factors by EMF increments/(decrements) of 0.575¢/kWh for the Residential class, 0.363¢/kWh for the Small General Service class, 0.343¢/kWh for the Medium General Service class, 1.038¢/kWh for the Large General Service class, and 0.885¢/kWh for the Lighting class (excluding the regulatory fee) and EMF interest decrements of 0.000¢/kWh for the Residential class, 0.000¢/kWh for the Small General Service class, 0.000¢/kWh for the Medium General Service class, and 0.000¢/kWh for the Large General Service class (excluding the regulatory fee). The EMF increments are to remain in effect for service rendered through November 30, 2019;

2. That effective for service rendered on and after December 1, 2018, DEP shall bill the following fuel EMF Deficiency Riders: 0.022¢/kWh for the Residential class; 0.052¢/kWh for the Small General Service class; 0.068¢/kWh for the Medium General Service class; 0.002¢/kWh for the Large General Service class; and (0.046)¢/kWh for the Lighting class;

3. That DEP shall file appropriate rate schedules and riders with the Commission in order to implement these approved rate adjustments as soon as practicable; and

4. That DEP shall work with the Public Staff to jointly prepare a proposed notice to customers of the rate adjustments ordered by the Commission in Docket Nos. E-2, Subs 1173, 1175, and 1176 and the Company shall file the proposed notice to customers for Commission approval as soon as practicable.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

Appendix A

EXCLUDING REGULATORY FEE

	A	B	C	D	E	F

ELECTRIC -- RATE SCHEDULES/RIDERS/SERVICE RULES AND REGULATIONS

DOCKET NO. E-2, SUB 1174

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Progress, LLC,	)	
for Approval of Demand-Side Management	)	ORDER APPROVING
and Energy Efficiency Cost Recovery Rider	)	DSM/EE RIDER AND REQUIRING
Pursuant to N.C. Gen. Stat. § 62-133.9 and	)	FILING OF CUSTOMER NOTICE
Commission Rule R8-69	)	

HEARD: Tuesday, September 18, 2018, in Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner ToNola D. Brown-Bland, Presiding; Chairman Edward S. Finley, Jr.; Commissioners Jerry C. Dockham, James G. Patterson, Lyons Gray, Daniel G. Clodfelter, and Charlotte A. Mitchell

APPEARANCES:

For Duke Energy Progress, LLC:

Kendrick C. Fentress, Associate General Counsel, Duke Energy Corporation 401 South Wilmington Street, Raleigh, North Carolina 27602

For the Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For the Carolina Industrial Group for Fair Utility Rates II:

Warren K. Hicks, Bailey & Dixon, LLP, 434 Fayetteville Street, Suite 2500, Raleigh, North Carolina 27602

For the North Carolina Sustainable Energy Association:

Benjamin Smith, Regulatory Counsel, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

For the North Carolina Justice Center, Southern Alliance for Clean Energy, Natural Resource Defense Council, and North Carolina Housing Coalition:

David Neal, Senior Attorney, Southern Environmental Law Center, 601 West Rosemary Street, Suite 220, Chapel Hill, North Carolina 27516

For the Using and Consuming Public:

Lucy E. Edmondson and Heather D. Fennell, Public Staff – North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699

BY THE COMMISSION: Pursuant to N.C. Gen. Stat. § 62-133.9(d) the North Carolina Utilities Commission (Commission) is authorized to approve an annual rider to the rates of electric public utilities, outside of a general rate case, for recovery of all reasonable and prudent costs incurred for adoption and implementation of new demand-side management (DSM) and energy efficiency (EE) measures. The Commission is also authorized to award incentives to electric companies for adopting and implementing new DSM/EE measures, including, but not limited to, appropriate rewards based on (1) the sharing of savings achieved by the DSM and EE measures and/or (2) the capitalization of a percentage of avoided costs achieved by the measures. Commission Rule R8-69(b) provides that every year the Commission will conduct a proceeding for each electric public utility to establish an annual DSM/EE rider to recover the reasonable and prudent costs incurred by the electric utility in adopting and implementing new DSM/EE measures previously approved by the Commission pursuant to Commission Rule R8-68. Further, Commission Rule R8-69(b) provides for the establishment of a DSM/EE experience modification factor (EMF) rider to allow the electric public utility to collect the difference between reasonable and prudently incurred costs and the revenues that were actually realized during the test period under the DSM/EE rider then in effect. Commission Rule R8-69(c) permits the utility to request the inclusion of utility incentives (the rewards authorized by the statute), including net lost revenues (NLR), in the DSM/EE rider and the DSM/EE EMF rider.

On June 20, 2018, Duke Energy Progress, LLC (DEP or the Company), filed an application for approval of its annual DSM/EE cost recovery rider (Application) pursuant to N.C. Gen. Stat. § 62-133.9 and Commission Rule R8-69. Along with the Application, DEP filed the associated testimony and exhibits of Carolyn T. Miller and Robert P. Evans in support of recovery of DSM/EE costs and utility incentives forecasted for the rate period of January 1, 2019 through December 31, 2019, including program expenses, amortizations and carrying costs associated with deferred prior period costs, Distribution System Demand Response (DSDR) depreciation and capital costs, NLR, and program and portfolio performance incentives (PPI). In addition, DEP asked for approval of an EMF component of its DSM/EE rider to true-up its actual DSM/EE costs and utility incentives during the test period of January 1, 2017 through December 31, 2017.

On July 2, 2018, the Commission issued an order scheduling a public hearing in this matter for September 18, 2018, establishing discovery guidelines, providing for intervention and testimony by other parties, and requiring public notice (Scheduling Order). On September 13, 2018, DEP filed its affidavits of publication indicating that the Company had provided notice in newspapers of general circulation as required by the Commission's Scheduling Order.

The intervention of the Public Staff is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e). On June 28, 2018, the North Carolina Sustainable Energy Association (NCSEA) filed a petition to intervene, which was granted by Commission order on June 29, 2018. On July 3, 2018, the Carolina Industrial Group for Fair Utility Rates II (CIGFUR II) filed a petition to intervene, which was granted by Commission order on July 6, 2018. On

July 19, 2018, the Carolina Utility Customers Association, Inc. (CUCA) filed a petition to intervene, which was granted by Commission order on July 24, 2018. On August 2, 2018, the North Carolina Justice Center, Southern Alliance for Clean Energy, Natural Resources Defense Council, and North Carolina Housing Coalition (collectively, NC Justice Center) filed a petition to intervene, which was granted by Commission order on August 14, 2018.

On September 4, 2018, NC Justice Center filed the testimony and exhibits of Christopher Neme, and the Public Staff filed the testimony and exhibits of Michael C. Maness, David M. Williamson, and John R. Hinton.

On September 10, 2018, DEP filed the supplemental testimony and exhibits of witness Miller and the supplemental exhibits of witness Evans (Supplemental Filing). The Supplemental Filing supported adjustments to the PPI relating to Vintage 2016 and Vintage 2017 of the EnergyWise for Business program; adjustments to Vintage 2016 and Vintage 2017 lost revenues to align with the final outcome of DEP's most recent general rate case in Docket No. E-2, Sub 1142; and adjustments to the valuation of Vintage 2017 lost revenues allocated to the non-residential lighting program.

Also on September 10, 2018, the Company filed a Motion for Additional Public Hearing and Public Notice of Revised Proposed Rates. On September 11, 2018, the Commission issued an order scheduling an additional public hearing in this matter for October 8, 2018, and requiring public notice. On October 5, 2018, DEP filed its affidavits of publication indicating that the Company had provided notice in newspapers of general circulation as required by the Commission's September 11, 2018 order. On October 16, 2018, the Company filed additional affidavits of publication that it had been unable to obtain earlier due to Hurricane Florence.

On September 12, 2018, DEP filed the rebuttal testimony and exhibit of Timothy J. Duff and the rebuttal testimony of witness Evans.

On September 12, 2018, NC Justice Center filed a motion to excuse witness Neme from appearing at the September 18, 2018 hearing. On September 13, 2018, the Public Staff and DEP filed a motion to excuse their witnesses. On September 13, 2018, the Commission issued an order granting both motions.

On September 17, 2018, the Public Staff filed the supplemental testimony and exhibit of witness Maness, which incorporated the impact of the Public Staff's recommended adjustments to avoided costs to be used in the determination of the PPI and reflected the termination of the Residential Smart $aver EE Program, as well as the three adjustments made in DEP witness Miller's supplemental testimony and exhibits.

On September 18, 2018, the hearing was held as scheduled. No public witnesses appeared at the hearing.

On September 21, 2017, DEP filed the Affidavit of witness Evans authenticating Supplemental Evans Exhibit 9.

On October 8, 2018, the additional public hearing was held as scheduled. No public witnesses appeared at the hearing.

On October 18, 2018, the Public Staff filed a letter stating it had completed its review of DEP's 2017 DSM/EE program costs and had found no exceptions.

On October 18, 2018, DEP filed a proposed order, NC Justice Center filed a brief, NCSEA filed post-hearing comments, and the Public Staff filed a proposed order.

Cost Recovery Mechanism

On June 15, 2009, in Docket No. E-2, Sub 931, the Commission issued an Order Approving Agreement and Stipulation of Partial Settlement, Subject to Certain Commission-Required Modifications in DEP's first DSM/EE rider proceeding (Sub 931 Order). In the Sub 931 Order, the Commission approved, with certain modifications, an Agreement and Stipulation of Partial Settlement (Stipulation) between DEP, the Public Staff, and Wal-Mart Stores East, LP, and Sam's East, Inc., setting forth the terms and conditions for approval of DSM/EE measures and the annual DSM/EE rider proceedings pursuant to N.C. Gen. Stat. § 62-133.9 and Commission Rules R8-68 and R8-69. The Stipulation included a Cost Recovery and Incentive Mechanism for DSM and EE Programs (Original Mechanism), which was modified by the Commission in its Sub 931 Order and subsequently in its Order Granting Motions for Reconsideration in Part issued on November 25, 2009, in the same docket. The Original Mechanism as approved after reconsideration allows DEP to recover all reasonable and prudent costs incurred and utility incentives earned for adopting and implementing new DSM and EE measures in accordance with N.C. Gen. Stat. § 62-133.9, Commission Rules R8-68 and R8-69, and the additional principles set forth in the Original Mechanism.

On January 20, 2015, in Docket No. E-2, Sub 931, the Commission issued an Order Approving Revised Cost Recovery and Incentive Mechanism and Granting Waivers. In that Order, the Commission approved an agreement between DEP, the Public Staff, Natural Resources Defense Council (NRDC), and Southern Alliance for Clean Energy (SACE) proposing revisions to the Original Mechanism, generally to be effective January 1, 2016 (Revised Mechanism). The Revised Mechanism allows DEP to recover all reasonable and prudent costs incurred and utility incentives earned for adopting and implementing new DSM and EE measures in accordance with N.C. Gen. Stat. § 62-133.9, Commission Rules R8-68 and R8-69, and the additional principles set forth in the Revised Mechanism.

On November 27, 2017, in Docket No. E-2, Sub 1145 (Sub 1145), the Commission issued its Order Approving DSM/EE Rider and Requiring Filing of Proposed Customer Notice (Sub 1145 Order), in which it approved the agreement to revise certain provisions of the Revised Mechanism reached by the Company and the Public Staff. The Revised Mechanism, as revised by the Sub 1145 Order, is set forth in Maness Exhibit I and referred to herein as the "Mechanism."

In the present proceeding, based upon DEP's verified Application, the parties' testimony and exhibits received into evidence, and the record as a whole, the Commission makes the following:

ELECTRIC -- RATE SCHEDULES/RIDERS/SERVICE RULES AND REGULATIONS

FINDINGS OF FACT

1. DEP is a duly organized limited liability company existing under the laws of the State of North Carolina, is engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North and South Carolina, and is subject to the jurisdiction of the Commission as a public utility. DEP is lawfully before this Commission based upon its Application filed pursuant to N.C. Gen. Stat. § 62-133.9 and Commission Rule R8-69.

2. The test period for purposes of this proceeding extends from January 1, 2017 through December 31, 2017.

3. The rate period for purposes of this proceeding extends from January 1, 2019 through December 31, 2019.

4. DEP has requested approval for the recovery of costs, and utility incentives where applicable, related to the following DSM/EE programs:

Residential
- Appliance Recycling
- EE Education Program
- Multi-Family EE
- My Home Energy Report (MyHER)
- Neighborhood Energy Saver (Low-Income)
- Smart $aver EE Program (formerly, Home Energy Improvement Program)
- New Construction
- EnergyWise (Load Control)
- Save Energy and Water Kit
- Energy Assessment

Non-Residential
- Smart $aver Energy Efficient Products and Assessments (formerly, EE for Business)
- Smart $aver Performance Incentive Program
- Small Business Energy Saver
- Commercial, Industrial, and Governmental (CIG) Demand Response Automation
- EnergyWise for Business

Residential and Non-Residential
- DSDR
- EE Lighting

These programs are eligible for cost and utility incentive recovery, where applicable.

5. For purposes of inclusion in this DSM/EE rider the Company's portfolio of DSM and EE programs is cost-effective.

6. The MyHER and Non-Residential Smart $aver Performance Incentive Programs do not require additional scrutiny at this time. However, if the programs do not project cost-effectiveness for future vintages, pursuant to Paragraph 22B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program in its next DSM/EE rider proceeding.

7. The Residential Smart $aver EE Program should not be terminated at this time. DEP should propose modifications to this program not later than December 31, 2018, with the goal of restoring the Total Resource Cost test result to 1.00 or greater. DEP should include a discussion of the impact of these modifications and other actions it has taken to improve cost-effectiveness in its next year's DSM/EE rider proceeding.

8. The evaluation, measurement, and verification (EM&V) reports filed as Evans Exhibits A, B, C, D, E, F, G, H, and K are acceptable for purposes of this proceeding and should be considered complete for purposes of calculating program impacts. DEP has appropriately incorporated the results of these EM&V reports into the DSM/EE rider calculations.

9. Acceptance of the EM&V report for the MyHER Program (Evans Exhibit I) should be postponed and addressed in next year's proceeding pending completion of the Public Staff's review.

10. The EM&V recommendations contained in the testimony of Public Staff witness Williamson are appropriate for inclusion in future EM&V reports for the applicable EE programs, when feasible and not cost prohibitive, including certain program vintages that remain to be verified and trued up.

11. The Company has complied with the Commission's requirement that DEP monitor the changes in annual ratios of allocations between non-DSDR and DSDR equipment and report the degree of change in its annual DSM/EE rider filing. No change in the allocation ratio applicable to capacitors was necessary for 2018. The allocation ratio applied to regulators was elevated from 77.79 percent to 79.45 percent for 2018. Annual review of the allocation ratios should continue, should be reported to the Public Staff each year, and any changes should be addressed in future rider proceedings.

12. It is inappropriate to calculate the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs under the assumption that capacity avoided prior to year 2022 be assigned a zero dollar value. The Public Staff's recommendation of such, and the corresponding reduction to the Company's Vintage 2019 PPI, should not be accepted.

13. In its direct testimony and exhibits, DEP requested the recovery of NLR in the amount of $40,178,116 and PPI in the amount of $21,846,452 through the EMF component of the total DSM/EE rider, and NLR of $32,348,840 and PPI of $25,997,556 for recovery in the forward-looking, or prospective component of the total rider. As a result of additional analysis performed by DEP and discussions with the Public Staff during the course of the proceeding, in its Supplemental Filing, the Company corrected its EMF NLR amount to $40,144,647 and the

EMF PPI amount to $21,798,731. The Company also corrected its prospective NLR amount to $31,947,155, as reflected in its Supplemental Filing. DEP's proposed recovery of NLR and PPI, as adjusted by the Supplemental Filing, is consistent with the Mechanism and is appropriate, subject to further review to the extent allowed in the Mechanism.

14. For purposes of the DSM/EE rider to be set in this proceeding and subject to review in DEP's future DSM/EE rider proceedings, the reasonable and appropriate estimate of the Company's North Carolina retail DSM/EE program rate period amounts, consisting of its amortized operations and maintenance (O&M) costs, depreciation, capital costs, taxes, amortized incremental administrative and general (A&G) costs, carrying charges, NLR, and PPI, is $175,770,263, and this is the appropriate amount to use to develop the forward-looking DSM/EE revenue requirement. This amount is the total of the $176,171,948 proposed in DEP's initial filing and the total adjustment of $(401,685) reflected in DEP's Supplemental Filing.

15. For purposes of the EMF component of its DSM/EE rider, DEP's reasonable and prudent North Carolina retail test period costs and incentives, consisting of its amortized O&M costs, capital costs, taxes, amortized incremental A&G costs, carrying charges, NLR, and PPI, are $168,007,613. This amount is the total of the $168,088,803 proposed in DEP's initial filing and the total EMF adjustment of $(81,190) reflected in DEP's Supplemental Filing. The reasonable and appropriate amount of test period DSM/EE rider revenues and miscellaneous adjustments to take into consideration in determining the test period DSM/EE under- or over-recovery is $157,320,600. Therefore, the test period revenue requirement, minus the test period revenues collected and miscellaneous adjustments, leaves $10,687,013 as the test period under-collection that is appropriate to use as the DSM/EE EMF revenue requirement in this proceeding.

16. After assignment or allocation to customer classes in accordance with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, and the Commission orders in Docket No. E-2, Sub 931, the revenue requirements for each rate class, excluding the North Carolina Regulatory Fee (NCRF), are as follows:

DSM/EE PROSPECTIVE COMPONENT:	
Residential	$100,657,479
General Service EE	68,669,252
General Service DSM	6,086,071
Lighting	357,461
Total	$175,770,263
DSM/EE EMF:	
Residential	$ 494,880
General Service EE	11,979,271
General Service DSM	(1,790,030)
Lighting	2,892
Total	$10,687,013

17. The appropriate and reasonable North Carolina retail class level kilowatt-hour (kWh) sales for use in determining the DSM/EE and DSM/EE EMF billing factors in this proceeding are:

Rate Class	kWh Sales
Residential	15,740,238,953
General Service EE	9,852,771,378
General Service DSM	9,737,467,991
Lighting	361,265,217

18. The appropriate DSM/EE EMF billing factors, excluding NCRF, are: 0.003 cents per kWh for the Residential class; 0.122 cents per kWh for the EE component of the General Service classes; (0.018) cents per kWh for the DSM component of the General Service classes, and 0.001 cents per kWh for the Lighting class. These DSM/EE EMF billing factors do not change when the NCRF is included.

19. The appropriate forward-looking DSM/EE rates to be charged by DEP during the rate period, excluding NCRF, are: 0.640 cents per kWh for the Residential class; 0.697 cents per kWh for the EE component of the General Service classes; 0.063 cents per kWh for the DSM component of the General Service classes; and 0.099 cents per kWh for the Lighting class. The appropriate forward-looking DSM/EE rates to be charged by DEP during the rate period, including NCRF, are: 0.641 cents per kWh for the Residential class; 0.698 cents per kWh for the EE component of the General Service classes; 0.063 cents per kWh for the DSM component of the General Service classes; and 0.099 cents per kWh for the Lighting class.

20. DEP should leverage its collaborative stakeholder meetings (Collaborative) to discuss the EM&V issues and program design issues raised in the testimony of NC Justice Center witness Neme and report the results of those discussions in the Company's 2019 DSM/EE rider filing.

21. Beginning in 2019, the Company should increase the frequency of the Collaborative meetings so that the combined DEP/Duke Energy Carolinas, LLC (DEC) Collaborative meets every two months.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 1

This finding of fact, which is supported by DEP's Application, is essentially informational, procedural, and jurisdictional in nature and is uncontroverted.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 2-3

No party opposed DEP's proposed rate period and test period. The rate period and test period proposed by DEP are consistent with the Mechanism approved by the Commission. The proposed rate period and test period are reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 4

The evidence for this finding of fact can be found in DEP's application, the testimony and exhibits of DEP witnesses Miller and Evans, the testimony of Public Staff witness Williamson, and various Commission orders in program approval dockets.

DEP witness Miller's testimony shows the portfolio of DSM/EE programs that is associated with the Company's request for approval of this rider. The direct testimony of DEP witness Evans lists the DSM/EE programs for which the Company is requesting cost recovery, and incentives where applicable, in this proceeding. Those programs are:

Residential

- Appliance Recycling
- EE Education Program
- Multi-Family EE
- MyHER
- Neighborhood Energy Saver (Low-Income)
- Smart $aver EE Program (formerly, Home Energy Improvement Program)
- New Construction
- EnergyWise (Load Control)
- Save Energy and Water Kit
- Energy Assessment

Non-Residential

- Smart $aver Energy Efficient Products and Assessments (formerly, EE for Business)
- Smart $aver Performance Incentive Program
- Small Business Energy Saver
- CIG Demand Response Automation
- EnergyWise for Business

Residential and Non-Residential

- DSDR
- EE Lighting

In his testimony, Public Staff witness Williamson also listed the DSM/EE programs for which the Company seeks cost recovery and noted that each of these programs has received approval as a new DSM or EE program and is eligible for cost recovery in this proceeding under N.C. Gen. Stat. § 62-133.9.

Thus, the Commission finds and concludes that each of the programs listed by witnesses Evans and Williamson has received Commission approval as a new DSM or EE program and is, therefore, eligible for cost recovery in this proceeding under N.C. Gen. Stat. § 62-133.9.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-7

The evidence for these findings can be found in the testimony and exhibits of Company witness Evans, Public Staff witness Williamson, and NC Justice Center witness Neme.

DEP witness Evans testified that the Company reviewed the portfolio of DSM/EE programs and performed prospective analyses of each of its programs and the aggregate portfolio for the Vintage 2019 period, the results of which are incorporated in Evans Exhibit No. 7. He noted that the Company's aggregate portfolio continues to project cost-effectiveness. However, DEP's calculations indicate that that the following programs do not pass the Total Resource Cost test (TRC) threshold of 1.00: Residential Smart $aver (TRC of 0.57); My Home Energy Report (TRC of 0.96); and Non-Residential Smart $aver Performance Incentive (TRC of 0.92).

Public Staff witness Williamson stated in his testimony that he reviewed DEP's calculations of cost-effectiveness under each of the four standard cost-effectiveness tests – the Utility Cost Test (UCT), TRC, Participant, and Ratepayer Impact Measure (RIM) tests. The Public Staff also compared the cost-effectiveness test results in previous DSM/EE proceedings to the current filing and developed a trend of cost-effectiveness that serves as the basis for the Public Staff's recommendation of whether a program should be terminated. Witness Williamson testified that while many programs continue to be cost-effective, the TRC scores as filed by the Company for all programs have decreased since the 2017 DSM/EE rider proceeding, mainly due to changes in avoided costs, but also due to updated EM&V and program participation.

Witness Williamson explained that the Public Staff does not agree with the avoided capacity rates used by the Company in its calculations of cost-effectiveness filed in this proceeding. Under the Public Staff's interpretation, the avoided capacity rates would reflect zero avoided capacity values in years prior to the identified need for new capacity in the underlying Integrated Resource Plan (IRP) that serves as the basis for the avoided capacity rate calculations.

As reflected in Evans Exhibit 7, under DEP's calculations of cost-effectiveness, the Residential Smart $aver EE Program, MyHER Program, and Non-Residential Smart $aver Performance Incentive Program are not projected to be cost-effective for Vintage 2019 under the TRC test. Under the Public Staff's methodology (i.e., applying zero capacity value for years prior to 2022), the Residential New Construction, EE for Business, and EnergyWise for Business programs would also not be cost-effective under the TRC test for Vintage 2019.

Witness Williamson recommended that pursuant to the Mechanism, the Company should provide a discussion in its filing for next year's DSM/EE rider proceeding on the actions being taken to maintain or improve the cost-effectiveness of the MyHER and the Non-Residential Smart $aver Performance Incentive Programs. Under Paragraph 22 and Paragraphs 22A-D of the Mechanism, the Company is directed to take certain actions for programs that are not projected to be cost-effective. According to Paragraph 22B-22D of the Mechanism, if a program demonstrates a prospective TRC score of less than 1.0 in a DSM/EE rider proceeding, the Company should provide a discussion of the actions being taken to maintain or improve the program's cost-effectiveness. If a program demonstrates a prospective TRC score of less than 1.00 in a third

DSM/EE rider proceeding, the Company will terminate the program at the end of the year following the DSM/EE rider order, unless otherwise ordered by the Commission.

DEP witness Evans in his rebuttal testimony notes that the TRC score for the MyHER Program is 0.96, and given how close the program is to being cost-effective, Paragraph 22B of the Mechanism should not be applicable. In his rebuttal testimony, he also notes that the Non-Residential Smart $aver Performance Incentive Program should not be subject to the scrutiny of Paragraph 22B because it has only been in place a short period of time, and it is anticipated to be cost-effective.

NC Justice Center witness Neme testified that DEP's DSM/EE portfolio is very cost-effective, demonstrating that DSM/EE programs are a least cost resource for meeting consumers' electricity needs. Based on DEP's estimated UCT benefit-cost ratio, he stated that for every dollar that DEP spends on its programs, it is eliminating the need to spend $2.63 on new power plants, the fuel to run those power plants, new power lines, and other investments otherwise needed to supply electricity to homes and businesses. DEP's analysis also suggests that the programs are very cost-effective under the TRC test, with a benefit cost-ratio of approximately 2.1 to 1.

As a whole, the Commission concludes that DEP's portfolio of DSM and EE programs is cost-effective and eligible for inclusion in the Company's DSM/EE rider. The Commission makes specific findings and conclusions as to the individual programs that DEP and/or the Public Staff have identified as not being cost-effective below.

Residential New Construction, EE for Business, and EnergyWise for Business

Witness Williamson testified that DEP's EnergyWise for Business Program is a DSM program that draws the majority of its avoided cost benefits from capacity and transmission and distribution (T&D) reductions. He acknowledged that using the Company's application of avoided capacity costs, this program is cost-effective under the TRC test. However, when using the Public Staff's methodology, this program is no longer cost-effective. Thus, according to witness Williamson, pursuant to Paragraph 22B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program. He recommended further that pursuant to Paragraph 22C of the Mechanism, if this program shows a prospective TRC of less than 1.00 in next year's DSM/EE rider proceeding, the Company should include a discussion of what actions it has taken to improve cost-effectiveness.

Like EnergyWise for Business, the Residential New Construction and EE for Business programs are cost-effective under the TRC test using the Company's application of avoided capacity costs, but drop below 1.00 after incorporating zeros for the value of calculating avoided costs pursuant to the Public Staff's methodology. As a result, witness Williamson recommended that, pursuant to Paragraph 22B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program.

In his rebuttal testimony, witness Evans indicated that the Company does not agree with the application of zero avoided capacity cost values proposed by the Public Staff for the determination of program cost-effectiveness. He reiterated that while use of the Public Staff's proposed zero avoided capacity cost values would render the EnergyWise for Business, EE for Business, and Residential New Construction programs non-cost-effective, these programs are considered to be cost-effective under the avoided cost rates applied by the Company. He concluded that because these programs are cost-effective under the TRC test using the Company's methodology, Paragraph 22B of the Mechanism does not apply. He added that it is important to recognize that these programs constitute a significant portion of the Company's DSM/EE portfolio, which demonstrates the impact that the Public Staff's position on avoided costs could have on the Company's portfolio.

In Docket No. E-7, Sub 1164, Duke Energy Carolinas, LLC's (DEC's) most recent DSM/EE Rider proceeding, the Commission concluded that it was inappropriate to calculate the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the DEC's DSM/EE programs under the assumption that capacity avoided prior to year 2023 be assigned a zero dollar value. As a result, the Commission held in its order dated September 11, 2018 (DEC Order), that the Public Staff's recommendation otherwise, the same argument the Public Staff is making here, should be rejected. For the reasons stated in the DEC Order, the Commission declines to accept the Public Staff's position that capacity avoided by DEP prior to year 2023 be assigned a zero dollar value.

The parties note that the EnergyWise for Business, EE for Business, and Residential New Construction programs are cost-effective under the TRC test using DEP's calculation of avoided capacity costs. Therefore, the Commission finds that these programs are cost-effective, and no further action is required by the Company.

<u>MyHER Program</u>

Witness Williamson recommended that the Company be required to provide a discussion in the next proceeding on the actions being taken to maintain or improve cost-effectiveness of the MyHER program, or alternatively, its plans to terminate this program, under Paragraph 22B of the Mechanism.

Witness Evans testified that the Company's EM&V for the MyHER Program indicates a TRC result of 0.96, which is very close to 1.0. He noted that there has only been a single EM&V study performed on the MyHER Program and that this single program constitutes a significant portion of the Company's portfolio. He explained that this is merely a short-term issue that will resolve itself over time. Witness Evans testified that the program is still relatively young (launched in March 2015) and was evaluated shortly after its launch (evaluation period of calendar year 2016). Witness Evans stated that based on the MyHER results the Company has experienced in other jurisdictions where the program has been in the market longer (including DEC), the Company believes that the savings realized by participants will increase as customer engagement becomes more established. In addition, witness Evans stated that the Company continues to work with the program vendor to identify potential cost savings for the program. Given the closeness of the applicable cost-effectiveness test to 1.00 and the importance of the program, he testified that he would not recommend that MyHER fall under the provisions of Paragraph 22B of the Mechanism at this time.

Non-Residential Smart $aver Performance Incentive Program

Evans Exhibit 7 reflects the forecasted 2019 TRC score for the Non-Residential Smart $aver Performance Incentive Program is 0.92, and the UCT score is 3.75. DEP Witness Evans pointed out that these scores are significantly greater than the 0.40 TRC and 0.54 UCT scores submitted in the Company's 2017 cost recovery request. He noted that while the 0.92 TRC score may be viewed as slightly less than optimal in isolation, this program encompasses energy saving measures related to new technologies, unknown building conditions and system constraints, as well as uncertain operating circumstances, occupancy, or production schedules. He noted that as such, energy savings are difficult to project with any level of accuracy and that due to the scope of projects envisioned, the Company also believes that the program could impact a customer's decision to opt into the EE portion of the rider. Witness Evans further testified that if this program were no longer offered as part of the Company's EE portfolio, additional customers may elect to opt out as a result. Witness Evans testified that the program also limits the prospects of overcompensating participants at the expense of other customers, or undercompensating participants for their EE improvements. He emphasized that the Company believes that this program is an important element of its non-residential portfolio of programs and that its cost-effectiveness results will continue to improve as more customers become familiar with it and participation increases.

Witness Williamson testified that the Non-Residential Smart $aver Performance Incentive Program was launched in January 2017. He indicated that though this is the second year that the program has not been cost-effective, the Public Staff prefers to give new programs a year to get established before directing the Company to take action to improve cost-effectiveness. He then recommended that the Company be required to provide a discussion in the next proceeding on the actions being taken to maintain or improve cost-effectiveness of the Non-Residential Smart $aver Performance Incentive Program, or alternatively, its plans to terminate this program, under Paragraph 22B of the Mechanism.

In his rebuttal testimony, witness Evans reiterated that the program was intended to encompass large EE-related projects with uncertainty relative to their performance (e.g., projects that employ new technologies). He explained that related program incentives are provided in installments based on actual savings. As a result, participants are properly incentivized for their EE-related investments, and other customers are shielded from the impacts of overstated performance. He also indicated that very few projects are appropriate for participation in the program. The 0.92 TRC test score reflected in Evans Exhibit 7 was based upon participation forecasts and costs used in the Company's 2016 program filing. During 2017, only five projects were involved. Currently, there are seventy-four projects underway in the DEP service territory. Witness Evans testified that the Company's estimated TRC score for this program, based on these and other projects under review, should exceed 1.50. Therefore, he testified that the Company does not believe that this program requires additional scrutiny at this time, due to both the short time it has been in place and its anticipated cost-effectiveness results.

Based on the evidence presented above, and in particular the short time each program has been in place and the anticipated cost-effectiveness results, the Commission concludes that the MyHER and Non-Residential Smart $aver Performance Incentive programs do not require additional scrutiny at this time. However, if the programs to not project cost-effectiveness for future vintages, pursuant to Paragraph 22B of the Mechanism, the Company should provide a discussion of the actions being taken to maintain or improve cost-effectiveness, or alternatively, its plans to terminate the program in its next DSM/EE rider proceeding.

Residential Smart $aver EE Program

Witness Evans testified that despite several modifications, the Residential Smart $aver EE Program (formerly, HEIP) continues to struggle to maintain cost-effectiveness. More specifically, he explained that during 2016 and 2017, the Company made several changes to the program to address the erosion in the program's cost-effectiveness caused by advancement in efficiency standards and the associated lower incremental savings associated with exceeding the new standards. These program changes, which included redesign of the program to include a referral channel that reduced program costs, proved successful in returning the program to cost-effectiveness in 2017 and 2018. Unfortunately, with the application of the new lower avoided costs in 2019, the program is again projecting to no longer be cost-effective. According to witness Evans, the Company is actively working to evaluate additional programmatic changes, such as the Public Staff's recommendation to transition to referral channel measures that would offset the decline in avoided costs and make the program cost-effective in 2019 and beyond.

Witness Williamson testified that the Residential Smart $aver EE program has struggled to achieve cost-effectiveness for several years due to: (1) higher efficiency standards mandated by the federal government that have increased baselines against which savings impacts have been measured; and (2) the need for large participant incentives to overcome the upfront out-of-pocket costs to participants. He noted that DEP has consistently advocated the need to offer a residential HVAC replacement program. Because HVAC is one of the largest energy-consuming users in homes, Witness Williamson agreed that a well-designed, cost-effective program that encourages adoption of higher efficiency HVAC equipment is fundamental for any utility EE portfolio. He noted that DEP has also indicated the importance of maintaining its trade ally network. Witness Williamson agreed that it is desirable to maintain a good vendor network that provides customers with accurate, reliable information on HVAC energy consumption and other assistance. Nevertheless, he expressed concern that ratepayers should not be required to pay for a program that is not cost-effective, especially when cost-effectiveness projections continue on a downward trend.

Witness Williams testified that in Docket No. E-2, Sub 114 (Sub 1145), DEP's 2017 DSM/EE Rider proceeding, the Commission's Order stated that "if the Commission-approved modifications do not maintain or improve the program's cost-effectiveness by the next DSM/EE rider proceeding, the program should be terminated at the end of 2018." Because the Residential Smart $aver EE Program's performance has not improved, Witness Williamson recommended that the program be closed at the end of 2018. Consistent with this recommendation, Public Staff Witness Maness concluded that all associated Vintage 2019 program costs, NLR, and PPI should be removed from the calculating billing factors.

Witness Neme encouraged the Company to focus on promoting longer-lived major measures, such as those included in the Residential Smart $aver EE Program. He suggested that the Company make efforts to increase participation in rebate offers for high-efficiency heat pumps, central air conditioners, heat pump water heaters, pool pumps, attic insulation, air sealing, and duct sealing. He stated that there should be significant savings potential from these measures as they address the largest electricity end-uses in homes.

In his rebuttal testimony, witness Evans responded to witness Williamson's recommendation that the Residential Smart $aver Program be terminated. He testified that the Company believes that terminating the only program that offers assistance for making the largest single energy user in the home, a customer's HVAC system, more energy efficient does not seem reasonable, especially when the decision to make said investment only comes around once every fifteen years. He also noted that the recommended termination of the program does not take into consideration the Company's relationships with HVAC contractors. According to witness Evans, the proposed termination will likely erode trust and engagement with these valuable "trade allies," making it difficult to offer similar types of programs that would require trade ally support in the future.

Witness Evans explained that in the past, when the program's cost-effectiveness has struggled due to efficiency standard changes, the Company has demonstrated the ability to effectively modify the program to restore cost-effectiveness and should have the opportunity to attempt to restore to the cost-effectiveness of the program that was eroded by reduction in avoided costs. He indicated that Company is currently investigating several opportunities to increase the cost-effectiveness of the program, including the following:

1. While the Company does have some concerns with respect to the Public Staff's recommendation to move the program to an all-referral structure, DEP is not opposed to adopting this proposal so long as the Commission deems it appropriate. However, in lieu of moving to a referral only approach, the Company's program management team has developed a number of potential revisions to the referral program that will improve cost-effectiveness and lead to a more gradual transition to a referral only approach. The Company believes that these modifications would result in improving the program and the cost-effectiveness tests referenced in Witness Williamson's testimony;

2. The Company has been reevaluating and updating studies of the incremental costs actually being paid by customers to adopt higher efficiency equipment. This work will ensure that the Company's cost-effectiveness analysis is consistent with the current market conditions and reflects the changes in equipment pricing that occur as the new higher efficiency standards have been in place for a longer period of time. The Company believes that such information could lead to improvements in the program's TRC scores; and

3. The Company's program management team has been working with the third-party vendor used in program administration (payment processing) to further reduce program costs and increase the TRC score. (*Id.* at 80-81.)

Witness Evans testified that the Company is sure that the combination of these actions will restore cost-effectiveness and that shutting down the current operations without an appropriate time frame for planning and adjustment is not the best answer for its customers.

The Commission agrees with witnesses Evans, Neme, and Williamson that a residential HVAC program is an important program for an electric utility to offer as part of its DSM/EE portfolio. All three witnesses testified that the HVAC is one of the largest – if not, the largest – energy-consuming appliances in the home. In addition, as noted by witnesses Neme, the long measure life of an HVAC unit makes it particularly important to maintain this program as part of the Company's portfolio. A rebate for a high-efficiency HVAC unit could lead to savings for many years to come.

Both witnesses Evans and Williamson also recognize that DEP's relationship with its trade ally network – i.e., the HVAC contractors that service the HVAC equipment of participants in the Residential Smart $aver EE Program – is important to maintaining a viable HVAC program. The Commission agrees with witness Evans that a termination of the program would place those valuable relationships at risk, which could jeopardize the Company's ability to offer an HVAC program in the future. Accordingly, the Commission finds and concludes that the Residential Smart $aver EE Program should not be terminated at this time. That said, the Commission is mindful of the Public Staff's concerns that ratepayers should not pay for programs that are not cost-effective. Based on the Company's persistent efforts to maintain the viability of the program through program modifications, as well as the negative impact on the Company's PPI if the program continues to struggle to maintain cost-effectiveness, the Commission is persuaded that DEP is highly motivated to continue to find ways to improve cost-effectiveness. The Commission is hopeful that the possible improvements outlined by witness Evans will improve cost-effectiveness. Thus, the Commission directs the Company (1) to propose modifications to this program no later than December 31, 2018, with the goal of restoring the TRC score to 1.00 or greater, and (2) to include a discussion of the impact those modifications and other actions it has taken to improve cost-effectiveness in next year's DSM/EE rider proceeding. However, if DEP cannot demonstrate cost-effectiveness of this program by its next DSM/EE rider proceeding, the Commission may order the program closed as of December 31, 2019.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NOS. 8-10

The evidence for these findings of fact can be found in the testimony and exhibits of DEP witness Evans and the testimony of Public Staff witness Williamson.

DEP witness Evans testified regarding the EM&V process, activities, and results presented in this proceeding. He explained that the EMF component of the Company's DSM/EE rider incorporates actual customer participation and evaluated load impacts determined through EM&V and applied pursuant to the Mechanism. In addition, actual participation and evaluated load impacts are used prospectively to update estimated NLR. In this proceeding, the Company submitted, as exhibits to witness Evans' testimony, detailed completed EM&V reports or updates for the following programs:

- CIG Demand Response Automation – 2016 (Evans Exhibit A)
- EE Education Program – 2015 & 2016 (Evans Exhibit B)
- EnergyWise Home Demand Response Program – Summer 2016 (Evans Exhibit C)
- EnergyWise Home Demand Response Program – Winter 2016 & 2017 (Evans Exhibit D)
- Multi-Family EE Program – 2015 & 2016 (Evans Exhibit E)
- Non-Residential Smart $aver Program (Prescriptive) – 2016 & 2017 (Evans Exhibit F)
- EnergyWise for Business Program – 2016 (Evans Exhibit G)
- EE Lighting Program – 2016 & 2017 (Evans Exhibit H)
- MyHER Program – 2016 (Evans Exhibit I)
- Small Business Energy Saver Program – 2015 & 2016 (Evans Exhibit J)
- Save Energy and Water Kit Program – 2016 (Evans Exhibit K)

In his testimony, Public Staff witness Williamson testified that with respect to program vintages for which EM&V reports were filed in this proceeding, he does not recommend any adjustment to the impacts at this time. He also testified that he had confirmed through sampling that the changes to program impacts and participation were appropriately incorporated into the rider calculations for each DSM and EE program, as well as the actual participation and impacts calculated with the EM&V data. Witness Williamson stated his belief that DEP was appropriately incorporating the results of EM&V into the DSM/EE rider calculations consistent with Commission orders and the Mechanism.

In addition, witness Williamson stated that DEP had adopted his EM&V-related recommendations made in the 2017 DSM/EE rider proceeding, Docket No. E-2, Sub 1145, to the extent those recommendations are applicable to the EM&V reports filed in this proceeding. He also provided recommendations concerning the content of future EM&V studies for particular EE programs, noting that DEP's implementation of these recommendations would be subject to the consideration of whether the recommendation would be cost prohibitive.

Witness Williamson also provided recommendations concerning the content of future EM&V studies for the Company's EE Lighting Program, noting that DEP's implementation of these recommendations would be subject to the consideration of whether the recommendation would be cost prohibitive. Public Staff witness Williamson recommended that:

1. The program evaluator should include the basis for the selected weighting methodology (weightings based on bulb sales, measure savings, or other metric) when assessing program savings. The program evaluator should also indicate the other weighting methodologies that were considered, why they were rejected, and why the selected methodology is preferable;

2. The program evaluator should provide further clarity into the sales of incentivized bulbs at dollar/discount stores to determine the income levels of customers purchasing these bulbs; and

3. The program evaluator should update its study on the percentage of bulb sales to residential and non-residential customers.

Regarding the EM&V report for the MyHER Program, Evans Exhibit I, witness Williamson stated that while the Public Staff has confidence in the methodology applied to complete this evaluation and believes that the overall savings appear to be reasonable and in line with the findings of other similar evaluations of residential behavioral savings in the United States, it has not finalized its review of the overall findings and savings estimates put forth in the evaluation report at this time. Witness Williamson recommended postponing acceptance of the results of the MyHER program until the Public Staff conducts further review and offers recommendations in the next DSM/EE rider proceeding.

Witness Williamson concluded that, with the exception of the MyHER Program EM&V Report (Evans Exhibit I), the EM&V of the vintages of the measures covered by the remaining reports filed in this proceeding should be considered complete. In addition, he recommended that the two reports from the Sub 1145 proceeding, Small Business Energy Saver Program EM&V Report, and the Multi-Family EE Program EM&V Report, (Evans Exhibits D and E, respectively, filed in the Sub 1145 proceeding) be considered complete for the purposes of calculating program impacts in this proceeding.

In his rebuttal testimony, DEP Witness Evans raised concerns regarding two of the recommendations regarding the future evaluations of the EE Lighting Program. Witness Evans noted that the most reliable methods to determine both the income level of the purchasers of bulbs at dollar/discount stores and to update the percentage of bulb sales to residential and non-residential customers would require in-store intercepts. However, he pointed out that the EM&V evaluators have had problems in the past gaining access to stores to conduct the in-store intercepts.

With the exception of those EM&V-related recommendations made by Public Staff witness Williamson for revisions to Evans Exhibits H and I, no party contested the EM&V information submitted by the Company. The Commission therefore finds that the EM&V reports filed as Evans Exhibits A, B, C, D, E, F, G, H, J, and K are acceptable for purposes of this proceeding and should be considered complete for purposes of calculating program impacts; that the EM&V reports for Small Business Energy Saver Program (Evans Exhibit D) and the Multi-Family EE Program (Evans Exhibit D) from the 1145 proceeding should be considered complete; acceptance of the EM&V Report for the MyHER program should be postponed until the Public Staff conducts further review and offers recommendations in the next DSM/EE rider proceeding; and the EM&V recommendations concerning future EM&V reports contained in the testimony of Public Staff witness Williamson should be approved and applied in future EM&V reports for the applicable EE programs, when feasible and not cost prohibitive.

Based upon the testimony and evidence cited above, the Commission finds the net energy and capacity savings derived from the EM&V to be reasonable and appropriate. Further, the Commission concludes that DEP is appropriately incorporating the results of EM&V into the DSM/EE rider calculations.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 11

The evidence for this finding of fact can be found in the testimony of DEP witness Evans.

The Commission's Order Approving DSM/EE Rider and Requiring Filing of Proposed Customer Notice, issued on November 16, 2015 in Docket No. E-2, Sub 1070, provided that DEP shall file all changes in annual ratios of allocations between non-DSDR and DSDR equipment, report the degree of change in its annual DSM/EE rider filing, and provide such changes to the Public Staff as they become available. Witness Evans informed the Commission that a review of 2016 units showed that no change in the allocation ratio applicable to capacitors was necessary for 2018. However, the allocation ratio applied to regulators was elevated from 77.79 percent to 79.45 percent for 2018. He stated that 2017 units would be reviewed, and any changes would be communicated to the Public Staff and implemented on January 1, 2019. Based on the evidence, the Commission concludes that DEP should continue to file reports of changes to its allocations between non-DSDR and DSDR equipment in future proceedings and provide the Public Staff with information on any changes to the allocation factor as they become available.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 12

The evidence in support of this finding can be found in the testimony and exhibits of Company witness Duff; the testimony and exhibits of Public Staff witnesses Maness, Hinton, and Williamson; and various Commission orders.

In its application, the Company included avoided capacity cost benefits in every year of the life of a measure when calculating the PPI and when calculating the cost-effectiveness of its programs. The Public Staff disagreed with the Company regarding the appropriate level of avoided costs to be used in the determination of the PPI and calculations of cost-effectiveness. The Public Staff contended that DEP is required by the Revised Mechanism and the Sub 148 Order to use zero as the input when calculating the avoided capacity values for DSM/EE until 2021, when DEP's IRP shows a capacity need. As such, the Public Staff recommended that the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs be calculated under the assumption that capacity avoided prior to year 2021 be assigned a zero dollar value.

Background

Paragraph 70 of the Revised Mechanism set out the method for determination of avoided capacity costs as follows:

> 69. For the PPI for Vintage Year 2016, the per kW avoided capacity costs used to calculate avoided cost savings shall be the avoided capacity cost rates approved by the Commission for DEP in the most recent biennial avoided cost proceeding as of the date of the filing of the 2015 DSM/EE cost and incentive recovery proceeding. The per kWh avoided energy costs shall be those

reflected in or underlying the most recently filed integrated resource plan (IRP).

70. For the PPI for Vintage Years after 2016, the presumptive per kW avoided capacity costs and per kWh avoided energy costs used to calculate avoided cost savings shall be those determined pursuant to paragraph 69 above. However, if at the time of initial estimation of the PPI for each vintage year after 2016, either (a) the Company's per kWh avoided energy costs calculated for the purposes of the Company's annual IRP or resource plan update filings have increased or decreased by 20% or more or (b) the Company's per kW avoided capacity costs reflected in the rates approved in the biennial avoided cost proceedings have increased or decreased by 15% or more, the avoided costs (both energy and capacity) will be updated for purposes of the DSM/EE rider proceeding.

The parties sometimes referred to the method for updating avoided costs under Paragraph 70 of the Revised Mechanism as the "trigger" or "ratchet" method, in that avoided costs would remain the same unless and until the specified thresholds were met – either a change in avoided energy costs of at least 20% or a change in avoided capacity costs of at least 15% – which would then trigger an update of both avoided energy and avoided capacity costs. In addition, under Paragraph 70 of the Revised Mechanism, avoided energy costs and avoided capacity costs were derived from two different sources: the annual IRP or resource plan update filings for avoided energy, and the biennial avoided cost proceedings for avoided capacity.

In DEP's 2017 DSM/EE proceeding (Sub 1145), the Public Staff and DEP discovered that they had differing interpretations as to the appropriate avoided costs to be used in calculating the 2018 DSM/EE rider pursuant to Paragraph 70 of the Revised Mechanism. The Public Staff believed that the "ratchet" that would cause avoided capacity and energy costs to be updated for purposes of the DSM/EE rider proceeding had been triggered for purposes of the PPI to be calculated for Vintage 2018. The Company maintained that the ratchet had not been triggered. Had avoided cost rates been updated in a manner consistent with the Public Staff's interpretation of Paragraph 70, the Vintage 2018 PPI would have been reduced by approximately $3.3 million.

The Company and the Public Staff eventually reached a comprehensive agreement (Sub 1145 Agreement) resolving their differences which consisted of (1) a monetary adjustment which reduced the Vintage 2018 PPI by $2.1 million; and (2) certain revisions to the Revised Mechanism, including the method by which avoided costs would be updated for purposes of the PPI and DSM/EE program cost-effectiveness. In particular, DEP and the Public Staff recommended certain changes to Paragraphs 18, 22, and 70 of the Mechanism, and the addition of new Paragraphs 22A through 22D and 70A. The Commission approved the Sub 1145 Agreement and the resulting revisions to the Revised Mechanism in the Sub 1145 Order.[1]

[1] In DEC's 2017 DSM/EE proceeding (E-7, Sub 1130, or Sub 1130), DEC and the Public Staff encountered the same disagreement over whether the avoided cost ratchet had been triggered for purposes of DEC's 2018

Paragraph 70A now governs the calculation of the PPI, and provides that:

> For the PPI for Vintage Years 2019 and afterwards, the program-specific per kW avoided capacity benefits and per kWh avoided energy benefits used for the initial estimate of the PPI and any PPI true-up will be derived from the underlying resource plan, production cost model, and cost inputs that generated the avoided capacity and avoided energy credits reflected in the most recent Commission-approved Biennial Determination of Avoided Cost Rates for Electric Utility Purchases from Qualifying Facilities as of December 31 of the year immediately preceding the date of the annual DSM/EE rider filing. However, for the calculation the underlying avoided energy credits to be used to derive the program-specific avoided energy benefits, the calculation will be based on the projected EE portfolio hourly shape, rather than the assumed 24x7 100 MW reduction typically used to represent a qualifying facility.

Paragraph 18 (which governs the calculation of cost-effectiveness for program approval filings) and Paragraph 22 (which governs continuing cost-effectiveness for existing programs) were revised to reflect the same method for determining avoided costs.[1]

Public Staff witness Williamson testified that the Public Staff believes that the Company's calculation of cost-effectiveness was not appropriately based on the avoided capacity rates approved in the Commission's October 11, 2017 order approving new avoided cost rates in Docket No. E-100, Sub 148 (Sub 148 Avoided Cost Order). The Public Staff believes that the Mechanism requires the Company to use avoided capacity rates consistent with the Sub 148 Avoided Cost Order and that the rates should reflect zero capacity value in years prior to the identified need for new capacity in the underlying IRP. Public Staff witness Williamson stated that the avoided cost methodology used for capacity payments to qualified facilities (QFs) should be the same as the methodology for calculating cost effectiveness of DSM/EE measures. Public Staff witness Maness also stated that the avoided costs benefits used to determine PPI should also be consistent with the avoided cost rates for capacity set by the Commission for QFs. He further recommended that DEP adjust its estimated Vintage Year 2019 PPI proposed in this case to bring it into compliance with Paragraph 70A of the Revised Mechanism.

DSM/EE rider. DEC and the Public Staff eventually reached a resolution (the Sub 1130 Agreement) which consisted of (1) a monetary adjustment which reduced the Vintage 2018 PPI (which in DEC's case amounted to a $6.75 million adjustment); and (2) revisions to DEC's cost recovery mechanism, including the method by which avoided costs would be updated for purposes of the PPI and DSM/EE program cost-effectiveness. The Sub 1130 Agreement and resulting revisions to DEC's cost recovery mechanism were approved by the Commission in its Order Approving DSM/EE Rider, Revising DSM/EE Mechanism, and Requiring Filing of Proposed Customer Notice, issued in Sub 1130 on August 23, 2017, prior to the Sub 1145 proceeding. The Sub 1130 Agreement and the resulting revisions to DEC's cost recovery mechanism are substantively the same as – and, in fact, are the basis of – the Sub 1145 Agreement and the resulting revisions to DEP's Revised Mechanism approved in Sub 1145.

[1] The Public Staff refers to the method for calculating avoided cost rates pursuant to revised Paragraph 18 and new Paragraphs 22A and 70A as the "PURPA method."

ELECTRIC – RATE SCHEDULES/RIDERS/SERVICE RULES AND REGULATIONS

In the most recent Biennial Determination of Avoided Cost Rates for Electric Utility Purchases from Qualifying Facilities (Avoided Cost Proceeding) in Docket No. E-100, Sub 148 (Sub 148), the Commission was faced with whether certain changes to the previously-approved methods used to calculate avoided cost rates and to the current framework for implementing Section 210 of the Public Utility Regulatory Policies Act of 1978 (PURPA) were warranted given the amount and pace of the development of QFs, and in particular solar QFs, in North Carolina. The issue arose as to whether utilities should have to pay QFs for capacity in years in which they do not have a capacity need. Witnesses in the proceeding described significant growth in solar production in the State resulting in over-supply, operational challenges, and artificially high costs passed on to North Carolina residents, businesses, and industries. Both DEP and DEC proposed, and a number of parties, including the Public Staff, agreed, that a utility should include zeros in the calculation of capacity rates for the years in which the utility does not have a capacity need.

While the case was pending, N.C. Gen. Stat. § 62-156(b)(3) was amended by the General Assembly to provide, with respect to power sales by small power producers to public utilities:

> A future capacity need shall only be avoided in a year where the utility's most recent biennial integrated resource plan filed with the Commission pursuant to G.S. 62-110.1(c) has identified a projected capacity need to serve system load and the identified need can be met by the type of small power producer resource based upon its availability and reliability of power, other than swine or poultry waste for which a need is established consistent with G.S. 62-133.8(e) and (f).

In its Sub 148 Order, the Commission concluded that with regard to QFs that are small power producers, N.C. Gen. Stat. § 62-156(b)(3) requires that when calculating avoided capacity rates using the peaker method, it is appropriate to require a payment for capacity in years of a utility's IRP forecast period only when a capacity need is demonstrated during that period. The Commission found that providing a levelized capacity payment over the term of the standard offer contract is a reasonable means of implementing this capacity payment. The Commission also determined that this avoided capacity payment methodology is appropriate with regard to the standard offer to purchase available to QFs that are not small power producers. The Commission based this change in methodology upon the "changed economic and regulatory circumstances facing QFs and utilities" – namely, the increasing amount of solar powered QF development activity and its impact on utilities' systems and rates.

The underlying IRP for purposes of the Sub 148 proceeding – DEP's 2016 IRP – does not show a capacity need until 2022. As such, the Commission's ruling in Sub 148 results in avoided capacity rates that use a zero value for capacity for the years 2019 to 2021. However, that ruling does not apply to QFs that established a legally enforceable obligation (LEO) prior to the date the Company made its avoided cost filing in Sub 148. As a result, QFs establishing a LEO after November 15, 2016 (new QFs) receive a capacity value that is zero in years 2019 through 2021; QFs that established LEOs prior to November 15, 2016 (legacy QFs) receive a capacity value that is not zero in years 2019 through 2021.

Summary of Testimony

Public Staff witness Hinton testified that the Public Staff interprets the Sub 1145 Order and the Sub 148 Order to mean that the Company's avoided capacity rates for DSM/EE should reflect zero avoided capacity value in years prior to the identified need for new capacity in the Company's IRP. He explained that as a result of the Commission ruling in the Sub 148 Order, "new" QFs seeking to sell their energy and capacity to DEP will not be paid capacity payments until new capacity is needed in 2022, as identified in the Company's 2016 IRP.[1]

Witness Hinton pointed out that the Commission noted in the Sub 148 Order that "in addition to providing the basis for electric power purchases from QFs by a utility, the Commission determined avoided costs are utilized in, among other applications, the determination of the cost-effectiveness of DSM/EE programs and the calculation of the performance incentives for such programs..." Though he acknowledged that the focus of his testimony in DEP's 2017 DSM/EE rider proceeding (Sub 1145) was on the use of PURPA-based models to determine the appropriate avoided energy cost, witness Hinton asserted that his testimony in DEC's parallel 2017 rider proceeding (Sub 1130) linked the PURPA-based avoided capacity and energy costs to the savings and financial incentives of the Company's DSM/EE programs. As a result, he concluded that in order to be consistent with the Sub 148 Order and the Mechanism, "determinations of ongoing cost-effectiveness and utility incentives of both new DSM/EE programs and new vintages of existing DSM/EE programs starting in vintage 2019 should be based on avoided capacity rates that reflect zero avoided capacity value in years prior to the identified need for new capacity in the Company's IRP (2022)."

Witness Hinton testified that the Public Staff believes that the Company was not consistent with Sub 148 and the Mechanism in how it applied avoided capacity value with respect to its DSM/EE programs. He stated that, in assessing the ongoing cost-effectiveness of its DSM/EE programs and the appropriate level of utility incentives, the Company applied the approved avoided capacity rate in all years of the measures lives for its programs, as opposed to applying zero capacity values in years prior to the need for new capacity.

Witness Hinton noted that in response to data requests, the Company contended DSM/EE is distinct from QFs in that without DSM/EE in the IRP, there would be an immediate need for new capacity. The Company maintained that the very fact that the DSM/EE portfolio has been included in the resource plan is the reason there is not a capacity need until 2022. As such, the Company's position is that the DSM/EE within the IRP has capacity value and should receive avoided capacity benefits in all years. Witness Hinton disagreed, stating that in his opinion the utilization of the existing block of DSM/EE programs in the IRP does not justify an exception from the use of zero capacity values.

Public Staff witness Maness testified that he concurs with witness Hinton's recommendation that the avoided capacity cost benefits for purposes of the PPI and

[1] New QFs under the standard offer tariff will receive capacity payments in years prior to the utilities' first capacity need because the new QFs will receive a levelized capacity rate reflecting a lower annual payment to account for those initial years in which there are no avoidable capacity costs.

cost-effectiveness of the Company's DSM/EE programs be calculated under the assumption that capacity avoided prior to year 2022 be assigned a zero dollar value. He testified that the Company's estimated PPI calculations should be adjusted to reflect this assumption. He testified that the Public Staff asked the Company to provide a calculation of estimated avoided cost benefits related to Vintage Year 2019 under the assumption that avoided capacity kW occurring prior to year 2022 is assigned a zero dollar value. According to the Company's calculation, making this assumption reduces the estimated Vintage 2019 system-level PPI (before levelization) from $14,913,197 to $13,404,068, a decrease of $1,509,129. He also recommended that the $1,509,129 reduction in the system PPI be included in all future true-ups of the Vintage 2019 DSM/EE revenue requirement and billing factors. In his supplemental testimony, witness Maness testified that the rate period 2019 revenue requirement impact of the Public Staff's recommended adjustment to reduce the avoided costs used in the determination of the PPI to reflect a value of zero is a reduction of $488,550.[1] Witness Maness incorporated this reduction into his recommended billing factors as set forth on Maness Exhibit II.

Public Staff witness Williamson discussed the impact to the cost-effectiveness of the Company's DSM/EE portfolio that would result from applying zero capacity value for years prior to 2022, in accordance with the Public Staff's recommendation. Williamson Exhibit 3 shows the decrease in cost-effectiveness scores for each program when no capacity value is given for years that DEP's 2016 IRP does not show a capacity need. In addition to the programs that were not cost-effective under the TRC test according to the Company's calculations, DEP's Residential New Construction, EE for Business, and EnergyWise for Business programs, which are addressed in a previous section of this order would, no longer be cost-effective under the Public Staff's methodology.

DEP witness Duff provided rebuttal testimony on the issue of the appropriate avoided capacity value to be used in calculation of the PPI and cost-effectiveness. Witness Duff explained that the revisions to the Mechanism approved in Sub 1145 eliminated the Mechanism triggers to change the avoided cost rates to be used to evaluate the PPI and cost-effectiveness, and approved the current language of Paragraphs 18, 22A, and 69 of the Mechanism. He also noted that a second primary purpose of the revision was to change the source and methodology for calculating avoided energy costs from the IRP to the most recently approved avoided cost proceeding. He contended that the revisions approved in the Sub 1145 Order did not change the source of methodology. underlying the avoided capacity calculation.

Witness Duff described how, consistent with the Commission-approved revisions to DEP's DSM/EE cost recovery Mechanism, the Company derived both the avoided energy and avoided capacity using the rates approved in the Company's most recent biennial avoided cost proceeding, which in this case is Sub 148. In particular, he noted that the Company utilized the avoided capacity value calculated using the peaker method consistent with the Company's understanding of the Sub 1145 Agreement, which, in the Company's view, did not modify the approach used in past DSM/EE proceedings.

[1] Witness Maness noted that, if accepted by the Commission, the long-term impacts of this adjustment will be significantly greater, in total, because a given vintage year's PPI is typically amortized over several years into the future; the $488,550 figure represents only one of those years.

Witness Duff opined that the Company had calculated avoided capacity values consistent with Public Staff Witness Hinton's testimony in Sub 1145, and that witness Hinton had never testified that the avoided capacity rates used for existing DSM EE programs should be the same as those paid to QFs. Witness Duff further stated that during the Sub 1145 proceeding, DEP had provided the Public Staff with a projection of what the change in Vintage 2019 PPI would be under the revisions to the Mechanism if DEP's proposed avoided costs rates in Sub 148 were approved. The projection showed capacity values in each year. Witness Duff further testified that the Company agrees with Public Staff witness Hinton's testimony that the rates paid QFs are generally linked to the avoided cost rates utilized for DSM/EE. However, according to witness Duff that does not mean the rates are the same.

Witness Duff also disagreed with the Public Staff's argument that the Sub 148 Order dictates that the Company must use zero values instead of capacity values for existing DSM/EE programs. He explained how witness Hinton quoted the Sub 148 Order out of context, and that the language witness Hinton referenced does not support the Public Staff's position.

Next, witness Duff explained why DEP believes the Public Staff's approach is inappropriate and underestimates the value of the Company's DSM/EE programs. Witness Duff testified that the Public Staff's adjustment would remove the avoided capacity value of DSM/EE in the years 2019 to 2021 for purposes of evaluating cost-effectiveness and PPI, a removal of capacity value for 951 MW of DSM impacts and 128 MW of EE impacts of summer capability from DEP's portfolio of DSM/EE programs.

Witness Duff indicated that legacy DSM programs are embedded in the resource plan, and like legacy QFs with LEOs existing prior to November 15, 2016, should receive a capacity value in the 2019 to 2021 time period. He disagreed with witness Hinton's contention that the Company's existing DSM programs should be treated differently from existing QFs with regard to receiving avoided capacity value based on contract length. Witness Duff notes that witness Hinton bases his contention on the assumption that while existing QFs are under long-term contracts of up to ten years, customers who participate in DSM are under a contract for one year. First, witness Duff clarified that while residential customers do have the ability to cease participation in the residential DSM program after one year, non-residential customers who elect to participate in the Company's CIG Demand Response Automation Program agree to a contract period of five years, with automatic extensions of two years thereafter, unless terminated by either party at the end of the contract period with at least 60 days prior written notice. Second, while acknowledging that the majority of the Company's EE programs do not require the customer to sign a contract, witness Duff stated that one EE program, MyHER, is effectively in the same position as the legacy DSM programs. He noted that the MW capability provided by the MyHER EE program was created prior to the establishment of the new avoided cost rates. According to witness Duff, all that is required is the expenditure of funds to maintain the impacts, just like the Company must do to maintain the availability of the impacts from the legacy DSM programs. Like the Company's legacy DSM programs, the MyHER program impacts are also not incremental or new after November 2016. He stated that they are embedded in the resource plan, and like legacy QFs with LEOs existing prior to November 15, 2016, should receive a capacity value in the 2019 to 2021 time period.

With respect to the other EE programs (aside from MyHER), witness Duff indicated that there is a summer capacity need of 216 MW (166 MW for the winter) from the EE programs in the year 2022. He observed that, "Those familiar with the implementation of EE programs will recognize that one does not create 216 MW of EE overnight. It takes time. It takes time to build customer awareness. It takes time for equipment to wear out and be replaced or for customers to recognize that it is time to change out equipment." In addition, he noted in the Company's IRP, the EE impacts are subtracted from the load forecast. As a result, there is no reserve margin for the EE impacts.

Witness Duff testified that the very fact that DSM/EE capacity savings from existing approved programs are included in the IRP forecast is a critical part of the reason there is not a capacity need until 2022. The Company's inputs to the IRP for the cost of the DSM and EE programs include not just the implementation cost, but also the estimate of the utility's PPI, which contains a capacity value for the years 2019 through 2021. As a result, to be consistent with the underlying resource plan, including the cost inputs, one should be including the avoided capacity cost for DSM/EE for the years 2019 to 2021.

Finally, witness Duff noted that the Company believes that the Commission's ruling in the DEC Order relating to avoided costs is dispositive of the avoided cost issue in this proceeding. He stated that the relevant language in the DEC cost recovery mechanism is substantively identical to the relevant language in the DEP cost recovery mechanism; the agreement reached between the Public Staff and the Company which resulted in that language was substantively the same as that reached for DEC; and the rationale with which the Commission generally agreed in the DEC Order ("evaluating the contributions that DSM/EE measures make to a utility avoided future capacity needs to determine cost-effectiveness is inherently different than the evaluation undertaken to determine the capacity costs avoided through the purchase of the electric output from a QF") applies equally in this case. Accordingly, the Company believes that the Commission should reach the same result and decline to accept the Public Staff's downward adjustment to DEP's PPI in this docket.

In its post-hearing brief, NC Justice Center agreed with DEP's calculation of avoided capacity costs for purposes of establishing the PPI and calculating cost effectiveness. NC Justice Center contended that assigning a zero-capacity value to DEP's suite of cost-effective DSM/EE programs would discourage the Company from making investments that save ratepayers money in part because of the avoided capacity. Moreover, NC Justice Center stated that it agrees with DEP's decision to continue offering the Residential Energy $aver Program.

In its post-hearing comments, NCSEA maintained that the Commission should reject the Public Staff's position that the avoided capacity benefits used for program approval, PPI, and review of on-going cost effectiveness of DEP's DSM/EE programs should include zero capacity value in years prior to 2023.

<u>Commission Discussion</u>

Based on the foregoing, as well as the record in Sub 1145, the Commission finds and concludes that the Company's calculation of its proposed DSM/EE rider for 2019 is consistent with the language and intent of the Sub 1145 Agreement and Paragraphs 18, 22A, and 70A of the Mechanism. As witness Duff testified, the Sub 1145 Agreement was intended to eliminate the trigger method, so that avoided costs would be updated more frequently, and to change the source of avoided energy costs, so that avoided energy and avoided capacity rates for DSM/EE would be derived from the same proceeding. The revisions to Paragraphs 18, 22, and 70 resulting from the Sub 1145 Agreement did not alter the source or manner in which the avoided capacity costs are to be derived for the purpose of calculating cost-effectiveness and incentives associated with DSM/EE programs.

The Commission notes that in DEC's most recent DSM/EE rider proceeding in Docket No. E-7, Sub 1164, the Commission rejected this same argument now raised by the Public Staff, holding that "It is inappropriate to calculate the avoided capacity cost benefits for purposes of the PPI and cost-effectiveness of the Company's DSM/EE programs under the assumption that capacity avoided prior to year 2023[1] be assigned a zero dollar value. The Public Staff's recommendation of such, and the corresponding reduction to the Company's Vintage 2019 PPI, is rejected." The controlling facts in the DEC Order are essentially the same in this proceeding, and the Commission finds no reason to stray from that same conclusion.

The Commission further finds that including capacity values with respect to this issue is consistent with the public policy of the State of North Carolina. The Public Staff's position implies that DSM/EE is the first capacity resource that should be cut out of the Company's resource plan in the event DEP's IRP does not show a need for capacity. Similarly, adopting the Public Staff's zero avoided capacity value position for DSM/EE, would have the effect of removing the financial incentive for the Company to pursue certain programs in years 2019 through 2021, and would discourage the Company from developing DSM/EE programs to help customers to reduce their kW impact.

Finding that customers should not have to pay for third parties to supply generation capacity that the Company does not need – the crux of N.C. Gen. Stat. § 62-156 and the Sub 148 Order – is a different matter from encouraging customers to use less energy and capacity to decrease their bills. As the stated public policy of North Carolina, use of less energy should be encouraged and reflected in the Company's rates through "consideration of appropriate rewards to utilities for efficiency and conservation which decrease utility bills."

The Commission generally agrees with the testimony of DEP witness Duff and DEP's arguments that evaluating the contributions that DSM/EE measures make to a utility's avoiding future capacity needs to determine cost-effectiveness is inherently different from the evaluation undertaken to determine the capacity costs avoided through the purchase of the electric output from a QF. In addition, the Commission is persuaded by the arguments of DEP and NC Justice Center that assigning a zero capacity value to DSM programs would under-value the contributions of those programs and send the wrong pricing signal. The Commission, therefore, declines to accept the Public Staff's downward adjustment to the Vintage 2019 PPI, and, instead, accepts the cost-effectiveness calculations performed by the Company for purposes of the DSM/EE rider at

[1] DEC's 2016 IRP does not show a capacity need until 2023.

issue in this proceeding, and approves the Company's calculation of the DSM/EE rates for Vintage 2019, as reflected in the supplemental testimony and exhibits of DEP witness Miller.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 13-19

The evidence for these findings of fact can be found in the testimony and exhibits of DEP witnesses Miller and Evans and the testimony and exhibits of Public Staff witness Maness.

In her direct testimony and exhibits, DEP witness Miller calculated proposed North Carolina retail NLR in the amount of $40,178,116 and a PPI in the amount of $21,846,452 for the EMF component of the total DSM/EE rider, and North Carolina retail NLR of $32,348,840 and a PPI of $25,997,556 for the forward-looking, or prospective component of the total rider. Company witness Miller indicated that as a result of additional analysis performed by DEP and discussions with the Public Staff, the Company adjusted its NLR and PPI amounts in the Supplemental Filing. The supplemental exhibits of witness Miller included in the Supplemental Filing indicated that the EMF NLR and PPI amounts were adjusted to $40,144,647 and $21,798,731, respectively, and the prospective NLR estimate was adjusted to $31,947,155.

In her exhibits filed as part of the Supplemental Filing, DEP witness Miller calculated DEP's total North Carolina retail adjusted test period costs and utility incentives, consisting of its amortized DSM/EE O&M costs, capital costs, taxes, amortized incremental A&G costs, carrying charges, NLR, and PPI to be $168,007,613. Witness Miller's testimony and exhibits also indicated that the amount of test period DSM/EE rider revenues and miscellaneous adjustments to take into consideration in determining the test period DSM/EE under- or over-recovery is $157,320,600. Therefore, the aggregate DSM/EE under-recovery recommended by DEP for purposes of this proceeding is $10,687,013, as reflected in the Supplemental Filing.

Witness Miller also calculated DEP's estimate of its North Carolina retail DSM/EE program rate period amounts, consisting of its amortized O&M costs, depreciation, capital costs, taxes, amortized incremental A&G costs, carrying charges, NLR, and PPI, as $175,770,263.

According to the revised exhibits of DEP witness Miller as filed in the Supplemental Filing, after assignment or allocation to customer classes in accordance with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, and the Commission orders in Docket No. E-2, Sub 931, the revenue requirements for each class, excluding NCRF, are as follows:

DSM/EE PROSPECTIVE COMPONENT:	
Residential	$100,657,479
General Service EE	68,669,252
General Service DSM	6,086,071
Lighting	357,461
Total	$175,770,263

DSM/EE EMF:

Residential	$ 494,880
General Service EE	11,979,271
General Service DSM	(1,790,030)
Lighting	2,892
Total	$10,687,013

Witness Miller's exhibits also set forth the North Carolina retail class level kWh sales that DEP believes are appropriate and reasonable for use in determining the DSM/EE and DSM/EE EMF billing factors in this proceeding. She adjusted the kWh sales to exclude estimated sales to customers who have opted out of participation in DEP's DSM/EE programs. The adjusted sales amounts are as follows: Residential class – 15,740,238,953 kWh; General Service EE class – 9,852,771,378 kWh; General Service DSM class – 9,737,467,991; and Lighting class – 361,265,217 kWh.

According to her revised exhibits filed as part of the Supplemental Filing, witness Miller calculated the DSM/EE billing factors without NCRF as follows:

DSM/EE PROSPECTIVE BILLING FACTORS (cents/kWh):

Residential	0.640
General Service EE	0.697
General Service DSM	0.063
Lighting	0.099

DSM/EE EMF BILLING FACTORS (cents/kWh):

Residential	0.003
General Service EE	0.122
General Service DSM	(0.018)
Lighting	0.001

Including the NCRF, the factors calculated by witness Miller are as follows:

DSM/EE PROSPECTIVE BILLING FACTORS (cents/kWh):

Residential	0.641
General Service EE	0.698
General Service DSM	0.063
Lighting	0.099

DSM/EE EMF BILLING FACTORS (cents/kWh):

Residential	0.003
General Service EE	0.122
General Service DSM	(0.018)
Lighting	0.001

Public Staff witness Maness indicated that the focus of the Public Staff's investigation of DEP's filing in this proceeding was whether the proposed DSM/EE rider was calculated in accordance with the Mechanism and otherwise adhered to sound ratemaking concepts and principles. The Public Staff's investigation included a review of the Company's filing and relevant prior Commission proceedings and orders, and workpapers and source documentation used by the Company to develop the proposed billing rates (including the selection and review of a sample of source documentation for test period costs included by the Company for recovery).

With the exception of the avoided costs to be used in determination of the PPI and the recommendation of the Public Staff to terminate the Residential Smart $aver EE Program, witness Maness testified that the Company has calculated its proposed prospective DSM/EE and DSM/EE EMF billing factors in a manner consistent with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, and the Mechanism.

Company Supplemental Adjustments to Rate Calculations

Public Staff witness Maness testified that in its filing in this proceeding, the Company cut off NLR, as of the March 16, 2018, the effective date of the general rate increase approved by the Commission in Docket No. E-2, Sub 1142 (Sub 1142), associated with DSM/EE measures installed through December 31, 2016, the end of the Sub 1142 test year.[1] However, DEP did not further reduce NLR to reflect the update adjustment made in Sub 1142 to capture changes in residential per customer usage through October 31, 2017. Witness Maness testified that after discussions with the Public Staff, the Company agreed to make an adjustment to remove from residential NLR the impacts of the measures installed/implemented through October 31, 2017. He noted that the Company also indicated to the Public Staff that in calculating this adjustment related to 2017, it found that it had initially overstated the amount of residential and nonresidential NLR related to 2016 that should be removed. He stated that DEP had provided workpapers to the Public Staff that indicated that the net of the two corrections for the 2019 rate period is a reduction to

[1] This adjustment is necessitated due to paragraph 58 of the mechanism which states that: "Notwithstanding the allowance of 36 months' Net Lost Revenues associated with eligible kWh sales reductions, the kWh sales reductions that result from measurement units installed shall cease being eligible for use in calculating Net Lost Revenues as of the effective date of (a) a Commission-approved alternative recovery mechanism that accounts for the eligible Net Lost Revenues associated with eligible kWh sales reductions, or (b) the implementation of new rates approved by the Commission in a general rate case or comparable proceeding to the extent the rates set in the general rate case or comparable proceeding are set to explicitly or implicitly recover the Net Lost Revenues associated with those kWh sales reductions."

NC retail NLR of approximately $308,000[1]. He testified that the Public Staff was in the process of reviewing the workpapers and that it was his understanding that DEP would incorporate said adjustments into its supplemental filing.

Witness Maness noted in his testimony that although the test period in the Company's most recent general rate case in Sub 1142 was January 1, 2016 through December 31, 2016, the Agreement and Stipulation of Partial Settlement agreed to between the Public Staff and the Company in that proceeding included updated revenues that reflected changes in the number of customers and, for the residential class, changes in weather-normalized usage per customer through October 31, 2017.

In her supplemental testimony, witness Miller testified that the Public Staff and the Company discussed the methodology that should be used to incorporate these revenue adjustments from the Sub 1142 rate case into the Company's DSM/EE rider filing. Based on these discussions, she stated that the Company will do the following:

a. For residential customers, the Company will extend the rate case test period to October 31, 2017 as the customer growth adjustment used in the rate case also included updated actual kWh sales through that time period; and

b. For non-residential customers, the Company will continue to utilize the rate case test period January 1, 2016 through December 31, 2016, as no adjustments were made to incorporate actual kWh sales past that date.

In addition, she indicated that the following modification will be made to calculate how much lost revenue is included in kWh sales for the test period. She explained that since the twelve-month rate case test period uses actual kWh sales, and participation in EE measures occurs throughout the year, in any given twelve-month period, a full year of lost revenues are not captured in test period kWh sales, as all measures are not in place at the beginning of the test period. The Company believes it is appropriate to quantify the actual incremental savings by month during that twelve-month rate case test period to calculate the amount of lost revenues that is truly being reflected in the new base rates that will be recovered from customers. Witness Miller testified that the difference between the annualized amount of energy savings and the actual amount of energy savings should be recovered through the Company's DSM/EE rider. The final result of the adjustment for the 2019 rate period is a reduction in NLR requested for residential customers in the amount of ($1,669,505) and an increase in NLR requested for non-residential customers in the amount of $1,361,119.

In his supplemental testimony, witness Maness indicated that the Public Staff agrees that this adjustment is appropriate for purposes of this proceeding.

[1] For rate period 2018, the net adjustment is estimated to be an increase of approximately $1,022,000; however, this adjustment would not be reflected in the rates until rate period 2018 is trued up in a future proceeding.

Further, in her supplemental testimony, witness Miller testified that during the course of the Company's review of its DSM/EE filing in this docket, DEP discovered that, although the EM&V results received in 2017 for the EnergyWise for Business Program had been appropriately applied prospectively, these results had not been included in calculation of the filed EMF rate. Accordingly, in its Supplemental Filing the Company updated Vintages 2016 and Vintage 2017 to reflect the revised kW savings included in the EnergyWise for Business EM&V report, which results in a reduction of PPI for non-residential customers in the amount of ($8,468) for Vintage 2016 and a reduction in PPI for non-residential customers in the amount of ($47,721) for Vintage 2017.

Witness Miller also testified that during the analysis to determine the appropriate Vintage 2017 lost revenues for non-residential customers, the Company found that there were certain non-residential customers in the lighting program whose benefits were inadvertently calculated using the residential lost revenue rate. In the Supplemental Filing, the Company made an adjustment that corrects that error. According to witness Miller, the impact on NLR for Vintage 2017 non-residential EE Lighting is ($33,469) for Vintage 2017 and ($93,299) for Vintage 2019.

In his supplemental testimony, witness Maness indicated that the Public Staff agrees that this adjustment is appropriate for purposes of this proceeding.

With respect to DEP's proposed adjustments reflected in the Supplemental Filing, the Commission notes that no party opposed such recovery, and the Public Staff has agreed that they are reasonable for purposes of this proceeding. The Commission finds that such proposed recovery is consistent with the Commission's orders in Docket Nos. E-2, Sub 931 and Sub 1145, and that NLR and PPI are appropriate for recovery in this proceeding, with the prospective rate period costs subject to further review in DEP's future annual DSM/EE rider proceedings. The Commission concludes that DEP has complied with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, and the Commission's orders in Docket Nos. E-2, Sub 931 and Sub 1145, with regard to calculating costs and utility incentives for the test and rate periods at issue in this proceeding.

Therefore, the Commission concludes that for purposes of the DSM/EE EMF billing rates to be set in this proceeding, DEP's reasonable and prudent North Carolina retail test period costs and incentives, consisting of its amortized DSM/EE O&M costs, capital costs, taxes, amortized incremental A&G costs, carrying charges, NLR, and PPI, are $168,007,613. The reasonable and appropriate amount of test period DSM/EE rider revenues and adjustments to take into consideration in determining the test year and prospective period DSM/EE under- or over-recovery is $157,320,600. Therefore, the aggregate DSM/EE under-recovery for purposes of this proceeding is $10,687,013.

For purposes of the DSM/EE rider to be set in this proceeding, and subject to review in DEP's future DSM/EE rider proceedings, the Commission concludes that DEP's reasonable and appropriate estimate of its North Carolina retail DSM/EE program rate period amounts, consisting of its amortized O&M costs, capital costs, taxes, amortized incremental A&G costs, carrying charges, NLR, and PPI, after incorporation of the adjustments reflected in the Company's Supplemental Filing, is $175,770,263, and this is the appropriate amount to use to develop the DSM/EE revenue requirement.

With regard to the revenue requirements per class, the Commission concludes that after assignment or allocation to customer classes in accordance with N.C. Gen. Stat. § 62-133.9, Commission Rule R8-69, and the orders in Docket No. E-2, Sub 931, the revenue requirements for each class, excluding NCRF, are as follows:

DSM/EE PROSPECTIVE COMPONENT:

Residential	$100,657,479
General Service EE	68,669,252
General Service DSM	6,086,071
Lighting	357,461
Total	$175,770,263

DSM/EE EMF:

Residential	$ 494,880
General Service EE	11,979,271
General Service DSM	(1,790,030)
Lighting	2,892
Total	$10,687,013

Furthermore, the Commission finds that the appropriate and reasonable North Carolina retail class level kWh sales for use in determining the DSM/EE and DSM/EE EMF billing factors in this proceeding are as follows: Residential class – 15,740,238,953; General Service class EE – 9,852,771,378; General Service class DSM – 9,737,467,991; and Lighting class – 361,265,217.

Based on the testimony and exhibits of witnesses Miller and Evans, the testimony and exhibits of witness Maness, and the entire record in this proceeding, the Commission finds and concludes that the forward-looking DSM/EE rates as proposed by DEP in the Supplemental Filing to be charged during the rate period for the Residential, General Service, and Lighting rate schedules are appropriate. The Commission further concludes that the DSM/EE EMF billing factors as proposed by DEP in the Supplemental Filing are appropriate.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 20-21

The evidence for these findings of fact can be found in the testimony of NC Justice Center witness Neme, Public Staff witness Williamson, and DEP witness Evans.

Company witness Evans noted that Vintage 2017 of the Company's DSM and EE programs produced over 416 million kWh of energy savings and over 450 MW of capacity savings, which produced net present value of avoided cost savings of close to $287 million.

Witness Evans testified that opt-outs by qualifying industrial and commercial customers have had a significant impact on the Company's overall non-residential participation and the associated impacts. For Vintage 2017, 4,165 eligible customer accounts opted out of participating in DEP's non-residential portfolio of EE programs, and 4,099 eligible customer accounts opted out of participating in the Company's non-residential DSM programs. Witness Evans stated that to reduce opt-outs, the Company continues to evaluate and revise its non-residential portfolio of programs to accommodate new technologies, eliminate product gaps, remove barriers to participation, and make its programs more attractive to opt-out eligible customers. It also continues to leverage its Large Account Management Team to make sure customers are informed about product offerings.

NC Justice Center witness Neme testified that in the three years from 2015 through 2017, DEP's efficiency programs have saved enough energy at the time of system peak to eliminate the need for the equivalent of approximately two and half natural gas peaker plants. He also commended the Company for including a wide range of efficiency measures and programs in its DSM/EE portfolio, including "some national state-of-the art program design features." However, witness Neme noted that DEP's 2019 projected energy savings are 0.84%, which he indicated is below the 1% annual energy savings target contained in the settlement of the then-proposed merger of Duke Energy and Progress Energy (Merger Settlement).[1]

In his testimony, witness Neme also made several recommendations related to DSM/EE portfolio design, cost-effectiveness analysis, and EM&V. He emphasized that the complicated issues that he raises in his testimony would probably be best addressed, at least initially, through in-depth discussions between the utilities and other parties. Thus, he recommended that the Commission refer those issues to the DEP/DEC Collaborative, with a requirement that DEP report back on decisions in its 2019 DSM/EE rider proceeding. In particular, he recommended that DEP should leverage its Collaborative to discuss: (a) ways to improve participation in the Company's Residential Smart $aver EE Program, such as establishing a midstream channel for promoting measures, increasing incentives, and enhancing marketing; (b) greater promotion of whole-building retrofits, with an initial focus on targeting low-income communities; (c) building on DEP's recent successes in promoting measures in the midstream channel of its Non-Residential Prescriptive Rebate measure; (d) the potential to reduce the number of customers who opt out by educating customers who are eligible to opt out on available programs and/or improving program design to make programs more attractive to these customers; (e) the value of a Technical Reference Manual (TRM); (f) the propriety of assuming a one-year life for savings from the MyHER; (g) the impact of EISA on the Company's savings assumptions for residential light bulbs; and (h) the appropriateness of including non-electric benefits in cost-effectiveness analyses In addition, he suggested that the Collaborative explore program options for decreasing emphasis on short-lived savings, increasing investment in longer-lived measures, filling the "savings gap" that will be created by the elimination of most residential-lighting savings potential in 2020, and increasing program offerings to low-income communities. He noted that analysis and consideration of his program ideas will likely require more than a quarterly Collaborative meeting.

[1] The Merger Settlement was approved by the Public Service Commission of South Carolina in Docket No. 2011-158-E.

Public Staff witness Williamson also discussed his concerns regarding the fact that the EE lighting market is being transformed and that non-specialty LED lighting will likely become the baseline standard for general service bulb technologies by January 2020, as the second phase of the federal Energy Independence and Security Act (EISA) goes into effect, thereby decreasing savings from EE lighting programs. He indicated that it appears that the lighting market may be close to adopting EE lighting technologies as baseline and that further incentives for certain EE lighting measures for certain customers may not be necessary after January 1, 2020. Witness Williamson recommended that the Company include in its 2019 rider filing its plans for general service lighting measures in all of its EE programs that include lighting measures.

Witness Williamson also testified that the Company was in the process of installing Advanced Metering Infrastructure (AMI) meters and new customer information systems, and there may be some redundancy in the information available through these new systems and the information provided through the MyHER Program. He stated that the EM&V for the MyHER Program will need to clearly isolate any savings associated with enhanced access to customer data provided through AMI and customer information systems from the impacts solely attributable to the customized suggestions for the home provided by the MyHER Program.

In his rebuttal testimony, DEP witness Evans testified that given that the updated customer information system and billing system will not be in service for several years, he believes that witness Williamson's observations relating to potential overlap between AMI/customer information system and the MyHER Program are premature. Nevertheless, witness Evans indicated that the Company will work with the Public Staff to evaluate the MyHER Program's energy savings, recognizing the impacts of AMI and the updated customer information system.

In response to witness Williamson's comments regarding the impact of EISA on the Company's EE lighting programs, witness Evans stated that the Company is amenable to discussing its plans for EE programs that include general use lighting measures in its 2019 DSM/EE rider filing.

Witness Evans testified that while the Company does not necessarily agree with all of the recommendations included in witness Neme's testimony, it does agree that the Company's Collaborative meetings are the appropriate forum to discuss his program ideas. Witness Evans indicated that given the commonality between DEC's and DEP's programs, a combined DEC/DEP Collaborative would be preferable. He also agreed with witness Neme's assessment that quarterly meetings would be insufficient to adequately address the issues raised in his testimony, and recommended that the Collaborative meetings be expanded to every two months, as was approved in the Sub 1164 Order.

In its post-hearing brief, NC Justice Center reiterated witness Neme's testimony that DEP failed to reach the savings target of 1% per year agreed upon by DEP as part of the Merger Settlement. NC Justice center stated that it continues to have concerns about DEP's: (1) over reliance on short-lived measures, particularly its residential behavioral program My Home Energy Report; (2) inadequate promotion of longer-lived measures and comprehensive treatment of buildings; (3) insufficient planning to offset a significant loss of lighting savings once the 2020 federal EISA efficiency standards go into effect; (4) need to reach more lower-income communities and deliver programs that reach rental units; and (5) failure to account for all benefits achieved when calculating the cost-effectiveness of its programs. NC Justice Center urged the Commission to order DEP to take up these issues in the Collaborative over the course of the next year.

The Commission concludes that the Collaborative is the appropriate forum for consideration of all the issues raised by witness Neme as outlined herein. The Collaborative should also consider the issues raised by Public Staff witness Williamson regarding the MyHER program and the impact of upcoming lighting standards. The Commission agrees that given the overlap between DEC's and DEP's programs, as well as the stakeholders who participate in each utility's Collaborative, a combined Collaborative is appropriate and should meet every other month as suggested by witness Evans.

IT IS, THEREFORE, ORDERED as follows:

1. That the appropriate DSM/EE EMF billing factors, excluding NCRF, for the Residential, General Service, and Lighting rate classes are: 0.003 cents per kWh for the Residential class; 0.122 cents per kWh for the EE component of General Service classes; (0.018) cents per kWh for the DSM component of General Service classes; and 0.001 cents per kWh for the Lighting class. These DSM/EE EMF billing factors do not change when the NCRF is included.

2. That the appropriate forward-looking DSM/EE rates to be charged by DEP during the rate period for the Residential, General Service, and Lighting rate classes (excluding NCRF) are: 0.640 cents per kWh for the Residential class; 0.697 cents per kWh for the EE component of General Service classes; 0.063 cents per kWh for the DSM component of General Service classes; and 0.099 cents per kWh for the Lighting class. The appropriate forward-looking DSM/EE rates to be charged by DEP during the rate period, including NCRF, are increments of: 0.641 cents per kWh for the Residential class; 0.698 cents per kWh for the EE component of the General Service classes; 0.063 cents per kWh for the DSM component of the General Service classes; and 0.099 cents per kWh for the Lighting class.

3. That the appropriate total DSM/EE annual riders including the DSM/EE rate and the DSM/EE EMF rate (including NCRF) for the Residential, General Service, and Lighting rate classes are increments of 0.644 cents per kWh for the Residential class, 0.820 cents per kWh for the EE portion of the General Service classes, 0.045 cents per kWh for the DSM portion of the General Service classes, and 0.100 cents per kWh for the Lighting class.

4. That DEP shall file appropriate rate schedules and riders with the Commission in order to implement these adjustments as soon as practicable. Such rates are to be effective for service rendered on or after January 1, 2019.

5. That DEP shall work with the Public Staff to prepare a joint proposed Notice to Customers giving notice of rate changes ordered by the Commission herein, and DEP shall file such proposed notice for Commission approval as soon as practicable.

6. That the Company shall propose modifications to the Residential Smart $aver EE Program no later than December 31, 2018, with the goal of restoring the TRC score to 1.00 or greater, and the Company shall include a discussion of the impact of these modifications and any other actions it has taken to improve cost-effectiveness in next year's DSM/EE rider proceeding.

7. That in its next rider application, DEP shall address the continuing cost-effectiveness of the Non-Residential Smart $aver Performance Incentive Program and if it is not cost-effective, provide details of plans to modify or close the program.

8. That in its next rider application, DEP shall address the continuing cost-effectiveness of the MyHER Program and if it is not cost-effective, provide details of plans to modify or close the program.

9. That the results of the EM&V report for the MyHER Program, as shown in Evans Exhibit I, are accepted conditionally for purposes of this proceeding. The Public Staff shall continue to review this report and offer further recommendations for the Company's consideration in the next DSM/EE rider proceeding.

10. That the Company should incorporate the recommendation made by Public Staff witness Williamson that the program evaluator for the Company's EE Lighting Program should (a) include the basis for the selected weighting methodology (weightings based on bulb sales, measure savings, or other metric) when assessing program savings, and (b) indicate what other weighting methodologies were considered and why they were rejected, and why the selected methodology is preferable, in future EM&V reports for the EE Lighting Program.

11. That DEP shall leverage the DEP Collaborative to discuss the EM&V issues and program design issues raised in the testimony of NC Justice Center witness Neme as discussed herein, as well as the issues raised by Public Staff witness Williamson regarding the MyHER program and the impact of upcoming lighting standards. The results of these discussions, specifically including the salient points arising from the discussion of the issues raised in the testimonies of witnesses Neme and Williamson, shall be reported to the Commission in the Company's 2019 DSM/EE rider filing. In addition, the report should identify all participants in the Collaborative discussions; identify any new ideas, proposals, programs and/or program adjustments presented or arising out of the discussions; summarize the Company's analysis or evaluation of such ideas, proposals, programs or program adjustments; and provide a status update with respect to unfinished or future discussions of the Collaborative.

12. Beginning in 2019, the combined DEC/DEP Collaborative shall meet every other month.

ISSUED BY ORDER OF THE COMMISSION.
This the 29th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-2, SUB 1175

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Duke Energy Progress, LLC,	)	
for Approval of Renewable Energy and Energy	)	ORDER APPROVING REPS AND REPS
Efficiency Portfolio Standard Cost Recovery	)	EMF RIDER AND APPROVING REPS
Rider Pursuant to G.S. 62-133.8 and	)	COMPLIANCE REPORT
Commission Rule R8-67	)	

HEARD: Tuesday, September 18, 2018 at 9:40 a.m. in the Commission Hearing Room 2115, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner Daniel E. Clodfelter, Presiding, Chairman Edward S. Finley, Jr., and Commissioners ToNola D. Brown-Bland, Jerry C. Dockham, James G. Patterson, Lyons Gray and Charlotte A. Mitchell

APPEARANCES:

For Duke Energy Progress, LLC:

Kendrick C. Fentress, General Counsel, Duke Energy Corporation, 410 South Wilmington Street, NCRH 20/P.O. Box 1551, Raleigh, North Carolina 27602

Robert W. Kaylor Law Office of Robert W. Kaylor, P.A. 353 E. Six Forks Road, Suite 260 Raleigh, North Carolina 27609

For Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For North Carolina Sustainable Energy Association:

Benjamin Smith, Regulatory Counsel, North Carolina Sustainable Energy Association, 4800 Six Forks Road, Suite 300, Raleigh, North Carolina 27609

For the Using and Consuming Public:

Tim R. Dodge, Staff Attorney and Robert B. Josey, Staff Attorney, Public Staff, North Carolina Utilities Commission 4326 Mail Service Center Raleigh, North Carolina 27699

BY THE COMMISSION: On June 20, 2018, Duke Energy Progress, LLC (DEP or the Company) filed its 2017 REPS Compliance Report and application seeking an adjustment to its North Carolina retail (NC Retail) rates and charges pursuant to N.C.G.S. § 62-133.8(h) and

Commission Rule R8-67, which require the Commission to conduct an annual proceeding for the purpose of determining whether a rider should be established to permit the recovery of the incremental costs incurred to comply with the requirements of the Renewable Energy and Energy Efficiency Portfolio Standard (REPS), N.C.G.S. § 62-133.8(b), (d), (e) and (f), and to true up any under-recovery or over-recovery of compliance costs. DEP's application was accompanied by the testimony and exhibits of Megan W. Jennings, Renewable Compliance Manager, and Veronica I. Williams, Rates and Regulatory Strategy Manager. In its application and pre-filed testimony, DEP sought approval of its proposed REPS rider, which incorporated the Company's proposed adjustments to its North Carolina retail rates.

On July 2, 2018, the Commission issued an Order setting this matter for hearing, establishing deadlines for the submission of intervention petitions, intervenor testimony, and DEP rebuttal testimony, requiring the provision of appropriate public notice, and mandating compliance with certain discovery guidelines.

The Commission issued orders granting petitions to intervene filed by the North Carolina Sustainable Energy Association (NCSEA) and the Carolina Utility Customers Association, Inc. (CUCA), on June 29, and July 24, 2018, respectively. The intervention and participation by the Public Staff is recognized pursuant to N.C.G.S. § 62-15(d) and Commission Rule R1-19(e).

On August 29, 2018, the Public Staff filed the affidavits and exhibits of Jay B. Lucas, an engineer in the Public Staff Electric Division, and Michelle M. Boswell, an accountant in the Public Staff Accounting Division.

On September 12, 2018, DEP filed a motion requesting that all of its witnesses be excused from attending the evidentiary hearing and that the pre-filed testimony, exhibits, and affidavits of the witnesses and affiants be received into evidence and made a part of the record in this proceeding. On September 13, 2018, the Commission issued an order granting that motion.

This matter came on for hearing on September 18, 2018. DEP presented the testimony and exhibits of witnesses Jennings and Williams, and the Public Staff presented the affidavits of witnesses Boswell and Lucas. All pre-filed testimony, exhibits, and affidavits of the DEP and Public Staff's witnesses were received into evidence.

Based upon the foregoing, the testimony, exhibits, and affidavits introduced at the hearing, the records in the North Carolina Renewable Energy Tracking System (NC-RETS), and the entire record in this proceeding, the Commission makes the following:

FINDINGS OF FACT

1. DEP is a duly organized limited liability company existing under the laws of the State of North Carolina, is engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North Carolina, and is subject to the jurisdiction of the Commission as a public utility. DEC is also an electric power supplier as defined in N.C.G.S. § 62-133.8(a)(3). DEP is lawfully before this Commission based upon its application filed pursuant to N.C.G.S. § 62-133.8 and Commission Rule R8-67.

2. For purposes of DEP's annual rider established pursuant to N.C.G.S. § 62-133.8(h), the test period and billing period for this proceeding are, respectively, the twelve-month period beginning April 1, 2017, and ending March 31, 2018, and twelve-month period beginning December 1, 2018, and ending November 30, 2019.

3. Section 62-133.8(h) of the North Carolina General Statutes authorizes an electric power supplier to recover the "incremental costs" of compliance with the REPS requirement through an annual REPS rider. The "incremental costs," as defined in N.C.G.S. § 62-133.8(h)(1), include the reasonable and prudent costs of compliance with REPS "that are in excess of the electric supplier's avoided costs other than those costs recovered pursuant to N.C.G.S. § 62-133.9." The term "avoided costs" includes both avoided energy costs and avoided capacity costs.

4. For calendar year 2017, the Company was required to meet at least 6% of its previous year's North Carolina retail electric sales by a combination of renewable energy and energy reductions due to the implementation of energy efficiency measures. Also in 2017, energy in the amount of at least 0.14% of the previous year's total electric power sold by DEP to its North Carolina retail customers must be supplied by solar energy resources.

5. Beginning in 2012, N.C.G.S. §§ 62-133.8(e) and (f) require DEP and the other electric suppliers of North Carolina, in the aggregate, to procure a certain portion of their renewable energy requirements from electricity generated from swine and poultry waste, based on each electric power supplier's respective pro-rata share derived from the ratio of its North Carolina retail sales as compared to total North Carolina retail sales. The Commission further established the annual allocation of the state-wide poultry waste requirement applicable to 2016-2018 among electric power suppliers and utility compliance aggregators in its August 5, 2016, Order Establishing 2016, 2017, and 2018 Poultry Waste Set-Aside Requirement Allocation in Docket No. E-100, Sub 113 (2016 Poultry Allocation Order). In its Order Modifying the Swine and Poultry Waste Set-Aside Requirements and Providing Other Relief, issued on October 16, 2017, in Docket No. E-100, Sub 113 (2017 Delay Order), the Commission modified the aggregate 2017 poultry waste set-aside requirement to remain at the same level as the 2016 requirement and delayed by one year the scheduled increases in the requirement. In the 2017 Delay Order, the Commission also postponed for one additional year the swine waste set-aside requirement, directing that the swine waste set-aside requirement would commence in 2018, rather than 2017.

6. DEP has agreed to provide compliance services, including the procurement of renewable energy certificates (RECs), to the following electric power suppliers, pursuant to N.C.G.S. § 62-133.8(c)(2)(e): the Town of Black Creek, the Town of Lucama, the Town of Sharpsburg, the Town of Stantonsburg, and the Town of Winterville (collectively, Wholesale Customers). DEP's contractual obligation to provide REPS services to the Wholesale Customers ended December 31, 2017.

7. DEP has complied with the 2017 REPS compliance requirements, for itself and the Wholesale Customers, by submitting for retirement 2,210,451 RECs, including 16,358 Senate Bill 886 (SB 886) RECs, each of which counts for two poultry waste RECs and one general REC, to meet its overall total REPS requirement of 2,243,167 RECs. Within this total, the Company submitted for retirement 52,344 RECs to meet the solar set-aside requirement and 15,358 RECs,

along with 16,358 SB 886 RECs (which count as 32,716 poultry waste set-aside RECs), to meet the poultry waste set-aside requirement.

8. DEP and the Wholesale Customers met their 2017 REPS obligations, including those the set-aside requirements as modified or delayed by the Commission's Orders issued in Docket No. E-100, Sub 113.

9. When DEP filed its application, DEP expressed uncertainty about its ability to meet the poultry and swine waste set-aside requirements for compliance year 2018. On October 8, 2018 (subsequent to the September 18 hearing date in this proceeding), the Commission issued its Order Modifying the Swine and Poultry Waste Set-Aside Requirements and Providing Other Relief in Docket No. E-100, Sub 113 (2018 Delay Order) which: modified the 2018 swine waste set-aside requirement by establishing that requirement for DEP and the other electric public utilities at 0.02% of prior year retail sales; delayed the 2018 swine waste set-aside requirements for electric membership corporations and municipalities until 2019; modified the 2018 poultry waste set-aside requirement by establishing that requirement at 300,000 MWh for all electric suppliers; and delayed by one year the future scheduled increases in the poultry and swine waste set-aside requirements.

10. The research activities funded by DEP during the test period are incremental costs reasonably and prudently incurred by DEP to fund research that encourages the development of renewable energy, energy efficiency, or improved air quality and are within the annual $1-million limit established pursuant to N.C.G.S. § 62-133.8(h)(1)(b). It is appropriate to require DEP to continue to provide the results of its REPS-related research when these results are publicly available, and the procedures for third parties to access the results when they are proprietary in its future applications for the recovery of costs incurred to comply with the REPS requirements.

11. DEP appropriately calculated its avoided costs and incremental REPS compliance costs for the test period and billing period. For purposes of establishing the REPS experience modification factor (EMF) rider in this proceeding, DEP's incremental costs for REPS compliance during the test period were $42,744,260, including the costs incurred for its Wholesale Customers, and these costs were reasonably and prudently incurred. The Company's projected incremental costs for REPS compliance for the billing period total $40,959,120 for DEP retail customers only, as DEP's agreement to provide REPS compliance services to the Wholesale Customers ended effective December 31, 2017.

12. It is appropriate to approve DEP's request to recover other incremental costs and the costs of incentives provided to customers and program administrative costs related to the solar rebate program established pursuant to N.C.G.S. § 62-155(f), as incremental costs reasonably and prudently incurred and authorized for recovery pursuant to N.C.G.S. § 62-133.8(h)(1)(a) and (d).

13. DEP complied with the conditions related to cost recovery for the solar photovoltaic (PV) electric generating facilities located in Fayetteville, Warsaw, Camp Lejeune, and Elm City, which are owned by the Company. DEP's compliance requirement associated with these conditions is complete.

14. It is appropriate to approve DEP's request to recover other incremental costs of compliance with REPS pursuant to G.S. 62-133.8(h)(1)(a), as incremental costs reasonably and prudently incurred to comply with the REPS requirements.

15. DEP's allocation of incremental REPS compliance costs among customer classes for the purposes of calculating its proposed REPS and EMF rider charges is appropriate for this proceeding.

16. DEP's test period REPS expense under-collections were $2,124,217 for the residential class and $196,787 for the industrial class. DEP's test period over-collection, including interest, was $1,272,374 for the general service class. In addition, the Company appropriately credited to customers the following amounts received from REC suppliers during the test period related to contract amendments, penalties, and other conditions of the supply agreements: $325,340 for residential customers, $294,082 for general service customers, and $18,500 for industrial customers. Total test period charges to customers' accounts, including the under-collections offset by contract-related credits, were $1,798,877 for the residential class, and $178,287 for the industrial class. The total test period credit to the general service class, including the over-collection and contract-related credits, was $1,566,456. These amounts are exclusive of the regulatory fee.

17. DEP's North Carolina retail prospective billing period expenses for use in this proceeding are $19,004,704 for the residential class, $20,526,773, and $1,427,643, for the residential, general service, and industrial classes, respectively, excluding regulatory fee.

18. The appropriate monthly REPS EMF rider charges per customer account, excluding regulatory fee, to be charged to customers during the billing period are $0.12 for residential accounts and $8.11 for industrial accounts, and the appropriate monthly REPS EMF rider credit to be refunded to customers during the billing period is $(0.66) for general service accounts.

19. The appropriate monthly prospective REPS rider charges per customer account, excluding regulatory fee, to be charged to customers during the billing period are $1.30 for residential accounts, $8.61 for general service accounts, and $64.96 for industrial accounts.

20. The combined monthly REPS and REPS EMF rider charges per customer account, excluding the regulatory fee, to be charged to customers during the billing period are $1.42 for residential accounts, $7.95 for general service accounts, and $73.07 for industrial accounts. Including the regulatory fee, the combined monthly REPS and REPS EMF rider charges per customer account to be collected during the billing period are $1.42 for residential accounts, $7.96 for general service accounts, and $73.17 for industrial accounts.

21. DEP's REPS rider charges, including the regulatory fee, to be charged to each customer account for the billing period is within the annual limits established for each class in N.C.G.S. § 62-133.8(h)(4).

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NO. 1

This finding of fact is essentially informational, procedural, and jurisdictional in nature and is uncontested.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 2-6

The evidence supporting these findings of fact is found in in the direct testimony and exhibits of DEP witnesses Jennings and Williams, including DEP's 2017 REPS Compliance Report that was sponsored as an exhibit to witness Jennings' testimony, and in the affidavit of Public Staff witness Lucas. These findings of fact are essentially informational, jurisdictional and procedural in nature and are not contested.

Section 62-133.8(h)(4) requires the Commission to allow an electric power supplier to recover all of its incremental costs incurred to comply with N.C.G.S. § 62-133.8 though an annual rider. N.C.G.S. § 62-133.8(h)(1) provides that "incremental costs" means all reasonable and prudent costs incurred by an electric power supplier to comply with the REPS requirement that are in excess of the electric power supplier's avoided costs other than those costs recovered pursuant to N.C.G.S. § 62-133.9. The term "avoided costs" includes both avoided energy and avoided capacity costs. Commission Rule R8-67(e)(2) provides that the "cost of an unbundled renewable energy certificate to the extent that it is reasonable and prudently incurred is an incremental cost and had no avoided cost component."

Commission Rule R8-67(e)(1) provides that the Commission shall schedule an annual public hearing to review an electric utility's REPS compliance costs. Subdivision (e)(3) of Rule R8-67 further provides that the test period for REPS rider proceedings shall be the same as that used by the utility in its fuel charge adjustment proceedings, which is specified in Commission Rule R8-55(c) for DEP to be the twelve months ending March 31 of each year. Commission Rule R8-67(e)(5) provides that "[t]he REPS EMF rider will reflect the difference between reasonable and prudently incurred incremental costs and the revenues that were actually realized during the test period under the REPS rider then in effect." Commission Rule R8-67(e)(4) further provides that the REPS and REPS EMF riders shall be in effect for a fixed period, which "shall coincide, to the extent practical, with the recovery period for the cost of fuel and fuel-related cost rider established pursuant to Rule R8-55." In its current fuel charge adjustment proceeding, Docket No. E-2, Sub 1173, and in this proceeding, DEP proposed that its rate adjustments take effect on December 1, 2018, and remain in effect for a twelve-month period.

The test period and the billing period proposed by DEP were not challenged by any party. The Commission concludes that the test period and billing period appropriate for this proceeding are the twelve months beginning April 1, 2017, and ending March 31, 2018, and the twelve months ending November 30, 2019, respectively.

Pursuant to N.C.G.S. § 62-133.8(b)(1), each electric public utility in the state is required to produce a certain percentage of its North Carolina retail electric sales from various renewable energy or EE resources. An electric public utility may meet these requirements from any one or more of the following compliance options listed in N.C.G.S. § 62-133.8(b)(2): (a) generating electric power at a new renewable energy facility; (b) using a renewable energy resource to generate electric power at a generating facility other than the generation of electric power from waste heat derived from the combustion of fossil fuel; (c) reducing energy consumption through the implementation of energy efficiency measures; (d) purchasing electric power from a new renewable energy facility; (e) purchasing RECs produced from in-State or out-of-state new renewable energy facilities; (f) using electric power that is supplied by a new renewable energy facility or saved due to the implementation of an EE measure that exceeds the requirements of the REPS in any calendar year as a credit toward the requirements of the REPS in the following calendar year; or (g) electricity demand reduction. Each of these measures is subject to additional limitations and conditions. For 2017, an electric public utility must meet a total REPS requirement equal to at least six percent of its previous year's North Carolina retail electric sales by a combination of these measures.

Subsection 62-133.8(d) requires a certain percentage of the total electric power sold to retail electric customers in the State, or an equivalent amount of energy, to be supplied by a combination of new solar electric facilities and new metered solar thermal energy facilities. The percentage requirement for solar resources in 2017 is 0.14%.

Subsections 62-133.8(e) and (f) require DEP and the other electric suppliers of North Carolina, in the aggregate, to procure a certain portion of their renewable energy requirements from electricity generated from swine and poultry waste. The swine waste energy requirement is based on a percentage of retail sales, similar to the solar energy requirement. The poultry waste energy requirement is based on each electric power supplier's respective pro-rata share derived from the ratio of its North Carolina retail sales as compared to the total North Carolina retail sales. Pursuant to the Commission's Order on Pro-Rata Allocation of Aggregate Swine and Poultry Waste Set-Aside Requirements and Motion for Clarification, issued on March 31, 2010, in Docket No. E-100, Sub 113, DEP's share of the aggregate State set-aside requirements for energy from swine and poultry waste is based on the ratio of its North Carolina retail kilowatt-hour sales for the previous year divided by the previous year's total North Carolina retail kilowatt-hour sales. The Commission's 2016 Poultry Allocation Order established DEP's allocation share of the state-wide poultry waste requirement to be effective for the 2017 compliance year. Subsequently, the Commission's 2017 Delay Order modified the 2017 state-wide poultry waste requirement to remain at 2016 levels. The 2017 Delay Order also postponed the swine waste requirement for one year, to commence in 2018 rather than 2017.

DEP witness Jennings testified that DEP submitted its 2017 REPS compliance report as Jennings Exhibit No. 1 and that this report contained all the information required by Commission Rule R8-67(c) in the aggregate for DEP and the Wholesale Customers for which DEP has contracted to provide REPS compliance services. In its 2017 compliance report, DEP stated that it provided energy resources and compliance reporting services for the Town of Black Creek, the Town of Lucama, the Town of Sharpsburg, the Town of Stantonsburg, and the Town of Winterville. Public Staff witness Lucas noted that DEP indicated in response to data requests that it no longer provides any REPS compliance services to the Wholesale Customers as of January 1, 2018.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 7-9

The evidence supporting these findings of fact is found in the direct testimony and exhibits of DEP witnesses Jennings and Williams, including DEP's 2017 REPS Compliance Report, which was admitted into evidence as Jennings Exhibit No.1, and in the affidavit of Public Staff witness Lucas. In addition, the Commission takes judicial notice of the information contained in NC-RETS.

Witness Jennings testified that DEP submitted for retirement 2,210,451 RECs, which included 16,358 Senate Bill 886 (SB 886) RECs, each of which counts for two poultry waste and one general REC, to meet its Total Requirement of 2,243,167 RECs. She defined the "Total Requirement" as DEP's overall REPS requirement. Within this total, the Company submitted for retirement 52,344 RECs to meet the solar set-aside requirement, along with 16,358 SB 886 RECs (which count as 32,716 poultry waste set-aside RECs), to meet the poultry waste set-aside requirement. Witness Jennings' further testified that she estimates that, for compliance year 2018, the Company would be required to submit for retirement 3,682,990 RECs to meet its Total Requirement defined according to N.C.G.S. § 62-133.8(b). Within this total, the Company estimated it would retire the following: 73,660 solar RECs, 25,781 swine waste RECs, and 197,318 poultry waste RECs. For 2019, her testimony included estimates of 3,724,847 RECs for the Total Requirement and, within this total, estimates of the following set-aside requirements: 74,497 solar RECs, 26,074 swine waste RECs and 253,695 poultry waste RECs.

Witness Jennings next testified that the Company had complied with its "General Requirement" (DEP's Total Requirement, net of the Solar, Swine Waste and Poultry Waste requirements) for 2017. Pursuant to NC-RETS Operating Procedures, she testified that the Company has submitted for retirement 2,142,749 RECs to meet the General Requirement. Specifically, the RECs to be used for 2017 compliance have been transferred from the NC-RETS Progress Energy Electric Power Supplier account to the Progress Energy Compliance Sub-Account and the Sub-Accounts of the Wholesale Customers.

Witness Jennings also testified that DEP procured or produced sufficient RECs to meet its 2017 solar set-aside requirement of 52,344 RECs. In addition, she testified that the Company met its 2017 poultry waste requirement of 48,074 RECs, including 15,358 poultry waste RECs and 32,716 SB 886 bonus poultry RECs (generated from 16,358 general requirement SB 886 RECs). Pursuant to NC-RETS Operating Procedures, the Company submitted these solar RECs and poultry waste RECs for retirement. The RECs were transferred from the Progress Energy Electric Power Supplier Account to the Progress Energy Compliance Sub-Account and the Sub-Accounts of its Wholesale Customers.

In her direct testimony, Company witness Jennings testified DEP could comply with the then-current poultry waste set-side requirement in 2018, though future compliance was dependent on the performance of poultry waste-to-energy developers on current contracts. Witness Jennings' testimony also indicated that the Company did not expect to be able to meet its then-current swine waste requirement level for 2018, citing performance difficulties related to swine waste-to-energy developers on current contracts, and delays in swine waste-to-energy developers becoming commercially operational on new contracts. She noted difficulties, as understood by the Company, that are being experienced by current projects in achieving full REC output, related to: the inability to secure firm and reliable sources of swine waste feedstock from waste producers in North Carolina; difficulties securing project financing; and technological challenges encountered when ramping up production. As detailed in witness Jennings's direct testimony as well as in the Company's Joint Semiannual Progress Report, filed on May 31, 2018, in Docket No. E-100, Sub 113A, DEP continues to engage in numerous and diverse efforts to procure or develop resources to meet its swine waste set-aside requirements in a reasonable and prudent manner. The 2018 Delay Order modified DEP's swine waste requirement to 0.02% from 0.07%, modified the poultry waste requirement from 700,000 MWh to 300,000 MWh, and delayed the subsequent increases for an additional year, reflecting the Company's expectation of compliance difficulties as noted in her testimony.

Public Staff witness Lucas recommended that the Commission approve DEP's 2017 REPS Compliance Report. Specifically, he testified that for 2017 compliance, DEP needed to obtain a sufficient number of RECs and energy efficiency certificates (EECs) derived from eligible sources so that the total equaled 6% of the 2016 North Carolina retail electricity sales of itself and the Wholesale Customers. Additionally, he testified that DEP needed to pursue retirement of sufficient solar RECs to match 0.14% of retail sales in 2016 for itself and the Wholesale Customers, and of its pro-rata share of the 170,000 poultry waste RECs required by N.C.G.S. § 62-133.8(f). Further, he testified that the number of poultry waste RECs was established pursuant to the Commission's 2017 Poultry Allocation Order and 2017 Delay Order, and that the REPS requirement for swine waste, under N.C.G.S. § 62-133.8(e), was delayed until 2018 by the Commission's 2017 Delay Order.

No party disputed that DEP had fully complied with the applicable REPS requirements, or argued that DEP's REPS Compliance Report for 2017 should not be approved.

Based on the foregoing and the entire record herein, the Commission finds that DEP and the five Wholesale Customers for which it is providing REPS compliance services have complied with the REPS requirements for 2017, as modified by the Commission's 2017 Delay Order. Therefore, the Commission concludes that DEP's 2017 REPS Compliance Report should be approved, and that the RECs and EECs in the related NC-RETS compliance sub-accounts should be permanently retired. Finally, the Commission finds that, at the time DEP filed its application in this proceeding, it was uncertain whether it will be able to comply with the poultry and swine waste set-aside requirements for 2018, which have subsequently been modified pursuant to the Commission's 2018 Delay Order, and that this uncertainty persists as to future compliance years notwithstanding that the Company is committed to satisfying these requirements by continuing to pursue procurement of these resources in a reasonable and prudent manner.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 10

The evidence for this finding of fact is found in the testimony of DEP witnesses Jennings and Williams.

Witness Jennings identified in confidential Jennings Exhibit No. 3 the "Research," "Solar Rebate Program," and "Other Incremental" costs that the Company incurred or projects to incur in association with REPS compliance. With respect to research costs, Williams Exhibit No. 1 shows that the research costs are under the $1 million per year cap established in N.C.G.S. § 62-133.8(h)(1)(b).

In compliance with prior Commission Orders, witness Jennings supplied testimony and exhibits on the results and status of various studies, the costs of which DEP is seeking to recover in this docket.

No party disputed these costs or argued that the recovery of these costs through the REPS rider charges should be disallowed.

Based upon the foregoing and the entire record herein, the Commission finds that the research activities funded by DEP during the test period were reasonable and prudent costs incurred to fund research that encourages the development of renewable energy, energy efficiency, or improved air quality and do not exceed the one million dollar annual limit established pursuant to N.C.G.S. § 62-133.8(h)(1)(b). Therefore, the Commission concludes that DEP should be allowed to recover these costs through the REPS rider charges approved in this Order. In addition, the Commission finds that the research information DEP provided is helpful. Therefore, the Commission finds that it is appropriate to require DEP to continue filing this information with its future REPS compliance reports and applications to recover costs incurred to comply with the REPS Requirements, and to continue to provide procedures for third parties to access the results of studies that are subject to confidentiality agreements. For research projects sponsored by Electric Power Research Institute, DEP should provide the overall program number and specific project number for each project, as well as an internet address or mailing address that will enable third parties to inquire about the terms and conditions for access to any portions of the study results that are proprietary.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 11-14

The evidence for these findings of fact is found in testimony and exhibits of DEP witnesses Jennings and Williams, and in the affidavits of Public Staff witnesses Boswell and Lucas.

DEP witness Williams testified regarding the calculation of DEP's avoided costs and its incremental costs of compliance with REPS requirements, based on incurred and projected costs provided by witness Jennings. N.C.G.S. § 62-133.8(h)(1) provides that "incremental costs" means "all reasonable and prudent costs incurred by an electric power supplier" to comply with the REPS requirements "that are in excess of the electric power supplier's avoided costs other than those costs recovered pursuant to N.C. Gen Stat. § 62-133.9." For purchased power agreements with a renewable energy facility, DEP subtracted its avoided cost from the total cost associated with the renewable energy purchase to arrive at the incremental cost for that renewable energy purchase during the period in question. Consistent with Commission Rule R8-67(e)(2), which provides that the cost of an unbundled REC is an incremental cost with no avoided cost component, witness Williams included in incremental costs the total amount of costs incurred during the test period for unbundled REC purchases. In addition to costs incurred or projected to be incurred for bundled or unbundled RECs, Williams Exhibit No. 1, Pages 1 and 2 identified the "Other Incremental," "Solar

Rebate Program" and "Research" costs that DEP has incurred or projects to incur in association with REPS compliance.

Williams Exhibit No. 1, Page 1 showed total NC Retail and Wholesale Customer incremental REPS compliance costs incurred during the test period as $42,744,260 ($42,645,949 for NC Retail only), and Williams Exhibit No. 1, Page 2 showed comparable projected incremental costs for the billing period as $40,959,120 (applicable to NC Retail only as compliance services for Wholesale Customers ended effective December 31, 2017).

Public Staff witness Lucas stated in his affidavit that DEP's proposed REPS rider charges are based on the projected costs and projected number of accounts subject to the REPS charge in the billing period. He further testified that the REPS EMF charges are based on the incremental costs in the test period and the average number of accounts subject to the REPS charge during the billing period, as more fully discussed in the affidavit of Public Staff witness Boswell. In addition, he testified that the Public Staff has reviewed the costs that produce the REPS and REPS EMF rider charges proposed by DEP in this proceeding, and that the Public Staff takes no issue with them. Accordingly, he further testified that the Public Staff recommends approval of the proposed rider charges as filed.

Pursuant to Ordering Paragraph No. 7 of the Commission's Order Approving REPS and REPS EMF Rider and Approving REPS Compliance Report, issued on November 17, 2017, in Docket No. E-2, Sub 1144 (2017 DEP REPS Order), DEP is required to "continue to file a worksheet explaining the discrete costs it includes as 'other incremental costs' in all future REPS proceedings." Witness Jennings's Exhibit No. 3 is a worksheet that is intended to meet this requirement by detailing the "Other Incremental Cost," "Solar Rebate Program Cost," and "Research Cost" that DEP is seeking to recover in this proceeding. Witness Jennings testified that "Other Incremental Cost" includes labor costs associated with REPS compliance activities and non-labor costs associated with administration of REPS compliance; however witness Jennings further testified that, as required by the Commission's Order Approving REPS and REPS EMF Rider REPS Compliance Report, issued on January 17, 2017, in Docket No. E-2, Sub 1109, no internal interconnection-related labor costs and non-labor costs have been included DEP's application for cost recovery in this proceeding. Witness Williams included the other incremental and research costs that were incurred in the Test Period in the EMF calculation. She explained that these costs are estimated for the Billing Period and included in the proposed REPS riders. She also testified that an amount equal to the annual amortization of Solar Rebate Program costs incurred pursuant to N.C.G.S. § 62-155(f) applicable to the billing period is also included for recovery in the proposed REPS rider.

Witness Jennings provided additional detail on the inclusion of Solar Rebate Program costs for recovery in the proposed REPS rider. As required by N.C.G.S. § 62-155(f), DEP filed an application for approval of its Solar Rebate Program in Docket Nos. E-7, Sub 1166 and E-2, Sub 1167. On April 3, 2018, in Docket Nos. E-7, Sub 1166 and E-2 Sub 1167, the Commission issued its Order Modifying and Approving Riders Implementing Solar Rebate Program. Witness Jennings testified in this current proceeding DEP's Solar Rebate Program offers reasonable incentives to residential and nonresidential customers for the installation of small customer-owned or leased solar energy facilities participating in the Company's net metering tariff. Witness

Jennings explained that, consistent with N.C.G.S. §§ 62-155(f) and 62-133.8(h), the Company had included labor and non-labor costs projected to be incurred in the billing period related to implementation of the Solar Rebate Program. Witness Jennings identified these costs, which include the annual amortization of incentives paid to customers and program administration costs, including labor, information technology, and marketing costs, in Jennings Confidential Exhibit No. 3.

The Commission notes that this is the first REPS rider proceeding in which DEP has included costs associated with its Solar Rebate Program for recovery through the REPS rider. Subsection 62-155(f) authorizes DEP to recover through the REPS rider charges all reasonable and prudent costs of incentives provided to customers and program administrative costs by amortizing the total program incentives distributed during a calendar year and administrative costs over a 20-year period, including a return component adjusted for income taxes at the utility's overall weighted average cost of capital established in its most recent general rate case. Additionally, N.C.G.S. § 62-133.8(h), as amended by House Bill 589, provides that an electric power supplier's cost recovery and customer charges under the REPS rider may include incremental costs incurred to "provide incentives to customers, including program costs, incurred pursuant to N.C.G.S. § 62-155(f)."

No party challenged DEP's calculation of its avoided costs or incremental costs to comply with the REPS requirements, or otherwise disputed whether these costs were reasonable and prudently incurred.

Witness Williams also testified regarding the Company's Fayetteville, Warsaw, Camp Lejeune, and Elm City solar photovoltaic electric generating facilities (DEP Solar PV Facilities), which were in service for the duration of the test period. She testified that the Commission included two conditions related to cost recovery for the DEP Solar PV Facilities in its December 16, 2014, orders approving the transfer of each Certificate of Public Convenience and Necessity (CPCN) in Docket No. E-2, Subs 1054, 1055, 1056, respectively, and in its April 14, 2015, order issuing a CPCN in Docket No. E-2, Sub 1063 (collectively, CPCN Orders). The first condition addressed the avoided cost values to be used by the Company in subsequent calculations of the avoided and incremental components of total cost for each of the facilities. The Company agreed that, in the appropriate REPS rider and general rate case proceedings, it would determine the levelized avoided cost per MWh for each facility by using the same avoided energy and capacity cost values included in the Company's analysis of the revenue requirements for each facility, as presented during the CPCN proceedings. The second condition relates to DEP's ability to realize certain tax benefits included in the Company's revenue requirements analysis for each facility as presented during the CPCN proceedings. The condition provides that, in the appropriate REPS rider and general rate case proceedings, DEP will separately itemize the actual monetization of the tax benefits listed in the Commission's orders within its calculation of the levelized revenue requirement per MWh for each facility, so that it may be compared with the monetization of such tax benefits included in the Company's revenue requirement analysis of each facility presented during the CPCN proceedings. To the extent the Company fails to fully realize the tax benefits it originally assumed in its estimated revenue requirements, costs associated with the increased revenue requirements (with a limited exception) will be presumed to be imprudent and unreasonably incurred. The condition further provides that DEP may rebut this presumption with evidence supporting the reasonableness and prudence of its actual monetization of the tax credits.

Witness Williams testified that, in the Company's 2016 annual REPS rider filing in Docket No. E-2, Sub 1109 and its 2017 annual REPS rider filing in Docket No. E-2, Sub 1144, the Company updated its original models of estimated annual revenue requirements to reflect its actual experience to date with regard to each of the specified tax-related benefits, and that the Company updated its estimates of the timing of realization of the relevant tax benefits in future tax years. In addition, she testified that the avoided cost components of the revenue requirement calculations updated in these REPS rider dockets were fixed at the levels included in the original CPCN revenue requirement calculations, as required by the CPCN Orders. In each docket, the updated annual levelized revenue requirement for each project remained below the annual levelized avoided cost, and no incremental REPS cost was included for recovery in the respective REPS rider.

Witness Williams further testified that, on June 1, 2017, DEP filed its Application for Adjustment in Rates and Request for Accounting Order in Docket No. E-2, Sub 1142, the Company's only general rate case proceeding since the issuance of the CPCN Orders. The DEP Solar PV Facilities costs were included in total in the revenue requirement calculated and subject to recovery in base rates in the general rate case docket. The Commission issued its final order in that general rate case proceeding on February 23, 2018, in which the Commission accepted DEP's conclusion that the facility costs included in its proposed base rates were prudently incurred and approved recovery through base rates. Witness Williams explained that the Company included no recovery of costs related to the DEP Solar PV Facilities in its current REPS rider filing, and submitted that it has now met in full the cost recovery conditions of the CPCN Orders, and its compliance requirement is completed.

No party disputed whether DEP had complied with the required treatment of the costs related to the DEP Solar PV Facilities.

Based upon the foregoing and the entire record herein, the Commission finds that DEP appropriately calculated its avoided costs and incremental REPS compliance costs for the test period and the billing period. The Commission further finds that for the purpose of establishing the REPS EMF rider in this proceeding, DEP's incremental costs for REPS compliance during the test period were $42,744,260, including the costs incurred for DEP's Wholesale Customers, and that these costs were reasonable and prudently incurred. The Commission further finds that DEP appropriately projected incremental costs for REPS compliance for the billing period totaling $40,959,120, representing costs of compliance based on DEP's retail sales only, because DEP's obligation to provide REPS compliance services to the Wholesale Customers ended December 31, 2017. Therefore, the Commission concludes that DEP's request for recovery of these costs should be approved. In addition, the Commission finds that DEP has complied with the requirements of the CPCN Orders, as relevant to this proceeding. Therefore, the Commission concludes that DEP's compliance obligation related to the conditions detailed above is complete.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 15

The evidence for this finding of fact is found in DEP's Application and in the direct testimony and exhibits of DEP witness Williams, as well as in the affidavits of Public Staff witnesses Boswell and Lucas.

Witness Williams' direct testimony explained that incremental costs assigned to DEP retail customers are separated into two categories: costs related to solar, poultry and swine waste compliance requirements, and research, solar rebate program and other incremental costs (Set-Aside and Other Incremental Costs); and costs related to the General Requirement (General Incremental Costs). Set-Aside and Other Incremental Costs are allocated to customer class based on per-account cost caps, and General Incremental Costs are allocated among customer classes to give credit for EE RECs (EECs), for which there are no General Incremental Costs according to the relative energy reduction contributed by each customer class.

In his affidavit, Witness Lucas noted that the Commission, in its 2017 DEP REPS Order, required DEP and the Public Staff to evaluate the inputs and methods used to allocate credits for EECs by class, and file a report of the results. On April 12, 2018, the Public Staff and DEP filed the joint report as required in Docket No. E-2, Sub 1144. Witness Lucas stated in his affidavit in this current proceeding that the Public Staff reviewed the allocation method used by DEP in this rider proceeding, and agreed that it is consistent with the method agreed to by the Public Staff and DEP in the April 12, 2018, joint report. In her affidavit, Witness Boswell indicated the Public Staff recommended no adjustments to DEP's proposed allocation among customer classes for credits for EECs.

The Commission finds that DEP's allocation of incremental REPS compliance costs among customer classes for the purposes of calculating its proposed REPS and EMF rider components is appropriate for this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 16-21

The evidence for these findings of fact is found in the direct testimony and exhibits of DEP witnesses Jennings and Williams, including DEP's application for cost recovery, and in the affidavits of Public Staff witnesses Boswell and Lucas.

Williams Exhibit No. 2 demonstrates that DEP's total NC Retail test period under-collections were $2,124,217 for the residential class and $196,787 for the industrial class, and an over-collection, including interest, of $1,272,374 for the general service class. Williams Exhibit No. 4 shows additional credits for contract receipts by customer class of $325,340 for residential, $294,082 for general service, and $18,500 for industrial. Total under-collections net of contract-related credits by class for the EMF period are $1,798,877 for residential and $178,287 for industrial. The total over-collection including contract-related credits is $1,566,456 for the general service class. As reflected in Williams Exhibit No. 4, witness Williams calculated proposed NC Retail monthly per-account REPS EMF charges (excluding regulatory fee) of $0.12 for residential accounts and $8.11 for industrial accounts, and a monthly REPS EMF credit (excluding regulatory fee) of $(0.66) for general service accounts. Also in Williams Exhibit No. 4, she calculated the projected NC Retail REPS costs for the billing period of $19,004,704 for the residential class, $20,526,773 for the general service class, and $1,427,643 for the industrial class. Williams Exhibit No. 4 shows that the proposed monthly prospective REPS riders per customer account, excluding the regulatory fee, to be collected during the billing period are $1.30 for residential accounts, $8.61 for general service accounts, and $64.96 for industrial accounts. The combined monthly REPS and REPS EMF rider charges per customer account, excluding regulatory fee, to be collected during the billing period are thus $1.42 for residential accounts, $7.95 for general service accounts, and $73.07 for industrial accounts. Including the regulatory fee, the combined monthly REPS and REPS EMF rider charges per customer account to be collected during the billing period are $1.42 for residential accounts, $7.96 for general service accounts, and $73.17 for industrial accounts. As further illustrated on Williams Exhibit No. 4, the Company's REPS incremental cost rider to be charged to each customer account for the billing period is within the annual cost cap established for each customer class in N.C.G.S. § 62-133.8(h)(4).

Public Staff witness Boswell stated in her affidavit that as a result of its investigation, the Public Staff recommended that the Company's proposed annual REPS EMF increment/(decrement) amounts and monthly EMF riders for each customer class be approved. Witness Boswell also stated that, excluding the regulatory fee, the annual increment/(decrement) REPS EMF riders are $1.47, $(7.88) and $97.35 and the monthly increment/(decrement) REPS EMF riders are $0.12, $(0.66), and $8.11, per retail customer account, for residential, general service, and industrial customers, respectively.

Public Staff witness Lucas stated that the Public Staff had reviewed the costs that produced the proposed, revised rates and that it took no issue with them. He recommended approval of the Company's proposed monthly per account REPS rider charges for the combined REPS and EMF billing components for the billing period (including regulatory fee), as follows: $1.42 for residential accounts, $7.96 for general service accounts, and $73.17 for industrial accounts.

Based upon the foregoing and the entire record herein, the Commission finds that DEP's calculation of its incremental costs for compliance with the REPS requirements during the test period and incremental costs projected during the billing period, and the resulting monthly per-account REPS rider and REPS EMF rider charges as set out in Revised Williams Exhibit No. 4, are reasonable and appropriate. The Commission further finds that the total of these charges are well below the respective annual per-account cost limits of $34.00, $150.00, and $1,000.00, for residential, commercial/general service, and industrial customers, as established in G.S. 62-133.8(h)(4). Therefore, the Commission concludes that DEP's total over-collection amounts incurred during the Test Period and the costs projected to be incurred during the billing period and the resulting REPS EMF and REPS rider charges should be approved.

IT IS, THEREFORE, ORDERED as follows:

1. That DEP shall establish a REPS rider as described herein, in the amounts approved herein, and that this rider shall remain in effect for a twelve-month period beginning on December 1, 2018, and expiring on November 30, 2019;

2. That DEP shall establish an EMF rider as described herein, in the amounts approved herein, and that this rider shall remain in effect for a twelve-month period beginning on December 1, 2018, and expiring on November 30, 2019;

3. That DEP shall file the appropriate rate schedules and riders with the Commission in order to implement the provisions of this Order as soon as practicable, but not later than ten (10) days after the date that the Commission issues orders in this docket and in Docket Nos. E-2, Sub 1173 and E-2, Sub 1176;

4. That DEP shall work with the Public Staff to prepare a joint notice to customers of the rate changes ordered by the Commission in this docket, as well as in Docket Nos. E-2, Sub 1173 and E-2, Sub 1176, and the Company shall file such notice for Commission approval as soon as practicable, but not later than ten (10) days after the Commission issues orders in both dockets;

5. That DEP's 2017 REPS compliance report shall be, and is hereby, approved and the RECs in DEP's 2017 compliance sub-accounts in NC-RETS and those of the Wholesale Customers shall be retired;

6. That DEP shall file in all future REPS rider applications the results of studies the costs of which were or are proposed to be recovered through the REPS rider charges and, for those studies that are subject to confidentiality agreements, information regarding whether and how parties can access the results of those studies; and

7. That DEP shall continue to file a worksheet explaining the discrete costs it includes as "other incremental costs" in all future REPS Rider proceedings.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of November, 2018.

NORTH CAROLINA UTILITIES COMMISSION
Janice H. Fulmore, Deputy Clerk

DOCKET NO. E-2, SUB 1176

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of:

Application by Duke Energy Progress, LLC	)	
for Approval of Joint Agency Asset Rider	)	
for Recovery of Costs Related to Facilities	)	ORDER APPROVING JOINT
Purchased from Joint Power Agency	)	AGENCY ASSET RIDER
Pursuant to N.C. Gen. Stat. § 62-133.14	)	ADJUSTMENT
and Rule R8-70	)	

HEARD: Tuesday, September 18, 2018, at 10:00 a.m. in the Commission Hearing Room, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina

BEFORE: Commissioner Charlotte A. Mitchell, Presiding; Chairman Edward S. Finley, Jr., Commissioner ToNola D. Brown-Bland, Commissioner Jerry C. Dockham, Commissioner James G. Patterson, Commissioner Lyons Gray, and Commissioner Daniel G. Clodfelter

APPEARANCES:

For Duke Energy Progress, LLC:

Lawrence B. Somers, Deputy General Counsel, Duke Energy Corporation, NCRH 20/Post Office Box 1551, Raleigh, North Carolina 27602-1551

For the Using and Consuming Public:

Heather D. Fennell, Staff Attorney, Public Staff, North Carolina Utilities Commission, 4326 Mail Service Center, Raleigh, North Carolina 27699-4300

For the Carolina Utility Customers Association, Inc.:

Robert F. Page, Crisp & Page, PLLC, 4010 Barrett Drive, Suite 205, Raleigh, North Carolina 27609

For the Carolina Industrial Group for Fair Utility Rates II:

Warren Hicks, Bailey & Dixon, LLP, Post Office Box 1351, Raleigh, North Carolina 27602

BY THE COMMISSION: On June 20, 2018, Duke Energy Progress, LLC (DEP or the Company) filed its Application for Approval of Joint Agency Asset Rider (JAAR) to recover costs related to facilities purchased from the North Carolina Eastern Municipal Power Agency (NCEMPA) pursuant to N.C. Gen. Stat. § 62-133.14 and Commission Rule R8-70. DEP's application was accompanied by the testimony and exhibits of LaWanda M. Jiggetts – Rates and Regulatory Strategy Manager. In its application and pre-filed testimony, DEP sought approval of the proposed rider, which incorporated the Company's proposed adjustments in its North Carolina retail rates.

On July 2, 2018, the Commission issued an Order Scheduling Hearing, Requiring Filing of Testimony, Establishing Discovery Guidelines, and Requiring Public Notice, in which the Commission set this matter for public witness and expert witness hearings, established discovery guidelines, and provided for public notice of the hearings.

On July 3, 2018, Carolina Industrial Group for Fair Utility Rates II (CIGFUR II) filed its petition to intervene. The Commission granted the petition on July 6, 2018. On July 19, 2018, Carolina Utility Customers Association, Inc. (CUCA) filed its petition to intervene. CUCA's petition was granted on July 24, 2018. The intervention and participation by the Public Staff is recognized pursuant to N.C. Gen. Stat. § 62-15(d) and Commission Rule R1-19(e).

On August 31, 2018, DEP filed the supplemental testimony and revised exhibits[1] of witness Jiggetts and a Motion for Additional Public Hearing and Public Notice of Revised Rates.

On September 4, 2018, the Public Staff filed the testimony of Darlene P. Peedin – Manager of the Electric Section of the Accounting Division of the Public Staff.

No other party pre-filed testimony in this docket.

On September 5, 2018, the Commission issued an Order Scheduling Additional Public Hearing and Requiring Public Notice.

On September 7, 2018, DEP and the Public Staff filed a Joint Motion to Excuse All Witnesses from appearing at the September 18, 2018 hearing in this proceeding. The Commission granted this motion on September 12, 2018.

On September 13, 2018, DEP filed its affidavits of publication for the initial public notice, and on October 5, DEP filed affidavits for the additional public notice.

This matter came on for hearing as scheduled on September 18, 2018. No public witnesses appeared. Because the parties had waived cross-examination of witnesses, DEP asked that the Company's application and the direct and supplemental testimony of witness Jiggetts be copied into the record and that her initial exhibits and revised exhibits be entered into evidence. The Commission granted those requests.

The Public Staff also moved into evidence the testimony of witness Peedin. That request was also granted. No other party presented witnesses.

The matter came on for hearing for an additional public witness hearing on October 8, 2018. No public witnesses appeared.

Based upon the foregoing, DEP's verified application, the testimony, supplemental testimony, initial exhibits, and revised exhibits received into evidence at the hearing, and the entire record in this proceeding, the Commission makes the following:

[1] DEP filed two revised exhibits to reflect changes to certain calculations from what was originally filed.

FINDINGS OF FACT

1. DEP is a duly organized corporation existing under the laws of the State of North Carolina, engaged in the business of developing, generating, transmitting, distributing, and selling electric power to the public in North Carolina and South Carolina, and is subject to the jurisdiction of the North Carolina Utilities Commission as a public utility. DEP is lawfully before this Commission based upon its application filed pursuant to N.C. Gen. Stat. § 62-133.14 and Commission Rule R8-70.

2. On July 31, 2015, DEP acquired NCEMPA's undivided ownership interests of 18.33% in the Brunswick Steam Electric Plant (Brunswick Units 1 and 2), 12.94% in Unit No. 4 of the Roxboro Steam Electric Plant (Roxboro Unit 4), 3.77% in the Roxboro Plant Common Facilities, 16.17% in the Mayo Electric Generating Plant (Mayo Unit 1), and 16.17% in the Shearon Harris Nuclear Power Plant (Harris Unit 1) (collectively, Joint Units). On May 12, 2015, the Commission issued an Order Approving Transfer of Certificate and Ownership Interests in Generating Facilities in Docket No. E-2, Sub 1067 and Docket No. E-48, Sub 8, which approved the transfer of NCEMPA's ownership interests in the Joint Units to DEP.

3. Pursuant to N.C. Gen. Stat. § 62-133.14, DEP is allowed to recover the North Carolina retail portion of all reasonable and prudent costs incurred to acquire, operate, and maintain the proportional interest in the generating facilities purchased from NCEMPA. Commission Rule R8-70(c) provides for an annual proceeding to establish the JAAR and requires the electric public utility to submit an application at the same time that it files the fuel proceeding information required by Commission Rule R8-55.

4. Commission Rule R8-70 schedules an annual adjustment hearing for DEP and requires that the Company use a test period of the calendar year that precedes the end of the test period used for purposes of Commission Rule R8-55. The test period covered by the proposed rates in this proceeding is January 1, 2017 through December 31, 2017. Pursuant to Commission Rule R8-70, each annual filing will provide for the recovery of costs expected to be incurred in the rate period (prospective component), including the levelized annual cost of the plant initially acquired and appropriate annual portions of the cost of other assets acquired (excluding construction work in progress), as well as ongoing annual non-fuel operating costs, reduced by the annual effects of the acquisition on North Carolina retail allocation factors. Commission Rule R8-70(b) provides for an over- or underrecovery component as a Rolling Recovery Factor, or a "Joint Agency Asset RRF," and requires the Company to use deferral accounting and maintain a cumulative balance of costs incurred but not recovered through the JAAR. This cumulative balance will accrue a monthly return as prescribed by the Rule.

5. DEP's proposed rates consist of a prospective component related to the future billing period December 2018 through November 2019, and a Joint Agency Asset RRF component that accomplishes the true-up of costs incurred through the test year ended December 31, 2017.

6. In its application and testimony in this proceeding, as revised, DEP requested a total of $147.654 million for the prospective component of its North Carolina retail revenue

requirement, for the period December 1, 2018 through November 30, 2019, associated with the acquisition and operating costs of NCEMPA's undivided ownership interest in the Joint Units.

7. The annual levelized costs associated with the acquisition of the Joint Units at the time of purchase were $56.314 million. DEP also requested an additional $8.276 million in annual pre-tax costs associated with the acquisition costs not included in the levelized costs. The acquisition costs underlying these amounts are deemed reasonable and prudent under N.C. Gen. Stat. § 62-133.14(b)(1).

8. DEP requested an additional $12.473 million in annual financing and operating costs relating to estimated capital additions during the rate period. The Commission finds it reasonable for the Company to recover these estimated costs during the rate period, subject to true-up through the Joint Agency Asset RRF.

9. DEP estimates the annual non-fuel operating costs from December 1, 2018 to November 30, 2019 to be $70.385 million. The Commission finds it reasonable for the Company to recover these estimated costs during the rate period, subject to true-up through the Joint Agency Asset RRF.

10. DEP requested $0.207 million for incremental regulatory fees. The Commission finds it reasonable for the Company to recover these estimated costs during the rate period, subject to true-up through the Joint Agency Asset RRF.

11. The prospective annual revenue requirement of $147.654 million resulting from the summing of the amounts set forth in Findings of Fact Nos. 7 through 10 has not been reduced by the annual effects of the acquisition on North Carolina retail allocation factors. This prospective credit is no longer applicable in the JAAR as new North Carolina retail base rates were effective March 16, 2018, as established in DEP's general rate case in Docket No. E-2, Sub 1142. North Carolina retail base rates approved in Sub 1142 reflect greater costs being allocated to wholesale customers because the Company is now supplying the entire electric requirements for NCEMPA.

12. In addition to the prospective components, DEP requests to return $9.196 million in its application and testimony in this proceeding through the Joint Agency Asset RRF component of its North Carolina retail revenue requirement charged during the period December 1, 2018 through November 30, 2019, related to the overrecovery of financing and non-fuel operating costs experienced through the test year ended December 31, 2017. The Commission finds the actual costs and credits underlying this true-up amount to be reasonable and prudent for purposes of this proceeding, and the return of this amount to be reasonable and appropriate.

13. Under N.C. Gen. Stat. § 62-133.14(b)(5), the prospective components and Joint Agency Asset RRF have been allocated under the customer allocation methodology approved by the Commission in Docket No. E-2, Sub 1142, DEP's most recent general rate case, to produce the following rates by customer class, which rates the Commission finds to be just and reasonable.

Rate Class	Applicable Schedule(s)	Prospective Rate	Rolling Recovery Factor	Combined Rate*
Non-Demand Rate Class (dollars per kilowatt-hour)				
Residential	RES, R-TOUD, R-TOUE, R-TOU	0.00456	(0.00015)	0.00441
Small General Service	SGS, SGS-TOUE	0.00542	(0.00044)	0.00498
Medium General Service	CH-TOUE, CSE, CSG	0.00411	(0.00039)	0.00372
Seasonal and Intermittent Service	SI	0.00412	0.00037	0.00449
Traffic Signal Service	TSS, TFS	0.00248	(0.00011)	0.00237
Outdoor Lighting Service	ALS, SLS, SLR, SFLS	-	-	-
Demand Rate Classes (dollars per kilowatt)				
Medium General Service	MGS, GS-TES, AP-TES, SGSTOU	1.35	(0.18)	1.17
Large General Service	LGS, LGS-TOU	1.38	(0.02)	1.36

*Incremental Rates, shown above, include North Carolina regulatory fee of 0.14%.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 1

This Finding of Fact is essentially informational, procedural, and jurisdictional in nature and is uncontroverted.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 2-4

The evidence for these Findings of Fact can be found in DEP's application, N.C. Gen. Stat. § 62-133.14, and Commission Rule R8-70.

Under N.C. Gen. Stat. § 62-133.14(a), upon the filing of a petition of an electric public utility and a public hearing, the Commission is required to approve an annual rider to the utility's rates for the North Carolina retail portion of reasonable and prudent costs incurred to acquire, operate and maintain the Joint Units. The acquisition costs shall be deemed reasonable and prudent and shall be levelized over the useful life of the Joint Units at the time of acquisition. Financing costs shall be included and shall be equal to the weighted average cost of capital as authorized in the utility's most recent general rate case.

The utility may recover an estimate of operating costs based on the experience of the test period and the costs projected for operation of the Joint Units for the next twelve months, subject to the filing of an annual adjustment including any under- or overrecovery, any changes necessary to recover costs for the next twelve-month period, or any changes to the cost of capital or customer allocation methodology occurring in a general rate case after the establishment of the initial rider. Commission Rule R8-70(c) requires the Company to propose annual updates to its JAAR in order for the hearing to be held as soon as practicable after the hearing held by the Commission under Rule R8-55.

The Commission concludes that DEP's application is in compliance with N.C. Gen. Stat. § 62-133.14 and Commission Rule R8-70.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-7

The evidence for these Findings of Fact can be found in the direct testimony of DEP witness LaWanda M. Jiggetts and in the testimony of Public Staff witness Darlene P. Peedin.

Witness Jiggetts' exhibits reflect that DEP's annual levelized cost associated with the acquisition price of the Joint Units was $56.314 million. In her direct testimony, witness Jiggetts explained that the Company seeks to recover its acquisition costs, which are the amounts DEP paid to NCEMPA to acquire the proportional ownership interest in the Joint Units, including the amount paid above the net book value of the facilities. Within this first category of acquisition costs there are also two subgroups: costs for which the recovery is levelized and costs for which the recovery is not levelized. In general terms, the levelized revenue requirement represents recovery of the acquisition cost for the NCEMPA assets, spread evenly over the remaining life of the assets at the time the Joint Units were purchased. Witness Jiggetts also included additional financing and operating costs of $8.276 million associated with assets purchased that were not included as part of the levelized costs. In her direct testimony, witness Jiggetts described these costs as including inventory amounts that are part of the asset acquisition costs, nuclear fuel inventory, dry cask storage, and materials and supplies inventory. Because these assets are not depreciated, the financing costs for these amounts are calculated on the basis of the average investment for the rate period.

Pursuant to N.C. Gen. Stat. § 62-133.14(b)(2), the JAAR shall include financing costs equal to the weighted average cost of capital as authorized by the Commission in the electric public utility's most recent general rate case. Witness Jiggetts' exhibits reflect that the Company computed the debt and equity rate of return and the Company's weighted average net-of-tax cost of capital as authorized by the Commission in DEP's most recent general rate case. The net of tax cost of capital incorporates the 3% North Carolina state income tax rate that became effective January 1, 2017.

In her testimony filed with the Commission, Public Staff witness Peedin stated that the Public Staff's investigation included a review of DEP's application, testimony, and exhibits filed in this docket. Additionally, the Public Staff's investigation included the review of responses to written and verbal data requests, as well as discussions with the Company. She further testified that the Public Staff performed a limited review of the underlying capital additions and operating costs added to the calculation of the rider in this proceeding and did not perform a full-scale review of the prudence and reasonableness of all such additions or expenses. She testified that Commission Rule R8-70(b)(4) provides that the Commission is to determine the reasonableness and prudence of the cost of capital additions or operating costs incurred related to the acquired plant in a general rate proceeding. However, should the Public Staff discover imprudent or unreasonable costs in a JAAR proceeding, it will recommend an adjustment in that proceeding; in that case, it would also recommend that the impact of any disallowance also be reflected in the Company's cost of service in a general rate case. She testified the Public Staff did not find any adjustments that should be made to the calculations of either the prospective or Joint Agency Asset RRF revenue requirements.

Based on the evidence on the record, the Commission concludes that, pursuant to N.C. Gen. Stat. § 62-133.14(b)(1), DEP is allowed to recover in the annual JAAR the financing and depreciation costs associated with the acquisition costs of the Joint Units on a levelized basis in the amount of $56.314 million annually, and the annual amount of $8.276 million of financing and operating costs associated with acquisition costs that are not levelized. To the extent the costs underlying these amounts are acquisition costs, such costs are deemed reasonable and prudent under N.C. Gen. Stat. § 62-133.14(b)(1). The Commission further finds it reasonable for the Company to recover the remainder of these estimated costs during the rate period, subject to true-up through the Joint Agency Asset RRF.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 8-9

The evidence for these Findings of Fact can be found in DEP's application, the testimony of DEP witness LaWanda M. Jiggetts and the testimony of Public Staff witness Darlene P. Peedin.

The Company requested annual costs of $12.473 million to be included in the JAAR for financing and operating costs related to estimated capital additions to be incurred during the period December 1, 2018 through November 30, 2019, and an estimated $70.385 million for annual non-fuel operating costs over the period December 1, 2018 to November 30, 2019. Under N.C. Gen. Stat. § 62-133.14(b)(3), the Commission shall include in the rider an estimate of operating costs based on the prior year's experience and the costs projected for the next twelve months, and shall include the annual financing and operating costs for any proportional capital investments in the acquired electric generation facility. Public Staff witness Peedin did not oppose the recovery of these cost components in her testimony filed in this proceeding, and stated that the Public Staff recommended approval of the Company's revised proposed JAAR rates. The Commission concludes that it is reasonable for the Company to recover these estimated costs during the rate period, subject to true-up through the Joint Agency Asset RRF.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 10

The evidence for this Finding of Fact can be found in the testimony of DEP witness Lawanda M. Jiggetts.

Witness Jiggetts' exhibits reflected a decrease in DEP's regulatory fee to $0.207 million based on the decrease in the estimated JAAR costs for the period December 1, 2018 through November 30, 2019. The Commission concludes that the calculation of the regulatory fee is just and reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 11

The evidence for this Finding of Fact can be found in DEP's application and the testimony of DEP witness LaWanda M. Jiggetts, as well as the testimony of Public Staff witness Darlene P. Peedin.

Under N.C. Gen. Stat. § 62-133.14(b)(4), the JAAR shall include adjustments to reflect the North Carolina retail portion of financing and operating costs related to the electric public utility's other used and useful generating facilities owned at the time of the acquisitions to properly account for updated jurisdictional allocation factors. This adjustment benefits DEP customers by reducing DEP's annual retail revenue requirement. Witness Jiggetts testified that the revenue reductions reflect changes in jurisdictional allocation factors resulting from the additional NCEMPA load that will be served by the Company's portfolio of generating facilities owned at the time of the acquisition. As a consequence, a greater portion of the cost of the Company's other generating facilities will be allocated to its wholesale jurisdiction, while a lesser portion will be allocated to its retail jurisdictions. In her direct testimony, witness Jiggetts testified that in the Company's filing, the annual revenue reduction to North Carolina retail revenue requirements for the test period January 2017 through December 2017 totaled $87 million. For the prospective period December 2018 through November 2019, the reduction is zero. Witness Jiggetts testified that the change in allocation approach was due to the Company's base rate request filed in Docket No. E-2, Sub 1142. The reallocation between retail and wholesale jurisdictions is reflected in the base rates approved by the Commission in Docket No. E-2, Sub 1142. Therefore the reduction will not be included in JAAR revenue requirements from March 16, 2018 forward, the effective date for DEP's new base rates.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 12

The evidence for this Finding of Fact can be found in DEP's application, the direct testimony of DEP witness LaWanda M. Jiggetts, DEP's exhibits to the JAAR, and the testimony of Public Staff witness Darlene P. Peedin.

The Company requested a Joint Agency Asset RRF decrement adjustment of $9.196 million related to the overrecovery of costs incurred through the test year ended December 31, 2017. The Commission notes that DEP should file a Joint Agency Asset RRF adjustment rider to include a true-up between estimated and actual costs incurred during the test period under N.C. Gen. Stat. § 62-133.14(c). The deferred costs related to any true-up are to be recorded as a regulatory asset or regulatory liability, including a return on the deferred balance each month. Public Staff witness Peedin did not oppose the return of this rate component in her testimony filed in this proceeding. The Commission finds the actual costs and credits underlying this true-up amount to be reasonable and prudent, and that the return of this amount is reasonable and appropriate.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 13

The evidence for this Finding of Fact can be found in DEP's application, the direct testimony and supplemental testimony of DEP witness LaWanda M. Jiggetts, DEP's revised exhibits, and the testimony of Public Staff witness Darlene P. Peedin.

Pursuant to N.C. Gen. Stat. § 62-133.14(b)(5), the costs of the rider shall be allocated utilizing the cost allocation methodology approved in DEP's last general rate case, Docket No. E-2, Sub 1142. In her direct testimony, witness Jiggetts testified that the Company's filing used the customer allocation methods approved in DEP's last general rate case. The North Carolina retail revenue requirement was allocated among customer classes using the production demand allocation factors. For the prospective revenue requirement, rates were set for each customer class. For the Joint Agency Asset RRF rates, production demand was used to split the revenue requirement between two customer groups, customers billed by kW and customers billed by kWh. This approach resulted in one common rate being applied to all customer classes within the respective group.

In her supplemental testimony, witness Jiggetts testified that the Company revised its approach to calculate the rates associated with the Joint Agency Asset RRF, based on the Public Staff's inquiries regarding the methodology used in developing uniform rates for the two customer groups. Instead of using a common rate for the two customer groups, rates were established for each North Carolina retail customer class based on the over/under collection position using production demand allocation factors. Witness Jiggetts also testified that the total revenue requirement did not change as a result of this revision due to the fact that the total dollars needed for the Rolling Recovery Factor were not impacted. The revision only impacts how the Rolling Recovery Factor is recovered between different rate classes of North Carolina retail customers. The table included in Finding of Fact No. 13 sets forth the revised rates.

The Company agreed with Public Staff witness Peedin's recommendation regarding the usage of the production demand allocation factors to set rates for each of the North Carolina retail customer classes. Witness Peedin agreed with the revised RRF on a class-specific basis as opposed to the uniform rates that are initially proposed. The class specific calculation for the Joint Agency RRF conforms with DEP's approved customer allocation methodology set forth in the most recent general rate case.

Based on the evidence and the record, the Commission finds and concludes that the rates set forth in the table included in Finding of Fact No. 13 are just and reasonable.

IT IS, THEREFORE, ORDERED as follows:

1. That DEP shall be allowed to charge in a rider $138.458 million ($147.654 million as the prospective component and ($9.196) million in the Joint Agency Asset RRF) on an annual basis to recover the costs in relation to the acquisition and operation of the Joint Units;

2. That the costs shall be allocated using the customer allocation methodology used in DEP's last general rate case as shown in DEP's application and the supplemental testimony of DEP witness Jiggetts;

3. That DEP shall file appropriate rate schedules and riders with the Commission in order to implement these approved rate adjustments to be effective for service rendered on and after December 1, 2018, as soon as practicable; and,

4. That DEP shall work with the Public Staff to jointly prepare a proposed notice to customers of the rate adjustments ordered by the Commission in Docket Nos. E-2, Subs 1173, 1175, and 1176 and the Company shall file the proposed notice to customers for Commission approval as soon as practicable.

ISSUED BY ORDER OF THE COMMISSION.
This the 8th day of November, 2018.

Sheppard Mullin Richter & Hampton, LLP
2099 Pennsylvania Avenue NW, Suite 100
Washington, DC 20006

BY THE COMMISSION: This is the fifth pole attachment case to come before the Commission under the jurisdiction provided in the General Assembly's 2015 amendments to North Carolina General Statute § 62-350 (N.C. Gen. Stat. § 62-350).

N.C. Gen. Stat. § 62-350 gives exclusive jurisdiction to the Commission to resolve disputes between municipally-owned and cooperatively organized utilities and communications service providers, defined to include telephone companies, telephone membership corporations (TMCs), broadband service providers, and cable operators. Municipal and cooperative utilities are required to allow communications service providers to use their poles, ducts and conduits at "just, reasonable, and nondiscriminatory rates, terms and conditions adopted pursuant to negotiated or adjudicated agreements." N.C. Gen. Stat. § 62-350(a). Where disputes between pole owners and attaching communications service providers are not resolved within a 90-day period, or where either party believes in good faith that they are at an impasse, either party may bring a complaint to the Commission for resolution. The Commission has exclusive jurisdiction over the dispute, and is required to adjudicate all such complaints on a case-by-case basis. N.C. Gen. Stat. § 62-350(c). With respect to rate issues, the Commission is granted discretion to "consider any evidence or rate-making methodologies offered or proposed by the parties . . . consistent with the public interest." Id. In particular, the law makes clear that the Commission "may consider any evidence presented by a party, including any methodologies previously applied." N.C. Session Law 2015-119, § 7. Any new rate adopted by the Commission is applied retroactively to the date of initiation of the proceeding or "the date immediately following the expiration of the 90-day negotiating period, whichever is earlier." N.C. Gen. Stat. § 62-350(c). If the rate relates to an existing agreement, however, the new rate "applies retroactively to the date immediately following the end of the existing agreement." Id.

In addition to setting forth a process to resolve disputes regarding rates and terms of attachment, N.C. Gen. Stat. § 62-350 separately addresses safety and compliance issues. The statute provides that, in the absence of a different agreement between the parties, if the facilities of a communications service provider do not comply with applicable safety rules and regulations, the electric membership corporation (EMC) or municipal utility must follow a prescribed procedure for notifying the communications service provider, making a demand that the compliance issues be cured, and working together "cooperatively to determine the causation of, and to effectuate any remedy for, noncompliant lines, equipment, and attachments." Id. N.C. Gen. Stat. § 62-350(d).

Finally, in N.C. Gen. Stat. § 62-350, the General Assembly directed the Commission to "adjudicate disputes arising under this [statute] on a case-by-case basis." N.C. Gen. Stat. § 62-350(c). As a consequence of these directives, any decision reached in this docket regarding the rate, and/or the ratemaking methodology or the terms and conditions which govern these parties' pole attachment agreement will be based upon the unique facts and circumstances present in this docket. Furthermore, in each subsequent pole attachment dispute that is filed with the Commission, the Commission will be required to examine the unique facts and circumstances in that case and to make its decision based upon those unique facts and circumstances as a consequence of these directives. As a result, the Commission's ultimate decision in this docket will not and cannot establish a binding precedent in future pole attachment resolution proceedings with regard to core and salient issues raised by and addressed in this docket.

On November 30, 2016, Blue Ridge Electric Membership Corporation (Blue Ridge or the Complainant), an electric cooperative utility organized under Chapter 117 of the General Statutes, filed a Complaint (the Complaint) against Charter Communications Properties, LLC (Charter), a "communications services provider" as defined in N.C. Gen. Stat. § 62-350. Blue Ridge's Complaint alleged that Charter had improperly refused to agree to reasonable terms and conditions in a new pole attachment agreement, including a pole attachment rate.

On February 1, 2017, Charter filed its Answer to Blue Ridge's Complaint. In its Answer, Charter responded to the allegations of the Complaint and also sought additional relief against Blue Ridge in a Counterclaim. On March 1, 2017, Blue Ridge filed its Answer to Charter's Counterclaim.

On May 26, 2017, Blue Ridge filed a motion for a procedural schedule. Charter responded on May 31, 2017. The Chairman issued an order to establish a procedural schedule on June 7, 2017.

On August 8, 2017, Blue Ridge and Charter filed a joint motion to approve a stipulated protective agreement, which the Chairman granted by order dated August 10, 2017.

On September 12, 2017, Blue Ridge filed a motion for leave to amend its Complaint, and on September 18, 2017, filed a motion to compel discovery from Charter. Also, on September 18, 2017, Charter filed a motion for a temporary stay and in opposition to Blue Ridge's motion for leave to amend its Complaint. Blue Ridge opposed Charter's motion for a temporary stay and replied to Charter's opposition to its motion to amend its Complaint on September 21, 2017. Charter in turn replied in support of its motion for a temporary stay on September 22, 2017. On September 27, 2017, the Chairman issued an order granting Blue Ridge leave to amend its Complaint and denying the motion for a temporary stay.

On September 29, 2017, Charter filed its opposition to Blue Ridge's motion to compel discovery.

On October 3, 2017, Blue Ridge and Charter filed a joint motion for modification of the procedural schedule, that the Chairman granted by order dated October 6, 2017.

On October 9, 2017, the Chairman issued an order requiring Charter to submit an answer to Blue Ridge's Amended Complaint, and Charter filed the answer on October 16, 2017. The Chairman also issued an order on that date requiring the parties to make various pre-trial filings, including: (1) agreed upon stipulations covering all relevant and material facts, legal issues and factual issues; (2) contentions covering matters which the parties had not been able to stipulate; (3) a clear and concise listing and statement of each issue in dispute; (4) a list of the names and addresses of all witnesses each party may offer at trial, together with a brief statement of what counsel proposed to establish by their testimony; and (5) a list of exhibits which each party may offer at trial. These filings were duly submitted by the parties on November 2, 2017.

On October 16, 2017, Blue Ridge filed direct testimony of Wilfred Arnett, Gregory Booth, and Lee Layton. On October 31, 2017, Charter filed responsive testimony of Michael Mullins, Nestor Martin, and Patricia Kravtin. On November 1, 2017, Blue Ridge filed a notice of its objection to untimely filing and moved to supplement its rebuttal testimony at the hearing. Charter opposed this motion on November 3, 2017. Blue Ridge submitted rebuttal testimony of witnesses Arnett, Booth, and Layton on November 6, 2017. Blue Ridge replied to Charter's opposition to its motion to supplement its rebuttal testimony on November 7, 2017, and the Chairman, at the hearing, issued an oral ruling on Blue Ridge's motion by stating that Blue Ridge's counsel could ask their rebuttal witnesses additional questions when they took the stand. [Tr. Vol. 1, p.11].

The matter came on for hearing as scheduled on November 8 and 9, 2017, and concluded on December 18, 2017. Blue Ridge presented direct testimony, rebuttal testimony, and exhibits of witnesses Layton, Arnett and Booth. Charter offered responsive testimony and exhibits of witnesses Mullins, Martin and Kravtin.

On January 24, 2018, Charlotte Mitchell, counsel for Blue Ridge, moved to withdraw from the case following her appointment to the North Carolina Utilities Commission. The Chairman granted her motion the same day.

Pursuant to order of the Chairman at the conclusion of the hearing, post-hearing proposed orders and briefs were to be filed thirty (30) days from the filing of the last transcript. [Tr. Vol. 5, p. 155].

On February 14, 2018, Blue Ridge filed a motion to extend time to submit post-hearing briefs and proposed orders to April 4, 2018. On February 19, 2018, the Commission granted Blue Ridge's motion.

Blue Ridge and Charter filed briefs and proposed orders in accordance with the Order. Also, on that date, the North Carolina Association of Electric Cooperatives (NCAEC), the North Carolina Cable Telecommunications Association (NCCTA), the North Carolina Telephone Membership Cooperative Coalition (CarolinaLink), and Carolina Telephone and Telegraph Company LLC d/b/a CenturyLink, Central Telephone Company d/b/a CenturyLink and MebTel, Inc. d/b/a CenturyLink (collectively, CenturyLink) filed motions to participate in the proceeding as Amicus Curiae or, in the case of CenturyLink, a letter. On May 4, 2018, the Chairman granted the requests. Briefly summarized, the Amici comments are as follows.

Post-Hearing Amicus Briefs

NCAEC: NCAEC noted that it is a non-profit affiliate of the NCEMC charged with representing the common interest of its members (all 26 EMCs headquartered in North Carolina) including Blue Ridge. NCAEC commented that by law, EMCs must make electric service available to customers at the lowest cost consistent with sound economy and prudent management.

NCAEC stated that Charter is asking the Commission to adopt the Federal Communications Commission (FCC) rate methodology. According to NCAEC, properly determining just and reasonable pole attachment rates requires the Commission to address the FCC's rates shortcomings by considering the full range of potential rate methodologies, based on how parties actually use space on the poles. It also requires the Commission to weigh cable companies' false promises of rural broadband against the public's overriding interest in ensuring EMCs' members are not being forced to subsidize the operations of for-profit cable companies through electric rates. Additionally, NCAEC stated that the Commission should refuse Charter's demand that it consider only the subsidization of broadband and nothing else when it sets rates that are consistent with the public interest.

NCAEC stated that as the Commission considers the various rate methodologies discussed in this proceeding, the Commission should be mindful that the FCC Methodology rate is the clear wrong answer. NCAEC argued that the Tennessee Valley Authority (TVA) methodology represents a fairer and more reasonable way to divide the costs of the pole and reflects a proper understanding of the ways in which the parties use the pole and allocates the entire Communications Worker Safety Zone equally among communications attachers (but not the electric utility) and allocates the Support Space among all attaching entities on an equal, per capita basis.

Finally, NCAEC observed that the Commission's decision in this proceeding is not a binary choice and that Blue Ridge offered several alternative methodologies which the Commission is entitled to consider including the American Public Power Association (APPA) Rate, the Telecom Plus Rate and the Arkansas Formula. NCAEC also observed that the Commission is free to modify the space allocation factor contained in the proposed methodology to conform to the Commission's understanding of what would constitute a just and reasonable rate, consistent with the public interest and the parties' actual use of the poles.

<u>CarolinaLink</u>: CarolinaLink asserted that the TVA rate approach is a recent innovation designed to inflate rates certain electric suppliers can charge for access to their facilities. CarolinaLink argued that the TVA rate methodology is flawed for several reasons. CarolinaLink maintained that it is inappropriately based on the benefits received by the attacher, as opposed to the cost incurred by the pole owner. In addition, CarolinaLink maintained that even if it was appropriate to base the rate on benefits as opposed to costs, which it is not, the TVA rate wrongly assumes the attachers and pole owners benefit equally from the pole. CarolinaLink argued that they do not benefit equally and that a pole owner realizes a greater benefit from the pole because it owns the poles, designs the network with its needs in mind, and dictates the location of the attachment. CarolinaLink noted that while telecommunication and cable companies have a right to attach their facilities to utility poles, they do not have the right to exert the same control over the poles as the pole owner, nor do they have the right or as many opportunities to monetize the utility pole as the pole owner. Therefore, CarolinaLink asserted, pole owners receive more benefits from their poles than attachers.

CarolinaLink stated that long-established economic principles demonstrate that pole attachments should be based on costs rather than benefits or arbitrary and subjective value of service concepts. CarolinaLink noted that while the TVA formula appears to attribute the cost of the pole between the attachers and pole owner, in reality its cost allocation formula is based on the faulty notion that attachers and the pole owners each receive an equal benefit. CarolinaLink maintained that cost allocation, as the name suggests, should only be based on cost-causation and that the Commission is familiar with the concept of cost allocation. CarolinaLink maintained that direct costs are easily assigned because they are incurred incrementally to benefit a certain group. CarolinaLink noted that in addition to direct costs, there are always common costs, which must be assigned on a rational, economically efficient basis. CarolinaLink noted that common costs are allocated based on a reasonable allocator, which recognizes that a percentage of the common costs must be apportioned. CarolinaLink asserted that in approving cost allocation methodologies, the Commission does not assign common costs by an arbitrary method that selects who will be the winner and who will be the loser, totally disregarding the issue of cost causation.

CarolinaLink also noted that the EMCs' monopolistic control over poles in their service areas becomes increasingly problematic as some of the EMCs choose to enter the broadband market. CarolinaLink asserted that the EMCs should not be permitted to inflate the costs to potential competitors by artificially allocating unnecessary costs to those competitors or by arbitrarily assigning a value of service component to serve their own purposes.

CarolinaLink maintained that the FCC rate methodology has withstood the test of time. CarolinaLink also noted that as recently as July 31, 2017, the United States Court of Appeals for the Eighth Circuit stated that the FCC Cable Rate formula represents a reasonable policy choice.

CarolinaLink asserted that the FCC Cable Rate formula approximates an efficient rental rate that corresponds to the actual cost of the unit of service being produced. CarolinaLink noted that if pole attachments were in a competitive market in which a surplus could exist, the price would be driven down to its marginal costs. CarolinaLink argued that the FCC Cable Rate formula provides the pole owner with more than just its marginal costs and fairly compensates the pole owner for all out-of-pocket expenses, such as make-ready cost inspection fees, pole inventories, and other charges.

CarolinaLink noted that pole attachment rates are not only important to Investor Owned Utilities (IOUs), the rates are important to TMCs. CarolinaLink stated that, in many instances, the TMCs share many of the same characteristics with the EMCs; they are both member owned, are both organized under Chapter 117, both serve rural North Carolina with essential services, and are both operated for the benefit of their members. CarolinaLink maintained that the TMCs have differed with Charter on many public policy issues and in most cases have sided with the EMCs; however, in this limited instance, the TMCs share more in common with Charter than the EMCs and the EMCs share more in common with investor owned utilities than the TMCs.

CarolinaLink noted that, all combined, the EMCs serve a significant amount of territory, 2.5 million members spread through 93 North Carolina counties, and the EMCs overlap the TMCs almost entirely.

CarolinaLink also noted that rural broadband deployment continues to be a critical issue at the state and federal level. CarolinaLink asserted that the most problematic areas for broadband deployment are in rural areas and often in areas served by EMCs. CarolinaLink argued that broadband is a must for economic success in rural communities and that if EMC's are allowed to implement artificially high pole attachment rates investment in broadband will further shift away from rural areas and that those areas will continue to be left behind.

CenturyLink: CenturyLink stated that it was filing a letter to express support for the positions advocated by Charter. CenturyLink observed that like Charter, it relies on existing utility networks owned by electric and telephone utilities to provide services. Further, CenturyLink noted that excessive rates and burdensome contract terms are a concern of all pole attaching entities and that access to utility poles at just, reasonable and non-discriminatory rates is essential to the expansion of broadband and other advanced services across North Carolina, especially the rural areas which may be unserved or underserved. Pole attachment fees can be one of the largest costs in reaching rural customers and are a key component in determining how and where advanced services can be deployed. Finally, CenturyLink urged the Commission to consider the comments that CenturyLink made in its Amicus Brief in the prior pole attachment proceedings and incorporate those comments by reference into this proceeding.

NCCTA: NCCTA stated that the fundamental issue presented in this proceeding relates to the interpretation of N.C. Gen. Stat. § 62-350. According to NCCTA this is the same basic issue addressed by the Commission in prior pole attachment proceedings. NCCTA asserted that the orders issued in the prior proceedings were well reasoned, in the public interest, and in accord with the statutory requirement of N.C. Gen. Stat. § 62-350. Further, NCCTA urged the Commission to apply the same principles in the present proceeding and apply the FCC pole attachment rate methodology which is widely accepted, time-tested, and best suited for balancing the interests at stake. Finally, NCCTA urged the Commission to consider the comments that it made in its Amicus Brief in the prior pole attachment proceedings and incorporate those comments by reference into this proceeding.

Based on the foregoing, Blue Ridge's Complaint, Charter's Counterclaim and Answers and other filings, the evidence and exhibits presented at the hearing, and the entire record in this proceeding, the Commission now makes the following findings of fact and conclusions of law.

FINDINGS OF FACT

1. Charter and Blue Ridge entered into a pole attachment agreement as of September 1, 2008 (the 2008 Agreement). The 2008 Agreement expired on September 1, 2013.

2. A true and correct copy of the 2008 Agreement is attached as Exhibit No. LL-3 to the Direct Testimony of witness Layton.

3. Blue Ridge approached Charter about a new pole attachment agreement on May 22, 2014, noting that the 2008 Agreement had expired and offering a new draft agreement. [MM Ex. 2] On May 26, 2015, Charter sent a redlined draft agreement back to Blue Ridge. Despite negotiation efforts, the parties have not been able to resolve their differences regarding the rates, terms and conditions for a new agreement.

4. On or about June 22, 2015, the parties agreed to operate under the terminated 2008 Agreement until the General Assembly completed action on the revisions to

N.C. Gen. Stat. § 62-350. [MM Ex. 4] Charter attaches and has attached to Blue Ridge's poles pursuant to the 2008 Agreement.

5. The Commission has exclusive jurisdiction under N.C. Gen. Stat. § 62-350 to determine the just and reasonable rates that Blue Ridge may charge Charter for attaching its facilities to Blue Ridge's poles.

6. The Commission has exclusive jurisdiction under N.C. Gen. Stat. § 62-350 to determine the appropriate terms and conditions for Charter's continued use of or attachment to the poles, ducts, or conduits owned or controlled by Blue Ridge, including matters customary to such negotiations, such as a fair and reasonable rate for the use of facilities, indemnification by the attaching entity for losses caused in connection with the attachments, and the removal, replacement, or repair of installed facilities for safety reasons.

7. Charter and Blue Ridge each discussed at the hearing numerous state and federal decisions, and rate methodologies and methods which have been developed and/or applied by various state commissions, energy and communications related interest groups, organizations and federally established regulatory and administrative agencies.

8. Although Charter and Blue Ridge discussed at hearing various rate methodologies and methods, Charter and Blue Ridge each advocated that the Commission adopt specific, separate and distinct methodologies to determine the just and reasonable pole attachment rate that should be applied to resolve the dispute in this case.

9. Charter contended that the Commission should apply the FCC Cable Rate Methodology (FCC Rate Methodology) which was developed by the FCC, an administrative agency created by the federal government.

10. Blue Ridge compared the TVA methodology (TVA Rate Methodology) that was developed by the TVA, an administrative agency created by the federal government, to a number of other potential rate formulas, including the formula adopted by the American Public Power Association, the Telecom Plus formula considered by the United States House of Representatives, the formula adopted by the Arkansas Public Service Commission and the FCC Rate Methodology. After doing so, Blue Ridge contended that the TVA Rate Methodology was the proper formula for the Commission to apply to determine the just and reasonable rates that Charter should pay to attach to Blue Ridge's poles.

11. Neither the FCC nor the TVA has regulatory authority over the pole attachment rates charged by Blue Ridge.

12. While the Commission is not required under N.C. Gen. Stat. § 62-350 to apply the FCC Rate Methodology, the TVA Rate Methodology or any other rate methodologies discussed by the parties in deciding on the just and reasonable rates that should apply under the facts of this case, the Commission, in its discretion, may consider any evidence or rate-making methodologies offered or proposed by the parties to arrive at its decision as to the just and reasonable rates that Blue Ridge is authorized to charge Charter.

13. It is therefore appropriate for the Commission to consider both the FCC Rate Methodology and the TVA Rate Methodology in making its decision as to the maximum just and reasonable rates that Blue Ridge may charge Charter to attach to its poles.

14. The FCC Rate Methodology and the TVA Rate Methodology rely on the same inputs and generate almost identical average annual pole costs. They differ significantly, however, in their allocation of those costs.[1]

15. The primary difference between the FCC Rate Methodology and the TVA Rate Methodology is the allocation of the cost of the space on the pole.

16. Based upon the evidence presented in this docket, it is appropriate for the Commission to apply economic, cost-based principles in allocating costs of providing pole attachment service.[2]

17. Blue Ridge does not have any duty to construct facilities necessary to provide pole attachment services to Charter, and Charter is separately responsible for covering the EMC's measurable and verifiable costs that are directly attributable to Charter's attachments. Charter occupies space on Blue Ridge's poles only so long as that space is not required by Blue Ridge for its own utility service.[3]

18. While economic cost causation and cost allocation principles justify reliance on the FCC Rate Methodology, it is appropriate for the Commission to consider the public interest benefits and detriments from raising or lowering pole attachment rates under N.C. Gen. Stat. § 62-350.[4]

19. While economic cost causation and cost allocation principles justify reliance on the FCC Rate Methodology, it is appropriate for the Commission to consider the benefits from lower pole attachment rates on economic efficiency in the communications sector as well as, more specifically, the geographic expansion of broadband service.[5]

20. It is not appropriate for the Commission to treat non-profit and for-profit entities differently regarding pole attachment rates.[6]

21. Based upon the evidence herein presented, the FCC Rate Methodology for allocating the total costs of a pole based on the percentage of space used by the attacher established by the FCC and approved by the North Carolina Business Court and affirmed by the North Carolina

[1] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[2] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[3] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[4] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[5] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[6] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

Court of Appeals is the appropriate methodology for allocating the total costs of the pole, including unusable space.[1]

22. The costs associated with the "safety space" on a pole should be allocated in accordance with the FCC Rate Methodology.[2]

23. The parties disagree as to whether the Commission should use the FCC Rate Methodology's or the TVA Rate Methodology's presumptions in determining the appropriate rate for Charter's attachments to Blue Ridge's poles, or whether the Commission should employ actual data Blue Ridge has introduced to rebut those presumptions.

24. The FCC Cable Rate Methodology employs rebuttable presumptions regarding the height and use of a utility's poles, which include presumptions that: (i) the average height of a distribution pole is 37.5 feet; (ii) these poles are, on average, buried six feet deep, and (iii) in order to maintain proper clearances, the lowest attachment on a pole must be at least 18 feet off the ground. In applying the FCC Cable Rate, the FCC treats these presumptions as rebuttable. *See* 47 C.F.R. § 1.1418 (providing that the presumptions regarding space occupied by cable company's attachment, the amount of usable space, and average pole height "may be rebutted by either party").

25. The TVA Rate Methodology also employs rebuttable presumptions.

26. According to Blue Ridge's records and recently collected audit data, Blue Ridge had an average of 2.35 attachers on its poles (*i.e.*, Blue Ridge, Charter, and other third-party attachers) in the years 2014, 2015, and 2016.

27. According to Blue Ridge's Rural Utilities Service (RUS) and accounting records, Blue Ridge's actual data shows the following:

a) __Pole Height__. The average height of Blue Ridge's distribution poles, calculated using its continuing property records, is roughly one foot less than the 37.5 feet presumption under the FCC cable rate, resulting in average pole heights of (a) 36.83 feet for 2014, (b) 36.85 feet for 2015, and (c) 36.87 feet for 2016.

b) __Attachment Height__. The FCC cable formula presumes that all entities attaching to the pole require 18 feet of ground clearance, and thus the first attacher will attach at this height, rendering the remainder of the pole "usable space." However, because Blue Ridge's poles are spaced farther apart than is typical, attachers are required to make the first attachment higher on the pole in order to maintain ground clearance. As a result the first available attachment on Blue Ridge's poles based on its yearly average pole height was (a) 21.3 feet in 2014, (b) 21.8 feet in 2015, and (c) 21.26 feet in 2016. This necessarily results in less "Usable Space" and more "Support Space" that must be allocated among the attachers.

---

[1] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[2] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

c) **Appurtenance Factor**. While the FCC Cable rate presumes an appurtenance rate of 15%, meaning 85% of a utility's Account 364 is attributable to distribution poles, Blue Ridge's true bare pole costs, net of appurtenances, were (a) 87.0% for 2014; (b) 87.29% for 2015; and (c) 87.41% for 2016.

d) **Number of Attachments / Occupied Space**. The FCC Cable Rate presumes that cable company attachments use only one foot of space, and that a cable company only attaches once to each pole. Blue Ridge's 2015-2016 pole audit showed that Charter had 27,674 attachments on 24,888 poles. This means Charter has an average of 1.11 attachments per pole, which is reflected by showing that it uses 1.11 feet of space as opposed to the FCC Rate Methodology presumption of 1 foot of space.

28. The evidence that Blue Ridge provided to rebut the FCC Rate Methodology's presumptions is reliable, and more accurately reflects the costs and the parties' use of Blue Ridge's distribution poles. It is therefore appropriate to use the actual data provided by Blue Ridge with the FCC Rate Methodology to calculate the maximum pole attachment rates that Blue Ridge may charge Charter.

29. Blue Ridge's maximum just and reasonable pole attachment rates for the years 2015-2017 should be determined based on the FCC's Rate Methodology.

30. The FCC Rate Methodology presumptions should be replaced with actual data provided by Blue Ridge. When Blue Ridge's actual data is employed in the FCC Rate Methodology, the resulting rates for rate years 2015, 2016, and 2017, are as follows:

2015 - $8.49 per pole
2016 - $8.37 per pole
2017 - $8.31 per pole

31. Charter paid the following rates to Blue Ridge for 2015 through August 2017:[1]

2015 - $26.64 per year
2016 - $26.64 per year
2017 - $26.64 per year

32. Blue Ridge owes a refund to Charter for excessive pole attachment fees paid from August 25, 2015, through August 31, 2017, and for excessive pole attachment fees paid after August 31, 2017.[2]

[1] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[2] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

33. In addition to a just and reasonable pole attachment rate, it is appropriate for Charter to pay Blue Ridge's measurable and verifiable costs directly attributable to Blue Ridge providing pole attachment space to Charter.[1]

34. It is appropriate for the Commission to look to industry standard provisions in agreements negotiated in regulated and unregulated situations as cogent evidence of reasonableness.[2]

35. Issues regarding the condition and compliance of Charter's outside plant as presented at the hearing are not yet ripe for Commission consideration.[3]

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-4

The evidence supporting these Findings of Fact is found in the Joint Stipulations and the record of evidence.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 5-13

The evidence supporting these Findings of Fact is found in the testimony of Charter witnesses Kravtin, Martin and Mullins, Blue Ridge witness Arnett, the Joint Stipulations, and the record of evidence.

Witness Kravtin testified that the FCC has regulated pole attachment matters, including how to set just and reasonable, cost-based pole attachment rates, for many years. [Kravtin Tr. Vol. 4, pp. 168-69.] As noted by witness Kravtin, the rate methodology approved by the FCC under 47 U.S.C. § 224(d) has been found by numerous courts, including the United States Supreme Court, to be compensatory and subsidy free. [Tr. Vol. 4, pp. 201-02 & n.43.][4] The FCC has issued scores of decisions implementing its rate formula and has reaffirmed the formula recently in Restoring Internet Freedom, WC No. 17-108, Declaratory Ruling, Report & Order, 2018 WL 305638, ¶¶ 185-91 (FCC 2018). Witness Kravtin testified that reliance on this well-understood and easy-to-apply methodology would avoid the need for constant Commission refinement and explanation. [Kravtin, Tr. Vol. 4, p. 204.]

As explained by witness Kravtin, the FCC Rate Methodology[5] is applied directly to electric IOUs and incumbent local exchange carriers (ILECs) in those 30 states that have not chosen

[1] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

[2] Issue No. 3 per the November 2, 2017 Joint Statement of Issues.

[3] Issue No. 3 per the November 2, 2017 Joint Statement of Issues.

[4] *See, e.g.*, FCC v. Florida Power Corp., 480 U.S. 245, 253-54 (1987).

[5] Pursuant to 47 U.S.C. § 224(d)(1), the FCC has regulated pole attachments made by cable operators to provide cable service since 1978. Adoption of Rules for the Regulation of Cable Television Pole Attachments, CC No. 78-144, First Report & Order, 68 FCC2d 1585, 1585, 1598-99 (1978). The Commission will refer to this rate methodology throughout as the "FCC Rate." In 1996 Congress amended the Pole Attachment Act to provide for regulation of attachments made by telecommunications carriers to provide telecommunications service pursuant to 224 U.S.C. § 224(e). In 2011 and 2015, the FCC released orders bringing the "telecommunications" rate into line with the "cable rate." Implementation of Section 224 of the Act: A National Broadband Plan for Our Future, 26 FCC Rcd.

themselves to regulate pole attachment rates. *See* States That Have Certified That They Regulate Pole Attachments, Public Notice, WC No. 10-101, 25 FCC Rcd 5541, 5541-42 (2010). The pole attachment rates of IOUs and ILECs in North Carolina are based on the FCC Rate Methodology. [Kravtin, Tr. Vol. 4, p. 180; Martin, Tr. Vol. 4, p. 80.] The poles owned by IOUs and ILECs are "largely if not entirely indistinguishable" from the poles owned by the Cooperatives. [Kravtin, Tr. Vol. 4, p. 180.] Witnesses Martin and Mullins testified similarly. [Martin, Tr. Vol. 4, p. 77; Mullins, Tr. Vol. 3, p. 236.] Witness Kravtin testified that, due in part to historic joint use[1] pole agreements between ILECs and Blue Ridge, those parties have constructed poles with the same physical characteristics, often interspersed in a pole line. Further, these poles are sometimes adjacent to virtually identical poles owned by a federally regulated IOU. [Kravtin, Tr. Vol. 4, p. 180; Martin, Tr. Vol. 4, p. 77; Mullins, Tr. Vol. 3 p. 236.] Due to joint use agreements, in almost all situations, there is only one set of poles on any particular road.[2] [*See* Martin, Tr. Vol. 4, pp. 138-39.]

Witness Kravtin noted that the average pole attachment rate that Charter paid in 2016 to North Carolina IOUs and ILECs, which are regulated by the FCC under its standard rate methodology, was $7.20 for IOUs and $3.24 for ILECs. [Kravtin, Tr. Vol. 4, p. 234.] These rates are in the same range as the rates that witness Kravtin calculated for Blue Ridge under the FCC Rate Methodology. Witness Kravtin testified that it makes no sense from an economic perspective to have the rates charged by different types of entities vary widely. [Kravtin, Tr. Vol. 4, pp. 179-80, 246-47.] On the other hand, she testified that there are significant public interest benefits in having similar poles regulated similarly, regardless what type of entity owns them. [Kravtin, Tr. Vol. 4, pp. 196-97.]

Witness Kravtin also observed that the large majority of states that regulate pole attachments,[3] including poles owned by electric cooperatives, do so according to the FCC Rate Methodology or a close cousin. For example, she testified that Ohio, New York, California, Michigan, and Kentucky, along with 10 other states, all regulate IOU and ILEC pole attachment rates according to the FCC Rate Methodology or something very close to it. [Kravtin, Tr. Vol. 4, p. 204 and Ex. PDK 7.] While some of these methodologies were initially adopted decades ago, many have been reaffirmed more recently.[4] In addition, eleven states regulate the pole attachment

5240, 5322 (2011), aff'd sub nom. Am. Elec. Power Serv. Corp. v. FCC, 708 F.3d 183 (D.C. Cir. 2013); Implementation of Section 224 of the Act: A National Broadband Plan for Our Future, Order on Reconsideration, 30 FCC Rcd. 13731 (2015).

[1] The term "joint use" refers to arrangements between different pole owners, generally electric and telephone providers, to each share their poles with the other entity.

[2] ***BEGIN CONFIDENTIAL***END CONFIDENTIAL***

[3] The Federal Pole Attachment Act allows states to "reverse-preempt" the FCC's pole attachment regulations so long as they meet certain federal standards. 47 U.S.C. § 224(c). To date, twenty states and the District of Columbia have reverse-preempted FCC jurisdiction over the rates, terms, and conditions of pole attachments in their states. *See* States That Have Certified That They Regulate Pole Attachments, WC No. 10-101, Public Notice, 25 FCC Rcd 5541, 5542 (FCC WCB 2010). North Carolina has chosen to allow the pole attachment service of IOUs and ILECs to continue to be regulated by the FCC.

[4] Implementation of Section 224 of the Act: A National Broadband Plan for Our Future, 26 FCC Rcd 5240, 5322 (2011), aff'd sub nom. Am. Elec. Power Serv. Corp. v. FCC, 708 F.3d 183 (D.C. Cir. 2013); Implementation of Section 224 of the Act: A National Broadband Plan for Our Future, Order on Reconsideration, 30 FCC Rcd. 13731

rates of cooperatives and/or municipal utilities according to the FCC Rate Methodology. [Ex. PDK 7.]

Witness Kravtin also testified that the National Association of Regulatory Utility Commissioners (NARUC) has strongly recommended that state utility commissions apply the FCC pole attachment rate methodology to electric cooperatives. [Kravtin, Tr. Vol. 4, pp. 204-05; Exs. PDK 11 and 12.] She also noted that the National Association of State Utility Consumer Advocates (NASUCA) has similarly endorsed the FCC formula for uniform application to all pole owners. [Kravtin, Tr. Vol. 4, pp. 204-05; Ex. PDK 13.] Witness Kravtin also pointed out that even the National Rural Electric Cooperative Association (NRECA), Blue Ridge's own national trade association, has found the FCC pole attachment formula to be "unimpeachable." [Kravtin, Tr. Vol. 4, pp. 242-43.]

Witness Kravtin, testified that the North Carolina Business Court relied on the FCC Rate Methodology to determine that the pole attachment rates sought by the Town of Landis and Rutherford EMC were excessive and neither just nor reasonable. [Kravtin, Tr. Vol. 4, p. 165; Time Warner Entertainment-Advance/Newhouse Partnership v. Town of Landis, No. 10-CVS-1172, 2014 WL 2921723 (N.C. Sup. Ct. Jun. 24, 2014) (Landis); Rutherford Electric Membership Corp. v. Time Warner Entertainment-Advance/Newhouse, No. 13-CVS-231, 2014 WL 2159382 (N.C. Super. Ct. May 22, 2014), aff'd, 771 S.E.2d 768 (N.C. Ct. App. 2015) (Rutherford).] The Rutherford case, which was unanimously affirmed in the Court of Appeals, found that, based on the evidence presented in that case, including the testimony of witness Kravtin,[1] "the FCC Cable Rate formula's allocation method, used to determine what percentage of the fully allocated costs to assign to the attaching party, provides an economically justified means of reasonably allocating costs." Rutherford, 2014 WL 2159382 at *9. "[F]ar from providing any subsidy to communications providers, the FCC Cable Rate formula actually leaves the utility and its customers better off than they would be if no attachments were made to their poles." Id.

Witness Arnett, testifying on behalf of Blue Ridge, urged the Commission to rely on a rate formula adopted by the TVA in a resolution dated February 20, 2016, which was developed for use by the local power distribution companies that are the TVA's wholesale electric power customers. [Arnett, Tr. Vol. 2, p. 46.] The TVA provides electric power to approximately 165 retail electric distributors in seven states, including three electric cooperatives in North Carolina: Blue Ridge Mountain Electric Membership Corp., Tri-State Membership Corp. and Mountain Electric Cooperative. [Arnett, Tr. Vol. 2, pp. 46-47.] Witness Arnett opined that the TVA considered the FCC Rate Methodology but rejected it as providing a "subsidy" to the attachers. [Arnett, Tr. Vol. 2, p. 84.] In developing the methodology, the TVA noted that,

[1] Witness Kravtin served as an expert for Time Warner Cable Southeast LLC in the Rutherford and Landis cases.

"[u]nlike the FCC, however, the TVA is charged with keeping electric rates as low as feasible, and ensuring that electric ratepayers do not subsidize other business activities is important in achieving this objective." [WA Ex. 3; PDK Ex. 14 at Attachment B.] Although witness Arnett testified that the TVA Rate Methodology is based, at least in part, on the TVA's "recogni[tion] that certain portions of the poles are of equal benefit to all attaching parties" [Arnett, Tr. Vol. 2, p. 53], a review of the TVA's resolution and supporting documentation does not reflect any such finding. [*See* WA Ex. 3.]

In support of his testimony urging the Commission to adopt the TVA Rate Methodology, witness Arnett relied on rate methodologies (i) considered by the United States House of Representatives (but never adopted by Congress), (ii) adopted by the Arkansas Public Service Commission, and (iii) recommended by the APPA. [Arnett, Tr. Vol. 2, pp. 67-77.] While none of these other methodologies exactly mirrors that adopted by the TVA, witness Arnett testified that each of them shared some common elements with the TVA's methodology.

Witness Arnett also relied on 1954 guidance from the Rural Electric Administration (REA) about how rates for joint use arrangements between telephone companies and EMCs, which both owned poles shared by the others, should be set. [Arnett, Tr. Vol. 2, pp. 102-03 and WA Ex. 31.] He did not address, however, whether the rights of telephone joint users and those of cable operators like Charter are equivalent, agreeing at the hearing that the REA method was meant for users who each own a percentage of the pole.[1] [Arnett, Tr. Vol. 2, p. 157.] Although witness Arnett attacked the FCC rate formula as unreasonable in his judgment, he did not address the independent and affirmative decisions reached by 15 states to follow the FCC method, or the recommendations of other objective bodies such as NARUC and NASUCA, that state utility commissions should follow the FCC Rate Methodology, or the finding by the NRECA that the FCC rate method is "unimpeachable." [*See* Arnett, Tr. Vol. 2, pp. 84 and 161-63.]

In response to witness Arnett's recommendation of the TVA Rate Methodology, witness Kravtin pointed out that the TVA does not have general jurisdiction over pole attachment matters and that the TVA explicitly declared its sole objective to be to keep pole rates high in order to support lower electric rates. Also, witness Kravtin stated that the TVA rate was the product of a closed process that involved only parties that stood to benefit from higher pole attachment rates. As noted by witness Kravtin, the TVA did not conduct a public proceeding or seek the input of any parties other than the pole owners and their trade association. [Kravtin, Tr. Vol. 4, pp. 173-74.] Witness Kravtin testified that the "TVA's rejection of the FCC Rate, for example, was based on a number of patently false premises likely supplied by its customers and their advocates, and without the benefit of any information from other stakeholders, a complete record, or an open debate to better inform its findings." [Kravtin, Tr. Vol. 4, p. 218.] Witness Kravtin dismissed the APPA's recommendation as "another industry-driven formula designed to serve the self-interest of its public power company members." [Kravtin, Tr. Vol. 4, p. 220.] Witness Arnett confirmed that he has no knowledge of any other regulator ever following the methodologies used in his referenced proceedings or the approach advocated by the APPA. [Arnett, Tr. Vol. 2, p. 146.] Witness Kravtin also observed that the TVA has itself announced plans to invest in its own fiber

infrastructure, which will be used to compete with cable operators. [Kravtin, Tr. Vol. 4, pp. 219-20 and n.64.]

Discussion and Conclusions

The Commission has exclusive jurisdiction under N.C. Gen. Stat. § 62-350 to determine the just and reasonable rates that Blue Ridge can charge Charter for attaching its facilities to Blue Ridge's poles. In making that determination, the Commission, in its discretion, may consider any evidence or rate-making methodologies offered or proposed by the parties to arrive at its decision as to the just and reasonable rates that Blue Ridge is authorized to charge Charter.

During the hearing, both Blue Ridge and Charter discussed numerous state and federal decisions, and rate methodologies and methods which had been developed and/or applied by various state commissions, energy and communications related interest groups, organizations and federally established regulatory and administrative agencies. However, at hearing, Charter and Blue Ridge each advocated that the Commission adopt its preferred rate-making methodology and find that the alternative proposed by the other party was inappropriate. More specifically, Charter requested that the Commission adopt the FCC Rate Methodology to determine the just and reasonable rate that Blue Ridge should charge Charter to attach to Blue Ridge's poles and determine that the TVA Rate Methodology advocated by Blue Ridge was inappropriate for that purpose. And, Blue Ridge requested that the Commission adopt the TVA Rate Methodology to determine the maximum just and reasonable rate that Blue Ridge may charge Charter to attach to Blue Ridge's poles and determine that the FCC Rate Methodology advocated by Charter was inappropriate for that purpose. That is, the parties have requested that the Commission determine whether the FCC Rate Methodology or the TVA Rate Methodology is the proper methodology for the Commission to use to determine the just and reasonable rates that Blue Ridge should charge for Charter to attach to its poles.

The FCC Rate Methodology is widely recognized as a reasonable regulatory tool for this Commission to follow. It is used by the FCC to set maximum pole attachment rates of IOUs and ILECs in thirty states, and applies in North Carolina to poles that are often identical to and interspersed with poles owned by Blue Ridge in its service territory. It, or a closely related methodology, is used by state agencies to set pole attachment rates in 15 other states in their own, independent regulation of pole attachments. It is strongly recommended by NARUC and NASUCA as the appropriate rate methodology for regulating EMC pole rates, and even Blue Ridge's own national trade association has termed it "unimpeachable." The FCC Rate Methodology has been upheld in the federal courts, including the United States Supreme Court, as compensatory. And, importantly, it was found by the North Carolina Business Court, in a decision unanimously affirmed in the Court of Appeals, to present a reasonable rate methodology that benefits the pole owner.

The TVA Rate Methodology, on the other hand, was adopted for a specific and limited purpose, to keep electric rates low, and was the result of a process that involved only those that would benefit from high pole attachment rates. The evidence before the Commission is that neither the parties that will have to pay the TVA pole attachment rates nor members of the public who may be affected were consulted. The Commission, therefore, will give minimal weight to the fact that the TVA rejected the FCC Rate Methodology and adopted a different one. The extent to which the TVA approach has any merit must stand or fall entirely on its economic underpinnings and public interest considerations.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 14-15

Evidence supporting these Findings of Fact is found in the testimony of witnesses Kravtin, Arnett, Layton and Mullins.

The pole attachment rate methodology applied by the TVA in its February 2016 resolution relies on the historic FCC Rate Methodology for most of the cost inputs. As described by witnesses Kravtin and Arnett, both methods use the same utility accounts to determine the average net cost of a utility pole and multiply by the same elements to derive an average annual cost to own and maintain a pole. The numbered accounts of the RUS (used by Blue Ridge and other EMCs) and the Federal Energy Regulatory Commission (FERC) accounts (used by IOUs to compute the FCC Rate) are the same. Both the FCC and the TVA presume that 15% of the pole investment account (Account 364 in both RUS and FERC accounting) consists of appurtenances such as cross arms and other facilities and hardware that are not used by attaching third parties. The FCC and the TVA both presume that 15% of the costs in that account should be subtracted out in determining the net cost of an average pole. Both the FCC and the TVA also create an annual carrying charge for the average pole by factoring in the annual cost of depreciation, maintenance, taxes (if any), administrative and general expenses and a rate of return.

The formulas used by both the FCC and the TVA to derive an annual cost of a pole are virtually identical, as depicted below in Figures 1 and 2.[1]

FIGURE 1

FCC Cable Rate Formula =
Net Bare Pole Cost (NBP) x Carrying Charge Factor (CCF) x Space Allocation Factor (SAF)
Where the SAF = Space Occupied by Attacher / Usable Space on Pole

[Kravtin, Tr. Vol. 4, p. 186.]

FIGURE 2

TVA Rate Formula =
Pole Attachment Rate = (Space Allocation) x (Net Cost of Bare Pole) x (Carrying Cost)

[*See* WA Ex. 2.1-2.3]

[1] The only differences are that the TVA relies on a three-year average for maintenance expenses while the FCC relies on a single year, and the TVA uses a rate of return of 8.5% while the FCC relies on a default rate of return of 11%. [Arnett, Tr. Vol. 2, p. 49; Kravtin, Tr. Vol. 4, pp. 188-89, 229.]

Witnesses Kravtin and Arnett agreed that the difference between the FCC Rate Methodology and the TVA Rate Methodology lies in their allocation of the annual cost of the pole to the third-party communications service provider. They explained that the TVA has followed the FCC method in dividing the pole, and the annual cost thereof, into "usable" and "unusable" space. Both the FCC and the TVA presume an average pole as being 37.5 feet long. Both presume that the bottom 6 feet of the pole are buried to give the pole stability, and both presume that attachments cannot be made lower than 18 feet above ground in order to achieve the necessary minimum ground clearance to avoid contact between the wires attached to the poles and vehicles traversing underneath. The TVA, like the FCC, treats this 24 feet of space as "unusable." Both the FCC and the TVA consider the 13.5 feet of space that is above the 18 foot minimum ground clearance on an average pole to be "usable" for the attachment of wires, cables and other revenue-generating facilities. Both the FCC and the TVA also presume that a communications attachment occupies one foot of this usable space. [Kravtin, Tr. Vol. 4, pp. 186-87 and n.29; Arnett, Tr. Vol. 2, pp. 49-51.]

As explained by witnesses Kravtin and Arnett, both the FCC and the TVA also recognize that the electric attachments occupy the upper-most portion of the usable space, and the communications attachments occupy the lower portion of the usable space. Both also recognize that the National Electric Safety Code (NESC) requires a 40-inch "safety space" (termed by the NESC as the "Communication Worker Safety Zone") (the "safety space") between some energized conductors and communications facilities.

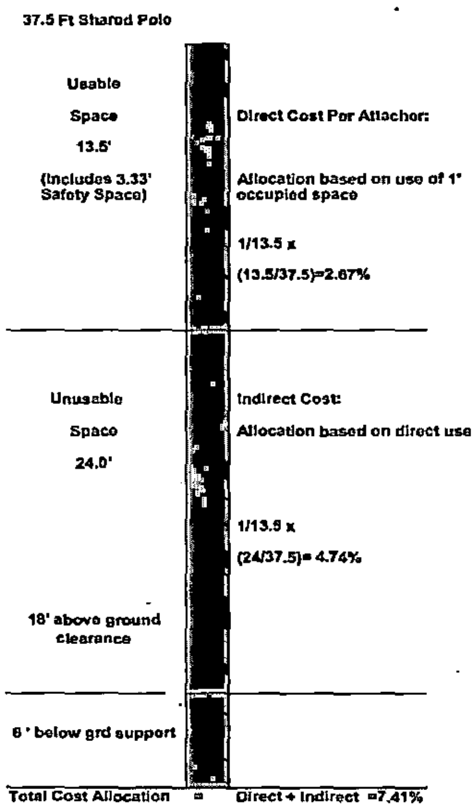
Witnesses Kravtin and Arnett agreed that the NESC has exceptions to the 40-inch safety space and allows street lights, traffic control devices, and even communications facilities owned by the pole owner to be placed within the "safety space." Both witnesses, and others on behalf of Blue Ridge and Charter, agreed that the placement of devices such as street lights in the safety space generates revenue for Blue Ridge. [Kravtin, Tr. Vol. 4, p. 209 n.49; Arnett, Tr. Vol. 2, pp. 56-57, 165-166; Mullins, Tr. Vol. 3, pp. 245-246; Layton, Tr. Vol. 1, p. 20.]

The testimony of witnesses Kravtin, Mullins and Arnett differed in their description of the purpose and effect of the safety space. Witness Kravtin testified that the safety space is required only because of the danger caused by electric shock and that from an economics point of view the need for the safety space relates to the electrification of Blue Ridge's facilities. [Kravtin, Tr. Vol. 5, p. 35.] Her economic benefit assessment was supported by the testimony of witness Mullins who explained that the safety space benefits the employees of both the electric utility and communications attachers by lessening the likelihood that any of these workers will come into simultaneous contact with the electrical and communications facilities. [Mullins, Tr. Vol. 3, pp. 245-46.] Witness Arnett, on the other hand, testified that the safety space is required only because the communications facilities are present on the pole. [Arnett, Tr. Vol. 2, p. 56.] Although witness Arnett testified that Blue Ridge does not often attach facilities in the safety space, he agreed with witness Kravtin that Blue Ridge is allowed to place its facilities in that space and does so. [Arnett, Tr. Vol. 2, pp. 57-58, 164-65.]

Witness Kravtin explained that the FCC uses a "proportionate" and "cost-based" method to allocate the costs of attachment, based on the percentage of the usable space on a pole that is occupied by the attachment. In other words, the communications attacher is allocated the percentage of the annual cost of the entire pole represented by the percentage of the space "usable" for the attachment of revenue generating facilities that is occupied by the attacher's attachment. Presuming that the communications attachment occupies one foot and that there are 13.5 feet of space that are "usable" for attachments, the FCC allocates 1/13.5 (or 7.41%) of the costs of the entire pole to the communications attacher. The FCC treats the safety space as usable to the pole owner, and does not assign any of that space directly to the communications attacher, meaning that the communications attacher pays 7.41% of the costs of that space, as it does of the entire pole.

The FCC method of allocation is reflected in Figure 3.

FIGURE 3

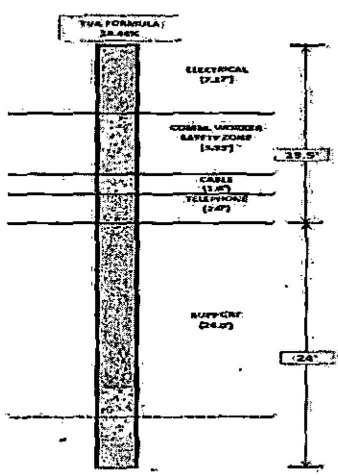


[Ex. PDK 9.]

According to witnesses Kravtin and Arnett, the TVA's allocation method also relies upon the proportionate allocation method used by the FCC for allocation of the costs of the pole space that is above the safety space. [Kravtin, Tr. Vol. 4, pp. 185-87, 219; Arnett, Tr. Vol. 2, pp. 49-51.] However, unlike the FCC, the TVA assigns to the third party communications service provider more than the one foot of space its attachment actually occupies. The TVA also assigns to all communications service providers that use the pole (and none to the EMC pole owner) the entire cost of the 40-inch safety space.[1] In addition, the TVA allocates the cost of the 24 feet of unusable space to all attachers, including the EMC pole owner, on a per-capita basis. In other words, the cost of the unusable space is allocated on an equal basis to all pole users. The TVA presumes that there are three entities that use an average pole, but allows the pole owner to rebut that presumption. The TVA allocation method, as proposed in witness Arnett's exhibit, is reflected in Figure 4.

The TVA relies on the same factual presumptions relied on by the FCC. These include presuming that (i) an average pole has three attaching parties, (ii) an average pole is 37.5 feet tall and has 13.5 feet of usable space and 24 feet of unusable space, and (iii) a communications provider's attachment occupies one foot of usable space. [Kravtin, Tr. Vol. 4, pp. 186-87; Arnett, Tr. Vol. 2, pp. 49-52.] Applying these FCC/TVA presumptions, the TVA Rate Methodology allocates 28.44% of the total pole costs to each third party communications service provider.

FIGURE 4



[Arnett, Tr. Vol. 2, p. 54.]

[1] In other words, if Charter were the only communications service provider on the pole, the TVA would allocate all of the cost of the 40-inch safety space to Charter. If Charter and another communications service provider occupied the pole, the cost of the 40-inch safety space would be allocated evenly between the two providers.

Discussion and Conclusions

The evidence establishes that the TVA has modeled much of its rate methodology on that used for many years by the FCC. The basic reliance of the formula on the cost accounts of the particular utility, the inputs relied on, and the structure of the formula used by the TVA mirrors closely the FCC's formula. The TVA also relies on the same presumptions about pole space relied on in the FCC formula: that an average pole has 24 feet of unusable space and 13.5 feet of usable space, and that a communications attachment occupies one foot of the usable space.

Only in the allocation of these costs to the attaching parties does the TVA chart a new path. Whereas the FCC bases its allocation methodology on the theory that the costs of the entire pole should be assigned based on the attacher's occupancy of a portion of the usable, revenue-generating space, the TVA assigns only the costs of the usable space under that theory. Unlike the FCC, the TVA assigns the cost of the 24 feet of unusable space equally among all providers on the pole (including the pole owner) on a per-capita basis. Further, the TVA assigns the costs of the 40-inch safety space entirely to the communications service providers and none to the EMC pole owner. The FCC, on the other hand, treats the safety space as usable to the pole owner and does not allocate any of that space directly to the communications services provider(s). The FCC thus allocates the cost of the safety space according to the same percentage as it allocates the costs of the usable space.

The result of these allocation methods is that, where the presumptions jointly applied by both the FCC and the TVA are employed, the FCC assigns 7.41% of the annual costs of the entire pole to the communications services provider. The TVA assigns 28.44% of the pole costs to each of the communications services providers under those same presumptions, such that two communications services providers would pay more of the pole's costs (56.88%) than the pole owner (43.12%).

The FCC Rate Methodology employs rebuttable presumptions regarding the height and use of a utility's poles, which include presumptions that: (i) the average height of a distribution pole is 37.5 feet; (ii) these poles are, on average, buried six feet deep, and (iii) in order to maintain proper clearances, the lowest attachment on a pole must be at least 18 feet off the ground. In applying the FCC Rate Methodology, the FCC treats these presumptions as rebuttable by either party.[1] The TVA Rate Methodology also employs certain rebuttable presumptions. Because witness Arnett determined that Charter has an actual average of 2.35 entities attached to its poles, and attempted to rebut the presumptions that average poles have 13.5 feet of usable space and 24 feet of unusable space, he allocated a total of 41.16% (for 2016) of Blue Ridge's pole costs to Charter alone.

---

[1] See 47 C.F.R. § 1.1418 which provides that with respect to the FCC Cable Rate Methodology: "the space occupied by an attachment is presumed to be one (1) foot. The amount of usable space is presumed to be 13.5 feet. The amount of unusable space is presumed to be 37.5 feet. These presumptions may be rebutted by either party."

ELECTRIC COOPERATIVES – MISCELLANEOUS

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 16-17

The evidence supporting these Findings of Fact is found in the testimony of witnesses Kravtin, Martin, Mullins, Arnett, and Layton.

Witness Kravtin is a trained, practicing economist, who was educated in the field and has many years of experience in dealing with the economic basis for utility rates, in particular pole attachment rates. [Kravtin, Tr. Vol. 4, pp. 162-64.] She testified that the primary purpose of pole attachment regulation is to protect "cable operators and other communications attachers against potential abuse by pole-owning utilities that control access to a vital input of production needed by those attachers." [Kravtin, Tr. Vol. 4, p. 174.] Excessively high pole attachment rates, she observed, act like a tax that raises the cost to the communications companies of doing business. [Kravtin, Tr. Vol. 4, p. 175.] Ultimately, such rates result in higher prices for the communications services and distort that market. [Kravtin, Tr. Vol. 4, p. 175.]

Witness Kravtin also provided testimony concerning the economic underpinnings of the FCC pole attachment rate allocation method, pointing out that the FCC allocation is based on the fundamental economic principle of cost-causation in that costs lacking a direct or strong causal linkage to the provision of the service at issue (such as overhead and other common costs) are allocated in the same ratio as direct costs characterized by a strong cost causal linkage. [Kravtin, Tr. Vol. 4, pp. 190-91.] The rate formula allocates costs of the entire pole based upon the use of the space on the pole that is usable for revenue generating activities. Said another way, she testified that the FCC cost assignment method "allocates costs attributable to *both* usable and unusable space on the pole based on the attacher's direct occupancy of space." [Kravtin, Tr. Vol. 4, p. 170 (Emphasis original.).] She described the FCC Rate formula as based on a "widely accepted methodology, with a longstanding history of use in state and federal regulatory cost allocation manuals." [Kravtin, Tr. Vol. 4, p. 189.]

The FCC Rate, she observed, is similar to that "commonly used in leasing arrangements throughout the economy, in which the costs associated with common space of the facility are allocated to individual tenants on the basis of the tenant's direct occupancy of space on the shared facility." [Kravtin, Tr. Vol. 4, p. 192.] Relying on a real estate example, she pointed out that if a tenant leases one of the 10 floors of a building while the owner uses the other 9 floors, the tenant would not be expected to pay more than one-tenth of the costs of the common space, such as the lobby, elevator, garage and grounds. The tenant would not be charged one-half of the common space costs simply because two entities share use the common space. [Kravtin, Tr. Vol. 4, pp. 192-93.] Similarly, she testified that the same concept is used in allocating common costs for shopping malls and airport terminals. [Kravtin, Tr. Vol. 4, p. 193.] "[A]s an economic matter, the costs associated with space on the pole do *not* vary according to the number of attaching entities but rather to the economic utilization of pole capacity." [Kravtin, Tr. Vol. 4, pp. 194-95 (emphasis original).]

The FCC Rate, witness Kravtin emphasized, is fully compensatory and does not provide any kind of subsidy to the communications attachers. In reaching that conclusion, she explained that as an economic term a "subsidy" is present only when a rate does not cover marginal costs, defined as the additional costs that would not exist but for the product sold. [Kravtin, Tr. Vol. 4, pp. 197, 206-07.] "It is a central and well-established tenet of economics that rates that recover the marginal costs of production are economically efficient and subsidy-free." [Kravtin, Tr. Vol. 4, p. 197 n.35.] On the other hand, she stated, any recovery higher than marginal cost, which is clearly recovered under the FCC Rate Methodology, prevents any subsidy from Blue Ridge's electric customers to Charter and its communications customers. [Kravtin, Tr. Vol. 4, pp. 198-201.] She also noted that the FCC and numerous courts, including the U.S. Supreme Court, have held that the FCC pole attachment rate formula is fully compensatory to the pole owner and does not result in a subsidy.[1] [Kravtin, Tr. Vol. 4, p. 201-02, n.43.][2]

Witness Kravtin further supported her rate recommendation based on the following economic benefits: (1) the FCC Rate achieves "competitive and technical neutrality" since it can be applied uniformly across different utilities; (2) the FCC Rate "best mimics a competitive market outcome"; and (3) the FCC Rate provides "straightforward, consistent and predictable rates." [Kravtin, Tr. Vol. 4, pp. 195-203.] Witness Kravtin also noted that to allocate costs based on the number of attaching parties, as the TVA's methodology does, has no support in economic analysis and leads to arbitrary results. [Kravtin, Tr. Vol. 4, p. 191.] Further, she noted that it results in widely fluctuating rates based on the number of third party attachers. [Kravtin, Tr. Vol. 4, p. 226.] For example, witness Kravtin observed that a rate could double based on differences only in the number of attaching entities, even when the costs to the pole owner remain constant. [Kravtin, Tr. Vol. 4, p. 226.]

Witness Kravtin testified that the FCC Rate Methodology "adheres closely to the key economic and public policy principles of effective pole rate regulation." [Kravtin, Tr. Vol. 4, pp. 166-67.] In particular, she noted that the FCC Rate Methodology's use of its "proportionate" or "direct cost" allocator follows the principle of the "cost causer pays" [Kravtin, Tr. Vol. 4, p. 184], "commonly used in leasing arrangements in other sectors of the economy" such as commercial real estate. [Kravtin, Tr. Vol. 4, pp. 192-93, 208.] She also testified that excessively high pole

[1] Amendment of Commission's Rules and Policies Governing Pole Attachments, Consolidated Partial Order on Reconsideration, 16 FCC Rcd. 12103, ¶¶ 15-25 (FCC 2001) ("2001 Reconsideration Order"); FCC v. Florida Power Corp., 480 U.S. 245, 253-54 (1987) (finding that it could not be "seriously argued, that a rate providing for the recovery of fully allocated cost, including the cost of capital, is confiscatory."); Alabama Power Co. v. FCC, 311 F.3d 1357, 1363, 1370-71 (11th Cir. 2002); Detroit Edison Co. v. Michigan Pub. Serv. Commission, Nos, 203421, 203480, slip op., 1998 WL 1988754, at *3-4 (Mich. Ct. App. Nov. 24, 1998), *affirming* Consumers Power Co., Detroit Edison Co., Setting Just and Reasonable Rates for Attachments to Utility Poles, Ducts and Conduits, Case Nos. U-010741, U-010816, U-010831, Opinion & Order (Mich. Pub. Serv. Comm'n Feb. 11, 1997), appeal denied, 461 Mich. 853, 602 N.W.2d 386, 1999 Mich. LEXIS 3252, 1999 WL 711854 (Mich.); Trenton Cable TV, Inc. v. Missouri Pub. Serv. Co., PA-81-0037, ¶ 4 (rel. Jan. 25, 1985) ("Since any rate within the range assures that the utility will receive at least the additional costs which would not be incurred but for the provision of cable attachments, that rate will not subsidize cable subscribers at the expense of the public.").

[2] It is noteworthy that the North Carolina Business Court also found that the FCC Rate does not result in a subsidy to a communications service provider such as TWC at the expense of the Cooperative. In discussing this very issue, the Court of Appeals found that the FCC Cable Rate "actually leaves the utility and its customers better off than they would be if no attachments were made to their poles" because the cable attacher "pays most of the incremental 'but for' costs of attachment up front, as well as its share of the fully allocated costs of pole ownership that necessarily would exist even absent its attachment." Rutherford Electric Membership Corp. v. Time Warner Entertainment-Advance/Newhouse Partnership, 240 N.C. App. 199, 213, 771 S.E. 2d 768, 778 (N.C. Ct. App. 2015). In terms of subsidies, the Court found that, if anything, in light of the agreement's terms, they flowed the opposite direction because "[w]hen [TWC] pay[s] to create surplus space where it does not already exist, [the Cooperative] benefits from receiving a taller, stronger pole that enhances [the Cooperative's] network, and [TWC] remain[s] obligated to pay annual rent to maintain an attachment to that pole." Id.

attachment rates artificially raise costs of providing communications services and reduce consumer demand for and ability to pay for new and enhanced services, especially in less densely populated areas such as those served by Blue Ridge. [Kravtin, Tr. Vol. 4, pp. 175-76, 231.] As for the overall impact on Blue Ridge's electric rates, she testified that Charter's pole attachment payments at the current $26.64 rate in 2016 only amounted to a very small portion of Blue Ridge's total electric revenues. [Kravtin, Tr. Vol. 4, p. 176-77.][1]

In support of the FCC fully allocated rate, witness Kravtin emphasized the limited and contingent nature of Charter's rights to attach to Blue Ridge's poles. Witnesses Kravtin, Mullins and Martin testified that the current and proposed Blue Ridge pole attachment agreements give Charter the right to attach to poles only where the existing configuration of the pole will accommodate the attachment consistent with the NESC requirements. If there is insufficient unused space on the pole to accommodate the attachment, Charter will be allowed to attach only if it pays for reconfiguring the existing attachments on the pole or for installing a new pole, if necessary. Even if Charter has thus paid for a new pole, the pole is owned by Blue Ridge, and Charter pays annual rental to use it. In all cases where Charter's facilities are attached to a pole, the attachment is contingent on Blue Ridge not requiring the space for the latter's own utility services. If Blue Ridge needs the space sometime in the future, Charter is required to remove its attachment or pay at that time for a new pole.

Charter does not contest these provisions and recognizes that its pole attachment agreements, both currently and in the future, will provide the right to attach only in "surplus" or "excess" space. [Kravtin, Tr. Vol. 4, pp. 198-99, n.38; Mullins, Tr. Vol. 3, p. 224; Martin, Tr. Vol. 4, p. 141.] In addition, Charter's pole attachment agreements with Blue Ridge, both in the past and as proposed by both parties, require Charter to pay all out of pocket expenses incurred by the utility associated directly with the attachment. [Martin, Tr. Vol. 4, p. 84; Mullins, Tr. Vol. 3, p. 237.] Thus, Blue Ridge is permitted to charge Charter for the costs of pole inspections and audits, and all expenses related to making the pole ready for attachment, including post-construction review expenses. [Kravtin, Tr. Vol. 4, p. 198 n.36; Mullins, Tr. Vol. 3, p. 232; Martin, Tr. Vol. 4, p. 84.] Charter's contingent attachment rights and responsibility for absorbing Blue Ridge's "but for" costs related to Charter's attachments gives witness Kravtin assurance that the FCC fully allocated pole attachment rate does not create any kind of subsidy. [Kravtin, Tr. Vol. 4, pp. 206-07.]

Witness Arnett, who testified as a rate expert for Blue Ridge, is a consultant with decades of experience in representing pole owners, many of them cooperatives, in pole attachment matters. [Arnett, Tr. Vol. 2, pp. 43-44, WA Ex. 1.] But he is not an economist, does not have a college degree, and does not claim any educational background or professional training in dealing with rate issues. [Arnett, Tr. Vol. 2, pp. 132-33; WA Ex. 1.] On cross examination, he acknowledged that he has no background in rate making, no experience in rate making theory, and no knowledge of any rate allocation methods used by this Commission. [Arnett, Tr. Vol. 2, pp. 136-38.][2] In his

[1] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

[2] Witness Arnett testified that he has never been accepted as a rate expert in any judicial case and although he presented recommendations for how pole attachment rates should be set before two regulatory commissions, his rate recommendations were not accepted. He testified that he now believes that the rate methodologies he then recommended are not reasonable. [Arnett, Tr. Vol. 2, pp. 133, 140-42.]

testimony, witness Arnett did not purport to provide any economic analysis in support of his recommendation that the Commission follow the rate methodology adopted by the TVA in February 2016. Nor did he give any "economics" based justification for his contention that the FCC Rate results in Blue Ridge providing a subsidy to Charter. Instead, his testimony focused on explaining how the TVA Rate Methodology he advocates works, providing his intuitive support for the methodology, and pointing to other rate formulas that, in his view, are similar to that adopted by the TVA.[1]

In justifying the TVA's equal allocation of the costs of the "unusable space" (also referred to as "common space") on a pole, witness Arnett relied on the benefit to Charter in being able to use Blue Ridge's poles. Witness Arnett testified that the principles underlying the TVA Rate Methodology arise from the "TVA's regulatory philosophy that (a) the parties benefitting from the various sections of the pole should be responsible for those costs, and (b) where multiple parties derive benefit, those respective costs should be shared equally." [Arnett, Tr. Vol. 2, p. 49.] Although he testified that the "TVA recognizes that certain portions of the pole are of equal benefit to all attaching parties" [Arnett, Tr. Vol. 2, p. 53], he was not able to identify any evidence that the TVA had based its rate method on such a philosophy or recognition. [Arnett, Tr. Vol. 2, pp. 170-73.]

Nevertheless, witness Arnett testified that sharing the costs of unusable common space equally among all attaching parties makes sense because all attaching entities benefit equally from the common or unusable space on the pole and therefore should pay an equal share of those costs. [Arnett, Tr. Vol. 2, p. 55.] Witness Arnett asserted that "[a]ll attaching entities need" the portions of the pole that are buried in the ground and used to achieve minimum ground clearance. [Arnett, Tr. Vol. 2, p. 55.] In addition, witness Arnett testified that Charter, like all other attaching parties including Blue Ridge, uses the "unusable" pole space to transition between underground and aerial facilities through the use of "risers" and relies on this space for power supplies and other equipment. [Arnett, Tr. Vol. 2, p. 55.] Witness Arnett did not address witness Kravtin's testimony demonstrating that Charter has only a contingent right to use space on Blue Ridge's poles. Witnesses Layton and Arnett testified that Blue Ridge does not make any capital investment for Charter; Blue Ridge does not take account of, or even consider, the possibility that Charter may want to attach to a pole in designing its pole plant. [Layton, Tr. Vol. 1, pp. 31-32; Arnett, Tr. Vol. 2, pp. 94-95.]

Witness Arnett attacked the FCC rate as "subsidized." [Arnett, Tr. Vol. 2, pp. 84, 115.] He also argued that the Commission should consider the "benefits received" by Charter, essentially that Charter avoids the greater cost it would incur if it installed equivalent facilities underground. [Arnett, Tr. Vol. 2, pp. 80-82, 85.] Witness Arnett further testified that in comparing Charter's proposed annual payment per pole to the avoided costs of pole ownership, Charter's proposal "results in a subsidy instead of an equitable sharing of costs." [Arnett, Tr. Vol. 2, p. 84.]

Discussion and Conclusions

The disagreement between the parties regarding the appropriate rate methodology to apply is essentially threefold: (1) how to allocate the costs associated with the unusable portion of the

[1] See discussion at pp. 16-17 supra.

pole among users of the pole, (2) how to allocate the cost associated with the "safety space" on the pole among users of the pole and (3) whether Blue Ridge's actual data should be used to calculate the maximum pole attachment rate in lieu of the presumptions used in the FCC and the TVA rate methodologies.

Allocating the annual costs of owning and maintaining a pole based on the percentage of the usable and revenue-generating space occupied by the attachment is supported by well-recognized cost-causation principles and is consistent with previous decisions of the Commission in analogous circumstances. *See* Order Addressing Collocation Issues, Docket No. P-100, Sub 133j (NCUC Dec. 28, 2001), at 17 (concluding in a proceeding involving competitive access to incumbent telephone company central office facilities that "it is appropriate to allocate security costs to carriers based on square footage occupied in the central office as a recurring charge," and rejecting the arguments of BellSouth and Verizon to allocate the costs on a pro-rata basis among the occupants of the property) (Collocation Order), motion for recon. denied, Order Addressing Motions for Reconsideration and Clarification, Docket No. P-100, Sub 133j (Aug. 20, 2002), at 118 ("[T]he Commission finds it appropriate to deny Verizon's Motion for Reconsideration and Clarification in this regard and affirms its original decision that security costs should be allocated based on square footage occupied in the central office."). This allocation method previously adopted by the Commission is the same as one would expect in a competitive real estate market where the costs of common space in a building are allocated on the basis of the number of apartments or floors occupied by each tenant, rather than simply based on a per-capita allocation. In fact, the Commission notes, when a tenant rents an apartment, the tenant typically has a lease that guarantees that the tenant has a right to stay in the rented space identified in the lease for a specific period of time. In this case, Charter can be forced to move to a different location on the pole or to leave a pole altogether at any time if Blue Ridge needs the space on the pole. Similarly, this method is how one would allocate the common costs of a factory production system (the costs of the building, conveyor belts, and so on) based on the direct costs of the different product lines, not simply dividing the common costs by the number of product lines. While it is true that all product lines benefit from the common costs, they do not benefit from them "equally" in any economic sense.

This approach is consistent with the general approach to cost allocation recognized and applied by the Commission as a foundation of its regulatory approach to setting rates, which seeks to allocate costs based on practical, observable or logical links to cost causation.[1] As also recognized by the FCC in establishing uniform methods of cost allocation in Part 64 of its Rules, where costs cannot be directly assigned to regulated or unregulated activities (i.e., "common costs"), they may be allocated "based upon an indirect, cost-causative linkage to another cost category . . . for which a direct assignment or allocation is available." 47 C.F.R. § 64.901(b)(3). In other words, where common costs can be linked to a method of direct assignment (i.e., the space occupied on a pole or facility), the direct method should be used to assign common costs.

[1] See, e.g., Commission Rule R9-2 (adopting FCC Uniform System of Accounts for telephone companies; requiring submission of cost allocation plans); Rule R8-27 (adopting FERC Uniform System of Accounts for electric utilities); and Rule R19-1 (requiring Electric Membership Corporations to file cost allocation manuals updated within 30 days of any significant change).

Based on the evidence presented in this docket, the Commission can discern no principled basis grounded in cost causation for the arbitrary allocation of costs associated with unusable space on a per-capita basis. Indeed, the theory seems rooted in the pure numerical convenience of dividing costs by users. Where the character and nature of the attachers' rights and patterns differ, as they do here, the use of this method of allocation is not sufficiently related to the costs that are being allocated. An attacher that occupies one foot of space on the pole does not stand in an equal position vis-à-vis the pole owner that (a) would own and operate the pole for its electric distribution needs regardless of the presence of an attacher, (b) has superior rights to utilize the entirety of the pole and may require the attacher to vacate the pole for the owner's use, and (c) uses a much greater portion of the pole as a whole. Similarly, an attacher that uses one foot of space does not stand in the same position as an attacher that uses two feet of space. The use of a space allocation factor consistent with the FCC approach also has the benefit of leading to more rational, less arbitrary pricing. The unrebutted evidence shows that adoption of Blue Ridge's proposed methodology would result in widely fluctuating rates depending on the number of third party attachers. Even where the costs of the pole remain constant, the rate charged for an attachment could double based solely on the number of attaching entities. Again, the Commission can perceive no principled reason why prices for attachment should vary so widely depending on the number of attaching parties.

Blue Ridge's argument that Charter benefits equally with Blue Ridge from the cost of the unusable space on a pole is not supported in the record and is the precise argument rejected by this Commission allocating space costs in the Collocation Order. *See* BellSouth Proposed Order, Docket No. P-100, Sub 133j, at 120 (Feb. 16, 2001) (arguing that security access "provides equal value to all parties; therefore, all parties should share equally in the costs of security services"). It is also the argument rejected by the Commission in the January 2018 Pole Attachment Orders. *See* e.g., Order Resolving Pole Attachment Complaint Pursuant to G.S. 62-350, Docket Nos. EC-43, Sub 88, EC-49 Sub 55, EC-55, Sub 70 and EC-39, Sub 44. (NCUC Jan. 9, 2018). The question is not whether Charter benefits from the portions of the pole that are buried and are used to achieve minimum grade clearance. Rather, the question is: what is the just and reasonable proportion of that cost to allocate to Charter. Blue Ridge did not choose to provide any expert economic testimony to support its position, and it is not clear from the record whether any such economic basis exists. Although there may be instances where allocating costs on a per-capita basis is appropriate in rate setting despite widely varying usage and rights, this case plainly does not present such a situation. The record here is clear not only that Charter occupies only a very small percentage of the usable space on the pole, but that even that occupancy is contingent and potentially temporary. Similar to the finding of the Business Court in the *Rutherford* case,[1] the record here does not establish that Blue Ridge expends capital to serve Charter by installing taller poles. To the contrary, Blue Ridge's witnesses made plain that it does not construct any pole plant to serve Charter. As stated by witness Kravtin, Charter occupies only "surplus" or "excess" space on the pole that is not required by Blue Ridge for its own purposes.[2] By any reasonable measure,

[1] Rutherford, 2014 WL 2159382 at *10.

[2] Witness Arnett disputed that Blue Ridge has any "surplus space," arguing that it does not create any space that it does not intend to use. [Arnett, Tr. Vol 2, pp. 94-95.] The Commission understands, however, witness Kravtin's position to be that the pole space occupied by Charter is "surplus" in the sense that it is not currently being used by Blue Ridge. When Blue Ridge needs the space, it is entitled to reclaim it.

Charter does not enjoy equal benefits to those of the pole owner from the common ("unusable") space on Blue Ridge's poles.

The argument that all parties' wires may traverse the "unusable" space between the ground line and the height necessary for minimum grade clearance with "risers" does not alter the Commission's analysis.[1] Risers are simply a means used by all parties to transition between underground and aerial facilities. The testimony was that risers do not affect the usefulness of any portion of the pole for attachment of wires and cables.[2] [Mullins, Tr. Vol. 3, p. 224.]

The Commission does not find a basis for deviating from this approach to cost allocation with respect to costs associated with maintenance of the so-called "safety space" on the pole. Blue Ridge's proposal would shift to communications service providers, including Charter, 100% of the costs associated with the safety space. The Commission finds unhelpful the "chicken or the egg" debate between witnesses Booth, Arnett and Kravtin about whether the safety space is required due to the presence of communications facilities on a pole or due to the fact that the pole carries energized and dangerous electric conductors. Obviously, it is the presence of both the communications facilities as well as the presence of electric power that creates the need for the space. Again, the question before the Commission is the appropriate method for allocating costs associated with that space. Based on the evidence presented here, the Commission is in agreement with the FCC and the Business Court that the safety space is actually usable (and used) by Blue Ridge for revenue generating facilities.[3] Blue Ridge's proposed methodology would have the inappropriate effect of allocating to Charter up to 100% of the costs of space it cannot use, while allocating to the pole owner none of the costs associated with space that it can and, in fact does, use.

---

[1] Risers are vertical conduits used by all pole users to transition between underground and aerial service. The presence of a riser on a pole does not preclude other uses of that same space (there can be multiple risers on a single pole), and risers do not prevent the pole owner from making revenue-generating use of excess usable pole space for horizontal attachments.

[2] Nor does the fact that Charter occasionally places power supplies in the pole space below minimum grade affect the analysis. Power supplies are devices that enable the electric utility to generate electric revenue. The FCC has held that neither risers nor power supplies should count in its rate making method because both relate to the "unusable" and not the "usable" space. *See, e.g.*, Capital Cities Cable, Inc. v. Mountain States Tel. & Tel. Co., 1984 FCC LEXIS 2443, ¶ 23 (FCC June 29, 1984).

[3] Adoption of Rules for the Regulation of Cable Television Pole Attachments, Memorandum Opinion & Second Report & Order, 72 FCC 2d 59, 69-71 (1979) ("Second Report & Order") (finding, based on an extensive record, that safety space is to be considered usable space for ratemaking purposes, and that no portion of the safety space is to be considered occupied by cable television), aff'd on recon., 77 FCC 2d 187, 188-91 (1980) (affirming that "electric utilities make resourceful use of safety space for mounting street light support brackets, step-down distribution transformer and grounded shielded power conductors"); aff'd sub nom., Monongahela Power Co. v. FCC, 655 F.2d 1254, 1256 (D.C. Cir. 1981) (FCC's treatment of safety space as usable space was "a conscientious exercise of discretion," supported by the record evidence of "industry practice, ... on utility companies' profitable use of the safety clearance space, and ... the risk of replacement cost that many utility contracts [impose] on their [cable] lessees."); Amendment of Rules and Policies Governing Pole Attachments, Report & Order, 15 FCC Rcd 6453, 6467 ¶ 22 (2000) ("The [safety] space is usable and is used by the electric utilities."); Landis, 2014 WL 2921723 at *12; Rutherford, 2014 WL 2159382 at *15.

ELECTRIC COOPERATIVES – MISCELLANEOUS

The Commission takes notice of the following NESC provisions relating to the definition of the "communication worker safety zone."

Rule 238E defines "[c]ommunication worker safety zone" as:

> The clearances specified in Rules 235C and 238 create a communication worker safety zone between the facilities located in the supply space and facilities located in the communication space, both at the structure and in the span between structures. Except as allowed by Rules 238C, 238D, and 239, no supply or communication facility shall be located in the communication worker safety zone.[1]

Related to this definition:

- Rule 235C provides the vertical clearance at the support for line conductors and service drops.
- Rule 238 (Table 238-1) states, in pertinent part, that there must be a 40 inch vertical clearance between supply conductors and communications equipment, between communication conductors and supply equipment, and between supply and communications equipment for supply voltages from 0 kV to 8.7 kV.
- Rule 238C specifies the following clearances for span wires or brackets: "Span wires or brackets carrying luminaires, traffic signals, or trolley conductors shall have vertical clearances from communications lines and equipment not less than the values specified in Table 238-2."
- Rule 238D specifies the following clearance of drip loops associated with luminaires and traffic signals:

  > "If a drip loop of conductors entering a luminaire, a luminaire bracket, or a traffic signal bracket is above a communication cable, the lowest point of the loop shall be not less than 300 mm (12 in) above the highest (1) communication cable, or (2) through bolt or other equipment.
  >
  > *EXCEPTION*: The above clearance may be reduced to 75 mm (3 in) if the loop is covered by a suitable nonmetallic covering that extends at least 50 mm (2 in) beyond the loop."

- Rule 239 provides for the clearance of vertical and lateral facilities from other facilities and surfaces on the same supporting structure.

As noted above, the NESC only allows the safety space to be used by the electric company/pole owner to install such things as luminaires (street lights), traffic signals, or trolley conductors. Therefore, the Commission concludes that it is appropriate to classify the Communication Worker Safety Zone as usable space to the EMC as accounted for in the FCC Rate Methodology advocated for use in this proceeding by Charter.

---

[1] 2017 NESC (C2 2017).

Blue Ridge's witnesses asserted in this case that very few of Blue Ridge's streetlights or other facilities are actually placed in the safety space, based on their interpretation of the NESC's definitions. [Booth, Tr. Vol. 3, pp. 116-17; Layton, Tr. Vol. 1, p. 82.] Witnesses Booth and Layton argued that even though Blue Ridge's streetlights may be found in the midst of the required 40 inch separation between Blue Ridge's neutral conductors and Charter's facilities, the streetlights are actually located in the Cooperative's "supply space," and not the "safety space." [Booth, Tr. Vol. 3, pp. 116-17; Layton, Tr. Vol. 1, p. 82.] In essence, witness Booth took the position that the safety space does not start at the lowest electrical conductor,[1] but starts at the bottom of the electric supply space, which he argues may be set by the EMC far below existing electrical facilities if the EMC desires to do so. [Tr. Vol. 3, pp. 180-82.]

Witness Booth's testimony in this matter that the Communication Worker Safety Zone is not tied to the location of existing facilities, and is based instead on some arbitrary and unilateral determination by the EMC pole owner of the lower bound of its "supply space" on a pole is hard to square with the wording of the NESC. But the Commission does not have to resolve the issue in this case. First, it is conceded by Blue Ridge's witnesses that the NESC allows the EMC to place its streetlights and other revenue generating facilities in the safety space, and that Charter is prohibited from placing its facilities in that space. [Layton, Tr. Vol. 1, pp. 121-22; Arnett, Tr. Vol. 2, pp. 56-58.] In other words, the safety space is "usable" by Blue Ridge but not "usable" by Charter, regardless of how the safety space is defined or where on a particular pole it is located. It would make no sense, therefore, to treat Charter as using the safety space and to treat Blue Ridge as not using it. Second, and most important, the evidence establishes that the presence of safety space on a pole never prevents Blue Ridge from placing any of its electrical facilities in that space on a pole. Due to Blue Ridge's rights at any time to commandeer any space on the pole for its facilities, the concept that safety space is in any way not "usable" by the EMC pole owner is not reasonable.

The Commission notes that the Business Court in the Rutherford case rejected the opinion of witness Booth, Blue Ridge's expert also in this case, that the cable operator should be held responsible for the safety space, finding that, "there is no basis for allocating the safety space entirely to the attacher as Booth did." Rutherford, 2014 WL 2159382, at *15. The Commission reaches that same conclusion based on the evidence presented here. Further, the Commission concludes that, based upon the evidence herein presented, the FCC Rate Methodology for allocating the total costs of a pole based on the percentage of space used by the attacher established by the FCC and approved by the North Carolina Business Court and affirmed by the North Carolina Court of Appeals is the appropriate methodology for allocating the total costs of the pole, including unusable space.[2]

[1] Witness Booth refused to agree that the definitions in the NESC Rules measuring vertical clearance requirements from surface to surface of the closest electrical supply lines and communications lines and specifying that the Communication Worker Safety Zone is established by the electrical facilities and the communications facilities mean that the safety space is tied to the location of existing facilities on the pole. [Tr. Vol. 3, pp. 165-81.]

[2] Issue Nos. 1 and 2 per the November 2, 2017 Joint Statement of Issues.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 18-20

The evidence supporting Findings of Fact Nos. 18-20 is found in the testimony of witnesses Kravtin, Martin, Mullins, Arnett and Layton.

The parties presented diametrically opposed theories of the purpose of pole attachment regulation. Witness Kravtin testified that pole attachments are regulated because they are a form of essential facility over which Blue Ridge (and other pole owners) have monopoly control, a fact that is supported by numerous decisions in the federal courts. [Kravtin, Tr. Vol. 4, p. 168.][1] She testified that "[t]he purpose of effective pole regulation is to protect cable and other communications attachers, for whom utility poles are essential bottleneck facilities, from being charged per unit attachment rates far in excess of a cost-based, competitive market level rate and from other harmful monopoly type practices of pole owning utilities." [Kravtin, Tr. Vol. 4, p. 167.] "Fundamental to pole rate regulation," in her opinion, "is recognition of the fact that pole-owning utilities, by virtue of historical incumbency, own and control existing pole plant to which cable operators and other communications attachers have no practical alternative to attach." [Kravtin, Tr. Vol. 4, pp. 174-75.] Witness Mullins testified that "due to economic, aesthetic, regulatory and other factors, Charter often has no practical alternative to using Blue Ridge's poles . . . ." [Mullins, Tr. Vol. 3, p. 227.] Further, there generally is a single set of poles on which to place aerial cables. [*See* Mullins, Tr. Vol. 3, p. 227; *see also* Martin, Tr. Vol. 4, p. 79.][2] Witness Mullins also testified that it would cost approximately $56 million (not counting the cost to wreck out existing aerial facilities) to move underground the facilities that Charter currently has attached to Blue Ridge's poles, which would be "prohibitively expensive." [Mullins, Tr. Vol. 3, pp. 223, 227-28.]

Witness Arnett, in contrast, testified that Blue Ridge's poles are not essential facilities to Charter because more than half of Charter's distribution infrastructure in North Carolina is placed underground and because some telephone companies have shifted their facilities from overhead to underground. [Arnett, Tr. Vol. 2, pp. 92-94] He testified that one of the telephone companies that currently attaches to Blue Ridge's poles removed approximately 1,400 of its total of 27,000 attachments from Blue Ridge's poles in the last five years. [Arnett, Tr. Vol. 3, p. 13.] He accepted, however, Charter's representation that it would cost about $45,109.40 per mile to move its aerial construction underground. [Arnett, Tr. Vol. 2, p. 85.] And none of Blue Ridge's witnesses addressed the feasibility of moving Charter's existing facilities off Blue Ridge's poles or how Charter could afford to continue to provide service if doing so required an additional investment of more than $45,000 per mile to serve what witness Mullins notes is a small number

---

[1] *See, e.g.*, Nat'l Cable & Telecomm. Ass'n, Inc. v. Gulf Power Co., 534 U.S. 327, 330 (2002) ("[Cable companies have] found it convenient, and often essential, to lease space for their cables on telephone and electric utility poles. Utilities, in turn, have found it convenient to charge monopoly rents."); *see also* Common Carrier Bureau Cautions Owners of Utility Poles, 1995 FCC LEXIS 193, *1 (1995) ("Utility poles, ducts and conduits are regarded as essential facilities, access to which is vital for promoting the deployment of cable television systems"); FCC v. Florida Power Corp., 480 U.S. 245, 247 (1987) ("[I]n most instances underground installation of necessary cables is impossible or impractical. Utility company poles provide, under such circumstances, virtually the only practical physical medium for the installation of television cables.").

[2] Although witness Arnett testified that there are situations where there is more than one pole line in Blue Ridge's service territory, he was unable to give any estimate as to how prevalent that situation is. [Arnett, Tr. Vol. 3, pp. 10-11.]

of households per mile in Blue Ridge's service territory. [Mullins, Tr. Vol. 3, pp. 228-29.][1] Although witness Arnett argued that a facility may not be deemed to be an "essential facility" if it is replaceable, even at a much higher cost, he acknowledged that he may be mistaken as to how to define an essential facility. [Arnett, Tr. Vol. 3, p. 11.]

Witness Arnett did not employ any economic or cost-causation principles to support his opinion that Charter should equally share on a per-capita basis the costs of the unusable common space on a pole. Instead, he grounded his opinion in the overall benefit he asserted that Charter gains from using Blue Ridge's poles in the first place, as well as the equal benefit that he believes all pole users gain from use of the unusable space. [Arnett, Tr. Vol. 2, pp. 53-55, 84-87, 103-104.]. Witness Arnett suggested that the much higher cost to Charter of constructing its own facilities, rather than relying on attaching to Blue Ridge's poles, should be factored in by the Commission. [Arnett, Tr. Vol. 2, pp. 84-85.] Again, he chose not to address witness Kravtin's opinion that Charter has only limited and conditional rights of attachment.

Witness Kravtin testified about the damaging impact of excessive pole attachment rates on the market for communications services: "[E]xcessively high pole attachment rates operate like a non-cost based tax on the final or 'downstream' communications and broadband services bought by consumers." [Kravtin, Tr. Vol. 4, p. 175.] "Ultimately," she pointed out, "high pole attachment rates result in higher prices for communications services which in turn serve to reduce consumers' demand for and/or ability to pay for these services." [Kravtin, Tr. Vol. 4, p. 175.] She also testified that, in particular, higher pole attachment rates "discourage communications companies from making additional investment in the state and their ability to roll out, or continue to expand advanced broadband service offerings." [Kravtin, Tr. Vol. 4, p. 176.] She explained that the "dampening effect" of high pole attachment rates on broadband service deployment and adoption is especially serious in more rural and less densely populated areas due to the fact that these areas contain fewer potential customers per pole. [Kravtin, Tr. Vol. 4, p. 231.] In such areas, because there are relatively more poles necessary to serve a potential subscriber, the impact of high pole attachment rates is especially severe. [*See* Kravtin, Tr. Vol. 4, pp. 231-32.] The need for increased broadband deployment, in turn, has been recognized at both the national and state level, according to witness Kravtin's testimony. She noted that the FCC recently observed that it "has repeatedly recognized the importance of pole attachments to the deployment of communications networks." [Kravtin, Tr. Vol. 4, pp. 178-79 n.19.] Witness Kravtin testified that FCC Chairman Pai has emphasized that lower pole attachment rates are important "[t]o bring the benefits of the digital age to all Americans." [Kravtin, Tr. Vol. 4, pp. 178-79 n.19.] Witness Kravtin also said that the North Carolina Department of Information Technology is developing its own broadband plan to ensure affordable broadband access to sparsely populated areas. [Kravtin, Tr. Vol. 4, pp. 178-79 n.19.]

None of Blue Ridge's witnesses either debated the importance of broadband or argued that attachment rates may not be an important factor in a communications company's determination to expand its distribution plant in less populated areas. Nor did any Blue Ridge witness testify that lower Blue Ridge pole rates will have a significant effect on its electric rates. Witness Kravtin, on the other hand, testified that the impact of pole attachment revenues to total electricity revenues

[1] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

was, at most, very small. [Kravtin, Tr. Vol. 4, p. 176-77.][1] Witness Kravtin noted that EMCs already have a cost advantage over investor-owned companies due to the low interest loans that the former receive from the federal RUS. [Kravtin, Tr. Vol. 4, p. 181.] Cooperatives have available low-cost loans, and by their nature they do not have to pay the higher cost of raising public equity. [Kravtin, Tr. Vol. 4, p. 181.] Nevertheless, witness Kravtin testified that the FCC Rate methodology relies on a cost of money component that assumes the higher cost of equity applicable to IOUs, thus benefiting any cooperatives subject to pole attachment regulation pursuant to the FCC Rate Method. [Kravtin, Tr. Vol. 4, pp. 181-82 and n.21.]

With respect to comparing IOUs and cooperative utilities in other ways, witness Kravtin testified that EMCs "use the same type of plant, technology, and production techniques to provide electricity service to subscribers and in the same basic manner as IOUs." [Kravtin, Tr. Vol. 4, p. 212.] She and witness Martin also testified that IOUs and EMCs use poles that are indistinguishable. [Kravtin, Tr. Vol. 4, pp. 180, 196; Martin, Tr. Vol. 4, p. 77.] Witness Arnett testified that pole rates should be calculated based on economic cost allocation principles uninfluenced by the facts that Blue Ridge is a non-profit entity and that Charter is a large for-profit company. [Arnett, Tr. Vol. 3, pp. 46-47.]

Blue Ridge witness Layton testified that a Blue Ridge affiliate provides dark fiber services via facilities attached to Blue Ridge's poles. [Layton, Tr. Vol. 2, p. 9]. Witness Kravtin, moreover, testified that preventing pole owning electric utilities from charging excessive pole rates "has taken on heightened significance in recent years, with the increased opportunity of pole owning utilities to directly compete with communications attachers." [Kravtin, Tr. Vol. 4, p. 178.]

Discussion and Conclusions

While externalities and value of service principles associated with rates have seldom if ever been determinative, the Commission has considered both in past cases, at least in considering different classes of service. *See*, e.g., State ex. rel. Utilities Comm'n v. Durham, 282 N.C. 308, 314-15 (1972); Public Service Co. of North Carolina, Inc., Docket No. G-5, Sub 386, 1998 WL 941806, ¶ 57 (NCUC 1998). In this case the rate formulae advanced by the opposing parties are the FCC formula and the TVA formula. Even without considering externalities and value of service principles, the Commission determines that the FCC formula is based on valid and acceptable cost of service and cost allocation principles and the TVA formula is not. Nevertheless, N.C. Gen. Stat. § 62-350 directs the Commission, on a case-by-case basis in response to a dispute filed with the Commission, to set pole attachment rates that are "just and reasonable" and "consistent with the public interest." N.C. Gen. Stat. § 62-350(c). In considering whether a rate would be consistent with the public interest, it is appropriate to consider any externalities inherent in higher or lower pole attachment rates, as well as the impact of the rate on value of service principles.

Both parties presented testimony advocating pole attachment rates that rely, in some way, on the pole-related costs of Blue Ridge. The pole-related costs the parties believe should be factored into the rates directly as inputs are virtually identical. The principal difference between the parties relates to the appropriate allocation of those pole-related costs. As noted above, the

1 ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

economic analysis presented by witness Kravtin, Charter's expert, in support of a cost-based proportionate allocation of the costs of the common space is the sole economic testimony presented in the case. That analysis provides a solid basis on cost allocation principles in support of the FCC Rate formula. The Commission also concludes that the FCC formula finds additional support in the testimony regarding externalities and value of service principles.

The Commission agrees with witness Kravtin that there is a general benefit in the expansion of broadband service, and the Commission determines, as witness Kravtin asserts, that lower pole attachment rates would likely assist in the expansion of broadband service. In opposition to the economic principle that lower input costs are most likely to lead to expansion of output, Blue Ridge has presented no contrary economic evidence. In essence, witness Arnett simply argues that there is no assurance that lower pole rates in the range recommended by witness Kravtin will result in expanded broadband and that higher pole rates will reduce the cost of electricity to Blue Ridge's members. But witness Arnett did not even discuss, much less present any evidence of, the impact on electric rates of the lower pole attachment rate witness Kravtin recommends. Nor did witness Arnett provide any reason why the Commission should favor lower EMC electric rates over lower pole attachment rates in the public interest analysis under N.C. Gen. Stat. § 62-350 in any event. While lower electric rates, to the extent supported by evidence, might provide an arguable public interest benefit in support of higher pole attachment rates, the Commission cannot ignore the fact that the statute is primarily directed toward pole attachment, and not electric, rates. The Commission is confident that Blue Ridge does not intend to suggest that N.C. Gen. Stat. § 62-350 gives the Commission jurisdiction over cooperative electric rates.[1]

Further, the Commission finds convincing witness Kravtin's testimony that the purpose of pole attachment regulation is to control the natural incentive for monopoly owners of essential facilities to overcharge. The history of pole attachment regulation at the federal level and in other states has been directed toward that goal, and the Commission has been made aware of no different objective on the part of the General Assembly in passing and amending N.C. Gen. Stat. § 62-350. Although witness Arnett contends that poles are not an "essential facility" to Charter, the evidence shows that it would be prohibitively expensive and infeasible for Charter to transfer its existing aerial facilities underground.[2] The Commission has no basis in the record, therefore, to depart from the many prior decisions finding that poles are "essential" monopoly facilities to communications service providers.[3] Moreover, with respect to the argument between the parties

[1] The fact that electric cooperatives are formed, in part, to "mak[e] electric energy available to inhabitants of the State at the lowest cost consistent with sound economy and prudent management," N.C. Gen. Stat. § 117-10, has no bearing on the Commission's mandate under N.C. Gen. Stat. § 62-350 to adjudicate just and reasonable pole attachment rates. If the General Assembly intended the Commission to prioritize low electric rates in adjudicating disputes over pole attachment rates, it would have said so explicitly. The Commission assumes that any such intention would have to be accompanied by some regulatory authority by the Commission over those electric rates so that the Commission could evaluate whether a reduction in pole attachment rates could properly be off-set by reduction of expenses or a more efficient electric delivery operation.

[2] The testimony of Blue Ridge's witnesses that some ILECs have found it possible to remove some aerial facilities and place them underground does not counter the infeasibility for Charter to move all of its facilities off of Blue Ridge's poles at a cost of more than $56 million. [Mullins, Tr. Vol. 3, p. 228.] Charter's witnesses testified that it would be "prohibitively expensive." [Mullins, Tr. Vol. 3, p. 227.]

[3] *See* Otter Tail Co. v. United States, 410 U.S. 366, 378 (U.S. 1973) (finding that for practical reasons, "[i]nterconnection with other utilities is frequently the only solution."); FCC v. Florida Power Corp., 480 U.S. 245,

over whether Blue Ridge's poles are essential facilities and thus providing entitlement for communications providers to attach on that basis, the Commission concludes that the North Carolina General Assembly has effectively preempted that debate. N.C. Gen. Stat. § 62-350 requires that "a membership corporation . . . shall allow any communications service provider to utilize its poles" at rates determined by the Commission to be just and reasonable. Neither the right to attach nor the attachment rate is triggered by any finding that the poles are "essential facilities."

In addition, the Commission does not find that the non-profit nature of Blue Ridge presents any compelling argument for higher pole attachment rates. The poles owned by Blue Ridge are fundamentally the same as the IOU- and telephone company-owned poles that Charter also relies on in North Carolina and that are subject to the FCC pole attachment rate formula. In addition, IOUs and cooperatively-organized electric utilities operate the same types of facilities to provide the same services. The only meaningful difference identified by the parties is that, as witness Kravtin testified, EMC costs are lower than IOU costs, in particular because cooperatives have access to money at a lower cost. Nevertheless, witness Kravtin's use of the FCC Rate formula involves an acceptance of a default annual rate of return of 11%, which is intended to reflect a blended overall cost of both equity and debt. Even the TVA, which has adopted a rate formula intended to be very favorable to its wholesale electric customers, relies on a lower rate of return (8.5%). The Evidence and Conclusions for Finding of Fact No. 33 addresses Blue Ridge's argument that it should also be allowed to recover additional "but for" costs separately from the pole rental rate, but that analysis is no different for investor-owned or cooperatively-organized utilities. The Commission is thus confident that the FCC Rate formula fairly allocates pole costs of nonprofit cooperatives in exactly the same way it does for investor-owned utilities.

It is possible to characterize witness Arnett's focus on the benefits that Charter receives from being able to attach to Blue Ridge's poles as a value of service analysis. The Commission has, on occasion, looked to value of service as a factor to be considered in rate design for different classes of customers, traditionally as a downward constraint on rates recognizing that certain classes of consumers may have substitute service available in some situations. See, e.g., State ex. rel. Utilities Commission v. Durham, 282 N.C. 308, 314-15 (1972); *Order Granting Partial Rate Increase*, Docket No. G-5, Sub 386, 1998 WL 941806, ¶ 57 (NCUC 1998). The Commission, however, has never applied the concept to increase the rates paid by customers on the basis that the service is particularly "valuable" to the consumer. Nor has the Commission ever set a customer's rate based on the "value" to the customer of avoiding the prohibitive cost of providing the utility service to itself, as opposed to relying on the utility's provision of the service, as witness Arnett suggests. In any event, traditional value of service principles are inapplicable here, where the Commission is not asked to design rates for different classes of customers and the record evidence indicates Charter does not have viable substitutes to attaching to poles owned by Blue Ridge and in light of the prohibitive cost of relocating its existing aerial network underground.

---

247 (1987) ("[I]n most instances underground installation of necessary cables is impossible or impractical. Utility company poles provide, under such circumstances, virtually the only practical physical medium for the installation of television cables."); MCI Commc'ns Corp. v. Am. Tel. and Tel. Co., 708 F.2d 1081, 1133 (7th Cir. 1983) (facilities were essential where "[i]t would not be economically feasible . . . to duplicate . . . local distribution facilities"). The evidence in this case does not establish that Charter would have any viable and economic alternative to attaching to large numbers of Blue Ridge's poles.

As a final comment, the Commission notes that, in the hearing and its post-hearing filings, Blue Ridge implores the Commission to "disregard Charter's illusory promises that [Charter] will extend broadband if awarded a low pole attachment rate." Blue Ridge's Post Hearing Brief, p. 3. The Commission has not acceded to that request. Instead, as the text above indicates, the Commission has chosen to accord substantial weight to witness Kravtin's expert opinion that lower pole attachment rates would likely assist in the expansion of broadband service. While as a matter of economic theory, witness Kravtin's assertion in this regard is undoubtedly true, it provides no solace to Blue Ridge because it is not supported by any hard or quantifiable data from Charter or for that matter any other communications service provider that demonstrates conclusively that the lower pole attachment rates has led to the expansion of broadband it its territory. Thus, in this and other pole attachment proceedings that may come before this Commission in the future, the Commission looks forward to quantifiable data being presented to the Commission by Charter and other communications service providers which will support this opinion. For that to happen, Charter and other communications service providers would have to do more than just talk the talk when they come before the Commission seeking to use the FCC rate methodology, which was purposely designed by Congress and the FCC to produce low rates to encourage the expansion of cable/ broadband. (While the FCC was statutorily mandated to structure this low rate to encourage the expansion of cable and broadband, this Commission has no such mandate. This Commission is charged with developing just and reasonable rates and protecting the public interest.) Indeed, they will have to walk the walk. That is, Charter and every other communications service provider that advances this assertion should now commit to and follow through with the commitment to expand broadband in the areas served by customers similar to those residing in Blue Ridge's territory in return for this low rate. If they fail to do so, Blue Ridge's assessment that Charter's promise of broadband service in exchange for a lower FCC rate is illusory would prove to be correct. Without quantifiable data, this Commission is unlikely to accord any weight to such empty promises in the future.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 21-22

The evidence presented in support of these Findings of Fact has been discussed above.

Discussion and Conclusions

Based on the evidence in the record in this docket, the Commission concludes that the FCC Rate Methodology should be used to set Blue Ridge's maximum pole attachment rate. The FCC formula is longstanding, well-understood, widely applied, and judicially approved. It is employed in the vast majority of states, including for the electric IOUs and telecommunications ILECs in North Carolina. It has been found by the U.S. Supreme Court to be fully compensatory. It relies on the well-accepted economic theory that common or indirect costs are appropriately allocated on the same basis as direct costs are incurred and assigned. Applying it here to cooperative pole owners like Blue Ridge would bring uniform treatment to most poles in the state, avoiding in large part the anomaly of having widely varying rates for virtually identical poles which are placed in a pole line side by side.[1]

[1] Blue Ridge argues that the Commission cannot achieve uniform treatment through adoption of the FCC Rate Methodology because three EMCs in North Carolina purchase their electric power from the TVA and thus the

In contrast, the TVA pole attachment rate method is new and untested and, so far as presented in this case, without any basis in economic theory. Its reliance on a per-capita allocation of the cost of the unusable common space results in widely varying rates even where the underlying costs are themselves similar, and produces the highest rates in rural areas where high rates can have the most pernicious impact.

No evidence was presented to the Commission that Blue Ridge requires a continuation of pole attachment rates in the range it has been charging. The pole attachment rates that Blue Ridge has been charging Charter are substantially higher than the rates that Blue Ridge has been charging other pole attachers,[1] [Martin, Tr. Vol. 3, p. 225; see MM Exs. 9-14], and Blue Ridge's pole attachment revenues are a tiny fraction of its electric revenues.

The rate methodologies relied on by Blue Ridge in support of the TVA method are not only different from that method, they have had very limited application. Furthermore, Blue Ridge has not made a convincing case for the proposition that Charter should share equally on a per-capita basis the costs of the unusable space. Charter has only limited, conditional and potentially temporary rights to occupy Blue Ridge's poles, and it is wholly responsible for paying to create or preserve the limited amount of pole space that it uses. For this reason, it does not share the benefits of using any portion of the pole equally with Blue Ridge.

In some respects, the pole attachment service provided to Charter by Blue Ridge is like interruptible electric service, which generally is provided at rates well below standard rates.[2] *See, e.g.,* State ex. rel. Utilities Commission v. Durham, 282 N.C. 308, 308 (1972) (noting that "interruptible customers pay at a substantially lower rate than the firm customers".); Order on Petition for Limited Waiver of Rate Schedule 106 Billing Procedures, Docket No. G-9, Sub 649, (NCUC Oct. 29, 2014) (reciting evidence that Piedmont's interruptible transportation customers paid between 28.6% and 36.3% less than firm customers for the first 15,000 therms of service; concluding that "in exchange for agreeing to curtail their service Piedmont's interruptible customers pay substantially lower rates than Piedmont's firm transportation customers."); Federal Energy Regulatory Commission, Cost of Service Rates Manual 41 (1999), available at https://www.ferc.gov/industries/gas/gen-info/cost-of-service-manual.doc ("[P]aying the lowest unit rate that a firm shipper could pay for firm service, appropriately recognizes the inferior quality of interruptible service."). As with interruptible electric service, the evidence here reflects that Blue Ridge does not incur capital investment to provide Charter with pole attachment service. Instead, Charter is entitled to make pole attachments only to the extent that pole space is available and not required for Blue Ridge's own facilities. Charter's service rights are even more limited

---

TVA sets their pole attachment rates. Nevertheless, the Commission's decision to rely on the FCC Rate Methodology in the state will mean that the vast majority of poles in the state are regulated according to the same rate methodology.

[1] Blue Ridge charged Charter the highest annual pole attachment rate of any third party attacher. The annual rate that Blue Ridge has imposed on Charter is more than double the rate that Blue Ridge has imposed on Charter's direct competitor, SkyBest. [Martin, Tr. Vol. 3, p. 225.] While Blue Ridge explains the former disparity by noting that the majority of these agreements are with joint users, it has yet to provide a satisfactory explanation of this disparate treatment between Charter and SkyBest, another third party attacher and a direct competitor of Charter.

[2] In "interruptible" service, the customer is entitled to service only to the extent that it is not necessary to serve another customer. The "interruptible" service customer understands that its service may be interrupted if necessary to serve a regular customer.

than those of an interruptible service customer because Charter itself absorbs any necessary capital expenditures in connection with making space on Blue Ridge's poles, yet continues to pay for the service thereby made possible.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 23-30

The evidence supporting these Findings of Fact is found in the testimony of witnesses Arnett and Kravtin.

The FCC Rate Methodology employs rebuttable presumptions regarding the height and use of a utility's poles, which include presumptions that: (i) the average height of a distribution pole is 37.5 feet; (ii) these poles are, on average, buried six feet deep, and (iii) in order to maintain proper clearances, the lowest attachment on a pole must be at least 18 feet off the ground. In applying the FCC Rate Methodology, the FCC treats these presumptions as rebuttable by either party.[1] The TVA Rate Methodology also employs presumptions that may be rebutted.

Witness Arnett offered testimony and calculations in support of an argument that Blue Ridge should be permitted to rebut each of these factual presumptions. [Arnett, Tr. Vol. 2, pp. 60-61.] He testified that the average Blue Ridge pole is 36.83 feet, 36.85 feet and 36.87 feet for 2014, 2015 and 2016 respectively. [Arnett, Tr. Vol. 2, pp. 61-62.] In rebutting the presumption that the average pole is 37.5 feet long, he looked to the continuing property records of all of Blue Ridge's distribution poles in Account 364. [Arnett, Tr. Vol. 2, pp. 61-62, 187-88.] He determined that the average amount of unusable space on those poles is 27.3 feet, 27.28 feet and 27.26 feet for the years 2014, 2015 and 2016 respectively by estimating that the average mid-span clearance requirement for the lowest communications cable would be 15.5 feet, by calculating the average span length between poles and the expected "sag" of the lowest communications cables, and by assuming that poles are buried 6 feet in the ground. [Arnett, Tr. Vol. 2, pp. 63-65.] He then determined that an average Blue Ridge pole has 9.53 feet of usable space for 2014, 9.57 feet of usable space for 2015 and 9.61 feet of usable space for 2016 by subtracting his unusable space calculation for each year during the subject period (27.26 feet) from his average pole height (36.87 feet).

In addition to the aforementioned, he also testified about and attempted to rebut or refine the following presumptions that the FCC relied upon in developing the FCC Cable Rate Methodology. Although he accepted the FCC/TVA presumption that communications attachments occupy one foot of usable space, he determined that Charter has an average of 1.1 attachments on those Blue Ridge poles to which it is attached. [Arnett, Tr. Vol. 2, p. 63.] Based on Blue Ridge's continuing property records, he determined that the percentage of the pole investment account (Account 364) consisting of "appurtenances" is 12.59%, rather than the presumed 15%. [Arnett, Tr. Vol. 2, pp. 61-62.] And, finally, based on a survey, Blue Ridge has an average of only 2.35 entities attached to its poles. [Arnett, Tr. Vol. 2, p. 60.] By utilizing the aforementioned figures, witness Arnett calculated that the maximum pole attachment rate utilizing the modified

[1] See 47 C.F.R. § 1.1418 which provides that with respect to the FCC Cable Rate Methodology: "the space occupied by an attachment is presumed to be one (1) foot. The amount of usable space is presumed to be 13.5 feet. The amount of unusable space is presumed to be 37.5 feet. These presumptions may be rebutted by either party."

FCC Rate Methodology should be (a) $8.49 for rate years 2015, (b) $8.37 for rate year 2016, and (c) $8.31 for rate year 2017. *See* Exhibit WA-33 (providing calculations).

In her testimony, witness Kravtin stated that the Commission should set rates using the FCC Rate Methodology's "presumptions," rather than actual data regarding Blue Ridge's pole plant, because those presumptions are "generically applicable" and "streamline the formula process." *See* Kravtin Tr. Vol. 4, p. 188. Her position, however, directly contradicts her own testimony where she states:

> ***As with any presumptive value in the formula, to the extent there is actual (or statistically significant) utility or attacher specific data to support use of alternative space presumptions those can be used in lieu of the FCC's established space presumptions.*** So, for example, if actual data exists to support use of a 35-foot joint use pole with 11 feet of usable space and 24 feet of unusable space, the space allocation factor would be 1/11 or 9.09%.

Kravtin Tr. Vol. 4, pp. 187 (emphasis added).

By ignoring Blue Ridge's actual data and applying the FCC Rate Methodology's presumptions, witness Kravtin calculated the following maximum attachment rates of $5.22 for rate year 2015, $5.20 for rate year 2016 and $5.18 for rate year 2017.

Discussion and Conclusions

In its Post Hearing Brief and Proposed Order, Charter argued that the Commission should reject Blue Ridge's attempts to rebut the presumptions that the FCC (and the TVA) relied upon in the FCC/TVA formulae because: (1) witness Arnett designed his own methods for rebutting the presumptions, (2) the TVA has not offered any guidance on how presumptions employed in the pole attachment formula should be rebutted, (3) the FCC has offered guidance on how the presumptions employed in the FCC formula should be rebutted and witness Arnett has failed to comply with that guidance, and (4) Blue Ridge cherry picked and rebutted only those presumptions that benefitted Blue Ridge. While it is not entirely clear from the aforementioned, it appears that the crux of Charter's argument is that the Commission should reject witness Arnett's evidence because: (1) he designed his own methods for rebutting the FCC Rate Methodology's presumptions, and (2) witness Arnett's method did not comply with FCC decisions and guidelines. There is no merit to these arguments.

When Congress enacted Section 224 of the federal Pole Attachment Act of 1978, it specifically exempted EMCs from regulation by the FCC. Prior to 2009, EMC pole attachment rates were not subject to regulation in North Carolina. The General Assembly enacted N.C. Gen. Stat. § 62-350 in 2009. In the 2009 version of the statute, the General Assembly placed responsibility for resolving pole attachment disputes with the North Carolina Business Court. The General Assembly amended the statute in 2015 to grant this Commission exclusive jurisdiction to resolve disputes arising under the statute. When determining a pole attachment dispute filed pursuant to N.C. Gen. Stat. § 62-350, the Commission may, in its discretion "consider any evidence or rate-making methodologies offered or proposed by the parties" in making its decision regarding the just and reasonable rates by which a communications service provider shall be able to attach to an EMC's poles. N.C. Gen. Stat. § 62-350. Further, in making that determination, the Commission "shall apply the rules of evidence applicable in civil actions in the superior court [in these actions], in so far as practicable." N.C. Gen. Stat. § 62-65.

In this docket, the Commission has determined that it is proper for the pole attachment rates in this case to be determined by using the FCC Rate formula. FCC regulations specifically permit the following three presumptions employed in the FCC formula to be rebutted by either party: (1) that the space occupied by an attachment is one foot; (2) that the amount of usable space is presumed to be 13.5 feet; and (3) that the amount of unusable space is presumed to be 37.5 feet. And, North Carolina law permits any presumption employed in the formula other than a conclusive presumption to be rebutted. <u>Brandis & Broun on North Carolina Evidence</u>, Sixth Edition, Section 44, footnote 191, p. 149. None of the presumptions employed in the FCC Rate Methodology are conclusive. Thus, under North Carolina law, the presumptions used in the FCC and the TVA rate formulas may be rebutted.

Here, witness Arnett testified that Blue Ridge has actual data that should be used in lieu of the permissive presumptions employed in the FCC and the TVA formulas to calculate the maximum pole attachment rate. As previously noted, during the hearing, witness Arnett presented evidence to the Commission which he contended better reflected Blue Ridge's actual system data. The evidence was presented <u>without objection</u>. The evidence is admissible. It is relevant and, it is material. Thus, the only real issue with regard to witness Arnett's testimony is whether this evidence is sufficient to persuade the Commission that it is accurate and that it can and should be utilized in the FCC formula in lieu of the presumptions employed by the FCC to determine the maximum pole attachment rate applicable in this proceeding.

The Commission has carefully considered the evidence presented in this proceeding by witness Arnett to rebut the FCC's presumptions as well as the flaws in that evidence detailed in Charter's post hearing filings. In evaluating witness Arnett's testimony and the flaws identified by Charter, the Commission is mindful that Charter witness Kravtin stated that "[a]s with any presumptive value in the formula, to the extent there is actual (or statistically significant) utility or attacher specific data to support use of alternative space presumptions, those can be used in lieu of the FCC's established space presumptions." [Kravtin Test, Vol. 4, pp. 187.] Further, the Commission is mindful that witness Arnett has fifty plus years of experience with pole attachment issues, and that he had 17 plus years in BellSouth's engineering department performing and managing all aspects of BellSouth's <u>outside plant</u> engineering. This experience has given him particular insight which he used to develop <u>actual</u> or statistically significant utility or attacher specific data <u>in this case</u>. (The depth of witness Arnett's expertise in these matters is illustrated by the following colloquy between witness Arnett and Mr. Gillespie:

> Q. Do you know the guidance the FCC has given regarding the information that you need to rebut the presumption that there's 13.5 feet of usable space on the pole?
>
> A. No, sir, but I know how to calculate that.

> Q. My question was whether you've gotten any guidance from the FCC according to what are discussed what you need to look to, what information you need in order to rebut that presumption.
>
> A. I did those kinds of calculations whenever I was in the engineering department at Southern Bell and Bell South for their communications cables. We routinely calculated the point of attachment and those points of attachment were almost never on an electric co-op pole 18 feet.

Emphasis added. Tr. Vol. 2. pp.197-198.) The Commission finds his expertise in these matters particularly persuasive in this case.

In light of the aforementioned and after duly considering that evidence and the record proper, the Commission finds by the greater weight of the evidence in this case that witness Arnett has presented actual, credible and statistically significant specific data which should be used in lieu of the FCC's established space presumptions in calculating the maximum pole attachment rates that should apply in this case. Further, the Commission finds and concludes that such a finding is consistent with the statutory directive that the Commission consider each case filed under N.C. Gen. Stat. § 62-350 on a "case by case basis" and that the Commission "consider any evidence or rate-making methodologies offered or proposed by the parties" in making its decision. As noted above, by applying Blue Ridge's actual data in the FCC rate formula, the following rates result: (a) $8.49 for rate year 2015, (b) $8.37 for rate year 2016, and (c) $8.31 for rate year 2017.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 31-32

The evidence supporting these Findings of Fact is found in the testimony of witnesses Arnett, Kravtin and Mullins, and the Joint Stipulations, agreed to by both parties.

Witness Arnett calculated Blue Ridge's pole attachment rates for the years 2015-2017 according to the FCC Rate Methodology, based on cost data provided by Blue Ridge. He calculated Blue Ridge's annual rates as follows:

2015 - $8.49
2016 - $8.37
2017 - $8.31

The uncontradicted testimony is that Charter paid the following rates for 2015 through August 2017:

2015 – $26.64
2016 - $26.64
2017 – $26.64

[Joint Stipulations ¶¶ 8-10.][1]

[1] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

Blue Ridge commenced an effort to negotiate a new pole attachment agreement with Charter on May 22, 2014 by notifying Michael Mullins at Charter that the 2008 Agreement between the parties had expired and sending Charter a draft agreement to start negotiations. [Layton, Tr. Vol. 1, p. 36.] Charter responded with a redlined draft on May 26, 2015, and the negotiations were joined. [*See* MM Ex. 3; Mullins, Tr. Vol. 3, p. 237; Layton, Tr. Vol. 1, p. 37.] The parties were unable to reach an agreement on a new pole attachment agreement, and the 90-day negotiating period under N.C. Gen. Stat. § 62-350 was complete as of August 25, 2015. Charter has paid Blue Ridge at the $26.24 rate through August 2017. [Joint Stipulations ¶ 10.] During this period of time, the 2015-16 Inventory found that Charter had 27,674 attachments to 24,888 Blue Ridge poles. [Joint Stipulations ¶ 12.]

Discussion and Conclusions

Blue Ridge contends that Charter's counterclaim requesting that the Commission require Blue Ridge to refund the difference between the pole attachment rates that Charter paid Blue Ridge to continue attaching to Blue Ridge's poles in 2015, 2016 and 2017 and the rates that the Commission determines that Charter should have been paying during those periods should be denied because a close reading of N.C. Gen. Stat. § 62-350(c) indicates that the Commission is "not authorized to apply rates retroactively when the parties are operating under an existing agreement." Blue Ridge Proposed Order, p. 65. Blue Ridge's core argument is that the parties have an "existing agreement" and that, by statute, any new rate that the Commission determines in that circumstance should be applied "prospectively" from the date that the Commission issues an order. There is no merit to this argument.

At the outset, the Commission notes that Blue Ridge is essentially arguing that Charter waived its right to seek recovery for overpayments that it allegedly made to Blue Ridge during the periods in question by agreeing to extend the term of the 2008 Agreement [1] or that it is statutorily estopped and/or "bar[red]" [2] from pursuing this claim because of that act. Waiver, bar and estoppel are affirmative defenses which were required to be set forth in Blue Ridge's response to Charter's Counterclaim. N.C. Gen. Stat. § 1A-1, Rule 15(c). As such, these affirmative defenses must be pled with certainty and particularity and established by the greater weight of the evidence. Duke University v. Saint. Paul Mercury Insurance Company, 95 N.C. App. 663, 673, 384 S.E. 2d 36, 42 (1989).[3] "Failure to raise an affirmative defense in the pleadings generally results in a waiver thereof." Robinson v. Powell, 348 N.C. 562, 566, 500 S.E.2d 714, 717 (1998).

Blue Ridge's pre-hearing responses and pleadings did not set forth any affirmative defenses to Charter's counterclaims. Nor did Blue Ridge present any evidence during the hearing itself from which one could infer that Blue Ridge believed that it had an affirmative and/or statutory defense

[1] The 2008 Agreement terminated on September 1, 2013.

[2] "Charter's stipulation and admissions that the 2008 Agreement remains in place—bar it from seeking 'true-up' payments under G.S. 62-350." Emphasis added. Blue Ridge Post-Hearing Brief, p. 9.

[3] This specificity requirement is consistent with the pleading requirements set forth in N.C. Gen. Stat. § 62-350(c) which provides in pertinent part that: "The parties shall identify with specificity in their respective filings the issues in dispute." Emphasis added. The Commission's Order Requiring Pretrial Filing also required the parties to file: "3. A clear and concise listing and statement of each issue in dispute."

to Charter's counterclaims. Arguably, Blue Ridge has waived its right to assert these defenses by its failure to set forth these defenses with particularity and certainty prior to its post-hearing filings. Assuming arguendo, however, that Blue Ridge did not waive these defenses by failing to plead them prior to its post-hearing pleadings, its argument that Charter is barred from recovering these alleged overpayments by a close reading of N.C. Gen. Stat. § 62-350(c) lacks merit.

In pertinent part, N.C. Gen. Stat. § 62-350(c) states:

> The Commission shall apply any new rate adopted as a result of the action retroactively to the date immediately following the expiration of the 90-day negotiating period or initiation of the proceeding, whichever is earlier. If the new rate is for the continuation of an existing agreement, the new rate shall apply retroactively to the date immediately following the end of the existing agreement. Emphasis added.

As previously noted, the core of Blue Ridge's argument is that the Commission is "not authorized to apply rates retroactively when the parties are operating under an existing agreement and that, by statute, any new rate that the Commission determines in that circumstance should be applied "prospectively" from the date that the Commission issues an order. Blue Ridge Proposed Order, p. 65. Blue Ridge's argument is, on its face, inconsistent with the statute. That is, the text of the statute does not contain any reference to a prospective application. Nor does the text of the statute indicate that, under the circumstances described therein, the new rate shall apply "prospectively from the date of the order." Blue Ridge Proposed Order, p. 67. Instead, by its clear terms, the pertinent text of N.C. Gen. Stat. § 62-350(c) states that "[i]f the new rate is for the continuation of an existing agreement, the new rate shall apply retroactively to the date immediately following the end of the existing agreement." Emphasis added.

Under the terms of the 2008 Agreement, that agreement ended on September 1, 2013. See footnote 58, Charter Proposed Order, Public Version, p. 43. Thus, the 2008 Agreement ceased to exist on that date. Blue Ridge acknowledged this fact on numerous occasions. See Testimony, Lee Layton, Tr. Vol. 1, p. 36, footnote 2, Blue Ridge Brief, pp. 4-5. *****BEGIN CONFIDENTIAL***** *****END CONFIDENTIAL***** Because the 2008 Agreement ceased to exist on September 1, 2013, N.C. Gen. Stat. § 62-350 would not apply and could not be interposed to bar Charter from collecting for any alleged overpayments that it made after the expiration date of the agreement.

Moreover, if the 2008 Agreement did in fact continue in existence as Blue Ridge contends, under the plain text of the statute, any new rate determined by this Commission in this docket would apply retroactively to September 1, 2013, the only end date specified in the 2008 Agreement. Applying the statute in accordance with this literal interpretation [1] is problematic

[1] The pertinent provision in N.C. Gen. Stat. § 62-350(c) provides that "if the new rate is for the continuation of an existing agreement, the new rate shall apply retroactively to the date immediately following the end of the existing agreement." By its clear terms, this provision is intended to facilitate "the continuation of an existing agreement" by resolving a rate dispute. Thus, this provision only applies when there is unanimity between the parties that the current terms and conditions in an existing agreement should continue to apply and will continue to apply once the Commission resolves the rate issue. In that situation, the only dispute between the parties that the Commission should be requested to resolve is the rate dispute. That is not the case here because Blue Ridge and Charter seek Commission approval to change the terms and conditions that have previously governed the parties' operations. Therefore, N.C. Gen. Stat. § 62-350(c) does not apply in this circumstance.

for Blue Ridge because it would increase rather than decrease Blue Ridge's potential liability because Charter would be able to seek recovery for payments made since that September 1, 2013 expiration date instead of August 25, 2015, i.e., the date that Charter alleges that the 90-day negotiation period expired and that its recovery right began.

To avoid this literal application of the statute, Blue Ridge here contends that not only did the parties (implicitly) agree (in 2015) to continue operating under the terminated 2008 Agreement, but that they also agreed that the 2008 Agreement would not end until this Commission issues an order in this docket.[1] While there is abundant evidence in the record that Charter agreed to operate pursuant to the "expired" 2008 Agreement,[2] Blue Ridge has not cited to any document or discussion in the record proper where Charter specifically agrees that the term of the "expired" 2008 Agreement would be extended until the date that the Commission issues an order in this dispute.[3] In fact, the documentary evidence in this proceeding indicates only that the parties agreed to continue operating under the terms of the "expired" 2008 Agreement for a limited term which was and is well short of the date of this order.[4] Operating "under" or "pursuant to" the terms of an expired agreement is not the same as and does not mandate an interpretation or finding that the term, i.e., length of the agreement, was extended.

Moreover, even if one assumes arguendo that the parties agreed that the term of the agreement would be extended until the date that the Commission issues an order in this docket, N.C. Gen. Stat. § 62-350(c) would not bar Charter's overpayment recovery because the revival of the expired 2008 Agreement and the extension of its term do not result in the "continuation of the existing agreement." Instead, it results in the formation of a "new" agreement with different terms and conditions including a new expiration date. See, Lewis v. Edwards, 147 N.C. App. 39, 554 S.E.2d 17(2001). The cited sentence in N.C. Gen. Stat. § 62-350(c) does not apply to this newly formed agreement.

---

[1] See Paragraph 72, Blue Ridge Proposed Order, p. 67, where Blue Ridge states: "Because Charter is operating under an existing pole attachment agreement with Blue Ridge, it is not entitled to recover retroactive "true up" payments based on the rate the Commission ultimately adopts. Instead, pursuant to Section 62-350, the rate the Commission adopts will only apply prospectively from the date of this order. Charter's counterclaim for "true up" payments retroactively applying the rate the Commission adopts back to 2015 therefore should be denied." The crux of this argument is that the parties must have agreed and/or understood that N.C. Gen. Stat. § 62-350 would provide for an expiration date different from the date set forth in the 2008 Agreement when they agreed to continue operating pursuant to the terms of that agreement and that the expiration date would be the date that the Commission issues an order in this docket.

[2] For instance, Blue Ridge made the following statements as support for its position: "it is undisputed that Charter has continued to attach to Blue Ridge's poles pursuant to the 2008 Agreement and thus agreed to *continue its term* through continued performance." Blue Ridge's Post Hearing Brief, p. 8. Further, Blue Ridge stated: In addition to stipulating that it continues to attach to Blue Ridge's poles "pursuant to" the 2008 Agreement, see Joint Stipulations, [] the evidence makes clear that Charter has agreed through its conduct to continue operating under the 2008 Agreement, even after the expiration of the original term." Blue Ridge's Proposed Order, p. 66.These are Blue Ridge's words and not Charter's.

[3] In Paragraph 6 of the Joint Stipulations, the parties stipulated that: "Charter attaches and has facilities attached to Blue Ridge's utility poles pursuant to a Pole Attachment Agreement dated September 1, 2008."

[4] ***** BEGIN CONFIDENTIAL*** *** END CONFIDENTIAL*****

When the parties continue to operate based upon this newly formed agreement and initiate and/or follow through on previously begun negotiations as a result thereof, the first sentence in N.C. Gen. Stat. § 62-350(c) applies. It provides that "[t]he Commission shall apply any new rate adopted as a result of the action retroactively to the date immediately following the expiration of the 90-day negotiating period or initiation of the proceeding, whichever is earlier." See the first sentence in N.C. Gen. Stat. § 62-350(c). Here, the 90-day negotiating period expired on August 25, 2015 and Blue Ridge filed the complaint initiating this action on November 30, 2016. Thus, pursuant to this language, Charter is entitled to seek reimbursement for alleged overpayments since August of 2015.

In addition to the aforementioned, Blue Ridge also argues that Charter is statutorily "barred" [1] from recovering any "overpayments" that it made to Blue Ridge while the parties continued to operate under the 2008 Agreement. Blue Ridge's argument in this regard is dependent upon the language in N.C. Gen. Stat. § 62-350, Charter's subsequent conduct after the 2008 Agreement expired and the parties' stipulation.

With regard to the former, N.C. Gen. Stat. § 62-350 did not exist in 2008. It was enacted by the General Assembly in 2009, long after the parties had reached the 2008 Agreement. For this reason, the 2008 Agreement did not include and could not have included a specific reference to the yet to be enacted provisions in N.C. Gen. Stat. § 62-350. Perhaps an agreed upon change of law provision may have incorporated subsequent changes in relevant law such as the enactment of N.C. Gen. Stat. § 62-350 into the 2008 Agreement, but no such provision was included in the 2008 Agreement. Thus, the terms of N.C. Gen. Stat. § 62-350 could not have been included in the Agreement unless the Agreement itself was specifically modified by the parties at some date subsequent to the effective date of the Agreement.[2]

The later inclusion of such a provision in the parties' agreement would have necessitated the agreement of both parties as well as additional consideration. Neither party produced a written and/or signed document where the parties agreed to this specific term. Neither party produced any direct evidence or testimony where the parties explicitly discussed and agreed to that specific term. And, neither party produced any evidence that any additional consideration was provided in support of this modification. Instead, Blue Ridge cites to the parties' stipulation (and conduct) and asks this Commission to infer that Charter has agreed (or should be deemed to have agreed) to be bound by this "new" term in the 2008 Agreement.

[1] See Blue Ridge's Post-Hearing Brief, p. 9. "Charter's stipulation and admissions that the 2008 Agreement remains in place—and that it is subject to an existing pole attachment agreement—bar it from seeking 'true-up' payments under G.S. 62-350."

[2] It is noteworthy that, at the time when the parties agreed to continue operating under the terms of the terminated 2008 Agreement, i.e., in 2015, the status of N.C. Gen. Stat. § 62-350 itself was uncertain. Blue Ridge acknowledged this uncertainty when it proposed that the parties continue to operate under the expired 2008 Agreement. See MM Ex 4 and LL-5 where Blue Ridge acknowledged that "the [General Assembly might] add other provisions to guide [the parties'] negotiations." MM Ex 4 and LL-5. Thus, because of this uncertainty, even if the Commission could find that the parties are operating under an "existing" agreement, the Commission could not and cannot conclude that Charter was bound by the statutory provision cited by Blue Ridge without compelling evidence that Blue Ridge specifically agreed that this provision would apply. No such evidence has been presented.

While N.C. Gen. Stat. § 62-69 allows the Commission to resolve any proceeding by stipulation, the Commission may not extend the agreed upon stipulation beyond the limits set by the parties. Utilities Commission v. CUCA, Inc., 348 N.C. 452, 500 S.E.2d 693 (1998). The Parties' joint stipulation states: "Charter attaches and has attached to Blue Ridge's utility poles pursuant to a Pole Attachment Agreement dated September 1, 2008." The text of the stipulation clearly indicates that the parties agreed to continue operating under the 2008 Agreement. It does not, however, indicate that the parties agreed to or stipulated that the alleged overpayments made pursuant to the agreement could not be recovered by Charter because of N.C. Gen. Stat. § 62-350.

The same is true of Charter's conduct. While Charter's conduct indicates that it agreed to continue operating under the terms and conditions of the 2008 Agreement, one could not fairly conclude from that conduct that by continuing to operate under the terms of the 2008 Agreement, Charter understood and agreed that it was forgoing its rights to recovery of any alleged overpayments. In fact, Charter's pursuit of this claim in this proceeding is a rather strong indication that it did not and does not believe that it agreed to be statutorily barred from recovering any alleged overpayments either by agreeing to operate under the 2008 Agreement or by agreeing to the stipulation. Therefore, without more, the Commission cannot reasonably conclude from Charter's conduct and stipulation that Charter agreed to and/or understood that it would be statutorily precluded from seeking repayment for any alleged overpayments. Were the Commission to do so, the Commission would extend the agreed upon stipulation beyond the limits set by Charter and Blue Ridge and/or draw an unreasonable inference from Charter's conduct. Thus, for this reason and the reasons previously articulated, the Commission concludes that N.C. Gen. Stat. § 62-350(c) does not prevent Charter from pursuing recovery for overpayments that it can prove that it has made in this proceeding simply because it agreed to continue operating under the terms of the 2008 Agreement. Charter is therefore entitled to pursue recovery for any overpayments that it is alleged to have made.

The only remaining issue in this regard is the starting date that Charter should be allowed to begin recovering for any alleged overpayments that it made to Blue Ridge. N.C. Gen. Stat. § 62-350 requires that communications attachers and cooperatives must either negotiate for a period of 90 days or reach an impasse before submitting a pole attachment dispute to the Commission. *See* N.C. Gen. Stat. § 62-350(c). There are two ways to trigger this 90-day negotiation period under the statute: (1) "[f]ollowing receipt of a request from a communications service provider" or (2) "[f]ollowing a request from a party to an existing agreement," (that is, a request from either party), provided the request is "made pursuant to the terms of the agreement or made within 120 days prior to or following the end of the term of the agreement." *See* N.C. Gen. Stat. § 62-350(b).

Blue Ridge contends that the parties' negotiations in this case do not meet either of these triggers and that, as a result, the 90-day negotiating period never did commence. In support of this contention Blue Ridge observes that it sent a request to negotiate a renewed pole attachment agreement to Charter on May 22, 2014, which is more than 120 days from September 1, 2013—the date the 2008 Agreement was set to otherwise expire (*See* Layton Tr. Vol. 1, p. 36; see also Exhibit LL-3, p. 2) and that Blue Ridge is not a communications attacher. Thus, the negotiations were not initiated "following a request from a communications attacher," and the negotiations were not initiated "following a request …made [by either party] pursuant to the terms of the agreement or made within 120 days prior to or following the end of the term of the agreement." *See* N.C. Gen. Stat. § 62-350(b). Emphasis added. As a result, according to Blue Ridge, even if any new rate were to be applied retroactively, because the 90-day negotiating period never did commence, the new rate would apply only back to the commencement of this action, not the parties' negotiations.[1] The Commission does not agree.

N.C. Gen. Stat. § 62-350(c) expressly requires the Commission to award reimbursement of overpayments. The statute provides that any new rates set by the Commission "shall apply . . . retroactively to the date immediately following the expiration of the 90-day-negotiating period or initiation of the proceeding, whichever is earlier." N.C. Gen. Stat. § 62-350(c). Here, the 90-day negotiating period expired on August 25, 2015.[2] That date is well before the initiation date of this proceeding. Blue Ridge sent a proposed new agreement to Charter in May 2014. Charter responded to Blue Ridge's proposal on May 26, 2015, declaring at that time its intent to negotiate the agreement – including the rate – by submitting a redline of it.[3] Contrary to Blue Ridge's contention that Charter did not dispute the rate, Charter's redline flags Blue Ridge's rate and notes: "To be determined. These rates are to be calculated in accordance with the FCC cable formula."[4] Accordingly, Charter requested to negotiate the rate at that time – consistent with the requirements of N.C. Gen. Stat. § 62-350(b) – and the negotiating period expired 90 days later.

The Commission finds and concludes that the negotiating period commenced on May 26, 2015 and that the new rates determined in this case, therefore, will be effective as of August 25, 2015 (90 days after the start of the negotiating period). Based on the Commission's conclusion that Blue Ridge's maximum just and reasonable rates for the years 2015-2017 are properly calculated according to the FCC Rate Methodology, as modified to reflect the actual data supplied by witness Arnett, the Commission determines that, according to the evidence of record, Blue Ridge owes a refund to Charter for the period from August 25, 2015, through August 31, 2017[5] and that Charter shall calculate such refund and provide it to Blue Ridge for verification. Blue Ridge also owes a refund to Charter for any additional overpayments made to it based on Blue Ridge's excessive rate. The refunds shall be calculated based on the following guidelines.

In the past, Charter invoiced Blue Ridge on per attachment rather than a per pole basis. The 2015-2016 Inventory revealed that Charter had more attachments than there would have been if

---

[1] According to Blue Ridge the pertinent provision of N.C. Gen. Stat. § 62-350(c) states: "The Commission shall apply any new rate adopted as a result of the action retroactively to the date immediately following the expiration of the 90-day negotiation period or the initiation of the proceeding, whichever is earlier."

[2] Although the parties' 2008 Agreement expired on September 1, 2013, and it is arguable that the negotiations under N.C. Gen. Stat. § 62-350 started on May 22, 2014, Charter seeks refunds of overpayments only from August 26, 2015, 90 days following its return of a redlined draft agreement to Blue Ridge.

[3] Mullins, Tr. Vol. 3, p. 236-37; *see also* Layton Ex. 7.

[4] *See* Layton Ex. 7, Draft Redline Agreement, Ex. C.

[5] The Commission notes that Blue Ridge's annual RUS filing shows accumulated Patronage Capital *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***** The record does not reflect whether some of the *****BEGIN CONFIDENTIAL*** **END CONFIDENTIAL***** Patronage Capital is the result of Blue Ridge accruing for this payment, but there is no testimony that payment by Blue Ridge of the refund will have any significant adverse effect on Blue Ridge or its members. [*See* Kravtin, Confidential Tr. Vol. 4, pp. 181-82 n.22.]

there was only one attachment per pole. Because of this mismatch between the number of poles and the number of attachments, witness Arnett determined that Charter occupied 1.11 feet of space per attachment rather than the one foot per attachment that the FCC and the TVA rate formulas presumed. Witness Arnett used this hybrid space allocation factor to calculate the maximum rate that Charter should have been paying under the TVA and the FCC rate methodologies. This hybrid rate thus accounts for the fact that Charter has more than one attachment on some poles.[1]

Charter does not object if Blue Ridge is permitted to charge Charter the FCC rate for any attachment that is not within one foot of another attachment. Charter contends, however, that it would be inappropriate for the Commission to allow Blue Ridge to charge per attachment and to also use an average occupancy of more than one foot because that would amount to double billing. The Commission agrees.

Thus, to be fair to Charter, any refund due Charter shall be determined by multiplying the rates calculated by witness Arnett times the number of poles in Blue Ridge's inventory for each year in question and subtracting that amount from the total amount of attachment fees that Charter paid for that year(s). The parties shall work collaboratively to calculate the refund due recognizing that, in the past, Charter has been billed on a per attachment basis and that the Commission is requiring the pole attachment rates determined in this proceeding to be hereinafter applied on a per pole basis.[2] If Blue Ridge desires, and Charter is agreeable, the Commission will allow the parties to use this refund amount as a credit against future pole attachment bills until the amount of the credit is fully exhausted.[3]

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 33

The evidence supporting this Finding of Fact is found in the testimony of witnesses Kravtin, Martin, Layton, Arnett and Booth.

Charter's witnesses agreed that under appropriate terms and conditions of attachment, and in addition to an annual pole attachment rental rate, Charter is responsible for paying any out-of-pocket expenses incurred by Blue Ridge directly attributable to Charter's attachments. Those expenses include the costs of making poles ready for Charter's attachments (including all costs associated with installing a new pole and removing the old pole, if necessary, to accommodate Charter's attachment); the costs incurred by Blue Ridge in conducting pre-construction inspections and engineering; the costs incurred in any post-construction inspection; measurable and direct

[1] Witness Arnett accepted the presumption that Charter's attachments use one foot of usable space. He nevertheless calculated that Charter should be treated as occupying 1.11 feet on average based on the audit results showing that Charter made 27,674 attachments on 24,888 poles.

[2] While the Commission has established that bills will be issued on this basis in the future, nothing precludes the parties from agreeing to a different arrangement.

[3] Blue Ridge witness Arnett testified that Charter is attached to 442 poles that are used for transmission (as opposed to distribution) of electricity. He testified that these poles are typically larger and more expensive than distribution poles and that it would be appropriate for Blue Ridge to charge a different rate for attachment to these poles than Blue Ridge charges for distribution poles. [Arnett, Tr. Vol. 2, p. 67.] Blue Ridge did not propose any rate for transmission poles in this proceeding, however, and under N.C. Gen. Stat. § 62-350, no such issue is before the Commission for resolution.

costs incurred by Blue Ridge in processing Charter's pole attachment applications; and the costs incurred by Blue Ridge in auditing those poles to which Charter is attached. [Kravtin, Tr. Vol. 4, pp. 184-85; Martin, Tr. Vol. 4, pp. 86-87.] Witness Kravtin termed these costs "but for" costs, and she testified that because Charter pays those costs, Blue Ridge's remaining marginal costs of attachment are very small, certainly well under the FCC fully allocated rate she advocates. [Kravtin, Tr. Vol. 4, pp. 176-77.]

Witnesses Arnett, Booth and Layton testified that Blue Ridge incurs additional costs related to providing pole attachments that should be recovered. [Arnett, Tr. Vol. 2, pp. 88-89; Booth, Tr. Vol. 3, pp. 58-59, 72;. Layton, Tr. Vol. 1, pp. 55-57.] These witnesses testified that Charter's presence on Blue Ridge's poles creates numerous costs and burdens on the EMC that would not be present "but for" Charter's attachments. [Booth, Tr. Vol. 3, pp. 58-59, 72; Arnett, Tr. Vol. 2, pp. 88-89.] According to this testimony, these costs and burdens include pole damage, pole climbing impediments, impediments to vegetation management, clearance violations, public safety violations, failure to allow for expansion by Blue Ridge, failure to bond equipment to pole ground, downed Charter cables, and various administrative costs. [Booth, Tr. Vol. 3, pp. 78-81, 85-93.] Witness Arnett testified that the annual rental rate does not cover all "but for" costs and argued that Blue Ridge should be allowed to charge Charter separately for the hiring of administrative personnel to oversee Charter's attachments. [Arnett, Tr. Vol. 2, pp. 88-89.] No witness on behalf of Blue Ridge presented evidence of any specific amounts that it contended Charter should be charged for additional "but for" costs.

Witness Kravtin, in response to the testimony of witnesses Booth and Arnett, said that undocumented "but for" costs could not properly be added to the fully allocated costs allowed under the FCC Rate Methodology. [Kravtin, Tr. Vol. 4, p. 201.] She noted that not only does the fully allocated FCC Rate provide additional contribution to the pole owner beyond "but for" costs, [Kravtin, Tr. Vol. 4, p. 170], but also that similarly undocumented claims of "but for" costs of pole owners have been rejected by the FCC.[1]

Discussion and Conclusions

The Commission concludes that, in addition to an annual pole attachment rate, it is appropriate for Charter to pay the direct and measurable out-of-pocket "but for" costs for certain expenses incurred by Blue Ridge associated with Charter's attachments, including make-ready construction and engineering costs and the costs to Blue Ridge of post-construction inspections and audits of poles to which Charter is attached.

Blue Ridge argues that Charter is responsible for other "but for" costs that should be the direct responsibility of Charter. The testimony is unclear, however, as to what conditions Blue Ridge has identified regarding Charter's facilities have been caused by Charter, as opposed to other parties. Equally importantly, Blue Ridge has not introduced any evidence of the amount of any of the "but for" costs Blue Ridge claims. Without any evidence of the amount of additional costs it

[1] The FCC rejected similar claims by electric utilities that were submitted without any cost study. *See* Implementation of Section 224 of the Act, Report & Order on Reconsideration, 26 FCC Rcd 5240 ¶¶ 189-190 (2011), aff'd sub nom. Am. Elec. Power Serv. Corp. v. FCC, 708 F.3d 183 (D.C. Cir. 2013) (rejecting pole-owner claims that they incur significant unrecovered costs outside of the make-ready process because they "did not provide any cost study" demonstrating additional costs incurred "solely to accommodate third party attachers").

claims, or even how to calculate them, the Commission has no basis in the record heretofore developed to award them, even were it otherwise inclined to do so. Nor is the Commission willing to simply allow Blue Ridge to impose on Charter generalized, non-specific and non-verifiable costs, in addition to verifiable out-of-pocket costs that Charter has testified are appropriate and the fully allocated costs recovered in the annual FCC Rate. Not only would such a practice undoubtedly cause additional conflict and the potential for additional and unnecessary proceedings before the Commission, but this Commission has previously, and correctly, rejected efforts to set rates by reference to undocumented costs. *See, e.g.*, Order Establishing Standard Rates and Contract Terms for Qualifying Facilities, Docket No. E-100, Sub 106, at 23-24 (Dec. 19, 2007) ("uncertain and unquantifiable costs . . . should not be taken into account in calculating avoided cost rates").

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 34

The evidence supporting this Finding of Fact is found in the testimony of witnesses Martin, Mullins, Kravtin, Layton, Arnett and Booth.

Blue Ridge has raised a number of issues related to the terms and conditions of attachment to be contained in a new pole attachment agreement between the parties.

Through witness Kravtin, Charter presented testimony that Blue Ridge has been able to exercise leverage over Charter because it has "monopoly ownership and control over the existing distribution network of poles." [Kravtin, Tr. Vol. 4, p. 168.] According to witnesses Kravtin, Mullins and Martin, Charter has no practical alternative to attaching to Blue Ridge's poles in its service territory. [Kravtin, Tr. Vol. 4, pp. 174-75; Martin, Tr. Vol. 4, p. 79; Mullins, Tr. Vol. 3, p. 227.] Regardless of the size of the entities, witness Martin testified, the pole owner has a monopoly on critical infrastructure and has the "ability to dictate the terms of attachment." [Martin, Tr. Vol. 4, p. 79.] Witness Arnett testified that there are some places where other pole owners have poles that would serve as an alternative for Charter. [Arnett, Tr. Vol. 2, p. 87.] But witness Arnett was not able to estimate how prevalent such situations are in the field. [Arnett, Tr. Vol. 3, pp. 16-17.]

Witness Martin introduced evidence of industry standard terms of attachment that are present in most pole attachment agreements, even in the absence of any regulatory oversight. Witness Martin testified that Charter's attachments are generally the same regardless of the pole owner and that most pole agreements are similar. [Martin, Tr. Vol. 4, p. 77.] Because most agreements are similar, witness Martin testified, "they can serve as a barometer of what terms and conditions are just and reasonable." [Martin Tr. Vol. 4, p. 78.]

Witness Martin also testified that there are standard terms and conditions that other pole owners, including cooperatives in North Carolina, accepted both before and after the advent of regulatory oversight, and that these terms continue in effect. [Martin, Tr. Vol. 4, p. 78, and NM Ex. 3.] According to witness Martin, these agreements help to establish the industry standard terms on which Charter relies. [Martin, Tr. Vol. 4, pp. 78, 83-84, and NM Ex. 3.]

Witness Booth testified as an engineering expert for Blue Ridge in this proceeding. He is a professional engineer who has an extensive history of assisting cooperative utilities, including

Blue Ridge, for more than 50 years in engineering matters. [Booth, Tr. Vol. 3, pp. 54-57.] He has served as an expert witness for cooperatives in litigation matters in a large number of cases, and he assisted Jones-Onslow Electric Membership Corp., in developing its agreement with Time Warner Cable Southeast LLC, as reflected in the January 2018 Pole Attachment Orders. *See* GLB Ex. 1; see also Order Resolving Pole Attachment Complaint Pursuant to G.S. 62-350, Docket No. EC-43, Sub 88 (JOEMC), at *51 (NCUC Jan. 9, 2018). He also served as a rate expert for Rutherford EMC in the Rutherford case before the Business Court.

In this proceeding, witness Booth urged the Commission to adopt language for Blue Ridge's pole attachment agreement different from and far more restrictive than the language in the 2007 JOEMC agreement on which witness Booth had advised the EMC. *See* Order Resolving Pole Attachment Complaint Pursuant to G.S. 62-350, Docket No. EC-43, Sub 88 (JOEMC), at *51 (NCUC Jan. 9, 2018). In his testimony in the instant matter, witness Booth relied on the many photographs of Charter's facilities that were contained in his exhibits. [Booth Tr. Vol. 3, pp. 75 and Ex. GLB 3.] He testified that the photographs show safety hazards, pole damage and other problems caused by Charter. [Booth, Tr. Vol. 3, pp. 78-81.] In light of what witness Booth contended are unsafe and unsound practices on the part of Charter, he asserted that Blue Ridge requires language in the agreement that better protects it. [Booth, Tr. Vol. 3, pp. 60-65.] Neither witness Booth nor any other witness for Blue Ridge addressed Charter's extensive testimony about the industry standard terms that are found across pole attachment agreements in North Carolina.

Discussion and Conclusions

The Commission is mindful that many of the issues related to the contractual terms and conditions raised in this case have been addressed by the FCC and other regulatory authorities. In addition, extensive evidence has been presented of certain "industry standard" terms and conditions that have been accepted by North Carolina cooperatives prior to this Commission being afforded jurisdiction over these matters. Where there are templates for resolution of similar concerns that have been accepted by a regulatory authority that has dealt with pole attachments for decades, and where large numbers of electric cooperatives have accepted terms and conditions as safe and protective of the reliability of their networks when there was no regulatory oversight, the Commission will look closely to those sources as potentially reflecting an unbiased resolution of the issues presented by the parties in this case.

The evidence reflects that the terms and conditions of attachment to EMC poles were largely within the control of the EMCs prior to regulation under N.C. Gen. Stat. § 62-350. No tribunal had jurisdiction over EMCs' pole attachment service until 2009. Yet Charter had a need to attach, and especially to retain its existing attachments, to Blue Ridge's poles.

In this Order, the Commission will address individually each of the issues related to terms and conditions of agreement that are listed in the parties' November 2, 2017 Joint Statement of Issues. In this case, Blue Ridge argues that a number of the terms and conditions specified in its 2008 pole attachment agreement with Charter are just and reasonable, while Charter argues that they are burdensome, unreasonable and contrary to industry standard. The Commission notes that whereas voluntary agreement by Blue Ridge and Charter to terms and conditions that Charter also found acceptable in the past was evidence of the reasonableness of those terms and conditions, the fact that Charter and Blue Ridge agreed to certain provisions that Charter now contests is less persuasive evidence of reasonableness because at the time the 2008 Agreement was executed, Charter had limited leverage and there was no tribunal with authority to protect Charter's rights to reasonable terms. [Kravtin, Tr. Vol. 4, pp. 180-81; Martin, Tr. Vol. 4, pp. 78-80; Mullins, Tr. Vol. 3, p. 223.]

The Commission will now address and provide a decision individually on each of the contested terms and conditions (Issues (a) through (l) – or referred to as Issue Nos. 3(a) through 3(l) per the November 2, 2017 Joint Statement of Issues).

Issue (a): Disputed Invoices[1]

Witnesses Layton and Booth, on behalf of Blue Ridge, argued that Charter should be required to pay any disputed invoices, and that allowing Charter to withhold payment on disputed invoices until the dispute is resolved creates an incentive for Charter to unreasonably dispute payment obligations. [Layton, Tr. Vol. 1, pp. 60-61; Booth, Tr. Vol. 3, p. 63.] Witness Layton also testified that Charter had recently refused to pay for two make-ready projects, despite the fact that the parties do not dispute the amount owed. [Layton, Tr. Vol. 1, pp. 60-61.]

On behalf of Charter, witness Martin testified that if Charter were required to pay where there is a good faith dispute, Blue Ridge would have an incentive to work less efficiently to resolve the dispute. Witness Martin also noted that N.C. Gen. Stat. § 62-350(c) addresses the issue, requiring that a party pay undisputed amounts prior to bringing an issue to the Commission. [Martin, Tr. Vol. 4, p. 108.]

Discussion and Conclusions for Issue (a)
Disputed Invoices

Sections 4.2 of the parties' 2003 and 2008 Agreements respectively require Charter to pay Blue Ridge's monthly invoices for attachment fees within 30 days. Those same provisions, however, recognize that Charter may not pay invoices within the 30 day period and provide that, when that occurs, interest shall accrue on the unpaid attachment fees and charges at twelve percent (12%) per annum.[2] In negotiating a new Agreement, Charter has insisted on including provisions in any new agreement that would allow it to withhold payment on any disputed invoices until the dispute is resolved. While Blue Ridge agrees that it is appropriate for Charter to have a mechanism to dispute invoices, Blue Ridge argues that Charter should be required to pay outstanding invoices in full pending resolution of the dispute. See Blue Ridge Proposed Order, p. 50. Charter objects to this proposal.

In 2009, the General Assembly enacted N.C. Gen. Stat. § 62-350. In pertinent part, N.C. Gen. Stat. § 62-350(c) provides that "[p]rior to initiating any proceeding under this subsection, a party must pay any undisputed fees related to the use of poles, ducts, conduits which are due and owing under a preexisting agreement with the [] membership corporation. In any proceeding brought under this subsection, the Commission may resolve any dispute regarding fees alleged to

[1] Issue No. 3(a) per the November 2, 2017 Joint Statement of Issues.

[2] The 2003 Agreement and the 2008 Agreement are essentially identical. See Blue Ridge Answer to Counterclaim.

be owing under a preexisting agreement or regarding safety compliance arising under subsection (d) of this section." This provision clearly contemplates that: (1) there will be fee disputes between attachers and pole owners; (2) the Commission will be asked to resolve these disputes; and (3) prior to bringing any of these disputes to the Commission for resolution, a party must pay all undisputed amounts to the opposing party. This provision clearly does not contemplate that a party must pay all disputed invoices to the opposing party prior to bringing a dispute to the Commission for resolution.

Blue Ridge's argument that Charter should be required to pay any disputed invoices in full pending resolution of the parties' disagreement by this Commission is inconsistent with the tone, tenor and text of N.C. Gen. Stat. § 62-350. It is also inconsistent with the tone, tenor and text of the 2003 and 2008 Agreements, which Charter had little choice but to accept if it wished to provide service in the areas served by Blue Ridge. Therefore, the Commission denies Blue Ridge's request that Charter be required to pay in full any invoices which it disputes in good faith prior to filing a fee dispute resolution proceeding with this Commission and affirms that, under N.C. Gen. Stat. § 62-350, Charter is only obligated pay any undisputed invoices to Blue Ridge prior to filing a dispute resolution proceeding with the Commission. The Commission will, however, expect the parties to behave in good faith toward each other in regards to paying and/or disputing invoices.

Issue (b): Requirements regarding new attachments, overlashing and drop poles (a/k/a secondary poles)[1]

Witness Layton, on behalf of Blue Ridge, testified that, in its negotiations, Charter took the position that it should be required to seek a permit only for projects involving ten or more attachments. Instead, witness Layton requests the Commission to require that Charter apply for a permit for each attachment and pay an associated application fee. [Layton, Tr. Vol. 1, p. 60.]

Witness Booth testified on behalf of Blue Ridge that various safety violations by Charter caused damage to Blue Ridge. Witness Booth maintained that Charter should not be allowed to overlash its facilities without completing a full application process to ensure that Blue Ridge has notice and an opportunity to review and approve the design and construction. [Booth, Tr. Vol. 3, p. 61.] He testified that overlashing can affect the windloading on a pole and that this should be "policed through the permitting process."[2] [Booth, Tr. Vol. 3, pp. 61, 97.] No witness for Blue Ridge presented any testimony on why aerial drops not physically attached to the pole should be considered an attachment.

Charter witness Martin proposed the following language for Blue Ridge's and Charter's pole attachment agreement related to the permitting process:

> ***Permit and Approval Process:*** *Charter shall comply with the Cooperative's generally applicable, non-discriminatory Attachment approval application procedures for all new Attachments to the Cooperative's poles, except for secondary poles (a/k/a lift poles or drop poles). Charter shall notify Cooperative of all new secondary pole Attachments on a quarterly basis, and such Attachments*

[1] Issue No. 3(b) per the November 2, 2017 Joint Statement of Issues.

[2] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

shall be subject to the Annual Attachment Fee. Charter may overlash its existing Attachments where such activity will not cause the Attachment to become noncompliant with the safety standards described above. Charter shall provide prior notice to Cooperative of all new overlashings at least 15 days in advance, except for projects involving the overlashings of 5 or fewer poles, when Charter shall provide at least forty-eight (48) hours prior notice to Cooperative. Licensor may perform a post-overlash inspection of Licensee's overlashing on poles as Licensor deems critical in its reasonable discretion, including reliance on Licensor's professional engineers as Licensor deems necessary, and Licensee shall pay for the actual cost. Licensee shall provide sufficient information regarding its overlash to allow Licensor to determine the impact of Charter's overlash on the pole loading. There shall be no additional annual Attachment Fee for overlashings of Licensee's existing facilities. [Martin, Tr. Vol. 4, pp. 94-95.]

The testimony of the parties was consistent that Charter should be required to file an application and obtain a permit before attaching to a mainline distribution pole. [*See, e.g.*, Martin, Tr. Vol. 4, pp. 94-95; Layton, Tr. Vol. 1, p. 60.]

Witnesses Martin and Mullins testified that it is impractical to both provide timely service and treat drop poles as attachments subject to the same notice or permitting to which mainline poles are subject.[1] [Martin, Tr. Vol. 4, pp. 118-19; Mullins, Tr. Vol. 3, pp. 233-34.] Witness Martin agreed that after-the-fact notice of drop attachments is, however, appropriate, and his exhibit showed that it is industry-standard. [Martin, Tr. Vol. 4, p. 94-95; NM Ex. 3.]

Witness Martin testified that "overlashing" a light-weight, half-inch in diameter cable onto an existing steel strand hung between poles is an important technique for efficiently and cost-effectively deploying advanced communications services. [Martin, Tr. Vol. 4, pp. 93-94.][2] A reasonable contractual term, he stated, will allow overlashing by Charter upon prior notice that includes information necessary for Blue Ridge to conduct a safety analysis of the overlash. [Martin, Tr. Vol. 4, p. 90-91.] Witness Martin also testified that this practice has provided a practical solution acceptable to other cooperatives in the past. [Martin, Tr. Vol. 4, p. 91.]

Witness Martin testified that it is industry-standard in pole attachment agreements to allow overlashing of existing attachments without additional permitting or even notice. He stated that in his review of 90 pole attachment agreements with various North Carolina pole owners, 72% of those agreements do not require any notice or permitting for overlashing. [*See* NM Ex. 3, pp. 12-23.] Of the remaining 25 agreements, 19 require notice only after the fact. [*See* NM Ex. 3, pp. 12-23.] Only 6 agreements require permitting prior to overlashing being performed. [*See* NM Ex. 3, pp. 12-23.] Witnesses Martin and Mullins observed that Charter is one of the only attachers required to submit a permit to Blue Ridge prior to overlashing, even though overlashing by third-parties is common and Charter's direct competitors are not subject to the same permitting

[1] Drop poles, also referred to as Secondary Poles or Lift Poles, are typically installed across a street from the main distribution pole line in order to provide clearance for facilities necessary to provide service to a customer.

[2] Overlashing is the process of lashing additional fiber or coaxial cable onto an existing steel strand hung between poles.

requirements.[1] [Mullins, Tr. Vol. 3, pp. 225, 241-42; Martin, Tr. Vol. 4, p. 92; *see* MM Ex. 1.] Witness Martin also testified that his proposed language is consistent with the FCC's determination that attempts to impose permitting requirements for overlashing are "unjust and unreasonable on [their] face." [Martin, Tr. Vol. 4, 92-93.]

Discussion and Conclusions for Issue (b)
Requirements regarding new attachments, overlashing, and drop poles (a/k/a secondary poles)

The parties agree that Charter is (and should be) required to submit an application and obtain approval from Blue Ridge prior to making an attachment on a mainline distribution pole. No evidence was submitted of any specific safety issues that would require prior approval or application for attachment to drop poles, and the record reflects a strong industry standard of allowing Charter to continue to provide notice of drop attachments after-the-fact. The FCC requires Charter to provide service to new customers within seven days, which would not be possible if a full permitting process for drop poles were required. 47 C.F.R. § 76.309(c)(2)(i). Blue Ridge does not require any kind of notice of overlashing by joint user telephone companies, who often overlash bigger and heavier cables to their strand. [Martin, Tr. Vol. 4, pp. 93-94; *see* Mullins, Tr. Vol. 3, pp. 239-40.]

Witness Martin's proposed language regarding overlashing would require Charter to supply sufficient information to allow Blue Ridge to determine the impact of the overlashing on pole loading, and would permit Blue Ridge to conduct a post-overlash inspection (by a registered professional engineer if deemed necessary) at Charter's cost. Under these notice requirements proposed by Charter, Blue Ridge would receive 30 days' prior notice for overlashing projects involving 20 or more poles, 15 days' notice for six to 19 poles and 48 hours' notice for projects of five or fewer poles. Charter's additional proposed language would address witness Booth's concerns about pole loading by requiring Charter to supply information that will allow Blue Ridge to determine the effect on loading at Charter's expense. Accordingly, the Commission finds it appropriate to approve the following language as proposed by Charter:

> ***Permit and Approval Process:*** *Charter shall comply with Cooperative's Attachment approval application procedures for all new Attachments to the Cooperative's poles, except for secondary poles (a/k/a lift poles or drop poles). Charter shall notify the Cooperative of all new secondary pole Attachments on a quarterly basis, and such Attachments shall be subject to the Annual Attachment Fee. Charter may overlash its existing Attachments where such activity will not cause the Attachment to become noncompliant with the safety standards described above. Charter shall provide prior notice to the Cooperative of all new overlashings at least 30 days in advance for projects involving overlashing to 20 or more poles, at least 15 days in advance for projects involving overlashing 6 to 19 poles and at least 48 hours in advance for projects involving overlashing 5 or fewer poles. The Cooperative may perform a post-overlash inspection of Charter's overlashing on poles as the Cooperative deems critical in its reasonable discretion, including reliance on the Cooperative's professional engineers as the Cooperative*

[1] *See also* *** BEGIN CONFIDENTIAL*** *** END CONFIDENTIAL***

deems necessary, and Charter shall pay for the actual cost. Charter shall provide sufficient information regarding its overlash to allow the Cooperative to determine the impact of Charter's overlash on the pole loading. There shall be no additional annual Attachment Fee for overlashings of Charter's existing facilities.

<u>Issue (c): Certification requirements related to Charter's attachments to Blue Ridge's poles</u>[1]

Witness Booth testified that neither Charter nor its contractors carefully review whether they are meeting NESC requirements [Booth, Tr. Vol 3, p. 82], adding that contractors used by communications attachers generally, including ILECs and other phone companies, are not properly trained in Code requirements. [Booth, Tr. Vol. 3, p. 160.] He believes that the lack of training applies to the "entire communications industry across the board." [Booth, Tr. Vol. 3, p. 160.] He also testified that Charter and its contractors do not engage the services of professional engineers (PEs). [Booth, Tr. Vol. 3, pp. 58-59.] Witnesses Layton and Booth also testified that a North Carolina statute, N.C. Gen. Stat. § 89C-2, requires that a person be certified as a professional engineer to certify compliance with the NESC. [Layton, Tr. Vol. 1, p. 61; Booth, Tr. Vol. 3, p. 95.] Witness Booth proposed that the pole attachment agreement require Charter within 30 days of installing the last attachment or overlashing covered by a permit provide Blue Ridge a certification by a professional engineer, licensed and registered in North Carolina, that the attachments "are of sound engineering design and fully comply with the safety and operational requirements of the agreement, including without limitation the NESC." [Booth, Tr. Vol. 3, p. 95.] If the certification is not provided, witness Booth requests that Blue Ridge have the right to declare that the attachment is unauthorized. [Booth, Tr. Vol. 3, p. 95.]

Witness Martin proposed the following language on behalf of Charter:

<u>Certification</u>: *Upon written request from the Cooperative, no later than 30 days after Charter installs the last Attachment covered by its approved application, Charter shall send to the Cooperative a certification (the "Certification") by a Registered Professional Engineer in the State of North Carolina or an authorized representative that the Attachments are of sound engineering design and fully comply with the safety and operational requirements of this Agreement, including without limitation the National Electrical Safety Code. If Certification is not received when requested, the Cooperative may declare the Attachment to be unauthorized.* [Martin, Tr. Vol. 4, pp. 90-91.]

Witness Martin testified that Charter does not rely on professional engineers and expressed his view that it is unnecessary to obtain routine certification for every installation. Instead, his exhibit showed that the industry standard, to the extent pole agreements address certification at all, is for a certification by an "authorized representative" of the attacher with knowledge and experience with the NESC and safety and operational requirements.

Witness Martin also testified that requiring a professional engineer to certify each communications attachment is unnecessary and would be prohibitively expensive. [Martin, Tr. Vol. 4, p. 89.] Charter competes directly with ILECs such as Skybest, CenturyLink, and AT&T

[1] Issue No. 3(c) per the November 2, 2017 Joint Statement of Issues.

in Blue Ridge's territory in the provision of video, internet, and voice services. [*See* Martin, Tr. Vol. 4, pp. 83, 94; Mullins, Tr. Vol. 3, p. 223.] Charter's competitors attach facilities much like Charter's to Blue Ridge's poles. [*See* Martin, Tr. Vol. 4, p. 83; NM Ex. 3.] Blue Ridge's joint use agreements with Charter's competitors do not require any professional engineer [Martin, Tr. Vol. 4, p. 89.][1] Further, witness Booth testified that Blue Ridge itself does not perform a full PE analysis of each and every one of its own attachments. [Booth, Tr. Vol. 3, pp. 83-84.] Witness Martin testified that if Blue Ridge believes that a professional engineer is required in any instance, it can have a professional engineer conduct a post-construction inspection at Charter's expense. [Martin, Tr. Vol. 4, p. 89.] Charter's proposed language contains such a provision. [Martin, Tr. Vol. 4, pp. 89-90.] Witness Mullins testified that Charter has an arrangement with Duke Energy under which Duke contracts with a third-party engineering group that reviews Charter's attachments at Charter's expense. [Mullins, Tr. Vol. 4. p. 53.]

Discussion and Conclusions for Issue (c)
Certification requirements related to Charter's attachments to Blue Ridge's poles

Section 5.9 of Charter's 2003 and 2008 Agreements with Blue Ridge both required Charter to provide, within 30 days after completing the last attachment covered by an application, a certification from a professional engineer that Charter's attachments to Blue Ridge's poles "are of sound engineering design, fully comply with the [Rules specified in the agreement], th[e] agreement and the latest edition of the National Electric Safety Code, and were constructed as provided in the Make Ready Engineering Plans" Charter provided in its application. The agreements required Charter to make this certification in a form attached to the agreements as an exhibit, which requires a professional engineer's signature.

Charter, despite having agreed to these provisions twice before without any request for modification, has refused to accept them in its current negotiations with Blue Ridge, and instead proposes that it (i) should be allowed to provide certification from an "authorized representative," and (ii) should not have to provide any certification with respect to secondary or "drop" poles that serve a single house.

Charter's proposal that it provide a certification from only "an authorized representative", which could be any employee, is inadequate to address Blue Ridge's safety concerns and assure it that Charter's attachments comply with the NESC and applicable safety standards. Moreover, it would be unlawful for one of Charter's employees to certify that Charter's attachments are of "sound engineering design and fully comply" with the NESC and other design specifications, unless he or she is a licensed engineer. *See* N.C. Gen. Stat. § § 89C-2 and 89C-3. At the hearing, witness Booth, himself a licensed professional engineer, introduced guidance he received from the North Carolina Board of Examiners for Engineers and Land Surveyors, advising that providing such a certification would require a professional engineer's license under N.C. Gen. Stat. § 89C-3(6), and that doing so without a license would violate N.C. Gen. Stat. § 89C-2.

Accordingly, the Commission concludes that Blue Ridge's proposed terms and conditions requiring Charter to provide a certification from a licensed professional engineer that its attachments are of sound engineering and comply with applicable design and safety standards, as

[1] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

set forth in its 2003 and 2008 Agreements with Charter, are just and reasonable and appropriate for inclusion in a new pole attachment agreement between the parties. In doing so, however, the Commission further concludes that the language adopted herein does not specify that the professional engineer must be a Charter employee. The Commission therefore concludes that Charter may fulfill the requirements of this provision by contracting directly with a professional engineer or through some other third-party arrangement.

<u>**Issue (d): Transferring attachments**</u>[1]

Blue Ridge suggested that if Charter does not act on any Blue Ridge request that Charter transfer its facilities to a different pole in a timely fashion, Blue Ridge may consider the attachment unauthorized, assess an unauthorized attachment fee, and recover from Charter all costs associated with making a transfer without incurring liability to Charter.[2] [Booth, Tr. Vol. 3, pp. 99-100.]

Witness Martin testified that Charter accepts responsibility for the costs incurred by Blue Ridge for any failures to timely meet requests to transfer its facilities, and is prepared to reimburse Blue Ridge for the actual costs of performing work Blue Ridge undertakes that Charter is required to perform under the terms of the agreement. [Martin, Tr. Vol. 4, p. 105.] Noting that the Cooperative could revoke an attachment permit and deem an overdue transfer to be an Unauthorized Attachment or engage in self-help at Charter's expense if Charter's failure to complete the transfer becomes problematic, Charter proposed the following language:

> ***<u>Transfers & Relocation</u>****: The Cooperative may replace or relocate poles for a number of reasons, including without limitation when existing poles have deteriorated, when new attachers require additional pole space, and when poles must be relocated at the request of the North Carolina Department of Transportation, another governmental body or a private landowner. In such cases, Charter shall, within 60 days after receipt of written notice, transfer its Attachments to the new poles. If such transfer is not timely performed, the Cooperative may, at its option: (i) revoke the permit for the Attachment and declare it to be an Unauthorized Attachment subject to the Unauthorized Attachment fee; or (ii) transfer Charter's Attachments and Charter shall reimburse the Cooperative for the actual costs of completing such work. If Cooperative elects to do such work, it shall not be liable to Charter for any loss or damage except when caused by the Cooperative's gross negligence or willful misconduct.* [Martin, Tr. Vol. 4, pp. 105-06.]

Discussion and Conclusions for Issue (d)
Transferring attachments

Here, the parties appear to be in agreement on this issue. Witness Booth testified that "[a]s Charter's proposal is generally consistent with the 2008 Agreement, it appears to be reasonable." [Booth, Tr. Vol. 3, p. 139.] Charter's proposed provision guarantees the Cooperative will recover any costs incurred for completing the work and ensures all parties know the Unauthorized

[1] Issue No. 3(d) per the November 2, 2017 Joint Statement of Issues.

[2] ***BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL***

Attachment fee upfront, which should be sufficient to incentivize compliance. Therefore, the Commission concludes that Charter's proposed language is appropriate.

Issue (e): Non-compliant attachments[1]

On behalf of Blue Ridge, witness Booth testified in favor of language in the pole agreement that would require Charter to provide a plan to correct non-compliant attachments within a time certain.[2] [Booth, Tr. Vol. 3, p. 135.] Witness Booth argued that allowing Charter to correct non-compliant attachments within a "reasonable timeframe" would invite litigation. [Booth, Tr. Vol. 3, p. 135.]

Witness Booth testified that the photographs included in his exhibits demonstrated a wide scope of Charter's non-compliant attachments. He proposed unspecified amounts of "liquidated damages" for any non-compliant Charter attachment. [Booth, Tr. Vol. 3, pp. 60-61.] Witness Mullins on behalf of Charter testified that Charter had not had an opportunity to fully review the situations presented by the photographs in witness Booth's hearing exhibits, but that he believed that much of the noncompliance depicted was created by Blue Ridge and other attachers. [Mullins, Tr. Vol. 3, pp. 267-77.] There is also widespread agreement that attachments that are at one time compliant may fall out of compliance due to natural forces, and that all attaching parties' attachments, including Blue Ridge's, may fall out of compliance and require maintenance and correction. [Martin, Tr. Vol. 4, p. 97; Mullins, Tr. Vol. 3, pp. 259-60.]

Witness Martin proposed the following language for the Blue Ridge pole agreement:

> ***Notification and Opportunity to Cure Safety Violations:*** *If Charter's Attachments are out of compliance with applicable safety and operational requirements and specifications, whether in a safety inspection or otherwise, then the Cooperative will provide written notice to Charter of the non-compliant Attachment containing the pole number, location, and description of the problem. Charter must either contest the notice of non-compliance in writing or correct them consistent with the specifications of G.S. 62-350(d)(1). If Charter should fail to correct the non-compliance within a reasonable timeframe within G.S. 62-350, the Cooperative may revoke the permit for the Attachment. The cost of correcting all violations shall be borne by the party that has created the violation. Charter shall not be responsible for the cost of correcting a non-compliant Attachment(s) that were placed by or otherwise created by Cooperative or another attacher after Charter's facilities were attached.* [Martin, Tr. Vol. 4, p. 98.]

As witness Martin explained, the NESC does not require that existing facilities be brought up to the latest version of the Code, except where specifically indicated. [Martin, Tr. Vol. 4, pp. 99-100.] Witness Martin proposed the following language to clarify this issue:

> ***Compliance with Safety Standards:*** *Charter's Attachments constructed on the Cooperative's poles after the Commencement Date shall be placed and maintained*

[1] Issue No. 3(e) per the November 2, 2017 Joint Statement of Issues.

[2] *****BEGIN CONFIDENTIAL*** ***END CONFIDENTIAL*****

at all times in accordance with the requirements and specifications of the National Electrical Safety Code, the National Electrical Code, the North Carolina Department of Transportation, the Occupational Safety and Health Act, the Rural Utilities Service, the Society of Cable Television Engineer's Recommended Practices for Coaxial Cable Construction and Testing and for Optical Fiber Cable Construction, and the operational standards developed by the Cooperative. And in all cases as such requirements, specifications, and standards may be modified, revised, supplemented or replaced from time to time, all revisions taking effect after Charter's facilities have been installed shall be treated as applying on a prospective basis, except to the extent NESC requires that a modified, revised, supplemented or replaced rule must be applied retroactively. [Martin, Tr. Vol. 4, p. 100.]

Discussion and Conclusions for Issue (e)
Non-compliant attachments

The Commission has insufficient basis, at this time, to determine causation and responsibility for any compliance issues reflected in witnesses Booth's or Layton's photographs. Furthermore, N.C. Gen. Stat. § 62-350 sets forth required processes and procedures for dealing with non-compliant attachments. The statute does not provide for penalties for non-compliant attachments, and the Commission has no basis for accepting any "liquidated damages" amounts. *See* Eastern Carolina Internal Medicine P.A. v. Faidas, 149 N.C. App. 940, 945-46 (N.C. Ct. App. 2002).[1]

Under Charter's proposed language, all attachments, post-agreement, would have to comply with the most current safety standards that are in place on the date that the attachment is placed. Thus, the practical effect of the language proposed by Charter is to grandfather or protect all authorized attachments which were placed on Blue Ridge's poles prior to the commencement of any new agreement from revision or modification that might be necessitated by future changes by the organizations specified above (including Blue Ridge) unless the revision or modification is mandated by the NESC. The Commission finds unpersuasive witness Booth's contention that allowing Charter to correct non-compliant attachments within a "reasonable time" invites disputes. The Commission recognizes that fixing some compliance issues often requires the cooperation and coordination of two or more parties on a pole. Furthermore, provisions that allow Blue Ridge to recover any costs incurred for completing work and clear Unauthorized Attachment fees will incentivize compliance.

The Commission, therefore, finds it appropriate to adopt Charter's proposed language.

[1] In Eastern Carolina Internal Medicine, the court found that liquidated damages are permitted when they are reasonable estimates of probable damages or where they are reasonably proportionate to the actual damage caused by a breach. But penalty clauses designed as punishment or a threat to prevent a breach are not enforceable. 149 N.C. App. at 945-56.

Issue (f): Insurance requirements[1]

Witness Layton testified that, to adequately protect Blue Ridge, Charter should be required to carry sufficient insurance to meet requirements imposed by the RUS, Blue Ridge's lender. [Booth, Tr. Vol. 3, 141.] On behalf of Charter, witness Martin testified that the amount of insurance it carries should be consistent with the standards set by Charter's management, and that the requirements of RUS for financing Blue Ridge's infrastructure do not apply to Charter. [Martin, Tr. Vol. 4, p. 109.]

Discussion and Conclusions for Issue (f)
Insurance Requirements

In its Post Hearing Brief and Proposed Order, Blue Ridge states that the RUS, the government agency that provides loans to finance construction of Blue Ridge's system, "mandates" that all of its borrowers require third parties working on their system to provide proof of such insurance and to maintain the levels of insurance set forth in its proposed terms and conditions. In support of this proposition, Blue Ridge cited 7 C.F.R. § 1788.48. However, 7 C.F.R. § 1788.48 applies only to "contractors, engineers, and architects performing work for borrowers under construction, engineering and architectural service contracts..." 7 C.F.R. § 1788.47(a). Charter is not a contractor, engineer, and/or architect performing work for Blue Ridge. Thus, 7 C.F.R. § 1788.48 does not support Blue Ridge's request that Charter be required to maintain coverages for worker's compensation, commercial general liability and automobile liability insurance sufficient to meet requirements imposed by RUS. As a result, the Commission determines that Blue Ridge has not met its burden to establish a basis for its complaint on this subject and that its request that the Commission conclude that Blue Ridge's proposed terms and conditions requiring Charter to maintain specified levels of insurance, as set forth in Article 20 of the 2003 and 2008 Agreements is just reasonable and appropriate for inclusion in a new pole attachment agreement between the parties should be and is hereby denied.

In making this determination, the Commission notes that Charter indicated that "[it] is willing to maintain sufficient coverages for worker's compensation, commercial general liability, and automobile liability insurance, as determined by Charter's risk management." Martin, Tr. Vol. 4, p. 109. However, Charter has not filed any proposed language that details the kinds, amounts and the terms of the coverage that its risk management has determined would be sufficient to adequately insure the risks that arise in this situation. And, the record is, for the most part, devoid of any substantive discussion regarding this proposal. In the absence of such, the Commission cannot determine from the record here presented whether Charter's proposal is just and reasonable, whether it would alleviate the concerns expressed by Blue Ridge that Charter's position amounts to no commitment at all, as it would allow Charter to drop or increase its coverage at any time, and/or whether Blue Ridge would be amenable to Charter's proposal if its concerns could somewhat be alleviated after further discussions and negotiations. In light of this, the Commission finds and concludes that further discussions and negotiations about this issue are warranted. The Commission therefore directs the parties to re-start good faith negotiations with the goal of resolving this issue.

[1] Issue No. 3(f) per the November 2, 2017 Joint Statement of Issues.

ELECTRIC COOPERATIVES – MISCELLANEOUS

Issue (g): Default Remedies[1]

Witness Layton testified that Blue Ridge should be entitled to charge Charter for the cost of performing work that Charter is required to perform, but does not, under the pole attachment agreement. Witness Layton also testified that Blue Ridge should be allowed to withhold performance of make-ready work until after Charter cures any failures to perform under the contract. [Layton, Tr. Vol. 1, p. 63.] Witness Booth testified that Blue Ridge should be allowed to withhold consent for additional attachments if Charter is in default under the agreement. [Booth, Tr. Vol. 3, p. 64.]

Witness Martin proposed language intended to ensure that Blue Ridge provides reasonable notice of any alleged default and a reasonable time for cure. If Charter fails to take appropriate actions, despite notice, witness Martin proposed a number of alternative actions for Blue Ridge. [Martin, Tr. Vol. 4, pp. 107-108.] Specifically, witness Martin proposed the following language:

> ***Defaults***: *If Charter is in material default under this Agreement and fails to correct such default within the cure period specified below, the Cooperative may, at its option:*
>
> *(a) declare this Agreement to be terminated in its entirety;*
> *(b) terminate the authorization covering the pole(s) with respect to which such default shall have occurred;*
> *(c) decline to authorize additional Attachments under this Agreement until such defaults are cured;*
> *(d) suspend all make-ready construction work;*
> *(e) correct such default without incurring any liability to Charter except when caused by Cooperative's gross negligence or willful misconduct, and Charter shall reimburse Cooperative for the actual costs of doing the work; and/or*
> *(f) obtain specific performance of the terms of this Agreement through a court of competent jurisdiction.*
>
> *For a period of thirty (30) days following receipt of notice from the Cooperative (or, for defaults of a nature not susceptible to remedy within this thirty (30) day period within a reasonable time period thereafter), Charter shall be entitled to take all steps necessary to cure any defaults. The 30-day notice and cure period does not apply to any default by Charter of its payment obligations under this Agreement.* [Martin, Tr. Vol. 4, pp. 107-08.]
